The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

**Paragraph** 6.28  
**Sound** ☐ Yes ☑ No ☑ Justified ☐ Effective ☐ Consistent with national policy  
**Legally Compliant** ☑ Yes ☐ No  

**Details of Reasons for Soundness/ Legal Complaince:**

The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

**Details of Changes to be Made:**

Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.

**Paragraph** 6.28  
**Sound** ☑ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy  
**Legally Compliant** ☑ Yes ☐ No  

**Details of Reasons for Soundness/ Legal Complaince:**

The Sustainability Appraisal and other background documents relating to proposed growth at Stone Cross are clear that the level of growth allocated to this settlement is consistent with the remaining headroom at the Hailsham South WWTW. The Core Strategy should be clearer on this point to demonstrate that an additional 650 dwellings can be accommodated within the existing EA discharge licence.

**Details of Changes to be Made:**

Strengthen the wording or para 6.28 to explain that the full 650 dwellings can be delivered without requiring upgrades to Hailsham South WWTW.
We are pleased to see that your development distribution in policy WCS2 can be accommodated within existing consented capacities at Waste Water Treatment Works (WWTW). This is particularly important at the Hailsham North and South Waste Water Treatment Works that discharge into the Pevensey Levels. The Review of Consents As you are already aware, we are currently undertaking a Review of Consents (RoC) for the Pevensey Levels. The purposes of the RoC is to assess the impact of existing discharge consents into the Pevensey Levels, and make suitable changes where appropriate and fully justified. We have currently reached Stage 3 of the RoC which we are awaiting sign off from our Area Manager. We will make these results available to you at the earliest opportunity at the end of April 2011. The results will identify those consents that will require further assessment under the final Stage 4 of the RoC. We expect the final recommendations to be available by April 2012. This will be in time to inform your Site Allocations Development Plan Document. Through the course of the RoC there is a possibility that the existing consent for Hailsham North and South WWTWs will be reviewed which would have implications for the capacity of the works to accept the waste water flows from new development. We are happy that your Strategy is based on the most up to date information available, and you have addressed potential changes to existing consents through the RoC by considering phasing development with the provision of necessary infrastructure. Southern Water have also commissioned a study into alternative solutions for waste water treatment in the south of Wealden should it be needed. We therefore consider your Core Strategy sound in this regard. No Deterioration Policy We are awaiting the publication of a 'No Deterioration' policy from Defra. The policy will seek to achieve the Water Framework Directive (WFD) requirement of achieving good ecological status of all waterbodies and not allowing any deterioration in status. The impact of this Policy is similar to that of the Review of Consents, insofar as there is a potential risk that it will result in existing consents being tightened in line with WFD. Again, without this policy being in place, we are satisfied that your Strategy is based on the best available information and remains sound in this regard. Once the No Deterioration Policy is published we will consider how this will impact on your Site Allocations and the need for waste water infrastructure delivery.

Details of Changes to be Made:

---

6.28 states 'development will only be allowed if it can be accommodated by the existing works, unless an alternative location for the treatment and discharge of waste water is implemented'.

Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:

There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link’ no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:
Paragraph 6.29

Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

Paragraphs 6.21 - 6.30 of the document provide further information to support the Council’s policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accommodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirements of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client’s land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be ‘sound’ in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

Details of Changes to be Made:
Details of Reasons for Soundness/Legal Compliance:
The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

Details of Changes to be Made:
Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Developmentt Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Reasons for Soundness / Legal Compliance:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Paragraph 6.3

Details of Reasons for Soundess/ Legal Complaince:

Paragraphs 6.21 - 6.30 of the document provide further information to support the Council’s policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accommodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirements of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client’s land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Compliance:
The council;s comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and wast water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.
Paragraph 6.3

Details of Reasons for Soundess/ Legal Compliance:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon' Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:
Paragraph 6.3

Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 'Land at South Polegate and East Willingdon' Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:
1. The Core Strategy's proposal for a Broad Location south of Polegate and east of Willingdon, shown in Figure 8 and discussed at paragraphs 6.30-6.31, is not sound. 2. The broad housing locations shown in the Draft Core Strategy in October 2010 were (a) to the north of Polegate and (b) to the south of Polegate and east of Willingdon. It was indicated then that no choice between them was as yet possible. 3. The Sustainability Appraisal of the Plan Alternatives sets out the findings on the two broad locations in the summary table at p96, under 'Broad Locations Polegate'. Both 'North' and 'South Polegate and East Willingdon' are listed as 'selected'. 4. However, the Submitted Core Strategy approved for consultation in December 2010, the only option offered at Polegate as a broad location is the land south of Polegate and east of Willingdon (Hindslands and Mornings Mill). 5. The Sustainability Assessment (Background Paper 5) at pp39-41 analyses both the broad locations against a list of objectives the summary table (at p96) demonstrates that both perform sufficiently well to meet the aims of the Strategy. A detailed response on the Sustainability Assessment entries for Polegate broad locations is attached at Appendix 1. 6. The Core Strategy at para 6.30 does not give adequate reasons, or justify, the choice of the broad location south of Polegate / east of Willingdon over the alternative location north of Polegate. It states only that the Sustainability Appraisal 'favoured' the former. 7. the south of Polegate / east of Willingdon location needs to be compared with the alternative north of Polegate location in terms of: a. the preference of local opinion b. the effect on local, and nationally important, landscape c. the traffic impact. Local Opinion 8. The Polegate Town Masterplan supports the north of Polegate location. The Background Paper 'Summary of Town Masterplanning documents' at pp15-17, Polegate Masterplan, states (para 6.10): Polegate Town Council supports the 'suitable' sites identified in the SHLAA with the proviso that Hindslands Fields Eastbourne Road should only be considered for the provision of a new educational facility and not housing. Future development should only take place south of the A27 Bypass and should include a good mix of dwellings and should be of appropriate design to fit in with the existing character of the area. 9. The Government policy principle of localism, which aims to give weight to local opinion and allow local people to determine the future for their area, supports giving weight to the local council's preference for the north of Polegate location for new housing instead of the south of Polegate (Hindslands Fields) site. Comparison of impacts on local and national important landscape 10. The landscape impact of the north of Polegate location would be less than that of the south of Polegate / east of Willingdon alternative. It would be out of view of the South Downs; whereas the south of Polegate / east of Willingdon location would be highly visible from the publicly-owned and accessible Coombe Hill. the impact on the views from and setting of the National Park would be negligible; the impact of the south of Polegate / east of Willingdon location on these views and settings would be large. 11. the north of Polegate locations has not been subject to a landscape appraisal since the A27 Polegate Bypass was opened in 2002. The Polegate Bypass has changed the landscape character of the land south of the bypass. Mounding and planting have created an enclosed area which is not easily visible from the surrounding countryside. In the decade since the bypass was completed, the land has become well-screened and more suitable for development. Comparison of traffic impacts. 12. The South Wealden and Eastbourne Transport Study (SWETS) at Phase 1 included the land north of Polegate. Its general conclusion was that the scenarios that included this broad location could be served by the existing and committed transport infrastructure. 13. In Phase 3 of SWETS the broad location south of Polegate / east of Willingdon was included and assessed in detail. The transport assessment is stated to show that 700 dwellings and employment could be accommodated at that location (CS para 6.30); but there is considerable concern at the impact of that location on local roads and junctions. 14. TheSWETS Report indicates that the north of Polegate location does not need additional transport infrastructure of the same type. It would thus be more effective and justified in transport terms than the south of Polegate / east of Willingdon location, which would add to problems on the local road system. Lack of public participation 15. there was no public participation on the choice of broad house location at Polegate before the Submission Core Strategy was approved and published. Local opinion should be consulted on the choice between the two broad locations which were selected as suitable in the Sustainability Appraisal of Plan Alternatives. 16. the principle of locating some 700 house at Polegate should be included in the Core Strategy as sound; the choice between the two locations assessed should be made through a Strategic Sites Development Plan Document which should follow the Core Strategy. Details of Changes to be Made: 17. The Draft Proposed Submission Core Strategy Policy WCS4 (p40) lists location SD4 as 'Land at Polegate/Willingdon'. This is the wording that should be restored to the text of the Core Strategy to make it sound.
18. Figure 8 should be amended to delete the broad location notation (red colour) at the south of Polegate / east of Willingdon location; the notation in the October 2010 draft Core Strategy Fig 8 should be restored to indicate that both north of Polegate and south of Polegate / east of Willingdon locations are potential strategic housing locations.

Paragraph 6.3

**Sound**: Yes  No  Justified  Effective  Consistent with national policy

**Legally Compliant**: Yes  No

### Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 ‘Land at South Polegate and East Willingdon’. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

### Details of Changes to be Made:

The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isloated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:
Paragraph 6.3

Details of Reasons for Soundness/ Legal Complaince:
The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

Details of Changes to be Made:
Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.

Details of Reasons for Soundness/ Legal Complaince:

Paragraph 6.31
Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:
Paragraph 6.31

Details of Reasons for Soundness/Legal Compliance:
I believe that the proposal to allow 700 dwellings + other sundries on area SD4 flies in the face of PPG 12 section 2.4 "orchestrates the necessary social, physical and green infrastructure to ensure sustainable communities are delivered" The development will eliminate the green infrastructure that is there. Also, point 6.25 within this section, points to employment opportunities. As a resident, I can tell you that these opportunities are few and far between. If there is to be development it should be commercial, not housing. I can't help but notice the plan also suggests that SD4 be built next to the drainage for Polegate. Since the 2010 sewage incident, how will the addition of 700+ homes help? Has the Environment Agency given it's consent to this proposal? (PPS 25, point 26) PPG 17, point 17 - 17. Local authorities should: i. avoid any erosion of recreational function and maintain or enhance the character of open spaces; ii. ensure that open spaces do not suffer from increased overlooking, traffic flows or other encroachment; iii. protect and enhance those parts of the rights of way network that might benefit open space; and iv. consider the impact of any development on biodiversity and nature conservation. I do not think the proposed plan meets these recommendations. In the same document, annex: Definitions, point 3 reads: Local authorities should also recognise that most areas of open space can perform multiple functions. They should take account of the various functions of open space when applying the policies in this document. These include: i. strategic functions: defining and separating urban areas; The Hindslands site is a vital barrier between Eastbourne and Polegate, and should be maintained.

Details of Changes to be Made:
That SD4 be struck off as a site for consideration.

Paragraph 6.31

Details of Reasons for Soundness/Legal Compliance:
Refer this paragraph to the managing the release of housing section to add clarity and certainty to the CS. As requested split SD7 & SD6 on the phasing and be clear on the priority of the development of SD7 before SD6 due to proximity to Polegate and services and employment sustainabilties.

Details of Changes to be Made:
The CS offers no suitable guidance on the delivery of housing over the plan period for Stone Cross This should be address as stated above.
Details of Reasons for Soundess/ Legal Complaince:
I am writing to register my objection to the proposed residential development south east of Stone Cross. We have lived in Eastbourne for the past 17 years and Borrowdale Close is right on the border with Wealden. Since living here we have seen Wealden build at least 3 developments on Eastbourne's boundary. This is grossly unfair on the residents of Eastbourne. It take advantage of the places unacceptable pressure on the already stretched local infrastructure and services provided by Eastbourne. The position of this proposed site is at the rear of existing homes in Langney and would mean that access to it would have to be on existing small estate roads which could not cope with the increase in traffic. Enough is enough.

Details of Changes to be Made:

---

Details of Reasons for Soundess/ Legal Complaince:
I would like to register my strong objection to the building of 700 new homes plus employment floorspace on this greenfield site. Polegate, Willingdon and Eastbourne are soon going to merge into one big, sprawling town. We cannot afford to lose any more of our precious green spaces. Most of all, the traffic on the Eastbourne road is already horrendous. It won't take much more.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

I understand that although a proposal to develop the Hindsland/ Mornings Mill area was rejected only a few years ago, another such plan is under consideration. Whilst the original deadline (28 March 2011) has passed, my local parish council officer advises me that the period for representations has now been extended. Would you therefore please register my disapproval to the plans to create a large development, which will add to the already rapid increase in the size of Eastbourne over the past thirty years. The rate of development in and around Eastbourne in that period seems to far exceed that of other neighbouring seaside towns (e.g. Hastings and Brighton). In my view one of the problems of planning in the local area is that Eastbourne and its surrounding villages are governed by separate authorities, when dual, all- encompassing approach is needed. Development inside or just outside the town can have great ramifications for those living either side of the town boundary. My reasons for opposing this proposal can be summarised as follows: Environmental The area provides a rare green lowland corridor in the otherwise unbroken development which threatens to swallow Polegate (in the same way as has happened to Stone Cross) into the Eastbourne conurbation. The area at risk includes old woodland which provides a home to much wildlife. Traffic Problems Secondly, the traffic on Eastbourne Road, Willingdon is already too heavy due to the peculiar geographical location of Eastbourne (hemmed in by the Downs) and the lack of approach roads. In high season the number of people in the town doubles, exacerbating the problem. Furthermore the lack of good roads linking Brighton, Crawley/ Gatwick and Greater London with Eastbourne and Hastings already causes unacceptable levels of traffic congestion and has hindered local economic growth. Encouraging more people to live in the Eastbourne conurbation which hosts a dwindling number of jobs will only cause more traffic problems. Local industrial development needs modern road networks to the east of the A23/ M23 road. Any attempt at boosting the local economics without providing a dual carriageway road from Lewes to Hastings, and on the A22 from Hailsham to Uckfield and beyond along the A272, will, I believe, be doomed to failure. Impact on local Services Lastly, whilst I believe good roads are the main pre-requisite for commercial or residential development, sufficient infrastructure provided by local services needs to be in place. Currently local health services are overstretched. Units at the Eastbourne District General hospital are under threat and Eastbourne charities are struggling to cope. Cuts in local Social Services are likely. If such housing developments are necessary, in my view they should be small scale and in areas nearer to good transport links and jobs. The East/ West Sussex border areas near Burgess Hill, Haywards Heath, Uckfield and East Grinstead at present offer more suitable locations for such developments. Only if there is a serious upgrading of the road network as mentioned above and considerable long term investment in the local social infrastructure, would a slight increase in housing and commercial property development in the Willingdon/ Polegate/ Stone Cross area possibly be justified.

Details of Reasons for Soundess/ Legal Compliance:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:
Paragraph 6.31

Details of Reasons for Soundness/ Legal Compliance:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. Yes Sound ☑ No Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No
Details of Reasons for Soundness/ Legal Compliance:

We do not believe that the proposed core strategy has taken adequate consideration of the effects that the development of further housing to the south east of Stone Cross (SD6) would have upon the adjoining area within the Borough of Eastbourne and its residents. Development to the south of the railway line at Stone Cross would place an unacceptable strain upon the community infrastructure within North Langney. The existing residential developments within the District of Wealden but along the Borough boundary lack community facilities and so residents make use of facilities on the Eastbourne side of the border which Wealden District council does not contribute towards. Furthermore any proposed development south of the railway line will need to be accessed through the already overstretched and narrow estate roads in Langney.

Details of Changes to be Made:
The proposed development for housing at SD6 should not extend to the south east of Stone Cross. The land south of the railway line should be removed from the core strategy as housing land.

The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:

The proposed building of 700 homes on land at Hindsland and Mornings Mill Farm, Willingdon is unsound because:- 1.The increasingly heavy use of traffic on A2270 causes problems at present at peak times. Vehicles exiting properties have limited opportunity to access road safely at these times. The extra traffic generated from proposed site would cause the A2270 to become gridlocked. The increased accident risks / risks of road rage has not been dealt with effectively in the core strategy. This road is used constantly for emergency services, particularly ambulances to and from the District General Hospital. This could cause life threatening delays. 2.The Green space, Hindsland & Mornings Mill Farm is an essential buffer against effects of climate change on wildlife. Free movement of species across this landscape would be disconnected causing further collapse of our essential eco system. Increased carbon dioxide produced by homes, people and traffic at site would cause even more pollution. The peaceful country footpath at present provides access to necessary public open space. This would be lost. Each problem will affect human health and well being. 3.Water management required for this site would be detrimental to ecological habitats. The water table in the area is very high. At present properties in vicinity suffer flooding of gardens at heavy rainfall. At times drains struggle to cope with overload. Building on Hindsland and Mornings Mill Farm will greatly exacerbate flooding risk to entire area. This has not been dealt with in the core strategy.

Details of Changes to be Made:
Remove the proposed provision of 700 dwellings etc on the land at Mornings Mill Farm & Hindsland, Willingdon.
Details of Reasons for Soundess/ Legal Complaince:

Paragraphs 6.21 - 6.30 of the document provide further information to support the Council's policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accommodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirements of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client's land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:

Separation of Polegate and Willingdon Para 2.2 states that 'each settlement has its own unique characteristics and functions, depending on its location and historical influences.' This wording follows on from the wording in Chapter 17 of the Non Statutory Wealden Local Plan. However the Development of the SD4 area could either force two settlements (Willingdon and Polgate) into one, thus destroying the unique characteristics referred to or result in a remote settlement in Willingdon if the important green frontage to the A2270 is to be preserved. The vital green gap on that side of the A2270 between the built up areas of Willindon and Polegate is likely to be lost. Para 7.23 states 'in order to maximize the benefits, policy places the emphasis on the creation and maintenance of linkages between green spaces.' Changing the Character of Willingdon Para 2.21 states 'the strategy is not seeking to change the character of Wealden.' It is argued that development of the SD4 area will either force two settlements (the village of Willingdon and the town of Polegate) into one thus changing the character of the area or alternatively a remote and separate settlement will be created. It could also lead to a change in the character of Willingdon with encouragement of extensive business use where none currently exists. Community facilities are proposed in an area sufficiently remote from most of the village to need transport to access it. Development of Recreational Land Planning Policy Guidance 17: Planning for open space, sport and recreation para 17.10 states 'existing open space, sports and recreational buildings and land should not be built on unless an assessment has been undertaken which has clearly shown the open space or the buildings and land to be surplus to requirements.' The Core Strategy refers frequently to the lack of suitable recreational facilities so even if an assessment had been carried out the land is not surplus, so the proposal to develop and existing on (Hindslands) (SD4) is inconsistent. Chapter 17 paragraphy 17.1 of the Wealden non statutory plan states that "Polegate and Willingdon are adjacent but distinctly different communities located at the foot of the South Downs to the north of Eastbourne." However, one outcome of the proposed Core Strategy is that the two settlements could merge for the first time on the east side of the A2270. Traffic Congestion Para 6.23 states "the A2270 running through the urban area is still heavily congested and traffic flows on the strategic road network are very high." Numerous references are made throughout the strategy to the need for infrastructure, and 5.16 states "development at SD4 will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in South Wealden." The impact of this number of additional vehicles will have a very bad effect on the already heavily congested road network of the A2270 and surrounding roads in Lower Willingdon. With the very limited changes proposed to junctions the policy is unsound and needs further examination. It is not understood how a quality bus service would improve matters. These proposals were not properly examined by the District Council because it was only a tthe last moment that a decision was made to promote SD4 and the very late arrival of the SWETS document. Concerns about School Places Concern is expressed about whether adequate provision has been made for additional places at the primary and secondary schools in the local vicinity of SD4. Extensions to the existing school which are in heavily built up areas with heavy congestion on the roads is not the answer. The strategy appears to be unsound.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:

Medical Infrastructure Threatened Para 6.22 refers to the 'limited range of facilities available locally', and states 'a new GP surgery and medical centre has recently been granted planning consent in Willingdon.' This is a change from the original draft wording that the centre would be built and there is now considerable doubt whether it will ever be built at this location. Given that uncertainty the provision of medical infrastructure cannot be sound.

Drainage Issues Para 6.28 states 'development will only be allowed it it can be accommodated by the existing works, unless an alternative location for the treatment and discharge of waste water is implemented.' There appears to be undue reliance on this infrastructure being provided and if it and other infrastructure is not provided the whole allocation at SD4 fails. There appears no fall back position should this be the case and that will make the whole core strategy unsound in terms of numbers of dwellings to be built.

Details of Changes to be Made:

Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:

I Object to the proposed development to build 220 new homes within an urban extension to the urban are of Stone Cross as we will lose valuable green open space.

Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:

I am writing in protest at the proposal to build seven hundred homes on the Hindsland/Morning Mill Farm site. It appears from the Wealden Housing survey of 2009 that only a small number of new houses are needed and these could be built throughout the Wealden area. Our areas of natural habitat and beauty are being eroded and these areas are beneficial for residents and wildlife alike. We do not have the infrastructure to support seven hundred houses, our roads are in appalling repair, our doctors are overworked and there are a shortage of school places. Another major factor is that the proposed area being built on acts as a flood plane for local housing and as we have seen in recent years our weather is unpredictable and the incidence of flooding is more frequent and devastating. Therefore I strongly oppose the proposal for the building of seven hundred new houses on the aforemention site.

Legally Compliant ☐ Yes ☐ No
Details of Reasons for Soundess/ Legal Complaince:
Our first and most paramount concern over any development is the loss of countryside and of wildlife living there. Poor animals and birds do not have any choice in us humans constantly eating away at their living environments, which has already been eroded enormously. We have far fewer plant life and other forms of life due to developments such as the above, and if we carry on the way we are going, even more plants and creatures will become extinct to add to the ones that already have. We wrote, to not avail, with our objections over the 550 homes and an industrial estate being built between Ditton's Corner and the Polegate Bypass. Unfortunately, building has already started there. Hopefully this letter will make a difference. As well as the loss of plants and wildlife, these building schemes make a huge impact on the people who already live here. Roads are not going to be able to cope with the extra traffic created by any development. The A27 already can't cope with the heavy traffic it already has. Plus the fact, there's too few parking spaces, and the few that we have - like the Co-op Car park has already had houses built on that! Public transport is also a joke. Often there is only standing room on our squashed trains. Our buses are also extremely infrequent. Eastbourne District General Hospital is full to bursting and can't cope with any more patients. The same is true for doctor's surgeries and dentists, who are only taking on private patients now. Schools here are in the same situation. We have therefore made a decision not to support this development for the above reasons.

Details of Reasons for Soundess/ Legal Complaince:
I wish to comment regarding the above development plan involving land at Hindsland/Mornings Mill Farm. Flooding takes place during heavy rainfall. Should future development take place on the higher ground, this will result in further flooding in the Broad Road/Oldfield area. The proposed density of building will inevitably result in many more cars in the area. This will result in further car parking issues.

Details of Changes to be Made:
WJPC is concerned at the numerous references to Polegate and Willingdon as one settlement, as highlighted in 3.3 Table 1, 3.11, SPO6, WCS2, WCS3, 5.13, 6.31(2), Figure 8 and Figure 12. In particular, Figure 2 showing settlement hierarchy, places Polegate and Willingdon as one settlement, yet details other settlements individually.

Details of Changes to be Made:

Summary - use of greenfield site, currently poor infrastructure, coalescence, water supply, loss of wildlife habitats, drainage, agricultural land. No need to conform to the South Coast Plan.

Details of Changes to be Made:
### Details of Reasons for Soundness/ Legal Compliance:

Policy WSC4 identifies the Strategic Development Areas in the District that the Council considers to be critical to the delivery of the overall strategy. SD6 identifies land at East and South East of Stone Cross that includes land north of Rattle Road owned by my client. We support the approach adopted within Policy WCS4 and the importance attached to the identified Strategic Development Areas to deliver housing and employment opportunities and wider services and infrastructure to support the growth of the District. In particular we support the identification of SD6 - it being a logical location to accommodate strategic development given the status of Stone Cross as a Service Centre within the wider settlement hierarchy, its particularly good public transport connections to Langney and Estbourne, its existing level of services, employment opportunities and facilities and its close links with other A22/A27 primary and trunk routes. Indeed, the provision of housing and employment development in the area will, we believe, help to address the economic needs of the south of the District and the wider Sussex Coast sub-region whilst also delivering affordable housing in meaningful numbers and making a positive contribution to the sustainability of Stone Cross and the quality of life for existing and future residents. The South East Plan proposes that approximately 63% of Wealden's new housing development is located in the Sussex Coast Policy Area. The draft Core Strategy is in accordance with this as at present approximately 63% of new allocations (excluding rural areas) are within the Sussex Coast Policy Area. Overall therefore, this approach is consistent with policy within the South East Plan. including specific policy for the Sussex Coast Sub-Region and national planning policy (PPS3 paragraphs 36-38) by helping to create mixed and sustainable communities, developing housing and employment in suitable locations offering a range of community facilities with access to jobs and services. The approach also accords with the Government's housing objectives in PPS3 in particular the approach identified in Paragraphs 10 and 36 of delivering housing developments in suitable locations, which offer a good range of community facilities and with good access to jobs, key services and infrastructure. Further, it is apparent that all of the requirements set out in paragraph 38 of PPS3 for finding the most suitable locations for growth have been carefully applied to the housing and employment land targets, resulting, at least in the south Wealden District area, in a comprehensive, credible and deliverable spatial plan to address the needs of the District. The Council's SHLAA identified a number of development sites around Stone Cross that are suitable for development and unconstrained by ownership. In addition, development in this location is known to be viable based on the findings of the Strategic Housing Market Assessment. Having regard to all of the above points and when considered against the alternative of less or no development, this approach is considered to be sound. Less or no development at Stone Cross would be at odds with the established national and regional planning policy identified above. It would also fail to reflect the established settlement pattern in the District, would place greater development pressures on other locations in the District and would inevitably fail to achieve the aims of sustaining and enhancing local services, providing homes in parallel with jobs, providing affordable housing and combining growth with recreation and leisure development. Overall therefore, the approach to development within this area is largely justified in line with the requirements of PPS12 as it is founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. However, in the context of our comments concerning the overall scale of housing required in the District under Policy WCS1, we consider that the housing provision identified for Stone Cross under supporting text (Figure 5 and at paragraph 6.31) to Policy WCS1 (650 dwellings) should be increased to reflect existing local housing need and the anticipated growth in households during the Core Strategy period.

I write to register my objections to the Polegate and Willingdon and Stone Cross area strategy in the above document on the basis that it is not sound or justified for the following reasons: NUMBER OF ALLOCATED HOUSING CONTRADICTS THE AMOUNT WHICH IS CLAIMED TO EVEN BE SUSTAINABLE. It is very disappointing that despite repeatedly asked questions at Wealden District Council’s full council meetings and committees regarding the proposed 1265 new houses for this area, Wealden District Council’s position is that it is waiting for the outcome of the Honey Farm Appeal where the proposal is for up to 520 houses. So far, there has never been any mention of any alternative plans should the Council lose the appeal. The Council appears to be confident in defending this appeal, despite also contradicting itself with by using the exact same reasons in the rejection of Honey Farm at Committee to justify and support those proposals within the Core Strategy for the Polegate and Willingdon area, for a site which is only down the road where the same problems would apply. Wealden District Council clearly has no plan B and if Wealden District Council cannot successfully defend this appeal, Willingdon and Polegate will automatically be lumbered with 1785 extra houses. For this reason alone, the Proposed Submission Document is irresponsible and misleading the communities. In addition reason as below;

INFRASTRUCTURE - SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounding roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain. This was not mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the travel plans are unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable. For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. The local roads and traffic infrastructure is already running at it’s maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which make bus companies contend that there are not enough service users in the area which make

During peak commuting hours, traffic is often congested along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which make bus companies contend that there are not enough service users in the area which make
currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. PROPOSED SUBMISSION CORE STRATEGY OPTION CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindsland should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindsland / Mornings Mill Farm. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues ignored GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green lung between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. I trust that the above representations will be placed on record accordingly.

**Details of Changes to be Made:**
1.1 These representations have been prepared on behalf of the Trustees of the KKH Banner Life Interest Settlement which own land immediately to the north and east of the built up area of Stone Cross. This land has been identified as part of two urban extensions to Stone Cross in the Core Strategy. the land is referred to below as Site 1 which is Land north of Peelings Lane and adjoining Pickens Wood and Site 2 Land to the south of Peelings Lane further to the east. These sites are illustrated in Appendix 1. 1.2. We support the allocation of 650 dwellings in Stone Cross, Stone Cross is a settlement which is well connected to Eastbourne to the south, the urban area of Eastbourne stretches north to Stone Cross without a break. 1.3. Due to its services and transport connection as well as its proximity to neighbouring settlements we consider that Stone Cross is a sustainable location for development. Planning Policy Statement 1 (PPS1) includes in paragraph 3 a definition of sustainable development which is "development which meets the needs of the present without compromising the ability of future generations to meet their own needs,. "Paragraph 6 of PPS1 states that "planning has a key role in the creation of sustainable communities: communities that will stand the test of time, where people want to live, and which will enable people to meet their aspirations and potential. 1.4 Stone Cross has, as set out in paragraph 6.21 of the Core Strategy, "grown rapidly in recent years as a result of being identified for development in previous Wealden Local Plans". Figure 13 of the Wealden Local Plan illustrates the locations that were identified for development in Stone Cross; a copy of this plan is shown in Appendix 1. 1.5 Planning Policy Statement 3 (PPS3) states in paragraph 36, that housing should be developed in suitable locations which offer a range of community facilities, and good access to jobs, key services and infrastructure. Paragraph 38 sets out the criteria for identifying broad locations and specific sites in Local Development Documents. These criteria include evidence of current and future levels of demand for housing as well as the availability of viable sites. Weight must be given to sites with good public transport connections that will contribute to cutting carbon emissions. Account must be taken of "any physical, environmental, land ownership, land-use, investment constraints or risks associated with broad locations or specific sites, such as physical access restrictions, contamination, stability, flood risk, the need to protect natural resources e.g. water and biodiversity and complex land ownership. 1.6 Stone Cross is some 4 km north of Eastbourne, It is immediately to the north of Langley, some two km east of Polegate which has a railway station and two km west of Westham which also has a railway station. Stone Cross has good bus services particularly to Eastbourne with buses departing three to four times per hour during the day, Monday to Saturday. Bus number 56 departs for Eastbourne from Stone Cross 9 times a day between 07.55 and 16.54 as well as Eastbourne from Stone Cross twice per hour from 07.00 to 18.00 and also links Stone Cross to Hailsham. The number 55 departs 10 times from Eastbourne to Stone Cross between 08.00 and 17.40 and also links Stone Cross to Westham. 1.7 Stone Cross also has a good range of facilities. Convenience shopping is provided by a supermarket in the centre of the settlement. Stone Cross has useful range of health facilities with a doctors, dentists, and pharmacy. In addition there is a vets practice, takeaway, public house church and a community hall. Stone Cross also has a primary school with a nursery which can if necessary be expanded to provide space for children from the new development allocated to the settlement. A secondary school is available less than a kilometre to the south of Stone Cross in Langley. the Core Strategy recognises that Stone Cross is well placed to use the facilities in Langley, and can help to facilitate regeneration in Langley. 1.8 We therefore support the view of the Council set out in the Core Strategy that Stone Cross is a sustainable location for development. 1.9 PPS3 states that Local Planning Authorities should provide specific deliverable sites to deliver housing in the first fives of the plan. To be deliverable sites should be available for development suitable for development and development should be achievable. 1.10. Site 1 forms part of SD7 as shown in Fugure 8 Polegate and Willingdon and Stone Cross Area Strategy and is a deliverable residential site. It is some 3.7 hectares in size and comprises agricultural land and woodland. The sites western boundary is formed by the B2104 Hailsham Road and housing development that runs along this road. To the south west of the site is St Lukes Church which forms a land mark at the junction of the B2104 and dittons Road. 1.11 The site is in a single ownership the owners being the Trustees of the KKH Banner Life Interest Settlement. The simplicity of having one owner will aid delivery. The Trustees have been promoting the land for development since 2000. The SHLAA is therefore not correct to state that the land is in multiple ownerships. There are no legal constraints to delivering the land for development. The woodland forming part of the site and surrounding it would not be
developed. The agricultural land is free from constraints to development. 1.12 The site has good road frontage to the B2104 and is within walking distance (300 metres) of the main facilities in Stone Cross including the primary school and shops. The length of the road frontage will ensure there is sufficient space to create a suitable vehicular access to the site. 1.13 In long views from the west development on the site would be seen in the context of the existing development of Stone Cross and the settlement of Polegate, so the development would not have an adverse visual impact. In close views from the B2104 the development will be seen in the context of existing development on the opposite side of the B2104. 1.14 Though plans show that the site adjoins the A17 to the north this boundary comprises a thick and mature tree belt. This provides very good visual screening of the A27 and helps to mitigate noise from the road. If necessary further noise mitigation could be employed on the site to ensure good quality of life of those that would live on the site. Access can easily be provided from the site to Peelings lane for cyclists and pedestrians. 1.15 The trees already around the site will provide it with character and the master planning of the site can respond to the belts of trees and woods and the links provided by Peelings Lane in the layout of the development to create an attractive residential environment. 1.16 We therefore consider that Site 1 is deliverable as it is available for development now, is suitable for housing development and this can be achieved in five years without the need for third party land. 1.17 Site 2 forms part of SD6 in the Core Strategy and is some 4.25 hectares in size. It has Peelings lane to the north and is surrounded by belts of mature planting except for part of its southern boundary. Through its western boundary housing which is part of the 1998 Local Plan allocation built out in Stone Cross is visible. this gives the site a visual connection to the existing built up area. The A27 north of the site is well screened by trees and is in a cutting which will mitigate traffic noise. As with Site 1 there is space to include additional noise mitigation if required. there are views into the site from the east however, any development on the site will be seen in the context of the existing development of Stone Cross and development to the south on the B2247 Dittons Road. 1.18 Site 2 does not have direct road frontage. In the core Strategy it is proposed that SD6 would stretch to the north and south of the B2247 and the Polegate to Westham railway. The site is owned by the Trustees of the KKH Banner Life Interest Settlement who have been promoting it for development since 2000. The site is available and suitable for development however, the need to involve third party landowners to gain access to the site means that thought it is available and suitable for development, whether this development is achievable in five years is dependent on the phasing that the Council considers appropriate for SD6. It can therefore be argued that the site is developable in accordance with the PPS3 paragraph 56 definition. 1.19 The Core Strategy identifies that the risks to delivery of housing in the south of the District are the highways infrastructure required to mitigate impact on strategic routes and local junctions. Developing on sites 1 and 2 at Stone Cross with their good links to Langney and Eastbourne will be mean less traffic being put on strategic routes than by developing in other areas in the south of the District. This analysis is confirmed by paragraph 8.33 of the Council's Delivery of Housing Background Paper dated February 2011. Development in Polegate, Stone Cross and Willingdon is constrained by the capacity for waste water disposal which currently allows for a further 1,500 dwellings. However the Core Strategy only proposes to deliver 1,350 homes in this area to allow for windfalls so capacity does exist to deliver the development proposed. If new school or nursery places are required then the development around Stone Cross can fund extensions to the existing primary school and a new nursery if necessary.
INFRASTRUCTURE The local roads and traffic infrastructure is already running to its maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Cophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirmed how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it makes it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would be able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority's responsibility. I refer to pages 69 and 70 of the East Sussex County Council Highways' Report dated 10 September 2010 for information of their findings, which is relevant to my area and recreational ground. However, Wealden District Council and other groups within the council decided not to increase the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirmed how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it makes it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would be able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority’s responsibility. I refer to pages 69 and 70 of the East Sussex County Council Highways’ Report dated 10 September 2010 for information of their findings, which is relevant to my submissions above. COPHALL ROUNDBOARD SENSITIVITY TEST 3.1 Using the Dittons Road trip rates, the development traffic from 520 dwellings on the PW1 site has been calculated as follows: Table 3.1: 520 Dwellings Trip Rates & Trip Generations Time Period Trip Rates Trip Generations AM Peak Arrive Depart Two way Arrive Depart Two way (0800 - 0900) 0.12 0.46 0.58 62 239 301 The data shows an increase of about 301 trips per hour, 5.016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounding roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain, this was not revealed until I questioned this at a cabinet meeting. PUBLIC TRANSPORT In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from a to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. PROPOSED SUBMISSION CORE STRATEGY OPTION CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindslands should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not
to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindsland / Mornings Mill Farm. In addition, in the Wealden non-statutory local plan consultation in 2003, we presented a petition signed by 1000 Willingdon households to Wealden District Council. Hindsland / Mornings Mill Farm is not suitable to build extra 1000 new homes. I am pleased to say that the Council and Councillors had made a very sensible decision at the time, 8 years on, there are no changes or improvements within the infrastructure. We are continually facing shortage of secondary school places, primary school places, nursery places and facilities including sports and play facilities, amenity space, parking places an indoor sports hall and swimming pool and yet this Council considers that these will be provided, how? There is no mention of any sustainable or plausible proposal. GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green site between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues ignored

Details of Changes to be Made:

Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011
NUMBER OF ALLOCATED HOUSING CONTRADICTS THE AMOUNT WHICH IS CLAIMED TO EVEN BE SUSTAINABLE. It is very disappointing that despite repeatedly asked questions at Wealden District Council’s full council meetings and committees regarding the proposed 1265 new houses for this area, Wealden District Council’s position is that it is waiting for the outcome of the Honey Farm Appeal where the proposal is for up to 520 houses. So far, there has never been any mention of any alternative plans should the Council lose the appeal. The Council appears to be confident in defending this appeal, despite also contradicting itself with by using the exact same reasons in the rejection of Honey Farm at Committee to justify and support those proposals within the Core Strategy for the Polegate and Willingdon area, for a site which is only down the road where the same problems would apply. Wealden District Council clearly has no plan B and if Wealden District Council cannot successfully defend this appeal, Willingdon and Polegate will automatic be lumbered with 1785 extra houses. For this reason alone, the Proposed Submission Document is irresponsible and misleading the communities. In addition reason as below; INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain. This was not revealed until Councillor Stephen Shing questioned this at a cabinet meeting. PUBLIC TRANSPORT In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable. For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. The local roads and traffic infrastructure is already running to it’s maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Crophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirm how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways, which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority’s responsibility. The report does not even address how this traffic problem will be address at present or in the future. The increase of about 301 trips per hour, 5,016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to
enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. PROPOSED SUBMISSION CORE STRATEGY OPTION
CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindsland should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindsland / Mornings Mill Farm. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues ignored GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green lung between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. I trust that the above representations will be placed on record accordingly.

Details of Changes to be Made:
I write to register my objections to the Polegate and Willingdon and Stone Cross area strategy in the Core Strategy on the basis that it is not sound nor justified for the following reasons:

INFRASTRUCTURE - SCHOOL AND HEALTH FACILITIES

As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounding roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this Council has amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain. This was not revealed until Cllr Stephen Shing questioned this at a cabinet meeting.

PUBLIC TRANSPORT

In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable. For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. The local roads and traffic infrastructure is already running to it’s maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Cophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirm how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road infrastructure can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would be able to cope in the same road. Details of Reasons for Soundess/ Legal Complaince:

The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

Details of Changes to be Made:

Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:
The SWETS Report indicates that the north of Polegate location does not need additional transport infrastructure, consistent with national policy. However, the broad location south of Polegate / east of Willingdon was included and assessed in detail. The Polegate Bypass was opened in 2002. The Polegate Bypass has changed the landscape character of the land south of the bypass. Mounding and planting have created an enclosed area which is not easily visible from the surrounding countryside. The landscape impact of the north of Polegate location would be less than that of the south of Polegate / east of Willingdon alternative. It would be out of view of the South Downs; whereas the south of Polegate / east of Willingdon location would be highly visible from the public-owned and accessible Coombe Hill. The impact on the views from and setting of the National Park would be negligible; the impact of the south of Polegate / east of Willingdon location on these views and settings would be large. The south of Polegate locations has not been subject to a landscape appraisal since the A27 Polegate Bypass was opened in 2002. The Polegate Bypass has changed the landscape character of the land south of the bypass. Mounding and planting have created an enclosed area which is not easily visible from the surrounding countryside.

Details of Changes to be Made:

17. The Draft Proposed Submission Core Strategy Policy WCS4 (p40) lists location SD4 as 'Land at Polegate/Willingdon'. This is the wording that should be restored to the text of the Core Strategy to make it sound.
18. Figure 8 should be amended to delete the broad location notation (red colour) at the south of Polegate / east of Willingdon location; the notation in the October 2010 draft Core Strategy Fig 8 should be restored to indicate that both north of Polegate and south of Polegate / east of Willingdon locations are potential strategic housing locations.

**Paragraph**  6.31

**Sound**  Yes  No
**Legally Compliant**  No  Yes

**Details of Reasons for Soundess/ Legal Complaince:**
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 'Land at South Polegate and East Willingdon' Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the Folkington Link no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

**Details of Changes to be Made:**

This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:
Sound Yes  No Justified Effective Consistent with national policy
Legally Compliant Yes No

Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 'Land at South Polegate and East Willingdon' Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:

The council's comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.
We support the flexibility contained in Policy WCS3 regarding the distribution of employment floor space between Polegate and Willingdon and Stone Cross. However, in view of the current retail provision in Polegate and the scale of the development planned for the area, we consider that a retail allocation should be included for Polegate, rather than concentrating new provision solely in Uckfield and Hailsham. By improving facilities at Polegate will reduce the need for both existing and future residents to travel further afield to meet their shopping needs, which is especially important in view of the high proportion of elderly residents. Whilst trips will be made to nearby Eastbourne, which is at a higher level of the retail hierarchy, there would be advantage if the day to day needs of residents are met in Polegate. Whilst Polegate town centre is constrained, opportunities may arise through redevelopment and there may be scope for local facilities as part of the new residential growth area.

Yes  Sound  No  Justified  Effective  Consistent with national policy

Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:

Our client has been engaged in discussions with the Council regarding the suitability of this redundant land for development for some time, and has previously submitted representations promoting the site through local plan reviews, and more recently, through the emerging Local Development Framework. In August 2009 King Sturge submitted technical information in support of our submission to the Strategic Housing Land Availability Assessment and representations were made to the Core Strategy Spatial Development Options Consultation Document (July 2009). We support Wealden District Council’s identification of land to the south of Polegate and east of Willingdon as an urban extension for residential, employment, leisure, recreation and community uses (Strategic Development Area 4 in Policy WCS4). Considerable background work and research has been undertaken by the Council in preparing the submission draft of the Core Strategy and we consider the Council have a sound evidence base to support the allocation. We consider this area has significant advantages compared to other locations in the Polegate area, to accommodate future development needs: · This area is well located in relation to existing development at Polegate and Willingdon, and it would form a natural extension. In particular, the area is well related to Polegate town centre (with its facilities as well as the railway station) which is within easy walking distance. There is the opportunity to create links to the town centre as well as other parts of the existing built-up area. The area is well served by existing bus services on Eastbourne Road, as well as the local cycle network. This complies with Planning Policy Statement 3 (Housing) which states that housing developments should be in suitable locations which offer a good range of community facilities and good access to jobs, key services and infrastructure. This should be achieved by making effective use of land and existing infrastructure thus contributing to the achievement of sustainable development. · In terms of potential visual impact on the AONB, including the newly created South Downs National Park, this area has significant advantages compared to other potential locations elsewhere in the Polegate area. · 2 - · The area is of sufficient size to meet the needs for development in the Polegate area during the plan period. · There are no significant constraints to the development of the area in terms of ecology, landscape features or flooding. · The area benefits from the potential to secure vehicular access from Eastbourne Road as well as from other parts of the built-up area of Polegate that lie immediately adjacent. The area is available for development, and offers the opportunity for phased development.

Details of Changes to be Made:
Mr Ankers
South Downs Society

Details of Reasons for Soundness/ Legal Compliance:
Polegate and Willingdon: we very much welcome the principle that strategic land release for housing in this area is to be kept further away from the boundaries of the national park. We welcome the wording of para 6.26 to the effect that impact on views from the downs limits the potential for urban extension especially seen against a rural backdrop north and west of Polegate, and that existing main transport routes provide firm limits to expansion in these directions. Having worked hard in support of Wealden Council and others in opposing the Honey Farm development proposal, not least at the recent public inquiry, we very much support the deletion, following the SHLAA of Honey Farm from the locations included within the 2005 non-statutory plan - for all the reasons set out at the inquiry, including the absence of the Folkington Link from any meaningful programme, the recent national park confirmation and the inclusion of Wootton Manor in English heritage's Register of Historic Parks and Gardens.

Details of Changes to be Made:

Mr Grout

Details of Reasons for Soundness/ Legal Compliance:
The provision of around 700 dwellings on the land to the south of Polegate and to the east of Willingdon is unsound because:- (i) The A2270 is unable to cope with peak traffic flows at present. The additional traffic generated will cause gridlock and no effective way of dealing with this is set out in the Core Strategy. (ii) The land to the east of the A2270 is low lying and prone to flooding. The water table is very high. Building on this land would exceed the drainage capacity and lead to increased flooding. The measures in the Core Strategy are not effective and the plan to build is not justified. (iii) It is essential to keep a green corridor between Polegate and Willingdon for the preservation of wildlife. The measures described in the Core Strategy are not effective for dealing with this. (iv) Building on this land is not justified; there are far more suitable sites elsewhere.

Details of Changes to be Made:
Remove the provision of 700 dwellings etc on the land to he south of Polegate and to the east of Willingdon.
Paragraph 6.31

Details of Reasons for Soundness/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Paragraph 6.31 point 3. Amend to reflect revised strategy for Polegate area and that waste water treatment is no longer a constraint.

Details of Changes to be Made:
REVISION SOUGHT. Delete up to 700 dwellings and replace with "at least 1500 dwellings" for Polegate and replace 650 with 300 for Stone Cross. Bullet Point 3. Delete and replace with "provision of 300 homes within an extension to the urban area of Stone Cross (SD5)". Bullet point 6. Delete "until such time as new infrastructure is in place to treat additional waste water.

---

Paragraph 6.31

Details of Reasons for Soundness/ Legal Complaince:
6.31.4 does not make it clear how this development of services and improvement of the High Street will be achieved.

Details of Changes to be Made:

---

Paragraph 6.31

Details of Reasons for Soundness/ Legal Complaince:
Concern raised at the reference to Polegate and Willingdon as one settlement

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
Planning Policy Guidance 17: Planning for open space, sport and recreation 17.10 states 'existing open space, sports and recreational buildings and land should not be built on unless an assessment has been undertaken which has clearly shown the open space or the buildings and land to be surplus to requirements.' The Core Strategy refers frequently to the lack of suitable recreational facilities, so the plan to build on an existing on (SD4) is inconsistent. Chapter 17 Paragraph 17.1 of the Wealden non statutory plan states that 'Polegate and Willingdon are adjacent but distinctly different communities located at the foot of the South Downs to the north of Eastbourne. "However the proposed Core Strategy is likely to merge the two settlements for the first time on the east side of the A2270. The urban extension designated SD4 extends across land within both PTC and Willingdon and Jevington Parish Council boundaries. PTC is concerned as to exactly where the development is planned, and how it will impact on the separate Councils in Polegate and Willingdon.

Details of Changes to be Made:
Development of SD4 area will force Willingdon and Polegate into one destroying the unique characteristics of each area as acknowledged in paragraph 2.2. and WCS4 + 6.31(1) and WCS4 6.32(2) and WCS4 + 6.31(3)
Details of Reasons for Soundness/ Legal Compliance:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindsland and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:
Paragraph 6.32

Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Paragraph  6.32

Sound  Yes  No  Justified  Effective  Consistent with national policy

Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:
The traffic from the A2270 turning left into the A27 often results in a blockage at Polegate traffic lights. To accommodate any increase in traffic the A27 will need to be made into a dual carriage way. The A2270 in its present form is incapable of taking an increased volume of traffic and maintaining traffic flow. As this is a built up area domestic properties restrict the road being widened. Although 8600 sq metres of employment floorspace is being allowed for at Willingdon this will itself create more traffic requiring access.

Details of Changes to be Made:
Paragraphs 6.21 - 6.30 of the document provide further information to support the Council’s policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accommodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirements of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client’s land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be ‘sound’ in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
The council's comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and wast water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 'Land at South Polegate and East Willingdon' Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:
Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported.

The Honey Farm location at West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

Details of Changes to be Made:
Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.

Details of Reasons for Soundess/ Legal Complaince:
1.1 Paragraph 6.32 is unsound. It highlights risks to delivery of the strategy for Polegate, Willingdon and Stone Cross which are caused by the need for highways infrastructure. It should also highlight the risk to delivery of the urban extenstions because of multiple land ownerships. The potential of ransom situations developing between landowners should be minimised to ensure that the development is integrated and sustainable and can be phased to meet the District's requirements. This should be clearly set out in the Core Strategy so that the Core Strategy is effective by being deliverable. Ransom situations can cause delay to delivery taking control of the phasing away from the Council. Ransoms will also add to some developers costs making sites less viable. This in turn can put at risk infrastructure that must be funded by development. 1.2 For ransom situations between developers to be prevented the forthcoming Strategic Sites DPD should set out that master plans should be prepared for the development of the urban extensions. These should identify highway land that should be dedicated to avoid ransom situations between landowners so that the development parcels can be linked together.

Details of Changes to be Made:
Paragraph 6.32 should be amended with a new sentence after the final sentence to state that: "It is important to ensure that the potential for ransom situations between land owners in the urban extenstions are prevented. this will ensure that the housing requirements of the Core Strategy are deliverd in a phase manner to meet the requirements of the Distieict and that appropriate infrastructure can be delivered when required!.
I have examined the Proposed Submission Core Strategy (PSCS) against the Soundness Tool and found it wanting in terms of justification and effectiveness. The PSCS is a carefully prepared document, well thought out to offer a plan for the future but it does not take full account of the background research and documentation upon which it is based. In particular the proposals to expand Hailsham to the north do not comply with the sustainability or infrastructure objectives for Wealden and the proposals for development to the east and north of Hailsham are contrary to previous WDC research and to current Background Papers. Participation The consultation process has permitted all interested parties to engage but the options for answering have been strictly limited on a Yes or No basis when, in fact, more discursive answers are needed. Research/Fact Finding The content of the PSCS is not permitted all interested parties to engage but the options for answering have been strictly limited on a Yes or No basis when, in fact, more discursive answers are needed.

Details of Reasons for Soundness/ Legal Complaince:

I have examined the Proposed Submission Core Strategy (PSCS) against the Soundness Tool and found it wanting in terms of justification and effectiveness. The PSCS is a carefully prepared document, well thought out to offer a plan for the future but it does not take full account of the background research and documentation upon which it is based. In particular the proposals to expand Hailsham to the north do not comply with the sustainability or infrastructure objectives for Wealden and the proposals for development to the east and north of Hailsham are contrary to previous WDC research and to current Background Papers. Participation The consultation process has permitted all interested parties to engage but the options for answering have been strictly limited on a Yes or No basis when, in fact, more discursive answers are needed. Research/Fact Finding The content of the PSCS is not justified by the evidence, particularly in respect of infrastructure and especially highways and sewerage. Document No 7 Infrastructure Position Statement dated July 2009 refers under (A) Transport to the need to reduce travel distances. The PSCS shows strategic development to North and East Hailsham and towards Hellingly at distances from the town centre of up to 2.2 km. The South Wealden & Eastbourne Transport Study (SWETS) in paragraph 3.29 makes it clear that development for major housing allocations in north and east Hailsham would cause significant traffic pressure. Fewer pinch points and reduced traffic pressure are shown for development south of Hailsham. BP No 11 Infrastructure Delivery Plan defines the highways issue for development to the north and east as ‘CRITICAL’ and states ‘Development is contingent on delivery of this infrastructure’. Regarding sewerage/waste water capacity, as outlined in BP No 11, Hailsham North wastewater works had a consented discharge capacity at 1st Jan 2007 at 2900 dwellings. Hailsham South wastewater works had a capacity of 2400 dwellings at same date. This same document shows infrastructure developments in the Appendix for the North water treatment works is deemed CRITICAL to deliver 1500 dwellings. In the south of Hailsham ‘A scheme is not necessary to deliver the proposed Submission Core Strategy. However a scheme may be required for windfalls of housing and employment development.’ The same Background Paper states under ‘Further Supporting Evidence’: ‘Infrastructure is not necessary to achieve the full allocation of development in Hailsham, Polegate and Stone Cross as shown in the proposed Submission Core Strategy.’ This reliance on ‘massing’ in the north of Hailsham therefore has infrastructure issues which could be avoided by reducing the size of the Strategic Development Areas and spreading the housing to the south of the town. According to the Housing Needs Assessment the greatest number of low income families are located to the south and such development would help to balance with Affordable and mixed housing. The Table at the end of BP 11 sets out water treatment for extant Planning Permissions and completions from April 2006-April 2010 and states that there are capacity issues arising in the north from the Spatial Strategy but not in the south. The Conclusions to BP 11 state that wastewater funding has been secured from Offwat for works in 2012 to increase capacity in the Hailsham area and to undertake a study to investigate other technical solutions. The financial solution would be via appropriate developer contributions. In summary, therefore, according to BP11 there are no capacity issues in South Hailsham providing development is not beyond 2400 houses, less 885 already approved – namely 1515 dwellings in Polegate, , Stonecross and South Hailsham. The Oaklands/Brickfield SHLAA site 100/1310 (224 dwellings) includes an East Sussex County Council approved road scheme to allow capacity for up to 300 dwellings. Landscape In January 2001 WDC prepared the ‘Low Weald Towns Sector Appraisal Landscape’ as part of the Background Papers for the then Local Plan Review. This document is partly incorporated in Background Paper No 6 Green Infrastructure. BP 6 does not include the following relevant paragraph about the landscape around Hailsham: ‘South of Hailsham: ....Urban Influence: On the western side of the sector the urban edge of Hailsham is generally well concealed by woodland often in deep ghylls or valleys. Scattered farms and houses are linked by a network of roads and lanes, the latter often sunk between high overgrown hedges. Horse grazing is common, a reflection of urban pressures, and as a result many of the pastures have the unkempt rather untidy appearance of paddocks. Rough sheds, water troughs and other paraphernalia are common place. ‘..’ Under the heading ‘Sensitivity to Development’ the Landscape Appraisal states: ‘The relatively open aspect of the landscape east of the Cuckmere flood plain makes it sensitive to change by new development and any large scale expansion of the built form beyond the existing urban edge of Hailsham in this location would tend to damage the rural setting of the town. .. ‘ However there is very little scope for additional development on the western edge of the sector without threatening the intrinsic qualities of the landscape and more particularly the rural settings of Hellingly and Horselunges Manor. Importantly the urban influence of Hailsham is hardly noticeable in this reach of the Cuckmere valley apart from some ribbon development along the A271 on the immediate fringes of the town. Any significant expansion of the built form in this location (Hellingly/North Hailsham) would be likely to erode the historic landscape, structure and rural
character of this valuable landscape and irreparably damage the vulnerable gap of countryside between Hailsham and Hellingly.' The Sustainability Appraisal sets out on p 42 the Sustainability Objectives for Wealden. The environmental objectives include: 7. ‘To make the most efficient use of land by prioritising brownfield sites for development, the re-use of existing buildings and promoting higher development densities.’ 11. ‘To conserve, enhance and make accessible for enjoyment the District’s countryside (in particular protecting the best and most versatile agricultural land) landscape, historic and built environment.’ 12. ‘Reduce the need to travel by car and promote alternative methods of transport.’ Development north and east of Hailsham is contrary to all or most of these objectives because it would increase travel distance, increase reliance on motor cars and damage the landscape and countryside, being on greenfield sites. SHLAA site 100/1310 Oaklands & The Brickfield are on a previously developed site, the Brickfield being defined as ‘Brownfield’. Oaklands, being used for business ‘horsy culture’ and not agriculture is also classified as ‘brownfield/previously developed’ under PPS3. Development of these sites south of Hailsham therefore complies with the environmental objectives set out in the Sustainability Appraisal. Alternatives The Council’s chosen approach in the PSCS is therefore not the most appropriate given the reasonable alternatives and it goes against the Background Papers and existing evidence base. It would appear from the PSCS that sustainability considerations have not informed its content from the start. In particular, it is stated at Para 6.30 of the PSCS that the Polegate, Willingdon, Stonecross development of 700 dwellings can only take place when formal road infrastructure is in position. Therefore SD4 is not programmed to start until 2019/20. Similarly, Para 5.16 states that the proposed northern urban extension of Hailsham (SD2 & SD3) cannot occur without infrastructure improvements namely sewerage and roads. Hence SD2 cannot start until 2017 and SD3 until 2021. I would submit that this issue of roads indicates that, by definition, the Strategic Development Areas forming the northern extension of Hailsham towards Hellingly and those in Polegate, Willingdon and Stone cross are unsustainable. The PSCS was initially prepared in its Draft and Consultation forms on the basis of the requirements of the South East Plan. This is now being abandoned and will no longer be valid. Because the Draft Core Strategies and most of the evidence gathering and Background Papers were prepared in accordance with the South East Regional Plan, the current PSCS is probably invalid and I would submit that the Inspector should examine this. Delivery The Council has correctly identified the main issues that the PSCS is seeking to address but does not present a clear vision for Wealden District into the future, only the equivalent of a ‘wish list’ of construction of 400 houses a year and sufficient commercial development for employment. It does not clarify how to achieve this, particularly in respect of infrastructure. The major strategic development north and east of Hailsham introduce an unacceptable risk in the ability to provide the infrastructure. Cross boundary issues have not been adequately addressed. In particular with Mid Sussex District Council and associated County Council Highways liaison for a relief road around East Grinstead. Nor does it address the problems of coalescence between Polegate, Willingdon and Stonecross and Eastbourne Councils, nor does it address the cross boundary issues which will arise with Lewes District Council, particularly in connection with development around Uckfield. The PSCS sets out objectives in terms of construction and development but does not connect these in sufficient detail with the necessary infrastructure. The most obvious gap in the policies is related to transport, in that the entire PSCS is predicated on continued and developing use of motor vehicles, there being no positive action proposed in relation to the Uckfield-Lewes Railway line and only passing mention of the possibility of public transport or reinstated railway from Hailsham southwards to Polegate and Eastbourne. The timescales given in the Plan are governed by the moribund South East Plan and are not realistic, particularly in respect of infrastructure provision and especially given the proposals in the PSCS for development north of Hailsham which will rely on the motor car. This is contrary to Spatial Planning Objective 7. Currently the Strategic Development Areas SD2, SD3, SD4, SD6 & SD7 are all undeliverable as set out in Paras 3.16, 6.19 & 6.31 due to lack of existing highways infrastructure. This amounts to 2650 dwellings which cannot be delivered. Flexibility It is not clear whether the PSCS will be flexible enough to respond to a variety of, or unexpected changes in, circumstances, whether environmental, political or economic. Currently there is no clear plan for updating it. It cannot be very flexible because of the infrastructure constraints in Wealden District. Summary The PSCS does not explain how its key policy objectives will be achieved because it is based on the South East Plan which is being abolished. Most of the supporting documents are also based around the South East Plan and pre-date its abolition. The proposals for Strategic Development housing north and east of Hailsham and in Polegate, Willingdon & Stonecross are all undeliverable because of lack of highways infrastructure and, in the north, due to lack of sewerage capacity. These proposals therefore contradict Wealden’s own sustainability and environmental objectives. The PSCS does not take proper account of some sites in the SHLAA which are recognised as suitable and which meet sustainability objectives better than those selected for ‘Strategic Development’. The Oaklands and Brickfield site south of Hailsham (SHLAA 100/1300; 224 dwellings) is largely on previously-developed (brownfield) land and has a highways scheme for the Ersham Road roundabout agreed with East Sussex County Council and should be included in the SDAs to the exclusion of less suitable development. It meets the Hailsham Sustainability Objectives, being a local Urban Extension within walking distance of Hailsham town centre and offering proximity to open space, woodland and biodiversity – at a scale capable of delivering up to 224 dwellings with minimum impact on infrastructure and environmental amenity. This PSCS has given careful consideration to the issues within the Wealden area but falls short of achieving deliverability because of a decision to favour massing over locality, with all the consequent risks involved in reliance on a minimum number of SDAs and with an intention to release more greenfield sites than is compliant with government recommendations. I welcome the Review and monitoring procedures inherent in the PSCS but this document is currently unsound.
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Details of Changes to be Made:
Reduction of development volumes in Polegate, Willingdon and Stonecross in favour of urban extensions on the south side of Hailsham to resolve infrastructure constraints.

Paragraph 6.35 to 6.36 – The main concern is that the strategy seeks to emphasise the role of the Pine Grove site for housing as opposed to its retention for employment uses. This is considered contrary to PPS4, PPG13 and results in an ineffective strategy. The solution is to identify more housing to the south and southeast of Crowborough and reinforce the Pine Grove site as being suitable for predominantly employment type uses. The Pine Grove site referred to in this paragraph is considered an important employment area in a highly sustainable location. The reference in the paragraph to ‘no decision being taken on the future use of this site’ means that the strategy is ineffective – it is surely the purpose of the Core Strategy to help direct development to suitable locations. This aside, identifying the site under paragraph 6.36 for high density housing would not be the most effective/appropriate strategy and would be contrary to PPS4, PPG13 and employment protection policies. Whilst some housing may be appropriate, the site should principally be retained for employment type uses. Its retention for mainly employment purposes would help maintain a balanced town centre economy. Its loss to housing would mean that the vitality of the town centre is wholly dependent on retail. This would not maintain a sustainable town centre. A more appropriate and effective strategy will be to identify Pine Grove for mainly employment uses and to reinforce housing to the south and south east of the town. The area of Tubwell Lane referred to here is considered to be contiguous with the built up area and would provide scope for growth and a better defined boundary to the AONB. This approach will require some changes to paragraph 6.35 to 6.36 to give more certainty to the Pine Grove site for employment uses, and to compensate for the reduced housing by amending the Key Diagram and paragraph 6.38.

Details of Changes to be Made:
Amend Key diagram on page 49 to annotate the Pine Grove as ‘primarily employment development’ Amend pink annotation of SD10 to also include areas around Tubwell Lane. Amend paragraph 6.38 to reduce the anticipated housing in the town centre and Pine Grove from 140 to 60 and to increase the number of dwellings at SD10 to 240
1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low. However there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. 2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well used. By comparison, Hailsham, where much the largest housing allocations are proposed, does not have a railway service at all, as well as reatatively limited bus links. The location of Crowborough’s railway station is no justification for suggesting that the town is less suited to new development. 3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead aned Uckfield however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London using the train service. This is a sustainable form of living and working which the Council has made no reference to. 4. The Council states that “the employment centres in town attract vehicles along unsuitable restricted residential roads”. This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. 5. The need for more employment in the town and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District. 6. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current level of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations fro Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. 7. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the twon to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900. 8. In this context, the residential provision identified as a contingency urban extension on land north of the A16 should be brought forward for development and not be dependent on progress on other sites. This land is available for development now, it is in a sustainable location and is deliverable. Although within the AONB it can be developed while at the same time preserving its main landscape features. Housing development will not be intrusive into the surrounding landscape and will appear as a logical contained extension to the built up area of the town. In order to illustrate these points two drawings have been appended. One shows the opportunities and constraint that effect the site, and the other is a simple masterplan of how the site might be developed for housing while preserving the tree lines and hedgerows which represent the key landscape features on the site. The site also provides the opportunity to make a direct contribution to the reacreational facilities at the adjoining Goldmsiths Leisure Centre as part of any scheme.

Details of Changes to be Made:
At least 900 new dwellings should be provided at Crowborough (in addition to existing commitments etc.) Land North of the A26 should be identified for development immediately and not be a ‘contingency site’.
Details of Reasons for Soundness/ Legal Compliance:
The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24-year duration, which is less than the current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs for market homes and affordable homes through the allocations proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low, however there is no indication as to what the Council think it should be. there can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. there is no justification for this inconsistent approach. The Council mentions that the railway station is some distance from the town centre. The residents of Crowborough do not all live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is very well used. Hailsham, where the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough's railway station is no justification for suggesting that the town is less suited to new development. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that a significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London, using the train service. This is a sustainable form of living and working which the Council has made no reference to. The Council states the “the employment centres in the town attract vehicles along unsuitable restricted residential roads”. this is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. The need for more employment in the town, and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the attractive landscape around the town. this means that it can deliver housing at a higher and more consistent rate than many other parts of the District.

Details of Changes to be Made:
Figure 9 identifies land for an urban extension to the south east of the town, and for residential development at Jarvis Brook. None of this land is within the AONB, it is well away from the exclusion zone around the Ashdown Forest Special protection Area, and is close to the railway station adn existing employment areas. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.
Details of Reasons for Soundess/ Legal Complaince:
Crowborough Area Strategy (paragraphs 6.33 – 6.38: Policy WCS2, Figure 9) 1 The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less that its current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocation figure would need to be significantly higher. 2 It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes.

Details of Changes to be Made:
3 Land that is available and free of constraint is identified in the Council’s SHLAA as a suitable site for allocation and early release (site 095/1110). It can make a material contribution to the higher overall strategic allocation that is required by the town. Unlike many of the town’s potential peripheral sites, it is not within the AONB which is considered to be a material advantage.
Details of Reasons for Soundess/ Legal Complaince:

Policy WCS6 – Rural Area Strategy The main thrust of this Policy, as promoted, is to catalogue Wealden settlements by, apparently, population levels. The result will exclude those falling into ‘Neighbourhood Centres and Unclassified settlements’ and representing the major portion (some 57%) of Wealden District land area, from any meaningful residential housing policy. In categorising the various settlements in this way, the district Council ignores the contribution which contained residential development makes to sustaining vibrant rural village communities. In consequence, no less that 27 currently sustainable villages, as recognised in the out going Local Plan, are to be emasculated, preventing all further growth during the period to 2030. The well intentioned and avowed aim of protecting the countryside is acknowledged. However, the abdication of its responsibilities is not an option open to the District Council. The direct effect of Policy WSC6 will cause those villages which are to be given this doubtful protection to stagnate and decay into geriatric dormitories. If this Policy is adopted there can be no interaction for the moribund local communities it creates, through the intake of younger people. The District Council will cite proposed Policy WCS 9, )Rural exception affordable housing), as a source of local housing, in defending the path they have chosen to pursue. Experience has shown that ‘exception’ housing policies, as entombed in successive Adopted local plans and applied first through housing associations (HAs), then through registered social landlords (RSLs) and more recently, through approved landlords (ALs), have been an almost total failure. The problem is well recognised but never acknowledged by those with the discretion to do something about it. It is this. Any land suitable for ‘exception’ housing is equally suitable for private housing development. Consequently and with no more land being made available, landowners prefer to retain their holdings, rather than support exception housing, which gives a return of about 1% of what their land would be worth for equivalent private housing development. Land can only be built on once!

Details of Changes to be Made:

We consider the deleted development boundaries should be restored to the 27 villages the District Council seeks to emasculate in proposed Policy WCS6. We refer to Q4 above, and to the preamble in paragraph 5 of the 19th October document. The district Council sets out to achieve housing growth of 400 units per annum. It quotes that number of dwellings per annum for a plan period of 18 years, (2012 to 2030), producing some 7200 homes in total. In analysing the figures proffered in Policy WCS 2, (Distribution of Housing Growth 2006 – 2030), these amount to 8000 dwellings in total and include the commitments already in hand for the period 2006 to 2012. However, these earlier commitments are not confirmed by completions. Taking current national housing performance, completions will be well below commitments. The draft Core Strategy seeks to create an imbalance in favour of family housing in the south of the district. This proposed imbalance take nebulous account of realistic employment prospects for those families who are being ‘designed’ into the southern housing. This imbalance restricts numbers in the north, where there is some prospect of local employment, and in the villages where, were it allowed, there are realistic prospects that developments would actually take place. Directing family housing to the south will hardly assist the adjoining Eastbourne District, which is already an area of low employment. In practice, the District Council’s financial liabilities will be further extended. The draft Core Strategy, in further seeking to restrict residential development to ‘towns only’, creates fundamentally unsound policy. The result is likely to be a sluggish take up and completions which will fall short of the targets set. The high cost of implementing recent changes to building regulations, together with general infrastructure requirements, will further constrain housing development. A lack of local employment in the south will promote out commuting and by car on an antiquated road network, given the lack of alternative public transport. We propose that the probable shortfall in housing completions be computed and the result be evenly distributed between the villages being unfairly shorn of their development boundaries. This will off-set the debilitating effect draft Policy WCS6 will otherwise cause to the district, should it be adopted.
Details of Reasons for Soundness/ Legal Compliance:
The roads in the Crowborough area are appalling and the crossing which services three schools around my house now has to be moved dangerously near the mini round about outside the White Heart pub.

Details of Changes to be Made:
1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low. However there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach.

2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well used. By comparison, Hailsham, where much the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough’s railway station is no justification for suggesting that the town is less suited to new development.

3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead aned Uckfield however there is no mention of the number of Crowborough residents that commute to London. It is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London using the train service. This is a sustainable form of living and working which the Council has made no reference to.

4. The Council states that "the employment centres in town attract vehicles along unsuitable restricted residential roads". This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. The need for more employment in the town and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District.

5. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current level of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations fro Crowborough.

6. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher.

7. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.

8. In this context, the residential provision identified as a contingency urban extension on land north of the A16 should be brought forward for development and not be dependent on progress on other sites. This land is available for development now, it is in a sustainable location and is deliverable. Although within the AONB it can be developed while at the same time preserving its main landscape features. Housing development will not be intrusive into the surrounding landscape and will appear as a logical contained extension to the built up area of the town. In order to illustrate these points two drawings have been appended. One shows the opportunities and contraint that effect the site, and the other is a simple masterplan of how the site might be developed for housing while preserving the tree lines and hedgerows which represent the key landscape features on the site. The site also provides the opportunity to make a direct contribution to the recreational facilities at the adjoining Goldsmiths Leisure Centre as part of any scheme.

Details of Changes to be Made:
At least 900 new dwellings should be provided at Crowborough (in addition to existing commitments etc.) Land North of the A26 should be identified for development immediately and not be a ‘contingency site’.

Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Details of Reasons for Soundness/ Legal Complaince:

1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. Paragraph 6.33

Sound ☐ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Compliance:

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:

The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24-year duration, which is less than the current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs for market homes and affordable homes through the allocations proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes.

Details of Changes to be Made:

Figure 9 identifies land for an urban extension to the south east of the town, and for residential development at Jarvis Brook. None of this land is within the AONB, it is well away from the exclusion zone around the Ashdown Forest Special protection Area, and is close to the railway station and existing employment areas. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.
**Details of Reasons for Soundness/ Legal Compliance:**

Crowborough Area Strategy (paragraphs 6.33 – 6.38: Policy WCS2, Figure 9) 1 The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less that its current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocation figure would need to be significantly higher. 2 It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes.

**Details of Changes to be Made:**

3 Land that is available and free of constraint is identified in the Council’s SHLAA as a suitable site for allocation and early release (site 095/1110). It can make a material contribution to the higher overall strategic allocation that is required by the town. Unlike many of the town’s potential peripheral sites, it is not within the AONB which is considered to be a material advantage.
Paragraph 6.33

Details of Reasons for Soundness/ Legal Compliance:

1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low, however there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. 2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of the residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well-used. By comparison, Hailsham, where most the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough’s railway station is no justification for suggesting that the town is less suited to new development. 3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London, using the train service. This is a sustainable form of living and working which the Council has made no reference to. 4. The Council states that “the employment centres in the town attract vehicles along unsuitable restricted residential roads”. This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. 5. The need for more employment in the town, and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the attractive landscape around the town. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District. 6. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 304 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current level of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. 7. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.

Details of Changes to be Made:

At least 900 new dwellings should be provided at Crowborough.
Details of Reasons for Soundness/ Legal Compliance:
The description of Crowborough in these paragraphs is unjustifiably negative. It understates its advantages, potential need for development and the capacity of its existing range of services and infrastructure, including rail connection.

Details of Changes to be Made:
Re-write these paragraphs with a greater emphasis upon the size and importance of Crowborough, its capacity to accommodate development without harm to the AONB or Ashdown Forest SPA and the need to provide new housing and employment to sustain its economic prosperity and make use of its existing infrastructure advantage.
The need for more employment in the town and the significant housing need that exists are clear and should be given of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live. This for future affordable provision to be yielded, the allocated figure would need to be significantly higher. 7. It is that “the employment centres in town attract vehicles along unsuitable restricted residential roads”. This is a Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension strategy and demonstrable proof that the Core Strategy under-provides new housing allocations fro Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. 7. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the twon to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900. 8. In this context, the residential provision identified as a contingency urban extension on land north of the A16 should be brought forward for development and not be dependent on progress on other sites. This land is available for development now, it is in a sustainable location and is deliverable. Although within the AONB it can be developed while at the same time preserving its main landscape features. Housing development will not be intrusive into the surrounding landscape and will appear as a logical contained extension to the built up area of the town. In order to illustrate these points two drawings have been appended. One shows the opportunities and constraint that effect the site, and the other is a simple masterplan of how the site might be developed for housing while preserving the tree lines and hedgerows which represent the key landscape features on the site. The site also provides the opportunity to make a direct contribution to the reacreational facilities at the adjoining Goldsmiths Leisure Centre as part of any scheme.

Details of Changes to be Made:
At least 900 new dwellings should be provided at Crowborough (in addition to existing commitments etc.) Land North of the A26 should be identified for development immediately and not be a ‘contingency site’.
Paragraph 6.34

Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24-year duration, which is less than the current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs for market homes and affordable homes through the allocations proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low, however there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. The Council mentions that the railway station is some distance from the town centre. The residents of Crowborough do not all live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is very well used. Hailsham, where the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough's railway station is no justification for suggesting that the town is less suited to new development. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that a significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London, using the train service. This is a sustainable form of living and working which the Council has made no reference to. The employment centres in the town attract vehicles along unsuitable restricted residential roads". This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. The need for more employment in the town, and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the attractive landscape around the town. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District.

Details of Changes to be Made:

Figure 9 identifies land for an urban extension to the south east of the town, and for residential development at Jarvis Brook. None of this land is within the AONB, it is well away from the exclusion zone around the Ashdown Forest Special protection Area, and is close to the railway station and existing employment areas. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.
Details of Reasons for Soundess/ Legal Compliance:

Officers at Mid Sussex District Council are continuing to work jointly with Wealden in developing and implementing a strategic and co-ordinated approach to protecting the Ashdown Forest SAC/SPA. Work already undertaken between the two Councils has identified a series of measures to limit the impact of new development on the conservation interests of the Ashdown Forest. These measures include new development contributing to an appropriate level of mitigation in the form of providing Suitable Alternative Natural Green Space (SANGS) and support via developer contributions towards the Ashdown Forest Access Management Strategy. This strategy will need to specify measures for the management of visitors to Ashdown Forest in such a way that reduces their impact on the interest features of the designated site and will need be prepared and implemented in association with the conservators of Ashdown Forest, Natural England and other partners. In addition, further joint working will be required to develop and implement on site management measures to reduce nitrogen emissions emanating from the increased number of vehicles using the roads crossing Ashdown Forest. In combination with this, both Councils through their Local Development Frameworks will also need to delivery initiatives to reduce reliance on the motor vehicle, through creating sustainable communities, providing improvements to public transport, cycling and walking facilities. Pollution monitoring on the Forest will be required to assess the effectiveness of these measures. The recognition of this situation in paragraphs 3.22 6.34 and policy SPO1 is welcomed. The recognition within the Core Strategy of the impact on the Ashdown Forest that development within rural villages (such as Forest Road and Danehill) would have is welcomed. The strategy focussing growth at Uckfield, Crowborough, Heathfield and Hailsham and smaller- scale growth at villages within the Wealden District will go some way to minimising the negative impact development would have on the Ashdown Forest, especially in combination with further mitigation measures (such as SANGS).

Paragraph 6.34

Sound  □ Yes □ No  ✓ Justified  ✓ Effective  □ Consistent with national policy

Legally Compliant □ Yes □ No

Details of Reasons for Soundess/ Legal Complaince:

1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low, however there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. 2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of the residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well-used. By comparison, Hailsham, where must the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough’s railway station is no justification for suggesting that the town is less suited to new development. 3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no mention of the number of Crowborough residents that commute into London. it is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London, using the train service. This is a sustainable form of living and working which the Council has made no reference to. 4. The Council states that “the employment centres in the town attract vehicles along unsuitable restricted residential roads”. This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. 5. The need for more employment in the town, and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the attractive landscape around the town. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District. 6. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 304 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current level of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. 7. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.

Details of Changes to be Made:
At least 900 new dwellings should be provided at Crowborough.
### Details of Reasons for Soundess/ Legal Complaince:

Crowborough Area Strategy (paragraphs 6.33 – 6.38: Policy WCS2, Figure 9) 1 The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less that its current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocation figure would need to be significantly higher. 2 It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes.

### Details of Changes to be Made:

3 Land that is available and free of constraint is identified in the Council’s SHLAA as a suitable site for allocation and early release (site 095/1110). It can make a material contribution to the higher overall strategic allocation that is required by the town. Unlike many of the town's potential peripheral sites, it is not within the AONB which is considered to be a material advantage.
Paragraph 6.35 to 6.36 – The main concern is that the strategy seeks to emphasise the role of the Pine Grove site for housing as opposed to its retention for employment uses. This is considered contrary to PPS4, PPG13 and results in an ineffective strategy. The solution is to identify more housing to the south and southeast of Crowborough and reinforce the Pine Grove site as being suitable for predominantly employment type uses. The Pine Grove site referred to in this paragraph is considered an important employment area in a highly sustainable location. The reference in the paragraph to ‘no decision being taken on the future use of this site’ means that the strategy is ineffective – it is surely the purpose of the Core Strategy to help direct development to suitable locations. This aside, identifying the site under paragraph 6.36 for high density housing would not be the most effective/appropriate strategy and would be contrary to PPS4, PPG13 and employment protection policies. Whilst some housing may be appropriate, the site should principally be retained for employment type uses. Its retention for mainly employment purposes would help maintain a balanced town centre economy. Its loss to housing would mean that the vitality of the town centre is wholly dependent on retail. This would not maintain a sustainable town centre. A more appropriate and effective strategy will be to identify Pine Grove for mainly employment uses and to reinforce housing to the south and southeast of the town. The south east of Crowborough, along Tubwell Lane, comprises a mixed area of detached houses, nursery land and nursery buildings. To the south of Tubwell Lane in particular is a cul de sac of houses, a manor house and a variety of other buildings. Although located within the AONB, closer inspection of the landscape quality indicates that this area is not as attractive as areas further to the south and so could be identified within the southeast quadrant of housing growth identified in the Core Strategy. The area of Tubwell Lane referred to here is considered to be contiguous with the built up area and would provide scope for growth and a better defined boundary to the AONB. This approach will require some changes to paragraph 6.35 to 6.36 to give more certainty to the Pine Grove site for employment uses, and to compensate for the reduced housing by amending the Key Diagram and paragraph 6.38.

Details of Changes to be Made:
Change 6.35 The Council currently locates one of its offices at a central strategically located site at Pine Grove, shared with the County Library Service. A decision has been made to transfer staff to its Hailsham campus. This is likely to take place within the first five years of the plan. The Pine Grove site should principally be used for employment type uses in the B1 category with only a small proportion for residential uses. Such a strategy would ensure that the centre maintains vitality and viability but also would be compliant with National Policies. No other suitable employment land has been identified within the Crowborough area and so its use for principally employment type uses is very important.
6. The need for more employment in the town and the significant housing need that exists are clear and should be given much weight. What should be taken into account is the stronger housing market that in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live. This is a sustainable form of living and working which the Council has made no reference to. 4. The Council states "the employment centres in town attract vehicles along unsuitable restricted residential roads". This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. 5. The need for more employment in the town and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District. 6. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current level of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations from Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. 7. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900. 8. In this context, the residential provision identified as a contingency urban extension on land north of the A16 should be brought forward for development and not be dependent on progress on other sites. This land is available for development now, it is in a sustainable location and is deliverable. Although within the AONB it can be developed while at the same time preserving its main landscape features. Housing development will not be intrusive into the surrounding landscape and will appear as a logical contained extension to the built up area of the town. In order to illustrate these points two drawings have been appended. One shows the opportunities and constraint that effect the site, and the other is a simple masterplan of how the site might be developed for housing while preserving the tree lines and hedgerows which represent the key landscape features on the site. The site also provides the opportunity to make a direct contribution to the reacreational facilities at the adjoining Goldsmiths Leisure Centre as part of any scheme.

Details of Changes to be Made:
At least 900 new dwellings should be provided at Crowborough (in addition to existing commitments etc.) Land North of the A26 should be identified for development immediately and not be a ‘contingency site’.
Paragraph 6.35

Details of Reasons for Soundess/ Legal Complaince:
Contrary to the statement at the end of Para 6.35 we contend that the site owned by Servomex, West of Palesgate Lane, (plan attached edged red) is suitable for employment use and that Wealden DC have failed to assess it sufficiently for this use.

Details of Changes to be Made:
A full assessment of the subject site for employment use should be undertaken by Wealden DC to ensure the soundness of its allocation of employment sites. Paragraph 6.35 of the Porposed Submission Core Strategy states that "no other suitable employment land has been identified within the Crowborough Area". In the event that the Servomex site is not allocated for housing I would propose that it is suitable for employment use as an extension of the Millbrook Industrial Estate. The attached extract from the 2008 Employment Land Review would appear to support this view. Such use would also be in accordance with the employment and sustainability policies in paras 2.7, 3.18 and 3.22 of the PSCS.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the
town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable
homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24-year duration, which
is less than the current level of need for affordable homes on their own. This would appear to be a fundamental
flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for
Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will
need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently
required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly
higher. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs for
market homes and affordable homes through the allocations proposed in Policy WCS2. To make the Core
Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new
homes. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either
incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work
in the town is low, however there is no indication as to what the Council think it should be. there can be no doubt
that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is much higher, and yet the
strategy aims to locate far more housing in these settlements than Crowborough. there is no justification for this
inconsistent approach. The Council mentions that the railway station is some distance from the town centre. The
residents of Crowborough do not all live in the town centre, and a very large proportion of them live within easy
walking distance of the railway station. The service is very well used. Hailsham, where the largest housing
allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location
of Crowborough's railway station is no justification for suggesting that the town is less suited to new development.
The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no
mention of the number of Crowborough residents that commute into London. It is not accepted that a significant
number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large
number commute to London, using the train service. This is a sustainable form of living and working which the
Council has made no reference to. the Council states the "the employment centres in the town attract vehicles
along unsuitable restricted residential roads". this is a wholly misleading over-generalisation. Not all existing
employment sites are as inaccessible as suggested. The need for more employment in the town, and the
significant housing need that exists are clear and should be given significant weight. What should be taken into
account is the stronger housing market in the town compared to much of the rest of the district. The fact that it is
close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the
attractive landscape around the town. this means that it can deliver housing at a higher and more consistent rate
than many other parts of the District.

Details of Changes to be Made:
Figure 9 identifies land for an urban extension to the south east of the town, and for residential development at
Jarvis Brook. None of this land is within the AONB, it is well away from the exclusion zone around the Ashdown
Forest Special protection Area, and is close to the railway station adn existing employment areas. In view of all of
these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other
settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the
town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan
period and the number allocated should be at least 900.
Crowborough Area Strategy (paragraphs 6.33 – 6.38: Policy WCS2, Figure 9) 1 The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less that its current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocation figure would need to be significantly higher. 2 It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes.

Details of Changes to be Made:
3 Land that is available and free of constraint is identified in the Council’s SHLAA as a suitable site for allocation and early release (site 095/1110). It can make a material contribution to the higher overall strategic allocation that is required by the town. Unlike many of the town’s potential peripheral sites, it is not within the AONB which is considered to be a material advantage.

Agent ID 102571  Mr Nightingale  Kember Loudon Williams

Paragraph 6.35

Sound ☑ No ☑ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:

1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low, however there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach.

2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of the residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well-used. By comparison, Hailsham, where most of the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough’s railway station is no justification for suggesting that the town is less suited to new development.

3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London, using the train service. This is a sustainable form of living and working which the Council has made no reference to.

4. The Council states that “the employment centres in the town attract vehicles along unsuitable restricted residential roads”. This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. The need for more employment in the town, and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that is in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the attractive landscape around the town. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District.

5. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 304 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current level of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher.

6. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.

Details of Changes to be Made:

At least 900 new dwellings should be provided at Crowborough.
Details of Reasons for Soundess/ Legal Complaince:
The Pine Grove site is not identified for employment uses. The wording of this paragraph needs to make this clear. The lack of any clear future use and timescale of the future of this important, centrally located site is unsatisfactory.

Details of Changes to be Made:
The Plan needs to include a clear Statement of the Council's intentions for the Pine Grove site and the timescale involved. Also the method of addressing the loss of jobs from the Council's relocation needs to be clear.

Details of Reasons for Soundess/ Legal Complaince:
Contrary to the statement at the end of Para 6.35 we contend that the site owned by Servomex, West of Palesgate lane, (Plan attached, Edged Red) is suitable for employment use and that Wealden DC have failed to assess if sufficiently for this use.

Details of Changes to be Made:
A full assessment of the subject site for employment use should be undertaken by Wealden DC to ensure the soundness of its allocation of employment sites.
Paragraph 6.35 to 6.36 – The main concern is that the strategy seeks to emphasise the role of the Pine Grove site for housing as opposed to its retention for employment uses. This is considered contrary to PPS4, PPG13 and results in an ineffective strategy. The solution is to identify more housing to the south and southeast of Crowborough and reinforce the Pine Grove site as being suitable for predominantly employment type uses. The Pine Grove site referred to in this paragraph is considered an important employment area in a highly sustainable location. The reference in the paragraph to ‘no decision being taken on the future use of this site’ means that the strategy is ineffective – it is surely the purpose of the Core Strategy to help direct development to suitable locations. This aside, identifying the site under paragraph 6.36 for high density housing would not be the most effective/appropriate strategy and would be contrary to PPS4, PPG13 and employment protection policies. Whilst some housing may be appropriate, the site should principally be retained for employment type uses. Its retention for mainly employment purposes would help maintain a balanced town centre economy. Its loss to housing would mean that the vitality of the town centre is wholly dependent on retail. This would not maintain a sustainable town centre. A more appropriate and effective strategy will be to identify Pine Grove for mainly employment uses and to reinforce housing to the south and south east of the town. The south east of Crowborough, along Tubwell Lane, comprises a mixed area of detached houses, nursery land and nursery buildings. To the south of Tubwell Lane in particular is a cul de sac of houses, a manor house and a variety of other buildings. Although located within the AONB, closer inspection of the landscape quality indicates that this area is not as attractive as areas further to the south and so could be identified within the southeast quadrant of housing growth identified in the Core Strategy. The area of Tubwell Lane referred to here is considered to be contiguous with the built up area and would provide scope for growth and a better defined boundary to the AONB. This approach will require some changes to paragraph 6.35 to 6.36 to give more certainty to the Pine Grove site for employment uses, and to compensate for the reduced housing by amending the Key Diagram and paragraph 6.38.

Details of Changes to be Made:
6.36 The SHLAA revealed a range of potential housing sites around the town but many of these are within the AONB, or are at locations which did not perform well at Sustainability Appraisal. That said, the Council has identified an area to the south and east of the town suitable for Greenfield housing development. In addition, areas south of Western Road along Tubwell Lane which, although in the AONB are characterized by existing housing development, should be considered as part of the urban extension area identified under SD10. It is recognised that development in this area could potentially add to traffic and congestion problems on the local road network and will need to be subject to a full transport assessment. A reserve location for housing, which performed well in Sustainability Appraisal, is to the north and west of the A26, although this area is within the AONB and detailed landscape and need assessments would be required.
1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low. However there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. 2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well used. By comparison, Hailsham, where much the largest housing allocations are proposed, does not have a railway service at all, as well as realltively limited bus links. The location of Crowborough's railway station is no justification for suggesting that the town is less suited to new development. 3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead aned Uckfield however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London using the train service. This is a sustainable form of living and working which the Council has made no reference to. 4. The Council states that "the employment centres in town attract vehicles along unsuitable restricted residential roads". This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. 5. The need for more employment in the town and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District. 6. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current level of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations fro Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. 7. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the twon to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900. 8. In this context, the residential provision identified as a contingency urban extension on land north of the A16 should be brought forward for development and not be dependent on progress on other sites. This land is available for development now, it is in a sustainable location and is deliverable. Although within the AONB it can be developed while at the same time preserving its main landscape features. Housing development will not be intrusive into the surrounding landscape and will appear as a logical contained extension to the built up area of the town. In order to illustrate these points two drawings have been appended. One shows the opportunities and constraint that effect the site, and the other is a simple masterplan of how the site might be developed for housing while preserving the tree lines and hedgerows which represent the key landscape features on the site. The site also provides the opportunity to make a direct contribution to the reacreational facilities at the adjoining Goldmsiths Leisure Centre as part of any scheme.

**Details of Changes to be Made:**
At least 900 new dwellings should be provided at Crowborough (in addition to existing commitments etc.) Land North of the A26 should be identified for development immediately and not be a ‘contingency site’.
Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24-year duration, which is less than the current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs for market homes and affordable homes through the allocations proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low, however there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. The Council mentions that the railway station is some distance from the town centre. The residents of Crowborough do not all live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is very well used. Hailsham, where the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough's railway station is no justification for suggesting that the town is less suited to new development. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that a significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London, using the train service. This is a sustainable form of living and working which the Council has made no reference to. The Council states the “the employment centres in the town attract vehicles along unsuitable restricted residential roads”. This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. The need for more employment in the town, and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the attractive landscape around the town. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District.

Details of Changes to be Made:
Figure 9 identifies land for an urban extension to the south east of the town, and for residential development at Jarvis Brook. None of this land is within the AONB, it is well away from the exclusion zone around the Ashdown Forest Special protection Area, and is close to the railway station and existing employment areas. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.
Paragraph 6.36

Details of Reasons for Soundess/ Legal Complaince:

1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low, however there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach.

2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of the residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well-used. By comparison, Hailsham, where most the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough’s railway station is no justification for suggesting that the town is less suited to new development.

3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London, using the train service. This is a sustainable form of living and working which the Council has made no reference to.

4. The Council states that “the employment centres in the town attract vehicles along unsuitable restricted residential roads”. This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested.

5. The need for more employment in the town, and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the attractive landscape around the town. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District.

6. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 304 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current level of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher.

7. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.

Details of Changes to be Made:

At least 900 new dwellings should be provided at Crowborough.
Paragraph 6.36

Details of Reasons for Soundness/ Legal Compliance:
Crowborough Area Strategy (paragraphs 6.33 – 6.38: Policy WCS2, Figure 9) 1 The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less that its current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocation figure would need to be significantly higher. 2 It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes.

Details of Changes to be Made:
3 Land that is available and free of constraint is identified in the Council’s SHLAA as a suitable site for allocation and early release (site 095/1110). It can make a material contribution to the higher overall strategic allocation that is required by the town. Unlike many of the town’s potential peripheral sites, it is not within the AONB which is considered to be a material advantage.

Paragraph 6.36

Details of Reasons for Soundness/ Legal Compliance:
The reference to the Council’s Pine Grove site being suitable for housing and a mis of other appropriate uses is misleading. Only housing is definitely identified by the CS policies. A clear statement of the proposed uses for this important site is required and it should be primarily compensatory employment. The suitability of the highway network system to the south of the town to accommodate at least a further 300 dwellings has recently been confirmed by East Sussex County Council

Details of Changes to be Made:
Clarify proposals for the Pine Grove site, including compensatory provision of jobs. Remove or qualify any references to the highway network to the south of the town being a constraint to development.
### Details of Reasons for Soundess/ Legal Complaince:

1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low. However there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. 2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well used. By comparison, Hailsham, where much the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough's railway station is no justification for suggesting that the town is less suited to new development. 3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London using the train service. This is a sustainable form of living and working which the Council has made no reference to. 4. The Council states that "the employment centres in town attract vehicles along unsuitable restricted residential roads". This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. 5. The need for more employment in the town and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District. 6. Paragraph 6.38

Sound ☐ Yes ☑ No ☐ Justified ☑ Effective ☐ Consistent with national policy

Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
Further consideration to alternative sites should be made before allocation of the South East Urban Extension. We would like to propose Brook Farm, High Broom Road, Crowborough as a suitable alternative to development.

Details of Changes to be Made:
All proposed housing allocations should be tested through the publication/ consultation of the Site Allocations DPD before such areas are proposed/ Allocated in the Core Strategy.

Paragraph 6.38

Sound ☐ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy

Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
No housing should be built in Walshes Road or Palesgate Lane until the road transport problems have been properly addressed, by the building of a by-pass of Jarvis Brook and Rotherfield. An independent study of the effects of increased surface water from proposed development sites on existing residential areas should be undertaken and better surface water drainage planned for Jarvis Brook prior to the building of houses at South East Crowbrough (SD10). An area already designated as at risk from flooding.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
The Unit is concerned about the identification of a site in the AONB on the edge of Crowborough adjacent the Goldsmith leisure centre. While acknowledging this is a reserve/contingency identification, it still proposes a major housing site within the AONB which may also compromise the integrity of the AONB boundary in this location.

Details of Changes to be Made:
1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low. However there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. 2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well used. By comparison, Hailsham, where much the largest housing allocations are proposed, does not have a railway service at all, as well as realltively limited bus links. The location of Crowborough's railway station is no justification for suggesting that the town is less suited to new development. 3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead aned Uckfield however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London using the train service. This is a sustainable form of living and working which the Council has made no reference to. 4. The Council states that "the employment centres in town attract vehicles along unsuitable restricted residential roads". This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. 5. The need for more employment in the town and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900. 8. In this context, the residential provision identified as a contingency urban extension on land north of the A16 should be brought forward for development and not be dependent on progress on other sites. This land is available for development now, it is in a sustainable location and is deliverable. Although within the AONB it can be developed while at the same time preserving its main landscape features. Housing development will not be intrusive into the surrounding landscape and will appear as a logical contained extension to the built up area of the town. In order to illustrate these points two drawings have been appended. One shows the opportunities and contraint that effect the site, and the other is a simple masterplan of how the site might be developed for housing while preserving the tree lines and hedgerows which represent the key landscape features on the site. The site also provides the opportunity to make a direct contribution to the reacational facilities at the adjoining Goldsmiths Leisure Centre as part of any scheme.

Details of Changes to be Made:
At least 900 new dwellings should be provided at Crowborough (in addition to existing commitments etc.) Land North of the A26 should be identified for development immediately and not be a 'contingency site'.

Paragraph 6.38

Sound ☑ No ☑ Justified ☑ Effective ☑ Consistent with national policy

Details of Reasons for Soundess/ Legal Complaince:
1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low. However there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. 2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well used. By comparison, Hailsham, where much the largest housing allocations are proposed, does not have a railway service at all, as well as realltively limited bus links. The location of Crowborough's railway station is no justification for suggesting that the town is less suited to new development. 3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead aned Uckfield however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London using the train service. This is a sustainable form of living and working which the Council has made no reference to. 4. The Council states that "the employment centres in town attract vehicles along unsuitable restricted residential roads". This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. 5. The need for more employment in the town and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900. 8. In this context, the residential provision identified as a contingency urban extension on land north of the A16 should be brought forward for development and not be dependent on progress on other sites. This land is available for development now, it is in a sustainable location and is deliverable. Although within the AONB it can be developed while at the same time preserving its main landscape features. Housing development will not be intrusive into the surrounding landscape and will appear as a logical contained extension to the built up area of the town. In order to illustrate these points two drawings have been appended. One shows the opportunities and contraint that effect the site, and the other is a simple masterplan of how the site might be developed for housing while preserving the tree lines and hedgerows which represent the key landscape features on the site. The site also provides the opportunity to make a direct contribution to the reacational facilities at the adjoining Goldsmiths Leisure Centre as part of any scheme.

Details of Changes to be Made:
At least 900 new dwellings should be provided at Crowborough (in addition to existing commitments etc.) Land North of the A26 should be identified for development immediately and not be a ‘contingency site’.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24-year duration, which is less than the current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs for market homes and affordable homes through the allocations proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low, however there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. The Council mentions that the railway station is some distance from the town centre. The residents of Crowborough do not all live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is very well used. Hailsham, where the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough's railway station is no justification for suggesting that the town is less suited to new development. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no mention of the number of Crowborough residents that commute into London. It is not accepted that a significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London, using the train service. This is a sustainable form of living and working which the Council has made no reference to. The fact that it is close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the attractive landscape around the town. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District.

Details of Changes to be Made:
Figure 9 identifies land for an urban extension to the south east of the town, and for residential development at Jarvis Brook. None of this land is within the AONB, it is well away from the exclusion zone around the Ashdown Forest Special protection Area, and is close to the railway station and existing employment areas. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.
Details of Reasons for Soundess/ Legal Complaince:

1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low, however there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. 2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of the residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well-used. By comparison, Hailsham, where must the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough’s railway station is no justification for suggesting that the town is less suited to new development. 3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no mention of the number of Crowborough residents that commute into London. it is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London, using the train service. This is a sustainable form of living and working which the Council has made no reference to. 4. The Council states that “the employment centres in the town attract vehicles along unsuitable restricted residential roads”. This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. 5. The need for more employment in the town, and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the attractive landscape around the town. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District. 6. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 304 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current leve of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. 7. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.

Details of Changes to be Made:

At least 900 new dwellings should be provided at Crowborough.
Details of Reasons for Soundness/ Legal Compliance:

Crowborough Area Strategy (paragraphs 6.33 – 6.38: Policy WCS2, Figure 9) 1 The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less that its current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocation figure would need to be significantly higher. 2 It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes.

Details of Changes to be Made:

3 Land that is available and free of constraint is identified in the Council’s SHLAA as a suitable site for allocation and early release (site 095/1110). It can make a material contribution to the higher overall strategic allocation that is required by the town. Unlike many of the town’s potential peripheral sites, it is not within the AONB which is considered to be a material advantage.

Details of Reasons for Soundness/ Legal Compliance:
Policies to restrain traffic, obtain modal shift in travel, reducing need to travel and improve the experience of non-car travel need to be sharpened and focused. Aspirations for these to happen must have necessary circumstances incorporated into the policies.

Details of Changes to be Made:
Demand management techniques for traffic in Hailsham (6.15) should be included in all the related and equivalent policies. There should be a definite commitment to traffic reduction measures and targets throughout the Strategy Plan document.
Paragraph 6.38

Details of Reasons for Soundness/Legal Compliance:

Other Issues - Density of Development The Crowborough councillors are concerned about the recent density of development and how it relates to the results of Crowborough's Health Check and subsequent visioning document (Top of the Weald). Both documents stress the state's desire of local people to live in a small town in the countryside with a rural feel. The density of recent developments does not uphold this principle in any way and are severely damaging the character of Crowborough as a small rural town. There is too little space between buildings and inadequate open space within developments to create a sense of linkage with the countryside.

Details of Changes to be Made:

Sound ☐ Yes ☐ No ☐ Justified ☑ Effective ☘ Consistent with national policy
Legally Compliant ☑ Yes ☘ No

Paragraph 6.38

Details of Reasons for Soundness/Legal Compliance:

St Richards Church considers that the scale of growth at Crowborough is insufficient to meet the needs of the town and the areas of deprivation within it. It supports development at Jarvis Brook but considers that a larger development of houses is needed to help to meet the housing needs of the areas and deliver the range of services necessary to support the local population.

Details of Changes to be Made:

Sound ☐ Yes ☑ No ☐ Justified ☑ Effective ☘ Consistent with national policy
Legally Compliant ☑ Yes ☘ No

Paragraph 6.38

Details of Reasons for Soundness/Legal Compliance:

Allocation of Urban Extension SD10 for housing Development in this location would put severe pressure on the wholly inadequate highway infrastructure in this part of Crowborough. Fermor Road and Whitehill are of great concern, but of even greater concern is Western Road. There is no possibility of widening Western Road and any proposal for a one way system would put pressure on even less suitable roads, such as Mount Pleasant. For these reasons, any allocation of housing land which is near to and depends on Western Road is unsound.

**Legally Compliant**
- ☐ Yes
- ☑ No

**Details of Reasons for Soundess/ Legal Compliance:**

Paragraph 6.38 sets out a strategy for Crowborough which is generally supported by Rydon but does not have any clear end objective or critical path. The extent of development envisaged is inadequate and most of the strategy is not founded upon any clear plan or policy and therefore is not capable of monitoring or implementation. The strategy is too vague and is not supported by the other policies of the plan. The proposed level of housing provision will not, contrary to the statement at 6.38, provide for housing demand and need.

**Details of Changes to be Made:**

Re-write the strategy for Crowborough with more meaningful objectives that are better supported by the evidence base and will be more effective in addressing the need to take advantage of the development potential of the town and ensure its future economic prosperity whilst also meeting local and wider housing needs.

"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Paragraph 6.38. Amend to reflect increased housing requirement. The increase is small and can be met at existing sites by increasing density.

**Details of Changes to be Made:**

REVISION SOUGHT Increase total number of new dwellings to 450. Increase SD8 and SD9 provision to 210 and increase SD10 to 240.
Sound ☐ Yes ☑ No ☑ Justified ☐ Effective ☑ Consistent with national policy
Legally Compliant ☐ Yes ☑ No

Details of Reasons for Soundess/ Legal Complaince:

1. The Core Strategy is not legally compliant and is unsound because of its proposals for an urban extension to the north west of Heathfield (Strategic Development Area SD11). 2. Whilst the principle of accommodating housing growth in the broad location of north west Heathfield is supported, the Core Strategy's proposals are deficient because they: (a) fail to take a comprehensive approach to the development of this area and so are not founded on a robust and credible evidence base and are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the soundness test in paragraph 4.36 of PPS12 that they are “justifiable”. (b) constitute an unjustified encroachment into the High Weald AONB and so are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12 and also the soundness test in paragraph 4.52 of PPS12 that they are “consistent with national policy”. Paragraph 16(v) of PPS7 requires the Council in preparing the Core Strategy to “conserve…sites of landscape…value, in accordance with statutory designations”. Paragraph 22(ii) of PPS7 requires that “major developments” should only take place within the AONB after “the most rigorous examination” and an assessment of “the scope for developing elsewhere outside the designated area or meeting the need for it in some other way”. The Council has failed to properly assess the scope for meeting the need for development on previously developed land at north west Heathfield that is not in the AONB. (c) utilise less accessible and less sustainable land and so are not the most appropriate strategy when considered against reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12. (d) fail to provide adequate safeguarding of amenities of existing dwellings (if those dwellings are to be excluded from the urban extension as currently proposed) and fail to integrate into the existing urban form, thus failing the soundness test in paragraph 4.52 of PPS12 that the proposals are consistent with national policy. Paragraph 34 of PPS1 and paragraph 13 of PPS3 require the Council to reject design which is “inappropriate in its context” and paragraph 35 of PPS1 requires development to be designed so that it will be “integrated into the existing urban form and the natural and built environments”. THE PROPOSED SUBMISSION CORE STRATEGY 3. We object to the following parts of the Core Strategy. Because the objections are interconnected, we have set out all the relevant matters in this response, although this particular objection only relates to the specific part of the Core Strategy identified in our response to Q1 above. Our objections are as follows: (i) The omission from Spatial Planning Objective SPO1 of any reference to minimising the loss of nationally designated landscapes, including the High Weald AONB. Paragraph 16(v) of PPS7 requires the Council to conserve the AONB and since it is clear that the Council is proposing to meet part of the District’s development needs by using land within the AONB, the Council should establish a clear objective that only the minimum AONB land should be used for this purpose and wherever possible non-AONB land should be used in preference. (ii) The reference in Policy WCS2 to the broad locations for housing development being shown as insets on the Key Diagram. We object to the inset for Heathfield in relation to the way it shows the proposal SD11 and consequently object to this reference to that inset plan in Policy WCS2. (iii) The reference in Policy WCS4 to SD11: Land at North West of Heathfield. We object to the way that SD11 is described in Chapter 6 of the Core Strategy and shown on the Key Diagram and as a result object to the reference to SD11 in Policy WCS4. (iv) The omission from paragraph 5.8 of any aim to maximise the use of previously developed land in meeting existing and future housing needs. Notwithstanding the recent changes to PPS3 it remains a national objective to prioritise the use of previously developed land, in accordance with paragraph 21 of PPS1 and paragraph 40 of PPS3. (v) The reference in paragraph 6.40 to the identification of potential sites for housing “through the SHLAA”. We object to the inclusion of Site 155/1210 in its current form as shown in the SHLAA and consequently object to this reference to that site in paragraph 6.40. (vi) The reference in paragraph 6.41 to the “most suitable location” being “within the AONB” and that this land could be developed “without strategic adverse impact on the landscape”. The Council’s evidence base does not demonstrate that the land within the AONB is more suitable for development than the non-AONB previously developed land on High Street. There is no assessment by the Council of the suitability of this non-AONB land (which includes the objector’s land at Lavender Cottage, High Street, Heathfield, TN21 0UP) and yet it is more suitable than the AONB land, being (i) not subject to a national landscape designation, (ii) previously developed land, (iii) within the existing settlement boundary, and (iv) well related and integrated into the urban area and existing transport connections. In addition, the Council’s evidence base does not show that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of 2 adjacent SHLAA sites at north west Heathfield (Site 155/1210 with a capacity of 123 dwellings at 40 dph and Site 307/1210 with a capacity of 35 dwellings at 35 dph). The Council’s Landscape Character Assessment (February 2009) shows at Figure 5 that large parts of these...
SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. (vii) The reference in paragraph 6.41 to the release of AONB land being justified “as no suitable alternative non-AONB location exists”. The Council’s evidence base does not substantiate this assertion. The Council has not assessed the suitability of the non-AONB land in this location which fronts High Street (including the objectors’ land at Lavender Cottage). This non-AONB land is within the settlement limits of Heathfield as identified on the Proposals Map of the saved Local Plan and paragraph 6.48 of the Core Strategy confirms that within development boundaries “the principle of development is acceptable”. The principle of redeveloping this land to provide more intensive residential development has already been accepted by the Council, with the grant of planning permissions at Brackenside (WD/08/0329) for 3 dwellings in place of 1 dwelling, and at Oaksdown/Lowlands (WD/2011/0400) for 9 apartments in the place of 2 dwellings. The more intensive development of the non-AONB land on the High Street frontage would minimise (or may even remove) the need for the use of AONB land. This option would plainly be a more suitable alternative than the use only of land “within the AONB” as proposed in the Core Strategy. (viii) The reference in paragraph 6.41 to “no suitable alternative contingency land is available”. The land at Oaksdown/Lowlands is available for development (as confirmed by the recent renewal of planning permission). The objectors’ land at Lavender Cottage is available for development (and this has been made known to the Council since at least August 2010). The land at Woodhatch is relied on as being available for development in order to provide the access for SHLAA site 155/1210. The objectors understand that the land at Holmhurst could be made available for development. Thus, there is a continuous frontage of 5 plots of non-AONB land available (all with generous areas of garden land, most of which is excluded from the AONB) just on this part of the High Street. Were the Council to actively promote a comprehensive redevelopment of this area it is likely that other land in the vicinity would be made available. However, the Council has simply failed in its evidence base to assess this option. If it is necessary to identify contingency land then the hinterland of AONB land should be identified as contingency land, with priority being given to the development of the non-AONB land on the High Street frontage. Prioritising that land would be consistent with the policy objectives of minimising the loss of AONB land and maximising the use of previously developed land. (ix) The reference in paragraph 6.42 item 3 to SD11 being “on land adjacent to the urban area”. The proposal for SD11 should not be defined in a way which excludes the urban area and which focuses only on land within the AONB. The proposal should embrace the urban area and the development should maximise the use of previously developed land in the urban area to achieve the provision of 160 dwellings before any consideration is given to the use of land in the AONB. (x) Figure 10 Heathfield Area Strategy. This diagram shows SD11 as located within the AONB and beyond the existing settlement. The diagram should not exclude the inclusion of the existing built up area in this location within the scope of SD11. The built up area has the potential and the capacity to be redeveloped and this aim should be the first priority at north west Heathfield. (xi) Key Diagram: the inset for Heathfield. The inset shows Heathfield and Proposal SD11 in the same way that they are shown on Figure 10 and they are not acceptable for the same reason set out at (x) above. 4. We now propose to elaborate on these objections. Piecemeal not comprehensive 5. SD11 takes an opportunistic approach. It utilises substantial areas of greenfield land as the main development areas (and by implication from the SHLAA one existing property simply as a means of access). Although the SHLAA indicates that Site 155/1210 is in multiple ownerships and Site 307/1210 is owned by a company with 7 shareholders, the choice of this location seems to be influenced simply by the fact that these 2 sites were promoted in the SHLAA and so it is assumed they are available. Site 155/1210 is said to be under the control of a housing developer. We are not aware whether the Council has seen the terms of any option or other legal agreement giving such control but, given that the Proposed Submission Core Strategy is a long term strategy to 2030 and its trajectory does not anticipate the site coming forward before 2015/16, little weight can be given to the status of any current contractual arrangements. 6. Any sensible spatial planning approach to the development of this area would not look at the sites promoted in the SHLAA in isolation but would look to see how that development would relate to its local context and how it would relate to the settlement it is intended to form a part of. 7. The site of SD11 is on sloping ground set back behind existing development which separates the site from the rest of Heathfield. Development as proposed will not integrate the development with its local context as required by paragraph 35 of PPS1. Nor will it maximise the opportunities for the site to benefit from clear and easy links to the facilities in the local service centre by non-car modes. 8. A comprehensive approach would look at the whole of the area in this north western part of Heathfield and then seek to identify the land which is most suited to development. It is common sense that this would start by looking at the land with the best links by foot, cycle, and public transport to the rest of the settlement. That is of course the frontage land along Heathfield Road/High Street itself. The frontage land also contains the previously developed land comprising the existing dwellings and their various outbuildings. Whilst the recent revisions to PPS3 have removed garden land from the definition of previously developed land, the footprint of the buildings and their associated driveways and hardstandings clearly have a higher priority for development than a greenfield meadow. 9. The present objectors, as the owners of Lavender Cottage, are willing to make their land available as part of a wider development. The objectors have made this known to the Council since at least August 2010. The principle of redevelopment for more intensive residential development has already been established on land to the wets (WD/08/0329) and on the adjoining site.
to the east of Lavender Cottage (WD/2011/0400). Although planning permission was granted for a block of flats (WD/2008/0276), that development has not come forward and the permission has recently had to be renewed. Clearly, the land is available for development, even if the form of development is not at present attractive to the market. We understand that the owner of the adjoining plot at Holmhurst would be prepared to make that site available. Woodhatch is relied on as available in the SHLAA (Site 155/1210 refers). Thus there is already a substantial amount of the frontage land which is available for development. A spatial approach to the planning of this area would look to utilise this developed frontage land, which plainly has development potential, before turning to the undeveloped hinterland to the rear. Unjustified Encroachment into the AONB 10. The Proposed Submission Core Strategy recognises that SD11 lies within the AONB, where there is strict control over new development. Paragraph 22 of PPS7 is clear that major development in the AONB requires “the most rigorous examination” and that such development should only be accepted after assessment of the scope for meeting the need elsewhere. Under the GDMO 2010 “major development” is a development of 10 or more dwellings. Under the Secretary of State’s arrangements for the recovery of appeals on the basis that they are large/controversial, the threshold is 150 residential units. On either basis, a development of 160 dwellings is major development. In any event, the Council has accepted in the SHLAA that “there is a requirement to demonstrate development is essential to meet local needs and that other more suitable sites do not exist elsewhere” (Site 155/1210). The claimed rationale for the use of AONB land in this case is that “no suitable alternative non-AONB location exists”. This is patently incorrect. As already noted, the frontage land is not within the AONB and if the desire is to achieve a development of some 160 dwellings there can be no justification for taking more AONB land than is absolutely necessary when there is non-AONB land in the same location which is available. 11. Whilst it may be doubtful that the frontage land which is known to be available could alone accommodate the full scale of the development sought, the need to encroach into the AONB would be very much reduced if the frontage land was used first. Such an approach would also enable the lower (and least accessible) parts of the meadow to be retained as open land, potentially providing a better buffer with the important woodland at Tilsmore Wood that makes up such a key component of the Wealden character. The need for such a buffer is recognised in the Landscape Character Assessment (Figure 5). In addition, if the Council made it clear that it was promoting the comprehensive development of the area, it is likely that other owners would also wish to make their land available, and the Council may therefore be able to avoid encroaching into the AONB to any material degree. 12. The Council’s claim that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape is not supported by the evidence base. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of the 2 adjacent SHLAA sites:Site 155/1210 and Site 307/1210. As already noted, the Council’s Landscape Character Assessment shows (Figure 5) that large parts of these SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. Using Less Accessible and Less Sustainable Land 13. Similar considerations in terms of minimising the amount of AONB land apply in relation to accessibility issues. The lower parts of the sloping meadow land are not only more remote by simple distance from the footways and bus route along Heathfield Road/High Street, there is also the fact that journeys from home will inevitably be uphill for residents of that area. There will therefore be a disinclination to use non-car modes for accessing local services, even if they might appear to be within walking distance. It must also be doubted whether much of the hinterland is within the preferred 400m distance for access to a bus route. 14. In contrast, the frontage development is already connected to existing pedestrian routes by the adjacent footways and there is only a shallow fall in the land closest to the roadside. Accessibility to the bus route is also much improved. 15. Again, on any sensible measure of accessibility and sustainability, it cannot make sense to use the more remote hinterland in preference to the frontage land, PPS1 is clear at paragraph 35 that new development needs to be integrated into the urban area and address connectivity issues. The choice of a backland location for SD11 when the more accessible frontage land is available is directly contrary to this guidance Inadequate safeguarding of amenities 16. We have already explained why a comprehensive approach needs to be taken to this area. However, if the Council persists in its piecemeal approach then it is apparent that inadequate consideration has been given to the relationship between the retained frontage properties and the new development to the rear. The existing development is at a very low density and has the established character of a mature residential area, with individual dwellings in spacious plots. 17. The SHLAA indicates a proposed density for the new development of some 40 dwellings per hectare for Site 155/120. This will be substantially different in character and could only be achieved by ensuring a substantial buffer between the 2 very different forms of development. However, this would push the new development further into the AONB and would further separate the new development from the settlement of which it is intended to form a part. Again, there would be a conflict with the advice in PPS1 on integrating the development with the urban area. Soundness Tests 18. It is clear from the objections set out above that the proposals for SD11 are not founded on a robust and credible evidence base, cannot be shown to be the most appropriate strategy when considered against the reasonable alternatives, and are not consistent with national policy in PPS1, PPS3, and PPS7 in several important respects. They therefore fail 2 of the key tests of soundness as set out at paragraph 4.52 of PPS12. Legal Tests 19. These objections also have the consequence that the Council’s failure to properly consider reasonable alternatives to its proposals at
north west Heathfield, and in particular to consider the alternative of an area of growth in this location planned on a comprehensive basis and focused on maximising the use of previously developed land and minimising the use of land within the AONB, has the consequence that the Sustainability Appraisal/Strategic Environmental Assessment that accompanies the Core Strategy is legally deficient and the Core Strategy is consequently not legally compliant with the requirements of either Regulation 5(1) of the Environmental Assessment of Plans and Programmes Regulations 2004 or with the requirements of s.19(5) and s.20(2) Planning & Compulsory Purchase Act 2004. In addition, the same failings, together with the lack of a credible and robust evidence base to support those proposals and the conflicts with national policy mean that the Core Strategy is not “sound” as required by s.20(5)(b) PCPA 2004. 20. The SA/SEA considers, in broad terms, alternative locations for growth at Heathfield as between the north east, north west, and west of the town. However, what it fails to do is to look at reasonable alternatives within the selected north west location. It is no answer for the Council to suggest that this level of detail is a matter for a later DPD because the Core Strategy is already spatially specific that the location of north west Heathfield is an “urban extension” (i.e. an addition) and that it is “within the AONB” (i.e. outside the settlement boundary. The same spatial approach is shown on Figure 10 and on the Inset for the Key Diagram. The Council is not, therefore, able to avoid grappling with the spatial implications of this choice as part of the Core Strategy and testing it against reasonable alternatives. However, it is clear that this is not an exercise that has been attempted in the SA/SEA. 21. The Council will be well aware from the recent decision in Save Historic Newmarket Ltd v Forest Heath District Council [2011] EWHC 606 (Admin) that a failure in the SA/SEA to give proper consideration to identification and assessment of reasonable alternatives is likely to result in a quashing of the relevant parts of the Core Strategy. Conclusion 22. For all of these reasons the objectors strongly suggest that neither the Council nor the Inspector should endorse the present proposals for SD11. What is required is a fundamental rethink to achieve an integrated, sustainable and accessible development which minimises the impact on the AONB and provides a comprehensive spatial approach to the development of this area. Essentially this requires the focus to shift from the “easy target” of greenfield meadows to a more considered approach, giving priority to the previously developed frontage land, and only considering the AONB hinterland to the minimum extent necessary to achieve the required dwelling numbers.

Details of Changes to be Made:
Change Figure 10 to remove the red/pink notation and replace it by a red dwellinghouse symbol located within the urban area to the immediate north of the A265, and replace the text annotation by the words “Comprehensive development area at north west Heathfield (SD11) (residential provision)".
Heathfield Area Strategy - SUPPORT 2.47 As set out above, we consider the Strategy for Heathfield is ‘suitable’ and ‘deliverable’ within the context of the Evidence Base. It is both ‘effective’ and ‘justified’ in this respect and therefore a ‘sound’ approach. We support paragraph 6.41 of the CS which identifies growth in North West Heathfield for 160 dwellings. This is supported in pp 68–71 and 94–95 of BP10: Sustainability Appraisal and summarised in pp 59–61 of BP1: Development of the Proposed Submission Core Strategy. 2.48 We consider this approach is ‘sound’, as it is based on the suitability of development sites in this location as identified in the SHLAA. Site specific technical reports/surveys have been undertaken to confirm the Site’s deliverability and potential infrastructure requirements at any subsequent planning application stage. 2.49 We have noted paragraph 6.42 of the CS and the seven point strategy, which seeks to ensure Heathfield continues its role as a Service Centre serving the local community and surrounding area. This strategy has been prepared with regard to the Heathfield and Waldron Parish Council ‘Visioning Document’ as evidenced in pages 13-14 of BP7: Summary of Town Masterplanning Documents. The ‘Visioning Document’ has been prepared with consultation with the local community and businesses. The document was finalised in April 2008 and some elements of the vision, such as town centre improvements, have already been implemented. 2.50 However, it should be noted that the development of 160 dwellings has limited opportunity to deliver all the aspirations as set out in the seven point strategy for the town. It is recognised the site can deliver significant benefits to the town (such as affordable housing, play areas etc), and will provide appropriate mitigation measures against any identified impact. This will be achieved through appropriate S106 Contributions in accordance with Circular 05/2005. It should not be expected that 160 dwellings will deliver all of the aspirations of the town. 2.51 The Heathfield ‘Visioning Document’ is a good example of how ‘emerging’ National Policy under the ‘Localism Bill’ could work. Summertree Estates has met with Members of Heathfield and Waldron Parish Council (January 2011) to discuss the potential development of the Site and the benefits development could bring to the community. As recognised by both the Parish Council and Housing Needs Survey (as evidenced in para 8.29 of BP2: Managing the Delivery of Housing), the delivery of Affordable Housing is considered to be one of the main priorities.

Heathfield Area Strategy Figure 10

Sound  No  Justified  Effective  Consistent with national policy

Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:

1. The Proposed Submission Core Strategy places far too much weight on the "topographical and landscape constraints" that are said to affect the town, and far too little weight on the needs of the town in terms of its future housing and another development. While the A265 passes through the town this is not a constraint. Sites that are suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land will need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the District as a whole are not adequately recognised in the Core Strategy. 2. Additional new housing development would meet the town's known housing needs, as well as making a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. Heathfield need higher levels of new housing to provide more buoyancy in the market and choice for residents which will in turn avoid outward migration from the town and the risk of declining services and social infrastructure. A higher housing allocation will increase the demand for public transport services and future provision and allow the existing service to be maintained and improved. 3. The Council has identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, but it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. 4. The Council has stated in its Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a possible trickle of windfall sites. This cannot be a supportable approach. 5. Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any undue impact on the wider landscape from a sensitively designed development. Similarly land adjoining the eastern settlement boundary has limited visual and landscape constraints which is explained in the submitted Landscape Character and Visual Impact Report. 6. The Core Strategy is unsound as it fails to make sufficient housing provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. paragraph 6.40 states that there is a current need for affordable housing for 112 households. to meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8) a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500+ over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

7. Land to the east of the town has been put forward for inclusion in earlier incarnations of the Core Strategy, principally SHLAA sites 258/1210; and 259/1210 on the norther side of the A265 and additionally SHLAA sites 260/1210; 275/1210 and 299/11210 on the southern side of the A265. The land is available and can deliver highway improvements, new homes, open space and community provision at an early stage in a comprehensive approach. The Core Strategy is simply wrong at paragraph 6.41 where it states that there are no suitable alternative sites available. The above are sites that are demonstrably available and suitable as the submitted supporting reports clearly indicate. This land is favoured by the Parish Council for development and if allocated for in the order of 250 new homes, existing highway constraint would be addressed and contributions secured to provide social and community provision (such as the needed swimming pool identified at paragraph 6.39). This can be achieved at this scale and level of development but would not achieve these objectives at the level proposed in the Core Strategy. New housing at the proposed level will maintain the town's future vitality and economic wellbeing and will help to maintain local services and avoid the prospects of Heathfield being starved of investment and resources in the future, with the very real risk that present services will decline, and for the town to
simply become no more than a commuter town for the larger centres of Tunbridge Wells, Eastbourne and beyond.

Heathfield Area Strategy Figure 10

Sound: ☑ Yes ☐ No ☑ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant: ☑ Yes ☐ No

Details of Reasons for Soundness / Legal Compliance:
The Proposed Submission Core Strategy places far too much weight on the “topographical and landscape constraints” that are said to affect the town, and far too little weight on the needs of the town in terms of its future housing and other development. While the A265 passes through the town this is not a constraint. Sites that are suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land will need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the district as a whole are not properly recognised in the Core Strategy. 2 Additional new housing development would meet the town’s known housing needs, as well as make a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. It will increase the demand for public transport services, and allow the existing service to be maintained and improved. 3 The Council has identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. 4 The Council has stated in is Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a trickle of windfall sites. This cannot be a justifiable approach. 5 Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any undue impact on the wider landscape from a sensitively designed development. 6 In addition, this figure excludes land to the west of the area identified for an urban extension that is not in the AONB. The land at Tilsmore lodge is accessible, and visually and physically well-contained. Any urban extension to the north of the A265 should include this land. 7 The Core Strategy is unsound as it fails to make sufficient housing provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. Paragraph 6.40 states that there is a current need for affordable housing for 112 households. To meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8), a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static, there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500 + over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand.

Details of Changes to be Made:
A minimum of 500 dwellings should be provided at Heathfield, and Figure 10 should be amended to enlarge the area for residential provision to include the land to the west.
### Details of Changes to be Made:

Fig 10 We do not agree with any northward extension to Heathfield into the AONB

Paragraph 6.39
Sound ☐ Yes ☐ No ☑ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The Proposed Submission Core Strategy places far too much weight on the “topographical and landscape constraints” that are said to affect the town, and far too little weight on the needs of the town in terms of its future housing and other development. While the A265 passes through the town this is not a constraint. Sites that are suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land will need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the district as a whole are not properly recognised in the Core Strategy. 2 Additional new housing development would meet the town’s known housing needs, as well as make a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. It will increase the demand for public transport services, and allow the existing service to be maintained and improved. 3 The Council has identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. 4 The Council has stated in is Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a trickle of windfall sites. This cannot be a justifiable approach. 5 Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any undue impact on the wider landscape from a sensitively designed development. 6 In addition, this figure excludes land to the west of the area identified for an urban extension that is not in the AONB. The land at Tilsmore lodge is accessible, and visually and physically well-contained. Any urban extension to the north of the A265 should include this land. 7 The Core Strategy is unsound as it fails to make sufficient housing provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. Paragraph 6.40 states that there is a current need for affordable housing for 112 households. To meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8), a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static, there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500 + over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand.

Details of Changes to be Made:
A minimum of 500 dwellings should be provided at Heathfield, and Figure 10 should be amended to enlarge the area for residential provision to include the land to the west.
1. The Core Strategy is not legally compliant and is unsound because of its proposals for an urban extension to the north west of Heathfield (Strategic Development Area SD11). 2. Whilst the principle of accommodating housing growth in the broad location of north west Heathfield is supported, the Core Strategy’s proposals are deficient because they: (a) fail to take a comprehensive approach to the development of this area and so are not founded on a robust and credible evidence base and are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the soundness test in paragraph 4.36 of PPS12 that they are “justifiable”. (b) constitute an unjustified encroachment into the High Weald AONB and so are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12 and also the soundness test in paragraph 4.52 of PPS12 that they are “consistent with national policy”. Paragraph 16(v) of PPS7 requires the Council in preparing the Core Strategy to “conserve…sites of landscape…value, in accordance with statutory designations”. Paragraph 22(ii) of PPS7 requires that “major developments” should only take place within the AONB after “the most rigorous examination” and an assessment of “the scope for developing elsewhere outside the designated area or meeting the need for it in some other way”. The Council has failed to properly assess the scope for meeting the need for development on previously developed land at north west Heathfield that is not in the AONB. (c) utilise less accessible and less sustainable land and so are not the most appropriate strategy when considered against reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12. (d) fail to provide adequate safeguarding of amenities of existing dwellings (if those dwellings are to be excluded from the urban extension as currently proposed) and fail to integrate into the existing urban form, thus failing the soundness test in paragraph 4.52 of PPS12 that the proposals are consistent with national policy. Paragraph 34 of PPS1 and paragraph 13 of PPS3 require the Council to reject design which is “inappropriate in its context” and paragraph 35 of PPS1 requires development to be designed so that it will be “integrated into the existing urban form and the natural and built environments”. THE PROPOSED SUBMISSION CORE STRATEGY 3. We object to the following parts of the Core Strategy. Because the objections are interconnected, we have set out all the relevant matters in this response, although this particular objection only relates to the specific part of the Core Strategy identified in our response to Q1 above. Our objections are as follows: (i) The omission from Spatial Planning Objective SPO1 of any reference to minimising the loss of nationally designated landscapes, including the High Weald AONB. Paragraph 16(v) of PPS7 requires the Council to conserve the AONB and since it is clear that the Council is proposing to meet part of the District’s development needs by using land within the AONB, the Council should establish a clear objective that only the minimum AONB land should be used for this purpose and wherever possible non-AONB land should be used in preference. (ii) The reference in Policy WCS2 to the broad locations for housing development being shown as insets on the Key Diagram. We object to the inset for Heathfield in relation to the way it shows the proposal SD11 and consequently object to this reference to that inset plan in Policy WCS2. (iii) The reference in Policy WCS4 to SD11: Land at North West of Heathfield. We object to the way that SD11 is described in Chapter 6 of the Core Strategy and shown on the Key Diagram and as a result object to the reference to SD11 in Policy WCS4. (iv) The omission from paragraph 5.8 of any aim to maximise the use of previously developed land in meeting existing and future housing needs. Notwithstanding the recent changes to PPS3 it remains a national objective to prioritise the use of previously developed land, in accordance with paragraph 21 of PPS1 and paragraph 40 of PPS3. (v) The reference in paragraph 6.40 to the identification of potential sites for housing “through the SHLAA”. We object to the inclusion of Site 155/1210 in its current form as shown in the SHLAA and consequently object to this reference to that site in paragraph 6.40. (vi) The reference in paragraph 6.41 to the “most suitable location” being “within the AONB” and that this land could be developed “without strategic adverse impact on the landscape”. The Council’s evidence base does not demonstrate that the land within the AONB is more suitable for development than the non-AONB previously developed land on High Street. There is no assessment by the Council of the suitability of this non-AONB land (which includes the objector’s land at Lavender Cottage, High Street, Heathfield, TN21 0UP) and yet it is more suitable than the AONB land, being (i) not subject to a national landscape designation, (ii) previously developed land, (iii) within the existing settlement boundary, and (iv) well related and integrated into the urban area and existing transport connections. In addition, the Council’s evidence base does not show that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of 2 adjacent SHLAA sites at north west Heathfield (Site 155/1210 with a capacity of 123 dwellings at 40 dph and Site 307/1210 with a capacity of 35 dwellings at 35 dph). The Council’s Landscape Character Assessment (February 2009) shows at Figure 5 that large parts of these...
SHLAA sites are required to be retained as open space to provide a "landscape buffer" to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. (vii) The reference in paragraph 6.41 to the release of AONB land being justified "as no suitable alternative non-AONB location exists". The Council’s evidence base does not substantiate this assertion. The Council has not assessed the suitability of the non-AONB land in this location which fronts High Street (including the objectors’ land at Lavender Cottage). This non-AONB land is within the settlement limits of Heathfield as identified on the Proposals Map of the saved Local Plan and paragraph 6.48 of the Core Strategy confirms that within development boundaries “the principle of development is acceptable”. The principle of redeveloping this land to provide more intensive residential development has already been accepted by the Council, with the grant of planning permissions at Brackenside (WD/08/0329) for 3 dwellings in place of 1 dwelling, and at Oaksdown/Lowlands (WD/2011/0400) for 9 apartments in the place of 2 dwellings. The more intensive development of the non-AONB land on the High Street frontage would minimise (or may even remove) the need for the use of AONB land. This option would plainly be a more suitable alternative than the use only of land “within the AONB” as proposed in the Core Strategy. (viii) The reference in paragraph 6.41 to “no suitable alternative contingency land is available”. The land at Oaksdown/Lowlands is available for development (as confirmed by the recent renewal of planning permission). The objectors’ land at Lavender Cottage is available for development (and this has been made known to the Council since at least August 2010). The land at Woodhatch is relied on as being available for development in order to provide the access for SHLAA site 155/1210. The objectors understand that the land at Holmhurst could be made available for development. Thus, there is a continuous frontage of 5 plots of non-AONB land available (all with generous areas of garden land, most of which is excluded from the AONB) just on this part of the High Street. Were the Council to actively promote a comprehensive redevelopment of this area it is likely that other land in the vicinity would be made available. However, the Council has simply failed in its evidence base to assess this option. If it is necessary to identify contingency land then the hinterland of AONB land should be identified as contingency land, with priority being given to the development of the non-AONB land on the High Street frontage. Prioritising that land would be consistent with the policy objectives of minimising the loss of AONB land and maximising the use of previously developed land. (ix) The reference in paragraph 6.42 item 3 to SD11 being “on land adjacent to the urban area”. The proposal for SD11 should not be defined in a way which excludes the urban area and which focuses only on land within the AONB. The proposal should embrace the urban area and the development should maximise the use of previously developed land in the urban area to achieve the provision of 160 dwellings before any consideration is given to the use of land in the AONB. (x) Figure 10 Heathfield Area Strategy. This diagram shows SD11 as located within the AONB and beyond the existing settlement. The diagram should not exclude the inclusion of the existing built up area in this location within the scope of SD11. The built up area has the potential and the capacity to be redeveloped and this aim should be the first priority at north west Heathfield. (xi) Key Diagram: the inset for Heathfield. The inset shows Heathfield and Proposal SD11 in the same way that they are shown on Figure 10 and they are not acceptable for the same reason set out at (x) above. 4. We now propose to elaborate on these objections. Piecemeal not comprehensive 5. SD11 takes an opportunistic approach. It utilises substantial areas of greenfield land as the main development areas (and by implication from the SHLAA one existing property simply as a means of access). Although the SHLAA indicates that Site 155/1210 is in multiple ownerships and Site 307/1210 is owned by a company with 7 shareholders, the choice of this location seems to be influenced simply by the fact that these 2 sites were promoted in the SHLAA and so it is assumed they are available. Site 155/1210 is said to be under the control of a housing developer. We are not aware whether the Council has seen the terms of any option or other legal agreement giving such control but, given that the Proposed Submission Core Strategy is a long term strategy to 2030 and its trajectory does not anticipate the site coming forward before 2015/16, little weight can be given to the status of any current contractual arrangements. 6. Any sensible spatial planning approach to the development of this area would not look at the sites promoted in the SHLAA in isolation but would look to see how that development would relate to its local context and how it would relate to the settlement it is intended to form a part of. 7. The site of SD11 is on sloping ground set back behind existing development which separates the site from the rest of Heathfield. Development as proposed will not integrate the development with its local context as required by paragraph 35 of PPS1. Nor will it maximise the opportunities for the site to benefit from clear and easy links to the facilities in the local service centre by non-car modes. 8. A comprehensive approach would look at the whole of the area in this north western part of Heathfield and then seek to identify the land which is most suited to development. It is common sense that this would start by looking at the land with the best links by foot, cycle, and public transport to the rest of the settlement. That is of course the frontage land along Heathfield Road/High Street itself. The frontage land also contains the previously developed land comprising the existing dwellings and their various outbuildings. Whilst the recent revisions to PPS3 have removed garden land from the definition of previously developed land, the footprint of the buildings and their associated driveways and hardstandings clearly have a higher priority for development than a greenfield meadow. 9. The present objectors, as the owners of Lavender Cottage, are willing to make their land available as part of a wider development. The objectors have made this known to the Council since at least August 2010. The principle of redevelopement for more intensive residential development has already been established on land to the wets (WD/08/0329) and on the adjoining site.
to the east of Lavender Cottage (WD/2011/0400). Although planning permission was granted for a block of flats (WD/2008/0276), that development has not come forward and the permission has recently had to be renewed. Clearly, the land is available for development, even if the form of development is not at present attractive to the market. We understand that the owner of the adjoining plot at Holmhurst would be prepared to make that site available. Woodhatch is relied on as available in the SHLAA (Site 155/1210 refers). Thus there is already a substantial amount of the frontland which is available for development. A spatial approach to the planning of this area would look to utilise this developed frontage land, which plainly has development potential, before turning to the undeveloped hinterland to the rear. Unjustified Encroachment into the AONB 10. The Proposed Submission Core Strategy recognises that SD11 lies within the AONB, where there is strict control over new development. Paragraph 22 of PPS7 is clear that major development in the AONB requires “the most rigorous examination” and that such development should only be accepted after assessment of the scope for meeting the need elsewhere. Under the GDMO 2010 “major development” is a development of 10 or more dwellings. Under the Secretary of State’s arrangements for the recovery of appeals on the basis that they are large/controversial, the threshold is 150 residential units. On either basis, a development of 160 dwellings is major development. In any event, the Council has accepted in the SHLAA that “there is a requirement to demonstrate development is essential to meet local needs and that other more suitable sites do not exist elsewhere” (Site 155/1210). The claimed rationale for the use of AONB land in this case is that “no suitable alternative non-AONB location exists”. This is patently incorrect. As already noted, the frontage land is not within the AONB and if the desire is to achieve a development of some 160 dwellings there can be no justification for taking more AONB land than is absolutely necessary when there is non-AONB land in the same location which is available. 11. Whilst it may be doubtful that the frontage land which is known to be available could alone accommodate the full scale of the development sought, the need to encroach into the AONB would be very much reduced if the frontage land was used first. Such an approach would also enable the lower (and least accessible) parts of the meadow to be retained as open land, potentially providing a better buffer with the important woodland at Tilsmore Wood that makes up such a key component of the Wealden character. The need for such a buffer is recognised in the Landscape Character Assessment (Figure 5). In addition, if the Council made it clear that it was promoting the comprehensive development of the area, it is likely that other owners would also wish to make their land available, and the Council may therefore be able to avoid encroaching into the AONB to any material degree. 12. The Council’s claim that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape is not supported by the evidence base. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of the 2 adjacent SHLAA sites: Site 155/1210 and Site 307/1210. As already noted, the Council’s Landscape Character Assessment shows (Figure 5) that large parts of these SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. Using Less Accessible and Less Sustainable Land 13. Similar considerations in terms of minimising the amount of AONB land apply in relation to accessibility issues. The lower parts of the sloping meadow land are not only more remote by simple distance from the footways and bus route along Heathfield Road/High Street, there is also the fact that journeys from home will inevitably be uphill for residents of that area. There will therefore be a disinclination to use non-car modes for accessing local services, even if they might appear to be within walking distance. It must also be doubted whether much of the hinterland is within the preferred 400m distance for access to a bus route. 14. In contrast, the frontage development is already connected to existing pedestrian routes by the adjacent footways and there is only a shallow fall in the land closest to the roadside. Accessibility to the bus route is also much improved. 15. Again, on any sensible measure of accessibility and sustainability, it cannot make sense to use the more remote hinterland in preference to the frontage land. PPS1 is clear at paragraph 35 that new development needs to be integrated into the urban area and address connectivity issues. The choice of a backland location for SD11 when the more accessible frontland is available is directly contrary to this guidance Inadequate safeguarding of amenities 16. We have already explained why a comprehensive approach needs to be taken to this area. However, if the Council persists in its piecemeal approach then it is apparent that inadequate consideration has been given to the relationship between the retained frontage properties and the new development to the rear. The existing development is at a very low density and has the established character of a mature residential area, with individual dwellings in spacious plots. 17. The SHLAA indicates a proposed density for the new development of some 40 dwellings per hectare for Site 155/120. This will be substantially different in character and could only be achieved by ensuring a substantial buffer between the 2 very different forms of development. However, this would push the new development further into the AONB and would further separate the new development from the settlement of which it is intended to form a part. Again, there would be a conflict with the advice in PPS1 on integrating the development with the urban area. Soundness Tests 18. It is clear from the objections set out above that the proposals for SD11 are not founded on a robust and credible evidence base, cannot be shown to be the most appropriate strategy when considered against the reasonable alternatives, and are not consistent with national policy in PPS1, PPS3, and PPS7 in several important respects. They therefore fail 2 of the key tests of soundness as set out at paragraph 4.52 of PPS12. Legal Tests 19. These objections also have the consequence that the Council’s failure to properly consider reasonable alternatives to its proposals at
north west Heathfield, and in particular to consider the alternative of an area of growth in this location planned on a comprehensive basis and focused on maximising the use of previously developed land and minimising the use of land within the AONB, has the consequence that the Sustainability Appraisal/Strategic Environmental Assessment that accompanies the Core Strategy is legally deficient and the Core Strategy is consequently not legally compliant with the requirements of either Regulation 5(1) of the Environmental Assessment of Plans and Programmes Regulations 2004 or with the requirements of s.19(5) and s.20(2) Planning & Compulsory Purchase Act 2004. In addition, the same failings, together with the lack of a credible and robust evidence base to support those proposals and the conflicts with national policy mean that the Core Strategy is not “sound” as required by s.20(5)(b) PCPA 2004. 20. The SA/SEA considers, in broad terms, alternative locations for growth at Heathfield as between the north east, north west, and west of the town. However, what it fails to do is to look at reasonable alternatives within the selected north west location. It is no answer for the Council to suggest that this level of detail is a matter for a later DPD because the Core Strategy is already spatially specific that the location of north west Heathfield is an “urban extension” (i.e. an addition) and that it is “within the AONB” (i.e. outside the settlement boundary. The same spatial approach is shown on Figure 10 and on the Inset for the Key Diagram. The Council is not, therefore, able to avoid grappling with the spatial implications of this choice as part of the Core Strategy and testing it against reasonable alternatives. However, it is clear that this is not an exercise that has been attempted in the SA/SEA. 21. The Council will be well aware from the recent decision in Save Historic Newmarket Ltd v Forest Heath District Council [2011] EWHC 606 (Admin) that a failure in the SA/SEA to give proper consideration to identification and assessment of reasonable alternatives is likely to result in a quashing of the relevant parts of the Core Strategy. Conclusion 22. For all of these reasons the objectors strongly suggest that neither the Council nor the Inspector should endorse the present proposals for SD11. What is required is a fundamental rethink to achieve an integrated, sustainable and accessible development which minimises the impact on the AONB and provides a comprehensive spatial approach to the development of this area. Essentially this requires the focus to shift from the “easy target” of greenfield meadows to a more considered approach, giving priority to the previously developed frontage land, and only considering the AONB hinterland to the minimum extent necessary to achieve the required dwelling numbers.

Details of Changes to be Made:
Delete from the first sentence of paragraph 6.40, all words from “although potential sites…” onwards.
The Proposed Submission Core Strategy places far too much weight on the “topographical and landscape constraints” that are said to affect the town, and far too little weight on the needs of the town in terms of its future housing and other development. While the A265 passes through the town this is not a constraint. Sites that are suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land will need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the district as a whole are not properly recognised in the Core Strategy. Additional new housing development would meet the town’s known housing needs, as well as make a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. It will increase the demand for public transport services, and allow the existing service to be maintained and improved. The Council has identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. The Council has stated in is Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a trickle of windfall sites. This cannot be a justifiable approach. Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any undue impact on the wider landscape from a sensitively designed development. In addition, this figure excludes land to the west of the area identified for an urban extension that is not in the AONB. The land at Tilsmore lodge is accessible, and visually and physically well-contained. Any urban extension to the north of the A265 should include this land. The Core Strategy is unsound as it fails to make sufficient housing provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. Paragraph 6.40 states that there is a current need for affordable housing for 112 households. To meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8), a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static, there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500 + over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand. A minimum of 500 dwellings should be provided at Heathfield, and Figure 10 should be amended to enlarge the area for residential provision to include the land to the west.
1. The Proposed Submission Core Strategy places far too much weight on the "topographical and landscape constraints" that are said to affect the town, and far too little weight on the needs of the town in terms of its future housing and other development. While the A265 passes through the town this is not a constraint. Sites that are suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land would need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the District as a whole are not adequately recognised in the Core Strategy. 2. Additional new housing development would meet the town's known housing needs, as well as making a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. Heathfield needs higher levels of new housing to provide more buoyancy in the market and choice for residents which will in turn avoid outward migration from the town and the risk of declining services and social infrastructure. A higher housing allocation will increase the demand for public transport services and future provision and allow the existing service to be maintained and improved. 3. The Council have identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, but it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. 4. The Council has stated in its Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a possible trickle of windfall sites. This cannot be a supportable approach. 5. Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any undue impact on the wider landscape from a sensitively designed development. Similarly land adjoining the eastern settlement boundary has limited visual and landscape constraints which is explained in the submitted Landscape Character and Visual Impact Report. 6. The Core Strategy is unsound as it fails to make sufficient housing provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. paragraph 6.40 states that there is a current need for affordable housing for 112 households. To meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8) a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500+ over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand.

## Details of Changes to be Made:

7. Land to the east of the town has been put forward for inclusion in earlier incarnations of the Core Strategy, principally SHLAA sites 258/1210; and 259/1210 on the norther side of the A265 and additionally SHLAA sites 260/1210; 275/1210 and 299/11210 on the southern side of the A265. The land is available and can deliver highway improvements, new homes, open space and community provision at an early stage in a comprehensive approach. The Core Strategy is simply wrong at paragraph 6.41 where it states that there are no suitable alternative sites available. The above are sites that are demonstrably available and suitable as the submitted supporting reports clearly indicate. This land is favoured by the Parish Council for development and if allocated for in the order of 250 new homes, existing highway constraint would be addressed and contributions secured to provide social and community provision (such as the needed swimming pool identified at paragraph 6.39). This can be achieved at this scale and level of development but would not achieve these objectives at the level proposed in the Core Strategy. New housing at the proposed level will maintain the town’s future vitality and economic wellbeing and will help to maintain local services and avoid the prospects of Heathfield being starved of investment and resources in the future, with the very real risk that present services will decline, and for the town to simply become no more than a commuter town for the larger centres of Tunbridge Wells, Eastbourne and beyond.
Details of Reasons for Soundess/ Legal Complaince:

This comment is an expansion of my earleir comment id 283. I have already set out in another comment (282) that the proposed Core Strategy does not meet the legal requirement of the South East Regional Plan for at least 11,000 new dwellings between 2006 and 2026. Neither does the proposed Core Stragey meet the housing demand predicted by the Office of National Statistics of the need for 16,900 new dwellings between 2006 and 2030. A greater expansion of Heathfield than currently set out would contribute to filling the gap. Specifically regarding the plans for Heathfield. 1. The Core Strategy needs: to include a contingency site for the single site currently proposed; to meet the local demand for affordable housing demonstrated by the current Council waiting list; and also to provide for some of the currently proposed shortfall in new dwellings in Wealden as a whole as set out above. 2. The currently proposed Core Strategy has failed to recognise the social and economic consequences of minimising dwelling allocations to Heathfield just because of its environmental constraints - which is in no way justified. Wealden District Council has had no regard for PPS7 (Sustainable Development in Rural Areas) which provides National Planning Policy on development in AONB locations. 3. In the SHLAA published October 2010, there is a site in Heathfield at Tilsmore off Ghyll Road (site ref 149/1210) suitable to be included for development in the Core Strategy once taking into account points 1 and 2 above. This site was included in an earlier short list because it is very close to Heatfield's schools, shops and recreation. The reasons given for exclusion are related to traffic and the narrowness of some roads but this can be overcome with some minor redesign of the road layout which could be incorporated into the Core Strategy. The demand for new local housing in Heathfield and Wealden as a whole demonstrate that this is an essential local need which outweighs the AONB aspect.

Details of Changes to be Made:

In the SHLAA published October 2010, there is a site in Heathfield at Tilsmore off Ghyll Road (site ref 149/1210) suitable to be included for development in the Core Strategy once taking into account points 1 and 2 above. This site was included in an earlier short list because it is very close to Heatfield's schools, shops and recreation. The reasons given for exclusion are related to traffic and the narrowness of some roads but this can be overcome with some minor redesign of the road layout which could be incorporated into the Core Strategy. The demand for new local housing in Heathfield and Wealden as a whole demonstrate that this is an essential local need which outweighs the AONB aspect.
The Core Strategy is not legally compliant and is unsound because of its proposals for an urban extension to the north west of Heathfield (Strategic Development Area SD11). Whilst the principle of accommodating housing growth in the broad location of north west Heathfield is supported, the Core Strategy’s proposals are deficient because they: (a) fail to take a comprehensive approach to the development of this area and so are not founded on a robust and credible evidence base and are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the soundness test in paragraph 4.36 of PPS12 that they are “justifiable”. (b) constitute an unjustified encroachment into the High Weald AONB and so are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12 and also the soundness test in paragraph 4.52 of PPS12 that they are “consistent with national policy”. Paragraph 16(v) of PPS7 requires the Council in preparing the Core Strategy to “conserve…sites of landscape…value, in accordance with statutory designations”. Paragraph 22(ii) of PPS7 requires that “major developments” should only take place within the AONB after “the most rigorous examination” and an assessment of “the scope for developing elsewhere outside the designated area or meeting the need for it in some other way”. The Council has failed to properly assess the scope for meeting the need for development on previously developed land at north west Heathfield that is not in the AONB. (c) utilise less accessible and less sustainable land and so are not the most appropriate strategy when considered against reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12. (d) fail to provide adequate safeguarding of amenities of existing dwellings (if those dwellings are to be excluded from the urban extension as currently proposed) and fail to integrate into the existing urban form, thus failing the soundness test in paragraph 4.52 of PPS12 that the proposals are consistent with national policy. Paragraph 34 of PPS1 and paragraph 13 of PPS3 require the Council to reject design which is “inappropriate in its context” and paragraph 35 of PPS1 requires development to be designed so that it will be “integrated into the existing urban form and the natural and built environments”. THE PROPOSED SUBMISSION CORE STRATEGY 3. We object to the following parts of the Core Strategy. Because the objections are interconnected, we have set out all the relevant matters in this response, although this particular objection only relates to the specific part of the Core Strategy identified in our response to Q1 above. Our objections are as follows: (i) The omission from Spatial Planning Objective SPO1 of any reference to minimising the loss of nationally designated landscapes, including the High Weald AONB. Paragraph 16(v) of PPS7 requires the Council to conserve the AONB and since it is clear that the Council is proposing to meet part of the District’s development needs by using land within the AONB, the Council should establish a clear objective that only the minimum AONB land should be used for this purpose and wherever possible non-AONB land should be used in preference. (ii) The reference in Policy WCS2 to the broad locations for housing development being shown as insets on the Key Diagram. We object to the inset for Heathfield in relation to the way it shows the proposal SD11 and consequently object to this reference to that inset plan in Policy WCS2. (iii) The reference in Policy WCS4 to SD11: Land at North West of Heathfield. We object to the way that SD11 is described in Chapter 6 of the Core Strategy and shown on the Key Diagram and as a result object to the reference to the proposal to SD11 in Policy WCS4. (iv) The omission from paragraph 5.8 of any aim to maximise the use of previously developed land in meeting existing and future housing needs. Notwithstanding the recent changes to PPS3 it remains a national objective to prioritise the use of previously developed land, in accordance with paragraph 21 of PPS1 and paragraph 40 of PPS3. (v) The reference in paragraph 6.40 to the identification of potential sites for housing “through the SHLAA”. We object to the inclusion of Site 155/1210 in its current form as shown in the SHLAA and consequently object to this reference to that site in paragraph 6.40. (vi) The reference in paragraph 6.41 to the “most suitable location” being “within the AONB” and that this land could be developed “without strategic adverse impact on the landscape”. The Council’s evidence base does not demonstrate that the land within the AONB is more suitable for development than the non-AONB previously developed land on High Street. There is no assessment by the Council of the suitability of this non-AONB land (which includes the objector’s land at Lavender Cottage, High Street, Heathfield, TN21 0UP) and yet it is more suitable than the AONB land, being (i) not subject to a national landscape designation, (ii) previously developed land, (iii) within the existing settlement boundary, and (iv) well related and integrated into the urban area and existing transport connections. In addition, the Council’s evidence base does not show that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of 2 adjacent SHLAA sites at north west Heathfield (Site 155/1210 with a capacity of 123 dwellings at 40 dph and Site 307/1210 with a capacity of 35 dwellings at 35 dph). The Council’s Landscape Character Assessment (February 2009) shows at Figure 5 that large parts of these
SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. (vii) The reference in paragraph 6.41 to the release of AONB land being justified “as no suitable alternative non-AONB location exists”. The Council’s evidence base does not substantiate this assertion. The Council has not assessed the suitability of the non-AONB land in this location which fronts High Street (including the objectors’ land at Lavender Cottage). This non-AONB land is within the settlement limits of Heathfield as identified on the Proposals Map of the saved Local Plan and paragraph 6.48 of the Core Strategy confirms that within development boundaries “the principle of development is acceptable”. The principle of redeveloping this land to provide more intensive residential development has already been accepted by the Council, with the grant of planning permissions at Brackenside (WD/08/0329) for 3 dwellings in place of 1 dwelling, and at Oaksdown/Lowlands (WD/2011/0400) for 9 apartments in the place of 2 dwellings. The more intensive development of the non-AONB land on the High Street frontage would minimise (or may even remove) the need for the use of AONB land. This option would plainly be a more suitable alternative than the use only of land “within the AONB” as proposed in the Core Strategy. (viii) The reference in paragraph 6.41 to “no suitable alternative contingency land is available”. The land at Oaksdown/Lowlands is available for development (as confirmed by the recent renewal of planning permission). The objectors’ land at Lavender Cottage is available for development (and this has been made known to the Council since at least August 2010). The land at Woodhatch is relied on as being available for development in order to provide the access for SHLAA site 155/1210. The objectors understand that the land at Holmhurst could be made available for development. Thus, there is a continuous frontage of 5 plots of non-AONB land available (all with generous areas of garden land, most of which is excluded from the AONB) just on this part of the High Street. Were the Council to actively promote a comprehensive redevelopment of this area it is likely that other land in the vicinity would be made available. However, the Council has simply failed in its evidence base to assess this option. If it is necessary to identify contingency land then the hinterland of AONB land should be identified as contingency land, with priority being given to the development of the non-AONB land on the High Street frontage. Prioritising that land would be consistent with the policy objectives of minimising the loss of AONB land and maximising the use of previously developed land. (ix) The reference in paragraph 6.42 item 3 to SD11 being “on land adjacent to the urban area”. The proposal for SD11 should not be defined in a way which excludes the urban area and which focuses only on land within the AONB. The proposal should embrace the urban area and the development should maximise the use of previously developed land in the urban area to achieve the provision of 160 dwellings before any consideration is given to the use of land in the AONB. (x) Figure 10 Heathfield Area Strategy. This diagram shows SD11 as located within the AONB and beyond the existing settlement. The diagram should not include the inclusion of the existing built up area in this location within the scope of SD11. The built up area has the potential and the capacity to be redeveloped and this aim should be the first priority at north west Heathfield. (xi) Key Diagram: the inset for Heathfield. The inset shows Heathfield and Proposal SD11 in the same way that they are shown on Figure 10 and they are not acceptable for the same reason set out at (x) above. 4. We now propose to elaborate on these objections. Piecemeal not comprehensive 5. SD11 takes an opportunistic approach. It utilises substantial areas of greenfield land as the main development areas (and by implication from the SHLAA one existing property simply as a means of access). Although the SHLAA indicates that Site 155/1210 is in multiple ownerships and Site 307/1210 is owned by a company with 7 shareholders, the choice of this location seems to be influenced simply by the fact that these 2 sites were promoted in the SHLAA and so it is assumed they are available. Site 155/1210 is said to be under the control of a housing developer. We are not aware whether the Council has seen the terms of any option or other legal agreement giving such control but, given that the Proposed Submission Core Strategy is a long term strategy to 2030 and its trajectory does not anticipate the site coming forward before 2015/16, little weight can be given to the status of any current contractual arrangements. 6. Any sensible spatial planning approach to the development of this area would not look at the sites promoted in the SHLAA in isolation but would look to see how that development would relate to its local context and how it would relate to the settlement it is intended to form a part of. 7. The site of SD11 is on sloping ground set back behind existing development which separates the site from the rest of Heathfield. Development as proposed will not integrate the development with its local context as required by paragraph 35 of PPS1. Nor will it maximise the opportunities for the site to benefit from clear and easy links to the facilities in the local service centre by non-car modes. 8. A comprehensive approach would look at the whole of the area in this north western part of Heathfield and then seek to identify the land which is most suited to development. It is common sense that this would start by looking at the land with the best links by foot, cycle, and public transport to the rest of the settlement. That is of course the frontage land along Heathfield Road/High Street itself. The frontage land also contains the previously developed land comprising the existing dwellings and their various outbuildings. Whilst the recent revisions to PPS3 have removed garden land from the definition of previously developed land, the footprint of the buildings and their associated driveways and hardstandings clearly have a higher priority for development than a greenfield meadow. 9. The present objectors, as the owners of Lavender Cottage, are willing to make their land available as part of a wider development. The objectors have made this known to the Council since at least August 2010. The principle of redevelopement for more intensive residential development has already been established on land to the wets (WD/08/0329) and on the adjoining site.
to the east of Lavender Cottage (WD/2011/0400). Although planning permission was granted for a block of flats (WD/2008/0276), that development has not come forward and the permission has recently had to be renewed. Clearly, the land is available for development, even if the form of development is not at present attractive to the market. We understand that the owner of the adjoining plot at Holmhurst would be prepared to make that site available. Woodhatch is relied on as available in the SHLAA (Site 155/1210 refers). Thus there is already a substantial amount of the frontage land which is available for development. A spatial approach to the planning of this area would look to utilise this developed frontage land, which plainly has development potential, before turning to the undeveloped hinterland to the rear. Unjustified Encroachment into the AONB 10. The Proposed Submission Core Strategy recognises that SD11 lies within the AONB, where there is strict control over new development. Paragraph 22 of PPS7 is clear that major development in the AONB requires “the most rigorous examination” and that such development should only be accepted after assessment of the scope for meeting the need elsewhere. Under the GDMO 2010 “major development” is a development of 10 or more dwellings. Under the Secretary of State’s arrangements for the recovery of appeals on the basis that they are large/controversial, the threshold is 150 residential units. On either basis, a development of 160 dwellings is major development. In any event, the Council has accepted in the SHLAA that “there is a requirement to demonstrate development is essential to meet local needs and that other more suitable sites do not exist elsewhere” (Site 155/1210). The claimed rationale for the use of AONB land in this case is that “no suitable alternative non-AONB location exists”. This is patentely incorrect. As already noted, the frontage land is not within the AONB and if the desire is to achieve a development of some 160 dwellings there can be no justification for taking more AONB land than is absolutely necessary when there is non-AONB land in the same location which is available. 11. Whilst it may be doubtful that the frontage land which is known to be available could alone accommodate the full scale of the development sought, the need to encroach into the AONB would be very much reduced if the frontage land was used first. Such an approach would also enable the lower (and least accessible) parts of the meadow to be retained as open land, potentially providing a better buffer with the important woodland at Tilsmore Wood that makes up such a key component of the Wealden character. The need for such a buffer is recognised in the Landscape Character Assessment (Figure 5). In addition, if the Council made it clear that it was promoting the comprehensive development of the area, it is likely that other owners would also wish to make their land available, and the Council may therefore be able to avoid encroaching into the AONB to any material degree. 12. The Council’s claim that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape is not supported by the evidence base. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of the 2 adjacent SHLAA sites:Site 155/1210 and Site 307/1210. As already noted, the Council’s Landscape Character Assessment shows (Figure 5) that large parts of these SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. Using Less Accessible and Less Sustainable Land 13. Similar considerations in terms of minimising the amount of AONB land apply in relation to accessibility issues. The lower parts of the sloping meadow land are not only more remote by simple distance from the footways and bus route along Heathfield Road/High Street, there is also the fact that journeys from home will inevitably be uphill for residents of that area. There will therefore be a disinclination to use non-car modes for accessing local services, even if they might appear to be within walking distance. It must also be doubted whether much of the hinterland is within the preferred 400m distance for access to a bus route. 14. In contrast, the frontage development is already connected to existing pedestrian routes by the adjacent footways and there is only a shallow fall in the land closest to the roadside. Accessibility to the bus route is also much improved. 15. Again, on any sensible measure of accessibility and sustainability, it cannot make sense to use the more remote hinterland in preference to the frontage land. PPS1 is clear at paragraph 35 that new development needs to be integrated into the urban area and address connectivity issues. The choice of a backland location for SD11 when the more accessible frontage land is available is directly contrary to this guidance. Inadequate safeguarding of amenities 16. We have already explained why a comprehensive approach needs to be taken to this area. However, if the Council persists in its piecemeal approach then it is apparent that inadequate consideration has been given to the relationship between the retained frontage properties and the new development to the rear. The existing development is at a very low density and has the established character of a mature residential area, with individual dwellings in spacious plots. 17. The SHLAA indicates a proposed density for the new development of some 40 dwellings per hectare for Site 155/120. This will be substantially different in character and could only be achieved by ensuring a substantial buffer between the 2 very different forms of development. However, this would push the new development further into the AONB and would further separate the new development from the settlement of which it is intended to form a part. Again, there would be a conflict with the advice in PPS1 on integrating the development with the urban area. Soundness Tests 18. It is clear from the objections set out above that the proposals for SD11 are not founded on a robust and credible evidence base, cannot be shown to be the most appropriate strategy when considered against the reasonable alternatives, and are not consistent with national policy in PPS1, PPS3, and PPS7 in several important respects. They therefore fail 2 of the key tests of soundness as set out at paragraph 4.52 of PPS12. Legal Tests 19. These objections also have the consequence that the Council’s failure to properly consider reasonable alternatives to its proposals at
north west Heathfield, and in particular to consider the alternative of an area of growth in this location planned on a comprehensive basis and focused on maximising the use of previously developed land and minimising the use of land within the AONB, has the consequence that the Sustainability Appraisal/Strategic Environmental Assessment that accompanies the Core Strategy is legally deficient and the Core Strategy is consequently not legally compliant with the requirements of either Regulation 5(1) of the Environmental Assessment of Plans and Programmes Regulations 2004 or with the requirements of s.19(5) and s.20(2) Planning & Compulsory Purchase Act 2004. In addition, the same failings, together with the lack of a credible and robust evidence base to support those proposals and the conflicts with national policy mean that the Core Strategy is not “sound” as required by s.20(5)(b) PCPA 2004. 20. The SA/SEA considers, in broad terms, alternative locations for growth at Heathfield as between the north east, north west, and west of the town. However, what it fails to do is to look at reasonable alternatives within the selected north west location. It is no answer for the Council to suggest that this level of detail is a matter for a later DPD because the Core Strategy is already spatially specific that the location of north west Heathfield is an “urban extension” (i.e. an addition) and that it is “within the AONB” (i.e. outside the settlement boundary. The same spatial approach is shown on Figure 10 and on the Inset for the Key Diagram. The Council is not, therefore, able to avoid grappling with the spatial implications of this choice as part of the Core Strategy and testing it against reasonable alternatives. However, it is clear that this is not an exercise that has been attempted in the SA/SEA. 21. The Council will be well aware from the recent decision in Save Historic Newmarket Ltd v Forest Heath District Council [2011] EWHC 606 (Admin) that a failure in the SA/SEA to give proper consideration to identification and assessment of reasonable alternatives is likely to result in a quashing of the relevant parts of the Core Strategy. Conclusion 22. For all of these reasons the objectors strongly suggest that neither the Council nor the Inspector should endorse the present proposals for SD11. What is required is a fundamental rethink to achieve an integrated, sustainable and accessible development which minimises the impact on the AONB and provides a comprehensive spatial approach to the development of this area. Essentially this requires the focus to shift from the “easy target” of greenfield meadows to a more considered approach, giving priority to the previously developed frontage land, and only considering the AONB hinterland to the minimum extent necessary to achieve the required dwelling numbers.

Details of Changes to be Made:
Change paragraph 6.41 to read: “The most suitable location for housing lies at the north west of the town where access to the town center is good and bus routes exist. The location includes the existing developed frontage along Heathfield Road/High Street and there is some potential for the use of some of the AONB land to the rear, provided that the use of previously developed land is maximised and the use of AONB land is minimised. A comprehensive approach to development is required to achieve an accessible and sustainable development that is well integrated into the existing settlement and avoids significant adverse impact on the AONB. The release of some AONB land to meet local needs may be justified if the necessary scale of provision cannot be achieved from the previously developed land alone. The AONB land may be identified as a contingency if not all of the previously developed land comes forward.”

Sound  No  Yes  Justified  Effective  Consistent with national policy

Legally Compliant

Details of Reasons for Soundness/ Legal Complaince:

1. The Proposed Submission Core Strategy places far too much weight on the "topographical and landscape constraints" that are said to affect the town, and far too little weight on the needs of the town in terms of its future housing and another development. While the A265 passes through the town this is not a constraint. Sites that are suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land will need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the District as a whole are not adequately recognised in the Core Strategy. 2. Additional new housing development would meet the town's known housing needs, as well as making a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. Heathfield need higher levels of new housing to provide more buoyancy in the market and choice for residents which will in turn avoid outward migration from the town and the risk of declining services and social infrastructure. A higher housing allocation will increase the demand for public transport services and future provision and allow the existing service to be maintained and improved. 3. The Council has identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, but it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. 4. The Council has stated in its Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a possible trickle of windfall sites. This cannot be a supportable approach. 5. Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any undue impact on the wider landscape from a sensitively designed development. Similarly land adjoining the eastern settlement boundary has limited visual and landscape constraints which is explained in the submitted Landscape Character and Visual Impact Report. 6. The Core Strategy is unsound as it fails to make sufficient housing provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. paragraph 6.40 states that there is a current need for affordable housing for 112 households. to meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8) a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500+ over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

7. Land to the east of the town has been put forward for inclusion in earlier incarnations of the Core Strategy, principally SLHAA sites 258/1210; and 259/1210 on the norther side of the A265 and additionally SLHAA sites 260/1210; 275/1210 and 299/11210 on the southern side of the A265. The land is available and can deliver highway improvements, new homes, open space and community provision at an early stage in a comprehensive approach. The Core Strategy is simply wrong at paragraph 6.41 where it states that there are no suitable alternative sites available. The above are sites that are demonstrably available and suitable as the submitted supporting reports clearly indicate. This land is favoured by the Parish Council for development and if allocated for in the order of 250 new homes, existing highway constraint would be addressed and contributions secured to provide social and community provision (such as the needed swimming pool identified at paragraph 6.39). This can be achieved at this scale and level of development but would not achieve these objectives at the level proposed in the Core Strategy. New housing at the proposed level will maintain the town's future vitality and economic wellbeing and will help to maintain local services and avoid the prospects of Heathfield being starved of investment and resources in the future, with the very real risk that present services will decline, and for the town to
Details of Reasons for Soundess/ Legal Complaince:
The Proposed Submission Core Strategy places far too much weight on the “topographical and landscape constraints” that are said to affect the town, and far too little weight on the needs of the town in terms of its future housing and other development. While the A265 passes through the town this is not a constraint. Sites that are suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land will need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the district as a whole are not properly recognised in the Core Strategy. Additional new housing development would meet the town’s known housing needs, as well as make a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. It will increase the demand for public transport services, and allow the existing service to be maintained and improved. The Council has identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. The Council has stated in is Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a trickle of windfall sites. This cannot be a justifiable approach. Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any undue impact on the wider landscape from a sensitively designed development. In addition, this figure excludes land to the west of the area identified for an urban extension that is not in the AONB. The land at Tilsmore lodge is accessible, and visually and physically well-contained. Any urban extension to the north of the A265 should include this land. The Core Strategy is unsound as it fails to make sufficient housing provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. Paragraph 6.40 states that there is a current need for affordable housing for 112 households. To meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8), a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static, there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500 over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand.

Details of Changes to be Made:
A minimum of 500 dwellings should be provided at Heathfield, and Figure 10 should be amended to enlarge the area for residential provision to include the land to the west.
Paragraph 6.41

Details of Reasons for Soundess/ Legal Complaince:

Policies to restrain traffic, obtain modal shift in travel, reducing need to travel and improve the experience of non-car travel need to be sharpened and focused. Aspirations for these to happen must have necessary circumstances incorporated into the policies.

Details of Changes to be Made:

Demand management techniques for traffic in Hailsham (6.15) should be included in all the related and equivalent policies. There should be a definite commitment to traffic reduction measures and targets throughout the Strategy Plan document.

---

Paragraph 6.41

Details of Reasons for Soundess/ Legal Complaince:

The plans for Heathfield need to include a contingency for both the single site currently proposed and also for a greater number of houses to be built to meet local demand evidenced by the Council waiting list for affordable housing. This is particularly required since the Wealden District plan does not currently allow for sufficient new houses to meet the legal requirement nor the expected demand.

Details of Changes to be Made:

There is a suitable site for additional housing at Tilsmore off Ghyll Road, Heathfield within easy walking distance of schools and the town centre shops which was included in the initial SHLAA but was later excluded on the assumption that the road system would remain unchanged over the next 20 years, which is unlikely.

---

Paragraph 6.41

Details of Reasons for Soundess/ Legal Complaince:

The Parish Council understands the constraints against development in Heathfield but consider that the existing allocation of 160 houses may be too small a number to ensure the long-term success and economic vitality of the town. It is considered that the site identified at SD11 could be brought forward in the timetable and that consideration be given to additional means of meeting the existing requirements for affordable housing in the parish.

Details of Changes to be Made:
The Core Strategy is not legally compliant and is unsound because of its proposals for an urban extension to the north west of Heathfield (Strategic Development Area SD11). Whilst the principle of accommodating housing growth in the broad location of north west Heathfield is supported, the Core Strategy’s proposals are deficient because they: (a) fail to take a comprehensive approach to the development of this area and so are not founded on a robust and credible evidence base and are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the soundness test in paragraph 4.36 of PPS12 that they are “justifiable”. (b) constitute an unjustified encroachment into the High Weald AONB and so are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12 and also the soundness test in paragraph 4.52 of PPS12 that they are “consistent with national policy”. Paragraph 16(v) of PPS7 requires the Council in preparing the Core Strategy to “conserve...sites of landscape...value, in accordance with statutory designations”. Paragraph 22(ii) of PPS7 requires that “major developments” should only take place within the AONB after “the most rigorous examination” and an assessment of “the scope for developing elsewhere outside the designated area or meeting the need for it in some other way”. The Council has failed to properly assess the scope for meeting the need for development on previously developed land at north west Heathfield that is not in the AONB. (c) utilise less accessible and less sustainable land and so are not the most appropriate strategy when considered against reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12. (d) fail to provide adequate safeguarding of amenities of existing dwellings (if those dwellings are to be excluded from the urban extension as currently proposed) and fail to integrate into the existing urban form, thus failing the soundness test in paragraph 4.52 of PPS12 that the proposals are consistent with national policy. Paragraph 34 of PPS1 and paragraph 13 of PPS3 require the Council to reject design which is “inappropriate in its context” and paragraph 35 of PPS1 requires development to be designed so that it will be “integrated into the existing urban form and the natural and built environments”. THE PROPOSED SUBMISSION CORE STRATEGY 3. We object to the following parts of the Core Strategy. Because the objections are interconnected, we have set out all the relevant matters in this response, although this particular objection only relates to the specific part of the Core Strategy identified in our response to Q1 above. Our objections are as follows: (i) The omission from Spatial Planning Objective SPO1 of any reference to minimising the loss of nationally designated landscapes, including the High Weald AONB. Paragraph 16(v) of PPS7 requires the Council to conserve the AONB and since it is clear that the Council is proposing to meet part of the District’s development needs by using land within the AONB, the Council should establish a clear objective that only the minimum AONB land should be used for this purpose and wherever possible non-AONB land should be used in preference. (ii) The reference in Policy WCS2 to the broad locations for housing development being shown as insets on the Key Diagram. We object to the inset for Heathfield in relation to the way it shows the proposal SD11 and consequently object to this reference to that inset plan in Policy WCS2. (iii) The reference in Policy WCS4 to SD11: Land at North West of Heathfield. We object to the way that SD11 is described in Chapter 6 of the Core Strategy and shown on the Key Diagram and as a result object to the reference to SD11 in Policy WCS4. (iv) The omission from paragraph 5.8 of any aim to maximise the use of previously developed land in meeting existing and future housing needs. Notwithstanding the recent changes to PPS3 it remains a national objective to prioritise the use of previously developed land, in accordance with paragraph 21 of PPS1 and paragraph 40 of PPS3. (v) The reference in paragraph 6.40 to the identification of potential sites for housing “through the SHLAA”. We object to the inclusion of Site 155/1210 in its current form as shown in the SHLAA and consequently object to this reference to that site in paragraph 6.40. (vi) The reference in paragraph 4.61 to the “most suitable location” being “within the AONB” and that this land could be developed “without strategic adverse impact on the landscape”. The Council’s evidence base does not demonstrate that the land within the AONB is more suitable for development than the non-AONB previously developed land on High Street. There is no assessment by the Council of the suitability of this non-AONB land (which includes the objector’s land at Lavender Cottage, High Street, Heathfield, TN21 0UP) and yet it is more suitable than the AONB land, being (i) not subject to a national landscape designation, (ii) previously developed land, (iii) within the existing settlement boundary, and (iv) well related and integrated into the urban area and existing transport connections. In addition, the Council’s evidence base does not show that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of 2 adjacent SHLAA sites at north west Heathfield (Site 155/1210 with a capacity of 123 dwellings at 40 dph and Site 307/1210 with a capacity of 35 dwellings at 35 dph). The Council’s Landscape Character Assessment (February 2009) shows at Figure 5 that large parts of these
SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. (vii) The reference in paragraph 6.41 to the release of AONB land being justified “as no suitable alternative non-AONB location exists”. The Council’s evidence base does not substantiate this assertion. The Council has not assessed the suitability of the non-AONB land in this location which fronts High Street (including the objectors’ land at Lavender Cottage). This non-AONB land is within the settlement limits of Heathfield as identified on the Proposals Map of the saved Local Plan and paragraph 6.48 of the Core Strategy confirms that within development boundaries “the principle of development is acceptable”. The principle of redeveloping this land to provide more intensive residential development has already been accepted by the Council, with the grant of planning permissions at Brackenside (WD/08/0329) for 3 dwellings in place of 1 dwelling, and at Oaksdown/Lowlands (WD/2011/0400) for 9 apartments in the place of 2 dwellings. The more intensive development of the non-AONB land on the High Street frontage would minimise (or may even remove) the need for the use of AONB land. This option would plainly be a more suitable alternative than the use only of land “within the AONB” as proposed in the Core Strategy. (viii) The reference in paragraph 6.41 to “no suitable alternative contingency land is available”. The land at Oaksdown/Lowlands is available for development (as confirmed by the recent renewal of planning permission). The objectors’ land at Lavender Cottage is available for development (and this has been made known to the Council since at least August 2010). The land at Woodatch is relied on as being available for development in order to provide the access for SHLAA site 155/1210. The objectors understand that the land at Holmhurst could be made available for development. Thus, there is a continuous frontage of 5 plots of non-AONB land available (all with generous areas of garden land, most of which is excluded from the AONB) just on this part of the High Street. Were the Council to actively promote a comprehensive redevelopment of this area it is likely that other land in the vicinity would be made available. However, the Council has simply failed in its evidence base to assess this option. If it is necessary to identify contingency land then the hinterland of AONB land should be identified as contingency land, with priority being given to the development of the non-AONB land on the High Street frontage. Prioritising that land would be consistent with the policy objectives of minimising the loss of AONB land and maximising the use of previously developed land. (ix) The reference in paragraph 6.42 item 3 to SD11 being “on land adjacent to the urban area”. The proposal for SD11 should not be defined in a way which excludes the urban area and which focuses only on land within the AONB. The proposal should embrace the urban area and the development should maximise the use of previously developed land in the urban area to achieve the provision of 160 dwellings before any consideration is given to the use of land in the AONB. (x) Figure 10 Heathfield Area Strategy. This diagram shows SD11 as located within the AONB and beyond the existing settlement. The diagram should not exclude the inclusion of the existing built up area in this location within the scope of SD11. The built up area has the potential and the capacity to be redeveloped and this aim should be the first priority at north west Heathfield. (xi) Key Diagram: the inset for Heathfield. The inset shows Heathfield and Proposal SD11 in the same way that they are shown on Figure 10 and they are not acceptable for the same reason set out at (x) above. 4. We now propose to elaborate on these objections. Piecemeal not comprehensive 5. SD11 takes an opportunistic approach. It utilises substantial areas of greenfield land as the main development areas (and by implication from the SHLAA one existing property simply as a means of access). Although the SHLAA indicates that Site 155/1210 is in multiple ownerships and Site 307/1210 is owned by a company with 7 shareholders, the choice of this location seems to be influenced simply by the fact that these 2 sites were promoted in the SHLAA and so it is assumed they are available. Site 155/1210 is said to be under the control of a housing developer. We are not aware whether the Council has seen the terms of any option or other legal agreement giving such control but, given that the Proposed Submission Core Strategy is a long term strategy to 2030 and its trajectory does not anticipate the site coming forward before 2015/16, little weight can be given to the status of any current contractual arrangements. 6. Any sensible spatial planning approach to the development of this area would not look at the sites promoted in the SHLAA in isolation but would look to see how that development would relate to its local context and how it would relate to the settlement it is intended to form a part of. 7. The site of SD11 is on sloping ground set back behind existing development which separates the site from the rest of Heathfield. Development as proposed will not integrate the development with its local context as required by paragraph 35 of PPS1. Nor will it maximise the opportunities for the site to benefit from clear and easy links to the facilities in the local service centre by non-car modes. 8. A comprehensive approach would look at the whole of the area in this north western part of Heathfield and then seek to identify the land which is most suited to development. It is common sense that this would start by looking at the land with the best links by foot, cycle, and public transport to the rest of the settlement. That is of course the frontage land along Heathfield Road/High Street itself. The frontage land also contains the previously developed land comprising the existing dwellings and their various outbuildings. Whilst the recent revisions to PPS3 have removed garden land from the definition of previously developed land, the footprint of the buildings and their associated driveways and hardstandings clearly have a higher priority for development than a greenfield meadow. 9. The present objectors, as the owners of Lavender Cottage, are willing to make their land available as part of a wider development. The objectors have made this known to the Council since at least August 2010. The principle of redevelopment for more intensive residential development has already been established on land to the wets (WD/08/0329) and on the adjoining site.
to the east of Lavender Cottage (WD/2011/0400). Although planning permission was granted for a block of flats (WD/2008/0276), that development has not come forward and the permission has recently had to be renewed. Clearly, the land is available for development, even if the form of development is not at present attractive to the market. We understand that the owner of the adjoining plot at Holmhurst would be prepared to make that site available. Woodhatch is relied on as available in the SHLAA (Site 155/1210 refers). Thus there is already a substantial amount of the frontage land which is available for development. A spatial approach to the planning of this area would look to utilise this developed frontage land, which plainly has development potential, before turning to the undeveloped hinterland to the rear. Unjustified Encroachment into the AONB

Paragraph 22 of PPS7 is clear that major development in the AONB requires “the most rigorous examination” and that such development should only be accepted after assessment of the scope for meeting the need elsewhere. Under the GDMO 2010 “major development” is a development of 10 or more dwellings. Under the Secretary of State’s arrangements for the recovery of appeals on the basis that they are large/controversial, the threshold is 150 residential units. On either basis, a development of 160 dwellings is major development. In any event, the Council has accepted in the SHLAA that “there is a requirement to demonstrate development is essential to meet local needs and that other more suitable sites do not exist elsewhere” (Site 155/1210). The claimed rationale for the use of AONB land in this case is that “no suitable alternative non-AONB location exists”. This is patently incorrect. As already noted, the frontage land is not within the AONB and if the desire is to achieve a development of some 160 dwellings there can be no justification for taking more AONB land than is absolutely necessary when there is non-AONB land in the same location which is available. 11. Whilst it may be doubtful that the frontage land which is known to be available could alone accommodate the full scale of the development sought, the need to encroach into the AONB would be very much reduced if the frontage land was used first. Such an approach would also enable the lower (and least accessible) parts of the meadow to be retained as open land, potentially providing a better buffer with the important woodland at Tilsmore Wood that makes up such a key component of the Wealden character. The need for such a buffer is recognised in the Landscape Character Assessment (Figure 5). In addition, if the Council made it clear that it was promoting the comprehensive development of the area, it is likely that other owners would also wish to make their land available, and the Council may therefore be able to avoid encroaching into the AONB to any material degree. 12. The Council’s claim that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape is not supported by the evidence base. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of the 2 adjacent SHLAA sites: Site 155/1210 and Site 307/1210. As already noted, the Council’s Landscape Character Assessment shows (Figure 5) that large parts of these SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. Using Less Accessible and Less Sustainable Land

13. Similar considerations in terms of minimising the amount of AONB land apply in relation to accessibility issues. The lower parts of the sloping meadow land are not only more remote by simple distance from the footways and bus route along Heathfield Road/High Street, there is also the fact that journeys from home will inevitably be uphill for residents of that area. There will therefore be a disinclination to use non-car modes for accessing local services, even if they might appear to be within walking distance. It must also be doubted whether much of the hinterland is within the preferred 400m distance for access to a bus route. 14. Again, on any sensible measure of accessibility and sustainability, it cannot make sense to use the more remote hinterland in preference to the frontage land. PPS1 is clear at paragraph 35 that new development needs to be integrated into the urban area and address connectivity issues. The choice of a backland location for SD11 when the more accessible frontage land is available is directly contrary to this guidance. 15. As already explained why a comprehensive approach needs to be taken to this area. However, if the Council persists in its piecemeal approach then it is apparent that inadequate consideration has been given to the relationship between the retained frontage properties and the new development to the rear. The existing development is at a very low density and has the established character of a mature residential area, with individual dwellings in spacious plots. 17. The SHLAA indicates a proposed density for the new development of some 40 dwellings per hectare for Site 155/120. This will be substantially different in character and could only be achieved by ensuring a substantial buffer between the 2 very different forms of development. However, this would push the new development further into the AONB and would further separate the new development from the settlement of which it is intended to form a part. Again, there would be a conflict with the advice in PPS1 on integrating the development with the urban area. Soundness Tests

18. It is clear from the objections set out above that the proposals for SD11 are not founded on a robust and credible evidence base, cannot be shown to be the most appropriate strategy when considered against the reasonable alternatives, and are not consistent with national policy in PPS1, PPS3, and PPS7 in several important respects. They therefore fail 2 of the key tests of soundness as set out at paragraph 4.52 of PPS12. Legal Tests 19. These objections also have the consequence that the Council’s failure to properly consider reasonable alternatives to its proposals at
north west Heathfield, and in particular to consider the alternative of an area of growth in this location planned on a comprehensive basis and focused on maximising the use of previously developed land and minimising the use of land within the AONB, has the consequence that the Sustainability Appraisal/Strategic Environmental Assessment that accompanies the Core Strategy is legally deficient and the Core Strategy is consequently not legally compliant with the requirements of either Regulation 5(1) of the Environmental Assessment of Plans and Programmes Regulations 2004 or with the requirements of s.19(5) and s.20(2) Planning & Compulsory Purchase Act 2004. In addition, the same failings, together with the lack of a credible and robust evidence base to support those proposals and the conflicts with national policy mean that the Core Strategy is not “sound” as required by s.20(5)(b) PCPA 2004.

20. The SA/SEA considers, in broad terms, alternative locations for growth at Heathfield as between the north east, north west, and west of the town. However, what it fails to do is to look at reasonable alternatives within the selected north west location. It is no answer for the Council to suggest that this level of detail is a matter for a later DPD because the Core Strategy is already spatially specific that the location of north west Heathfield is an “urban extension” (i.e. an addition) and that it is “within the AONB” (i.e. outside the settlement boundary. The same spatial approach is shown on Figure 10 and on the Inset for the Key Diagram. The Council is not, therefore, able to avoid grappling with the spatial implications of this choice as part of the Core Strategy and testing it against reasonable alternatives. However, it is clear that this is not an exercise that has been attempted in the SA/SEA. 21. The Council will be well aware from the recent decision in Save Historic Newmarket Ltd v Forest Heath District Council [2011] EWHC 606 (Admin) that a failure in the SA/SEA to give proper consideration to identification and assessment of reasonable alternatives is likely to result in a quashing of the relevant parts of the Core Strategy. Conclusion 22. For all of these reasons the objectors strongly suggest that neither the Council nor the Inspector should endorse the present proposals for SD11. What is required is a fundamental rethink to achieve an integrated, sustainable and accessible development which minimises the impact on the AONB and provides a comprehensive spatial approach to the development of this area. Essentially this requires the focus to shift from the “easy target” of greenfield meadows to a more considered approach, giving priority to the previously developed frontage land, and only considering the AONB hinterland to the minimum extent necessary to achieve the required dwelling numbers.

Details of Changes to be Made:
Change para 6.42 item 3 to read: “meeting the housing and community needs of Heathfield by allocating deliverable housing sites for around 160 homes on land within and potentially adjoining the urban area at north west Heathfield (SD11). Sites for housing development within this broad location will be identified and phased on a comprehensive basis as part of the Site Allocations DPD.”

**Details of Reasons for Soundess/ Legal Compliance:**
The Unit is concerned about the identification of a site at Heathfield - SD11- which proposes a large housing site within the AONB which may compromise the integrity of the AONB boundary. The site is bounded on the north by extensive ancient woodland and is the source of several small streams (see attached plan) that feed into the ancient woodland. Development in this location is likely to have significant impacts on the character of the AONB and is not considered appropriate.

**Details of Changes to be Made:**
Details of Reasons for Soundness/ Legal Compliance:
Natural England share the concerns of the High Weald AONB Unit with regard to a strategic site being situated within the High Weald north west of Heathfield. We recommend that a full assessment of alternatives is undertaken and that any development coming forward in this area is assessed against the criteria of the High Weald Management Plan.

Paragraph 6.42
Sound ☐ Yes ☑ No ☑ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundness/ Legal Complaince:
The Proposed Submission Core Strategy places far too much weight on the “topographical and landscape constraints” that are said to affect the town, and far too little weight on the needs of the town in terms of its future housing and other development. While the A265 passes through the town this is not a constraint. Sites that are suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land will need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the district as a whole are not properly recognised in the Core Strategy. 2 Additional new housing development would meet the town’s known housing needs, as well as make a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. It will increase the demand for public transport services, and allow the existing service to be maintained and improved. 3 The Council has identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. 4 The Council has stated in is Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a trickle of windfall sites. This cannot be a justifiable approach. 5 Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any undue impact on the wider landscape from a sensitively designed development. 6 In addition, this figure excludes land to the west of the area identified for an urban extension that is not in the AONB. The land at Tilsmore lodge is accessible, and visually and physically well-contained. Any urban extension to the north of the A265 should include this land. 7 The Core Strategy is unsound as it fails to make sufficient housing provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. Paragraph 6.40 states that there is a current need for affordable housing for 112 households. To meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8), a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static, there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500 + over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand.

Details of Changes to be Made:
A minimum of 500 dwellings should be provided at Heathfield, and Figure 10 should be amended to enlarge the area for residential provision to include the land to the west.
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Details of Reasons for Soundess/ Legal Complaince:

1. The Proposed Submission Core Strategy places far too much weight on the "topographical and landscape constraints" that are said to affect the town, and far too little weight on the needs of the town in terms of its future housing and another development. While the A265 passes through the town this is not a constraint. Sites that are suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land will need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the District as a whole are not adequately recognised in the Core Strategy. 2. Additional new housing development would meet the town's known housing needs, as well as making a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. Heathfield need higher levels of new housing to provide more buoyancy in the market and choice for residents which will in turn avoid outward migration from the town and the risk of declining services and social infrastructure. A higher housing allocation will increase the demand for public transport services and future provision and allow the existing service to be maintained and improved. 3. The Council has identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, but it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. 4. The Council has stated in its Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a possible trickle of windfall sites. This cannot be a supportable approach. 5. Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. 6. The Core Strategy is unsound as it fails to make sufficient provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. Paragraph 6.40 states that there is a current need for affordable housing for 112 households. To meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8) a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500+ over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

7. Land to the east of the town has been put forward for inclusion in earlier incarnations of the Core Strategy, principally SHLAA sites 258/1210; and 259/1210 on the norther side of the A265 and additionally SHLAA sites 260/1210; 275/1210 and 299/11210 on the southern side of the A265. The land is available and can deliver highway improvements, new homes, open space and community provision at an early stage in a comprehensive approach. The Core Strategy is simply wrong at paragraph 6.41 where it states that there are no suitable alternative sites available. The above are sites that are demonstrably available and suitable as the submitted supporting reports clearly indicate. This land is favoured by the Parish Council for development and if allocated for in the order of 250 new homes, existing highway constraint would be addressed and contributions secured to provide social and community provision (such as the needed swimming pool identified at paragraph 6.39). This can be achieved at this scale and level of development but would not achieve these objectives at the level proposed in the Core Strategy. New housing at the proposed level will maintain the town's future vitality and economic wellbeing and will help to maintain local services and avoid the prospects of Heathfield being starved of investment and resources in the future, with the very real risk that present services will decline, and for the town to
simply become no more than a commuter town for the larger centres of Tunbridge Wells, Eastbourne and beyond

**Details of Reasons for Soundess/ Legal Complaince:**
We support the Legal Compliance and Soundness of the Core Strategy. We support its development objectives.

**Details of Changes to be Made:**
Details of Reasons for Soundness/ Legal Compliance:
Only ten houses are allocated to the village of Upper Dicker. This is unsound and unjustified. St Bede’s Senior School, one of the largest employers in the Wealden District is located in Upper Dicker and has already bought a number of homes there for its own use; it also has a brownfield site three on which it may choose to build houses after the development boundary is removed, taking up all or a large part of Upper Dicker’s housing allocation for the foreseeable future. No allocation at all has been made for the village of Arlington.

Details of Changes to be Made:
In table 11 (eleven), allocating housing numbers to the rural villages, the allocation for Upper Dicker should become the allocation for Upper dicker and Arlington and should be increased from ten to thirty.

Details of Reasons for Soundness/ Legal Compliance:
Rural sites may be more constrained, due to topography, landscape, access etc, than those within the built up area. The wording of WCS6 seems to recognise this by implying there should be flexibility in the quantum of new house building within rural areas, as it refers to ‘at least’ 455 dwellings overall. The policy seems therefore to suggest that residential development in the 13 named settlements is a minimum. If so, Fig 11 should reflect this.

Details of Changes to be Made:
Remove settlement banding in notation to Fig 11 of the Core Strategy.
Growth potential of rural settlements and where development boundaries will be retained

Details of Reasons for Soundless/ Legal Complaince:

These representations are made on behalf of Rookwood Trinity Limited, owners of the Non-Statutory Plan Policy V5 site: West of Oakleigh, Five Ash Down. Our comments relate only to the Rural Areas Strategy and in particular the failure to allocate any new development to Five Ash Down under Policy WCS6 and the proposal under that policy to remove the Development Boundary from the village. Inconsistencies in the Rural Areas Strategy make it unsound. If adopted in its present form it could lead to development in relatively unsustainable locations while preventing any new development in relatively sustainable and accessible settlements such as Five Ash Down. Five Ash Down is an example of a settlement with a range of services, close proximity and excellent accessibility to a district centre, Uckfield. In early LDF publications, Five Ash Down was considered suitable for further growth as, indeed, it was in the Non-Statutory Plan where our client’s site was allocated for housing development under Policy V5. In this draft Core Strategy document, Five Ash Down is not proposed for development and it is proposed to remove the present development boundary. This represents a complete reversal of policy from the allocation of a site at Five Ash Down in the non-statutory plan and recognising it as a village with growth potential in early LDF consultation documents. The reasons for such a fundamental change of policy are unclear and ill-founded. This shift appears to be based first on inconsistencies and factual errors in the methodology on which the present draft policy is based and secondly on unsound overemphasis on “parish aspirations”. Methodology 1. Accessibility The “Development of the Proposed Submission Core Strategy Background Paper” Appendix 3 deals with the categorisation of Wealden settlements in terms of public/sustainable transport (including the quality and frequency of those services). The first category “Very Good Accessibility”, the highest category, is defined as “frequency of 30 minutes or less and duration of travel of 30 minutes or less by public/sustainable transport”. Brighton & Hove Transport service 29/29A, which runs between Brighton and Tunbridge Wells, passes through Five Ash Down with a half hour service throughout the day. This provides access to primary and secondary schools, Uckfield Rail Station, Uckfield town centre and to the subregional shopping centres of Brighton and Tunbridge Wells as well as Crowborough and Lewes. The travel times for the facilities referred to in the methodology are significantly less than 30 minutes. On this basis, Five Ash Down should be classified as having very good accessibility. While the Settlement Facilities Matrix in Appendix 4 of the background paper correctly shows Five Ash Down having very good accessibility, in Appendix 3 it is shown as having only “fair accessibility”. The draft policy on Five Ash Down appears to be based on this incorrect assessment. The benefit of a good regular bus service is not always given sufficient emphasis in assessing the sustainability of settlements in comparison with rail services. Many rural bus services are slow, circuitous and infrequent. By contrast Service 29/29A, which serves Five Ash Down half hourly, is regular, frequent and connects the village to the services and facilities of Uckfield and other centres. It provides a greater contribution to accessibility to non-car modes of travel than the rail services in Wealden which mainly provide long distance connections. 2. Services The Settlement Facilities Matrix correctly shows Five Ash Down having a convenience store, post office, public house, place of worship, community hall, business areas and “other locally significant employment opportunities”. However, it shows the village as not having a primary school. In fact, Buxted CE Primary School, lies within walking distance approximately 1 km from the A26 – A272 traffic lights at Five Ash Down. The primary school is in fact slightly closer to Five Ash Down than to most of the village of Buxted lying approximately equidistant between the two. Buxted CE Primary School is, therefore, equally or more accessible to Five Ash Down than it is to the village of Buxted itself. In addition, the No. 29 bus service provides access to primary schools in Uckfield. The Settlement Facilities Matrix also shows it as having no children’s play area whereas the new Ashdown Place development has a children’s play area which is not confined to the residents of that estate alone. Proposals for development of the West of Oakleigh site included provision of additional playspace. If the Policy V5 allocation is confirmed in the forthcoming Site Specific DPD, additional playspace could be provided close to the centre of the village. 3. Assessment of Growth Potential Chapter 8 of the Development of the Proposed Submission Core Strategy Background Paper includes “Table 2 – Rural Growth Potential”, which contains an appraisal of growth potential for those rural settlements that are either accessible or have some facilities. Five Ash Down is classified as a Neighbourhood Centre. The analysis is complicated by the fact that some of the assessments are on a village/settlement basis and others on a parish basis. Five Ash Down lies within Buxted Parish and is, therefore, denied a voice of its own in this context. One of the criteria – “Parish Council Favoured Option” – states: “No further development due to current allocations.” However, the footnote indicates...
that this comment was taken from responses to the Spatial Development Options consultation in July 2009 and in any event the reference to “current allocations” can only mean the allocations in the Wealden Local Plan and the Non-Statutory Plan, including the Policy V5 allocation at Five Ash Down. The analysis recognises that Five Ash Down is “well related to Uckfield with good connectivity and future employment opportunities” and that “development in this area is sustainable by virtue of links with Uckfield by public transport and employment provision in the area could meet wider housing needs”. The conclusion of “no growth potential” for Five Ash Down is at odds with that analysis and is based on the statement that development is “not compatible with Parish aspirations and significant growth could lead to a change in the hierarchy or settlements”. This conclusion contradicts the preceding analysis. The Parish’s apparent assumption that the Non-Statutory Local Plan allocated sites will be developed is not consistent with a conclusion that will result in the Policy V5 allocation site at Five Ash Down not being developed.

Details of Changes to be Made:
In summary, the Rural Areas Strategy needs further refinement and the correction of factual errors and inconsistencies. Five Ash Down has “Very Good Accessibility” and a good range of local services and facilities. On this basis it should be considered suitable for further modest growth and its development boundary should be retained. Five Ashdown does not neatly fit the criteria of Neighbourhood Centre defined in the document and background paper. The development of sustainable sites such as the Policy V5 site at Five Ash Down should not be precluded by Core Strategy Policy. The Council has previously judged the site suitable for allocation for low density development. At that time, the density policy for the site was inconsistent with national density guidelines in PPS3. Those density guidelines have now been removed and there is nothing to prevent the Council from revisiting the policy at its own density preference. That would be supported by the landowner.

Paragraph 6.43
Sound ☑ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Compliance:
We support the Legal Compliance and Soundness of the Core Strategy. We support its development objectives.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
Object to low level of dwelling provision in the rural areas. Object to the classification of Maresfield as neighbourhood centre and the removal of its development boundary. Object ot the low level of house provision in Maresfield as the adjacent Ashdown business Park justifies an allocation of 300 to 400 so workers can live where they work and reduce car travel. Most of the villages in the area are dying due to the lack of additional housing as the population cannot now sustain local needs. They are becoming more and more dormitory dead villages where the older rich and retired can live, but all the young people have to leave to go and live in the towns. It is also noted by the countil in para 2.14 that most of the small businesses in the area are farm based in converted farm buildings. This must therefore imply that many of the workers are actually travelling by car from the towns to the rural areas for their jobs. Therefore allowing more houses in the villages would actually cut travel to work by car journeys since more people could live where they work and help revitalise dying villages. Regarding Maresfield, it is much larger than the other villages in the neighbourhood centre group and contrary to the council's assessment has similar or greater facilities than most of those in the Local Service Centre group. In particular it is immediately adjacent to the Ashdown Business Park which is planned to provide 1000 jobs. It also has as many if not more shops, garages, pubs than most of the LSC group, and certainly has much more than those in the NC group. In particular, if Buxted is considered a LSC, where there is minimal local employment, no more shops than Maresfield, no garage, and the local village shop appears to have closed, and is considered an LSC then clearly Maresfield should also be in this group. Maresfield should retain a development boundary. given that the council state that one of the aims of the strategy is to limit car travel and enalbe people to live where they work, clearly the uniqueness of Maresfield having the large employment site next to it means much more new housing should be allowed there as well. As otherwise as things stand at the momembe, with a mainly older retired current population of Maresifle with few of working age, means the vast majority of workers at the Ashdown Business Park will have to drive in from other parts of the area.

Details of Changes to be Made:
On the current housing provision figures increase the rural areas allocation to 2000, and take these from the town sites already objected to as being unsustainable or undeliverable. If the housing provision number in SCS1 is increased as submitted by the objectors increase the rural areas amount accordingly. Change Maresfield to where it would be, a Local Service Centre and retain a development boundary. Allocate 300 - 400 houses to Maresfield to allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other parts of the area. The council have had plenty of submissions to past plans to know that joined up planning on their behalf can produce an excellent site in south maresfield with large amounts of stream side POS, foot and cycle bridge with direct access to the ABP, and other village enhancements to provide somewhere where workers at the ABP would want to live and avoid lengthy and costly daily car journeys to work.
The references to ‘dispersed settlement pattern’ in Wealden, with 93 per cent of the district containing half of its population are misleading, so affecting the policies derived from that thinking. It ignores the significance of nucleated villages as well as the main towns.

Details of Reasons for Soundness/ Legal Compliance:
The settlement pattern seen as ‘dispersed’ for half of the population needs refining in the document. The proportions of those living in places larger than 500 and 1,000 should be identified. There is great scope for serving these by public transport evolving from the present network, with limited strict dependence on cars.
Details of Reasons for Soundness/ Legal Complaince:
Object to low level of dwelling provision in the rural areas. Object to the classification of Maresfield as neighbourhood centre and the removal of its development boundary. Object of the low level of house provision in Maresfield as the adjacent Ashdown business Park justifies an allocation of 300 to 400 so workers can live where they work and reduce car travel. Most of the villages in the area are dying due to the lack of additional housing as the population cannot now sustain local needs. They are becoming more and more dormitory dead villages where the older rich and retired can live, but all the young people have to leave to go and live in the towns. It is also noted by the countil in para 2.14 that most of the small businesses in the area are farm based in converted farm buildings. This must therefore imply that many of the workers are actually travelling by car from the towns to the rural areas for their jobs. Therefore allowing more houses in the villages would actually cut travel to work by car journeys since more people could live where they work and help revitalise dying villages. Paragraph 6.45

Details of Reasons for Soundness/ Legal Compliance:

We support the commitment to ensure that the capacity for growth of any of the hierarchy settlements must be assessed on the characteristics of the individual settlement and its landscape context. Development should be of a kind and scale appropriate to protect and enhance services and support sustainable rural life. Within the wider countryside we support the policy that development should be that which meets an essential rural need, supports rural diversification and promotes sustainable tourism.

Details of Changes to be Made:

Policy WCS6 and the proposals map should provide clarity on the proposed revisions to the development boundaries. We consider that the land to the rear of Mountney Bridge Industrial Estate should be included within the Development Boundary, this reflects its previous allocation in the adopted 1998 Local Plan. Please see the Indigo Planning letter dated 15 April 2011, which sets out why this land should be included.

Details of Changes to be Made:

Distinction between towns and villages, where development may be appropriate and smaller settlements where protection of the countryside would normally take precedence. The current (non-statutory) Wealden Local Plan lists 39 villages with development boundaries. (para.19.50). some are quite small settlements (e.g. Fairwarp) where further development is clearly inappropriate, and where removal of the development boundary is probably correct. The proposed new Core Strategy (WC S6) retains development boundaries for 14 villages and removes them from 13. However in some cases the rationale behind retaining or removing development boundaries is unclear, as in the case of Buxted where the boundary is retained and Maresfield where it is removed. We wish to see the Development Boundary retained for Maresfield for the following reasons: · The village has grown considerably over the past 20 years by extension and infill, and by virtue of its strategic position, remains under considerable development pressure. We are not advocating major new development but wish to see further development properly controlled for the benefit of the village as a whole. · The Ashdown Business Park (see para. 3.21) to the immediate west of the village has now received planning consent, and as it develops should provide considerable employment for the village. · The village is strategically placed at the intersection of the major east-west and north-south routes, and as a direct result of this has relatively very good bus services in most directions (as compared with Buxted for example) which would be further enhanced. We note that one of the aims of the Core Strategy (see SPD.7) is to reduce private car usage, and consider the development of frequent and reliable bus services, is almost certainly the way to achieve this. Regrettably rail services in this part of Wealden can very limited impact on the local need to travel. · Although the village has limited facilities at present, it has all the elements of a vibrant community, primary school, church, village shop and post office. · There is general support for a small number of new homes in this village (Maresfield) over and above the 80 provided for in the current non-statutory Local Plan. Almost certainly this will require some extension of a retained Development Boundary.

Object to low level of dwelling provision in the rural areas. Object to the classification of Maresfield as
neighbourhood centre and the removal of its development boundary. Object ot the low level of house provision in
Maresfield as the adjacent Ashdown business Park justifies an allocation of 300 to 400 so workers can live where
they work and reduce car travel. Most of the villages in the area are dying due to the lack of additional housing as
the population cannot now sustain local needs. They are becoming more and more dormitory dead villages where
the older rich and retired can live, but all the young people have to leave to go and live in the towns. It is also noted
by the council in para 2.14 that most of the small businesses in the area are farm based in converted farm
buildings. This must therefore imply that many of the workers are actually travelling by car from the towns to the
rural areas for their jobs. Therefore allowing more houses in the villages would actually cut travel to work by car
journeys since more people could live where they work and help revitalise dying villages. Regarding Maresfield, it
is much larger than the other villages in the neighbourhood centre group and contrary to the council's assessment
has similar or greater facilities than most of those in the Local Service Centre group. In particular it is immediately
adjacent to the Ashdown Business Park which is planned to provide 1000 jobs. It also has as many if not more
shops, garages, pubs than most of the LSC group, and certainly has much more than those in the NC group. In
particular, if Buxted is considered a LSC, where there is minimal local employment, no more shops than
Maresfield, no garage, and the local village shop appears to have closed, and is considered an LSC then clearly
Maresfield should also be in this group. Maresfield should retain a development boundary. given that the council
state that one of the aims of the strategy is to limit car travel and enable people to live where they work, clearly the
uniqueness of Maresfield having the large employment site next to it means much more new housing should be
allowed there as well. As otherwise as things stand at the moment, with a mainly older retired current population
of Maresfield with few of working age, means the vast majority of workers at the Ashdown Business Park will have
to drive in from other parts of the area.

Details of Changes to be Made:
On the current housing provision figures increase the rural areas allocation to 2000, and take these from the town
sites already objected to as being unsustainable or undeliverable. If the housing provision number in SCS1 is
increased as submitted by the objectors increase the rural areas amount accordingly. Change Maresfield to where
it would be, a Local Service Centre and retain a development boundary. Allocate 300 - 400 houses to Maresfield to
allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other
parts of the area. The council have had plenty of submissions to past plans to know that joined up planning on
their behalf can produce an excellent site in south Maresfield with large amounts of stream side POS, foot and
cycle bridge with direct access to the ABP, and other village enhancements to provide somewhere where workers
at the ABP would want to live and avoid lengthy and costly daily car journeys to work.
Details of Reasons for Soundness/ Legal Complaince:
Policy WCS6 – Rural Area Strategy The main thrust of this Policy, as promoted, is to catalogue Wealden settlements by, apparently, population levels. The result will exclude those falling into ‘Neighbourhood Centres and Unclassified settlements’ and representing the major portion (some 57%) of Wealden District land area, from any meaningful residential housing policy. In categorising the various settlements in this way, the district Council ignores the contribution which contained residential development makes to sustaining vibrant rural village communities. In consequence, no less that 27 currently sustainable villages, as recognised in the out going Local Plan, are to be emasculated, preventing all further growth during the period to 2030. The well intentioned and avowed aim of protecting the countryside is acknowledged. However, the abdication of its responsibilities is not an option open to the District Council. The direct effect of Policy WSC6 will cause those villages which are to be given this doubtful protection to stagnate and decay into geriatric dormitories. If this Policy is adopted there can be no interaction for the moribund local communities it creates, through the intake of younger people. The District Council will cite proposed Policy WCS 9, )Rural exception affordable housing), as a source of local housing, in defending the path they have chosen to pursue. Experience has shown that ‘exception’ housing policies, as entombed in successive Adopted local plans and applied first through housing associations (HAs), then through registered social landlords (RSLs) and more recently, through approved landlords (ALs), have been an almost total failure. The problem is well recognised but never acknowledged by those with the discretion to do something about it. It is this. Any land suitable for ‘exception’ housing is equally suitable for private housing development. Consequently and with no more land being made available, landowners prefer to retain their holdings, rather than support exception housing, which gives a return of about 1% of what their land would be worth for equivalent private housing development. Land can only be built on once!

Details of Changes to be Made:
We consider the Deleted development boundaries should be restored to the 27 villages the District Council seeks to emulate in proposed Policy WCS6. We refer to Q4 above, and to the preamble in paragraph 5 of the 19th October document. The district Council sets out to achieve housing growth of 400 units per annum. It quotes that number of dwellings per annum for a plan period of 18 years, (2012 to 2030), producing some 7200 homes in total. In analysing the figures proffered in Policy WCS 2, (Distribution of Housing Growth 2006 – 2030), these amount to 8000 dwellings in total and include the commitments already in hand for the period 2006 to 2012. However, these earlier commitments are not confirmed by completions. Taking current national housing performance, completions will be well below commitments. The draft Core Strategy seeks to create an imbalance in favour of family housing in the south of the district. This proposed imbalance take nebulous account of realistic employment prospects for those families who are being ‘designed’ into the southern housing. This imbalance restricts numbers in the north, where there is some prospect of local employment, and in the villages where, were it allowed, there are realistic prospects that developments would actually take place. Directing family housing to the south will hardly assist the adjoining Eastbourne District, which is already an area of low employment. In practice, the District Council’s financial liabilities will be further extended. The draft Core Strategy, in further seeking to restrict residential development to ‘towns only’, creates fundamentally unsound policy. The result is likely to be a sluggish take up and completions which will fall short of the targets set. The high cost of implementing recent changes to building regulations, together with general infrastructure requirements, will further constrain housing development. A lack of local employment in the south will promote out commuting and by car on an antiquated road network, given the lack of alternative public transport. We propose that the probable shortfall in housing completions be computed and the result be evenly distributed between the villages being unfairly shorn of their development boundaries. This will off-set the debilitating effect draft Policy WCS6 will otherwise cause to the district, should it be adopted.

Object to low level of dwelling provision in the rural areas. Object to the classification of Maresfield as neighbourhood centre and the removal of its development boundary. Object to the low level of house provision in Maresfield as the adjacent Ashdown business Park justifies an allocation of 300 to 400 so workers can live where they work and reduce car travel. Most of the villages in the area are dying due to the lack of additional housing as the population cannot now sustain local needs. They are becoming more and more dormitory dead villages where the older rich and retired can live, but all the young people have to leave to go and live in the towns. It is also noted by the council in para 2.14 that most of the small businesses in the area are farm based in converted farm buildings. This must therefore imply that many of the workers are actually travelling by car from the towns to the rural areas for their jobs. Therefore allowing more houses in the villages would actually cut travel to work by car journeys since more people could live where they work and help revitalise dying villages. Regarding Maresfield, it is much larger than the other villages in the neighbourhood centre group and contrary to the council's assessment has similar or greater facilities than most of those in the Local Service Centre group. In particular it is immediately adjacent to the Ashdown Business Park which is planned to provide 1000 jobs. It also has as many if not more shops, garages, pubs than most of the LSC group, and certainly has much more than those in the NC group. In particular, if Buxted is considered a LSC, where there is minimal local employment, no more shops than Maresfield, no garage, and the local village shop appears to have closed, and is considered an LSC then clearly Maresfield should also be in this group. Maresfield should retain a development boundary. Given that the council state that one of the aims of the strategy is to limit car travel and enable people to live where they work, clearly the uniqueness of Maresfield having the large employment site next to it means much more new housing should be allowed there as well. As otherwise as things stand at the moment, with a mainly older retired current population of Maresfield with few of working age, means the vast majority of workers at the Ashdown Business Park will have to drive in from other parts of the area.

Details of Changes to be Made:
On the current housing provision figures increase the rural areas allocation to 2000, and take these from the town sites already objected to as being unsustainable or undeliverable. If the housing provision number in SCS1 is increased as submitted by the objectors increase the rural areas amount accordingly. Change Maresfield to where it would be, a Local Service Centre and retain a development boundary. Allocate 300 - 400 houses to Maresfield to allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other parts of the area. The council have had plenty of submissions to past plans to know that joined up planning on their behalf can produce an excellent site in south Maresfield with large amounts of stream side POS, foot and cycle bridge with direct access to the ABP, and other village enhancements to provide somewhere where workers at the ABP would want to live and avoid lengthy and costly daily car journeys to work.
As highlighted in the Core Strategt, Wealden is a predominantly rural district with approximately 50% of its population living outside main urban settlement (Para 6.43). In the context of the above we support Strategic Policy WCS6 - Rural Area Strategy which seeks to distribute at least 455 dwellings, proposed under Strategic Policy WCS2, throughout 13 settlement/ villages which consist of a combination of Service Centres, Local Service Centres, Neighbourhood Centres and Unclassified Settlements. Of the 455 dwellings. Horam is allocated 100 dwellings, the largest amount of any of the settlements/ villages within the rural area and equating to 22% of the rural allocation in total. Thus we support this level of housing proposed in Horam. The suitability and acceptability of development in Horam is discussed within the supporting Sustainability Appraisal and the accompanying Background Paper 3, in which the Authority has undertaken individual sustainability appraisals of the settlements within the settlement hierarchy in order to assist in identifying those which are capable of accommodating future growth. At Paragraph 7.3 of the Sustainability Appraisal it is noted that not only do the assessments utilise the "Information that underpins the settlement hierarchy including accessibility to services and facilities and the relative public transport accessibility links with other settlements offering a range of services, facilities and employment" but also includes "environmental factors including proximity to ecological conservation areas, the potential for the use of greenfield land and potential for flood risk and water quality issues" as well as economic data based upon "the presence of significant employment opportunities, business areas and tourism opportunities as well as economic indicators at the Parish level including average household income and educational attainment". Using this holistic approach and as illustrated within Table 7.2 of the Sustainability Appraisal, Horam is highly ranked in the sustainability hierarchy in terms of Social, Environmental and Economic categories. Although there are settlements which sit higher in the settlement hierarchy, the merits and constrains within the Sustainability Appraisal has rightly recognised that Horam is capable of accommodating development. This is further noted at paragraph 7.19 of the Sustainability Appraisal which states that "Rotherfield, Horam and East Hoathly perform well in sustainability terms and feature higher in the SA hierarchy, due to strong social and economic assessments". Moreover, the individual settlement assessments contained within the Sustainability Appraisal Background Paper 3 highlights that there is "housing land potential identified within Horam, including brownfield land opportunities". Also that "It has important service and employment functions with a wide range of shopping, commercial and recreational potential, services, facilities and employment/ economic opportunities". The assessment concludes that there are "relatively few environmental constraints and there are opportunities to contribute to green infrastructure and wildlife corridors". As is evident from above, Horam is a sustainable settlement which is capable of accommodating the largest proportion of rural allocation. Whilst it is not a function of the Core Strategy to allocate specific sites for development, as will be undertaken through a Site Allocation DPD, we draw attention to the opportunity within Horam to accommodate development on previously developed land at the Former Merrydown Cider site. The site has been considered within the Strategic Housing Land Availability Assessment (SHLAA) - March 2010 (and Addendum October 2010). The assessment outlines the opportunities and constraints for the site noting that the "brownfield site is centrally located and, although prominent in views from the village itself, its development should have only a limited impact on the wider landscape setting of the village". The SHLAA outlines the sites attributes which provide a development site that is suitable, available, and achievable in accordance with para 54 of PPS3: Housing and its capable of accommodating a total net dwelling capacity of 114. Whilst this total net dwelling figure is higher than the total Horam allocation under Strategic Policy WCS6 - Rural Area Strategy, it is envisaged that following further work the final total of dwellings on the Former Merrydown site may be lower, however it is still capable of providing a significant contribution toward the allocated 100 dwellings (at least 70%). Significantly the development of the site will also assist the Authority in meeting both the objectives in national planning policy and SPO14 in that it can deliver a large percentage of Horam's housing requirement on Brownfield land. Furthermore, having reviewed the other sites assessed within Horam, it is evident that the Former Merrydown Cider site is the only realistic previously developed land opportunity within the settlement boundary. Overall we support the distribution of at least 455 dwellings through the rural area and in particular the 100 dwellings allocated within Horam as per Strategic Policy WCS6 - Rural Area Strategy. We further support the suitability and acceptability for the growth of Horam as outlined in both the Sustainability Assessment work and the SHLAA.

Details of Reasons for Soundess/ Legal Complaince:
Hadlow Down Parish Council would like to express their continued concern that the development boundary has been removed from Hadlow Down, especially as this was done without consultation with the Parish Council. I would also like to highlight that with regard to document BP1 - Development of the Proposed Submission Core Strategy, appendix 4 - Settlement Facilities Matrix, that Hadlow Down now has a new children's play area and that they do have a sports pavilion which has toilet facilities, however it does not have changing facilities. Can you please ensure that this is recorded on any future documentation.

WCS6 Rural Areas Strategy
Policy 6
Sound  ☑ Yes  ☐ No  ☐ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No
Details of Reasons for Soundess/ Legal Complaince:
Policy WS6 allocates housing to the most sustainable settlements in the rural areas of Wealden. This is in accordance with national planning guidance. The rural settlements that have been identified for additional housing have been identified based on a settlement hierarchy which categorises settlements according to their ability to support additional development. This approach is supported by background evidence and is therefore justified. Furthermore, the policy is also effective because it is deliverable (through the Delivery and Site Allocations DPD) and provides sufficient flexibility should the 'proposed' amount of housing allocated to each village not be feasible.

Strategy
Policy 6
Sound  ☐ Yes  ☑ No  ☐ Justified  ☑ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No
Details of Reasons for Soundess/ Legal Complaince:
Selmeston Parish Meeting considers that the environmental criterion for classification of settlements have been incorrectly applied to Selmeston, causing it to be classified as a neighbourhood centre, when it would more correctly be described as an unclassified rural settlement. Our settlement was correctly rated low on the social and economic criteria. The much higher environmental rating was assigned on the basis that the limited shopping facilities recently opened in the village would enable a reduction in transport. However, the basic facilities provided by this outlet do not provide for instance any form of protein or vegetables. It is not a village store. It is still necessary to travel in order to obtain the basics of a healthy diet.

Details of Changes to be Made:
If Selmeston were reclassified as an unclassified rural settlement, the allocation of some houses could still be appropriate. The allocation of as many as ten houses would constitute a disproportionately high 20% increase in housing stock. A lesser number of up to five would be appropriate.

Sound  ☐ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  ☐ Yes  ☐ No
Details of Reasons for Soundess/ Legal Complaince:
Objection has been submitted to policy WCS2 on the inadequacy of its proposal to permit just an additional 455 dwellings in the Rural Villages. As policy WCS6 re-iterated that, (although it does, in fact, state "at least" 455 dwellings rather than just 455) then objection also has to be made to this policy. It is considered that a much higher figure than 455 dwellings should be given in this policy, since the Council should be providing 17,300 units rather than the 9,600 proposed in policies SPO3, WCS1 and WCS2. As previously stated, policy WCSs which sets out the proposed distribution of the 9,600 dwellings needs to be re-written so as to encompass the 17,300 units. The resultant figure for the Rural Villages will therefore need to be reflected in policy WCS6. It has already been stated in respect of policy WCS4 that a further strategic development area, namely land west of Mayfield, should be included in that policy. That will therefore also need to be referred to in policy WCSs. No amendments or increases are otherwise proposed in respect of the settlements listed in WCS6. However, in the light of the objections to the inadequacy of the overall additional housing figures of 9,600 units, then the Council should willingly accept other proposals for increased units in these - and other - settlements.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:

We believe that to remove all small settlements (neighbourhood centres and smaller) from the development boundaries, and to make them subject to countryside policies only, is too general an assumption to make at Core Strategy level. The decision as to whether a settlement should have a development boundary or not should be when the Proposals Map DPD is considered - such consideration should not be prejudiced by generalisations contained within the Core Strategy. The Core Strategy should only be for large strategic allocations, not the smaller allocations that may be found in smaller centres.

Details of Changes to be Made:

The Core Strategy should restrict itself to classifications of settlements, it should not be used to then define each settlement’s development boundary (or lack of). The Core Strategy should only be for large strategic allocations, not the smaller allocations that may be found in smaller centres.
A key test of ‘soundness’ for Wealden’s Core Strategy is conformity with national planning policy. Planning Policy Statement 7: ‘Sustainable Development in Rural Areas’ (PPS7) is particularly relevant in regard to Policy WCS6. It is considered that development proposed within the draft Core Strategy would accord with the aims of PPS7 because “the focus for most additional housing in rural areas should be on existing towns and identified service centres. But it will also be necessary to provide for some new housing to meet identified local need in other villages.” (para.8). PPS7 states that; “It is essential that local planning authorities plan to meet housing requirements in rural areas” (para.8) Policy WCS6 identifies growth at Maresfield of 10 dwellings. It is considered that Maresfield is well placed to accommodate additional growth; suitable sites have been identified within the Council’s Strategic Housing Land Availability Assessment (SHLAA) which are not divorced from the village and it is accessible by a range of transport methods. However it is submitted that in order to make efficient use of land identified as being potentially suitable to accommodate future housing development within the Strategic Housing Land Availability Assessment a more comprehensive approach to development in Maresfield is required. It is considered that this would better align the draft Core Strategy with national policy particularly the very recently updated Planning Policy Statement 3: ‘Housing’ where it states “Using land efficiently is a key consideration in planning for housing.” (para. 45) By not allocating a larger portion of development to Maresfield the draft Core Strategy would become less ‘sound’ because the development planned under Policy WCS6 would need to take place elsewhere, possibly in a location that does not accord as strongly with the principles for the location of new development established within PPS7. Comments previously made relating to Policy WCS2 are also pertinent here. A ‘sound’ Core Strategy must contain evidence of the views of the local community and others who have a stake in the future of the area. Public comments on the Issues and Options Paper support a general approach within which 30% of new dwellings are allocated to rural areas. The Rural Areas Strategy (WCS6) is deficient because it does not propose a high enough percentage of the total amount of housing to be located in rural settlements in accordance with public opinion. In addition it is not consistent with national policy.

Details of Changes to be Made:

WCS6 Rural Areas Strategy The rural areas comprise the following categories of settlement: Service Centre Local Service Centre Neighbourhood Centre Unclassified settlements Within Service Centres, Local Centres and Neighbourhood Centres (excluding Stone Cross, Polegate and Willingdon and Heathfield) provision will be made for at least 3732 new dwellings. The Delivery and Site Allocations DPD will allocate sites for development sufficient to ensure that the requirements above can be met. Development boundaries will not be retained for settlements classified as a neighbourhood centre or unclassified settlement. Development boundaries will be retained or provided at: Forest Row, Hartfield, Groombridge, Wadhurst, Mayfield, Frant, Buxted, Herstmonceux, Ninfield, Pevensey Bay, Horam, Alfiston, Westham and Rotherfield Development boundaries as shown in the adopted Wealden Local Plan are removed from: Berwick Station, Blackboys, Broad Oak, Cross-in-Hand, East Dean and Friston, East Hoathly, Fairwarp, Five Ash Down, Five Ashes, Framfield, Hadlow Down, Halland, Hoeo Common, Isfield, Lower Dicker, Lower Horsebridge, Maresfield, Mark Cross, Maynards Green, Nutley, Pevensey, Punnetts Town, Upper Dicker, Vines Cross and Windmill Hill Retained or new development boundaries will be reviewed as part of the Strategic Sites and Delivery and Site Allocations DPDs as appropriate. Development will be allocated to settlements classified as Service Centres, Local Service Centres and Neighbourhood Centres within rural areas for the period to 2030 based on the criteria within the Council’s Strategic Housing Land Availability Assessment. It is suggested that Maresfield receives 150 dwellings. This figure is based on Maresfield’s pro rata need for housing. It uses the number of existing households in Maresfield against the total existing households district wide and multiplied by the identified future housing need taken from DCLG forecasts. It has however, been reduced to recognise that footloose new households can be directed into the main towns of the district which would be more sustainable.

WCS6 Rural Areas Strategy  Policy 6

Sound  No  Justified  Effective  Consistent with national policy
Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:
Only ten houses are allocated to the village of Upper Dicker. This is unsound and unjustified. St Bede’s Senior School, one of the largest employers in the Wealden District is located in Upper dicker and has already bought a number of homes there for its own use; it also has a brownfield site three on which it may choose to build houses after the development boundary is removed, taking up all or a large part of Upper Dicker’s housing allocation for the foreseeable future. No allocation at all has been made for the village of Arlington.

Details of Changes to be Made:
In table 11 (eleven), allocating housing numbers to the rural villages, the allocation for Upper Dicker should become the allocation for Upper dicker and Arlington and should be increased from ten to thirty.

WCS6 Rural Areas Strategy  Policy 6

Sound  No  Justified  Effective  Consistent with national policy
Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:
Rural sites may be more constrained, due to topography, landscape, access etc, than those within the built up area. The wording of WCS6 seems to recognise this by implying there should be flexibility in the quantum of new house building within rural areas, as it refers to ‘at least’ 455 dwellings overall. The policy seems therefore to suggest that residential development in the 13 named settlements is a minimum. If so, Fig 11 should reflect this.

Details of Changes to be Made:
Remove settlement banding in notation to Fig 11 of the Core Strategy.
Details of Reasons for Soundness/ Legal Compliance:
The majority of the district is rural area. The Core Strategy recognises that it is important that villages and rural settlements remain vital and that they are sustained throughout the Plan period, so that they can meet their roles as described within the settlement hierarchy of the Plan. The removal of development boundaries from a number of settlements reduces the spread of development within the countryside. Rural Growth Areas shown under Policy WCS6 therefore assume more importance in delivering the Core Strategy. A housing figure of 100 units has been identified for Horam. A number of potentially deliverable sites have been identified in the councils 2010 dated SHLAA for the settlement. The redevelopment of my clients land at Horam to r/o the former Merrydown Cider Factory would tie in with any redevelopment of the factory site. Development here would be upon brownfield land, it could be well integrated with the village and it enjoys good access.

Details of Changes to be Made:
The Horam housing allocation be raised from 100 to 125 units under WCS6.

Details of Reasons for Soundness/ Legal Compliance:
Object to SD1. Unsound, as set out in detailed objections to this site made to that part of the CS document, it is undeliverable, and undeliverable in the set timescale, and unavailable, and will create major town centre congestion problems. Object to SD2. Unsound, as set out in detailed objections to this site made to that part of the CS document, it is undeliverable, undeliverable in the set timescale set and not sustainable. Object to SD3. Unsound, as set out in detailed objections to this site made to that part of the CS document, it is undeliverable, and undeliverable in the set timescale.

Details of Changes to be Made:
Delete SD1 to SD7 and replace with sites that are deliverable and sustainable, as set out in the objectors’ detailed objections. Particularly include land at South Maresfield as detailed in objections for WCS6.
Details of Reasons for Soundess/ Legal Complaince:
This policy fails the SHLAA and other planning criteria as most of the proposed allocated sites have deliverability problems, being either unavailable, undeliverable through access or infrastructure problems, or are in unsustainable locations. These matters are detailed in the separate objections to specific areas, which should be read in conjunction with this objection. But briefly these are: Uckfield, the chosen site has no access, is unavailable, would cause massive town centre congestion. Hailsham and Hellingly, sites are unsustainable as there is no rail transport, undeliverable due to sewage treatment problems, insufficient local employment and car travel only option to overcome this. Polegate and Willingdon undeliverable due to sewage treatment problems. Rural Areas. Village allocations far too low leaving villages to die and just become dormitories for the rich and retired and car owners. Also in particular Maresfield due to the adjacent Ashdown business Park should have a much larger allocation to enable people to live where they work and reduce car travel. This policy also shows what a farce the council have made of the SHLAA, for which there is no challenge objection process, nor does it appear to be independently checked or inspected. The whole point of the SHLAA was to identify land that was deliverable, so allocations could be made from this land. Yet WDC seems to have the opposite and chosen land that is neither available and or deliverable. Also the SHLAA seems to have been completely inconsistently administered, so far instance many sites or villages of very similar nature have very different outcomes in the SHLAA.

Details of Changes to be Made:
Remove the undeliverable sites in Uckfield, Hailsham and Polegate and Willingdon. Increase the village allocations to 2000, as detailed in objections to WCS6 Additionally, change Maresfield to a Local Service Centre and additionally allocate 300 to 400 dwellings for reasons detailed in the objections to WCS2 and WCS6.
This policy is unsound and not justified for housing as the housing figures are far too low given the local and national needs for housing and population growth. The house projection figures at para 3.10 show a need for 16800 by 2030, and additionally WDC's own recent Housing Needs Survey supposedly showed a need for 14000 dwellings by 2026, let alone 2030. These figures appear to have been adjusted/fiddled by local councillor politicians for electoral reasons to come up with the proposed 9600 until 2030. Even these local housing needs surveys are suspect since they did not ask anyone not local if they were palling to move into the area so the council have no idea how many extra people would do this adding to the housing need. This is particularly relevant since any EU national can now come to this country without any restriction or limit. So how many Poles, Romanians, etc were asked if they were planning to come and live in Wealden District. Clearly none, yet it is well recorded that a net 3 million or more EU nationals have come to this country in the last 6 or 7 years. These will all add to the housing need and should be allowed for by every council to take a fair share of these extra people. The council also effectively state that as house building in Wealden District over the last 21 years has been 400 a year, it will continue so for the next 20 despite the changed circumstances currently and looking ahead. Whilst only 400 houses have been built yearly over the last 21 years, this is because that is what the planning system has allowed. The council also have no idea how many extra people would do this adding to the housing need. This is particularly relevant since any EU national can now come to this country without any restriction or limit. Therefore to base the future on a false past in completely wrong. The fact of the matter is that in the last 10 or so years there has been a massive increase in net immigration compared to the 10 years preceding that. The levels of net immigration seen and continuing mean that every 3 to 4 years an extra million people are added to the population, and Wealden will have to accommodate its hare of these and allow for this to continue since most are EU nationals and no UK government has any way of limiting this. Should other countries join the EU, which is also planned during the period to 2030 it is certain even more immigration will occur. It is also a fact that life expectancy has increased significantly in recent times, meaning people live longer and so do not free up houses as they used to because they do not die so early. It is also a fact that more people are living singly and not as couples or families, thus meaning more individual house are needed. Thus all in all it is completely clear that the housing provision is far too low. It is a job to know what national policy is in the current political mess, with proposed changes to the planning system, yet to be enacted into law. However, assuming the aim is to give everyone a decent home to meet their needs this low level of housing provision will only make matters much worse, and do nothing to improve them, so much be against national policy. Employment land. All of the major current employment land allocations are unbuilied and being rolled into this plan. This is the Ashdown Business Park, Hackhurst Lane Industrial Estate and Polegate Business Park. These make up the vast majority of the supposed land allocation, yet they have been allocated for 15 to 20 years, and in contradiction to the council's claim that they are viable, have still yet to be build. Yet during this time a large amount of housing has been built, and even allowing farm building concernsations this would indicate that most occupiers of the new houses are adding to the existing high level of our commuting, and not working locally. So whilst in theory extra land employemtn land is needed for the increased population, there seems little point in allocating extra land when such a high level of the existing allocations have yet to be built.

Details of Changes to be Made:
Housing provision should be increased to 16800 dwellings to match the needs identified in para 3.10. Whilst the council will say there is not the infrastructure for this, this is because they are the incompetent authority for the area not the competent one. They spend all their time fighting against housing development to the detriment of the homeless and poorly housed, never ever produce any of the plans required in the local plan process in the allotted time so delaying decisions massively, k so ending with disjointed and incoherent plans or decision when they are eventually made. Essentially acting in a negative regressive way. A properly competent authority that embraced extra housing development in a positive forward looking way should easily be able to come up with a sensible joined up plan for extra housing that incorporates the provision of the required infrastructure in a proper joined up way and timely way, and would produce a coherent plan in a short space of time, and providing for these extra houses would not be a problem. It is also noted that the council have to allocate broad locations for their chosen house numbers, as detailed in para 5.9, that these figures and allocations do not include windfall sites, which have
averaged 200 dwellings over the past 10 years. Whilst the rate at which these will continue to come forward can only be guessed at, but if it were to be 200 a year that would allow an extra 4000 dwellings without effecting the councils’ proposed sites. Where it to drop to 100 a year this would still be an extra 2000 dwellings in areas other than the allocated sites. This clearly shows there is plenty of scope to increase the housing provisions despite what the council may say. Equally as submitted in regard to policy WCS6 there is good reason and plenty of scope to allow a much larger rural allocation. Employment land. If the housing figures stay as proposed by the council, then the proposed extra provision should not be allocated until construction of 50% of the outstanding allocations has at least started. Unfortunately the planning system cannot make owners and developers built their business units if they consider it unviable to do so, so there is no planning way out of this problem. Equally whilst there is a demand from small business to buy their own freehold sites, a small business cannot fund the huge initial start up costs of roads, services and S106 requirements needed to get these estates going. Clearly should the housing provision be increased additional employment land will be required, but whether the existing or new land would be build out any quicker than it has been up to now will depend entirely on economics, not planning policy.

Details of Reasons for Soundess/ Legal Complaince:
We note no proposed development for High Hurstwood as a community within the AONB. However we remain concerned that such ‘pickling in aspic’ of communities in the AONB is not sustainable in the long term - indeed the local school, where so much investment has been made to improve facilities, has a time monority of its pupils from High Hurstwood and while some are from the wider Parish, most are in-communting from Crowborough. Within the new drived to Localism we would at least hope that locally supported proposals for development and in particular smaller and affordabel homes (assuming sensible allocation policies for the entire spectrum of local people can be put in place) would be considered positively and that the AONB would not be used as an over-riding negating policy.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
We note that the Development Boundary in Buxted is being retained apart (we assume from discussions with WDC officers) from the Parish Council proposed and agreed extension to the land west of Church Road which will extend the boundary to the sewage works and the railway line. There is a slight concern that the precise number of new dwellings earmarked for Buxted has not been clearly stated.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
We are concerned that some of the approaches to allocating development based on 'local services' fail to appreciate the local pressures faced and that such imposition without local support result in fragmented and not sustainable local communities. Buxted has faced massive and rarely good development in such a manner over the last 30-50 years with substantive loss of local services, infrastructure and amenities, and has had to work hard to avoid community fracturing and the resulting anonymous suburbanised commuter-land so redolent of many similar once vibrant communities.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
Modest sized open market and affordable housing to include key worker accommodation in villages such as Frant and Eridge Green

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:
The removal of the Development Boundary is Maresfield is ill conceived. This was never discussed locally and appeared at the last minute without due concern as to what the community wanted. To remove the boundary here would in fact stifle the ambitions of the community to provide affordable homes and new facilities as well as a resolution to the long standing through traffic problems. In fact what should happen is that the development boundary should be retained, indeed it is probably right for the development boundary to be extended to include land that could provide the necessary number of homes that will provide all the housing needs identified further in the proposals. Reclassifying Maresfield as a local service will allow for this to enable local aspirations to be met. Development Boundaries should be reviewed and the local communities aspirations taken into account. Where there is a clear reason for retaining the boundaries and in some cases to extend them, these should be retained in accordance with the Non statutory and Statutory Local Plans (the only legal plan) which currently prevail. The allocation of 50 homes in Maresfield over the period of the LDF is ill founded and in spite of a local decision which, although deciding to only accept 50 homes, there was a caveat to the parish Councils response which said that a larger allocation could be considered if the demands for guaranteed benefits could be secured. In 2009, the council commissioned housing needs survey concerning the nature and extent of our local housing need. 50 homes would not meet demands by local people who wish to remain in Maresfield

Details of Changes to be Made:

Details of Reasons for Soundness/ Legal Compliance:
I refer to BR5 (Biodiversity) Appendix 1 Tables 4 and 5. Table 4 includes Arlington Reservoir as and LNR Table 5 includes Ludlay Coppice as an SNCI The woodland is an important habitat for wildlife and plant species as appears from the enclosed statements by Michael Hawkins and the Rev. Peter Blee. The reason is, of course, that is has not been disturbed for over fifty years. There cannot be many such sites in East Sussex, certainly none on such a large scale. It is essential that it remains undisturbed if we care at all about biodiversity, as we should. This is all the more important because of the woodland's proximity to Arlington Reservoir and Ludlay Coppice. As Mr Hawkins explains in his statement the development of the woodland for housing would inevitably have an adverse impact on the other sites. This would be a tragedy. It should therefore be included in Table 4 or 5. At the very least it should be designated a Biodiversity Opportunity Area, and included in Table 7. For the reasons stated above, the boundary should be reinstated North West of the station.

**Details of Reasons for Soundness/ Legal Complaince:**

We consider that Policy WCS6 is neither justified nor effective for two reasons: 1. The deletion of the development boundaries for only certain categories of settlement (and also only some settlements within the same category) is irrational. Clearly the concept is a sound one, and something that the Council supports in general terms. Removal of the boundaries for some of the smaller settlements, such as Maresfield, will lead to uncertainty; this is particularly the case in terms of identifying sites for future development via other LDF documents, or determining planning applications; and 2. The SHLAA which forms part of the evidence base for this and other Core Strategy policies, is unsound. Specifically, the appraisal of site reference 212/3120 (Land south of Maresfield) is seriously defective. The SHLAA analysis says "The site comprises an area of good quality open landscape on south facing slopes, and with a high visual sensitivity.. In isolation this substantial site is unsuitable as it could create a very large detached development, poorly related to the existing settlement". Notwithstanding the site is included within those sites as considered "suitable" for development. This finding clearly contradicts the analysis. This is a large site, and significant in terms of housing land supply and Policy.

**Details of Changes to be Made:**

The Policy should be amended to confirm that development boundaries will be retained for all category of settlements, or at least Maresfield where 50 dwellings are proposed over the plan period. The SHLAA must be reviewed in respect of the analysis and findings for site reference 212/3120. This site should be reclassified as unsuitable for residential development.
Details of Reasons for Soundess/ Legal Complaince:

1.1 We consider that Policy WCS6 Rural Areas Strategy is unclear as to how development of housing and employment in rural areas is expected to come forward to be sound it should state more clearly how development can be accommodated in rural areas. It should have more regard to national planning policy in PPS3. 1.2 Support for housing development in rural areas comes from Regional Planning Policy in Paragraph 7.5 which states that affordability is a concern in rural areas in the South East, and that there is a "rural premium" for housing. It continues that sustainable communities must be created and maintained in urban and rural areas. Planning Policy Statement 3: Housing (PPS3) under the heading "Providing housing in suitable locations", paragraph 38 states that there is a need to provide housing in rural areas including in vallages to enhance their sustainability. It says "this should include, particularly in small rural settlements, considering the relationship between settlements so as to ensure that growth is distributed in a way that supports informal social networks, assists people to live near their work and benefit from key services, minimise environmental impact and, where possible, encourage environmental benefits". 1.3 Planning Policy Statement 4: Planning for Sustainable Economic Growth (Policy EC6) supports economic activity in rural areas through the conversation of existing buildings, replacement buildings, where it would remedy deficiencies in facilities, and would address social exclusion. Support is to be given to businesses which want to diversity where this is consistent in scale and environmental impact with a rural location. 1.4 Paragraph 6.45 of the Core Strategy states that: "Outside the towns and the rural settlements identified for growth development will be restricted primarily to that required to meet an essential rural need, support rural diversification and sustainability of the countryside, promote tourism or enhance the countryside. More detailed development management policies and proposals will be contained in the Delivery and Site Allocations DPD in relation to development in the countryside. In the meantime the Council will use national policy and retained Local Plan policies to support development management decisions". This paragraph gives more scope for development in rural areas than policy WCS6. We consider that to be the most appropriate strategy the wording of paragraph 6.45 should be in policy WCS6. This would demonstrate that in accordance with national planning policy in PPS3 and regional planning policy that development of housing in areas other than the service centres and local service centres could be appropriate.

Details of Changes to be Made:

Policy WCS6 should include the working "Outside the towns and the rural settlements identified for growth development will be restricted primarily to that required to meet an essential rural need, support rural diversification and sustainability of the countryside, promote tourism or enhance the countryside. More detailed development management policies and proposal will be contained in the Delivery and Site Allocations DPD in relation to development in the countryside. In the meantime the Council will use national policy and retained Local Plan policies to support development management decisions. The Delivery and Site Allocations DPD will consider the opportunities in small rural settlements for considering the relationship between settlements so that housing and employment growth is districuted in a way that supports informal social networks, assists people to live near their work and benefit from key services."
Paragraph 6.45 implies that development promoted in settlements not identified for growth (which is the majority of settlements) would not be supported unless for rural or countryside uses. This is unsound and unsustainable. Policy WCS6 states that development boundaries will be reviewed through later DPD documents, but we consider that they should be considered through the core strategy. WCS6 is therefore ineffective and unsound at present there is insufficient certainty for landowners. Please see the Indigo Planning letter dated 15 April 2011.

**Details of Changes to be Made:**
Policy WCS6 and the proposals map should provide clarity on the proposed revisions to the development boundaries. We consider that the land to the rear of Mountney Bridge Industrial Estate should be included within the Development Boundary, this reflects its previous allocation in the adopted 1998 Local Plan. Please see the Indigo Planning letter dated 15 April 2011, which sets out why this land should be included.

**Details of Reasons for Soundness/ Legal Complianc**e:
We are aware that there is no capacity available at the Windmill Hill Waste Water Treatment Works in Herstmonceux. Policy WCS6 allocates 70 new homes at Herstmonceux so you will need to be satisfied that Southern Water Services can deliver the associated improvements to accommodate this.

**Details of Changes to be Made:**
Waste water capacity for number of homes
Officers at Mid Sussex District Council are continuing to work jointly with Wealden in developing and implementing a strategic and co-ordinated approach to protecting the Ashdown Forest SAC/SPA. Work already undertaken between the two Councils has identified a series of measures to limit the impact of new development on the conservation interests of the Ashdown Forest. These measures include new development contributing to an appropriate level of mitigation in the form of providing Suitable Alternative Natural Green Space (SANGS) and support via developer contributions towards the Ashdown Forest Access Management Strategy. This strategy will need to specify measures for the management of visitors to Ashdown Forest in such a way that reduces their impact on the interest features of the designated site and will need be prepared and implemented in association with the conservators of Ashdown Forest, Natural England and other partners. In addition, further joint working will be required to develop and implement on site management measures to reduce nitrogen emissions emanating from the increased number of vehicles using the roads crossing Ashdown Forest. In combination with this, both Councils through their Local Development Frameworks will also need to delivery initiatives to reduce reliance on the motor vehicle, through creating sustainable communities, providing improvements to public transport, cycling and walking facilities. Pollution monitoring on the Forest will be required to assess the effectiveness of these measures. The recognition of this situation in paragraphs 3.22 6.34 and policy SPO1 is welcomed. The recognition within the Core Strategy of the impact on the Ashdown Forest that development within rural villages (such as Forest Road and Danehill) would have is welcomed. The strategy focussing growth at Uckfield, Crowborough, Heathfield and Hailsham and smaller-scale growth at villages within the Wealden District will go some way to minimising the negative impact development would have on the Ashdown Forest, especially in combination with further mitigation measures (such as SANGS).

Details of Changes to be Made:

Policy WCS6 also refers to the retention of the development boundary in Forest Row. Whilst we recognise that there are overarching strategic requirements across the district as a whole, we feel that the case made by Forest Row Parish Council during the SHLAA process to find sites that met the criteria and enabled limited housing growth should be re-examined when the consultation on development boundaries is being considered. We believe that the development boundary round Forest Row should be re-drawn elastically to allow for the small pockets of land that meet the criteria to be considered in future without the rigidity of the current boundary limiting scope for future growth.

Details of Changes to be Made:

In this context we would like Wealden District Council to reconsider the sites that were proposed using the SHLAA process that the Parish Council felt would enable such growth and that were not in the Floor Plain and were within reasonable access to the village centre.
In view of the fact that by your own criteria Forest Row meets the requirement for additional housing, we would like to re-iterate our view that Forest Row could accommodate up to 100 dwellings - a conclusion drawn from our Masterplan Survey. This is also stated in Appendix 1. Please note that this level of housing would be in addition to the provision of sheltered accommodation to mitigate the loss of the units in Evelyn Clark House.

Details of Changes to be Made:
The following representations are made by Smiths Gore on behalf of the Trustees of the Firle Estate. The Estate are significant local landowners in the southern part of the District as well as in the adjoining part of Lewes District. As such, the Trustees take a great deal of interest in the emerging planning policy framework in Wealden, and are particularly keen that the southern part of the District is developed and allowed to grow in a way that is sustainable and proportionate to the capacity for that part of the District to support additional development. The representations outlined below focus on the Estate’s landholdings in and around the settlement of Berwick Station. As the Council will know, this area has been under consideration for a possible new settlement of 1500-2000 dwellings, indeed being included within the shortlist of three possible locations. It is clear that the presence of the excellent transport links in the form of the location of a well served train station in the Village combined with easy access to the trunk road network via the A27 meant that Berwick is considered a particularly sustainable location for housing growth. Around this time, Atkins was commissioned to assess the capacity of the Village and put forward suggested development options. The Atkins report, Land at Berwick Station: Proposed Rural Housing Development provides a good deal of background which Smiths Gore do not intend to repeat, including the Gage family’s discomfort at the level of growth then being discussed for Berwick. As responsible local landowners and community members, the family feel quite strongly that development of Villages such as Berwick Station should be allowed to happen in an organic, incremental way so as not to overwhelm existing communities or outpace the provision of social and physical infrastructure. That is not to say however, that growth should not be properly planned and the existing Atkins study should perhaps be seen as a much longer term vision of where Berwick Station may wish to head towards. With that in mind, Smiths Gore have been asked to prepare and submit the following representations to the Core Strategy which we hope will be taken into account during the examination of the Development Plan Document. We and the Estate look forward to a continued positive and effective relationship with the Local Development Framework process. Core Strategy Representations Paragraph 3.3, table 1 Policy unsound and not justified or consistent with national policy This paragraph, and the settlement strategy set out in Table 1, is considered to be inconsistent with national policy insofar as it relates to the need to promote sustainable patterns of development, particularly in relation to public transport accessibility and/or means other than the private car (PPS1, PPS3 and PPS7). This is particularly important for Wealden District since, as stated in Para.5.21 of Background Document 1, The Development of Proposed Submission Core Strategy, the many areas of poor public transport accessibility has led to a heavy reliance on the use of the private motor vehicle. It is therefore vitally important that the distribution of development moving forward does not exacerbate this issue. Whilst it is not suggested that public transport accessibility should be the only consideration, it is suggested that the definition of Accessible Settlements set out in the 2009 Spatial Development Options Background Paper Rural Settlement Classification, is perhaps more consistent with national planning policy than the current strategy and should be re-included. In addition, PPS3 requires LPAs to give consideration to the functional relationship between settlements in rural areas, and it is considered that the relative sustainability of smaller settlements that may in themselves have limited facilities, may in fact be greatly enhanced through a close functional relationship with larger dwellings. Arguably therefore, housing growth in such settlements would be as sustainable as development adjoining the urban area of those larger settlements. To use the example of Berwick Station, the extremely close functional relationship with the Primary Centres of Lewes and Eastbourne, make this Village, as well as all villages that are within easy walking of cycling distance such as Alciston, Berwick and Selmaeston much more sustainable that they are if viewed in isolation. Unfortunately the fact that these Primary Centres are located outside of the plan area has meant that this relationship has not been explored more fully. It is also suggested that the Settlement Hierarchy is not justified since it is also not clear how the decisions that led up to the identification of various categories of settlement are supported by evidence. In particular, it would appear that weighting has been afforded to some facilities, for example primary school provision but not to others such as public transport provision that may be more significant indicators of the sustainability of a settlement. However, since no evidence is provided or indeed does there appear to have been any meaningful consultation around this point during earlier rounds of community involvement, it is impossible to counter this assumption. At the same time, the contribution of certain facilities that have been listed in the matrix that was attached to the 2009 Rural Settlement Classification appears to be arbitrary and not necessarily, it is suggested, good indicators of the vitality or indeed capacity for growth of a settlement. Turning to two examples within the south of the District, Horam and Herstmonceaux are both identified within the Rural Strategy for relatively significant levels of growth, 100 and 70 dwellings respectively. However,
neither settlement are served by train stations and whilst bus based public transport is available, it is suggested relying on this mode of transport will not lead to greater uptake of public transport as would be the case if settlements that are served by rail services were identified for a similar level of growth. This is recognised in the Sustainability Assessment that accompanies the Core Strategy where Herstmonceaux in particular scores particularly low on environmental sustainability.

Details of Changes to be Made:

It is suggested that the allocation provided to Berwick is based on both the availability of land, the relative sustainability of the settlement - taking particular note of its high public transport accessibility, and landscape capacity to absorb development. It is suggested that a figure of between 50 and 100 dwellings over the plan period would be more appropriate and help to facilitate sustainable growth of this part of the district.
Details of Reasons for Soundness/ Legal Compliance:

Policy WCS6 – Rural Area Strategy The main thrust of this Policy, as promoted, is to catalogue Wealden settlements by, apparently, population levels. The result will exclude those falling into ‘Neighbourhood Centres and Unclassified settlements’ and representing the major portion (some 57%) of Wealden District land area, from any meaningful residential housing policy. In categorising the various settlements in this way, the district Council ignores the contribution which contained residential development makes to sustaining vibrant rural village communities. In consequence, no less that 27 currently sustainable villages, as recognised in the out going Local Plan, are to be emasculated, preventing all further growth during the period to 2030. The well intentioned and avowed aim of protecting the countryside is acknowledged. However, the abdication of its responsibilities is not an option open to the District Council. The direct effect of Policy WSC6 will cause those villages which are to be given this doubtful protection to stagnate and decay into geriatric dormitories. If this Policy is adopted there can be no interaction for the moribund local communities it creates, through the intake of younger people. The District Council will cite proposed Policy WCS 9, )Rural exception affordable housing), as a source of local housing, in defending the path they have chosen to pursue. Experience has shown that 'exception' housing policies, as entombed in successive Adopted local plans and applied first through housing associations (HAs), then through registered social landlords (RSLs) and more recently, through approved landlords (ALs), have been an almost total failure. The problem is well recognised but never acknowledged by those with the discretion to do something about it. It is this. Any land suitable for 'exception' housing is equally suitable for private housing development. Consequently and with no more land being made available, landowners prefer to retain their holdings, rather than support exception housing, which gives a return of about 1% of what their land would be worth for equivalent private housing development. Land can only be built on once!

Details of Changes to be Made:

We consider the deleted development boundaries should be restored to the 27 villages the District Council seeks to emasculate in proposed Policy WCS6. We refer to Q4 above, and to the preamble in paragraph 5 of the 19th October document. The district Council sets out to achieve housing growth of 400 units per annum. It quotes that number of dwellings per annum for a plan period of 18 years, (2012 to 2030), producing some 7200 homes in total. In analysing the figures proffered in Policy WCS 2, (Distribution of Housing Growth 2006 – 2030), these amount to 8000 dwellings in total and include the commitments already in hand for the period 2006 to 2012. However, these earlier commitments are not confirmed by completions. Taking current national housing performance, completions will be well below commitments. The draft Core Strategy seeks to create an imbalance in favour of family housing in the south of the district. This proposed imbalance take nebulous account of realistic employment prospects for those families who are being ‘designed’ into the southern housing. This imbalance restricts numbers in the north, where there is some prospect of local employment, and in the villages where, were it allowed, there are realistic prospects that developments would actually take place. Directing family housing to the south will hardly assist the adjoining Eastbourne District, which is already an area of low employment. In practice, the District Council’s financial liabilities will be further extended. The draft Core Strategy, in further seeking to restrict residential development to ‘towns only’, creates fundamentally unsound policy. The result is likely to be a sluggish take up and completions which will fall short of the targets set. The high cost of implementing recent changes to building regulations, together with general infrastructure requirements, will further constrain housing development. A lack of local employment in the south will promote out commuting and by car on an antiquated road network, given the lack of alternative public transport. We propose that the probable shortfall in housing completions be computed and the result be evenly distributed between the villages being unfairly shorn of their development boundaries. This will off-set the debilitating effect draft Policy WCS6 will otherwise cause to the district, should it be adopted.
We welcome the identification of Boreham Street as a settlement where the existing settlement boundary can be removed and where additional development can take place to meet the needs of the District. However, WCS6 only identifies the settlement as capable of accommodating an additional 10 dwellings. The SHLAA assessment of my client's land adjoining The Bull's Head PH identified it as a Potentially Suitable Site with the capacity to accommodate 48 dwellings. It is considered that the settlement of Boreham Street can sustainably accommodate more than the 10 dwellings identified in Policy WCS6 and it is proposed that this number should be increased accordingly. This could relieve the pressure on other, smaller settlements possibly less able to accommodate the level of provision envisaged in this policy.

---

Rural sites may be more constrained, due to topography, landscape, access etc, than those within the built up area. The wording of WCS6 seems to recognise this by implying there should be flexibility in the quantum of new house building within rural areas, as it refers to 'at least' 455 dwellings overall. The policy seems therefore to suggest that residential development in the 13 named settlements is a minimum. If so, Fig 11 should reflect this. Proposed Change

Remove settlement banding in notation to Fig 11 of the Core Strategy.
The majority of the district is rural area. The Core Strategy recognises that it is important that villages and rural settlements remain vital and that they are sustained throughout the Plan period, so that they can meet their roles as described within the settlement hierarchy of the Plan. The removal of development boundaries from a number of settlements reduces the spread of development within the countryside. Rural Growth Areas shown under Policy WCS6 therefore assume more importance in delivering the Core Strategy. Ninfield is better placed than neighbouring settlements to accommodate development. A housing figure of 50 units has been allocated to Ninfield, but this was set in the context of a number of sites having development potential. My client's land at Ingram's Farm, Ninfield, appears to be the least constrained and it has the capacity to accommodate in excess of 50 units. For all the above reasons, it is recommended that the housing quota for Ninfield is raised. Proposed Change

Details of Changes to be Made:
The Ninfield housing allocation be raised from 50 to 100 units.

Hallam Land Management Limited object to the scale of development at Wadhurst, Herstmonceux, Ninfield, Horam, Maresfield. The allocation at Maresfield being particularly unsustainable on the grounds that this is no more than a neighbourhood centre with only limited facilities.

Details of Changes to be Made:
The scale of development in all of these locations be reduced to a maximum of 25 units, reducing commensurate to the size and scale of the settlement.
Details of Reasons for Soundness/ Legal Complaince:
The majority of the district is rural area. The Core Strategy recognises that it is important that villages and rural settlements remain vital and that they are sustained throughout the Plan period, so that they can meet their roles as described within the settlement hierarchy of the Plan. The removal of development boundaries from a number of settlements reduces the spread of development within the countryside. Rural Growth Areas shown under Policy WCS6 therefore assume more importance in delivering the Core Strategy. At Selmeston there is the opportunity to increase housing provision to 20 units. Proposed Change

Details of Changes to be Made:
The Selmeston housing allocation be raised to 20 units.

Details of Reasons for Soundess/ Legal Complaince:
It is important to understand the relationship between the Council’s settlement hierarchy, proposed Rural Growth Areas (Figure 11) and proposed amendments to settlement boundaries (WCS6). If the relationship is unclear, the Core Strategy is unclear. The SHLAA is predominantly ‘site centred’; Rural Growth Areas need to consider the impact individual sites, most often identified in the SHLAA, will have upon a village / rural settlement. Designation of a village / rural settlement as a Growth Area indicates that there will be development for new housing with infrastructure to support it over a substantial time frame (up to 2030). The Core Strategy proposes to continue to apply countryside constraints to neighbourhood centres. To achieve this, some Growth Areas identified in Figure 11 in the Plan will have their development boundaries removed; other Growth Areas will not have development boundaries defined. There is a risk these policies could work against each other. In combination, these policies send out a mixed message to residents in the villages concerned – on the one hand, it is indicated that rural character will be preserved and yet on the other, with Growth Area designation, that there will be change with some degree of urbanisation. Proposed Change

Details of Changes to be Made:
That Growth Areas indentified in Figure 11 have development boundaries retained and Growth Areas presently without development boundaries have boundaries defined in later DPDs, with consequential amendments made to Paras 3.6 and 3.7.
Details of Reasons for Soundess/ Legal Complaince:
Policy 6 is unsound because: 1. The development boundary for Berwick Station should be retained. To remove it will encourage development on greenfield sites, including an archaeologically sensitive area considered for scheduling as a Ancient Monument by English Heritage. 2. The number of new houses proposed for Berwick Station is disproportionally high, representing over 25% growth in the size of the settlement.

Details of Changes to be Made:
Either this part of the strategy should be reconsidered or Berwick Station should be recategorised as an "Unclassified Settlement".

Details of Reasons for Soundess/ Legal Complaince:
Support housing growth at Ninfield, as this will help support the 'secondary centre' role of Bexhill.

Details of Changes to be Made:
A key test of ‘soundness’ for Wealden’s Core Strategy is conformity with national planning policy. Planning Policy Statement 7: ‘Sustainable Development in Rural Areas’ (PPS7) is particularly relevant in regard to Policy WCS6 because “the focus for much additional housing in rural areas should be on existing towns and identified service centres. But it will also be necessary to provide for some new housing to meet identified local need in other villages.” (para. 8). PPS7 states that; “It is essential that local planning authorities plan to meet housing requirements in rural areas” (para. 8) Policy WCS6 identifies growth at East Dean of 10 dwellings during the plan period. It is considered that East Dean is well placed to accommodate additional growth; suitable sites have been identified within the Council’s Strategic Housing Land Availability Assessment (SHLAA) which are not divorced from the village and it is accessible by a range of transport methods. However it is submitted that in order to make efficient use of land identified as being potentially suitable to accommodate future housing development within the Strategic Housing Land Availability Assessment a more comprehensive approach to development in East Dean is required. It is considered that this would better align the draft Core Strategy with national policy particularly the very recently updated Planning Policy Statement 3: ‘Housing’ where it states “Using land efficiently is a key aspect of what the plan says regarding the Sussex Coast Policy Area identified within the Regional Spatial Strategy for the South East. The ‘Sussex Coast and Towns’ was also a Priority Area for Economic Regeneration in RPG9 therefore it can be seen that this is an area where regeneration has been a priority for a long period of time. It is the present government’s stated intention to revoke the South East Plan however the issues within the Sussex Coast Policy Area will remain. The South East Plan was tested extensively and went through numerous consultations. It is important that the thrust of what the plan says regarding the Sussex Coast Policy Area is manifested in the Core Strategy in order to address the identified weakness of the area. A particular challenge identified within the South East Plan that is faced by the Sussex Coast Policy Area is, inter alia, to “deliver sufficient decent homes and provide a well integrated mix to meet the needs of the area” (para. 17.2) The South East Plan proposes that approximately 63% of Wealden’s new housing development is located in the Sussex Coast Sub-Region. The draft Core Strategy is in accordance with this as at present approximately 63% of new allocations (excluding rural areas) are within the Sussex Coast Policy Area. It is noted however that only approximately 42% of new housing allocations under policy WCS6 will be directed towards rural areas within the Sussex Coast Policy Area as defined in the Wealden Profile (2009). It is accepted that there are factors including land supply, the sub-region’s high environmental quality and nationally designated landscapes that may constrain development. None the less it is submitted that a higher proportion of Wealden’s future housing growth be directed towards the Sussex Coast Policy Area to address its need, specifically to “deliver sufficient decent homes” (para. 17.2) (South East Plan), particularly in rural areas. The South East Plan specifically refers to rural areas within the Sussex Coast Policy Area. “As well as the coastal towns, the sub-region includes the immediate rural hinterland which extends into the Sussex Downs AONB (which is to be replaced by the South Downs National Park) and High Weald AONB, and includes protected coastal areas.” (para. 17.1) It is important that the needs of this rural hinterland, which includes East Dean, are not neglected and as such it is submitted that a higher proportion of development be allocated to rural areas within the Sussex Coast Policy Area. The Managing the Delivery of Housing Background Paper (February 2011) confirms that the housing register and the housing needs assessment are both indicators of housing need. Planning Policy Statement 7: ‘Sustainable Development in Rural Areas’ states: “It is essential that local planning authorities plan to meet housing requirements in rural areas, based on an up to date assessment of local need.” (para. 8) East Dean & Friston Parish is identified within the Managing the Delivery of Housing Background Paper at appendix 1 as having 9 households on the housing register as of June 2010. Appendix 2 has regard to the housing needs
assessment and gives estimated gross needs per annum. East Dean & Friston is estimated to have a gross need per annum of 7 dwellings. At present there is a clear requirement for housing in East Dean and Friston which is not addressed sufficiently by Policy WCS6. The Core Strategy is therefore unsound because it does not take account of its evidence base and is not consistent with national policy. In addition the Managing the Delivery of Housing Background Paper recognises that “many households, although in housing need, do not apply to the local authority for housing.” (para. 6.10) therefore it is considered that the housing need in East Dean and Friston may actually be much higher than shown above. It is submitted that a larger portion of housing growth be allocated to East Dean and Friston to meet an identified need. The Managing the Delivery of Housing Background Paper states: “Policies in the Core Strategy can assist in ensuring the provision of affordable housing through the requirement for market housing to provide a proportion of affordable homes” (para. 6.15) It is considered that through the allocation of a larger portion of market housing through Policy WCS6, essential local affordable housing needs can be addressed. Under the heading planning for housing policy objectives Planning Policy Statement 3: ‘Housing’ states that the specific outcomes the planning system should deliver are, inter alia “A mix of housing, both market and affordable, particularly in terms of tenure and price, to support a wide variety of households in all areas, both urban and rural” and “A sufficient quantity of housing taking into account need and demand and seeking to improve choice.” (para. 10) The Wealden Profile 2009 informs that “The Parish with the highest proportion of detached properties as a percentage of its total dwellings is East Dean and Friston, with 80.4 %.” (para. 2.4) It is clear that East Dean requires additional housing development over the 10 dwellings allocated in Policy WCS6 in order to address the severe bias towards expensive, detached properties in the area. At present the draft Core Strategy is not sound as it is not consistent with the above national policy.

Details of Changes to be Made:

WCS6 Rural Areas Strategy The rural areas comprise the following categories of settlement: Service Centre Local Service Centre Neighbourhood Centre Unclassified settlements Within Service Centres, Local Centres and Neighbourhood Centres (excluding Stone Cross, Polegate and Willingdon and Heathfield) provision will be made for at least 3732 new dwellings. The Delivery and Site Allocations DPD will allocate sites for development sufficient to ensure that the requirements above can be met. Development boundaries will not be retained for settlements classified as a neighbourhood centre or unclassified settlement. Development boundaries will be retained or provided at: Forest Row, Hartfield, Groombridge, Wadhurst, Mayfield, Frant, Buxted, Herstmonceux, Ninfefield, Pevensey Bay, Horam, Alfriston, Westham and Rotherfield Development boundaries as shown in the adopted Wealden Local Plan are removed from: Berwick Station, Blackboys, Broad Oak, Cross-in-Hand, East Dean and Friston, East Hoathly, Fairwarp, Five Ash Down, Five Ashes, Framfield, Hadlow Down, Halland, Hooe Common, Isfield, Lower Dicker, Lower Horsebridge, Maresfield, Mark Cross, Maynards Green, Nutley, Pevensey, Punnetts Town, Upper Dicker, Vines Cross and Windmill Hill Retained or new development boundaries will be reviewed as part of the Strategic Sites and Delivery and Site Allocations DPDs as appropriate. Development will be allocated to settlements classified as Service Centres, Local Service Centres and Neighbourhood Centres within rural areas for the period to 2030 based on the criteria within the Council’s Strategic Housing Land Availability Assessment. It is suggested that East Dean receives 75 dwellings. This figure is based on East Dean’s pro rata need for housing. It uses the number of existing households in East Dean against the total existing households district wide and multiplied by the identified future housing need taken from DCLG forecasts. It has however, been reduced to recognise that footloose new households can be directed into the main towns of the district which would be more sustainable.
The District Council’s starting point for the distribution of housing in rural areas is the classification of settlements, their ability to meet the day to day needs of their inhabitants and the accessibility to services either within or outside those settlements. This has been carried out in a matrix format, so that each settlement can be compared with its neighbour within the district. This work was initially set out in background paper 6 to the Issues and Options document dated July 2009. It has been carried forward into Background Paper 1 and its appendices 3 and 4. One would therefore expect development to be directed to those settlements most able to meet the day to day needs of their populations, or to meet needs currently unmet. There appears little consistency in the approach taken by the Proposed Submission Core Strategy to the distribution of housing around the rural areas of the district. The settlement hierarchy approach adopted is designed to ensure that ‘those places that have the greatest amount and range of employment, community facilities and support services, and which are best served by public transport’ (paragraph 3.3) means that Wealden’s residents can access services whilst minimising the need to travel. The Core Strategy states that ‘evidence confirms that if more sustainable patterns of living are to be promoted, the large majority of future planned growth in Wealden needs to be focussed on the towns and larger villages in the hierarchy, where facilities, services and site opportunities exist’ (para 3.4) Nevertheless, some of the rural settlements singled out for housing growth do not comply with this principle. Some Service Centres and Local Service Centres have been earmarked for growth; some have not. Some Neighbourhood Centres have been earmarked for growth; others with extremely good accessibly links are not only excluded from development, but have had their development boundaries removed to exclude any windfall development. Village Position in Hierarchy Number of new homes Five Ash Down Neighbourhood Centre 0 Development boundary removed Wadhurst Service Centre 70 Frant Local Service Centre 20 Herstmonceax Local Service Centre 70 Ninfield Local Service Centre 50 Horam Local Service Centre 100 Maresfield Neighbourhood Centre 50 East Dean Neighbourhood Centre 10 Berwick Station Neighbourhood Centre 20 Cross in Hand Neighbourhood Centre 25 Boreham Street Neighbourhood Centre 10 Ripe Neighbourhood Centre 10 Seldeston Neighbourhood Centre 10 Upper Dicker (Arlington Parish) Neighbourhood Centre 10 A total of 145 dwellings have been allocated in Neighbourhood Centres, similar to Five Ash Down. Some of the settlements indicated for development are heavily environmentally constrained (for example within the National Park, High Weald Area of Outstanding Natural Beauty or close to the Ashdown Forest). Some are extremely small (for example Boreham Street and Cross in Hand). The allocated sites and the settlement hierarchy do not appear to match the Core Strategy statement that the allocations are limited to towns and larger villages. Given that, there appears to be no particular justification for those settlements singled out for growth. As commented on above, there is an acute level of housing need in the district. The impact of high residential values in rural areas contributes to poor population age and skills profiles of rural populations, leading to decline in rural populations and hence rural services. Planning Policy Statement 3 emphasises the need to address rural housing needs in paragraph 30; ‘In providing for affordable housing in rural communities, where opportunities for delivering affordable housing tend to be more limited, the aim should be to deliver high quality housing that contributes to the creation and maintenance of sustainable rural communities in market towns and villages. This requires planning at local and regional level adopting a positive and pro-active approach which is informed by evidence, with clear targets for the delivery of rural affordable housing.’ The Strategic Housing Market Assessment indicated that more affordable housing could be delivered in the central and northern parts of the district. On sites such as 71/72 Coopers Row in Five Ash Down a higher proportion of affordable housing could be delivered, unconstrained by marketability problems. The Proposed Submission Core Strategy examines housing need on a parish by parish basis. One would expect that the parishes singled out for housing growth would be those demonstrating higher levels of housing need. The following table compares the level of housing need for those parishes singled out for development against Buxted Parish. NOTE: Buxted parish includes the villages of Buxted and Five Ash Down. The figures are not broken down into villages. Parish Housing register Housing needs assessment Gross need p.a. Number of homes proposed Buxted (Five Ash Down) 21 21 22 0 Development boundary removed Wadhurst 67 63 62 70 Frant 26 9 14 20 Herstmonceax 42 3 3 70 Ninfield 23 6 13 50 Horam 26 14 19 100 Maresfield 21 41 23 50 East Dean 9 20 7 10 Berwick Station 1 4 1 20 Cross in Hand (Heathfield and Waldron parish) No info No info No info 25 Boreham Street Herstmonceux parish) No info No info No info 10 Ripe 2 0 4 10 Seldeston 0 4 3 10 Upper Dicker 0 0 0 10 There appears to be no correlation between levels of housing need and the distribution of housing growth. In my opinion, the level of housing need does not justify the distribution of housing growth. The parish by parish breakdown of housing need does not provide the justification
for the distribution of housing in rural areas. When I examine the infrastructure constraints on development, I would expect the parishes constrained by infrastructure to be excluded from potential growth. This is not the case. There appear to be no infrastructure constraints in the Five Ash Down area, that cannot be overcome by developer contributions. This is in contrast to the severe infrastructure constraints in South Wealden (waste water treatment works, particularly in respect of the Pevensey Levels Habitat Directive and transport constraints). Indeed the Strategic Housing Market Assessment noted that the market was buoyant in the central and northern parts of the district and could accommodate higher levels of developer contributions. There appears to be no correlation between those parishes/villages singled out for growth and those with infrastructure constraints. The removal of development boundaries on all the settlements excluded for growth diminishes flexibility and deliverability, should the constraints in other areas restrict growth in an unforeseen manner, or indeed if the infrastructure provided in the southern part of the district is not delivered. Five Ash Down, Buxted Parish Five Ash Down is one of two settlements within Buxted Parish. A further development at the former Mayhew chicken factory, known as Ashdown Place, is being developed for residential development, as a satellite to Five Ash Down. Its relatively isolated relationship to the village means that it is unlikely to contribute to local services. In the settlement hierarchy, Five Ash Down is listed as a Neighbourhood Centre. Five Ash Down (as distinct from Buxted village or Ashdown Place) enjoys these facilities: • Convenience store • Post Office • Place of Worship • Community Hall • Locally significant business area • Broadband access Five Ash Down is located directly on one of the best bus routes in the district, the 29 Regency Route which travels half hourly throughout the week from Tunbridge Wells to Brighton City Centre, taking in Crowborough, Uckfield and Lewes. This bus provides excellent access to the secondary and primary schools of Uckfield (within a 10 minute journey) as well as accessing local primary and secondary centres. Buxted is a settlement within the same parish. It is classed as a Local Service Centre. It is a short bus ride or walk from Five Ash Down and enjoys a main line train station and primary school as well as local; shops and employment. Five Ash Down lies just 1m north of Uckfield, one of the major towns of the District, and a major centre for growth. Uckfield is listed in the hierarchy as a District Centre. Land at Coopers Row Although individual sites are not being considered at this point in the Local Development Framework process, it is worth reiterating that suitable land in the village is available, achievable and suitable. The land at Coopers Row has been declared deliverable by the Strategic Housing Land Availability Assessment. It has been demonstrated that the land can make a significant contribution to life in the village by providing much needed open space. A potential housing layout has been indicated that is attractive and permeable, integrating with the existing village and with local footpath links. Accessibility to existing shops and services, as well as the excellent bus route, is key to the success and the sustainability of the site. The site could accommodate sufficient housing to create a village with a heart, and sufficient affordable housing to address the identified need. The landowner continues to develop a close relationship with the Parish Council and is working with the parish on a layout which reflects village needs. In my opinion therefore the distribution of housing in rural areas is not justified, and the evidence points to a more equitable distribution around the villages. The approach taken leaves many rural communities devoid of sufficient development to address affordability and sustainability. The application of the settlement hierarchy appears flawed and inconsistent. Settlements selected for growth appear unrelated to status, size, constraints or needs. Whereas Planning Policy Statement 3 provides some emphasis on the needs of villages, this has been overlooked in the Core Strategy. The delivery approach is inflexible and will falter if the infrastructure is not provided in the south of the district of in the principal towns. As a result I find the Proposed Submission Core Strategy unsound in relation to the PPS12 test of soundness.

Details of Changes to be Made:

WCS6 Rural Areas Strategy The rural areas comprise the following categories of settlement: Service Centre Local Service Centre Neighbourhood Centre Unclassified settlements Within Service Centres, Local Centres and Neighbourhood Centres (excluding Stone Cross, Polegate and Willingdon and Heathfield) provision will be made for at least 3042 new dwellings. The Delivery and Site Allocations DPD will allocate sites for development sufficient to ensure that the requirements above can be met. Development boundaries will not be retained for settlements classified as a neighbourhood centre or unclassified settlement. Development boundaries will be retained or provided at: Forest Row, Hartfield, Groombridge, Wadhurst, Mayfield, Frant, Buxted, Herstmonceux, Ninfield, Pevensey Bay, Horam, Alfriston, Westham and Rotherfield Development boundaries as shown in the adopted Wealden Local Plan are removed from: Berwick Station, Blackboys, Broad Oak, Cross-in-Hand, East Dean and Friston, East Hoathly, Fairwarpe, Five Ash Down, Five Ashes, Framfield, Hadlow Down, Halland, Hoe Commone, Isfield, Lower Dicker, Lower Horsebridge, Maresfield, Mark Cross, Maynards Green, Nutley, Pevensey, Punnetts Town, Upper Dicker, Vines Cross and Windmill Hill Retained or new development boundaries will be reviewed as part of the Strategic Sites and Delivery and Site Allocations DPDs as appropriate. Development will be allocated to settlements classified as Service Centres, Local Service Centres and Neighbourhood Centres within rural areas for the period to 2030 based on the criteria within the Council’s Strategic Housing Land Availability Assessment. It is suggested that Buxted Parish, in particular Five Ash Down is suitable to receive a proportion of the District’s housing growth, particularly when considered in relation to my previous comments regarding the overall figure for housing development and the proportion of the overall figure which needs to be distributed to rural areas.
POLICY WCS 6 Rural Areas Strategy

On behalf of our client, objection is raised to the above policy as modified by the published Errata on the basis that it is unsound. It is considered that the policy as worded is not justified, as it is not consistent with the stated objectives of the DPD; it is not founded on a credible evidence base, as it fails to examine the available sites at the individual settlements; it is not consistent with national planning policy in that it does not foster a sustainable pattern of development and provide for the continued viability of existing settlements. Tests of Soundness

The draft Core Strategy confirms that half of the local population is resident in the rural area beyond the main towns (para 2.6) and acknowledges that the challenge for the CS is to focus growth where it is most accessible and sustainable whilst maintaining the balance between rural settlements and larger service centres (para 2.7). The need to reflect the relative sustainability of the existing rural settlements in the strategy is explicit in this. Accordingly, it is confirmed in the document that the spatial strategy should recognise that some of the settlements could support some development to meet the needs of the local communities (para 2.7). In this context, it is noted that in other settlements in less sustainable locations additional growth would encourage more travel and out commuting (ibid). We draw attention to the fact that this strategy is therefore dependent on the relative sustainability of the individual settlements. It follows that the more sustainable settlements should be the focus for development if a sustainable pattern of development is to be created. It is noted in the CS that in order to reduce social inequalities it is necessary to ensure accessibility to services and to determine the best pattern of development across the District to ensure it is sustainable and supports the future role and function of settlements (para 2.18). The functions of the various settlements have been set out (see Table 1) with the role of larger settlements being confirmed. Whilst some development may be appropriate at Neighbourhood Centres, we note that these are categorised as settlements with limited, basic or no facilities but with access to another centre or where there are facilities but poor access to other centres. In both cases the introduction of further development is proposed at a relatively unsustainable settlement when compared to others that have a greater level of access to services including a supply of employment. As a result, we consider that the emphasis on new development allocations should be focused on those settlements that are regarded as more sustainable, notably the Service Centres and Local Service Centres. The draft policy seeks to accommodate a significant amount of development at Neighbourhood Centres (we calculate some 32% of the rural total), which in our view is substantial. It also involves development of a significant scale at certain locations such as Maresfield, Berwick Station and Cross-in-Hand. By excluding those remaining Service Centres and Local Service Centres from the allocation list, we consider that the strategy fails to promote the continued functioning of these and will not foster a sustainable pattern of development. On this basis, we consider that it is not justified by the needs of the population or the identified future role of the individual settlements. The CS notes that evidence confirms that ‘if more sustainable patterns of living are to be promoted, the large majority of future planned growth needs to be focused on the towns and larger villages in the hierarchy where facilities, services and site opportunities exist’. (para 3.4). The proposed split of new allocations within the selected rural settlements does not reflect these considerations in our view. In terms of the spatial planning objectives in the plan it is the case that SPO3 acknowledges that ‘the majority of new housing will be accommodated within, or as sustainable extensions to, existing towns, while allowing for limited growth within those villages capable of accommodating development in a sustainable fashion’. The proposed distribution simply fails to do this as in many cases it involves development that is proposed at the less sustainable settlements. In respect of the rural area it is proposed under SPO8 ‘to maintain and where appropriate enhance through the encouragement of growth, the effective network of villages that will continue to support the day to day needs of our rural communities, and which will accommodate some additional growth where this would be sustainable’. The need to promote development in sustainable locations therefore places an emphasis on those villages that are already sustainable, such as Local Service Centres. The proposed pattern of development in WCS6 fails to do this and is therefore not justified. Effective In order to be effective the policies and proposals need to be capable of being delivered. As part of the rural strategy, it is an objective of the plan to foster and enhance through development the functioning of existing settlements in order to provide for the needs of the rural based population (which is significant). This strategy requires a supportive approach to development if it is to be effective. The draft plan seeks to limit new allocations whilst relying on the continued development of sites within existing settlements to supplement this additional supply. It is therefore proposed to retain a number of existing development boundaries first established in the adopted Local Plan of 1998. In our view, retention of the existing development boundaries will only serve to prevent beneficial

POLICY WCS 6 Rural Areas Strategy

On behalf of our client, objection is raised to the above policy as modified by the published Errata on the basis that it is unsound. It is considered that the policy as worded is not justified, as it is not consistent with the stated objectives of the DPD; it is not founded on a credible evidence base, as it fails to examine the available sites at the individual settlements; it is not consistent with national planning policy in that it does not foster a sustainable pattern of development and provide for the continued viability of existing settlements. Tests of Soundness

Justified

The draft Core Strategy confirms that half of the local population is resident in the rural area beyond the main towns (para 2.6) and acknowledges that the challenge for the CS is to focus growth where it is most accessible and sustainable whilst maintaining the balance between rural settlements and larger service centres (para 2.7). The need to reflect the relative sustainability of the existing rural settlements in the strategy is explicit in this. Accordingly, it is confirmed in the document that the spatial strategy should recognise that some of the settlements could support some development to meet the needs of the local communities (para 2.7). In this context, it is noted that in other settlements in less sustainable locations additional growth would encourage more travel and out commuting (ibid). We draw attention to the fact that this strategy is therefore dependent on the relative sustainability of the individual settlements. It follows that the more sustainable settlements should be the focus for development if a sustainable pattern of development is to be created. It is noted in the CS that in order to reduce social inequalities it is necessary to ensure accessibility to services and to determine the best pattern of development across the District to ensure it is sustainable and supports the future role and function of settlements (para 2.18). The functions of the various settlements have been set out (see Table 1) with the role of larger settlements being confirmed. Whilst some development may be appropriate at Neighbourhood Centres, we note that these are categorised as settlements with limited, basic or no facilities but with access to another centre or where there are facilities but poor access to other centres. In both cases the introduction of further development is proposed at a relatively unsustainable settlement when compared to others that have a greater level of access to services including a supply of employment. As a result, we consider that the emphasis on new development allocations should be focused on those settlements that are regarded as more sustainable, notably the Service Centres and Local Service Centres. The draft policy seeks to accommodate a significant amount of development at Neighbourhood Centres (we calculate some 32% of the rural total), which in our view is substantial. It also involves development of a significant scale at certain locations such as Maresfield, Berwick Station and Cross-in-Hand. By excluding those remaining Service Centres and Local Service Centres from the allocation list, we consider that the strategy fails to promote the continued functioning of these and will not foster a sustainable pattern of development. On this basis, we consider that it is not justified by the needs of the population or the identified future role of the individual settlements. The CS notes that evidence confirms that ‘if more sustainable patterns of living are to be promoted, the large majority of future planned growth needs to be focused on the towns and larger villages in the hierarchy where facilities, services and site opportunities exist’. (para 3.4). The proposed split of new allocations within the selected rural settlements does not reflect these considerations in our view. In terms of the spatial planning objectives in the plan it is the case that SPO3 acknowledges that ‘the majority of new housing will be accommodated within, or as sustainable extensions to, existing towns, while allowing for limited growth within those villages capable of accommodating development in a sustainable fashion’. The proposed distribution simply fails to do this as in many cases it involves development that is proposed at the less sustainable settlements. In respect of the rural area it is proposed under SPO8 ‘to maintain and where appropriate enhance through the encouragement of growth, the effective network of villages that will continue to support the day to day needs of our rural communities, and which will accommodate some additional growth where this would be sustainable’. The need to promote development in sustainable locations therefore places an emphasis on those villages that are already sustainable, such as Local Service Centres. The proposed pattern of development in WCS6 fails to do this and is therefore not justified. Effective In order to be effective the policies and proposals need to be capable of being delivered. As part of the rural strategy, it is an objective of the plan to foster and enhance through development the functioning of existing settlements in order to provide for the needs of the rural based population (which is significant). This strategy requires a supportive approach to development if it is to be effective. The draft plan seeks to limit new allocations whilst relying on the continued development of sites within existing settlements to supplement this additional supply. It is therefore proposed to retain a number of existing development boundaries first established in the adopted Local Plan of 1998. In our view, retention of the existing development boundaries will only serve to prevent beneficial
development by maintaining areas of existing development and will therefore preclude delivery of rural development in sustainable locations. It is confirmed that ‘in order to sustain our larger, and more sustainable, villages the retention of development boundaries will allow a flexible approach in the provision of employment and other services and facilities’ (para 6.48). It is evident that the policy as drafted seeks to retain the development boundaries set out in the existing Local Plan for a number of sustainable settlements. These boundaries have been established for a long period and additional potential within them is strictly limited. In our view this approach will completely negate the potential of these settlements as it is prejudicial to the introduction of further development. Settlement boundaries were identified in the adopted Local Plan of 1998 and reflected in the informal review of 2005. This means that any potential development sites that were contained within these areas have long since been identified and implemented. Whilst it is notable that windfall sites have made a contribution in the past, we consider that these would have been sought at the height of recent economic cycles and are unlikely to be viable or achievable now. Examination of the existing boundaries reveals that in many cases they have been drawn tightly to prevent the outward expansion of settlements and contain only developed areas with further policy restrictions on intensification in certain places for reasons of townscape quality. Retaining existing boundaries will not provide for development opportunities and will not therefore provide a flexible approach. In our view the exact opposite is likely with the perpetuation of a highly restrictive policy framework that will prevent the delivery of much needed development in sustainable settlements. As drafted, policy WCS6 will thus prevent the delivery of sustainable development and will therefore not be effective in securing beneficial development to meet the needs of local communities in sustainable locations. This restrictive approach will preclude the delivery of the rural strategy as set out. Contrary to national policy PPS1 ‘Delivering Sustainable Development’ confirms that ‘sustainable development is the core principle underpinning planning’ (para 2). As part of the preferred approach it is confirmed that ‘planning should facilitate and promote sustainable and inclusive patterns of urban and rural development by (inter alia) ensuring that development supports existing communities and contributes to the creation of safe, sustainable, liveable and mixed communities with good access to jobs and key services for all members of the community’ (para 5). It follows from this that the CS must adopt an approach that accommodates development at the most sustainable settlements if a sustainable pattern of development is to be achieved in rural locations. In the absence of this, the draft policies will fail to secure the preferred approach as advocated by national planning policies. Part of this approach must be to co-ordinate housing development with the ability to provide for local jobs and services. The more sustainable villages are therefore those that combine the existence of services with access to employment provision. This places an emphasis on those settlements that have a better range of facilities, such as the Service Centres and the Local Service Centres as identified in the plan. It is also confirmed that ‘plans should be drawn up with community involvement and present a shared vision and strategy of how the area should develop to achieve more sustainable patterns of development’ (para 7). The requirement to promote greater levels of sustainability in rural areas is an integral part of this approach and needs to be adopted through the plan-making process. The identification of the more sustainable villages as Service Centres and Local Service Centres reflects community wishes and needs to form the basis of the strategy. Accordingly, it is confirmed that development plans should ‘promote development that creates socially inclusive communities’ and policies should (inter alia) ‘address accessibility (both in terms of location and physical access) for all members of the community to jobs, health, housing, education, shops, leisure and community facilities’ (para 16). This requirement places an emphasis on the need to maintain the functioning of the larger rural settlements given that these provide for the main services that are available to rural communities at a local level. The de-facto restriction on development at those settlements where development boundaries are proposed to be retained is unlikely to improve the accessibility of the services found in these and thus is contrary to national policies that seek to promote accessibility and inclusiveness. Under PPS3 ‘Housing’ 2010 it is the case that ‘the delivery of housing in rural areas should (provide) high quality housing that contributes to the creation and maintenance of sustainable rural communities…’ (para 3). In order to achieve this it is a requirement that housing is developed in suitable locations ‘which offer a range of community facilities and with good access to jobs, key services and infrastructure’ (para 36). In our view the failure of the plan to provide for new development at the larger villages is not consistent with this stance as it promotes development in unsustainable locations. It is confirmed that in identifying locations for development ‘the location of housing should facilitate the creation of communities of sufficient size and mix to the development of and sustain community facilities, infrastructure and services’ (para 38). The current proposals for the expansion of some of the neighbourhood centres under policy WCS6 is considered to be contrary to these considerations given the recognition that the level of services in these settlements is basic at best. Whilst it is agreed that the identification of sites for rural development are not of a strategic nature and therefore do not need to be allocated in the Core Strategy, there is already strong evidence that the housing market in the northern area of the District is strong and that demand here is causing problems for affordability. Although some sites may have been promoted through the SHLAA, the relative small scale of provision in rural locations is capable of being addressed through the updated evidence base for the Delivery & Site Allocations DPD. Excluding settlements through the retention of development boundaries at this stage is therefore not in accordance with the advocated criteria based approach (see para 38). The draft CS should therefore avoid prejudicing the detailed assessment of potential development sites at sustainable settlements as these can be more appropriately dealt with through the subsequent DPD.
Details of Changes to be Made:

REPRESENTATIONS ON THE WEALDEN LOCAL DEVELOPMENT FRAMEWORK POLICY WCS 6 Rural Areas Strategy

It is submitted that draft policy WCS6 should read as follows; ‘WCS6 Rural Areas Strategy The rural areas comprise the following categories of settlement: Service Centre Local Service Centre Neighbourhood Centre Unclassified Settlements Within Service Centres, Local Service Centres and Neighbourhood Centres (excluding Stone Cross, Polegate and Willingdon and Heathfield) provision will be made for at least 455 new dwellings (net). The Delivery & Site Allocations DPD will allocate sites for development sufficient to ensure that the requirements above can be met. Development boundaries as shown in the adopted Wealden Local Plan are removed from Service Centres, Local Service Centres and Neighbourhood Centres. New development boundaries will be reviewed for these settlements as part of the Strategic Sites and Delivery and Site Allocations DPD’s as appropriate. It is not proposed to retain or provide development boundaries for settlements that are categorised as unclassified. The following are selected settlements classified as Service Centres, Local Service Centres or Neighbourhood Centres where suitable sites have already been identified. The table indicates the proposed scale of additional housing development to be allocated in these settlements up until 2030: Name New Housing Allocations (Net Additional Dwellings) Wadhurst 70 Frant 20 Herstmonceux 70 Ninfield 50 Horam 100 Maresfield 50 East Dean 10 Berwick Station 20 Cross-in-Hand 25 Boreham Street 10 Ripe 10 Selmeston 10 Upper Dicker 10

In the light of the detailed boundary review in the Strategic Sites and Delivery and Site Allocations DPD’s, in all of the categorised Service Centres, Local Service Centres and Neighbourhood Centres further housing development of an appropriate scale on currently unidentified sites will be permitted at these settlements to supplement the overall supply’.
POLICY WCS 6 Rural Areas Strategy

On behalf of our client, objection is raised to the above policy as modified by the published Errata on the basis that it is unsound. It is considered that the policy as worded is not justified, as it is not consistent with the stated objectives of the DPD; it is not founded on a credible evidence base, as it fails to examine the available sites at the individual settlements; it is not consistent with national planning policy in that it does not foster a sustainable pattern of development and provide for the continued viability of existing settlements. The above reasons are expanded on below. Tests of Soundness

Justified

The draft Core Strategy confirms that half of the local population is resident in the rural area beyond the main towns (para 2.6) and acknowledges that the challenge for the CS is to focus growth where it is most accessible and sustainable whilst maintaining the balance between rural settlements and larger service centres (para 2.7). The need to reflect the relative sustainability of the existing rural settlements in the strategy is explicit in this. Accordingly, it is confirmed in the document that the spatial strategy should recognise that some of the settlements could support some development to meet the needs of the local communities (para 2.7). In this context, it is noted that in other settlements in less sustainable locations additional growth would encourage more travel and out commuting (ibid). We draw attention to the fact that this strategy is therefore dependent on the relative sustainability of the individual settlements. It follows that the more sustainable settlements should be the focus for development if a sustainable pattern of development is to be created. It is noted in the CS that in order to reduce social inequalities is it necessary to ensure accessibility to services and to determine the best pattern of development across the District to ensure it is sustainable and supports the future role and function of settlements (para 2.18). The functions of the various settlements have been set out (see Table 1) with the role of larger settlements being confirmed. Whilst some development may be appropriate at Neighbourhood Centres, we note that these are categorised as settlements with limited, basic or no facilities but with access to another centre or where there are facilities but poor access to other centres. In both cases the introduction of further development is proposed at a relatively unsustainable settlement when compared to others that have a greater level of access to services including a supply of employment. As a result, we consider that the emphasis on new development allocations should be focused on those settlements that are regarded as more sustainable, notably the Service Centres and Local Service Centres. The draft policy seeks to accommodate a significant amount of development at Neighbourhood Centres (we calculate some 32% of the rural total), which in our view is substantial. It also involves development of a significant scale at certain locations such as Maresfield, Berwick Station and Cross-in-Hand. By excluding those remaining Service Centres and Local Service Centres from the allocation list, we consider that the strategy fails to promote the continued functioning of these and will not foster a sustainable pattern of development. On this basis, we consider that it is not justified by the needs of the population or the identified future role of the individual settlements. The CS notes that evidence confirms that if more sustainable patterns of living are to be promoted, the large majority of future planned growth needs to be focused on the towns and larger villages in the hierarchy where facilities, services and site opportunities exist’. (para 3.4). The proposed split of new allocations within the selected rural settlements does not reflect these considerations in our view. In terms of the spatial planning objectives in the plan it is the case that SPO3 acknowledges that ‘the majority of new housing will be accommodated within, or as sustainable extensions to, existing towns, while allowing for limited growth within those villages capable of accommodating development in a sustainable fashion’. The proposed distribution simply fails to do this as in many cases it involves development that is proposed at the less sustainable settlements. In respect of the rural area it is proposed under SPO8 ‘to maintain and where appropriate enhance through the encouragement of growth, the effective network of villages that will continue to support the day to day needs of our rural communities, and which will accommodate some additional growth where this would be sustainable’. The need to promote development in sustainable locations therefore places an emphasis on those villages that are already sustainable, such as Local Service Centres. The proposed pattern of development in WCS6 fails to do this and is therefore not justified. Effective In order to be effective the policies and proposals need to be capable of being delivered. As part of the rural strategy, it is an objective of the plan to foster and enhance through development the functioning of existing settlements in order to provide for the needs of the rural based population (which is significant). This strategy requires a supportive approach to development if it is to be effective. The draft plan seeks to limit new allocations whilst relying on the continued development of sites within existing settlements to supplement this additional supply. It is therefore proposed to retain a number of existing development boundaries first established in the adopted Local Plan of 1998. In our view, retention of the existing development
boundaries will only serve to prevent beneficial development by maintaining areas of existing development and will therefore preclude delivery of rural development in sustainable locations. It is confirmed that ‘In order to sustain our larger, and more sustainable, villages the retention of development boundaries will allow a flexible approach in the provision of employment and other services and facilities’ (para 6.48). It is evident that the policy as drafted seeks to retain the development boundaries set out in the existing Local Plan for a number of sustainable settlements. These boundaries have been established for a long period and additional potential within them is strictly limited. In our view this approach will completely negate the potential of these settlements as it is prejudicial to the introduction of further development. Settlement boundaries were identified in the adopted Local Plan of 1998 and reflected in the informal review of 2005. This means that any potential development sites that were contained within these areas have long since been identified and implemented. Whilst it is notable that windfall sites have made a contribution in the past, we consider that these would have been sought at the height of recent economic cycles and are unlikely to be viable or achievable now. Examination of the existing boundaries reveals that in many cases they have been drawn tightly to prevent the outward expansion of settlements and contain only developed areas with further policy restrictions on intensification in certain places for reasons of townscape quality. Retaining existing boundaries will not provide for development opportunities and will not therefore provide a flexible approach. In our view the exact opposite is likely with the perpetuation of a highly restrictive policy framework that will prevent the delivery of much needed development in sustainable settlements. As drafted, policy WCS6 will thus prevent the delivery of sustainable development and will therefore not be effective in securing beneficial development to meet the needs of local communities in sustainable locations. This restrictive approach will preclude the delivery of the rural strategy as set out. Contrary to national policy PPS1 ‘Delivering Sustainable Development’ confirms that ‘sustainable development is the core principle underpinning planning’ (para 2). As part of the preferred approach it is confirmed that ‘planning should facilitate and promote sustainable and inclusive patterns of urban and rural development by (inter alia) ensuring that development supports existing communities and contributes to the creation of safe, sustainable, liveable and mixed communities with good access to jobs and key services for all members of the community’ (para 5). It follows from this that the CS must adopt an approach that accommodates development at the most sustainable settlements if a sustainable pattern of development is to be achieved in rural locations. In the absence of this, the draft policies will fail to secure the preferred approach as advocated by national planning policies. Part of this approach must be to co-ordinate housing development with the ability to provide for local jobs and services. The more sustainable villages are therefore those that combine the existence of services with access to employment provision. This places an emphasis on those settlements that have a better range of facilities, such as the Service Centres and the Local Service Centres as identified in the plan. It is also confirmed that ‘plans should be drawn up with community involvement and present a shared vision and strategy of how the area should develop to achieve more sustainable patterns of development’ (para 7). The requirement to promote greater levels of sustainability in rural areas is an integral part of this approach and needs to be adopted through the plan-making process. The identification of the more sustainable villages as Service Centres and Local Service Centres reflects community wishes and needs to form the basis of the strategy. Accordingly, it is confirmed that development plans should ‘promote development that creates socially inclusive communities’ and policies should (inter alia) ‘address accessibility (both in terms of location and physical access) for all members of the community to jobs, health, housing, education, shops, leisure and community facilities’ (para 16). This requirement places an emphasis on the need to maintain the functioning of the larger rural settlements given that these provide for the main services that are available to rural communities at a local level. The de-facto restriction on development at those settlements where development boundaries are proposed to be retained is unlikely to improve the accessibility of the services found in these and thus is contrary to national policies that seek to promote accessibility and inclusiveness. Under PPS3 ‘Housing’ 2010 it is the case that ‘the delivery of housing in rural areas should (provide) high quality housing that contributes to the creation and maintenance of sustainable rural communities...’ (para 3). In order to achieve this it is a requirement that housing is developed in suitable locations ‘which offer a range of community facilities and with good access to jobs, key services and infrastructure’ (para 36). In our view the failure of the plan to provide for new development at the larger villages is not consistent with this stance as it promotes development in unsustainable locations. It is confirmed that in identifying locations for development ‘the location of housing should facilitate the creation of communities of sufficient size and mix to justify the development of and sustain community facilities, infrastructure and services’ (para 38). The current proposals for the expansion of some of the neighbouring centres under policy WCS6 is considered to be contrary to these considerations given the recognition that the level of services in these settlements is basic at best. Whilst it is agreed that the identification of sites for rural development are not of a strategic nature and therefore do not need to be allocated in the Core Strategy, there is already strong evidence that the housing market in the northern area of the District is strong and that demand here is causing problems for affordability. Although some sites may have been promoted through the SHLAA, the relative small scale of provision in rural locations is capable of being addressed through the updated evidence base for the Delivery & Site Allocations DPD. Excluding settlements through the retention of development boundaries at this stage is therefore not in accordance with the advocated criteria based approach (see para 38). The draft CS should therefore avoid prejudicing the detailed assessment of potential development sites at sustainable settlements as these can be more appropriately dealt with through the subsequent DPD.
Details of Changes to be Made:

REPRESENTATIONS ON THE WEALDEN LOCAL DEVELOPMENT FRAMEWORK POLICY WCS 6 Rural Areas Strategy

It is submitted that draft policy WCS6 should read as follows; ‘WCS6 Rural Areas Strategy

The rural areas comprise the following categories of settlement: Service Centre Local Service Centre Neighbourhood Centre Unclassified Settlements Within Service Centres, Local Service Centres and Neighbourhood Centres (excluding Stone Cross, Polegate and Willingdon and Heathfield) provision will be made for at least 455 new dwellings (net). The Delivery & Site Allocations DPD will allocate sites for development sufficient to ensure that the requirements above can be met. Development boundaries as shown in the adopted Wealden Local Plan are removed from Service Centres, Local Service Centres and Neighbourhood Centres. New development boundaries will be reviewed for these settlements as part of the Strategic Sites and Delivery and Site Allocations DPD’s as appropriate. It is not proposed to retain or provide development boundaries for settlements that are categorised as unclassified. The following are selected settlements classified as Service Centres, Local Service Centres or Neighbourhood Centres where suitable sites have already been identified. The table indicates the proposed scale of additional housing development to be allocated in these settlements up until 2030:

<table>

WCS6 Rural Areas Policy 6

Sound  Yes No Justified Effective Consistent with national policy

Legally Compliant  Yes No

Details of Reasons for Soundness/ Legal Compliance:

Rural sites may be more constrained, due to topography, landscape, access etc, than those within the built up area. The wording of WCS6 seems to recognise this by implying there should be flexibility in the quantum of new house building within rural areas, as it refers to ‘at least’ 455 dwellings overall. The policy seems therefore to suggest that residential development in the 13 named settlements is a minimum. If so, Fig 11 should reflect this.

Proposed Change

Details of Changes to be Made:

Remove settlement banding in notation to Fig 11 of the Core Strategy.

**Details of Reasons for Soundness/ Legal Compliance:**

Point 6.48: "Each rural settlement will be considered on its own merit in following DPDs." together with blanket removal of development boundaries and allocation of housing for neighbourhood centres and smaller settlements does not seem to be a particularly coherent strategy. Villages such as Upper Dicker, with the potential for "in-migration" and prosperity provided by St Bedes school should have more than 10 houses allocated. It is marked on the map as adjacent to a major tourism destination. In addition, this should be the time to encourage development of homes in the southern quadrant of the area, that on which the village school stands. The allocation of homes across the rural areas, at 455, is too low. How else are we to encourage retention of residents who are of working age and stop them from migrating out of the area altogether? Housing development should be aimed at keeping families together.

**Details of Changes to be Made:**

This policy is inconsistent in how it addresses rural development: Focussing on larger towns, but then intending to use predominantly greenfield sites for this is surely a contradiction and would undoubtedly change the nature of the area by encouraging "urban sprawl". It makes more sense to encourage development over the area as a whole, which would prevent further collapse of our rural villages.

**Details of Reasons for Soundness/ Legal Compliance:**

Inadequate allocations to rural areas. Inappropriate to remove development boundary at Framfield. SECTION SEVEN - RURAL AREAS STRATEGY 7.1 Policy WCS6 (taking into account the errata published on 24th February 2011) sets out a strategy for rural areas. Our submissions on this matter rely on the material set out in Section Three of this Statement in respect of the settlement hierarchy. Also relevant is the need to increase housing provision overall (Policy WSC1).

**Details of Changes to be Made:**

7.2 We consider that Policy WCS6 is unsound in the following respects: · housing provision in rural areas should be increased from 455 dwellings in accordance with the need to increase housing provision in the District overall; · a development boundary should be maintained at Framfield; · Framfield should be added to the table of settlements with a new allocation of 50 dwellings; · Figure 11 should be amended accordingly. Increase housing provision. Retain Framfield as a settlement with a development boundary and identify it as a settlement with an allocation of 50 dwellings. Amend Figure 11 accordingly.

**Details of Reasons for Soundess/ Legal Complaince:**

the question of Development Boundaries was never put forward for consultation and indeed was only raised at a very late state, with very little free discussion in council, before this Porposed Submission was produced. We deplore this. “Distinction between towns and villages, where development may be appropriate and smaller settlements where protection of the countryside would normally take precedence”. The current (non-statutory) Wealden Local Plan lists 39 villages with development boundaries. (para.19.50). some are quite small settlements (e.g. Fairwarp) where further development is clearly inappropriate, and where removal of the development boundary is probably correct. The proposed new Core Strategy (WC S6) retains development boundaries for 14 villages and removes them from 13. However in some cases the rationale behind retaining or removing development boundaries is unclear, as in the case of Buxted where the boundary is retained and Maresfield where it is removed. We wish to see the Development Boundary retained for Maresfield for the following reasons: · The village has grown considerably over the past 20 years by extension and infill, and by virtue of its strategic position, remains under considerable development pressure. We are not advocating major new development but wish to see further development properly controlled for the benefit of the village as a whole. · The Ashdown Business Park (see para. 3.21) to the immediate west of the village has now received planning consent, and as it develops should provide considerable employment for the village. · The village is strategically placed at the intersection of the major east-west and north-south routes, and as a direct result of this has relatively very good bus services in most directions (as compared with Buxted for example) which would be further enhanced. We note that one of the aims of the Core Strategy (see SPD.7) is to reduce private car usage, and consider the development of frequent and reliable bus services, is almost certainly the way to achieve this. Regretfully rail services in this part of Wealden can very limited impact on the local need to travel. · Although the village has limited facilities at present, it has all the elements of a vibrant community, primary school, church, village shop and post office. · There is general support for a small number of new homes in this village (Maresfield) over and above the 80 provided for in the current non-statutory Local Plan. Almost certainly this will require some extension of a retained Development Boundary.

**Details of Reasons for Soundess/ Legal Complaince:**

Herstmonceux Parish Council supports the need for a mix of housing in the parish with a particular need for supported housing for older residents.
### Details of Reasons for Soundness/ Legal Complaince:
For Herstmonceux I don’t believe we should build along the road from the village hall to Collins garage, we should not allow the road side to become a new row of houses. Wealden may say that they don’t like the idea of houses being built on the land towards Lime park going down the lane besides the new houses and building opposite the recreation ground, the view is not seen by the people but would be great for those in houses there, but I suggest a tiered development as enclosed. The Windmill hill plan at the monkey puzzle has enough houses; this site where the garage still stands should be a social centre for the people in the area. That’s to say accommodation for a couple of families that can be on site to have a coffee shop, library, youth club open every evening, a place for young and older people that can be for a number of events.

### Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry

---

### Details of Reasons for Soundness/ Legal Complaince:
Village Housing Whilst some villages have been mentioned in the strategy document I feel every village should be allowed to take a number of houses for those people who grow up in those areas and the affordability should be retained and work units should be provided, possible old farm buildings can be adapted to this. While I do appreciate this is happening in some places more sites could be made available.

### Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry
These representations are made on behalf of Rookwood Trinity Limited, owners of the Non-Statutory Plan Policy V5 site: West of Oakleigh, Five Ash Down. Our comments relate only to the Rural Areas Strategy and in particular the failure to allocate any new development to Five Ash Down under Policy WCS6 and the proposal under that policy to remove the Development Boundary from the village. Inconsistencies in the Rural Areas Strategy make it unsound. If adopted in its present form it could lead to development in relatively unsustainable locations while preventing any new development in relatively sustainable and accessible settlements such as Five Ash Down. Five Ash Down is an example of a settlement with a range of services, close proximity and excellent accessibility to a district centre, Uckfield. In early LDF publications, Five Ash Down was considered suitable for further growth as, indeed, it was in the Non-Statutory Plan where our client’s site was allocated for housing development under Policy V5. In this draft Core Strategy document, Five Ash Down is not proposed for development and it is proposed to remove the present development boundary. This represents a complete reversal of policy from the allocation of a site at Five Ash Down in the non-statutory plan and recognising it as a village with growth potential in early LDF consultation documents. The reasons for such a fundamental change of policy are unclear and ill-founded. This shift appears to be based first on inconsistencies and factual errors in the methodology on which the present draft policy is based and secondly on unsound overemphasis on “parish aspirations”. Methodology 1. Accessibility The “Development of the Proposed Submission Core Strategy Background Paper” Appendix 3 deals with the categorisation of Wealden settlements in terms of public/sustainable transport (including the quality and frequency of those services). The first category “Very Good Accessibility”, the highest category, is defined as “frequency of 30 minutes or less and duration of travel of 30 minutes or less by public/sustainable transport”. Brighton & Hove Transport service 29/29A, which runs between Brighton and Tunbridge Wells, passes through Five Ash Down with a half hour service throughout the day. This provides access to primary and secondary schools, Uckfield Rail Station, Uckfield town centre and to the subregional shopping centres of Brighton and Tunbridge Wells as well as Crowborough and Lewes. The travel times for the facilities referred to in the methodology are significantly less than 30 minutes. On this basis, Five Ash Down should be classified as having very good accessibility. While the Settlement Facilities Matrix in Appendix 4 of the background paper correctly shows Five Ash Down having very good accessibility, in Appendix 3 it is shown as having only “fair accessibility”. The draft policy on Five Ash Down appears to be based on this incorrect assessment. The benefit of a good regular bus service is not always given sufficient emphasis in assessing the sustainability of settlements in comparison with rail services. Many rural bus services are slow, circuitous and infrequent. By contrast Service 29/29A, which serves Five Ash Down half hourly, is regular, frequent and connects the village to the services and facilities of Uckfield and other centres. It provides a greater contribution to accessibility to non-car modes of travel than the rail services in Wealden which mainly provide long distance connections. 2. Services The Settlement Facilities Matrix correctly shows Five Ash Down having a convenience store, post office, public house, place of worship, community hall, business areas and “other locally significant employment opportunities”. However, it shows the village as not having a primary school. In fact, Buxted CE Primary School, lies within walking distance approximately 1 km from the A26 – A272 traffic lights at Five Ash Down. The primary school is in fact slightly closer to Five Ash Down than to most of the village of Buxted lying approximately equidistant between the two. Buxted CE Primary School is, therefore, equally or more accessible to Five Ash Down than it is to the village of Buxted itself. In addition, the No. 29 bus service provides access to primary schools in Uckfield. The Settlement Facilities Matrix also shows it as having no children’s play area whereas the new Ashdown Place development has a children’s play area which is not confined to the residents of that estate alone. Proposals for development of the West of Oakleigh site included provision of additional playspace. If the Policy V5 allocation is confirmed in the forthcoming Site Specific DPD, additional playspace could be provided close to the centre of the village. 3. Assessment of Growth Potential Chapter 8 of the Development of the Proposed Submission Core Strategy Background Paper includes “Table 2 – Rural Growth Potential”, which contains an appraisal of growth potential for those rural settlements that are either accessible or have some facilities. Five Ash Down is classified as a Neighbourhood Centre. The analysis is complicated by the fact that some of the assessments are on a village/settlement basis and others on a parish basis. Five Ash Down lies within Buxted Parish and is, therefore, denied a voice of its own in this context. One of the criteria – “Parish Council Favoured Option” – states: “No further development due to current allocations.” However, the footnote indicates that this comment was taken from responses to the Spatial Development Options consultation in July 2009 and in any event the reference to “current allocations” can only mean the allocations in the Wealden Local Plan and the
Non-Statutory Plan, including the Policy V5 allocation at Five Ash Down. The analysis recognises that Five Ash Down is “well related to Uckfield with good connectivity and future employment opportunities” and that “development in this area is sustainable by virtue of links with Uckfield by public transport and employment provision in the area could meet wider housing needs”. The conclusion of “no growth potential” for Five Ash Down is at odds with that analysis and is based on the statement that development is “not compatible with Parish aspirations and significant growth could lead to a change in the hierarchy or settlements”. This conclusion contradicts the preceding analysis. The Parish’s apparent assumption that the Non-Statutory Local Plan allocated sites will be developed is not consistent with a conclusion that will result in the Policy V5 allocation site at Five Ash Down not being developed.

Details of Changes to be Made:
In summary, the Rural Areas Strategy needs further refinement and the correction of factual errors and inconsistencies. Five Ash Down has “Very Good Accessibility” and a good range of local services and facilities. On this basis it should be considered suitable for further modest growth and its development boundary should be retained. Five Ash down does not neatly fit the criteria of Neighbourhood Centre defined in the document and background paper. The development of sustainable sites such as the Policy V5 site at Five Ash Down should not be precluded by Core Strategy Policy. The Council has previously judged the site suitable for allocation for low density development. At that time, the density policy for the site was inconsistent with national density guidelines in PPS3. Those density guidelines have now been removed and there is nothing to prevent the Council from revisiting the policy at its own density preference. That would be supported by the landowner.
5.2 Issues

5.2.1 Th the option. Support was made for growth in Maresfield and for a change to the boundary to the south of the village another issue. Did the options being consulted upon actually reflect the question the Council was trying to ask, i.e.; should development boundaries be removed from some settlements? If this is the case, and consultees have submitted responses unaware of this, then the consultation undertaken must be flawed. Question 5a is perhaps the closest to asking the question about removal, but it is clearly couched in the context of growth and development, i.e.; should they be maintained, reflecting the status quo, or expanded to allow for growth. The question does not ask whether the boundaries should be removed. 5.2.11 Either way, it is clear from the officer recommendation based on the responses to the 2007 consultation (see page 60 ) that settlement boundaries are a positive planning tool and should be retained. There is no mention of removal: 'It would appear that, from the comments received, settlement boundaries are a positive planning policy tool and as an initial recommendation that they should be retained. It is preferable, taking into account the comments raised, that any review of development boundaries should be comprehensive in nature with transparent criteria and consultation . In addition
to the use of settlement boundaries, there appears to be some agreement to allowing development in the countryside to meet local need and this will also need to be considered’. 5.2.12 This recommendation also refers to the use of transparent criteria and consultation when reviewing development boundaries. We can not see (a) any evidence of what transparent criteria have been employed to suggest that the development boundaries should be removed, nor (b) what consultation was undertaken that expressly asked whether the boundaries should be removed. 5.2.13 Para 4.40 of the paper prepared under Agenda Item 8 of the LDF sub Committee on 15th October 2007 states: (i) There is a need for a comprehensive review of boundaries to reflect the current situation on the ground, with appropriate community involvement; (ii) A balance needs to be found between preventing urban sprawl, preventing town cramming and not stifling the development needs of individual communities, particularly where no specific allocations are envisaged. The High Weald AONB Unit was amongst those considering boundaries to have been applied too rigidly and that they have not necessarily taken into account the historic pattern of village development. (iii) That any redefinition of settlement boundaries should have regard to the need to retain the distinct and separate identify of nearby settlements; (iv) Not to limit appropriate design and force high densities in locations where new development is proposed; (v) There could be a need for settlement boundaries to be drawn for villages not identified for growth in any event; (vi) There could be a need to redraw more tightly the boundaries for certain villages, a view shared (cautiously) by the South Downs Joint Committee. (vii) The need for well-defined and systematic criteria for defining settlement boundaries and for the selection of settlements where settlement boundaries should be applied. 5.2.14 This response: (a) acknowledges support for the retention of settlement boundaries; (b) that, even in those settlements where there would be no growth, settlement boundaries are required; and (c) there is a need for a well-defined and systematic criteria for defining settlement boundaries and where they should be applied. It is quite clear that there is no intention to remove development boundaries and, in fact, the consultation strengthened the rationale for retention and, where appropriate, modification and expansion. 5.2.15 The 2009 Spatial Options consultation presents options in regard to the quantum and distribution of growth across the District, but does not present options about settlement boundaries nor ask whether they should be removed. 5.2.16 Although responses were made to the 2009 consultation in terms of the level of growth that might be appropriate and which spatial growth option should be progressed, there is no specific response which states that the Maresfield development boundary should be removed.

Details of Changes to be Made:

SUMMARY 5.2.17 In conclusion, we contend that the Core Strategy is unsound because: 1. it is not justified because (i) it is not based on evidence as no question was asked and (ii) it has not been considered against alternatives; 2. it is not effective, because it is not flexible; and 3. it is not consistent with national policy, specifically that set out in the Local Growth White Paper. 5.2.18 Representations made in previous sections indicate that the level of housing growth set out in the submission Core Strategy is too low, that the housing distribution and trajectory should be reconsidered, and that Maresfield is a suitable and sustainable location to accommodate additional housing growth. We thus suggest that Maresfield should (a) have a settlement boundary, and (b) that this should be drawn to allow for additional housing growth.
Paragraph 7.2

Details of Reasons for Soundess/ Legal Complaince:

7.2 states 'the fundamental principle is that development that generates a need for infrastructure or enhancements to existing infrastructure will only be permitted if the necessary infrastructure to support it is already in place, or there is a reliable mechanism to ensure that it will be provided at the right time, when it is needed.' WJPC seeks assurances that this fundamental principle will be applied prior to the commencement of any development identified in SD4.

Details of Changes to be Made:

PTC has no confidence that necessary infrastructure will be provided in the future, as this has not been the case with the Wealden Local Plan and the Wealden non statutory plan, development has been allowed without the infrastructure being in place.
Details of Reasons for Soundess/ Legal Complaince:

3. We agree with the underlying objectives for the housing trajectory to ensure that there is a continuous supply of new housing over the plan period that takes account of market conditions, the ability for communities to assimilate new development and the provision of the necessary infrastructure. However whilst Policy WCS5 does include flexibility in itself, and this is implicit in the housing trajectory (figure 4) which is referred to in Policy WCS5, the status of figure 5 is unclear and the wording in paragraph 5.16 reduces the flexibility. For example, it is suggested that development at south Polegate and east Willingdon (SD4) will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in south Wealden. Transport analysis undertaken on behalf of our client suggests there may well be scope for some development before this date. We do not consider there is any advantage in artificially delaying the commencement of development if there is no good reason to do so. This approach would be consistent with paragraph 7.4 where it is stated that development should make the most effective use of existing infrastructure. It is possible to phase housing development to take advantage of existing infrastructure and ensure a satisfactory supply of housing is achieved and development should not be hindered by more strategic infrastructure concerns. One of the advantages of the area identified for growth in Polegate is that it will integrate more naturally into the existing built form, rather than satellite locations with intervening movement constraints such as main roads etc, will help to minimise the use of cars and therefore will create less need for highway infrastructure improvements. 4. The infrastructure constraints of the various Strategic Development Areas in the Core Strategy will become clearer through the Strategic Site Allocations DPD and we consider that more detailed phasing guidance should await this document and not be included in the Core Strategy. In addition the introduction of the Community Infrastructure Levy by 2014 may give better opportunities to fund transport (and other) infrastructure than has been the case in the past. In addition, Policy WCS7 (Effective Provision of Infrastructure) ensures that the release of land for development is conditional upon there being sufficient capacity in the existing local infrastructure to meet the requirements generated by the proposed development.

Details of Changes to be Made:
The County Council strongly supports this policy. In particular it considers it is important that the release of land for development will be conditional upon there being sufficient capacity in the existing local infrastructure to meet the requirements generated by the proposed development, or that there is an agreed programme for delivery of new infrastructure which will ensure that improvements are provided at the time they are needed. The planned growth in the Core Strategy requires additional education provision and a number of transport interventions identified as critical in the Infrastructure Delivery Plan (IDP). There is at this stage, a level of uncertainty about their deliverability. County Council advice on education provision needs to be updated due to variations made to the spatial distribution of growth in the agreed Wealden District Council Submission Strategy. There has not been enough time so far for transport interventions to have been appropriately designed and costed, so there is a risk that they could fail to be delivered, either because the cost (once assessed) exceeds the available funding, or because the intervention itself proves unacceptable. Although these uncertainties present some risks to the strategy they are not so unreasonable to make the strategy unsound, because WCS7 provides a fundamental safeguard on the provision of infrastructure by making the release of land for development conditional upon infrastructure capacity being assured. The Core Strategy needs to be updated to take account of the Coalition Government’s embrace of the Community Infrastructure Levy (CIL) as the appropriate mechanism for securing development contributions. Wealden District Council will need to decide the area, or areas over which a CIL will operate as well as the possible need for cross-boundary co-operation (for example with Eastbourne).

**Details of Changes to be Made:**
Details of Reasons for Soundess/ Legal Complaince:
Legally Compliant - Possibly We appreciate that the ‘larger settlements outside the District exert a significant influence in terms of providing for jobs, health care, leisure, further education and shopping.’ (para.2.3) However, this paragraph should also include access to arts and cultural activities and, nevertheless, the document does not reflect the aspirations of the Cultural Activities and Leisure section of the Community Strategy 2007 which could be included in Policy WCS7 and will therefore be ineffective. Also the document is missing a section to give information on the monitoring and implementation of the Core Strategy policies. In order to assess whether the Core Strategy has helped achieve its objectives it is important that the Council monitors the impact of the policies. The accompanying text throughout mentions the arrangements for managing and monitoring delivery but the document is missing a section on this important matter.

Details of Changes to be Made:
Your revised 2007 Community Strategy states on page 6 that the people of Wealden will be provided ‘with access to a broad range of opportunities to improve their quality of life including …. and the arts’. The same paragraph goes on to say that Wealden will encourage ‘a range of local cultural and arts opportunities.’ Objective SPO11 of the Core Strategy recognises the ‘shortfalls in open space, leisure and recreational facilities within the District ….’ But this objective doesn’t refer to arts and cultural opportunities – the word ‘arts’ doesn’t appear anywhere in the document and ‘cultural’ only appears regarding ‘cultural assets’ and ‘cultural heritage’ both of which refer to green infrastructure. Paragraph 6.38 on page 47 of the Core Strategy states that a community building will be provided for Crowborough but there are policies for the main towns to provide guidance on future developments. We would expect Policy WCS7 to make some reference to specific deficits of community facilities in the District - the strategic infrastructure requirements should be generated from assessments structured around the key questions of what, when, where, how and how much infrastructure is needed to offset any deficits.
Details of Reasons for Soundess/ Legal Complaince:

Eastbourne Borough Council welcomes the importance that Wealden’s Proposed Submission Core Strategy has placed on the “Effective Provision of Infrastructure”. This is one of the essential components of the Core Strategy and the issue upon which its overall deliverability will ultimately be determined. The Council welcomes the inclusion of the wording which states that “The release of land for development will be conditional upon there being sufficient capacity in the existing local infrastructure to meet the requirements generated by the proposed development” and believes this is a fundamental premise upon which to base development proposals. The accompanying Infrastructure Delivery Plan provides a comprehensive list of transport interventions required in South Wealden, but there is little explanation of the cumulative impact that travel to work, access to services and facilities has on the movement between Eastbourne and locations in South Wealden. Furthermore, there is no explanation in the supporting text about whether or how developer contributions would be sought and allocated, and this is something that should be clarified to ensure that Policy WCS7 is as effective as possible. There is a high degree of uncertainty regarding the Hailsham South Waste Water Treatment Works and whether or not an extension to the plant will be delivered within the course of the plan period to cater for the additional growth proposed. This additional growth has the potential to place pressure on Eastbourne’s existing Waste Water Treatment Works, which may be required to cater for growth in the southern part of Wealden outside Eastbourne’s boundary. This has the potential to affect the deliverability and developability of new residential development within Eastbourne and something that needs further consideration. There is a lack of information to explain how the pupil number projections are calculated and what the forecast level of growth in children of school age will be over the course of the plan period. The possible expansion of primary and secondary education in the Polegate/Willingdon and Stone Cross areas could also cater for growth in children of school age in peripheral areas of Eastbourne such as Ratton, Hampden Park and Langney. This should be referred to in the Infrastructure Delivery Plan as school catchment areas are not confined to local authority boundaries. The way the key infrastructure issues for each location within Wealden have been listed systematically is very useful and is particularly valuable for the Borough Council in understanding the cross-boundary implications that development in Wealden will have for Eastbourne. It is expected that greater clarity will be provided on the infrastructure issues as the Core Strategy nears adoption but all issues should ideally be resolved before the Examination in Public. The Borough Council is keen to work closely with Wealden District Council to ensure a satisfactory outcome.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:

I remain to be convinced that the message has got through that we must have the necessary infrastructure before development is allowed.

WSC7 Effective Provision of Infrastructure

Sound  No  Justified  Effective  Consistent with national policy
Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:
WSC7 states adequate infrastructure is a precondition of any development. Developers need to understand what the implications of this are going to be, eg what happens when a piece of infrastructure is so significant that it cannot be afforded until contributions are received from later, phased development? Also, who has responsibility for providing and implementing the infrastructure? The infrastructure delivery plan, which is offered up as evidence in support of the Core Strategy, needs to be examined alongside WCS7, eg at a separate session of the forthcoming Examination. As presented in the Plan, WCS7 could deter development and jeopardise the Core Strategy; also what safeguard is there that infrastructure suppliers will not come to rely disproportionately upon developers.

Details of Changes to be Made:
The Infrastructure Delivery Plan is examined at a separate session of the forthcoming Examination to prove that WCS7 is deliverable.

WCS7 Effective Provision of Infrastructure

**Sound**: Yes, No, Justified, Effective, Consistent with national policy

**Legally Compliant**: Yes, No

**Details of Reasons for Soundness/ Legal Compliance:**

Infrastructure Needs Para 7.2 states "the fundamental principle is that development that generates a need for infrastructure or enhancements to existing infrastructure will only be permitted if the necessary infrastructure to support it is either already in place, or there is a reliable mechanism to ensure that it will be provided at the right time, when it is needed." Given the history of difficulties in Wealden in providing the necessary infrastructure to support development there is little confidence that development will not be allowed in the future without the infrastructure being in place. There have to be questions whether the policies relating to infrastructure are sound.

**Details of Changes to be Made:**

Policy WCS7 Delete the words 'will be conditional upon there being' and substitute 'take into consideration' delete the words 'must' and substitute 'should'

WCS7 Effective Provision of Infrastructure

**Sound**: Yes, No, Justified, Effective, Consistent with national policy

**Legally Compliant**: Yes, No

**Details of Reasons for Soundness/ Legal Compliance:**

The need to provide related infrastructure with housing development is acknowledged. However the need for infrastructure is not a precise measurement. Some level of overloading may well be acceptable until new or improved facilities are provided. The policy as currently drafted could be an absolute embargo on needed development.

**Details of Changes to be Made:**

Policy WCS7 Delete the words 'will be conditional upon there being' and substitute 'take into consideration' delete the words 'must' and substitute 'should'
Details of Reasons for Soundness/ Legal Complaince:

Those residents who disagree would simply list the following justifiable reasons for doing so because they live in and know their area. Most importantly they do not believe the necessary infrastructure will be put in place in time to deal with: 1. Traffic congestion on the A22 2. Health requirements - Doctors and hospital at full capacity 3. Education: local schools full capacity - sufficient places 4. Water drainage, sewage treatment 5. Recreational requirements; sports facilities

Details of Changes to be Made:

Sound: Yes, No, Justified, Effective, Consistent with national policy
Legally Compliant: Yes, No

Details of Reasons for Soundness/ Legal Complaince:

3. We agree with the underlying objectives for the housing trajectory to ensure that there is a continuous supply of new housing over the plan period that takes account of market conditions, the ability for communities to assimilate new development and the provision of the necessary infrastructure. However whilst Policy WCS5 does include flexibility in itself, and this is implicit in the housing trajectory (figure 4) which is referred to in Policy WCS5, the status of figure 5 is unclear and the wording in paragraph 5.16 reduces the flexibility. For example, it is suggested that development at south Polegate and east Willingdon (SD4) will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in south Wealden. Transport analysis undertaken on behalf of our client suggests there may well be scope for some development before this date. We do not consider there is any advantage in artificially delaying the commencement of development if there is no good reason to do so. This approach would be consistent with paragraph 7.4 where it is stated that development should make the most effective use of existing infrastructure. It is possible to phase housing development to take advantage of existing infrastructure and ensure a satisfactory supply of housing is achieved and development should not be hindered by more strategic infrastructure concerns. One of the advantages of the area identified for growth in Polegate is that it will integrate more naturally into the existing built form, rather than satellite locations with intervening movement constraints such as main roads etc, will help to minimise the use of cars and therefore will create less need for highway infrastructure improvements. 4. The infrastructure constraints of the various Strategic Development Areas in the Core Strategy will become clearer through the Strategic Site Allocations DPD and we consider that more detailed phasing guidance should await this document and not be included in the Core Strategy. In addition the introduction of the Community Infrastructure Levy by 2014 may give better opportunities to fund transport (and other) infrastructure than has been the case in the past. In addition, Policy WCS7 (Effective Provision of Infrastructure) ensures that the release of land for development is conditional upon there being sufficient capacity in the existing local infrastructure to meet the requirements generated by the proposed development.

**Sound**  
☑️ No  
☐ Justified  
☑️ Effective  
☐ Consistent with national policy

**Legally Compliant**  
☑️ Yes  
☐ No

**Details of Reasons for Soundess/ Legal Complaince:**

It is considered that Policy WCS7 is unsound on the grounds that the Core Strategy is not effective in providing the necessary planning policy support for the delivery of water infrastructure. Such infrastructure may be necessary to deliver development promoted by the Core Strategy. South East Water broadly welcomes the assertion in the policy that the “release of land for development will be conditional upon there being sufficient capacity in the existing local infrastructure to meet the requirements generated by the proposed development”. Whilst the policy recognises the need to work with infrastructure providers and identifying requirements within the Infrastructure Delivery Plan, the Core Strategy fails to provide policy support for water companies or other service providers in bringing forward new infrastructure. The policy should clearly state that new infrastructure necessary to meet existing and future demands will be supported.

**Details of Changes to be Made:**

In order for the Core Strategy to be effective, the following should be incorporated into policy WCS7: "New infrastructure necessary to meet the needs of existing or future development will be supported."

WCS7 Effective Provision of Infrastructure

Sound  ☑ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundness/ Legal Complaince:

I have examined the Proposed Submission Core Strategy (PSCS) against the Soundness Tool and found it wanting in terms of justification and effectiveness. The PSCS is a carefully prepared document, well thought out to offer a plan for the future but it does not take full account of the background research and documentation upon which it is based. In particular the proposals to expand Hailsham to the north do not comply with the sustainability or infrastructure objectives for Wealden and the proposals for development to the east and north of Hailsham are contrary to previous WDC research and to current Background Papers. Participation The consultation process has permitted all interested parties to engage but the options for answering have been strictly limited on a Yes or No basis when, in fact, more discursive answers are needed. Research/Fact Finding The content of the PSCS is not justified by the evidence, particularly in respect of infrastructure and especially highways and sewerage. Document No 7 Infrastructure Position Statement dated July 2009 refers under (A) Transport to the need to reduce travel distances. The PSCS shows strategic development to North and East Hailsham and towards Hellingly at distances from the town centre of up to 2.2 km. The South Wealden & Eastbourne Transport Study (SWETS) in paragraph 3.29 makes it clear that development for major housing allocations in north and east Hailsham would cause significant traffic pressure. Fewer pinch points and reduced traffic pressure are shown for development south of Hailsham. BP No 11 Infrastructure Delivery Plan defines the highways issue for development to the north and east as ‘CRITICAL’ and states ‘Development is contingent on delivery of this infrastructure’. Regarding sewerage/waste water capacity, as outlined in BP No 11, Hailsham North wastewater works had a consented discharge capacity at 1st Jan 2007 at 2900 dwellings. Hailsham South wastewater works had a capacity of 2400 dwellings at same date. This same document shows infrastructure developments in the Appendix for the North water treatment works is deemed CRITICAL to deliver 1500 dwellings. In the south of Hailsham ‘A scheme is not necessary to deliver the proposed Submission Core Strategy. However a scheme may be required for windfalls of housing and employment development.’ The same Background Paper states under ‘Further Supporting Evidence’: ‘Infrastructure is not necessary to achieve the full allocation of development in Hailsham, Polegate and Stone Cross as shown in the proposed Submission Core Strategy.’ This reliance on ‘massing’ in the north of Hailsham therefore has infrastructure issues which could be avoided by reducing the size of the Strategic Development Areas and spreading the housing to the south of the town. According to the Housing Needs Assessment the greatest number of low income families are located to the south and such development would help to balance with Affordable and mixed housing. The Table at the end of BP 11 sets out water treatment for extant Planning Permissions and completions from April 2006-April 2010 and states that there are capacity issues arising in the north from the Spatial Strategy but not in the south. The Conclusions to BP 11 state that wastewater funding has been secured from Ofwatt for works in 2012 to increase capacity in the Hailsham area and to undertake a study to investigate other technical solutions. The financial solution would be via appropriate developer contributions. In summary, therefore, according to BP11 there are no capacity issues in South Hailsham providing development is not beyond 2400 houses, less 885 already approved – namely 1515 dwellings in Polegate, Stonecross and South Hailsham. The Oaklands/Brickfield SHLAA site 100/1310 (224 dwellings) includes an East Sussex County Council approved road scheme to allow capacity for up to 300 dwellings. Landscape In January 2001 WDC prepared the ‘Low Weald Towns Sector Appraisal Landscape’ as part of the Background Papers for the then Local Plan Review. This document is partly incorporated in Background Paper No 6 Green Infrastructure. BP 6 does not include the following relevant paragraph about the landscape around Hailsham: ‘South of Hailsham: …Urban Influence: On the western side of the sector the urban edge of Hailsham is generally well concealed by woodland often in deep ghylls or valleys. Scattered farms and houses are linked by a network of roads and lanes, the latter often sunk between high overgrown hedges. Horse grazing is common, a reflection of urban pressures, and as a result many of the pastures have the unkempt rather untidy appearance of paddocks. Rough sherd, water troughs and other paraphernalia are common place. …’ Under the heading ‘Sensitivity to Development’ the Landscape Appraisal states: ‘The relatively open aspect of the landscape east of the Cuckmere flood plain makes it sensitive to change by new development and any large scale expansion of the built form beyond the existing urban edge of Hailsham in this location would tend to damage the rural setting of the town. ..’ ‘However there is very little scope for additional development on the western edge of the sector without threatening the intrinsic qualities of the landscape and more particularly the rural settings of Hellingly and Horselunges Manor. Importantly the urban influence of Hailsham is hardly noticeable in this reach of the Cuckmere valley apart from some ribbon
development along the A271 on the immediate fringes of the town. Any significant expansion of the built form in this location (Hellingly/North Hailsham) would be likely to erode the historic landscape, structure and rural character of this valuable landscape and irreparably damage the vulnerable gap of countryside between Hailsham and Hellingly.' The Sustainability Appraisal sets out on p 42 the Sustainability Objectives for Wealden. The environmental objectives include: 7. ‘To make the most efficient use of land by prioritising brownfield sites for development, the re-use of existing buildings and promoting higher development densities.’ 11. ‘To conserve, enhance and make accessible for enjoyment the District’s countryside (in particular protecting the best and most versatile agricultural land) landscape, historic and built environment.’ 12. ‘Reduce the need to travel by car and promote alternative methods of transport.’ Development north and east of Hailsham is contrary to all or most of these objectives because it would increase travel distance, increase reliance on motor cars and damage the landscape and countryside, being on greenfield sites. SHLAA site 100/1310 Oaklands & The Brickfield are on a previously developed site, the Brickfield being defined as ‘Brownfield’. Oaklands, being used for business ‘horsey culture’ and not agriculture is also classified as ‘brownfield/previously developed’ under PPS3. Development of these sites south of Hailsham therefore complies with the environmental objectives set out in the Sustainability Appraisal. Alternatives The Council’s chosen approach in the PSCS is therefore not the most appropriate given the reasonable alternatives and it goes against the Background Papers and existing evidence base. It would appear from the PSCS that sustainability considerations have not informed its content from the start. In particular, it is stated at Para 6.30 of the PSCS that the Polegate, Willingdon, Stonecross development of 700 dwellings can only take place when formal road infrastructure is in position. Therefore SD4 is not programmed to start until 2019/20. Similarly, Para 5.16 states that the proposed northern urban extension of Hailsham (SD2 & SD3) cannot occur without infrastructure improvements namely sewerage and roads. Hence SD2 cannot start until 2017 and SD3 until 2021. I would submit that this issue of roads indicates that, by definition, the Strategic Development Areas forming the northern extension of Hailsham towards Hellingly and those in Polegate, Willingdon and Stone cross are unsustainable. The PSCS was initially prepared in its Draft and Consultation forms on the basis of the requirements of the South East Plan. This is now being abandoned and will no longer be valid. Because the Draft Core Strategies and most of the evidence gathering and Background Papers were prepared in accordance with the South East Regional Plan, the current PSCS is probably invalid and I would submit that the Inspector should examine this. Delivery The Council has correctly identified the main issues that the PSCS is seeking to address but does not present a clear vision for Wealden District into the future, only the equivalent of a ‘wish list’ of construction of 400 houses a year and sufficient commercial development for employment. It does not clarify how to achieve this, particularly in respect of infrastructure. The major strategic development north and east of Hailsham introduce an unacceptable risk in the ability to provide the infrastructure. Cross boundary issues have not been adequately addressed. In particular with Mid Sussex District Council and associated County Council Highways liaison for a relief road around East Grinstead. Nor does it address the problems of coalescence between Polegate, Willingdon and Stonecross and Eastbourne Councils, nor does it address the cross boundary issues which will arise with Lewes District Council, particularly in connection with development around Uckfield. The PSCS sets out objectives in terms of construction and development but does not connect these in sufficient detail with the necessary infrastructure. The most obvious gap in the policies is related to transport, in that the entire PSCS is predicated on continued and developing use of motor vehicles, there being no positive action proposed in relation to the Uckfield-Lewes Railway line and only passing mention of the possibility of public transport or reinstated railway from Hailsham southwards to Polegate and Eastbourne. The timescales given in the Plan are governed by the moribund South East Plan and are not realistic, particularly in respect of infrastructure provision and especially given the proposals in the PSCS for development north of Hailsham which will rely on the motor car. This is contrary to Spatial Planning Objective 7. Currently the Strategic Development Areas SD2, SD3, SD4, SD6 & SD7 are all undeliverable as set out in Paras 3.16, 6.19 & 6.31 due to lack of existing highways infrastructure. This amounts to 2650 dwellings which cannot be delivered. Flexibility It is not clear whether the PSCS will be flexible enough to respond to a variety of, or unexpected changes in, circumstances, whether environmental, political or economic. Currently there is no clear plan for updating it. It cannot be very flexible because of the infrastructure constraints in Wealden District. Summary The PSCS does not explain how its key policy objectives will be achieved because it is based on the South East Plan which is being abolished. Most of the supporting documents are also based around the South East Plan and pre-date its abolition. The proposals for Strategic Development housing north and east of Hailsham and in Polegate, Willingdon & Stonecross are all undeliverable because of lack of highways infrastructure and, in the north, due to lack of sewerage capacity. These proposals therefore contradict Wealden’s own sustainability and environmental objectives. The PSCS does not take proper account of some sites in the SHLAA which are recognised as suitable and which meet sustainability objectives better than those selected for ‘Strategic Development’. The Oaklands and Brickfield site south of Hailsham (SHLAA 100/1300: 224 dwellings) is largely on previously-developed (brownfield) land and has a highways scheme for the Ersham Road roundabout agreed with East Sussex County Council and should be included in the SDAs to the exclusion of less suitable development. It meets the Hailsham Sustainability Objectives, being a local Urban Extension within walking distance of Hailsham town centre and offering proximity to open space, woodland and biodiversity – at a scale capable of delivering up to 224 dwellings with minimum impact on infrastructure and environmental amenity. This PSCS has given careful consideration to the issues within the Wealden area but falls short of achieving deliverability because of a decision to favour massing over locality, with all the consequent risks involved in reliance on a minimum number of SDAs and with an intention to
release more greenfield sites than is compliant with government recommendations. I welcome the Review and monitoring procedures inherent in the PSCS but this document is currently unsound.

**Details of Changes to be Made:**
Infrastructure is defined by Wealden District Council as CRITICAL for development north and east of Hailsham and at Polegate, Willingdon and Stonecross. Such development is therefore uncertain due to its scale and Wealden should look to other developments which have already agreed infrastructure provision, such as SHLAA site 100/1310, Oaklands & The Brickfield.

**Details of Reasons for Soundess/ Legal Complaiance:**
WCS7 states adequate infrastructure is a precondition of any development. Developers need to understand what the implications of this are going to be, eg what happens when a piece of infrastructure is so significant that it cannot be afforded until contributions are received from later, phased development? Also, who has responsibility for providing and implementing the infrastructure? The infrastructure delivery plan, which is offered up as evidence in support of the Core Strategy, needs to be examined alongside WCS7, such as at a separate session of the forthcoming Examination. As presented in the Plan, WCS7 could deter development and jeopardise the Core Strategy; also what safeguard is there that infrastructure suppliers will not come to rely disproportionately upon developers. Proposed Change

**Details of Changes to be Made:**
The Infrastructure Delivery Plan is examined at a separate session of the forthcoming Examination to prove that WCS7 is deliverable.

**Details of Reasons for Soundess/ Legal Complaiance:**
WCS7 states adequate infrastructure is a precondition of any development. Developers need to understand what the implications of this are going to be, eg what happens when a piece of infrastructure is so significant that it cannot be afforded until contributions are received from later, phased development? Also, who has responsibility for providing and implementing the infrastructure? The infrastructure delivery plan, which is offered up as evidence in support of the Core Strategy, needs to be examined alongside WCS7, such as at a separate session of the forthcoming Examination. As presented in the Plan, WCS7 could deter development and jeopardise the Core Strategy; also what safeguard is there that infrastructure suppliers will not come to rely disproportionately upon developers.

**Details of Changes to be Made:**
The Infrastructure Delivery Plan is examined at a separate session of the forthcoming Examination to prove that WCS7 is deliverable.
Details of Reasons for Soundess/ Legal Complaince:
It is inappropriate to make the release of land for development conditional on there being sufficient capacity within the existing local infrastructure instead the policy should be more appropriately reworded to make provision for the timely improvement of infrastructure concurrent with development.

Details of Changes to be Made:
That the first sentence of WCS7 be deleted.

---

Details of Reasons for Soundess/ Legal Complaince:
WCS7 states adequate infrastructure is a precondition of any development. Developers need to understand what the implications of this are going to be, eg what happens when a piece of infrastructure is so significant that it cannot be afforded until contributions are received from later, phased development? Also, who has responsibility for providing and implementing the infrastructure? The infrastructure delivery plan, which is offered up as evidence in support of the Core Strategy, needs to be examined alongside WCS7, eg at a separate session of the forthcoming Examination. As presented in the Plan, WCS7 could deter development and jeopardise the Core Strategy; also what safeguard is there that infrastructure suppliers will not come to rely disproportionately upon developers. Proposed Change

Details of Changes to be Made:
The Infrastructure Delivery Plan is examined at a separate session of the forthcoming Examination to prove that WCS7 is deliverable.
Details of Reasons for Soundness/ Legal Complaince:

The Core Strategy acknowledges that there remains a great deal of work to be done in achieving a satisfactory understanding of the infrastructure consequences of the development associated with the release of the broad locations identified. It is also apparent that the completion of various studies and assessment of the findings could significantly influence the way in which sites can deliver new homes and/or by when. Furthermore a number of sites appear to have been ruled-out before the completion of studies which could have led to their identification and inclusion within the identified broad locations. The approach also suggests that a Community Infrastructure Levy (or CIL) should be investigated which would significantly improve certainty and greater predictability in terms of funding issues and related delivery.

Details of Changes to be Made:

There remains a great deal of work to be done in understanding the infrastructure consequences of the various locations identified for growth together with a re evaluation of those sites superficially rejected without the outcome of on-going or completion of only partial studies. A CIL policy should be considered.

Details of Reasons for Soundness/ Legal Complaince:

WCS7 states adequate infrastructure is a precondition of any development. Developers need to understand what the implications of this are going to be, eg what happens when a piece of infrastructure is so significant that it cannot be afforded until contributions are received from later, phased development? Also, who has responsibility for providing and implementing the infrastructure? WCS7 Effective Provision of Infrastructure

Sound ☑ Yes ☐ No ☐ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☜ Yes ☐ No

Details of Reasons for Soundness/ Legal Complaince:
3.2 Suitable Alternative Natural Green Space 3.2.1 This section of our representations refers to policy WCS7 and supporting paragraph 3.32. It is summarised below: Section of Core Strategy: Policy WCS7 Effective Provision of Infrastructure and para 3.32 Legally Compliant: -Sound: No -Justified: No -Effective: No -Consistent with national policy: -

3.2.2 We contend that the Council has not demonstrated that there is a reasonable prospect of delivery of Suitable Alternative Natural Green Space (SANGS) on time to mitigate impacts from development on the Ashdown Forest Special Protection Area (SPA) which means that the quantum of housing identified in the Core Strategy can not be delivered. 3.2.3 Para 3.32 of the submission Core Strategy states that for developments within seven km of the Ashdown Forest, there will be a requirement for SANGS to be provided. This has a particular impact on the deliverability of homes in Uckfield and Crowborough. 3.2.4 The housing trajectory set out in Figure 5 of the submission Core Strategy shows homes being delivered in Uckfield from 2016/17 onwards, and in Crowborough from 2015/16 onwards. 3.2.5 In respect of Crowborough, this is just five years away (from the time of submitting these responses). Para 6.34 of the submission Core Strategy notes that for land to come forward for development in Crowborough SANGS will be required. However, no land for SANGS has been identified. 3.2.6 According to the Wealden Local Development Scheme (LDS) 2009-2013 (March 2010), the Councils Strategic Sites DPD is not due to be adopted until the end of 2012, with a Delivery and Site Allocations DPD following for adoption at the end of 2013. The LDS notes that public consultation on the Site Allocations document will be undertaken in January / February 2011. This did not take place. There is no publically available timeframe to establish when this consultation will now take place. The programme for delivery has slipped and it is unclear when these documents will be adopted. The end of 2014 may be a more realistic date now for the Delivery and Site Allocations DPD. 3.2.7 We would expect one of the DPDs to identify development sites and land for SANGS. The timing here is critical: if land for SANGS is not identified until 2014 this does not allow sufficient time for this to be incorporated within planning applications and proposals for new homes in Crowborough, and for these to be determined in enough time to allow for the first units to be delivered in the phasing period 2015/16. 3.2.8 The Core Strategy Infrastructure Delivery Plan (Background Paper 11) explicitly identifies the issue of SANGS as critical to supporting growth. It states (see Table 1): 'Development within and around Crowborough is constrained by proximity to the Ashdown Forest and Special Protection Area / Special Area of Conservation'. 'A number of avoidance and mitigation measures required, including visitor management and the provision of a local SANG in Crowborough'.

Details of Changes to be Made:
SUMMARY 3.2.9 We thus contend that the housing trajectory is unsound because it is not effective as the Council has not demonstrated that quantum of growth identified in Crowborough can be delivered.
Details of Reasons for Soundness/ Legal Compliance:
Herstmonceux C of E Primary School would not be able to accommodate any significant increase in pupil numbers; the present Year 1 class already has 39 children and who started in the school in September 2009, exceeding the ESCC guidelines of 30 pupils. The problems associated with these high numbers both in teaching and of physical space will continue through the subsequent school life of these children. This point was also raised in the Parish Council's response to the Spatial Options Consultation in August 2009, which noted that the ESCC Report on Primary Schools 1 May 2009 stated that the current site of the school is too small for the pupil numbers and it has insufficient outside space for the children. There are no current plans to build or expand the school to proved extra school spaces for new families.

Details of Changes to be Made:

Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry.

Details of Reasons for Soundess/ Legal Compliance:
Schools / Education I understand that there are 700 children in Eastbourne that are unable to attend a school in Eastbourne with lack of places, with more development proposed in Wealden the case for more educational centres are needed. I understand some developers are not willing to pay the contribution to schools infrastructure; they should be told if you don't pay, go away!

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry.
SP03 Herstmonceux Parish Council supports the statements relating to the delivery of infrastructure particularly in respect of development in Herstmonceux and Hailsham. However, although the document notes the intent, Wealden District Council is not capable of the delivery of the schemes as these are the functions of other bodies. If there are procedures in place for Wealden District Council to materially influence the delivery of infrastructure, explicit details of how it will be achieved should be listed.

Details of Changes to be Made:

7.11 Housing Needs Survey has confirmed an annual need for 812 dwellings. However this is not deliverable in context of the proposed housing provision. So what? If housing need is not met in full this will lead directly to a shortage which in turn will drive up prices and make housing in Wealden even less affordable. The housing waiting list is bound to increase at this time and to make no provision for this increase or indeed to deliberately not meet WDC’s own confirmed need is irresponsible and makes the survey a waste of public money. Because of recent and current conditions the Housing Waiting List is probably inflated by middle income groups who might be able to afford a mortgage, on a shared ownership basis, and this type of housing should be encouraged to give a step into home ownership and so that those in real need, because of restricted incomes, can be given priority for rentable social housing.

Details of Changes to be Made:

With regards to affordable housing, Policy WCS8 does not allow for exceptional circumstances where 35% affordable housing is not achievable due to economic viability (although it is mentioned in paragraph 7.14). It is considered that this should be included in the wording of the policy in order to ensure that a five year supply of housing can be maintained and enable developers to bring forward viable housing development.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
A robust policy on affordable housing is an integral part of any Core Strategy and the inclusion of Policy WCS8 is therefore welcomed. Paragraph 6.3 of Background Paper 2: Managing the Delivery of Housing, acknowledges that Wealden "has a high proportion of owner occupied properties (83%) and a lower proportion of social rented (8%) and private rented properties (9%) than East Sussex as a whole or the South East". Furthermore, paragraph 6.4 notes that "Wealden has the highest [house price to median income] ratio of all the East Sussex authorities and is therefore one of the most difficult and expensive places in which to access the housing market". In this context, and given the evidence contained in other supporting documents including the Strategic Housing Market Assessment (SHMA) and Housing Needs Assessment (HNA), it is clear that there are important housing issues in Wealden that need to be addressed in its Core Strategy. Issues relating to affordability are particularly acute and whilst a balance needs to be found, which ensures that schemes remain viable, it is clear that the supply of affordable housing needs to be significantly enhanced to help address historical shortfalls. Policy WCS8 requires affordable housing to be provided on sites of 5 or more dwellings (net) or on sites of 0.2 hectares or more. Affordable housing will be required at a level of 35% of the number of dwellings in any scheme. This is different to the proposed affordable housing requirement threshold in The Eastbourne Plan (Eastbourne’s Proposed Core Strategy). Policy D5 of The Eastbourne Plan states that “All development will be required to contribute towards affordable housing where there is a resultant net gain of 1 or more residential units”. There is some concern that Wealden’s threshold might pose problems for the deliverability of small housing schemes (between 1 and 4 residential units) in Eastbourne. This threshold has the potential to lead to developers looking at small sites in Wealden where there is no requirement for contributions towards affordable housing, rather than in Eastbourne. Eastbourne has very few large scale strategic residential sites and is consequently likely to rely strongly on smaller sites to meet its overall housing requirement over the course of the plan period. This is a very different situation to Wealden District, which has a number of large allocated development sites, on which a certain quota of affordable housing will be sought on each site. More detail will be provided on this in their emerging Allocations Development Planning Document (DPD). Policy WCS9 also allows for affordable housing to be developed on ‘rural exception’ sites, encouraging the provision of affordable housing in settlements where new housing development will not normally be permitted. A coordinated approach needs to be taken to balance the need for affordable housing, whilst at the same time ensuring developments remain economically viable across both local authorities. There is further opportunity to address this through close working on the development of Wealden’s Allocations DPD.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
Whilst it is acknowledged that there is a need for affordable housing, it is considered the policy has the potential to constrain development. It is not considered the appropriate time for such a drastic and fundamental change to the affordable housing threshold. Further detailed amplification is found in the covering letter to this rep, and a revisit of the policy is required, suggesting a less dramatic change to the affordable housing ‘trigger’. 
Details of Reasons for Soundness/ Legal Compliance:
The Plan notes the need for flexibility in providing affordable housing following the Strategic Housing Marketing Assessment. It is suggested that Paragraph 2 of the Policy is reworded to indicate the provision may be higher or lower, as indicated in the reasoned justification.

Details of Changes to be Made:
Reword Paragraph 2 of WCS8 along the lines that subsequent Development Plan Documents may specify a different Affordable Housing Target with regard to the Housing Viability Assessment and the Strategic Housing Marketing Assessment.

Details of Reasons for Soundness/ Legal Compliance:
The provision of 35% of all residential schemes is a significant impact on the economies of a residential site. The need is for family housing but if 35% is all in the form of housing this takes a disproportionate amount of development land. The policy should reflect this so that a range of 30 - 35% should be included depending on the number of affordable houses compared with affordable flats.

Details of Changes to be Made:
Change "Affordable housing will be required at a level of 35% of the number of dwellings in any scheme" to "Affordable housing will be required at a level of 30 - 35% of the number of dwellings in any scheme. The percentage being dependent on the number of affordable houses proposed compared with affordable flats."

WCS8 Affordable Housing
Policy 8

Sound  □ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  □ Yes  □ No

Details of Reasons for Soundless/ Legal Complaince:
Consider the level set for the start of the requirement for affordable housing is too low and will deter sites coming forward. Most small sites are likely to be windfall sites where there is an existing economic use or value. Or there can be additional development costs due to contamination or demolition and site preparation costs. Equally the government and councils increasingly look on housing as a milch cow to fund everything under the sun, with developments now effectively having to pay a roof tax to fund all these requirements. This may get even worse if the CIL is imposed on every new house as some councils are now doing, and the government has indicated it may bring in. Thus this policy as set out is likely to be self defeating as it will not make it worth while for small windfall sites to come forward in the way they have in the past thus causing less already development land to be available, so forcing more greenfield land to have to be used. As an illustration, the objectors own a possible/potential windfall site and at the start level submitted for affordable housing by WEC we would not make any attempt to put it forward as it would not viable to develop with all the other costs involved in just getting permission, CIL, S106 costs etc.

Details of Changes to be Made:
The policy should be amended to 21- houses or more, and o.5a or more

Policy 8

Sound  □ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  ☑ Yes  □ No

Details of Reasons for Soundess/ Legal Complaince:
1.1 We object ot Policy WCS8 national policy states that planning obligations must be fairly and resonably related to the poposed development. Community infrastructer Levy Regulation 122 states tha a planning obligation will only constitute a reason to grant planning permission if it is necessary to make the development acceptable in planning terms, it is directly related to the development and fairly and reasonably related in scale and kind to the development. This legal test (which reflects the existing policy position) has general application for determinations made on or after 6 April 2010. 1.2 We support the comments in paragraph 7.10 to 7.14 that the requirement to prove affordable housing will be varied if the developer can provide evidence of economic viability. We also note the assessment that the northern and central parts of the District can provide more affordable housing than the southern part of the district.

Details of Changes to be Made:
The policy does not reflect the supporting text that precedes it. To reflect the supporting text and national policy the policy should be amended so that the second sentence of the second paragraph reads "Wher sites are allocated in a site allocations Development Plan Document, that document may specify a different housing target, having regards to the findings of Wealden House Viability Assisment, any site specific considerations and national policy which requires that planning obligations must be fairly and reasonably related to the proposed development.

Legally Compliant  ☑ Yes  □ No
WCS8 Affordable Housing Policy 8

Sound  ☑ Yes  ☐ No  ☑ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
Whilst the policy is supported the infrastructure constraints of the major urban extensions to the north and east of Hailsham will prevent early delivery of housing within the settlement with these areas dependent on significant highway infrastructure improvements before housing can be delivered.

Details of Changes to be Made:
The provision of an additional urban extension to the south of Hailsham (SD13) will assist in delivering affordable housing, consistent with the policy in the short to medium term as opposed to the alternative sites which will not deliver until later in the plan period.

WCS8 Affordable Housing Policy 8

Sound ☑ Yes ☐ No ☐ Justified ☑ Effective ☐ Consistent with national policy

Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundness/ Legal Compliance:

iii) Core Policies a) WCS8: Affordable Housing – COMMENT/OBJECT 2.55 There is a recognised ‘need’ for affordable homes in the District. The overall delivery of housing in Wealden is recognised as resulting in a significant backlog of Affordable Homes which requires a delivery rate of 812 affordable dwellings per annum (para. 7.11 of CS) to rectify this deficiency over the plan period. As a result of this, a viability assessment has been prepared to support a specific affordable housing target and threshold. Within Policy WCS8, this is set at 35% on housing sites of 5 No. or more or 0.2ha and above. However, WCS8 also states that where sites are allocated in a Site Allocation DPD, this provision could be higher. 2.56 Notwithstanding the significant backlog, we consider that it is not for new strategic sites to rectify the existing affordable housing deficiencies in the District and attempt to deliver what has not been provided for in the past and perhaps its over-reliance upon smaller windfall sites that do not deliver such provision. Whilst we recognise the viability assessment considers that housing sites in the North and South of the District can accommodate a different level of affordable housing (para. 9.13 of BP2: Managing the Delivery of Housing), we do not consider this is an appropriate way forward. 2.57 By way of example, Appendix 2 of BP2: Managing the Delivery of Housing, identifies that Hailsham and Polegate have two of the highest gross affordable housing needs per annum in both quantum (266 and 124 dwellings per annum respectively) and as a percentage of all households (3.1% and 3.4% respectively). Notwithstanding Uckfield (189 dwellings or 3.2%), towns in the North of the District i.e. Heathfield (88 dwellings or 1.8%) and Crowborough (120 dwellings or 1.5%) have the lowest gross need for affordable housing (when compared to the other locations), and yet, are expected to deliver the higher level of affordable dwellings (potentially 50%). This is contrary to the Evidence Base and simply because the viability assessment recognises that areas in the North could deliver a higher percentage of affordable housing, it does not mean they should, especially when the identified ‘need’ is taken into account. We therefore question if this approach is the most suitable when compared to the alternatives and if it is based on credible evidence i.e. this approach is not ‘justified’. 2.58 We do not consider it appropriate that strategic sites identified in any Site Allocation DPD should be required to provide for a greater percentage of affordable housing than as set by Policy WCS8. This is contrary to Circular 05/2005 and the CIL. Given that the majority of strategic sites will also be required to provide for critical elements of infrastructure (dependent on the location) to mitigate against their impact, it is unlikely that sites will remain viable if they are required to deliver a higher level of affordable housing as well as contribute to any necessary infrastructure provision and meet all other financial commitments such as CIL or Code for Sustainable Homes etc. Furthermore, the decreasing availability of grant funding is having significant impact on the ability to deliver higher levels of Affordable Housing. 2.59 Furthermore, the CS (para 5.9) identifies that in the past, 200 dwellings per annum (approximately 50% of overall housing delivery in the District) has been built on unidentified ‘windfall’ sites. Therefore, if the higher affordable housing requirement is applied to only identified sites in a Site Allocation DPD, and the windfall rate continues, then potentially two sites, in the same location could be required to provide different levels of affordable housing simply based on whether they were considered ‘strategic’ or not. The policy does not have any flexibility to accommodate unidentified sites even though para 5.9 of the CS recognises that these sites also have ‘increase in demand on the Districts environmental and infrastructure constraints’. 2.60 Paragraph 8 of PPS1 provides clear intention that ‘This plan-led system, and the certainty and predictability it aims to provide, is central to planning and plays the key role in integrating sustainable development objectives.’ We do not consider that Policy WCS8 or the intention to increase affordable housing for allocated sites provides for this certainty and as such, we propose the following alteration to Policy WCS8: The Council will require affordable housing on sites of 5 or more dwellings (net) or on sites of 0.2ha or more. Affordable housing will be required at a level of 35% of the number of dwellings in any scheme. "Where sites are allocated in a Site Allocations Development Plan Document, that document may specify a different, and potentially higher, housing target, having regards to the findings of the Wealden Housing Viability Assessment and any site specific considerations." (proposed alteration: (Strikethrough) " " shows removal of existing text,

Details of Reasons for Soundess/ Legal Complaince:
Housing We develop as proposed as in the core strategy we will continue to build some awful estates which I believe are the Cause of family breakdown, depression, mental health issues, vandalism as these estates are lacking in open space and open marketing housing makes most people have a mortgage that is beyond their means, again may I refer you to look at my campaign for change document under land community trust we should not allow developers to build what they want buy they should be instructed to build what is needed, we cannot have open market housing with part time jobs. In the document it states that there is a need for 812 affordable dwellings annually, it then goes on to say that Wealden will deliver 400 homes per year, whilst some of these may be called affordable but in reality they are not and the vast majority of those on the market can bring more people in to the area putting more pressure on social services and school placements. We should stop building open market housing for the life time of this planet.

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry

Details of Reasons for Soundess/ Legal Complaince:
nb I have also made a similar comment in section 5.7 but consider that this is the more relevant section. I applaud the inclusion of a policy for affordable housing in rural areas but consider that this policy should be expanded to include allowing the development of Low Impact Agricultural Smallholdings. I believe there is at least one instance (in Pembrokeshire, Wales) where a similar policy has already been implemented by a far-sighted local authority. Smallholdings are beneficial socially and environmentally and it can be argued that they are more agriculturally productive and profitable than large industrial farms. As a member of a local smallholders group (Small Farm Training Group) and an active smallholder I am aware that there are many people who want to be smallholders but cannot due to both affordability and lack of suitable properties.

Details of Changes to be Made:
My proposal for a "Low Impact Affordable Agricultural Smallholding" policy is along the following lines: The development of an agricultural smallholding, with a dwelling, should be allowed on agricultural land holdings of five acres or more, subject to existing planning law and also to the following additional restrictions. 1. The domestic curtilage should not occupy not more than one third of an acre. 2. The ownership of the land and the dwelling/curtilage should be linked together ie no partial sale of any part of the holding is allowable. 3. The use of the agricultural land must remain for agricultural puposes such as food production for humans and/or animals, and not be recreational (eg horses, pets, quad bike circuits etc). 4. The dwelling must be carbon-neutral. 5. The dwelling must have its own borehole or well water supply, if conditions allow. 6. Any new agricultural buildings on the agricultural land should be subject to existing planning law.

Please refer to the group statement below

Details of Changes to be Made:
We are a group of people, many of whom are members of the Small Farm Training Group (SFTG) which is an association of small farmers and smallholders many of whom live in Wealden District. We believe that agricultural smallholdings are beneficial in many aspects: social, environmental and economic and that more smallholdings should be encouraged. Our experience is that there are many aspirant smallholders who are prevented from becoming such partly due to barriers created by current planning policies. We agree with the need for restrictions which prevent non-agricultural development in the countryside and minimise environmental impact but would support changes in planning policy which will do more to encourage the development of genuine agricultural smallholdings. We authorise Paul Lovatt-Smith to make this statement on our behalf.

Mr Andrew Blackburn & Jo Hart, Lindfield, W Sussex (SFTG Members) Mr Roy and Mrs Patricia Brigden, Ewhurst Green, E Sussex (SFTG Members) Mrs Joyce Byrne, Crowborough, E Sussex (SFTG Member) Miss Jennifer Cloke, Hellingly, E Sussex (SFTG Member) Mr Simon Cramond, Isfield, E Sussex (SFTG Member) Mr Robin de Wilde, Dallington, E Sussex (SFTG Member) Mrs Lorraine Dillon and Mr Rob Gaunt, Horam, E Sussex (SFTG Members) Mrs Tina Fearman, Buxted, E Sussex (SFTG Member) Mr Stuart Fletcher, Wadhurst, E Sussex (SFTG Member) Mr Simon and Mrs Tess Gray, Lower Dicker, E Sussex (SFTG Members) Mr Paul Hamblly, Wadhurst, E Sussex (SFTG Member) Mr John and Mrs Violet Henning, Battle, E Sussex (SFTG Members) Miss Mary Hinton and Mr John Oddie, Heathfield, E Sussex (SFTG Members) Mr Andrew Holbrook, Wartling, E Sussex (SFTG Member) Mr Andrew and Mrs Beverley Lake, E Grinstead, E Sussex (SFTG Members) Mr Paul Lovatt-Smith and Ms Helen Webster, Hellingly, E Sussex (SFTG Members) Mr Tony Mardell & Ms Elaine Pelling, St Leonards, E Sussex (SFTG Members) Ms Pamela McLellan, Uckfield, E Sussex (SFTG Member) Mr Robert and Mrs Vibeke Morfield, Bolney, E Sussex (SFTG Members) Mr Brian and Mrs Pat Paterson, Seaford, E Sussex (SFTG Members) Ms Melanie Powell & Mr Robert Hughes, Hailsham, E Sussex (SFTG Members) Mrs Rosemary Richardson, Ringmer, E Sussex (SFTG Member) Mr Roy Stevens, Woodingdean, E Sussex (SFTG Member) Mrs Anne Tapper, Hellingly, E Sussex (SFTG Member) Mr Dan, Mrs Hannah, Mr Eric and Ms Julie Tebay, Broad Oak, E Sussex (SFTG Members) Mrs Barbara and Mr Steve Thompson, Chailey, E Sussex (SFTG Members) Mrs Valerie and Mr Graham Tye, Robertsbridge, E Sussex (SFTG Members) Mr David and Mrs Annie Woolley, Lindfield, W Sussex (SFTG Members) Ms Angela Lewis, Canterbury, Kent Mrs Tessa James, Herstmonceux, E Sussex (SFTG Members) Ms Zoe Wangler, Lewes, East Sussex Ms Catherine Carr, Uckfield, East Sussex Ms Sara Rose, Hove, East Sussex Mr Steve Niner, Hailsham, East Sussex Mr Malcolm Bosher, Blackheath, London Mr Leo Rutherford, Horam, E Sussex Mr Lawrence Keeley, Herstmonceux, E Sussex Mr Alister and Mrs Sarah Scott, Berwick, E Sussex Mr Malcolm Emery, Herstmonceux, E Sussex
Policy WCS10 and WCS 11 We must object to these two policies on the grounds that the policy will not meet all the local needs that can be reasonably be determined at this stage and that the some of the criteria are not justified rendering the core strategy internally inconsistent. 1. Level of Need First turning to the level of need. The background paper describes the complicated sequence of events relating to the SE partial review and various revisions. It concludes that there is a need for 32 pitches to 2016 which is close to the number (33) assessed by the unfinished panel report. However the latest set of caravan count statistics (the only available evidence which although notoriously unreliable does at least provide minimum figures to work on) show that numbers of caravans have markedly increased over the 2006 baseline. The Jan 2006 data shows 50 caravans, the Jan 2010 data shows 104 caravans in the district. Clearly there is substantial unmet need. There has been only a small apparent change in the level of private provision during this period - 11 caravans on private sites in 2006 and 14 on private sites with permanent planning permission in Jul 2010. The 3 local authority sites in Wealdon are now at capacity (31 caravans as against 23 in 2006, total capacity 31 caravans). In July 2010 there were 11 caravans on sites with only temporary permission (and as such cannot count towards any requirement), one caravan on a tolerated owned site and 9 caravans which are not tolerated. In addition there were 38 caravans on unauthorised encampments. As such there is an immediate and proven residential need for sites for 21 caravans. We estimate that on RSL sites there are 21 pitches and probably a further 9 private pitches with permanent planning permission. There are probably also between 10-15 pitch equivalents without the benefit of permanent permission. This totals 40-45 pitches. Using the standard 3% compound increase to take account of family formation there will be a need for a further 7-8 pitches to 2016 for this need. The total residential need would therefore to 2016 be around 18 to 23 pitches which accords with the levels stated in WVS10. However these levels make no provision at all for need arising from those on unauthorised encampments or those in housing. Clearly there are problems here which can only be satisfactorily cleared up by means of a robust GTAA to be carried out as a matter of urgency. However there are changes which can be made to the needs figures which will go some way to addressing this issue. The unfinished panel report examined this issue at length (para 2.30 et seq) and concluded: 2.38. Most GTAAs justified their 0 or very low assumed need from this source to be on the basis of limited information. We find this to be fundamentally unsound and to effectively ignore such need. We consider that any robust figure of need for gypsy and traveller pitch in the South East should include at least a nominal figure reflecting the undoubted need from this source, and that that figure should be considerably greater than the 72 estimated by the GTAA if it is to make any real difference to addressing even a small proportion of those needs. 2.39. CLG Guidance on Preparing RSS Reviews suggest that ‘RPBs look critically at the way movement between sites and houses is treated in GTAA and whether the conclusions reached and the assumptions made seem reasonable. If the issue is not dealt with at all, it might be fair to regard resulting pitch requirements as likely to be an underestimate’. Page 36 of that Guidance suggests that adjustments to the GTAA figures can be made where there is a significant under- or over-estimate, based either on the formula set out in that study or on the basis of individual judgment of the various elements. That formula takes no explicit account of the needs arising from housed gypsies and travellers and we do not regard it as of any assistance in this matter. 2.40. Although not evidence based, taking into account such information as we do have we Recommend that a figure of 10% of the 2006 baseline plus the recommended needs arising to 2011 should be applied to all county totals and distributed in accordance with the recommended distribution. Across the Region as a whole this represents a need for an additional xx pitches to 2016 (probably about 350) which remains a modest figure, probably substantially less than actual need from this source. We regard this as a reasonable, clearly derived minimum figure but we would encourage future GTAAs to seriously consider how to obtain an evidence-based, locally representative figure of the pitch accommodation requirements of gypsies and travellers living in housing and for local authorities to make a reasoned judgment as to how many of these should be provided for in a future policy. Following this suggestion there would be a need for an additional 6 pitches to make a contribution to this need in line with the panel report (10% of baseline 29 plus recommended requirement of 33). This would mean a need of 30 pitches to be found before 2016, excluding those already provided for since 2006. We are concerned about the conclusion in the background paper (para 5.28) that there is no need for any further transit sites in Wealdon. Clearly the area is used regularly by Gypsies and Travellers as shown by the caravan count figures with regular numbers of unauthorised encampments. The presence of 38 caravans in July 200 is surely prima facie evidence of the need for transit provision in a large district. There clearly is a need for the council to further investigate need in the district and to establish a site if required to ensure that the large district does not become a no-go area for those
passing through or visiting. 2. Criteria The criteria listed do present some problems. The requirement that sites should be close to major roads and/or public transport makes little sense given the recognition by Circular 1/2006 that local authorities should be realistic about alternatives to the car in accessing local services (para 54). This is especially so in view of the recognition by 1/2006 of the difficulties which Gypsies and Travellers have in finding suitable affordable land for their needs. The second criterion contains the phrase ‘be suitable in terms of topography’. Without further detail this is a meaningless term and opens the door to NIMBY objections. The third criterion requires that sites should not lead to a reduction in residential amenity. This means that sites are treated differently from rural exception housing which contains no such term. The use of this phrase would certainly give support to NIMBY objections based on prejudice and is unacceptable. Almost any development of any sort could be held to reduce residential amenity - it is the level of impact balanced against the utility of the development which has to be considered. Hence impact should be measured against acceptability on residential amenity. The fourth criterion would seem to allow rejection of almost any site in an area which has a landscape or nature conservation designation. Circular 1/2006 recognises that sites in nationally designated areas (para 52) that it is the objectives which should not be compromised and also that (para 53) local landscape and local nature conservation designations should not be used in themselves to refuse permission. As it stands this criterion could allow this to happen.

Details of Changes to be Made:
Changes: 1. WCS10 To ensure conformability with the evidence presented above this could be reworded as follows: To meet the needs of Gypsies and Travellers within the district for the period 2006-2016, 37 pitches will be provided for (an additional 30 pitches). Sites will be allocated within the Delivery and Sites Allocation Development Plan document (DPD) to make up for any shortfall. 2. WCS11 a) replace first criterion with “reasonably well related to existing settlements”. This will help ensure a reasonable approach both the accessing land that may be available and ensuring that services can be accessed in a reasonable manner. b) delete ‘be suitable in terms of topography’ from second criterion. In the absence of detailed topographic requirements retention of this phrase would lead to confusion and potentially to arbitrariness. c) We think that reference to residential amenity should be deleted on the grounds that it not included for other forms of housing. However if the Inspector is minded to include some reference then we suggest that the word ‘unacceptable’ be inserted before ‘residential amenity’. d) The fourth criterion I essentially a restatement of 1/2006 and goes beyond it. Therefore we see no reason to include such a criterion. If the Inspector is minded to include such a criterion then it could be usefully amended to read: ‘Areas with nationally recognised designations should be avoided if the development compromises objectives of the designations.”

Details of Reasons for Soundess/ Legal Complaince:

Eastbourne Borough Council recognises the need in providing residential opportunities for both the settled and travelling communities and the inclusion of Policies setting out the need to provide provision (Policy WCS10) and setting the site criteria for gypsies and travellers (Policy WCS11) will help to reduce unauthorised encampments and help enhanced opportunities for increased social cohesion with the settled community. The site selection criteria established in Policy WCS11 is considered to represent an appropriate balance between the accommodation needs of gypsies, travellers and travelling showpeople, the needs of the settled community, and the need to protect and enhance existing landscape and wildlife assets.

Details of Changes to be Made:

Suggest the following wording for the criteria in policy WSC11: Criterion 1 (reword to comply with paragraph 54 of Circular 01/2006): The site is reasonably accessible to local services and facilities Criterion 2 (reword for clarity and to ensure policy is effective): The site has safe and convenient vehicular access and is located where infrastructure exists, or can be provided, for on site services such as water supply and sewerage disposal Criterion 3 (reword as current criterion unjustified - all development has some level of impact): The site will provide an acceptable level of amenity for the proposed residents and will not have an unacceptable impact on the residential amenity of neighbouring dwellings Criterion 4 (current criterion goes beyond paragraph 53 of Circular 01/2006): Consider rewording this criterion

WCS11 The Travelling Community- Provision for Gypsies, Travellers and Travelling Showpeople: Site Criteria

Sound  No  Yes  Justified  Effective  Consistent with national policy
Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:
Travellers It would appear again that the councillors are burying their heads in the sand regarding this issue, the travelling community aren't all bad people and with proper sites they could fit into the community, which may wish to do. If you were to see the 10 biggest crooks in Britain, you would find 9 of them living in large houses.

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry.

**WCS12 Biodiversity** Policy 12

**Details of Reasons for Soundness/ Legal Compliance:**
WCS 12 Whilst generally agreeing with what is said, there does not appear to be a clearly set out strategy at this time. We would wish for a strategy to be an integral part of the LDF. As well as providing protection for the sites set out in appendix 4, we would like to see some positive measures proposed, particularly to provide links between sites; suitable interconnection corridors could be proposed and feature in the LDF. As an example the site BOA74, along the Cuckmere River, should be extended northwards to link with other sites to the north and not leave a large gap across the Low Weald. If thus protected the whole length of the Cuckmere River and would continue to provide a very useful corridor for wildlife, a really useful green pathway, and preserve the whole Cuckmere valley as a unique asset within WDC area.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy should consider the principle of "Conservation Credits" currently being trialed by Defra and referred to in the Coalition's joint agreement. It originally appeared within the Conservative’s Green Paper - Open Source Planning. This enables the creation of effective off-setting for land taken out of eco system services and bio diversity. See web site www.environmentbank.com for further information.

Details of Changes to be Made:
That WCS12 Biodiversity should be revised to include the potential use of Conservation Credits.
Details of Reasons for Soundess/ Legal Complaince:
WJPC is concerned at the numerous references to Polegate and Willingdon as one settlement, as highlighted in 3.3 Table 1, 3.11, SPO6, WCS2, WCS3, 5.13, 6.31(2), Figure 8 and Figure 12. In particular, Figure 2 showing settlement hierarchy, places Polegate and Willingdon as one settlement, yet details other settlements individually.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
Concern raised at the reference to Polegate and Willingdon as one settlement

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
7.23 states 'in order to maximize the benefits, policy places the emphasis on the creation and maintenance of linkages between green spaces.'

Details of Changes to be Made:
What assurances can be provided to PTC that this policy will be applied to protect and maintain the existing green space at Hindsland playing fields which separates the town of Polegate from the parish of Willingdon and Jevington?
7.1.1 Introduction 7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: No;Justified: No;Effective: No;Consistent with national policy: No 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to be set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy.

7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’. 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is
discordant with its character, for instance managing the land to encourage woodland growth or planting
extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The
methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural
Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying
higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some
areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar
designation but not of the same quality as the AONB landscape and not covered by the same planning policy. Where
relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state
the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity
of these areas has been considered according to the landscape character to achieve a balanced comparison with
AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’
approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this
approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at
the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex
County Council and Wealden District Council would have been aware of the emerging South East Plan policies
through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the
Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring
measures to integrate the development into the landscape. Thirdly, there is no Government policy support for the
concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does
not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the
landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that
potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from
Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of
landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define
the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text.
We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is
acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or
lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape
sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine
the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value
to a character area that adjoins the AONB which although it may be of a similar character, does not meet the
quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject
to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees,
such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this
approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative
evaluation of a potential development area within a character area which has capacity to accommodate
development. This gives an early indication of sites which would be worthy of further consideration for
development in landscape terms. We contend that the comparative assessment of character areas within the
District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound
for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states
that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be
required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred
development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area
although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of
the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape
character is to be assessed and the information recorded using landscape character assessment sheets (section
2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to
recording baseline information on each character area such as planning designation, Public Right of Way and key
viewpoint, focal point, landscape features and detractors (which should be read with the assessment record
sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also
identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to
assess the robustness of the landscape capacity study for the purpose of this representation, the area around
Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape
assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of
elements / features not recorded or identified for some areas and therefore these factors were not able to
inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating
landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long
views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby
Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque
recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands
and plantations, (some of which are ancient woodlands and provide screening, containment and form visual
barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also
refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but
evertheless views are contained and obscured by landform and vegetation. The record sheet includes a photograph
of the view south but this is not taken from the urban fringe as recorded on the map Figure 52. The
photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment
sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to
the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1
below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views
with long views out towards the south from high ground in the north eastern parts of character area. Views into the
area are very limited and development within the area would have a minimal impact on views. However, in views
from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the
remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6
The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment,
Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate
Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and
access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting
would change open character and obscure long views out from recreation ground Capacity to Accept Change:
Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the
record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most
of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of
the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of
the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning
policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8
By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land
sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and
pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well
defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover
and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors,
although it describes the land as sloping away from the urban edge with a strong field structure with arable and
pasture. The landscape condition is considered to be fair which is not defined in the methodology although this
changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it
records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26
and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded
ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’
(see table 7.2), Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality
Ordinary Value Medium Snaw Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate
High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and
existing trees and hedges Potential for Mitigation Moderate Low on ridge as need to retain open fields Soften urban
distributions. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need
well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity.
7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated
and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a
recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area,
with long views south and west and numerous views in to the area from the surrounding countryside (roads and
footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where
views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’
sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We
also note that under management opportunities it is considered that the area could contribute to managing the
urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading
is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure
11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13
These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of
the judgements made. It does not give any confidence to the manner in which the Landscape Study has been
undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness
of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option
Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial
strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background
paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils
website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether
the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent
and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core
Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential
development area within a character area which has capacity to accommodate development. 7.4.3 The examples
referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and
arbitrary nature of the judgements made and it does not give any confidence to the manner in which the

Page 1463 of 1511
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Council's Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a 'strategic development area' suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:
SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Council's Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to 'AONB and AONB Buffer Zones' as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of 'AONB buffers' in Planning Policy Statement No.7 or any other policy guidance.
Paragraph 7.24

Sound ☐ Yes ☑ No ☑ Justified ☐ Effective ☑ Consistent with national policy

Legally Compliant ☐ Yes ☑ No

Details of Reasons for Soundess/Legal Complaince:

7 Landscape 7.1 Introduction 7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: ‘...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 – 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issued raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to...
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation, (and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value MediumSnawAccessible for recreational Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges Potential for Mitigation ModerateLow on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the Landscape Character Assessment and Development Option Evaluation Study of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

**Details of Changes to be Made:**

SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
### Details of Reasons for Soundness/ Legal Complaince:

7 Landscape 7.1 Introduction 7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Council’s website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Council’s website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of houses sites in the district, the spatial strategy and the Council’s Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33. Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11. Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28 Legally Compliant: -Sound: No Justified: No Effective: No Consistent with national policy: Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: ‘...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Council’s website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy.

7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact of housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONBs and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffer’ areas within the Structure Plan in the South East Plan. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but
elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph
of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The
photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment
sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to
the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1
below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views
with long views out towards the south from high ground in the north eastern parts of character area. Views into the
area are very limited and development within the area would have a minimal impact on views. However, in views
from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the
remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6
The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment,
Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate
Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and
access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation Low
PLanting would change open character and obscure long views out from recreation ground Capacity to Accept Change:
Housing Low Close to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the
record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most
of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of
the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of
the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning
policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8
By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land
sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and
pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well
declared edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover
and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors,
although it describes the land as sloping away from the urban edge with a strong field structure with arable and
pasture. The landscape condition is considered to be fair which is not defined in the methodology although this
changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it
records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26
and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded
ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’
(see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality
Ordinary Value Medium Snaw Accessible for recreational Sensitivity to Change Moderate Visual Sensitivity Moderate
High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage woodland
and existing trees and hedges Potential for Mitigation Moderate. Low on ridge as need to retain open fields Soften
urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate
Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity
7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated
and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a
recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area,
with long views south and west and numerous views in to the area from the surrounding countryside (roads and
footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where
views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’
sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We
also note that under management opportunities it is considered that the area could contribute to managing the
urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading
is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure
11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13
These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of
the judgements made. It does not give any confidence to the manner in which the Landscape Study has been
undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness
of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option
Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial
strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background
paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils
website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether
the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent
and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core
Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential
development area within a character area which has capacity to accommodate development. 7.4.3 The examples
referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and
arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Council’s Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:
SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Council’s Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact of housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan and how preferred development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation, (and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snap Accessible for recreation Sensitivity to Change High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges Potential for Mitigation Moderate Low on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground. Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity/capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:

SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.

Page 1479 of 1511
7 Landscape 7.1 Introduction 7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to "Landscape Character Assessment and Development Option Evaluation Study” and sites have been carefully scrutinised with regards to "...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.7 Paragraph 3.31 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and...
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development into the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and/or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity/capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation, (and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input/consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity/capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements/features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoining picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snaw Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges Potential for Mitigation Moderate Low on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Table 7.4 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 

Details of Changes to be Made:

SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.

Paragraph 7.28

Sound □ Yes □ No □ Justified □ Effective □ Consistent with national policy

Legally Compliant □ Yes □ No

Details of Reasons for Soundess/ Legal Complaince:

There is concern that although the AONB is referred to in detailed discussion of various locations, it does not have the profile and reference within the text that would support the statutory duty under Section 85 of the Countryside and Rights of Way Act 2000 to have regard to natural beauty. The submission document does not deal with landscape issues, covering both the High Weald AONB and the South Downs National park, in a strategic way. These designated landscapes cover over 60% of the district area and make a significant contribution to its character. This merits a higher profile policy and strategic reponse to be made in the document. The Unit would recommend a stategic reference to be made to the importance of the AONB, and a detailed policy reference made both to this and to the High Weald AONB Management Plan. The only reference to policy for the AONB comes at the end of the document under the green infrastructure section. The commitment to include landscape polices in the site allocations DPD is questioned as this may infer that AONB policy will only be referred to in relation to specific allocations, and not be a strategic and overall approach to landscape issues in the District.

Details of Reasons for Soundness/ Legal Compliance:

Details of Changes to be Made:
7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to be set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact of housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodological section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation Low.Planting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing Low.Close to village edge only Capacity to Accept Change: Business Low. 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snaw Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges. Potential for Mitigation Moderate. Low on ridge as need to retain open fields. Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate. Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity. 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:

SUMMARY 7.4.7 In conclusion, we contends that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
Details of Reasons for Soundess/ Legal Complaince:
The inclusion of a Policy dealing with the important issue of Green Infrastructure is strongly supported and there is considerable scope for joint working between Eastbourne Borough Council and Wealden District Council to ensure that the “existing network of green infrastructure will be protected, improved and enhanced” as advocated in Policy WCS13. Eastbourne Borough Council is currently preparing a Supplementary Planning Document for Eastbourne Park. It is a document which will set out a detailed vision and series of proposals to conserve and enhance the existing environmental and ecological characteristics of Eastbourne Park, whilst at the same time sensitively developing one of the Borough’s most important under-utilised resource for appropriate leisure and recreational uses to help enhance the social and economic well-being of the local community and attract more visitors to the Borough. It is envisaged that the proposals set out in Policy D11 of the Eastbourne Plan and expanded upon in the Eastbourne Park SPD will provide benefits for existing residents in Polegate/Willingdon and Stone Cross as well as future residents living in the proposed urban extensions (SD4: Land at South Polegate and East Willingdon, SD6: Land at East and South East of Stone Cross, and SD7: Land at North Stone Cross) advocated in Policy WCS4: Strategic Development Areas and shown on the Key Diagram. Eastbourne Park has the potential to be extended northwards into Wealden providing excellent local access to an important area of green infrastructure. The area of land immediately south of SD5 and SD7 (south of the proposed Willingdon Chord railway line) and which is shown on Figure 8 to be an area at risk from flooding would be ideal for providing green infrastructure to compliment the existing residential areas. The Borough Council considers that there would be considerable merit in both authorities working closely together to ensure a seamless transition over their respective administrative areas to enable residents in the southern part of Wealden and Eastbourne to have enhanced access to a larger and attractive area of green infrastructure whilst also preserving it for its important ecological value.

**Details of Reasons for Soundess/ Legal Complaince:**

The Unit welcomes the Green Infrastructure policy and recognises that reference is made to landscape and AONB issues in the supporting GI Background Paper. It is considered that the range of issues that this policy is trying to cover mean that it is more than a GI policy and could more fully encompass a full eco-sytems or Landscape Services approach, detailing the goods, services and attributes that the landscape provides and how they can be sustainable and responsibly exploited to provide a sustainable approach to Wealden's development needs. Full reference to the role of the AONB and the importance of the AONB Management Plan in supporting decision making for Landscape/ecosystem services, as well as wider landscape protection and enhancement, in this policy, would be very much welcomed. It is recommended that this be incorporated within the draft proposed Policy relating to Green Infrastructure.

521960  Wealden Councillors for Crowborough
Agent ID
WCS13 Green Infrastructure

Details of Reasons for Soundess/ Legal Complaince:
The Crowborough councillors are concerned about how recent density of development would relate to the statement in Background Paper 5 on Biodiversity, particularly 9.13, 9.15 and 9.18. There have been many opportunities in the past 3-4 years in Crowborough to uphold the principles of biodiversity, green corridors and connectivity of habitats referred to in those paragraphs but there does not seem to be a culture within the development control process to do this. It has also frequently been the case that the sheer density of development has made these aspirations unachievable. The Crowborough councillors would therefore like to make the point now, that future DPDs must be sincere and determined in protecting wildlife habitats and the general green environment within towns. We wish to stress the importance of retaining as much as possible of what exists on a site, particularly round the edges and where it assists connectivity, rather than destroying it and then re-planting. Once an established habitat is lost, it is seldom regained with planting. We feel that the only way in which local wishes for an environment with a rural feel can be achieved is with lower density development than has been the case recently.

Details of Changes to be Made:
The PSCS sets out an aspiration to enhance the District's bio-diversity by creating a coherent network of green infrastructure, especially in and around towns that can better support wildlife and improve public health through increased accessibility. This is encapsulated in Policy WCS13 which seeks to maintain and improve 'Green Infrastructure'. Paragraph 6.11(5) states that the strategy for Uckfield, includes supporting the creation of additional amenity and open space along the river corridor, though it is not made clear if this relates solely to the river Uck or extends to its tributaries. In any event Figure 6 indicates there is 'green infrastructure potential' to either side of the Lewes Road along the south-eastern edge of the town. This appears to include land within the ownership of Ridgewood House. It is assumed this reflects an aspiration for enhanced bio-diversity and public access along the corridor of the Ridgewood Stream, linking up to the adjacent Millennium Green to the east. No objection is raised in principle to the concept of enhanced green infrastructure, and its associated benefits. However, it must be recognised within the PSCS that this can only be achieved in conjunction with associated housing development. This will enable support from affected landowners and provide the requisite funding to deliver the green infrastructure enhancement and maintain it in the future. On this basis the PSCS should be modified to note that green infrastructure potential will be delivered in conjunction with associated development, including housing. Consequential changes should be made to Figure 6 of the Uckfield Area Strategy to note that delivery of green infrastructure on land to the east of the Lewes Road, will be delivered in conjunction with housing development under SD1. Failure to acknowledge the necessary linkage between development additional green infrastructure provision will not result in an effective and deliverable Core Strategy.

Details of Changes to be Made:

On this basis the PSCS should be modified to note that green infrastructure potential will be delivered in conjunction with associated development, including housing. Consequential changes should be made to Figure 6 of the Uckfield Area Strategy to note that delivery of green infrastructure on land to the east of the Lewes Road, will be delivered in conjunction with housing development under SD1. Failure to acknowledge the necessary linkage between development additional green infrastructure provision will not result in an effective and deliverable Core Strategy.

Details of Changes to be Made:
WCS 13 Please see the comments made for WCS 12
7.1.1 In this section of our representations on the Landscape Study, it is included as a background paper to the Core Strategy. However, it is not clear how the Landscape Study has been used to inform the spatial strategy contained in the Core Strategy. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy contained in the Core Strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 – 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 – 7.28Legally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SLHAA’. 7.1.7 Paragraph 3.30 goes on to state that: “…and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SLHAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to be set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape

perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy and other background material indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact of housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape.
but the identification of management opportunities is not relevant to determining the capacity of the landscape to accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also
refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but
elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph
of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The
photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment
sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to
the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1
below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views
with long views out towards the south from high ground in the north eastern parts of character area. Views into the
area are very limited and development within the area would have a minimal impact on views. However, in views
from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the
remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6
The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment,
Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate
Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and
access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting
would change open character and obscure long views out from recreation ground Capacity to Accept Change:
Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the
record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most
of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of
the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of
the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning
policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan.
7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land
sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and
pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well
defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and
landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors,
although it describes the land as sloping away from the urban edge with a strong field structure with arable and
pasture. The landscape condition is considered to be fair which is not defined in the methodology although this
changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it
records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26
and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded
ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’

defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity
7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated
and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a
recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area,
with long views south and west and numerous views in to the area from the surrounding countryside (roads and
footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where
views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’
sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We
also note that under management opportunities it is considered that the area could contribute to managing the
urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading
is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure
11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13
These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of
the judgements made. It does not give any confidence to the manner in which the Landscape Study has been
undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness
of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option
Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial
strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background
paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils
website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether
the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent
and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core
Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential
development area within a character area which has capacity to accommodate development. 7.4.3 The examples
referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Page 1500 of 1511
arbitrary nature of the judgements made and it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WCS13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. ’

Details of Changes to be Made:
SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.

Sound ☐ Yes ☑ No ☐ Justified ☐ Effective ☐ Consistent with national policy

Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
WSC13 states ‘development proposals will not be permitted which would result in the loss of existing open space or harm to Wealden's network of green spaces unless measures are incorporated within the development that will either mitigate the effects of development or alternative and suitable provision is made that is accessible, of good quality and value to its users, in an appropriate location, at an appropriate scale and nature and would positively contribute to the overall network of green space.’

Details of Changes to be Made:
A development proposal is required which will address the issues of green spaces in Polegate. This area has always been seen as an important green gap between Polegate and Willingdon.
Details of Reasons for Soundness/ Legal Compliance:
Housing planning should be carefully controlled. Solar panels and water conservation schemes for rain water to be used as grey water mad a general feature in all new houses.

Housing planning should be carefully controlled. Solar panels and water conservation schemes for rain water to be used as grey water mad a general feature in all new houses.

Details of Changes to be Made:
Wealden is identified as being an area of ‘water stress’, as is the whole of the South East. Water stress is a blanket term for the whole region and variations have not been identified for specific districts or boroughs. This term is based on the rainfall being particularly low compared with the rest of the country and the population being particularly high. Paragraph 7.30 of your Strategy relies on Building Regulations to deliver water efficiency measures for new homes. The basic Building Regulations 2010 Part G currently requires a minimum design standard of 125 l/h/d, which is below the Code for Sustainable Homes Level 1 of 120 l/h/d. The Catchment Abstraction Management Plan however shows that there are two distinctions within Wealden taking into account human impact on available water. The central and northern sections of the District are classified in this document as being 'over licenced'. This means that the levels of current water abstraction results in there being no water available at low flows. If the maximum amount of water were to be abstracted to the current licenced limit, then there is potential for unacceptable environmental impact, particularly at low flows. The rest of the area is defined as having ‘no water available’. This means that there is no water available for further licencing at low flows, although it may be acceptable at high flows with appropriate restrictions. We are using this data to ensure that domestic water consumption is reduced by applying a minimum standard. Our position is that in the Southern Region, as a minimum requirement, homes built before 2016 should achieve internal water use of 105 litres/head/day (as required by Code for Sustainable Homes (CSH) level 3). Your strategy relies too heavily on Building Regulations to deliver water efficiency to 125 litres/head/day (l/h/d). We consider that the local evidence in the CAMS shows that there is a specific requirement to reduce water consumption further than national standards in Wealden and across the South East of England. You should reflect the local water scarcity issues in Wealden by including a policy to achieve 105 l/h/d. Should the Inspector require further evidence to consider this matter, we would be happy to provide a further statement.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

Please refer to comments in respect of Policy SP09. The Core Strategy fails to acknowledge that one of the key components in mitigating and adapting to climate change is minimising the use of water. Despite recognising that Wealden District is within an area of water stress, as identified by the Environment Agency, the Core Strategy does not include any policies that will impose water efficiency measures on new properties, instead recent changes to the Building Regulations that will restrict water usage are considered to be adequate. South East Water does not consider this to be the most appropriate strategy and therefore believes the Plan to be unsound. The amendment to the Building Regulations 2000 Part G: Sanitation Hot Water Safety and Water Efficiency approved in 2010 will indeed require increased water efficiency measures for new dwellings. It includes a ‘Water Efficiency Calculator’ to ensure the potential consumption of water does not exceed 125 litres per day. The standards within the Code for Sustainable Homes are much lower than those set out within the revised Building Regulations. The standards are as follows: Level 0 - Part G of the Building Regulations Levels 1-2 - less than 120 litres/person/day Levels 3-4 - less than 105 litres/person/day Levels 5-6 - less than 80 litres/person/day For private dwellings, currently the Code for Sustainable Homes is voluntary and it is only through Local Development Frameworks that lower limits can be imposed on new development. It is South East Water’s view, being within a water stress area, that it would be legitimate for Wealden District Council to impose more stringent limits for new property based on measures set out in the Code for Sustainable Homes. Indeed, most local authorities within South East Water’s area of responsibility have taken the opportunity to do this. If the Core Strategy does impose water consumption measures limits, it is also important that Wealden District also monitor and evaluate the effect of those limits in terms of the level of water efficiency that is achieved. This is important to water companies’ demand forecasting in terms of determining the actual sustainable levels of water efficiency savings that are achieved.

Details of Changes to be Made:
South East Water considers that it is appropriate and indeed essential for the Core Strategy to impose water consumption measures limits, in line with the Code for Sustainable Homes measures, for new development and monitor the effectiveness of any policy in reducing water consumption.

---

Details of Reasons for Soundess/ Legal Complaince:

Housing planning should be carefully controlled. Solar panels and water conservation schemes for rain water to be used as grey water made a general feature in all new houses.

Details of Changes to be Made:
### Details of Reasons for Soundness/ Legal Complaince:

South East Water has significant concerns about the deliverability and therefore the soundness of the Core Strategy as it fails to acknowledge its responsibility and role in addressing potential water deficit issues within the District. The need to do this is compounded by the abolition of Regional Spatial Strategies, as set out below. South East Water welcomes the inclusion of the sections on water supply and water efficiency within the Infrastructure Delivery Plan (IDP) - Proposed Submission Document (February 2011) but considers that the issues are of such significance to Wealden District, both in terms of the existing population and future growth, that these need to be reflected within the main body of the Core Strategy and within its policies. As acknowledged within the IDP, Wealden District is within a severe water stress area and this is addressed within South East Water's Water Resource Management Plan (WRMP). The IDP references the measures set out within the draft Revised Water Resource Management Plan, including the development of further water winter storage in the Ouse catchment from 2020 and Bewl water dam raising, stating that, “Land use implications of additional water storage at these locations in due course subject to final adoption of the Draft Revised Management Plan”. The Secretary of State approved South East Water’s WRMP in December 2010 and the final version of the plan has now been published. The final plan is essentially unchanged from the draft revised WRMP in respect of the need for further water winter storage in the Ouse catchment and Bewl water dam raising. In respect of a water winter storage in the Ouse catchment, the WRMP says the following, “The company’s latest options appraisal modelling for the post 2020 period continues to identify a local winter storage reservoir as the preferred solution. The dWRMP identified a site at Clay Hill, north of Ringmer. Subsequent company-level modelling confirmed this to be the least cost and most sustainable long-term option on the basis of known information. However, other sites, in or close to the River Ouse catchment, could also meet the same need and could conceivably match or better the criteria used in the model. Whether this is the case can only be ascertained by further detailed studies which will be required to help formulate a proposal, prior to an application for planning or development consent, but which in themselves do not form part of this first stage, which is the separate WRMP process. The statutory process of an environmental assessment, which will be brought into play at that point, also requires consideration of possible alternatives. These will have to be identified and compared against a range of detailed planning and environmental policies set out in the statutory development plan and elsewhere.” What the WRMP confirms is therefore that there is a water supply deficit which will, more than likely, require the development of new water resources. South East Water readily acknowledge that further work to analyse alternatives is required but it is feasible that development may be required within Wealden District during the plan period up to 2030. South East Water is committed to working closely with the District Council in reviewing potential options. Similarly, increasing the output from Bewl Reservoir by raising the level of dam has also been retained within South East Water’s WRMP and is also part of Southern Water’s WRMP. Again, it is recognised that further investigation is needed to confirm the details of any proposal and to further consider alternatives. It is therefore essential that the potential need for water resource infrastructure is reflected within the Core Strategy and that there is sufficient flexibility to support any development that may come forward during the plan period. The imperative for this is even greater with the planned abolition of regional planning through the Localism Bill. South East Water had significant involvement in the regional planning process and had secured support for new strategic water resources within the South East Plan through policy NRM3. The broad policies contained within the South East Plan remain sound and have a substantive evidence base. In the absence of any regional policies, the Core Strategy needs to take forward these policies and should: • recognise that there is a demonstrable need for new water resource schemes and increased demand management to cater for water supply needs for current and future development and the protection of the environment; • provide a commitment that Wealden District will work with South East Water and the Environment Agency in assisting in the timely delivery of schemes; • state that sites identified for water resource schemes by water companies and the Environment Agency as being required to deliver necessary water infrastructure will be safeguarded and allocated. Without explicit policy support, as stated above, for water resource and demand management within the Core Strategy, it is South East Water’s view that the Core Strategy could fail to meet the challenges of climate change and that future growth could be hindered by potential water deficit issues.

### Details of Changes to be Made:

In order for the Core Strategy to be sound, the water demand and supply issues that face the District, as stated above, need to be directly addressed within the Plan and reflected in policy. The following policy should be incorporated into the Core Strategy: “New water resource schemes, improvements to the water supply network
and demand management measures that are needed to meet current and future water supply needs, meet the challenges of climate change and protect the environment will be supported. Wealden District will work with the water companies and the Environment Agency to assist in the time delivery of schemes. Sites that are identified for water resource schemes by water companies and the Environment Agency as being required to deliver necessary water infrastructure will be safeguarded and allocated within Development Plan Documents."
### Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

| 311               | Mr Hatfield | 102470 | Proposed Urban Extension in North & East Hailsham Planning Policy Statement 1 (PPS1), states that: ‘In preparing development plans, planning authorities should seek to: Reduce the need to travel... and focus development in existing centres and near to major public transport interchanges.’ The urban extension to north Hailsham (SD3) identified in the Figure 7 of the Proposed Submission Core Strategy (PSCS) is 1.95 km from the centre. Although the southern sections of the east extension (SD2) would be close to the town centre the northern sections would be approximately 2.2 km from the town centre. In contrast, southern sites identified as being suitable in the SHLAA (in particular Oaklands & The Brickfield SHLAA Ref 100/1310) are located 1.2 km from the town centre. This shorter distance means that trips into the town centre are much more likely to be undertaken on foot or bicycle rather than in a car. On this basis, the proposed residential development to Hailsham as identified in Figure 7 for the PSCS is contradictory to PPS1. This point was also highlighted by the Strategic Housing Land Availability Assessment. The site at Danecroft Nursery, Station Road, Hellingly and adjacent site at 13 Station Road, Hellingly are both within the north extension (SD3), and were deemed to be unsuitable for development by the SHLAA. This was because as stated; ‘These sites are relatively isolated and are remote from local services and facilities. They are disconnected from the boundary of Hailsham which is some distance away. Housing development would be unsustainable and would have the effect of consolidating a linear form of built development in this semi-rural location.’ PPS 1 states that; ‘In some circumstances, a planning authority may decide in reaching a decision to give different weight to social, environmental, resource or economic considerations. Where this Is the case, the reasons for doing so should be explicit and the consequences considered.’ The various studies undertaken in preparation for the PSCS do not address this issue. No compensatory positive reason is given for the location of development so removed from the town centre. The evidence base study; ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken in 2009 in preparation for the PSCS states that; ‘Development of the northern fringes of Hailsham would be north of the A271 and isolated from the town....’ The isolated nature of this development which is removed from the town centre of Hailsham contradicts guidance in PPS1. PPS1 states that Planning Authorities should; ‘ensure that the impact of development on the social fabric of communities is considered and taken into account’. Hailsham is more able to accommodate smaller sites to the south than larger sites to north and east. Flood Risk According to Figure 7 of the PSCS, sites identified to the north of communities is considered and taken into account’. Hailsham is more able to accommodate smaller sites to the east of Hailsham (SD2 and SD3) are positioned alongside a flood prone area. The Strategic Housing Land Availability Assessment (SHLAA) also points out that; ‘the eastern side of the north site are within Flood Zones 2 & 3’. PPS 1 states that ‘new development should be avoided in areas at risk of flooding’. Strategic Gap Section 3.10.7 of the ‘Landscape Character Assessment and Development Option Evaluation Study’ states that; ‘The countryside to the south of Ersham Road and Ingrams Way is more enclosed and has a stronger character than areas to the east. This is the strategic gap between Polegate and Hailsham and should be protected to prevent coalescence.’ The land south and west of Ersham Road is associated with previous use as a brickfield. There are a number of existing residential developments dotted around this area with the predominant use of the land being for horses and riding. There is existing residential development adjacent to the B2104 (Ersham Road) which is further south than southern sites identified as being suitable by the SHLAA. Development at this location would provide infill between this isolated area of housing and the existing south urban fringe of Hailsham. There is also additional existing development south of this site adjacent to the A22 (Woodside Way). It is therefore not accurate to say that development south of Ersham Road and Ingrams Way would reduce the strategic gap between Hailsham and Polegate. There is currently a gap of 2.5 km between the south side of Oaklands Farm & The Brickfield and the north edge of Polegate. This is a considerable distance. The proposed development of the northern sites such as those identified in Figure 7 of the PSCS would mean that the historic village of Hellingly would effectively become engulfed by Hailsham. Referring to the Hellingly Hospital site; Section 4.9.2 of the Landscape Character Assessment and Development Option Evaluation Study’ states that: ‘The consideration of this area as a new settlement should avoid coalescence between the settlements at north Hailsham and the village of Hellingly..... A new community in this area would need to include the areas to the north of Upper Horsebridge.’ Since the north extension (SD3) identified in Figure 7 of the PSCS would be located 350m from Hellingly, it seems clear that coalescence would occur between north Hailsham and the village of Hellingly. This seems to be a blatant contradiction to the aims of the Landscape Character Assessment and Development Option Evaluation Study. BP1: ‘Development of the Proposed Submission Core Strategy’ Document BP1:’Development of the Proposed Submission Core Strategy’ – February 2011’ section 8.21 refers to south sites indentified in the SHLAA as: ‘area with rural character compared to other broad locations. The access to the town centre, and the proximity..."
of the A22 would not provide a suitable alternative to car use, and compared to other broad locations would not benefit the town centre and the wider population to such degree.’ This assessment is not accurate. Access to the town centre from the identified south sites is superior to that of the north sites identified, with an existing bus stop located on the adjacent B2104 providing regular 3 minute shuttles directly to the town centre. The south sites are significantly closer to Hailsham town centre (1.2km rather than 2.2km) than the north sites identified in the SHLAA and increase the likelihood that this journey would be taken by bicycle or foot. Section 8.24 of Document BP1 provides an assessment of the north sites identified in the SHLAA, stating: ‘In order to maximise the use of existing waste water capacity the strategy is directed to north Hailsham.’ The SHLAA contradicts the above, stating that the northern site at Upper Horsebridge, Hailsham for 520 dwellings is currently not deliverable due to the current wastewater capacity constraints at Hailsham North Wastewater Treatment Works. With reference to the north site, Section 8.24 of Document BP1 goes on to state: ‘It is less sensitive in terms of landscape impact, provides an opportunity to consolidate development at Hellingly Hospital and has the necessary road linkages and ability to create mixed housing and employment areas. Provision of services in this location will not detract from the town centre and will help provide for the wider area, and allows for the provision of additional primary school places.’ The assessment states that development at this site would be less sensitive in terms of landscape impact despite being adjacent to the historic village of Hellingly containing several listed properties. It is also contrary to the Assessment made in 2001 in the then Local Plan Review Landscape Appraisal. Conclusion The PSCS has been prepared using flawed evidence base studies such as BP1: ‘Development of the Proposed Submission Core Strategy’ and the ‘Landscape Study’. The use of such studies has meant that the PSCS has not been able to provide the most appropriate strategy for development of sites surrounding Hailsham. The PSCS is not consistent with national policy document PPS1 in that the proposed residential development at Hailsham is not positioned close to the town centre and existing facilities. The Council has not been able to provide clear and convincing reasoning to justify the approach of positioning development to the North of Hailsham which is isolated from the town centre and does not comply with PPS1. The Oaklands and Brickfield site south of Hailsham (SHLAA 100/1300: 224 dwellings) is largely on previously-developed (brownfield) land and has a highways scheme to be paid for by the developers agreed with East Sussex County Council and should be included in the SDAs to the exclusion of less suitable development. It meets the Hailsham Sustainability Objectives, being a local Urban Extension within walking distance of Hailsham town centre and offering proximity to open space, woodland and biodiversity – at a scale capable of delivering up to 224 dwellings with minimum impact on infrastructure and environmental amenity.  

I have examined the Proposed Submission Core Strategy (PSCS) against the Soundness Tool and found it wanting in terms of justification and effectiveness. The PSCS is a carefully prepared document, well thought out to offer a plan for the future but it does not take full account of the background research and documentation upon which it is based. In particular the proposals to expand Hailsham to the north do not comply with the sustainability or infrastructure objectives for Wealden and the proposals for development to the east and north of Hailsham are contrary to previous WDC research and to current Background Papers. Participation The consultation process has permitted all interested parties to engage but the options for answering have been strictly limited on a Yes or No basis when, in fact, more discursive answers are needed. Research/Fact Finding The content of the PSCS is not justified by the evidence, particularly in respect of infrastructure and especially highways and sewerage. Document No 7 Infrastructure Position Statement dated July 2009 refers under (A) Transport to the need to reduce travel distances. The PSCS shows strategic development to North and East Hailsham and towards Hellingly at distances from the town centre of up to 2.2 km. The South Wealden & Eastbourne Transport Study (SWETS) in paragraph 3.29 makes it clear that development for major housing allocations in north and east Hailsham would cause significant traffic pressure. Fewer pinch points and reduced traffic pressure are shown for development south of Hailsham. BP No 11 Infrastructure Delivery Plan defines the highways issue for development to the north and east as ‘CRITICAL’ and states ‘Development is contingent on delivery of this infrastructure’. Regarding sewerage/waste water capacity, as outlined in BP No 11, Hailsham North wastewater works had a consented discharge capacity at 1st Jan 2007 at 2900 dwellings. Hailsham South wastewater works had a capacity of 2400 dwellings at same date. This same document shows infrastructure developments in the Appendix for the North water treatment works is deemed CRITICAL to deliver 1500 dwellings. In the south of Hailsham ‘A scheme is not necessary to deliver the proposed Submission Core Strategy. However a scheme may be required for windfalls of housing and employment development.’ The same Background Paper states under ‘Further Supporting Evidence’: ‘Infrastructure is not necessary to achieve the full allocation of development in Hailsham, Polegate and Stone Cross as shown in the proposed Submission Core Strategy.’ This reliance on ‘massing’ in the north of Hailsham therefore has infrastructure issues which could be avoided by reducing the size of the Strategic Development Areas and spreading the housing to the south of the town. According to the Housing Needs Assessment the greatest number of low income families are located to the south and such development would help to balance with Affordable and mixed housing. The Table at the end of BP 11 sets out water treatment for extant Planning Permissions and completions from April 2006-April 2010 and states that there are capacity issues arising in the north from the Spatial Strategy but not in the south. The Conclusions to BP 11 state that wastewater funding has been secured from Offwat for works in 2012 to increase capacity in the Hailsham area and to undertake a study to investigate other technical solutions. The financial solution would be via appropriate developer contributions. In summary, therefore, according to BP11 there are no capacity issues in South Hailsham providing development is not beyond 2400 houses, less 885 already approved – namely 1515 dwellings in Polegate, Stonecross and South Hailsham. The Oaklands/Brickfield SHLAA site 100/1310 (224...
dwellings) includes an East Sussex County Council approved road scheme to allow capacity for up to 300 dwellings. Landscape In January 2001 WDC prepared the ‘Low Weald Towns Sector Appraisal Landscape’ as part of the Background Papers for the then Local Plan Review. This document is partly incorporated in Background Paper No 6 Green Infrastructure. BP 6 does not include the following relevant paragraph about the landscape around Hailsham: ‘South of Hailsham: ….Urban Influence: On the western side of the sector the urban edge of Hailsham is generally well concealed by woodland often in deep ghyls or valleys. Scattered farms and houses are linked by a network of roads and lanes, the latter often sunk between high overgrown hedges. Horse grazing is common, a reflection of urban pressures, and as a result many of the pastures have the unkempt rather untidy appearance of paddocks. Rough sheds, water troughs and other paraphernalia are common place. ‘. Under the heading ‘Sensitivity to Development’ the Landscape Appraisal states: ‘The relatively open aspect of the landscape east of the Cuckmere flood plain makes it sensitive to change by new development and any large scale expansion of the built form beyond the existing urban edge of Hailsham in this location would tend to damage the rural setting of the town. ‘. ‘However there is very little scope for additional development on the western edge of the sector without threatening the intrinsic qualities of the landscape and more particularly the rural settings of Hellingly and Horselunges Manor. Importantly the urban influence of Hailsham is hardly noticeable in this reach of the Cuckmere valley apart from some ribbon development along the A271 on the immediate fringes of the town. Any significant expansion of the built form in this location (Hellingly/North Hailsham) would be likely to erode the historic landscape, structure and rural character of this valuable landscape and irreparably damage the vulnerable gap of countryside between Hailsham and Hellingly.’ The Sustainability Appraisal sets out on p 42 the Sustainability Objectives for Wealden. The environmental objectives include: 7. ‘To make the most efficient use of land by prioritising brownfield sites for development, the re-use of existing buildings and promoting higher development densities.’ 11. ‘To conserve, enhance and make accessible for enjoyment the District’s countryside (in particular protecting the best and most versatile agricultural land) landscape, historic and built environment.’ 12. ‘Reduce the need to travel by car and promote alternative methods of transport.’ Development north and east of Hailsham is contrary to all or most of these objectives because it would increase travel distance, increase reliance on motor cars and damage the landscape and countryside, being on greenfield sites. SHLAA site 100/1310 Oaklands & The Brickfield are on a previously developed site, the Brickfield being defined as ‘Brownfield’. Oaklands, being used for business ‘horsey culture’ and not agriculture is also classified as ‘brownfield/previously developed’ under PPS3. Development of these sites south of Hailsham therefore complies with the environmental objectives set out in the Sustainability Appraisal. Alternatives The Council’s chosen approach in the PSCS is therefore not the most appropriate given the reasonable alternatives and it goes against the Background Papers and existing evidence base. It would appear from the PSCS that sustainability considerations have not informed its content from the start. In particular, it is stated at Para 6.30 of the PSCS that the Polegate, Willingdon, Stonecross development of 700 dwellings can only take place when formal road infrastructure is in position. Therefore SD4 is not programmed to start until 2019/20. Similarly, Para 5.16 states that the proposed northern urban extension of Hailsham (SD2 & SD3) cannot occur without infrastructure improvements namely sewerage and roads. Hence SD2 cannot start until 2017 and SD3 until 2021. I would submit that this issue of roads indicates that, by definition, the Strategic Development Areas forming the northern extension of Hailsham towards Hellingly and those in Polegate, Willingdon and Stone cross are unsustainable. The PSCS was initially prepared in its Draft and Consultation forms on the basis of the requirements of the South East Plan. This is now being abandoned and will no longer be valid. Because the Draft Core Strategies and most of the evidence gathering and Background Papers were prepared in accordance with the South East Regional Plan, the current PSCS is probably invalid and I would submit that the Inspector should examine this. Delivery The Council has correctly identified the main issues that the PSCS is seeking to address but does not present a clear vision for Wealden District into the future, only the equivalent of a ‘wish list’ of construction of 400 houses a year and sufficient commercial development for employment. It does not clarify how to achieve this, particularly in respect of infrastructure. The major strategic development north and east of Hailsham introduce an unacceptable risk in the ability to provide the infrastructure. Cross boundary issues have not been adequately addressed. In particular with Mid Sussex District Council and associated County Council Highways liaison for a relief road around East Grinstead. Nor does it address the problems of coalescence between Polegate, Willingdon and Stonecross and Eastbourne Councils, nor does it address the cross boundary issues which will arise with Lewes District Council, particularly in connection with development around Uckfield. The PSCS sets out objectives in terms of construction and development but does not connect these in sufficient detail with the necessary infrastructure. The most obvious gap in the policies is related to transport, in that the entire PSCS is predicated on continued and developing use of motor vehicles, there being no positive action proposed in relation to the Uckfield-Lewes Railway line and only passing mention of the possibility of public transport or reinstated railway from Hailsham southwards to Polegate and Eastbourne. The timescales given in the Plan are governed by the moribund South East Plan and are not realistic, particularly in respect of infrastructure provision and especially given the proposals in the PSCS for development north of Hailsham which will rely on the motor car. This is contrary to Spatial Planning Objective 7. Currently the Strategic Development Areas SD2, SD3, SD4, SD6 & SD7 are all undeliverable as set out in Paras 3.16, 6.19 & 6.31 due to lack of existing highways infrastructure. This amounts to 2650 dwellings which cannot be delivered. Flexibility It is not clear whether the PSCS will be flexible enough to respond to a variety of, or unexpected changes in circumstances, whether environmental, political or economic. Currently there is no clear plan for updating it. It cannot be very flexible because of the infrastructure constraints in Wealden District. Summary The PSCS does not
explain how its key policy objectives will be achieved because it is based on the South East Plan which is being abolished. Most of the supporting documents are also based around the South East Plan and pre-date its abolition. The proposals for Strategic Development housing north and east of Hailsham and in Polegate, Willingdon & Stonecross are all undeliverable because of lack of highways infrastructure and, in the north, due to lack of sewerage capacity. These proposals therefore contradict Wealden’s own sustainability and environmental objectives. The PSCS does not take proper account of some sites in the SHLAA which are recognised as suitable and which meet sustainability objectives better than those selected for ‘Strategic Development’. The Oaklands and Brickfield site south of Hailsham (SHLAA 100/1300: 224 dwellings) is largely on previously-developed (brownfield) land and has a highways scheme for the Ersham Road roundabout agreed with East Sussex County Council and should be included in the SDAs to the exclusion of less suitable development. It meets the Hailsham Sustainability Objectives, being a local Urban Extension within walking distance of Hailsham town centre and offering proximity to open space, woodland and biodiversity – at a scale capable of delivering up to 224 dwellings with minimum impact on infrastructure and environmental amenity. This PSCS has given careful consideration to the issues within the Wealden area but falls short of achieving deliverability because of a decision to favour massing over locality, with all the consequent risks involved in reliance on a minimum number of SDAs and with an intention to release more greenfield sites than is compliant with government recommendations. I welcome the Review and monitoring procedures inherent in the PSCS but this document is currently unsound.

Details of Changes to be Made:
The Strategic Developments proposed by Wealden District Council for North and East Hailsham and Polegate, Willingdon & Stonecross all depend on critical roads infrastructure and critical sewerage infrastructure north of Hailsham. These Strategic Developments are therefore not deliverable and there is a major risk that this Core Strategy cannot be implemented. This could be resolved by adding smaller urban extensions, particularly around the south of Hailsham where there are much reduced infrastructure constraints and one site would be Oaklands & The Brickfield (SHLAA site 100/1310).

Details of Reasons for Soundness/ Legal Complaince:
We support the Legal Compliance and Soundness of the Core Strategy. We support its development objectives.

Details of Reasons for Soundess/ Legal Complaince:

Key Diagram and Errata dated 24 February 2011 – SUPPORT 2.52 We support paragraph 3.1 of the Errata to the Proposed Submission Core Strategy dated 24th February 2011. This amends a factual discrepancy between Figure 5: Phasing of Development (p31) of the Core Strategy and the Key Diagram which currently states ‘commencement around 2022’. 2.53 Whilst we support the overall strategy for Heathfield, we consider the Key Diagram is misleading and could result in an element of confusion. Currently, the wording for SD11 ‘urban extension to North West of Heathfield’ sits between two arrows relating to ‘wide AONB and views from ridge top’. We consider these two statements, i.e. the long distance views, and the potential for development, appear contradictory to each other on the Key Diagram. 2.54 We consider long distance views also exist to the South and West of Heathfield as well as areas in Crowborough and Uckfield as identified in the Landscape Strategy (paragraphs 3.1.4 (Crowborough), 3.4.5–3.4.7 (Heathfield) and 3.7.5 (Uckfield). Landscape arrows have not been provided in the Key Diagram in these locations and represent an inconsistency within the Key Diagram between settlements. We would recommend the Council to reconsider how this information is presented in order to avoid any confused messages the Key Diagram could present without reviewing the associated CS text.
