currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. PROPOSED SUBMISSION CORE STRATEGY OPTION CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindsland should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindsland / Mornings Mill Farm. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues ignored GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green lung between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. I trust that the above representations will be placed on record accordingly.

Details of Reasons for Soundess/ Legal Complaince:

Rydon supports the distribution of an additional 650 new dwellings to Stone Cross. We query the reference to 'Westham' alongside Stone Cross in this table as it is not intended that any of the 650 dwellings are allocated to the village of Westham

Details of Changes to be Made:

Remove reference to the village of 'Westham' in WCS2
I write to register my objections to the Polegate and Willingdon and Stone Cross area strategy in the above document on the basis that it is not sound or justified for the following reasons:

NUMBER OF ALLOCATED HOUSING CONTRADICTS THE AMOUNT WHICH IS CLAIMED TO EVEN BE SUSTAINABLE

It is very disappointing that despite repeatedly asked questions at Wealden District Council’s full council meetings and committees regarding the proposed 1265 new houses for this area, Wealden District Council’s position is that it is waiting for the outcome of the Honey Farm Appeal where the proposal is for up to 520 houses. So far, there has never been any mention of any alternative plans should the Council lose the appeal. The Council appears to be confident in defending this appeal, despite also contradicting itself with by using the exact same reasons in the rejection of Honey Farm at Committee to justify and support those proposals within the Core Strategy for the Polegate and Willingdon area, for a site which is only down the road where the same problems would apply.

Wealden District Council clearly has no plan B and if Wealden District Council cannot successfully defend this appeal, Willingdon and Polegate will automatic be lumbered with 1785 extra houses. For this reason alone, the Proposed Submission Document is irresponsible and misleading the communities. In addition reason as below;

INFRASTRUCTURE - SCHOOL AND HEALTH FACILITIES

As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical centre at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is

Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

problem will be address at present or in the future. The increase of about 301 trips per hour, 5,016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. PROPOSED SUBMISSION CORE STRATEGY OPTION

CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindsland should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindsland / Mornings Mill Farm. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues ignored.

GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green lung between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. I trust that the above representations will be placed on record accordingly.

Details of Changes to be Made:
1.1 The Amount of New Housing – Policy WCS1 and WCS2 and paragraphs 5.3 etc 1.1.1 We note that the proposed Submission Core Strategy looks to accommodate 9574 new dwellings in the district across the plan period (2006 – 2030) i.e. 399 a year. This is circa 27.5% less than the 11,000 dwellings proposed across the district in the South East Plan (SEP) (May 2009) for the period 2006 and 2026. 1.1.2 PPS12 requires Core Strategies to conform generally to the regional policy. We do not consider the amount of new housing proposed in the district to be legally compliant as it is not consistent with regional policy as set out in the SEP. 1.1.3 Whilst the LPA appear to be progressing with a lower level of growth on the assumption that the SEP will be revoked by the time the Core Strategy gets to examination, the fact is the SEP remains part of the development plan at present and the CS should have regard to the aims and objectives of the SEP/ justify why it is necessary and appropriate to depart from it. The proposed Submission Core Strategy contains no such justification. 1.1.4 A detailed understanding of the background to the amount of new housing proposed in the district in the SEP is in our opinion important in considering the soundness of the housing land supply strategy now being advocated in the proposed Submission Core Strategy document. 1.1.15 The Chief Planning Officer (CPO) in his letter of the 6th July made it clear that in the context of the revocation of the RSS LPAs would be responsible for determining the housing numbers in the absence of a regional target, and that the housing numbers promoted by LPAs would need to be justified, as LPAs would need to defend them through the LDF examination process. 1.1.19 The District Council has an obligation to assess and provide for the housing needs and demands of the District. Paragraph 33 of PPS3 makes it very clear that in determining local levels of housing provision local planning authorities should, in preparing their Core Strategies take into account evidence of current and future levels of housing need and demand, e.g. as set out in Housing Market Assessment and the Housing Needs Assessment. 1.1.22 Having regard to the above we feel the DC should give consideration to the accommodation of at least 13,200 (i.e. the 11,000 set out in the SEP plus 4 x 550) to cover the additional years to 2030). Given the 4,889 units are already committed this would leave a residual requirement of 8,311 i.e. a residual requirement equivalent to 415 dwellings pa. If, 75% of the 13,200 units were on sites that generated an affordable housing need under the new policy WCS8, this level of provision could provide for circa 3,465 affordable dwellings i.e. 18% of the affordable need identified in the HNA. Which demonstrates how severe the need is relative to the supply 1.1.23 WDC’s aversion to higher housing numbers appears to be related to the effect these could have on infrastructure and services, especially in the southern part of the district. However, it is often the case that the strategic housing allocations help to address this issue, providing new transport links/highway improvements, contributing to new sustainable drainage facilities, new schools, medical facilities etc. Higher levels of growth need not prejudice existing infrastructure and services; they could in fact help address existing problems. 1.2 Housing Distribution 1.2.1 We do not consider the housing distribution strategy to be legally compliant. It is not consistent with regional policy as set out in the SEP. PPS12 requires Core Strategies to conform generally to the regional policy. Paragraph 4.33 states that choices to be made on where growth should take place should follow national and regional policy. 1.2.2 The southern part of Wealden district is located within the Sussex Coast Sub Region, one of the nine sub regions identified in the SEP. These sub regions were to be ‘the focus for growth and regeneration’. Policy SP1 of the SEP refers 1.2.3 Policy H1 of the SEP deals with regional housing provision. It stipulates that in the Sussex Coast Sub Region, 69,300 net additional dwellings should be provided between 2006 and 2026. 1.2.4 Policy SCT5 of the SEP sets out the scale and distribution of housing across the Sussex Coast sub region. It indicates that that part of Wealden District which falls within the Sussex Coast Sub Region should seek to accommodate 7000 dwellings during the plan period (2006 – 2026) i.e. 350 dwellings per annum. 1.2.5 Given the above, and having regard to the requirements of policy H1b of the SEP (wherein WDC are required to provide some 11,000 units across the district during the plan period (2006-2026)), it is clear that the SEP looks to focus growth within that part of the district that falls within the Sussex Coast Sub Region, with only a small proportion of development (4000 homes) to be accommodated within what was called the Rest of the District. 1.2.6 The SEP also makes it clear that the Sussex Coast Sub Region was identified as an area where the government was looking to proactively pursue and promote economic growth and regeneration. As a result, over 60% of WDC’s housing requirement was located within the Sussex Coast Sub Region. The spatial strategy being promoted in the proposed Submission Core Strategy document, according to paragraph 5.5.of the proposed Submission Core 493/A3/JA April 2011 Strategy document, predicated upon the strategy objectives and the settlement hierarchy. Thus only circa 51% of the
proposed level of housing growth is to be located within what was referred to as the Sussex Coast Sub Region in the SEP. 1.2.7 Not only is the spatial strategy inconsistent with the SEP, but it fails to take on board the reason for the spatial strategy proposed in the SEP i.e. the economic regeneration of the Sussex coastal area. WDC have, in their sustainability appraisal of the proposed Submission Core Strategy Document failed to assess the implications of the spatial strategy advocated in the proposed Submission Core Strategy Document on the economic regeneration of the Sussex coastal area. The council’s failure to undertake this work means that the proposed Submission Core Strategy Document is not soundly based. 1.2.9 In promoting an annual housing requirement of just 400 units WDC, in their proposed Submission Core Strategy document, are in our opinion actively stifling economic growth. Furthermore, the council’s decision to treat the whole district as a single entity, with no emphasis placed on the regeneration of the Sussex Coast Sub Region, is in our opinion, despite the aspirations of policies SP03, 04 and 06, actively prejudicing the economic regeneration of the coastal area, to the detriment of the wider area. 1.2.11 As currently drafted the housing distribution strategy advocated by WDC in their Proposed Submission Core Strategy is not in ‘general conformity’ with the RSS as required by Paragraph 4.2 and 4.33 of PPS12 and is not therefore sound.

Details of Changes to be Made:

3.1 The Amount of New Housing:- 3.1.1 We feel the housing targets set out in policy WCS1 should having regard to our position on the scale of housing growth be amended from 9600 to 13,200 dwellings. 3.1.2 Similarly we feel the housing targets set out in policy WCS2 of the CS should, having regard to our position on the scale of housing growth, the spatial strategy, and the level of housing proposed in Stone Cross specifically, be amended thus:- WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 980 New allocations; total dwellings 2006 - 2030 1,022. Total Wealden 4,889 Built or already committed; 8,311 new allocations; 13,200 Total Dwellings 2006 - 2030. 3.1.3 We would also suggest that the number of new allocations is revised to ensure that 60% of the proposed growth is located in the Sussex Coast Sub Region, as per the SEP, which should be identified on a plan. 3.1.4 Having regard to the above there would also be a need to amend policy SPO3 to address the increase in housing supply we advocate, and the reinstatement of the Sussex Coast Sub Region. Similarly paragraphs 3.11 and 3.16 would need to be revised to reflect our position, with the economic policies (SPO6 and WSC3 reviewed accordingly). 3.1.5 If the scale of housing proposed during the plan period is not revised as recommended, we would suggest that policy WCS2 is revised thus:- WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 850 New allocations; total dwellings 2006 - 2030 892. Total Wealden 4,889 Built or already committed; 4,835 new allocations; 9,724 Total Dwellings 2006 - 2030. 3.1.6 Given our recommended changes to the scale of growth proposed at Stone Cross and Westham we would also recommend that paragraph 6.31 (3) and paragraph 6.31 (3 bullet points 3, and 4 be amended thus:- ‘allocating a range of deliverable housing sites for up to 700 dwellings, and leisure, recreation and community facilities in Polegate and Willingdon, around 850 dwellings in Stone Cross, with some 16,890 sq. metres employment floorspace in the Polegate and Willingdon area. Sites for development will be identified and phased through the Site Allocation DPDs including: · provision of around 550 homes within an extension to the urban area of Stone Cross to the east and south east (SD6), with flexibility between SD6 and SD7, subject to highway improvements; · provision of around 300 homes within an extension to the urban area of Stone Cross to the north (SD7), with flexibility between SD6 and SD7, subject to highway improvements’
Details of Reasons for Soundness/ Legal Complaince:

1. The majority of new housing is proposed to be provided in the southern part of the district. The highest number of additional dwellings (1300) is proposed for Hailsham, which is in addition to the 1645 dwellings already built or committed. Thus Hailsham is intended to receive 2945 dwellings over the 24 years of the plan period. This represents 123 dwellings per year. 2. What these figures fail to take into account is the ability of the local housing market in any given part of the District to generate sales of new dwellings at prices that will enable developers to implement viable developments. There is a limit to the number of dwellings that can be sold in Hailsham in any given year, which reflects the strength and vitality of the local housing market. Developers will not build more houses than they are reasonably sure they can sell at a price that reflects an appropriate profit level. The Wealden Housing Market Assessment published in 2007 sets out the "Drivers in the Development Industry" (paragraph 1.69) as follows: a. The type and size of dwelling they (a developer) have succeeded in selling in either the local area or in other similar locations (and therefore for which there is a known market). b. The scale of demand or pressure on particular dwellings in the existing stock - through discussion with local agents. c. Related to the above, the return on capital invested i.e. the mix of dwellings that will provide a quick sale once completed. d. The value of the land once contributions for affordable housing and other obligations have been factored in. 3. It is considered that these factors have not been properly taken into account. The market in Hailsham is not strong enough to ensure that at least 123 dwellings per year over a 24-year period can be delivered. Just because the settlement has been identified as being suitable for this much housing, and is even in need of it, does not mean that it will be provided. The delivery of the housing is wholly dependent on the development industry being able to sell it and it is not considered that any evidence from house builders or agents has been obtained to support the Council's view that this amount of housing can be delivered in Hailsham in the plan period. 4. It is also considered that the same issues apply to the proposed allocations in Polegate/Willingdon and Stone Cross/Westham. These are all close together in a relatively small part of the South of the District, and together they account for 4,902 of the dwellings proposed in the Strategy (51%). The Council's strategy for this part of the district will also result in the loss of the individual identity of these Wealden settlements as they will effectively become an urban extension of north Eastbourne. 5. The part of the District where the market is known to be strongest is in the north, a fact that is recognised at paragraph 2.17 of the Core Strategy which states: "Wealden's good quality of life and its proximity to London and the Gatwick growth area, creates a high demand for housing, especially in the north of the District. Demand has in the past exerted considerable upward pressure on house prices, and has caused a widening gap between local incomes and market prices, and led to severe shortages of affordable housing". This is the area where the Council can be far more confident that the amount of new housing needed can be delivered. The total number of proposed units in Crowborough, edge of Tunbridge Wells and Heathfield is only 1,557, which is only 16% of the total. Even if half of the number to be provided in the rural villages is added, this only brings the number to 2,243 (23%). Uckfield is not in the northern part of the District where the market is strongest. 6. The Proposed Submission Core Strategy is unsound because the majority of housing has been allocated to settlements in the south of the District where the market is not strong enough to deliver them, and not enough housing has been directed to the northern part of the district where they can be delivered. Notwithstanding the constraints of the AONB and the Ashdown Forest Special Protection area there is scope to prove more land for housing at Crowborough, and in the interests of actually seeking to achieve more housing in the District these should be actively pursued in the Core Strategy. One of the particular recommendations of the Wealden Housing Market Assessment is the encouragement of more small dwellings in the northern part of the district (para 9) in this could be an integral part of achieving more dwellings in the part of the District where there is a more viable housing market.

Details of Changes to be Made:
More housing should be provided at Heathfield and Crowborough. A minimum of 500 dwellings should be provided in Heathfield and a minimum of 900 in Crowborough (both excluding commitments etc)
We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We
question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Council’s emerging Core Strategy is not only deficient because it ignores the adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Council’s Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.

Details of Reasons for Soundess/ Legal Compliance:
Housing: we support the reference to appropriate, sustainable growth within villages, including affordable housing

Details of Changes to be Made:
We are intrigued by the Council's intended adoption of an unsound housing position. The Council's proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council's Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council's Background Paper no. 1 (BP1) states "Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan" (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that "The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026". The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council's BP1 states "Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026". Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: "In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London"; (h) any other local development document which has been adopted by the authority". The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We
question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Council’s emerging Core Strategy is not only deficient because it ignores the adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper”—Background Paper 2 notes that “the Council’s Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing requirement and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.

Details of Reasons for Soundness/ Legal Compliance:

Officers at Mid Sussex District Council are continuing to work jointly with Wealden in developing and implementing a strategic and co-ordinated approach to protecting the Ashdown Forest SAC/SPA. Work already undertaken between the two Councils has identified a series of measures to limit the impact of new development on the conservation interests of the Ashdown Forest. These measures include new development contributing to an appropriate level of mitigation in the form of providing Suitable Alternative Natural Green Space (SANGS) and support via developer contributions towards the Ashdown Forest Access Management Strategy. This strategy will need to specify measures for the management of visitors to Ashdown Forest in such a way that reduces their impact on the interest features of the designated site and will need be prepared and implemented in association with the conservators of Ashdown Forest, Natural England and other partners. In addition, further joint working will be required to develop and implement on site management measures to reduce nitrogen emissions emanating from the increased number of vehicles using the roads crossing Ashdown Forest. In combination with this, both Councils through their Local Development Frameworks will also need to delivery initiatives to reduce reliance on the motor vehicle, through creating sustainable communities, providing improvements to public transport, cycling and walking facilities. Pollution monitoring on the Forest will be required to assess the effectiveness of these measures. The recognition of this situation in paragraphs 3.22 6.34 and policy SPO1 is welcomed. The recognition within the Core Strategy of the impact on the Ashdown Forest that development within rural villages (such as Forest Road and Danehill) would have is welcomed. The strategy focussing growth at Uckfield, Crowborough, Heathfield and Hailsham and smaller- scale growth at villages within the Wealden District will go some way to minimising the negative impact development would have on the Ashdown Forest, especially in combination with further mitigation measures (such as SANGS).

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:

6. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current level of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher.

Details of Changes to be Made:

The proposed Submission Core Strategy is unsound because the majority of housing has been allocated to settlements in the south of the district where the market is not strong enough to deliver them, and not enough housing has been directed to the northern part of the district where they can be delivered. Notwithstanding the constrains of the AONB and the Ashdown Forest Special Protection area there is scope to provide more land for housing at Crowborough and Heathfield, and in the interests of actually seeking to achieve more housing in the district these should be actively pursued in the Core Strategy. One of the particular recommendations of the Wealden Housing market Assessment is the encouragement of more smaller dwellings in the northern part of the district (para 9) this could be an integral part of achieving more dwellings in the part of the district where there is a more viable housing market.
Details of Reasons for Soundess/ Legal Complaince:

We are pleased to see that your development distribution in policy WCS2 can be accommodated within existing consented capacities at Waste Water Treatment Works (WWTW). This is particularly important at the Hailsham North and South Waste Water Treatment Works that discharge into the Pevensey Levels. The purposes of the RoC is to assess the impact of existing discharge consents into the Pevensey Levels, and make suitable changes where appropriate and fully justified. We have currently reached Stage 3 of the RoC which we are awaiting sign off from our Area Manager. We will make these results available to you at the earliest opportunity at the end of April 2011. The results will identify those consents that will require further assessment under the final Stage 4 of the RoC. We expect the final recommendations to be available by April 2012. This will be in time to inform your Site Allocations Development Plan Document. Through the course of the RoC there is a possibility that the existing consent for Hailsham North and South WWTWs will be reviewed which would have implications for the capacity of the works to accept the waste water flows from new development. We are happy that your Strategy is based on the most up to date information available, and you have addressed potential changes to existing consents through the RoC by considering phasing development with the provision of necessary infrastructure. Southern Water have also commissioned a study into alternative solutions for waste water treatment in the south of Wealden should it be needed. We therefore consider your Core Strategy sound in this regard. No Deterioration Policy We are awaiting the publication of a ‘No Deterioration’ policy from Defra. The policy will seek to achieve the Water Framework Directive (WFD) requirement of achieving good ecological status of all waterbodies and not allowing any deterioration in status. The impact of this Policy is similar to that of the Review of Consents, insofar as there is a potential risk that it will result in existing consents being tightened in line with WFD. Again, without this policy being in place, we are satisfied that your Strategy is based on the best available information and remains sound in this regard. Once the No Deterioration Policy is published we will consider how this will impact on your Site Allocations and the need for waste water infrastructure delivery.

Details of Reasons for Soundess/ Legal Complaince:

2. Paragraph 5.9 confirms that housing figures set out in Policy WCS2 make no provision for windfall sites, but completions on windfall sites will count towards the overall house building totals achieved in Wealden. However, it should be clarified that these will be additional to the housing figures referred to in Policy WCS2. In this regard the wording of paragraph 5.17 is unclear and seems to potentially contradict Policy WCS2. In view of the higher housing allocation in the South East Plan, there is no justification for windfall sites to be counted against the total 9,600 housing figure.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
b) Policy WCS2: Distribution of Housing Growth – COMMENT/OBJECT 2.21 Policy WCS2 Distribution of Housing Growth 2006 – 2030 sets out how the quantum of housing is to be distributed throughout the District to meet the overall growth. WDC has assessed sites that have already been built or committed since 2006 (4,889 dwellings) and calculated the required new allocations (4,685 dwellings) to meet the remaining overall requirement (9,574 dwellings). This distribution is assessed on a town-by-town basis in Section 8 of BP2: Managing the Delivery of Housing. 2.22 In identifying the existing commitments (4,889 dwellings), it is considered the Evidence Base, specifically BP2: Managing the Delivery of Housing, should provide for a schedule detailing the sites which make up this component of the supply including an assessment of their ‘deliverability’. This is especially important in the light of the failure to deliver the required level of housing completions either against the SEP or the proposed CS figure as set out in Table 1 above. This would ensure that the number of new allocations required to be identified (4,685 dwellings) is demonstrated to be sufficient to meet the overall requirement (9,600 dwellings). 2.23 However, upon reviewing Section 10 of BP2: Managing the Delivery of Housing, and associated Appendices 8 and 12, it is considered the Evidence Base does not adequately demonstrate the schedule of sites that are ‘committed’ and is actually silent on the matter. Therefore the Core Strategy could be not be considered ‘justified’ in this respect, as the evidence to support this assumption has not been presented within the Evidence Base (the AMR 2010 also does not have a site by site schedule). 2.24 We therefore consider WDC has not demonstrated the ‘deliverability’ of existing commitments or evidenced the site by site schedule that supports the 4,889 dwelling figure. We therefore consider WDC is currently ‘unsound’ in its approach to demonstrate the quantum of new allocations is sufficient to meet the overall housing requirement.

Details of Changes to be Made:
b) Policy WCS2: Distribution of Housing Growth – COMMENT/OBJECT 2.21 Policy WCS2 Distribution of Housing Growth 2006 – 2030 sets out how the quantum of housing is to be distributed throughout the District to meet the overall growth. WDC has assessed sites that have already been built or committed since 2006 (4,889 dwellings) and calculated the required new allocations (4,685 dwellings) to meet the remaining overall requirement (9,574 dwellings). This distribution is assessed on a town-by-town basis in Section 8 of BP2: Managing the Delivery of Housing. 2.22 In identifying the existing commitments (4,889 dwellings), it is considered the Evidence Base, specifically BP2: Managing the Delivery of Housing, should provide for a schedule detailing the sites which make up this component of the supply including an assessment of their ‘deliverability’. We therefore consider WDC is currently ‘unsound’ in its approach to demonstrate the quantum of new allocations is sufficient to meet the overall housing requirement.
Distribution of housing growth 2006 – 2030 (Policy WCS2) 1 The majority of proposed new housing is to be provided in the southern part of the District. The highest number of additional dwellings (1300) is proposed for Hailsham, which is in addition to the 1645 dwellings already built or committed. Thus Hailsham is intended to receive 2945 dwellings over the 24 years of the plan period. This represents 123 dwellings per year. 2 What these figures fail to take into account is the ability of the local housing market in any given part of the District to generate sales of new dwellings. There is a limit to the number of dwellings that can be sold in Hailsham in any given year, which reflects is comparatively weaker strength and vitality of the local housing market. Developers will not build more houses than they are reasonably sure they can sell and the development industry perception of the markets in different parts of the District. The Wealden Housing Market Assessment published in 2007 sets out the “Drivers in the Development Industry” (paragraph 1.69) as follows: · The type and size of dwelling they (a developer) have succeeded in selling in either the local area of in other similar locations (and therefore for which there is a known market). · The scale of demand or pressure on particular dwellings in the existing stock – through discussion with local agents. · Related to the above, the return on capital invested i.e. the mix of dwellings that will provide a quick sale once completed. · The value of the land once contributions for affordable housing and other obligations have been factored in. 3 It is considered that these factors have not been properly taken into account. The market in Hailsham is not strong enough to ensure that at least 123 dwellings per year over a 24 year period can be delivered. Just because the settlement has been identified as being suitable for this much housing and is even in need of it, does not mean that it will be provided. The delivery of the housing is wholly dependent on the development industry being able to sell it and it is not considered that any evidence from house builders or agents has been obtained to support the Council’s view that this amount of housing can be delivered in Hailsham in the plan period. 4 It is also considered that the same issues apply to the proposed allocation in Polegate/Willingdon and Stone Cross/Westham. These are all close together in a relatively small part of the south of the District and together they account for 4,902 of the dwellings proposed in the Strategy (51%). The Council’s strategy for this part of the District will also result in the loss of the individual identity of these Wealden settlements as they will effectively become an urban extension of north Eastbourne. A further relevant factor is that the housing market in the south of the District is weaker compared to the stronger market in the northern part of the District. A contributory reason is the proximity to north Eastbourne and the high level of housing provision in he adjacent Borough especially associated with Sovereign Harbour. 5 The part of the District where the market is known to be strongest is in the north, a fact that is recognised at paragraph 2.17 of the Core Strategy that states: “Wealden’s good quality of life and its proximity to London and the Gatwick growth area, creates a high demand for housing, especially in he north of the District. Demand has in the past exerted considerable upward pressure on house prices and has caused a widening gulf between local incomes and market prices and let to severe shortages of affordable housing.” (our emphasis) This is the area where the Council can be far more confident that the amount of new housing needed can be delivered. The total number of proposed units in Crowborough, edge of Tunbridge Wells and Heathfield is only 1,557, which is only 16% of the total. Even if half of the number to be provided in the rural villages is added, this only brings the number to 2,243 (23%). Uckfield is not the northern part of the District where the market is strongest.

Details of Changes to be Made:
6 The Proposed Submission Core Strategy is unsound because the majority of housing has been allocated to settlements in the south of the District where the market is not strong enough to deliver them, and not enough housing has been directed to the northern part of the District where they can be delivered. Notwithstanding the constraints of the AONB and the Ashdown Forest Special Protection Area, there is scope to provide more land for housing at Crowborough and Heathfield and in the interest of actually seeking to achieve more housing in the District these should be actively pursued in the Core Strategy. One of the particular recommendations of the Wealden Housing Market Assessment is the encouragement of more smaller dwellings in the northern part of the district (paragraph) in this could be an integral part of achieving more dwellings in the part of the District where there is a more viable housing market.
Details of Reasons for Soundness/ Legal Complaint:
Crowborough Area Strategy (paragraphs 6.33 – 6.38: Policy WCS2, Figure 9) 1 The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 305 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less that its current level of need for affordable homes on their own. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocation figure would need to be significantly higher. 2 It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. To make the Core Strategy sound, it is considered that the housing allocation should be increased to a figure in the order of 900 new homes.

Details of Changes to be Made:
3 Land that is available and free of constraint is identified in the Council’s SHLAA as a suitable site for allocation and early release (site 095/1110). It can make a material contribution to the higher overall strategic allocation that is required by the town. Unlike many of the town’s potential peripheral sites, it is not within the AONB which is considered to be a material advantage.

Details of Reasons for Soundness/ Legal Complaint:
We would broadly support the distribution of housing growth around the edges of the towns in the district but we will refer to the numbers allocated to rural villages further on. Similarly the distribution of employment as indicated seems a little skewed, ignoring the rural villages altogether. We feel that the growth in employment opportunities is the key to sustainability of rural communities. The Growth in employment opportunities is directly correlated to the growth of housing.

Details of Changes to be Made:
Effective
Consistent with national policy

6. The Proposed Submission Core Strategy is unsound because the majority of housing has been allocated to settlements in the southern part of the district where the market is not strong enough to deliver them, and not enough housing has been directed to the northern part of the district where they can be delivered. Notwithstanding the constraints of the AONB and the Ashdown Forest Special Protection Area there is scope to provide more land for housing at Crowborough and Heathfield, and in the interests of actually seeking to achieve more housing in the district these should be actively pursued in the Core Strategy. One of the particular recommendations of the Wealden Housing Market Assessment is the encouragement of more smaller dwellings in the northern part of the district (paragraph 9) in this could be an integral part of achieving more dwellings in the part of the District where there is a more viable housing market.
Details of Reasons for Soundness/ Legal Complaince:

(Policy WCS2) 1 The majority of new housing is proposed to be provided in the southern part of the district. The highest number of additional dwellings (1300) is proposed for Hailsham, which is in addition to the 1645 dwellings already built or committed. Thus Hailsham is intended to receive 2945 dwellings over the 24 years of the plan period. This represents 123 dwellings per year. 2 What these figures fail to take into account is the ability of the local housing market in any given part of the District to generate sales of new dwellings at prices that will enable developers to implement viable developments. There is a limit to the number of dwellings that can be sold in Hailsham in any given year, which reflects the strength and vitality of the local housing market. Developers will not build more houses than they are reasonably sure they can sell at a price that reflects an appropriate profit level. The Wealden Housing Market Assessment published in 2007 sets out the “Drivers in the Development Industry” (paragraph 1.69) as follows: · The type and size of dwelling they (a developer) have succeeded in selling in either the local area or in other similar locations (and therefore for which there is a known market). · The scale of demand or pressure on particular dwellings in the existing stock – through discussion with local agents. · Related to the above, the return on capital invested i.e. the mix of dwellings that will provide a quick sale once completed. · The value of the land once contributions for affordable housing and other obligations have been factored in. 3 It is considered that these factors have not been properly taken into account. The market in Hailsham is not strong enough to ensure that at least 123 dwellings per year over a 24-year period can be delivered. Just because the settlement has been identified as being suitable for this much housing, and is even in need of it, does not mean that it will be provided. The delivery of the housing is wholly dependent on the development industry being able to sell it and it is not considered that any evidence from house builders or agents has been obtained to support the Council’s view that this amount of housing can be delivered in Hailsham in the plan period. 4 It is also considered that the same issues apply to the proposed allocations in Polegate / Willingdon and Stone Cross / Westham. These are all close together in a relatively small part of the south of the district, and together they account for 4,902 of the dwellings proposed in the Strategy (51%). The Council’s strategy for this part of the District will also result in the loss of the individual identity of these Wealden settlements as they will effectively become an urban extension of north Eastbourne. 5 The part of the District where the market is known to be strongest is in the north, a fact that is recognised at paragraph 2.17 of the Core Strategy which states: "Wealden’s good quality of life, and its proximity to London and the Gatwick growth area, creates a high demand for housing, especially in the north of the District Demand has in the past exerted considerable upward pressure on house prices, and has caused a widening gulf between local incomes and market prices, and led to severe shortages of affordable housing.” (our emphasis) This is the area where the Council can be far more confident that the amount of new housing needed can be delivered. The total number of proposed units in Crowborough, edge of Tunbridge Wells and Heathfield is only 1,557, which is only 16% of the total. Even if half of the number to be provided in the rural villages is added, this only brings the number to 2,243 (23%). Uckfield is not in the northern part of the District where the market is strongest. 6 The Proposed Submission Core Strategy is unsound because the majority of housing has been allocated to settlements in the south of the District where the market is not strong enough to deliver them, and not enough housing has been directed to the northern part of the district where they can be delivered. Notwithstanding the constraints of the AONB and the Ashdown Forest Special Protection area there is scope to provide more land for housing at Crowborough and Heathfield, and in the interests of actually seeking to achieve more housing in the District these should be actively pursued in the Core Strategy. One of the particular recommendations of the Wealden Housing Market Assessment is the encouragement of more smaller dwellings in the northern part of the district (para 9) in this could be an integral part of achieving more dwellings in the part of the District where there is a more viable housing market.

Details of Changes to be Made:

More housing should be identified at Heathfield and Crowborough. A minimum of 500 dwellings should be provided at Heathfield and a minimum of 900 dwellings at Crowborough (both excluding existing commitments etc.)
1. The description of Crowborough set out in paragraph 6.33 includes a number of comments that are either incorrect, or of questionable relevance. It is suggested that the number of people living in the town that also work in the town is low, however there is no indication as to what the Council think it should be. There can be no doubt that compared to Stone Cross and Westham, Willingdon and Polegate the proportion is actually much higher, and yet the strategy aims to locate far more housing in these settlements than Crowborough. There is no justification for this inconsistent approach. 2. The Council mentions that the railway station is some distance from the town centre. In practice however, the majority of the residents of Crowborough do not live in the town centre, and a very large proportion of them live within easy walking distance of the railway station. The service is well-used. By comparison, Hailsham, where most the largest housing allocations are proposed, does not have a railway service at all, as well as relatively limited bus links. The location of Crowborough’s railway station is no justification for suggesting that the town is less suited to new development. 3. The Council refers to out-commuting to Tunbridge Wells, East Grinstead and Uckfield, however there is no mention of the number of Crowborough residents that commute into London. it is not accepted that significant number of Crowborough residents commute to East Grinstead or Uckfield, however it is known that a very large number commute to London, using the train service. This is a sustainable form of living and working which the Council has made no reference to. 4. The Council states that “the employment centres in the town attract vehicles along unsuitable restricted residential roads”. This is a wholly misleading over-generalisation. Not all existing employment sites are as inaccessible as suggested. 5. The need for more employment in the town, and the significant housing need that exists are clear and should be given significant weight. What should be taken into account is the stronger housing market that in the town compared to much of the rest of the district. The fact that it is close to Tunbridge Wells makes it a desirable place to live, as does the good train service into London, and the attractive landscape around the town. This means that it can deliver housing at a higher and more consistent rate than many other parts of the District. 6. The Core Strategy is considered to be unsound on the basis that insufficient new homes are allocated for the town. This is demonstrated by reference to paragraph 6.33 which identifies a current need for 304 new affordable homes. The Core Strategy identifies only 300 new homes in total for Crowborough over its 24 year duration, which is less than its current level of need for affordable homes alone. This would appear to be a fundamental flaw in the strategy and demonstrable proof that the Core Strategy under-provides new housing allocations for Crowborough. On the basis that new development will need to provide 35% affordable homes, Crowborough will need to have allocated a minimum of 872 new homes to deliver the level of affordable housing that is presently required. Clearly for future affordable provision to be yielded, the allocated figure would need to be significantly higher. 7. It is considered that the Core Strategy is unsound in that it cannot meet the future housing needs of market homes and affordable homes through the allocation proposed in Policy WCS2. Figure 10 identifies land for an urban extension to the south-east of the town. This land is not in the AONB, well away from the exclusion zone around the Ashdown Forest Special Protection Area, close to the station and close to existing employment area. In view of all of these factors, and the ability of Crowborough to deliver more houses within the plan period than many of the other settlements it is considered that there is no justification in restricting the number of new dwellings allocated for the town to just 300. The town could easily deliver 90 additional dwellings per year over the remainder of the plan period and the number allocated should be at least 900.

Details of Changes to be Made:
At least 900 new dwellings should be provided at Crowborough.
Details of Reasons for Soundness/ Legal Compliance:
The Proposed Submission Core Strategy places far too much weight on the “topographical and landscape constraints” that are said to affect the town, and far too little weight on the needs of the town in terms of its future housing and other development. While the A265 passes through the town this is not a constraint. Sites that are suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land will need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the district as a whole are not properly recognised in the Core Strategy. 2 Additional new housing development would meet the town’s known housing needs, as well as make a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. It will increase the demand for public transport services, and allow the existing service to be maintained and improved. 3 The Council has identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. 4 The Council has stated in its Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a trickle of windfall sites. This cannot be a justifiable approach. 5 Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any undue impact on the wider landscape from a sensitively designed development. 6 In addition, this figure excludes land to the west of the area identified for an urban extension that is not in the AONB. The land at Tilsmore lodge is accessible, and visually and physically well-contained. Any urban extension to the north of the A265 should include this land. 7 The Core Strategy is unsound as it fails to make sufficient housing provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. Paragraph 6.40 states that there is a current need for affordable housing for 112 households. To meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8), a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static, there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500 + over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand.

Details of Changes to be Made:
A minimum of 500 dwellings should be provided at Heathfield, and Figure 10 should be amended to enlarge the area for residential provision to include the land to the west.
The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any land suitable for development as logical urban extensions are available that have perfectly adequate access. While some AONB land will need to be released, this will not have a detrimental impact on the wider landscape. The needs of the town, and the ability of the town to contribute more fully to the needs of the District as a whole are not adequately recognised in the Core Strategy. 2. Additional new housing development would meet the town’s known housing needs, as well as making a significant contribution towards the shortfall of housing in the District that will occur within the plan period. The housing market in Heathfield is stronger than those settlements in the south of the District where the majority of new housing has been focussed. Heathfield need higher levels of new housing to provide more buoyancy in the market and choice for residents which will in turn avoid outward migration from the town and the risk of declining services and social infrastructure. A higher housing allocation will increase the demand for public transport services and future provision and allow the existing service to be maintained and improved. 3. The Council has identified land within the AONB on the north-western side of the town for new housing development, but the number of units has been limited to 160. It is considered that this figure should be much higher, not only because the town has the services and facilities needed to serve a larger number of households, but it would also help to safeguard the future vitality and viability of the town. The restrictive strategy currently proposed will only encourage dormancy in the settlement and actually harm the quality of life and standard of living of the local community in the longer term. 4. The Council has stated in its Core Strategy Background Paper in Housing Land Availability that it will assume a build-out rate of 60 dwellings per year on sites of less than 199 units (paragraph 2.7). This means that the housing on the allocated land will be completed and disposed of in just over two years. The town will then have a period of around 15 years until the end of the plan period when there will be no housing development except for a possible trickle of windfall sites. This cannot be a supportable approach. 5. Figure 10 identifies land adjacent to the town that is proposed for an urban extension. The figure is inaccurate because not all of the land to the north of the A265 is open to views from the wider landscape. In fact much of this land is enclosed by hedgerows and woodland planting. There would not be any undue impact on the wider landscape from a sensitively designed development. Similarly land adjoining the eastern settlement boundary has limited visual and landscape constraints which is explained in the submitted Landscape Character and Visual Impact Report. 6. The Core Strategy is unsound as it fails to make sufficient housing provision for the town. It is also unsound because it fails to provide sufficient numbers of affordable homes. paragraph 6.40 states that there is a current need for affordable housing for 112 households. To meet that demand from new development (based on a requirement of 35% affordable provision in Policy WCS8) a minimum of 320 new homes will be required in Heathfield to meet this current demand. Because demand is not static there will be further need for affordable housing throughout the Core Strategy period. To achieve its delivery targets for affordable homes, the allocated number of homes for Heathfield realistically needs to be in the order of 500+ over the duration of the Core Strategy, but with a significant allocation in the early phases to meet current demand. Due to the size of additional appendices they have not been uploaded but are available to view at the Council’s offices.

Details of Changes to be Made:

7. Land to the east of the town has been put forward for inclusion in earlier incarnations of the Core Strategy, principally SHLAA sites 258/1210; and 259/1210 on the norther side of the A265 and additionally SHLAA sites 260/1210; 275/1210 and 299/11210 on the southern side of the A265. The land is available and can deliver highway improvements, new homes, open space and community provision at an early stage in a comprehensive approach. The Core Strategy is simply wrong at paragraph 6.41 where it states that there are no suitable alternative sites available. The above are sites that are demonstrably available and suitable as the submitted supporting reports clearly indicate. This land is favoured by the Parish Council for development and if allocated for in the order of 250 new homes, existing highway constraint would be addressed and contributions secured to provide social and community provision (such as the needed swimming pool identified at paragraph 6.39). This can be achieved at this scale and level of development but would not achieve these objectives at the level proposed in the Core Strategy. New housing at the proposed level will maintain the town’s future vitality and...
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Economic wellbeing and will help to maintain local services and avoid the prospects of Heathfield being starved of investment and resources in the future, with the very real risk that present services will decline, and for the town to simply become no more than a commuter town for the larger centres of Tunbridge Wells, Eastbourne and beyond.

WCS2 Distribution of Housing Growth 2006-2030

Policy 2

Details of Reasons for Soundness/ Legal Complaince:
The majority of the district is rural area. The Core Strategy recognises that it is important that villages and rural settlements remain vital and that they are sustained throughout the Plan period, so that they can meet their roles as described within the settlement hierarchy of the Plan. The removal of development boundaries from a number of settlements reduces the spread of development within the countryside. Rural Growth Areas shown under Policy WCS6 therefore assume more importance in delivering the Core Strategy. Ninfield is better placed than neighbouring settlements to accommodate development. A housing figure of 50 units has been allocated to Ninfield, but this was set in the context of a number of sites having development potential. My client’s land at Ingram’s Farm, Ninfield, appears to be the least constrained and it has the capacity to accommodate in excess of 50 units. For all the above reasons, it is recommended that the housing quota for Ninfield is raised. Proposed Change

Details of Changes to be Made:
The Ninfield housing allocation be raised from 50 to 100 units.

### Details of Reasons for Soundness/ Legal Complaince:

Para 3.15 of the submission document states that “The town of Tunbridge Wells is situated on the boundary of Wealden, and provides limited opportunities of extensions to that urban area, albeit situated within the rural parish of Frant. An extension to this urban area, compatible with the surrounding character of the area and located outside of the Area of Outstanding Natural Beauty, would help to address wider housing needs, by providing housing opportunities in an area of Wealden that in itself has limited potential due to the landscape designation.” The summary of the Core Strategy (page i) does not make reference to an urban extension within Frant, nor is there a Frant ‘Area Strategy’ like the other urban extensions, for example, Heathfield. In Figure 5 Phasing of Development, it is clear that the proposed urban extension in Frant starting in 2026 will provide 120 dwellings when completed in 2030. However, it is unclear whether the proposed allocation for 120 dwellings in this area refers to only Wealden’s housing needs or to the housing needs of a wider area. As the total number of dwellings proposed at this site (120) is included in full within Wealden’s proposed housing allocations for 2006-2030, it is assumed that “wider housing needs” refers to the housing needs of this rural part of Wealden District. It should also be addressed that, as part of the Rural Areas Strategy, Wealden District Council’s Core Strategy proposes 20 dwellings “in Frant village, in addition to the urban extension adjacent to Tunbridge Wells situated within the Parish of Frant” (page 55), bringing the total number of dwellings proposed for the Parish of Frant to 140 dwellings. In the background document “Development of the Proposed Submission Document” (BP1) at para 8.60, with specific reference to land adjacent to the boundary of Tunbridge Wells in Frant Parish, it is stated that although the area/site was “initially considered under the rural settlement hierarchy, the potential for development adjacent to Tunbridge Wells, albeit within the parish of Frant, is in effect an urban extension of that particularly sustainable town. Due to this high degree of sustainability, and the need to meet housing needs in the wider area, the area is considered suitable for growth. Based on SHLAA information, and taking into account contaminated land issues the broad location can yield around 120 dwellings”. It is therefore explicitly stated that the area in Frant adjacent to the boundary with Tunbridge Wells is being identified as an urban extension to Tunbridge Wells, while providing housing numbers for the District of Wealden. A reasoned justification needs to be given for this proposal. Frant is designated as an “other unclassified settlement” in Wealden District’s settlement hierarchy. As such, its function (according to this hierarchy) is having “few or no facilities and services, and where further development would be unsustainable.” It is therefore to be expected that residents of Frant, including those resident at the proposed allocation, will depend upon other centres to meet a broad range of needs; the nearest main service centre easily accessible to the village of Frant being Royal Tunbridge Wells. In effect, development at Frant would be an extension to Royal Tunbridge Wells and the release of greenfield land would be unlikely to meet the needs of Wealden’s residents given its location away from the District and Service centres located within Wealden and identified in Wealden’s settlement hierarchy. Development in this location is therefore unlikely to meet the wider housing needs of Wealden’s residents in terms of associated infrastructure and services. As part of reviewing Tunbridge Wells Borough Council’s Core Strategy during 2010/11, a detailed assessment of the capacity of greenfield sites around the built up area of Royal Tunbridge Wells and Southborough is currently being carried out as well as a review of the inner boundaries of the Green Belt to ensure that Rural Fringe sites provide a long-term supply of land safeguarded to meet the Borough’s growth requirements beyond 2026, to 2031. This is within the framework of Tunbridge Wells Borough’s Core Strategy that seeks to prioritise the use of previously developed land (PDL) within the Limits to Built Development (LBD) in the future development of Royal Tunbridge Wells. Consequently, it is considered premature if Wealden District Council makes an allocation on greenfield land at Frant. An allocation on this site will in effect be an allocation of greenfield land on the edge of Royal Tunbridge Wells without it having been considered and assessed within the wider context of the capacity of the Borough’s sites, including greenfield sites, around the built up area. As established through the examination into the Core Strategy, Tunbridge Wells Borough Council’s housing trajectory included a number of predominantly greenfield/mix (of greenfield/PDL) sites ‘contiguous’ with (adjacent to) the LBD of the Main Urban Area (Royal Tunbridge Wells and Southborough) and Small Rural Towns, which were used to show how the Local Planning Authority (LPA) could meet the South East Plan housing requirement. This included one of the Borough Council’s designated Rural Fringe Sites at Hawkenbury Farm (off Hawkenbury Road/Maryland Road). Should it prove necessary to utilise the Rural Fringe site at Hawkenbury to meet development needs in Tunbridge Wells Borough, the proposed site in Frant would have an added impact on the infrastructure and services within this area. The
proximity of the site in Frant to this designated Rural Fringe site should be considered. The implications on the infrastructure and environment of both sites being developed should be addressed by Wealden’s submission Core Strategy. Wealden District Council’s submission Core Strategy recognises that the expected contribution from PDL over the period 2010-2030 may be nearer to 35%, rather than the national annual target of 60% set out in Planning Policy Statement 3: Housing (PPS3). If this is the case, it should be clarified whether it is envisaged that the national average will be met by a higher proportion of PDL sites being developed in other, more urban areas of the South East region. In Wealden’s proposed submission Core Strategy it is noted that, over the past 10 years, around 200 dwellings per annum have been provided as windfalls. As completions of windfall sites will count towards the overall house building totals, the District Council’s Core Strategy should clarify what mechanism is to be used to manage the release of greenfield sites if a larger than expected amount of windfall development on PDL comes forward. The decision to apply “countryside constraints” on neighbourhood centres and unclassified settlements could severely restrict the lowest two categories of settlements and create smaller rural settlements with limited, or no, basic services/facilities. It may be worthwhile considering a more permissive approach at these settlements that would enable a degree of development to maintain and support the existing services. This could then reduce the requirement to develop in rural areas that would be dependent upon an urban area outside Wealden’s boundaries for its services. The Core Strategy should, in any case, give further explanation regarding the “countryside constraint” approach; in particular, the expected impact this could have on the long term sustainability of a large number of the District’s small settlements. Impact on Tunbridge Wells’ Infrastructure Residents of developments close to the boundary with Tunbridge Wells Borough are more likely to use the services/facilities provided by the urban area of Tunbridge Wells than the more limited range provided by the closest, smaller Wealden settlement of Frant which, as stated above, is considered to be a local service centre with limited social and economic infrastructure. Therefore, Tunbridge Wells Borough Council would wish to be engaged in cross-boundary negotiations from the outset to ensure that the impact of any proposed development upon the community infrastructure provided by the Borough Council and upon the transport system serving the urban area of Tunbridge Wells is addressed and mitigated. This should include consideration of how any S.106 Agreements/Developers’ Contributions resulting from development would accrue to the Borough of Tunbridge Wells. Environment Although the area to the south of Tunbridge Wells, which falls within Wealden District, does not lie within the High Weald Area of Outstanding Natural Beauty (AONB), it is identified within Tunbridge Wells’ Borough Landscape Character Assessment and Capacity Study as fulfilling the function of an AONB buffer. As well as the above, the Borough Council’s concerns in relation to the Local Wildlife Site (LWS), formerly classified as a Site of Nature Conservation Interest (SNCI), adjacent to Frant, still remain. The LWS should be surveyed to establish its present value prior to a site being allocated in order that mitigation measures are a central consideration in any forthcoming development proposals. Traffic Impact The Borough Council is concerned that the local road network around Royal Tunbridge Wells is already congested at peak times. No allocation should be made before it could be demonstrated by a comprehensive Transport Assessment and modelling that the traffic impacts of the development could be mitigated. Furthermore, Kent County Council should be consulted as a Highway Authority, as well as East Sussex County Council, with reference to any proposed development within the northern part of Frant Parish close to the boundary with this Borough.

WCS2 Distribution of Housing Growth 2006-2030

Policy 2

Sound ☐ Yes ☑ No ☐ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:

The majority of the district is rural area. The Core Strategy recognises that it is important that villages and rural settlements remain vital and that they are sustained throughout the Plan period, so that they can meet their roles as described within the settlement hierarchy of the Plan. The removal of development boundaries from a number of settlements reduces the spread of development within the countryside. Rural Growth Areas shown under Policy WCS6 therefore assume more importance in delivering the Core Strategy. At Selmeston there is the opportunity to increase housing provision to 20 units. Proposed Change

Details of Changes to be Made:

The Selmeston housing allocation be raised to 20 units.
Hallam Land Management Limited (HLM) believe that there is an insufficient distinction between Hailsham and Hellingly and those settlements outside the Sussex Coast Sub Region, and that consequently a greater proportion of the development proposed should be focused upon Hailsham (a minimum of 2000 units to reflect the available capacity within the Wastewater Treatment Plant from 2012 but with provision to increase that number if alternative solutions to the treatment of wastewater are put into place over the plan period.). HLM raise concerns about the scale of the proposed allocation at Uckfield; objection to the scale of allocations at Stone Cross and Westham on the grounds that these allocations will not contribute to achieving the Vision and Spatial Planning Objectives set in the Plan but merely further extend a dated and somewhat sprawling suburbia; raise objections to the allocation at Heathfield and Waldron on the grounds that this site is not developable; object to the allocation of 120 dwellings at Tunbridge Wells on the grounds that it is remote from the District and will not stimulate the economic activity envisaged in the “Vision” and associated “Spatial Planning Objectives” and object to the level of development being distributed across the rural villages (some 14% of the total dwellings proposed) on the grounds that this level of development is unsustainable.

Wealden’s Lead Member for Planning advocates a strategy for council lead rather than developer lead planning. To this end the sacrifice of green fields in certain locations to developers is clearly acceptable to the majority of councillors (living in toryshire). However forcing public inquiries for consent on Greenfield is relatively inexpensive; with deals locked into options the only significant front-loaded cost is for legal council and various consultants. Whilst the planning authority retains a target based planning policy a disproportionate allocation of building land in a specific locality (towards a five-year supply) can and most probably will be challenged. In regard to the Hailsham figure I estimate that there are 1100 dwellings 'not-yet-built' out of the 1645 in the category 'built or already committed'. However the member’s strategy is to allocate a further 1300 dwellings. This allocation has been made in spite of the many critical factors outlined in the Core Strategy Infrastructure Plan. It is for the planning inspector to examine or comment on the tactics employed by planning authority.

WCS2 Distribution of Housing Growth 2006-2030

Sound  Yes  Justified  Effective  Consistent with national policy
Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:
A ‘sound’ Core Strategy must contain evidence of the views of the local community and others who have a stake in the future of the area. Public comments on the Issues and Options Paper support a general approach within which 30% of new dwellings are allocated to rural areas. This would reflect the existing distribution of the population within the district as seen in the Wealden Profile 2009, a Core Strategy Spatial Development Options Background Paper, which states that of Wealden District’s total population, 19% live in town fringe settlements, and 32% live in villages, hamlets or isolated rural settlements. The draft Core Strategy currently states that an additional 4685 dwellings will be delivered in the period up to 2030. 30% of these dwellings is approximately 1405, greatly in excess of the provision made by WCS6 for at least 455 dwellings. It is submitted that a greater level of provision be made to the district as a whole, in addition to a greater level of provision made to rural areas under Policy WCS2 as the draft Core Strategy does not currently reflect the community’s views. In addition the draft Core Strategy is not consistent with national policy by neglecting to allocate a greater number of dwellings to rural areas. The Council should, as Planning Policy Statement 1: Delivering Sustainable Development informs “Ensure that plans are drawn up over appropriate time scales, and do not focus on the short term or ignore longer term impacts and the needs of communities in the future.” (para. 26 ii). Planning Policy Statement 7 ‘Sustainable Development in Rural Areas’ informs that the Council “should make sufficient land available, either within or adjoining existing villages, to meet the needs of local people” (para.9 i) The draft Core Strategy does not reflect public opinion or the existing development pattern within the district which could lead to valuable local services in rural areas being lost in the longer term. The overall distribution of housing proposed in WCS2 is deficient as it does not take account of public consultation responses, pay regard to the current distribution of the population, the availability of existing local services and facilities and is not consistent with national policy.

Details of Changes to be Made:
WCS2 Distribution of Housing Growth 2006-2030 Land will be allocated to meet the housing provision of WCS1 in accordance with the following distribution. Town/Settlement Built or already committed (dwellings) New allocations (dwellings) Total dwellings (2006 – 2030) Rural villages 918 3732 4650 Total Wealden 4889 10611 15500 N.B the remaining 6897 new dwellings will be distributed to Uckfield, Hailsham & Hellingly, Polegate & Willingdon, Stone Cross & Westham, Crowborough, Heathfield & Waldron and adjacent to Tunbridge Wells boundary (within Frant Parish) at the Council’s discretion taking note of the environmental constraints of certain locations.

WCS2 Distribution of Housing Growth 2006-2030
Policy 2

Sound  ☒ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
WSC2 does not provide for sufficient housing to meet the level of development envisaged for the Distruict within the South East Plan. The Plan remains part of the development plan and is the most authoritative and up-to-date document in relation to planned provision for growth within the District. The policy is inconsistent with the South East Plan and will fail to deliver a level of development considered appropriate for the District which, through the regional planning process, fully acknowledged and addressed environmental constraints including infrastructure. The Table at WSC2 - Distribution of Housing Growth 2006 - 2030 should make provision for a total of 13,200 dwellings within the Plan Period. The Hailsham and Hellingly allocation should be reviewed and increased in the light of the completion of the development options traffic modelling only partially undertaken, the results of the current study into the waste water treatment works capacity and the introduction of a Community Infrastructure Levy (or CIL).

Details of Changes to be Made:
The Policy should be revised to provide for an increased level of housing provision to a minimum of 13,200 within the Plan Period 2006-2030. The dwelling provision figure for Hailsham and Hellingly should be increased in line with the results of infrastructure modelling, the development of a funding and phasing mechanism and introduction of a CIL mechanism.
I am now going to comment on the distribution of housing growth throughout the Wealden District. I write on behalf of Hadley Property Group, the landowner of land at 71/72 Coopers Row, Five Ash Down. My comments therefore relate to the amount of housing growth in rural areas and in Five Ash Down in particular Wealden District is a largely rural district. More than half its population live in rural areas and villages. Wealden’s towns are smaller market towns; there are no strategic urban areas within its boundaries although it is influenced by Eastbourne, Tunbridge Wells etc. The distribution of housing growth in the Proposed Submission Core Strategy is supposedly driven by the settlement hierarchy. Settlements have been classified in relation to their role in meeting residents everyday needs. The distribution of housing growth seeks to ‘reinforce this pattern rather than change it’ (paragraph 3.4 Submission Core Strategy). However the proportion of housing growth attributed to rural settlements accounts for just 9.7% of the total growth, compared to more than half the existing resident population. In defining the best approach to locating housing, PPS3 requires local authorities to consider accessibility to services including public transport. Housing should facilitate the creation of communities of sufficient size and mix to justify the development of, and sustain, community services and infrastructure. This should include rural communities, not just market towns and service centres, but in villages to enhance or maintain sustainability. ‘This should include, particularly in small rural settlements, considering the relationship between settlements so as to ensure that growth is distributed in a way that supports informal social support networks, assists people to live near their work and benefit from key services, minimise environmental impact and, where possible, encourage environmental benefits’ (paragraph 38). In the evidence presented to justify the distribution, there are settlements within the rural areas that can be described, using the Council’s matrices, as sustainable, and which can meet the day to day needs of their populations. These can be considered comparable in accessibility terms to the edges of urban areas. Development can also provide support to local services and can address needs that have been identified. This is not recognised in the small proportion of development attributed to rural areas. The Strategic Housing Market Assessment indicated that more affordable housing could be delivered in the central and northern parts of the district. This adds weight to my view that a more equitable distribution of housing land to rural areas would positively influence the delivery of affordable housing in the areas where the effect is more acute. This is particularly the case with the threshold proposed in policy WSC8 is set at 5 dwellings (or 0.2 hectares). Additionally, as I will describe below, there are fewer infrastructure constraints in the northern and central parts of the district and few affecting rural parishes. In my view this restricted level of growth in rural areas fails to reflect the existing settlement pattern and fails to support rural settlements. Evidence suggests that a greater proportion of housing growth could be accommodated within rural areas to reflect the existing settlement pattern, provide for affordable housing in rural areas and embrace flexibility and deliverability. With respect to the number of houses in rural areas therefore, it is my view that the Core Strategy is not based on robust and credible evidence. Evidence suggests a greater proportion could be accommodated in rural areas and within the north of the district. As a result I believe that the Core Strategy will not be effective in delivering housing in the areas best able to address the needs of the villages, affordability, housing need, community facilities, open space etc. I therefore find the Proposed Submission Core Strategy unsound with regard to the tests in Planning Policy Statement 12.

Details of Changes to be Made:
The current population distribution in the Wealden District is more than half live in rural areas and less than half live in one of the small towns and market towns of the district. In my view the distribution of housing growth should recognise this fact to represent the district character. Rural parishes have comparable levels of social deprivation, housing need and there is an acute need to support rural services such as schools, shops and public transport infrastructure. These services will decline if they are not supported by population and employment growth. Evidence for this is available within the background reports. It is my view therefore that a much higher proportion of growth should be distributed to rural settlements. A mere 9.7% of residential growth is distributed to rural settlements in Submission policy WSC2. In my view this should be more like 30%. This would be 2,872 dwellings if the WSC1 submission Core Strategy policy was used. If the South East Plan annual requirement to 2030 was used, this would account for 3,960 dwellings. This would mean that meaningful volumes of housebuilding could be directed to settlements that have been declared to be neighbourhood centres in the settlement hierarchy. Housing could be directed to settlements with identified housing need. Housing development could help fund infrastructure
improvements such as the provision or expansion of good rural primary schools and the provision of community facilities such as open spaces, shops, community spaces. Developer contributions could help to fund public transport infrastructure. The Strategic Housing Market Assessment reflects that rural areas and those in the north of the district have a good local housing market and that there are no constraints to delivery in these areas. In my view the most effective means to make provision for the populations in these areas is to direct housing growth to areas where it can be delivered and where meaningful positive change to rural deprivation can be made. Also, importantly, during the consultation on the initial Issues and Options Consultation in 2007 a general view was that 70% of the housing allocation should be directed to urban areas and 30% be directed to rural areas, for precisely the reasons set out above. This is reported in Background paper 6 entitled Rural Settlement Classification to the Spatial Development Options 2009. WSC2 should therefore be amended as follows: Land will be allocated to meet the housing provision of WSC1 in accordance with the following distribution: Town/Settlement* Committed/Built New allocations Total Dwellings Rural Villages 918 3042 3960 Individual sites to meet these housing allocations will be allocated in the Site Allocations DPD. The housing development for rural villages will be distributed to local service centres and neighbourhood centres of the district. * This will have a knock on effect for some of the urban areas

WCS2 Distribution of Housing Growth 2006-2030 Policy 2

Sound [Yes] [No] [Justified] [Effective] [Consistent with national policy] Legally Compliant [Yes] [No]

Details of Reasons for Soundess/ Legal Complaince:
Planning Policy Statement 1 requires development plans to contribute to the delivery of sustainable development. In preparing development plans LPA's should seek to, amongst other things, bring forward development land taking into account issues such as accessibility and sustainable transport needs and by ensuring new development is located where everyone can access services and facilities on foot, bicycle or public transport rather than having to rely on access by car. This is amplified in Planning Policy Statement 3: Housing which states that in support of the objective of creating mixed and sustainable communities, the Government's policy is to ensure that housing is delivered in suitable locations which offer a good range of community facilities and with good access to jobs, key services and infrastructure. These obligations are acknowledged in the PSCS. In particular paragraph 2.7 states that the challenge is to focus growth where it is most accessible and sustainable. In response the PSCS sets out a settlement hierarchy as a basis for the distribution of development to ensure those places that have the greatest amount and range of employment and services and are best served by public transport are the focus of most development. The Core Strategy Background Paper entitled ‘Development of the Proposed Submission Core Strategy’ notes that Wealden towns are affected by the pull of larger and more attractive centres, particularly Tunbridge Wells, Brighton, Lewes and Eastbourne. Ensuring the vibrancy and improving the ‘offer’ of the District’s town centres is a key objective of the Core Strategy, whilst regeneration of the towns is important to the residents, to the economy, reducing carbon footprint, creating sustainable communities and reinforcing local distinctiveness and a sense of place. On this basis, a spatial distribution that focuses most housing and associated growth in the Districts larger towns, in accordance with a settlement hierarchy is supported. The settlement hierarchy was created via an assessment of (i) the accessibility and (ii) the self-sufficiency of settlements, together with a subsequent qualitative assessment. This has resulted in Table 1 of the PSCS which notes that Crowborough, Uckfield and Hailsham are the highest tier settlement, defined as District Centres. This reflects their accessibility by road and public transport and range of shops, employment opportunities and facilities such as secondary school, etc. For Uckfield in particular it is noted that it has the most popular shopping destination of the District and the largest amount of retail floorspace, with easy access to the centre by bus and train services. It has the third largest population with a high percentage of population being economically active with a significant quantum and range of employment opportunities. The identification of Uckfield as a District Centre, one of the 3 most sustainable settlements in the District is supported and is justified and renders the PSCS sound. It is therefore considered appropriate in principle for significant net additional housing growth over the plan period.

Details of Changes to be Made:
The overarching principle of focussing the majority of new development in the District within and on the edge of the main towns, is supported in principle. However, each of the five main towns (Crowborough, Hailsham, Uckfield, Heathfield, Polegate and Willingdon, and Stone Cross) have their own particular issues and constraints which affect their potential and capacity for growth. Crowborough is surrounded by the High Weald AONB and is affected by its proximity to the Ashdown Forest and the associated protection of this area afforded by the Habitats Directive. Furthermore, the Core Strategy acknowledges the proximity of Tunbridge Wells, detrimentally affects the performance of the town centre, and the number of residents living and working in the town is low. The PSCS seeks to allocate an additional 300 dwellings in Crowborough and this is considered to be a significant level of growth given the constraints. This is reflected by the contingency allocation on land to the north of the A26 on land that is within the AONB. It is considered this is inappropriate on landscape grounds. Planning Policy Statement 7 states that such areas have the highest status of protection in relation to landscape and scenic beauty and major developments should not take place in such areas, except in exceptional circumstances. Given the availability of housing land elsewhere in the District, it is not considered there are any exceptional circumstances which justify this allocation. It is therefore in conflict with national planning policy and is unsound. The contingency allocation on land to the north of the A26 at Crowborough should be deleted and land elsewhere within the District that is not affected by such national landscape designations should be allocated for housing development. Heathfield is surrounded by the High Weald AONB. Furthermore the Core Strategy acknowledges its relative inaccessibility detrimentally affects the performance of the town centre. The PSCS seeks to allocate an additional 160 dwellings in Heathfield and this is considered to be a significant level of growth given the constraints. This is reflected in the allocation of land that falls within the High Weald AONB. It is considered this is inappropriate on landscape grounds. Planning Policy Statement 7 states that such areas have the highest status of protection in relation to landscape and scenic beauty and major developments should not take place in such areas, except in exceptional circumstances. Given the availability of housing land elsewhere in the District, it is not considered there are any exceptional circumstances which justify this allocation. It is therefore in conflict with national planning policy and is unsound. The allocation for housing development to the north-west of Heathfield (SD11) should be deleted and land elsewhere within the District that is not affected by such national landscape designations should be allocated for housing development. Hailsham has been the subject of significant additional housing, either built or committed over the first years of the plan period (1645 dwellings). The PSCS seeks to allocate a further 1300 dwellings over the period up to 2030. This level of growth is limited by the capacity of the 2 waste water treatment works serving the town. The Environment Agency has confirmed that the discharge consents will not be extended due to the impact upon the Pevensey Levels. This is a Ramsar site and potential candidate Special Area of Conservation and is subject of protection under the Habitats Directive. Whilst feasibility studies are due to be undertaken to seek alternative solutions, the Environment Agency are undertaking a review of consents under the Habitats Regulations which has the potential to reduce the discharge consent beyond current levels. Furthermore a number of potential development sites around the edge of the town are relatively poorly connected by foot or non-car modes of transport. This has resulted in the allocation of land to the east of the existing built up area, despite its proximity to the Pevensey Levels, landscape sensitivity and odour control issues associated with the water treatment works in the area. The background paper to the Core Strategy also acknowledges that the town has a relatively weak housing market and the given the quantum of development already underway in the area, it is considered desirable to delay the delivery of the additional housing proposed in the Core Strategy to enable the delivery of this significant amount of housing growth. Given the constraints to growth in and around Hailsham it is considered that the quantum of growth over the period 2006-2030 is excessive. As a result the amount of proposed new allocations (1300) should be reduced and land allocated elsewhere in the District that does not experience the same constraints, and therefore has a greater prospect of delivery. This should in particular include land in and around Uckfield. This approach would deliver the most appropriate strategy and is therefore justified. The PSCS seeks to allocate some 1350 dwellings on land in and around Polegate and Willingdon, and Stone Cross and Westham. This level of growth is limited by the capacity of the waste water treatment works serving the settlements. The Environment Agency has confirmed that the discharge consents will not be extended due to the impact upon the Pevensey Levels. This is a Ramsar site and potential candidate Special Area of Conservation and is subject of protection under the Habitats Directive. Whilst a feasibility study is due to be undertaken to seek
alternative solutions, the Environment Agency are undertaking a review of consents under the Habitats Regulations which has the potential to reduce the discharge consent, beyond current levels. Furthermore, these settlements are dominated by Eastbourne in terms of their function, and as a result are relatively limited in their self-sufficiency. Due to the proximity of Eastbourne, there is no real prospect that housing growth in these settlements will deliver a greater level of self-containment, or enhancement in local services or facilities. Instead it will perpetuate the existing situation of reliance and commuting to larger centres, in particular Eastbourne. On this basis, growth in these areas will make little contribution to the over-arching purposes of growth in the District, namely to enhance employment and service provision within Wealden. It is considered that the planned housing growth in the settlements of Polegate and Willingdon, and Stone Cross and Westham should be reduced and re-allocated to settlements which have a greater prospect of benefitting from such growth in the form of enhanced employment, shopping and service provision, in particular Uckfield. This approach would deliver the most appropriate strategy and is therefore justified. The PSCS acknowledges that Uckfield acts as a hub and service centre for a wide catchment of surrounding villages and settlements; has a relatively younger population profile and two successful business areas. It also notes that the town centre has a good range and variety of shopping with scope for further expansion, which is progressing through a masterplan to guide regeneration. It is recognised that funding the required town centre improvements will need to financed by significant additional housing development. It is noted that improving the vitality and attractiveness of the town centre is a key to delivering sustainable development and improving the quality life for residents. As a result the PSCS seeks to allocate a further 1000 new dwellings in addition to the 742 that have either already been built or have been committed since 2006. It is considered that this figure should be increased. The town is the best placed of all the District’s settlement’s to deliver additional growth. It benefits from a relatively large economic and retail base and there is a clear desire and commitment to regenerate and expand this, which requires funding from additional housing growth. Given its geographic position and level of existing services, growth will provide the best opportunity of the District’s five towns to become self-sufficient. This will reduce out-commuting and reduce the carbon footprint of new housing. It is not restricted by any AONB designation and infrastructure (such as sewage treatment works etc) can all be satisfactorily provided.

Details of Changes to be Made:

The PSCS should be amended to allocate significant additional new housing growth in and around Uckfield, beyond the 1000 new dwellings set out in the table at Policy WCS2. This provides the most appropriate strategy when considered against reasonable alternatives and is therefore justified.

WCS2 Distribution of Housing Growth 2006-2030

Sound: Yes  No  Justified  Effective  Consistent with national policy

Legally Compliant: Yes  No

Details of Reasons for Soundness/ Legal Complaince:

The allocation of 300 new dwellings at Crowborough for the period 2006 - 2030 is not justified by the evidence base and is far too low for a town of this size and importance. It will not meet housing needs and is likely to lead to a decline in services and population and will lead to an increase in unmet housing need in town. It will also lead to an increasingly ageing population as young people go elsewhere to meet their housing needs.

Details of Changes to be Made:

Increase the dwelling allocation to Crowborough having regard to housing needs, economic growth objectives and wider housing requirements outside the District. This can be achieved by an overall increase in housing numbers rather than taking numbers away from other locations. It is also practicable without breaching capacity.
Details of Reasons for Soundess/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request".

Details of Changes to be Made:
REVISION SOUGHT. 1.3.2. A total of 13,209 homes are proposed over the plan period 2006 - 2030 with 8,411 proposed for South Wealden and 4,798. This distribution takes into account the findings of the three reports on Landscape Transport and Waste water which are appended. 1.3. In respect of Polegate the best placed area for development is that to the west of the town. Stone Cross is poorly placed in respect of landscape, sustainable transport and has few existing services and facilities within walking distance. Bramley Farm to the north of the bypass is actually favoured in the landscape assessment and could also be considered as an alternative employment location. Increase housing allocations as demonstrated as being required at sections 1.2 and 1.3 above. it should be noted that the distribution below provides for a north/south Wealden split of 8,400 : 4,800 and more properly reflects the aspirations of the Core Strategy to provide economic regeneration in South Wealden. The increases in dwellings for the north are modest and can be accommodated without detriment to Ashdown Forest as they reflect the SEPlan requirement which was tested through a Strategic Environmental Assessment. Uckfield; Built or already committed 742 New Allocations (1000) 1450 total dwellings (1742) 2192 Hailsham and Hellingly: Built or already committed 1645 New allocations (1300) 2500 Total dwellings (2945) 4145 Polegate and Willingdon Built or already committed 565 New allocations (700) 2500 Total dwellings (1265) 3065 Stone Cross and Westham Built or already committed 42 New allocations (650) 300 Total dwellings (692) 342 Crowborough Built or already committed 632 New allocations (300) 450 Total dwellings (932) 1082 Heathfield and Waldron Built or already committed 292 New allocations (160) 200 total dwellings (452) 492

WCS2 Distribution of Housing Growth 2006-2030

Sound  ☑ Yes  ☐ No  ☐ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The distribution of housing growth across the district is supported and is felt to be legally compliant and sound. 3.4. WCS2 Distribution of Housing Growth 2006 - 2030 3.4.1. The distribution of housing grown across the district is supported and is felt to be legally compliant and sound. The policy will see the focus of development at the main settlements whilst ensuring the smaller settlements receive sufficient development to be sustainable. 3.4.2. Uckfield and Hailsham/Hellingly are identified as the two main focuses of development. It is proposed that Uckfield will receive an allocation of 1000 new dwellings over the plan period, in addition to the 742 built or already committed dwellings. The level of development proposed for Uckfield is considered to be appropriate and recognises the sustainability of the settlement.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Compliance:

- **2.0 Policy WCS2: Distribution of Housing Growth 2006 to 2030 Summary Response**
  - 2.1 We object to the content of the Policy as drafted on the basis that it has not been shown to be justified, effective or consistent with national policy.
  - 2.2 The target figure of 9,600 dwellings to be met within the District during the period 2006 to 2030 is significantly lower than the strategic requirement set out in the South East Plan (adopted May 2009) and fails to address identified needs.
  - 2.3 Separate but related objections have been submitted in response to Policy WCS1, the content of which is relevant to our representations submitted in response to Policy WCS2.
  - 2.4 We also object to the omission of land to the south of Hailsham, west of Station Road, as a housing allocation in helping to meet identified housing needs. The site is edged red on the attached site location plan (no. PLO90620_LP-01) and extends to approximately 5.6ha. The site could accommodate around 150 dwellings and an illustrative masterplan is attached (no. PL090620_CP-01). The site is controlled by Redrow Homes (Eastern) Ltd and there are no known onsite constraints to bringing the site forward for development in the early part of the plan period.
  - 2.5 The site should be shown on the inset to the key Diagram as a housing allocation for around 150 dwellings. Representation Housing Requirement and Affordable Provision 2.6 Hailsham has the highest requirement for affordable housing anywhere in the District. However, despite the acute affordable housing need, only 149 dwellings were completed at Hailsham in the four year period 2006 to 2010. This is equivalent to only 37 dwellings per annum. 2.7 Policy WCS2 identifies that as at 1 April 2010, there were a total of 1,645 dwellings built or already committed at Hailsham and Hellingly. Appendix 8 adds further clarity, identifying that there were 811 commitments (sites with permission) at Hailsham as at the base date. 2.8 Appendix 3 identifies that of the 811 commitments, only 306 were affordable. 2.9 The 306 affordable commitments are equivalent to just over one years’ gross housing need for the town which currently stands at 266 per annum. 2.10 Even if all of the affordable commitments were to come forward as completions, there would remain an acute shortfall in affordable housing provision to meet identified needs.
  - 2.11 Without additional housing allocations, the supply of affordable housing in Hailsham is unlikely to improve in the short to medium term. The proposed “SD” allocations to the north and east of the town are not expected to start delivering completions until 2017, 2018 and 2021/22 respectively. 2.12 Additional sites, including land controlled by our client to the south of Hailsham, should be allocated for housing to come forward in the short term to address the identified shortfall in affordable housing provision. Land to the West of Station Road, South of Hailsham 2.13 The SEP identifies Eastbourne-Hailsham as an area where the strategy is to optimise the areas potential to provide employment space and associated housing is sustainable and strategically accessible locations along the A22 corridor. 2.14 Our client’s site to the south of the Hailsham urban area provides an opportunity to meet the SEP strategy for Eastbourne-Hailsham in a sustainable location. 2.15 Continued growth together with investment in the town centre will help make Hailsham a more sustainable location in its own right. 2.16 The merits of the site as a housing allocation are summarised below: 
  - The development of the site does not affect any national, regional or local environmental designations.
  - The site is in a sustainable location, within walking distance from local services and facilities, including the town centre.
  - The scheme can deliver around 150 dwellings, including much needed open market and affordable housing.
  - A material amount of Public Open Space can be provided as part of the masterplan proposals for the site, to the benefit of the wider area generally.
  - Impact on landscape character will be limited due to the topography rising gently towards the south west corner of the site preventing long distant views into and from the wider area. This is supported further still by the mature screening formed by the disused railway further to the West.
  - The site lies within Flood Zone 1 and development of the site for housing would be in accordance with the requirements at PPS25.
  - The site offers an opportunity for local journeys to and from the town centre to be made by foot or cycle via The Cuckoo Trail.
  - Good, frequent bus services connect Hailsham town centre to Polegate and Eastbourne. Further development in Hailsham will support and help maintain the viability of these strong links.

Details of Changes to be Made:

- **Summary of Suggested Changes**
  - 2.17 The overall housing requirement to be met at Hailsham should be increased in line with our separate but related objections set out in response to Policy WCS1. 2.18 Land to the west of Hailsham, west of Station Road, should be allocated for development to provide around 150 dwellings (including affordable housing) to help meet identified housing needs in the town.
WCS2 Distribution of Housing Growth 2006-2030

Sound  Yes  No  Justified  Effective  Consistent with national policy
Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:
The proposals for further population growth at Hailsham including urban extensions east (Policy SD2) and north (Policy SD3) of Hailsham are supported. The proposals themselves will create critical mass to provide economic and social benefit to the town. To maintain the viability of such large scale development, care should be taken to avoid excessive development contributions and to adhere strictly to the principles of Circular 05/05 namely that obligations must be. 1. relevant to planning ii necessary to make the proposed development acceptable in planning terms iii. directly related to the proposed development iv. Fairly and reasonably related in scale and kind to the proposed development; and v. reasonable in all other respects. given the scale of development and the lead time to first occupations where significant infrastructure works are required the respective 2017 and 2021 dates should be brought forward and treated with flexibility to ensure that planning permissions are granted well in advance of those dates in order to ensure completions in good time and so maintain housing land supply.

Details of Changes to be Made:
3.3 Infrastructure Delivery 3.3.1 This section of our representations refers to policies WCS2 and WSC4. It is summarised below: Section of Core Strategy: Policy WCS2 Distribution of Housing Growth 2006-2030, and WSC4 Strategic Development AreasLegally Compliant: -Sound: NoJustified: -Effective: NoConsistent with national policy: No 3.3.2 PPS12 emphasises the importance of infrastructure planning to inform the development of a Core Strategy. Wealden has produced an Infrastructure Delivery Plan (IDP, February 2011) to this end. It is a comprehensive and well presented document based upon what appears to be extensive liaison with infrastructure providers. However, the IDP clearly demonstrates the significant uncertainties surround the funding of key elements of critical infrastructure. These are most acute in relation to highway works and waste water treatment upgrades in the South of the district. 3.3.3 The Proposed Submission Core Strategy acknowledges these uncertainties, for example in relation to delivering the proposed levels of growth at Hailsham / Hellingley and Polegate/Stone Cross / Willingdon and states: “The infrastructure requirements for the delivery of development and growth in Hailsham provides an element of risk for the delivery of the spatial strategy.” (para 6.20) “The risk to delivery of this strategy relates to the highways infrastructure required for the South Wealden area, in order to mitigate the impact on the strategic routes and more localised junctions.” (para 6.32). 3.3.4 A review of the Wealden IDP reveals the extent of this uncertainty, with the following transport schemes all classified as critical to ensure delivery of development in the South of the district. None have identified funding, other than as yet uncommitted developer contributions and/or unconfirmed Highways Agency / East Sussex CC funding. South Polegate and East Willingdon 1. Signals at Cophall Roundabout 2. Improvements at junctions between A22 Jubilee Way and A27 and Dittons Road and 3. Junction improvements at A22/ A27 / A2270 intersection Junction improvements at the A2270 and Polegate High Street and at the A2270 and Wannock Road. 4. Improvements to Hempstead lane junction to alleviate traffic congestion on the A271 and Hailsham Town Centre. 5. Junction improvements at the A2270 and Polegate High Street and at the A2270 and Wannock Road. Hailsham 1. Hailsham - Relieve town centre congestion and stress at Battle Road and London Road through re-routing traffic to Summer Heath Road, including signalised junctions 2. Hailsham - Relieve town centre capacity issues through signal improvements at Battle Road / London Road and North Road / High Street junctions 3. Hailsham - A2270 and A259 Quality Bus Corridors and Eastbourne - Hailsham express bus service. 3.3.5 The first two schemes listed in relation to South Polegate and East Willingdon are on the Strategic Highway network and would therefore be expected to be at least part funded by the Department for Transport. At present none of these schemes are included within the DIT’s forward programme to 2015 or in the list of schemes under review for possible funding post 2015. The IDP assumes that all schemes will be partly reliant on developer funding through planning obligations. However, it does not provide any cost estimates for these schemes and consequently it is not possible to assess the potential scale developer contributions that may be sought, and their implications for viability (taking account of other potential claims on developer contributions including affordable housing and education). As such it is not possible to ascertain whether or not there is a reasonable prospect of delivery of the schemes in question. 3.3.6 PPS12 acknowledges that information on funding and delivery may not always be available at the time the Core Strategy is prepared. However it goes on to state: It is important therefore that the core strategy makes provision for such uncertainty and does not place undue reliance on critical elements of infrastructure whose funding is unknown. The test should be whether there is a reasonable prospect of provision. Contingency planning – showing how the objectives will be achieved under different scenarios – may be necessary in circumstances where provision is uncertain. (PPS, para 4.10) 3.3.7 This is seemingly addressed by paragraph 5.19 of the proposed submission Core Strategy which states that to ‘potential unforeseen infrastructure constraints, which may prevent housing being delivered, this plan contains contingency arrangements in the towns in the event of housing delivery substantially falling behind the trajectory’. However, it is not evident what these contingency arrangements will be, other than a review of the Core Strategy. 3.3.8 We contend that a review of the Core Strategy in itself does not provide a sufficiently flexible mechanism for responding to delays in the provision of critical infrastructure jeopardising housing and employment delivery. This is of particular relevance to the delivery of a number of the Strategic Development Areas which are considered critical to the delivery of the overall strategy (Policy WCS4); specifically: 1. SD2: Land and East Hailsham (600 dwellings) 2. SD3: Land at North Haisham (700 dwellings) 3. SD4: Land at South Polegate and East Willingdon (700 dwellings) 4. SD5: Land at Ditton Rd Polegate (employment) 5. SD6: Land at East and South East Stone Cross and SD7: Land at North
Stone Cross (650 dwellings) 3.3.9 Together, these account for 2,650 dwellings. The Core Strategy states that the Council have already identified around 4,889 dwellings. This leaves 4,711 dwellings to be provided on other sites across the district. Therefore the five sites listed above account for more than half of the uncommitted housing supply over the plan period. Non-delivery of these units will thus undermine the housing trajectory and spatial distribution in the Core Strategy, requiring alternative housing sites to come forward elsewhere. In order to mitigate this risk, the Council should revise its spatial strategy and housing trajectory so that it is less dependent upon sites which remain dependent upon infrastructure for which costs and funding sources have yet to be identified and highly uncertain. The spatial distribution of housing and growth across the district thus needs to be reviewed and amended accordingly.

Details of Changes to be Made:
SUMMARY 3.3.10 In summary we contend the Core Strategy is unsound on the grounds that it is not effective as it is not sufficiently flexible to respond to identified uncertainties surrounding the provision of infrastructure acknowledged by the Council as being critical to its delivery.

WCS2 Distribution of Housing Growth 2006-2030
Policy 2

Sound ☐ Yes ☑ No ☑ Justified ☑ Effective ☑ Consistent with national policy
Legally Compliant ☐ Yes ☑ No

Details of Reasons for Soundess/ Legal Complaince:
Housing distribution is flawed consequent upon inadequate provision overall. SECTION FIVE - HOUSING PROVISION 5.1 In this Section we set out our comments in response to Policy WCS1 and specifically regarding the provision of homes. 5.2 Policy WCS1 proposes a provision of 9,600 dwellings in Wealden District over the period 2006 - 2030, equivalent to 400 dwellings per annum (dpa). This represents a locally-derived target which is explained in para. 3.11 of the Consultation document to be based on estimates of capacity and community aspirations. This proposed level of provision must be compared with the intention of the South East Plan whereby housing provision of 550 dpa was proposed. 5.3 National policy emphasises the need to increase the provision of housing overall and in particular so as to achieve a wider choice and improve affordability. Thus, whilst it is the intention of Government policy that Local Authorities should decide their own housing targets, these must continue to be justified by robust evidence. This point was emphasised in the CLG Guidance dated 6th July 2010 (pursuant to the purported abolition of RS). National policy (PPS12 para. 4.52) continues to require Core Strategies to be "justified, effective and consistent with national policy". 5.4 PPS3 identifies the range of considerations that need to be taken into account in determining the appropriate level of housing at Local Authority level. Para. 33 states: "Regard should be had to evidence including Strategic Housing Market Assessments, the latest Household Projections, Strategic Housing Land Availability Assessments, affordability and the impact on infrastructure." 5.5 In light of the Council's proposal to reduce significantly housing provision in the District, it is therefore instructive to compare the results of recent Household Projections published by the Government. Sub National Household Projections Wealden Household Growth 2006 - 2026 Wealden Household Growth 2006 – 2030** 2004 Base + 14,000 N/A 2006 Base + 14,000 N/A 2008 Base + 12,000 + 15,000 ** Interpolation of 2028 and 2033 projections 5.6 Thus it can be seen that whilst the latest projections imply a slightly lower level of household generation than at the time the South East Plan was issued, the projection is still substantially above the housing provision included in the South East Plan, and therefore even higher than that proposed in Policy WCS1. Other indicators (national and local) similarly point to a need for housing provision at a higher level. 5.7 Using the 2008-based data and adding a 3% allowance for vacancies indicates a locally-generated demand within Wealden District of 15,450 over the Plan period. 5.8 At para. 3.10 of the Core Strategy, the Council identifies a trend-based projection of 16,800 households, slightly higher than this. Based on the lower of the two figures, the Council proposes to make provision for only 62% of the requirement. 5.9 Furthermore, the Council has not provided any robust evidence as to why a higher figure should not be proposed. Moreover para 3.10 of the Core Strategy confirms that suitable, available and achievable sites to meet this need have been identified in the SHLAA.

Details of Changes to be Made:
5.10 Accordingly we submit that Policy WCS1 is unsound and that a housing provision of at least 550 dpa (13,200 over the period 2006 - 2030) should be proposed. Amend distribution based on review of opportunities consistent with the need to increase provision overall, including rural villages.
I am a regular driver through Benhall Mill Road and play golf at the Nevill Golf Club. I would like to comment on the proposals as follows: 1. The proposed area of potential development currently offers a semi rural and rural dimension to the edge of town. The impact of 220 dwellings would change the entire functionality of Benhall Mill Road. The road cannot support this level of development on highways grounds alone. The area would be wholly supported by the infrastructure already in place through KKC and that provision would not be provided in any way by WDC as the road and finances just don't allow for this. 2. Although the site may not be prominent in its current natural state, it most certainly would with high density development, additional traffic and demand on public transport (which is currently being reviewed as part of the cost cutting for KCC). 3 The Trust who owns the site Ref: 126/1610 was awarded an extensive Government Grant for tree plantation some years ago. The land now benefits from extensive woodland, which in principle Wealden should be looking under policy, to retain. The primary purpose of this was to enhance the natural habitat. To remove these trees now that they are ecologically and environmentally beneficial would be illogical. There are some fine examples of large Oak trees, which presumably have TPOs on them. 4. Any vehicles currently leaver Acer Avenue currently look onto an extremely pleasing green vista. The proposed density of housing, with road frontage would change the environment from pasture to high density, which is extreme. 5. Many of the large trees on the boundary of the land and running along the length of the railway are old which will impact natural renewal and noise effect to any potential houses built near the railway both at the time of development and in the future. 6. The proposal of 220 dwellings equates to approximately 600 - 800 new residents to Benhall Mill Road. This additional volume is significant would undoubtedly have an ecological effect on the AONB: noise, litter, insufficient road infrastructure to support pavements and people walking their dogs, dog foul, lack of social infrastructure (access to libraries, supermarkets, administration offices, town centres, community centres etc) and an increase in crime. 7. The ground, be definition past 126/1610 will continue to produce gases for years to come. This may pose a health risk to people living on the old tip and surrounding ground area where contamination may be an issue. 8. Benhall Mill Road is a very narrow road which would require widening to support that number of additional cars, buses, industrial vehicles and lorries. Even if the road was widened the access could only be into and from Forest Road, which is maintained and paid for by Kent County Council. The access onto Forest Road with a new resident number of approximately 600 people would cause significant delays and danger to pedestrians. The road south is narrow, for single vehicles only. Golfers use the road to walk, with their golf bags, between the two greens. There is insufficient road or verge width to expand or extend as there is a rail bridge dividing the road. Additional traffic would undoubtedly be a safety issue. 9. The additional volume of vehicles would be unacceptable for the road and again would affect the AONB. In addition to the environment factors many of the houses at the entrance to Benhall Mill Road, from Forest Road, do not have off road parking. As a result there is a high volume parking in the current built up part of that road, together with overflow parking from the new developments on the Crematorium side of the road. This more densely populated area means that due to the high number of parked vehicles only one car can pass. The road is not wide enough for two vehicles to pass at the same time; this would cause significant additional pressure with potentially 300 - 400 additional cars using the road. 10. Access of vehicles in and out of the proposed land would have a significant impact to the dwellings in Tunbridge Wells at the tope of the Benhall Mill Road and the access into and out of the Cemetery and Crematorium. 11. The noise and light which is evident from the Hawkenbury Astro Turf when in use would go some way to demonstrate the impact a development of 220 dwellings (possible 800 people) would have on noise and light. 12. The density of dwellings proposed will not be in keeping with the large dwelling and proportional land at Birch lands, Little Mount Farm, Windmill Farm and Windmill Farmhouse. 13. The land immediately adjacent to Little Mount Farm is owned by the J Edmonton Trust. We believe there may be a restriction to development in any way capacity on the new tree plantation which overlooks Little Mount Farm and edges the railway boundary foliage and trees. The proposed plan does not appear to account for this. 14. This site is urban fringe to Tunbridge Wells and Kent County Council. The residents will naturally look for environmental and social support from within KCC and not Wealden which would suggest this proposal is made by WDC with the sole purpose of offloading the support of dwellings and residents to KCC. This is a ridiculous idea. WDC have many rural villages and town which will face the same impact issues in relation to schooling, medical provision, transport etc. but, if they invest properly improvements in these provisions will be of benefit to neighbouring villages and towns in the future when WDC face similar developmental pressures. 15. Kent County Council requested inclusion
of Social Housing in Ash Close, the development between the Nevill Golf Club and Acer Avenue. This development has been built to allow localised internal recreation areas for children and high brick walls, in line with the enclosed Acer Avenue development. There is no mention of any Social Housing allocation. More allocation of Social Housing together with the issues potential health risks with the land being built on and the railway will undoubtedly have a negative effect on house prices and the lack of medical provision, local shops and public transport will mean the demand for these properties will be poor. The residents in Ash Close find the lack of public transport and local shops very difficult. These properties are not in high demand even within KCC. 16. If the address of these dwellings was Tunbridge Wells; are WDC presuming that social provision within Tunbridge Wells will support this new development and its residents? 17. Developments of 220 dwellings (approx 600 - 800 people) should be allocated for sites within Wealden where WDC are able to provide the social support required by this size of residential community. 18. There is no provision of schooling within Wealden for miles. The nearest Wealden funded primary school is Frant. The site has developmental restraints and if already year in year out over subscribed. The nearest secondary school is Uplands in Wadhurst. There is no public transport from Benhall Mill Road to Wadhurst. The children in Ash Close, who are Kent County Council, are largely allocated Broadwater Down School. There is no transport to that school and many families walk that distance with their children. How would new residents be expected to travel to schools within Wealden? 19. The nearest Doctor's surgery will be in Frant. Has Wealden DC allocated fees for an extension of these medical services offered? The address for these properties will presumably be Tunbridge Wells and therefore WDC are presumably hoping they will not have to provide medical support to these residents. 20. The nearest hospital to the residents would be Pembury, already hugely busy with residents from Kent. If you applied for residential within Uckfield where there is considerable land between the town and the industrial area and which supports a local hospital provision. Crow Junior Colts Rackets champion - borough also has just such a provision. 21. The provision of sewage, mains, water, gas, electricity etc. There are no mains supplies from Wealden so again WDC would presumably be looking for the developers to tap into Kent supplies. There have been significant delays recently on Forest Road as a result of traffic lights being erected whilst essential repair and replacement work has been done.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

As an Association representing our residents, we don't want to build on green field sites unless absolutely necessary and the infrastructure and the flood planes must be taken into consideration. Since the Polegate bypass has been built, the traffic has quickly got back to being as bad as it was before through our Parish of Willingdon. The upgrading of the A27 to a dual carriageway should be a top priority to ease the congestion at the traffic lights on the A2270 and the A27 but whether this will ever be done in our lifetime remains to be seen. Mornings Mill site is a delicate site because it has a lot of flood plane and we wish to retain Hindsland Playing fields for both Willingdon and Polegate residents to use. It also acts as a good strategic gap between Polegate and Willingdon. The fields behind Hamlands which do flood could be dug out to form a lake to alleviate any flooding problem in Willingdon on the A2270 and also act as a good amenity linking with the Eastbourne Park and the cuckoo Trail and could be an excellent nature reserve. Any houses that might be built would need to be kept to a minimum and built near the railway line with the dirt from the lake acting as a bung which trees could be planted on to protect the view from the Downs. Also the residents could walk to the Railway Station, walk to Polegate to shop and this would help regenerate Polegate. Any access should go over the Railway Line on a flyover and link up with Dittons Road and then on to Jubilee Way via a roundabout where Morgan Est had their yard when they built the by pass. This would alleviate traffic problems on the A2270 which is almost to capacity now, before any extra houses are built. The land that adjoins the A2270 could be used for recreational and amenity use and still allow Willingdon to retain is rural/village appearance. By Mornings Mill Farm entrance there could possibly be a Community Centre/Cottage Hospital to serve the immediate area for minor injuries and outpatients like Uckfield Hospital. We would prefer not to have any extra housing and development in the area and when drawing up a plan you should consider the quality of life of the residents already here and the damage any over development will cause without the appropriate infrastructure in place. There are already many areas that flood and the sewerage and drainage would need considerable improvement as would the health service at a time when it is being suggested departments at our present hospital could well be closed in the not too distant future.

Details of Changes to be Made:
Paragraph 5.7

Details of Reasons for Soundess/ Legal Complaince:

Whilst it is outlined in paragraph 5.7 of the Core Strategy that the number of opportunities to utilise previous developed sites within Wealden is likely to diminish in comparison to previous rates and that there will be a legitimate role for urban expansion at principal settlements, we support the continued use and preference for previously developed land in accordance with national policy contained within PPS3: Housing, in particular paragraphs 10 and 40, both of which encourage Local Planning Authorities to make efficient use of land by re-using previously developed land. The importance of the continued use of previously developed land is outlined in PPS1: Delivering Sustainable Development. Paragraph 21 states that in order to utilise resources in an efficient and sustainable way "The broad aim should be to ensure that outputs are maximised whilst resources used are." Criteria (viii) of paragraph 27 further states that in preparing development plans, planning authorities should seek to "Promote the more efficient use of land through higher density, mixed use development and the use of suitably located previously developed land and buildings. Planning should seek actively to bring vacant and underused previously developed land and buildings back into beneficial use to achieve the targets the Government has set for development on previously developed land." The redevelopment of the Former Merrydown Cider site within the Local Service Centre of Horam as a mixed use scheme will assist the Authority in meeting the objectives in national planning policy and can deliver at least 70% of Horam's housing requirement (100 units), as outlined in representations to Strategic Policy WCS6 - Rural Area Strategy, on Brownfield land.

Details of Changes to be Made:

---

Paragraph 5.7

Details of Reasons for Soundess/ Legal Complaince:

The strategy aims to increase the economic, environmental and social well-being of the District. This will not be achieved by the policy as proposed. The siting of new housing on greenfield land means the permanent destruction of our precious and dwindling agricultural land, increasing carbon footprint, deceasing our food security, degrading the environment and destroying wildlife. In contrast there is no provision for the development of low-impact agricultural smallholdings, which would greatly benefit the economy, environment and social structure of the District. The national target of 60% brownfield land for development is proposed to be broken by the Strategy.

Details of Changes to be Made:

The national target of 60% of housing development or more on brownfield sites should be adhered to or exceeded. Housing developments in town centres using existing closed-down retail premises should be proposed and actively encouraged by the Strategy. The Strategy should include provision for allowing the development of "Low Impact Agricultural Smallholdings", including a dwelling, on existing agricultural land on plots of over 5 acres, with certain restrictions, most importantly: 1. Total floor area of buildings not to exceed a set amount; 2. the use of the land must remain agricultural, 3. The dwelling must be carbon-neutral.

Paragraph 5.7

Sound: Yes, No, Justified, Effective, Consistent with national policy

Legally Compliant: Yes, No

Details of Reasons for Soundness/ Legal Complaince:

I have examined the Proposed Submission Core Strategy (PSCS) against the Soundness Tool and found it wanting in terms of justification and effectiveness. The PSCS is a carefully prepared document, well thought out to offer a plan for the future but it does not take full account of the background research and documentation upon which it is based. In particular the proposals to expand Hailsham to the north do not comply with the sustainability or infrastructure objectives for Wealden and the proposals for development to the east and north of Hailsham are contrary to previous WDC research and to current Background Papers. Participation The consultation process has permitted all interested parties to engage but the options for answering have been strictly limited on a Yes or No basis when, in fact, more discursive answers are needed. Research/Fact Finding The content of the PSCS is not justified by the evidence, particularly in respect of infrastructure and especially highways and sewerage. Document No 7 Infrastructure Position Statement dated July 2009 refers under (A) Transport to the need to reduce travel distances. The PSCS shows strategic development to North and East Hailsham and towards Hellingly at distances from the town centre of up to 2.2 km. The South Wealden & Eastbourne Transport Study (SWETS) in paragraph 3.29 makes it clear that development for major housing allocations in north and east Hailsham would cause significant traffic pressure. Fewer pinch points and reduced traffic pressure are shown for development south of Hailsham. BP No 11 Infrastructure Delivery Plan defines the highways issue for development to the north and east as ‘CRITICAL’ and states ‘Development is contingent on delivery of this infrastructure’. Regarding sewerage/waste water capacity, as outlined in BP No 11, Hailsham North wastewater works had a consented discharge capacity at 1st Jan 2007 at 2900 dwellings. Hailsham South wastewater works had a capacity of 2400 dwellings at same date. This same document shows infrastructure developments in the Appendix for the North water treatment works is deemed CRITICAL to deliver 1500 dwellings. In the south of Hailsham ‘A scheme is not necessary to deliver the proposed Submission Core Strategy. However a scheme may be required for windfalls of housing and employment development.’ The same Background Paper states under ‘Further Supporting Evidence’: ‘Infrastructure is not necessary to achieve the full allocation of development in Hailsham, Polegate and Stone Cross as shown in the proposed Submission Core Strategy.’ This reliance on ‘massing’ in the north of Hailsham therefore has infrastructure issues which could be avoided by reducing the size of the Strategic Development Areas and spreading the housing to the south of the town. According to the Housing Needs Assessment the greatest number of low income families are located to the south and such development would help to balance with Affordable and mixed housing. The Table at the end of BP 11 sets out water treatment for extant Planning Permissions and completions from April 2006-April 2010 and states that there are capacity issues arising in the north from the Spatial Strategy but not in the south. The Conclusions to BP 11 state that wastewater funding has been secured from Offwat for works in 2012 to increase capacity in the Hailsham area and to undertake a study to investigate other technical solutions. The financial solution would be via appropriate developer contributions. In summary, therefore, according to BP11 there are no capacity issues in South Hailsham providing development is not beyond 2400 houses, less 885 already approved – namely 1515 dwellings in Polegate, , Stonecross and South Hailsham. The Oaklands/Brickfield SHLAA site 100/1310 (224 dwellings) includes an East Sussex County Council approved road scheme to allow capacity for up to 300 dwellings. Landscape In January 2001 WDC prepared the ‘Low Weald Towns Sector Appraisal Landscape’ as part of the Background Papers for the then Local Plan Review. This document is partly incorporated in Background Paper No 6 Green Infrastructure. BP 6 does not include the following relevant paragraph about the landscape around Hailsham: ‘South of Hailsham: …Urban Influence: On the western side of the sector the urban edge of Hailsham is generally well concealed by woodland often in deep ghylls or valleys. Scattered farms and houses are linked by a network of roads and lanes, the latter often sunk between high overgrown hedges. Horse grazing is common, a reflection of urban pressures, and as a result many of the pastures have the unkempt rather untidy appearance of paddocks. Rough sheds, water troughs and other paraphernalia are common place. …’ Under the heading ‘Sensitivity to Development’ the Landscape Appraisal states: ‘The relatively open aspect of the landscape east of the Cuckmere flood plain makes it sensitive to change by new development and any large scale expansion of the built form beyond the existing urban edge of Hailsham in this location would tend to damage the rural setting of the town. ... ‘ However there is very little scope for additional development on the western edge of the sector without threatening the intrinsic qualities of the landscape and more particularly the rural settings of Hellingly and Horselunges Manor. Importantly the urban influence of Hailsham is hardly noticeable in this reach of the Cuckmere valley apart from some ribbon development along the A271 on the immediate fringes of the town. Any significant expansion of the built form in this location (Hellingly/North Hailsham) would be likely to erode the historic landscape, structure and rural
character of this valuable landscape and irreparably damage the vulnerable gap of countryside between Hailsham and Hellingly.' The Sustainability Appraisal sets out on p 42 the Sustainability Objectives for Wealden. The environmental objectives include: 7. ‘To make the most efficient use of land by prioritising brownfield sites for development, the re-use of existing buildings and promoting higher development densities.’ 11. ‘To conserve, enhance and make accessible for enjoyment the District’s countryside (in particular protecting the best and most versatile agricultural land) landscape, historic and built environment.’ 12. ‘Reduce the need to travel by car and promote alternative methods of transport.’ Development north and east of Hailsham is contrary to all or most of these objectives because it would increase travel distance, increase reliance on motor cars and damage the landscape and countryside, being on greenfield sites. SHLAA site 100/1310 Oaklands & The Brickfield are on a previously developed site, the Brickfield being defined as ‘Brownfield’. Oaklands, being used for business ‘horse culture’ and not agriculture is also classified as ‘brownfield/previously developed’ under PPS3. Development of these sites south of Hailsham therefore complies with the environmental objectives set out in the Sustainability Appraisal. Alternatives The Council’s chosen approach in the PSCS is therefore not the most appropriate given the reasonable alternatives and it goes against the Background Papers and existing evidence base. It would appear from the PSCS that sustainability considerations have not informed its content from the start. In particular, it is stated at Para 6.30 of the PSCS that the Polegate, Willingdon, Stonecross development of 700 dwellings can only take place when formal road infrastructure is in position. Therefore SD4 is not programmed to start until 2019/20. Similarly, Para 5.16 states that the proposed northern urban extension of Hailsham (SD2 & SD3) cannot occur without infrastructure improvements namely sewerage and roads. Hence SD2 cannot start until 2017 and SD3 until 2021. I would submit that this issue of roads indicates that, by definition, the Strategic Development Areas forming the northern extension of Hailsham towards Hellingly and those in Polegate, Willingdon and Stone cross are unsustainable. The PSCS was initially prepared in its Draft and Consultation forms on the basis of the requirements of the South East Plan. This is now being abandoned and will no longer be valid. Because the Draft Core Strategies and most of the evidence gathering and Background Papers were prepared in accordance with the South East Regional Plan, the current PSCS is probably invalid and I would submit that the Inspector should examine this. Delivery The Council has correctly identified the main issues that the PSCS is seeking to address but does not present a clear vision for Wealden District into the future, only the equivalent of a ‘wish list’ of construction of 400 houses a year and sufficient commercial development for employment. It does not clarify how to achieve this, particularly in respect of infrastructure. The major strategic development north and east of Hailsham introduce an unacceptable risk in the ability to provide the infrastructure. Cross boundary issues have not been adequately addressed. In particular with Mid Sussex District Council and associated County Council Highways liaison for a relief road around East Grinstead. Nor does it address the problems of coalescence between Polegate, Willingdon and Stonecross and Eastbourne Councils, nor does it address the cross boundary issues which will arise with Lewes District Council, particularly in connection with development around Uckfield. The PSCS sets out objectives in terms of construction and development but does not connect these in sufficient detail with the necessary infrastructure. The most obvious gap in the policies is related to transport, in that the entire PSCS is predicated on continued and developing use of motor vehicles, there being no positive action proposed in relation to the Uckfield-Lewes Railway line and only passing mention of the possibility of public transport or reinstated railway from Hailsham southwards to Polegate and Eastbourne. The timescales given in the Plan are governed by the moribund South East Plan and are not realistic, particularly in respect of infrastructure provision and especially given the proposals in the PSCS for development north of Hailsham which will rely on the motor car. This is contrary to Spatial Planning Objective 7. Currently the Strategic Development Areas SD2, SD3, SD4, SD6 & SD7 are all undeliverable as set out in Paras 3.16, 6.19 & 6.31 due to lack of existing highways infrastructure. This amounts to 2650 dwellings which cannot be delivered. Flexibility It is not clear whether the PSCS will be flexible enough to respond to a variety of, or unexpected changes in, circumstances, whether environmental, political or economic. Currently there is no clear plan for updating it. It cannot be very flexible because of the infrastructure constraints in Wealden District. Summary The PSCS does not explain how its key policy objectives will be achieved because it is based on the South East Plan which is being abolished. Most of the supporting documents are also based around the South East Plan and pre-date its abolition. The proposals for Strategic Development housing north and east of Hailsham and in Polegate, Willingdon & Stonecross are all undeliverable because of lack of highways infrastructure and, in the north, due to lack of sewerage capacity. These proposals therefore contradict Wealden’s own sustainability and environmental objectives. The PSCS does not take proper account of some sites in the SHLAA which are recognised as suitable and which meet sustainability objectives better than those selected for ‘Strategic Development’. The Oaklands and Brickfield site south of Hailsham (SHLAA 100/1300; 224 dwellings) is largely on previously-developed (brownfield) land and has a highways scheme for the Ersham Road roundabout agreed with East Sussex County Council and should be included in the SDAs to the exclusion of less suitable development. It meets the Hailsham Sustainability Objectives, being a local Urban Extension within walking distance of Hailsham town centre and offering proximity to open space, woodland and biodiversity – at a scale capable of delivering up to 224 dwellings with minimum impact on infrastructure and environmental amenity. This PSCS has given careful consideration to the issues within the Wealden area but falls short of achieving deliverability because of a decision to favour massing over locality, with all the consequent risks involved in reliance on a minimum number of SDAs and with an intention to release more greenfield sites than is compliant with government recommendations. I welcome the Review and monitoring procedures inherent in the PSCS but this document is currently unsound.
Details of Changes to be Made:
It is not in accordance with Government or Council policy to develop greenfield sites in preference to brownfield sites. Currently much of the north and east Strategic Development proposed for Hailsham is on greenfield sites whereas brownfield sites which would form urban extension on the south side of the town have not been included. Sites such as Oaklands & The Brickfield (SHLAA site 100/1310) can help meet Government targets.

Sound  ☑ Yes  ☐ No  ☐ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:

Details of Changes to be Made:
1. The Core Strategy is not legally compliant and is unsound because of its proposals for an urban extension to the north west of Heathfield (Strategic Development Area SD11). 2. Whilst the principle of accommodating housing growth in the broad location of north west Heathfield is supported, the Core Strategy’s proposals are deficient because they: (a) fail to take a comprehensive approach to the development of this area and so are not founded on a robust and credible evidence base and are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the soundness test in paragraph 4.36 of PPS12 that they are “justifiable”. (b) constitute an unjustified encroachment into the High Weald AONB and so are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12 and also the soundness test in paragraph 4.52 of PPS12 that they are “consistent with national policy”. Paragraph 16(v) of PPS7 requires the Council in preparing the Core Strategy to “conserve…sites of landscape…value, in accordance with statutory designations”. Paragraph 22(ii) of PPS7 requires that “major developments” should only take place within the AONB after “the most rigorous examination” and an assessment of “the scope for developing elsewhere outside the designated area or meeting the need for it in some other way”. The Council has failed to properly assess the scope for meeting the need for development on previously developed land at north west Heathfield that is not in the AONB. (c) utilise less accessible and less sustainable land and so are not the most appropriate strategy when considered against reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12. (d) fail to provide adequate safeguarding of amenities of existing dwellings (if those dwellings are to be excluded from the urban extension as currently proposed) and fail to integrate into the existing urban form, thus failing the soundness test in paragraph 4.52 of PPS12 that the proposals are consistent with national policy. Paragraph 34 of PPS1 and paragraph 13 of PPS3 require the Council to reject design which is “inappropriate in its context” and paragraph 35 of PPS1 requires development to be designed so that it will be “integrated into the existing urban form and the natural and built environments”. THE PROPOSED SUBMISSION CORE STRATEGY 3. We object to the following parts of the Core Strategy. Because the objections are interconnected, we have set out all the relevant matters in this response, although this particular objection only relates to the specific part of the Core Strategy identified in our response to Q1 above. Our objections are as follows: (i) The omission from Spatial Planning Objective SPO1 of any reference to minimising the loss of nationally designated landscapes, including the High Weald AONB. Paragraph 16(v) of PPS7 requires the Council to conserve the AONB and since it is clear that the Council is proposing to meet part of the District’s development needs by using land within the AONB, the Council should establish a clear objective that only the minimum AONB land should be used for this purpose and wherever possible non-AONB land should be used in preference. (ii) The reference in Policy WCS2 to the broad locations for housing development being shown as insets on the Key Diagram. We object to the inset for Heathfield in relation to the way it shows the proposal SD11 and consequently object to this reference to that inset plan in Policy WCS2. (iii) The reference in Policy WCS4 to SD11: Land at North West of Heathfield. We object to the way that SD11 is described in Chapter 6 of the Core Strategy and shown on the Key Diagram and as a result object to the reference to SD11 in Policy WCS4. (iv) The omission from paragraph 5.8 of any aim to maximise the use of previously developed land in meeting existing and future housing needs. Notwithstanding the recent changes to PPS3 it remains a national objective to prioritise the use of previously developed land, in accordance with paragraph 21 of PPS1 and paragraph 40 of PPS3. (v) The reference in paragraph 6.40 to the identification of potential sites for housing “through the SHLAA”. We object to the inclusion of Site 155/1210 in its current form as shown in the SHLAA and consequently object to this reference to that site in paragraph 6.40. (vi) The reference in paragraph 6.41 to the “most suitable location” being “within the AONB” and that this land could be developed “without strategic adverse impact on the landscape”. The Council’s evidence base does not demonstrate that the land within the AONB is more suitable for development than the non-AONB previously developed land on High Street. There is no assessment by the Council of the suitability of this non-AONB land (which includes the objector’s land at Lavender Cottage, High Street, Heathfield, TN21 0UP) and yet it is more suitable than the AONB land, being (i) not subject to a national landscape designation, (ii) previously developed land, (iii) within the existing settlement boundary, and (iv) well related and integrated into the urban area and existing transport connections. In addition, the Council’s evidence base does not show that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of 2 adjacent SHLAA sites at north west Heathfield (Site 155/1210 with a capacity of 123 dwellings at 40 dph and Site 307/1210 with a capacity of 35 dwellings at 35 dph). The Council’s Landscape Character Assessment (February 2009) shows at Figure 5 that large parts of these...
SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. (vii) The reference in paragraph 6.41 to the release of AONB land being justified “as no suitable alternative non-AONB location exists”. The Council’s evidence base does not substantiate this assertion. The Council has not assessed the suitability of the non-AONB land in this location which fronts High Street (including the objectors’ land at Lavender Cottage). This non-AONB land is within the settlement limits of Heathfield as identified on the Proposals Map of the saved Local Plan and paragraph 6.48 of the Core Strategy confirms that within development boundaries “the principle of development is acceptable”. The principle of redeveloping this land to provide more intensive residential development has already been accepted by the Council, with the grant of planning permissions at Brackenside (WD/08/0329) for 3 dwellings in place of 1 dwelling, and at Oaksdown/Lowlands (WD/2011/0400) for 9 apartments in the place of 2 dwellings. The more intensive development of the non-AONB land on the High Street frontage would minimise (or may even remove) the need for the use of AONB land. This option would plainly be a more suitable alternative than the use only of land “within the AONB” as proposed in the Core Strategy. (viii) The reference in paragraph 6.41 to “no suitable alternative contingency land is available”. The land at Oaksdown/Lowlands is available for development (as confirmed by the recent renewal of planning permission). The objectors’ land at Lavender Cottage is available for development (and this has been made known to the Council since at least August 2010). The land at Woodhatch is relied on as being available for development in order to provide the access for SHLAA site 155/1210. The objectors understand that the land at Holmhurst could be made available for development. Thus, there is a continuous frontage of 5 plots of non-AONB land available (all with generous areas of garden land, most of which is excluded from the AONB) just on this part of the High Street. Were the Council to actively promote a comprehensive redevelopment of this area it is likely that other land in the vicinity would be made available. However, the Council has simply failed in its evidence base to assess this option. If it is necessary to identify contingency land then the hinterland of AONB land should be identified as contingency land, with priority being given to the development of the non-AONB land on the High Street frontage. Prioritising that land would be consistent with the policy objectives of minimising the loss of AONB land and maximising the use of previously developed land. (ix) The reference in paragraph 6.42 item 3 to SD11 being “on land adjacent to the urban area”. The proposal for SD11 should not be defined in a way which excludes the urban area and which focuses only on land within the AONB. The proposal should embrace the urban area and the development should maximise the use of previously developed land in the urban area to achieve the provision of 160 dwellings before any consideration is given to the use of land in the AONB. (x) Figure 10 Heathfield Area Strategy. This diagram shows SD11 as located within the AONB and beyond the existing settlement. The diagram should not exclude the inclusion of the existing built up area in this location within the scope of SD11. The built up area has the potential and the capacity to be redeveloped and this aim should be the first priority at north west Heathfield. (xi) Key Diagram: the inset for Heathfield. The inset shows Heathfield and Proposal SD11 in the same way that they are shown on Figure 10 and they are not acceptable for the same reason set out at (x) above. 4. We now propose to elaborate on these objections. Piecemeal not comprehensive 5. SD11 takes an opportunistic approach. It utilises substantial areas of greenfield land as the main development areas (and by implication from the SHLAA one existing property simply as a means of access). Although the SHLAA indicates that Site 155/1210 is in multiple ownerships and Site 307/1210 is owned by a company with 7 shareholders, the choice of this location seems to be influenced simply by the fact that these 2 sites were promoted in the SHLAA and so it is assumed they are available. Site 155/1210 is said to be under the control of a housing developer. We are not aware whether the Council has seen the terms of any option or other legal agreement giving such control but, given that the Proposed Submission Core Strategy is a long term strategy to 2030 and its trajectory does not anticipate the site coming forward before 2015/16, little weight can be given to the status of any current contractual arrangements. 6. Any sensible spatial planning approach to the development of this area would not look at the sites promoted in the SHLAA in isolation but would look to see how that development would relate to its local context and how it would relate to the settlement it is intended to form a part of. 7. The site of SD11 is on sloping ground set back behind existing development which separates the site from the rest of Heathfield. Development as proposed will not integrate the development with its local context as required by paragraph 35 of PPS1. Nor will it maximise the opportunities for the site to benefit from clear and easy links to the facilities in the local service centre by non-car modes. 8. A comprehensive approach would look at the whole of the area in this north western part of Heathfield and then seek to identify the land which is most suited to development. It is common sense that this would start by looking at the land with the best links by foot, cycle, and public transport to the rest of the settlement. That is of course the frontage land along Heathfield Road/High Street itself. The frontage land also contains the previously developed land comprising the existing dwellings and their various outbuildings. Whilst the recent revisions to PPS3 have removed garden land from the definition of previously developed land, the footprint of the buildings and their associated driveways and hardstandings clearly have a higher priority for development than a greenfield meadow. 9. The present objectors, as the owners of Lavender Cottage, are willing to make their land available as part of a wider development. The objectors have made this known to the Council since at least August 2010. The principle of redevelopment for more intensive residential development has already been established on land to the wets (WD/08/0329) and on the adjoining site
to the east of Lavender Cottage (WD/2011/0400). Although planning permission was granted for a block of flats (WD/2008/0276), that development has not come forward and the permission has recently had to be renewed. Clearly, the land is available for development, even if the form of development is not at present attractive to the market. We understand that the owner of the adjoining plot at Holmhurst would be prepared to make that site available. Woodhatch is relied on as available in the SHLAA (Site 155/1210 refers). Thus there is already a substantial amount of the frontage land which is available for development. A spatial approach to the planning of this area would look to utilise this developed frontage land, which plainly has development potential, before turning to the undeveloped hinterland to the rear. Unjustified Encroachment into the AONB 10. The Proposed Submission Core Strategy recognises that SD11 lies within the AONB, where there is strict control over new development. Paragraph 22 of PPS7 is clear that major development in the AONB requires “the most rigorous examination” and that such development should only be accepted after assessment of the scope for meeting the need elsewhere. Under the GDMO 2010 “major development” is a development of 10 or more dwellings. Under the Secretary of State’s arrangements for the recovery of appeals on the basis that they are large/controversial, the threshold is 150 residential units. On either basis, a development of 160 dwellings is major development. In any event, the Council has accepted in the SHLAA that “there is a requirement to demonstrate development is essential to meet local needs and that other more suitable sites do not exist elsewhere” (Site 155/1210). The claimed rationale for the use of AONB land in this case is that “no suitable alternative non-AONB location exists”. This is patently incorrect. As already noted, the frontage land is not within the AONB and if the desire is to achieve a development of some 160 dwellings there can be no justification for taking more AONB land than is absolutely necessary when there is non-AONB land in the same location which is available. 11. Whilst it may be doubtful that the frontage land which is known to be available could alone accommodate the full scale of the development sought, the need to encroach into the AONB would be very much reduced if the frontage land was used first. Such an approach would also enable the lower (and least accessible) parts of the meadow to be retained as open land, potentially providing a better buffer with the important woodland at Tilsmore Wood that makes up such a key component of the Wealden character. The need for such a buffer is recognised in the Landscape Character Assessment (Figure 5). In addition, if the Council made it clear that it was promoting the comprehensive development of the area, it is likely that other owners would also wish to make their land available, and the Council may therefore be able to avoid encroaching into the AONB to any material degree. 12. The Council’s claim that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape is not supported by the evidence base. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of the 2 adjacent SHLAA sites: Site 155/1210 and Site 307/1210. As already noted, the Council’s Landscape Character Assessment shows (Figure 5) that large parts of these SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. Using Less Accessible and Less Sustainable Land 13. Similar considerations in terms of minimising the amount of AONB land apply in relation to accessibility issues. The lower parts of the sloping meadow land are not only more remote by simple distance from the footways and bus route along Heathfield Road/High Street, there is also the fact that journeys from home will inevitably be uphill for residents of that area. There will therefore be a disinclination to use non-car modes for accessing local services, even if they might appear to be within walking distance. It must also be doubted whether much of the hinterland is within the preferred 400m distance for access to a bus route. In contrast, the frontage development is already connected to existing pedestrian routes by the adjacent footways and there is only a shallow fall in the land closest to the roadside. Accessibility to the bus route is also much improved. 15. Again, on any sensible measure of accessibility and sustainability, it cannot make sense to use the more remote hinterland in preference to the frontage land. PPS1 is clear at paragraph 35 that new development needs to be integrated into the urban area and address connectivity issues. The choice of a backland location for SD11 when the more accessible frontage land is available is directly contrary to this guidance Inadequate safeguarding of amenities 16. We have already explained why a comprehensive approach needs to be taken to this area. However, if the Council persists in its piecemeal approach then it is apparent that inadequate consideration has been given to the relationship between the retained frontage properties and the new development to the rear. The existing development is at a very low density and has the established character of a mature residential area, with individual dwellings in spacious plots. 17. The SHLAA indicates a proposed density for the new development of some 40 dwellings per hectare for Site 155/120. This will be substantially different in character and could only be achieved by ensuring a substantial buffer between the 2 very different forms of development. However, this would push the new development further into the AONB and would further separate the new development from the settlement of which it is intended to form a part. Again, there would be a conflict with the advice in PPS1 on integrating the development with the urban area. Soundness Tests 18. It is clear from the objections set out above that the proposals for SD11 are not founded on a robust and credible evidence base, cannot be shown to be the most appropriate strategy when considered against the reasonable alternatives, and are not consistent with national policy in PPS1, PPS3, and PPS7 in several important respects. They therefore fail 2 of the key tests of soundness as set out at paragraph 4.52 of PPS12. Legal Tests 19. These objections also have the consequence that the Council’s failure to properly consider reasonable alternatives to its proposals at
north west Heathfield, and in particular to consider the alternative of an area of growth in this location planned on a comprehensive basis and focused on maximising the use of previously developed land and minimising the use of land within the AONB, has the consequence that the Sustainability Appraisal/Strategic Environmental Assessment that accompanies the Core Strategy is legally deficient and the Core Strategy is consequently not legally compliant with the requirements of either Regulation 5(1) of the Environmental Assessment of Plans and Programmes Regulations 2004 or with the requirements of s.19(5) and s.20(2) Planning & Compulsory Purchase Act 2004. In addition, the same failings, together with the lack of a credible and robust evidence base to support those proposals and the conflicts with national policy mean that the Core Strategy is not “sound” as required by s.20(5)(b) PCPA 2004.

20. The SA/SEA considers, in broad terms, alternative locations for growth at Heathfield as between the north east, north west, and west of the town. However, what it fails to do is to look at reasonable alternatives within the selected north west location. It is no answer for the Council to suggest that this level of detail is a matter for a later DPD because the Core Strategy is already spatially specific that the location of north west Heathfield is an “urban extension” (i.e. an addition) and that it is “within the AONB” (i.e. outside the settlement boundary. The same spatial approach is shown on Figure 10 and on the Inset for the Key Diagram. The Council is not, therefore, able to avoid grappling with the spatial implications of this choice as part of the Core Strategy and testing it against reasonable alternatives. However, it is clear that this is not an exercise that has been attempted in the SA/SEA.

21. The Council will be well aware from the recent decision in Save Historic Newmarket Ltd v Forest Heath District Council [2011] EWHC 606 (Admin) that a failure in the SA/SEA to give proper consideration to identification and assessment of reasonable alternatives is likely to result in a quashing of the relevant parts of the Core Strategy. Conclusion 22. For all of these reasons the objectors strongly suggest that neither the Council nor the Inspector should endorse the present proposals for SD11. What is required is a fundamental rethink to achieve an integrated, sustainable and accessible development which minimises the impact on the AONB and provides a comprehensive spatial approach to the development of this area. Essentially this requires the focus to shift from the “easy target” of greenfield meadows to a more considered approach, giving priority to the previously developed frontage land, and only considering the AONB hinterland to the minimum extent necessary to achieve the required dwelling numbers.

Details of Changes to be Made:
Add to paragraph 5.8 the words “We will, nonetheless, maximise the use of brownfield land and will minimise the use of greenfield land, with brownfield opportunities having priority in meeting needs.”

Details of Reasons for Soundess/ Legal Complaince:
2. Paragraph 5.9 confirms that housing figures set out in Policy WCS2 make no provision for windfall sites, but completions on windfall sites will count towards the overall house building totals achieved in Wealden. However, it should be clarified that these will be additional to the housing figures referred to in Policy WCS2. In this regard the wording of paragraph 5.17 is unclear and seems to potentially contradict Policy WCS2. In view of the higher housing allocation in the South East Plan, there is no justification for windfall sites to be counted against the total 9,600 housing figure.

Paragraph 5.9
Sound ☐ Yes ☑ No ☐ Justified ☐ Effective ☑ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:

i) Spatial Strategy Policies a) Policy WCS1: Provisions of Homes and Jobs 2006-2030 – COMMENT/OBJECT 2.7 Paragraph 3.22 of BP1: Development of the Proposed Submission Core Strategy demonstrates the quantum of development identified in the plan period has resulted from ‘local needs and tested against capacities and constraints’ and demonstrates that a reduction from the South East Plan figure of 11,000 dwellings to 9,600 dwellings is appropriate. Sections 5 to 8 of BP1: Development of the Proposed Submission Core Strategy detail the justification for this approach and are expressed in the CS in paragraphs 3.8 – 3.17. 2.8 However, whilst the basis for proposed Policy WCS1 has been detailed within the Evidence Base and therefore could be considered ‘sound’ in this respect, it has not had due regard to the South East Plan, which still forms part of the Development Plan. PPS12 identifies under Para 4.50, that as a legal requirement ‘the plan conforms generally to the Regional Spatial Strategy’. 2.9 Notwithstanding the proposed intention to revoke the RSS and ‘emerging’ guidance contained within the ‘Localism Bill’, it is clear, that at this moment in time, the Core Strategy should have due regard to the requirements of the South East Plan, including the annual housing requirement from 2006 – 2010.

2.10 The overall housing requirement for Wealden as set out in the SEP (2006 – 2026) is 11,000 dwellings, which equates to 550 dwellings per annum over the 20 year plan period. Appendix 9 (p75) of BP2: Managing the Delivery of Housing, identifies that since 2006, a total of 1,332 dwellings have been completed in the District. 2.11 Table 1 below, demonstrates that against the SEP requirement since 2006, there has been ongoing failure to meet the housing requirement resulting in a current shortfall of 869 dwellings. Nevertheless, in seeking to reduce the overall housing requirement through locally derived evidence (to 9,600 dwellings), and increasing the plan period to 24 yrs (2006 to 2030) to provide an annual requirement of 400 dwellings per annum, it is evident WDC is still unable to deliver the proposed new housing requirement. Table 1 below demonstrates that even backdating the proposed Core Strategy figures to 2006, there is a current shortfall of 268 dwellings. Table 1: WDC Completions since 2006 vs SEP Requirement vs Proposed CS Requirement Year Actual Completions SEP Requirement(Surplus or Deficit)

| 2008/09    | 2,200 (- 868) 1,600 (- 268) | 2.12 It is therefore considered, that in order to promote the delivery of housing to meet the actual local requirement as set out in the CS (9,600 dwellings), or the SEP requirement (11,000 dwellings), it is essential the CS facilitates the delivery of housing and does not seek to artificially maintain the delivery of 400 dwellings per annum or constrain the natural delivery within the District. 2.13 We have concerns with regards to WDC’s approach to windfall sites and the attempt to rely on these sites (when calculating completions) to prevent ‘over-provision’ as set out in paragraphs 10.34 – 10.36 of BP2: Managing the Delivery of Housing. 2.14 Whilst we support WDC’s approach that windfall development should not be used to project delivery (as required by PPS3), we do not consider that monitoring the delivery of high levels of windfall completions should be used as an argument to ‘slow down’ the phases of allocated greenfield sites, as suggested in the Background Evidence and not fully explained within the Core Strategy. 2.15 This ‘preventative approach to delivery’ is at odds with the recent ‘Planning for Growth’ Ministerial Statement from Gregg Clarke MP on 23 March 2011. The statement clearly sets out the Government’s intentions for growth and reinforces the commitment to introduce ‘a strong presumption in favour of sustainable development’. The statement sets out ‘The planning system has a key role to play in this, by ensuring that the sustainable development needed to support economic growth is able to proceed as easily as possible’. The statement continues that ‘Governments clear expectation is that the answer to development and growth should, wherever possible be ‘yes’, except where this would compromise the key sustainable development principles set out in national planning policy’. 2.16 In reviewing paragraphs 10.34 – 10.36 of BP2: Managing the Delivery of Housing, we are concerned that ‘unplanned’ windfall sites could take precedence over the delivery of allocated sites (and associated infrastructure), if these windfall sites are delivered in significant quantities (as historically demonstrated within Appendix 9 of BP2: Managing the Delivery of Housing). This is at odds with the Ministerial Statement which calls for ‘local planning authorities to plan positively for new development.’ 2.17 Furthermore, para 10.34 of BP2: Managing the Delivery of Housing, refers to the provisions of PPS3 and that there may be no need for ‘specific management actions’ when assessed against the delivery trajectory and an acceptable 10%-20% range. However, it is clear that the principles of the ‘Plan, Monitor, Manage’ approach as set out in paragraphs 62 – 67 of PPS3, are predicated on the basis of reacting to any ‘under-provision’ and are not intended to respond to ‘over-provision’. WDC are incorrectly applying the ‘Implementation Strategy’ Guidance contained within PPS3 in the context of ‘over-provision’. 2.18 We therefore seek clarity over the intention of the content of paragraph 5.9 (extract below) of the CS where it identifies that ‘windfalls will be used as part of the
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

manage and monitor system, and provide some limited contingency. ‘5.9 Strategic Policy WCS2 makes no allowance for windfall sites. However over the past 10yrs around 200 dwellings per annum have been provided as windfall. Whilst the projected provision of such sites cannot be included at this stage in land supply projections, completions on these sorts of sites will count towards the overall house building totals achieved in Wealden. Windfalls will be used as part of the manage and monitor system, and provide some limited contingency. However, windfall sites can increase the demands of the District’s environmental and infrastructure constraints, and this in turn could have a determining effect on overall delivery capacity at any particular settlement. Through monitoring arrangements the Council will need to ensure that the unplanned development of windfall sites does not conflict with the strategy,’ 2.19 We seek clarity on what this ‘limited contingency’ represents, especially in the light of content of paragraphs 10.34 – 10.36 of BP2: Managing the Delivery of Housing and how the delivery of allocated sites will be reviewed in the context of windfall provision. We have noted the content of paragraph 5.17 of the CS which states: ‘5.17 The Council will, through its implementation and delivery framework and monitoring arrangements, ensure that delivery of its strategy and the overall provision of appropriate levels of growth is not prejudiced by windfalls. Further details of the management and phasing of delivery is constrained within out Background Paper 2: Managing the Delivery of Housing.’ 2.20 We therefore consider that the Background Evidence does not appear to support or relate to the content of the Core Strategy. If the approach as set out in paragraph 5.17 is the case, then why does the Background Evidence (para 10.34 – 10.36 of BP2: Managing the Delivery of Housing), or the Core Strategy (paragraphs 5.9, 5.17 and Policy WCS5 Managing the Release of Housing Land) need to have regard to the issue of ‘over-provision’ and the ‘re-phasing of sites’?

Details of Changes to be made:

ii) Spatial Strategy Policies a) Policy WCS1: Provisions of Homes and Jobs 2006-2030 – COMMENT/OBJECT 2.7 Paragraph 3.22 of BP1: Development of the Proposed Submission Core Strategy demonstrates the quantum of development identified in the plan period has resulted from ‘local needs and tested against capacities and constraints’ and demonstrates that a reduction from the South East Plan figure of 11,000 dwellings to 9,600 dwellings is appropriate. Sections 5 to 8 of BP1: Development of the Proposed Submission Core Strategy detail the justification for this approach and are expressed in the CS in paragraphs 3.8 – 3.17. 2.8 However, whilst the basis for proposed Policy WCS1 has been detailed within the Evidence Base and therefore could be considered ‘sound’ in this respect, it has not had due regard to the South East Plan, which still forms part of the Development Plan. Windfalls will be used as part of the manage and monitor system, and provide some limited contingency. However, windfall sites can increase the demands of the District’s environmental and infrastructure constraints, and this in turn could have a determining effect on overall delivery capacity at any particular settlement. Through monitoring arrangements the Council will need to ensure that the unplanned development of windfall sites does not conflict with the strategy,’ 2.19 We seek clarity on what this ‘limited contingency’ represents, especially in the light of content of paragraphs 10.34 – 10.36 of BP2: Managing the Delivery of Housing and how the delivery of allocated sites will be reviewed in the context of windfall provision. We have noted the content of paragraph 5.17 of the CS which states: ‘5.17 The Council will, through its implementation and delivery framework and monitoring arrangements, ensure that delivery of its strategy and the overall provision of appropriate levels of growth is not prejudiced by windfalls. Further details of the management and phasing of delivery is constrained within out Background Paper 2: Managing the Delivery of Housing.’ 2.20 We therefore consider that the Background Evidence does not appear to support or relate to the content of the Core Strategy. If the approach as set out in paragraph 5.17 is the case, then why does the Background Evidence (para 10.34 – 10.36 of BP2: Managing the Delivery of Housing), or the Core Strategy (paragraphs 5.9, 5.17 and Policy WCS5 Managing the Release of Housing Land) need to have regard to the issue of ‘over-provision’ and the ‘re-phasing of sites’?

Details of Reasons for Soundess/ Legal Complaince:
Contrary to the headline statements made in many areas of the core submission document the major growth of privately owned housing in Hailsham started in the early sixties with the estates of Lansdowne, Hawkwood and even Hawthylands being completed by the mid-sixties. Further expansion continues to this day. Virtually all of this housing stock is in a good state of repair with no urgent economic justification for rebuild. However the core strategy is supposed to address planning for a further generation, i.e. to 2030. Existing and future owners of some properties may be hard pushed to maintain their properties in the state they would wish. There is some scope for the redevelopment of land within the older parts of the town for example the ribbon development that occurred prior to the estates of the sixties. It is the core role of the planning process to provide a reasonable balance of local accountability when for the reuse issue is examined on a case by case basis. It should be the aim of the core strategy to ensure that an organic reuse of the existing built environment is entertained NOT prevented! There is no ‘angry of Tunbridge Wells’ issue here - there is no scope for a mini housing estate in a back garden. There is scope for examination of the issue of reusing PDL in a sympathetic manner (economics generally dictate upwards rather outwards). Rather than an allocation of a further 1300 dwellings Hailsham could contribute a proportionate capability towards a district wide use of PDL.

WCS3 Distribution of Employment (B Class) and Retail (convenience and comparison)

Sound  ☑ Yes  □ No  □ Justified  □ Effective  □ Consistent with national policy
Legally Compliant  ☑ Yes  □ No

Details of Reasons for Soundess/ Legal Complaince:
We note Strategic Policy WCS 3 - Distribution of Employment (B Class) and Retail (convenience and comparison) which seeks to allocate employment land within the Primary Centres, Secondary Centres and District Centres. We all note that there is no indication within the Core Strategy that any further employment land will be provided within any of the Rural Areas (under Strategic Policy WCS6), including Horam. In terms of existing business/ employment allocations para 3.22 of the Core Strategy states that "The Council's strategy is to encourage and support business in a flexible manner in order to improve economic prosperity and reduce economic disparities across the district". This includes "retaining existing business areas, where viable, and review all allocated site and business areas identified in the adopted Local Plan". The latter point is further noted at para 3.23 in that previously allocated employment sites within the Local Plan as well as business areas and associated policies will require review through the LDF process - "The Core Strategy details how much employment land will be provided and where, however policies concerning business and employment within Wealden will be contained within the Site Allocation Development Plan Documents, unless already contained within national guidance". Therefore, whilst no new allocations are provided within the Rural Areas, we support the flexible review of existing business/ employment areas through the LDF process. In particular the review of the Former Merrydown Cider Factory site within Horam which is no longer viable for its existing business/ employment allocation and is better suited to being redeveloped for housing and contributing to the dwelling allocation directed to Horam in accordance with policy WCS5: Rural Area Strategy and WCS2: Distribution of Housing Growth 2006 - 2030.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:
Eastbourne Borough Council acknowledges the new allocations in the Proposed Submission Core Strategy. The identification of 16,890sq. metres of new employment land (B1, B2 and B8) at Polegate and Willingdon/Stone Cross will provide local jobs and greater employment choices. The additional 8,650 sq. metres of new employment land and 6,230 sq. metres of retail land in Hailsham will help the town become more self-sufficient and independent. Eastbourne Borough Council notes the approach taken in Policy WCS3, which concentrates a significant proportion of employment development in the southern part of Wealden, close to a large pool of labour and where there is relatively good access to public transport, shops, and other services and facilities. Wealden is proposing a dedicated employment location at Land at Dittons Road, Polegate (SD5) and this is a gateway location on one of the key strategic arterial roads into Eastbourne. It provides an opportunity to provide an attractive business area that people will see on their approach to the town along Golden Jubilee Way (A22). The peripheral nature of employment land can lead to problems relating to accessibility, as many people have to travel long distances to reach these employment areas. Much of the northern part of Wealden is limited by relatively poor road and public transport links, as well as by significant environmental constraints. By focusing the largest proportion of development in the southern part of Wealden, the link between jobs and houses can be consolidated leading to a more sustainable form of development that meets the needs of residents and businesses alike.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
WJPC is concerned at the numerous references to Polegate and Willingdon as one settlement, as highlighted in 3.3 Table 1, 3.11, SPO6, WCS2, WCS3, 5.13, 6.31(2), Figure 8 and Figure 12. In particular, Figure 2 showing settlement hierarchy, places Polegate and Willingdon as one settlement, yet details other settlements individually.

Legally Compliant  ☐ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
With Wealden's approval of three major supermarkets in the Crowborough area, the High Street no longer has small shops and businesses in the way that it used to be. These supermarkets have monopolised on the weekly shop for most and in so doing have destroyed the small businesses and local employment. I have three sons who are 30 plus and all have had to get jobs involving at least a 30 mile trip to get to work. With the current and future travel costs and pollution problems, we need to concentrate on building local businesses with trade apprenticeships (five year, not useless NVQ's). The economy relies on manufacture and innovation not necessarily shop keepers who sell foreign goods.

Details of Reasons for Soundess/ Legal Complaince:
Our first and most paramount concern over any development is the loss of countryside and of wildlife living there. Poor animals and birds do not have any choice in us humans constantly eating away at their living environments, which has already been eroded enormously. We have far fewer plant life and other forms of life due to developments such as the above, and if we carry on the way we are going, even more plants and creatures will become extinct to add to the ones that already have. We wrote, to not avail, with our objections over the 550 homes and an industrial estate being built between Ditton's Corner and the Polegate Bypass. Unfortunately, building has already started there. Hopefully this letter will make a difference. As well as the loss of plants and wildlife, these building schemes make a huge impact on the people who already live here. Roads are not going to be able to cope with the extra traffic created by any development. The A27 already can't cope with the heavy traffic it already has. Plus the fact, there's too few parking spaces, and the few that we have - like the Co-op Car park has already had houses built on that! Public transport is also a joke. Often there is only standing room on our squashed trains. Our buses are also extremely infrequent. Eastbourne District General Hospital is full to bursting and can't cope with any more patients. The same is true for doctor's surgeries and dentists, who are only taking on private patients now. Schools here are in the same situation. We have therefore made a decision not to support this development for the above reasons.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
It is acknowledged in the document that Uckfield town centre is already congested. The addition of more housing as proposed, along with a much larger retail amount will completely negate any new road and town centre redevelopment efforts to overcome this. If the population of Uckfield means more retail area is needed this should be sited so as to not add to the town centre congestion. Therefore the current siting is unsound. Equally under this document’s proposals many of the people who live in the surrounding rural areas will have to travel to Uckfield as this is proposed to have the main employment sites for the area. Therefore equally these should be sited so as not to add to the town centre congestion. Therefore the current siting is unsound.

Details of Changes to be Made:
Site any new retail buildings away from the town centre, or in such a way that the access to them won’t add to the congestion. Site any new employment areas away from the town centre, or in such a way that the access to them won’t add to the congestion.
I write to register my objections to the Polegate and Willingdon and Stone Cross area strategy in the above document on the basis that it is not sound or justified for the following reasons: NUMBER OF ALLOCATED HOUSING CONTRADICTS THE AMOUNT WHICH IS CLAIMED TO EVEN BE SUSTAINABLE. It is very disappointing that despite repeatedly asked questions at Wealden District Council’s full council meetings and committees regarding the proposed 1265 new houses for this area, Wealden District Council’s position is that it is waiting for the outcome of the Honey Farm Appeal where the proposal is for up to 520 houses. So far, there has never been any mention of any alternative plans should the Council lose the appeal. The Council appears to be confident in defending this appeal, despite also contradicting itself with using the exact same reasons in the rejection of Honey Farm at Committee to justify and support those proposals within the Core Strategy for the Polegate and Willingdon area, for a site which is only down the road where the same problems would apply. Wealden District Council clearly has no plan B and if Wealden District Council cannot successfully defend this appeal, Willingdon and Polegate will automatic be lumbered with 1785 extra houses. For this reason alone, the Proposed Submission Document is irresponsible and misleading the communities. In addition reason as below; INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounding roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain. This was not revealed until Councillor Stephen Shing questioned this at a cabinet meeting. PUBLIC TRANSPORT In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways, which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

simply said that would be the Highways Authority’s responsibility. The report does not even address how this traffic problem will be address at present or in the future. The increase of about 301 trips per hour, 5,016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. PROPOSED SUBMISSION CORE STRATEGY OPTION CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindsland should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindsland / Mornings Mill Farm. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues ignored GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green lung between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue.

I trust that the above representations will be placed on record accordingly.

NUMBER OF ALLOCATED HOUSING CONTRADICTS THE AMOUNT WHICH IS CLAIMED TO EVEN BE SUSTAINABLE It is very disappointing that despite repeatedly asked questions at Wealden District Council’s full council meetings and committees regarding the proposed 1265 new houses for this area, Wealden District Council’s position is that it is waiting for the outcome of the Honey Farm Appeal where the proposal is for up to 520 houses. So far, there has never been any mention of any alternative plans should the Council lose the appeal. The Council appears to be confident in defending this appeal, despite also contradicting itself with by using the exact same reasons in the rejection of Honey Farm at Committee to justify and support those proposals within the Core Strategy for the Polegate and Willingdon area, for a site which is only down the road where the same problems would apply. Wealden District Council clearly has no plan B and if Wealden District Council cannot successfully defend this appeal, Willingdon and Polegate will automatic be lumbered with 1785 extra houses. For this reason alone, the Proposed Submission Document is irresponsible and misleading the communities. In addition reason as below; INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain. This was not revealed until Councillor Stephen Shing questioned this at a cabinet meeting. PUBLIC TRANSPORT In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable. For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. The local roads and traffic infrastructure is already running to it’s maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Cophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirm how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. Details of Changes to be Made:
INFRASTRUCTURE The local roads and traffic infrastructure is already running to its maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Cophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirmed how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority’s responsibility. I refer to pages 69 and 70 of the East Sussex County Council Highways' Report dated 10 September 2010 for information of their findings, which is relevant to my submissions above. COPHALL ROUNDABOUT SENSITIVITY TEST 3.1 Using the Dittons Road trip rates, the development traffic from 520 dwellings on the PW1 site has been calculated as follows: Table 3.1: 520 Dwellings Trip Rates & Trip Generations Time Period Trip Rates Trip Generations AM Peak Arrive Depart Two way Arrive Depart Two way (0800 - 0900) 0.12 0.46 0.58 62 239 301 The data shows an increase of about 301 trips per hour, 5.016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain, this was not revealed until I questioned this at a cabinet meeting. PUBLIC TRANSPORT In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. PROPOSED SUBMISSION CORE STRATEGY OPTION CONSULTATION
2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindslands should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindsland / Mornings Mill Farm. In addition, in the Wealden non-statutory local plan consultation in 2003, we presented a petition signed by 1000 Willingdon households to Wealden District Council. Hindsland / Mornings Mill Farm is not suitable to build extra 1000 new homes. I am pleased to say that the Council and Councillors had made a very sensible decision at the time, 8 years on, there are no changes or improvements within the infrastructure. We are continually facing shortage of secondary school places, primary school places, nursery places and facilities including sports and play facilities, amenity space, parking places an indoor sports hall and swimming pool and yet this Council considers that these will be provided, how? There is no mention of any sustainable or plausible proposal. GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green site between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues ignored

Details of Reasons for Soundess/ Legal Complaince:
The evidence collected by the Council in the preparation of the Core Strategy has identified that Crowborough currently has an underprovision of employment space compared with other settlements. Indeed, the provision of employment opportunities is a key objective of the town council. It is clear therefore that this underprovision is being used as a reason for not providing for any employment space within the town through this policy - a decision which does not appear to be supported by any conclusive evidence other than assumptions about the workings of the local employment market. It is suggested that in order to be made sound, this policy will need to be supported by detailed information about the local employment and commercial unit market, and also by travel towork patterns within the district. In addition, it is suggested that the closure of the Council offices in the next five years will lead to a significant reduction in employment within the town that should be planned for within this document.

WCS3 Distribution of Policy 3 Employment (B Class) and Retail (convenience and comparison)

Sound  □ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  □ Yes  □ No

Details of Reasons for Soundess/ Legal Compliance:
The evidence base does not justify a zero increase in employment and retail provision in Heathfield up to 2030. It is also inconsistent with the 'Heathfield Area Strategy' para. 642 point 5 that states that the strategy seeks to "support employment growth and increase the range of job opportunities by encouraging small-scale new development around the town" and point 6 to "support an increase in retail floorspace in the town".

Details of Changes to be Made:
Identify new employment and retail allocations in the town

WCS3 Distribution of Policy 3 Employment (B Class) and Retail (convenience and comparison)

Sound  □ Yes  ☑ No  ☑ Justified  □ Effective  □ Consistent with national policy
Legally Compliant  ☑ Yes  □ No

Details of Reasons for Soundess/ Legal Compliance:
The amalgamation of Polegate / Willingdon/ Stone Cross is entirely false and inconsistent with all other approaches in the Core Strategy (for example see WCS2 where Polegate and Willingdon is considered separately from Stone Cross and Westham) and the settlements need to be considered separately with Polegate and Willingdon having new allocations of 16890 sq. metres and Stone Cross and Westham as a matter of fact having 0 sq. metres as part of the Rural areas consistent with its designation as a Local Service Centre/Neighbourhood Centre.

Details of Changes to be Made:
Delete Stone Cross from the town/settlement list

Policy WCS3: Distribution of Employment (B Class) and Retail (Convenience and Comparison) - SUPPORT 2.25
Policy WCS3 sets out the new allocations for employment and retail provision over the plan period. Whilst we
recognise there are to be no new allocations of employment or retail in Heathfield, Crowborough and the Rural
Areas, we consider that the Policy WCS3 needs to recognise the ‘committed’ employment and retail sites in these,
and other locations. This should be reflected in Policy WCS3 and ensure consistency to how Policy WCS2
(Housing Growth) and Policy WCS3 (Employment Growth) are presented within the Core Strategy.

and other locations. This should be reflected in Policy WCS3 and ensure consistency to how Policy WCS2
(Housing Growth) and Policy WCS3 (Employment Growth) are presented within the Core Strategy.

Details of Reasons for Soundness/ Legal Complaince:
5. We support the flexibility contained in Policy WCS3 regarding the distribution of employment floor space
between Polegate and Willingdon and Stone Cross. However, in view of the current retail provision in Polegate
and the scale of the development planned for the area, we consider that a retail allocation should be included for
Polegate, rather than concentrating new provision solely in Uckfield and Hailsham. By improving facilities at
Polegate will reduce the need for both existing and future residents to travel further afield to meet their shopping
needs, which is especially important in view of the high proportion of elderly residents. Whilst trips will be made to
nearby Eastbourne, which is at a higher level of the retail hierarchy, there would be advantage if the day to day
needs of residents are met in Polegate. Whilst Polegate town centre is constrained, opportunities may arise
through redevelopment and there may be scope for local facilities as part of the new residential growth area.

**Details of Reasons for Soundess/ Legal Complaince:**

We support the Councils identification of Hailsham as a location to take new employment allocations to support the increased level of housing that will be accommodated in the town. We would however suggest, as with our earlier comments that a contingency / flexibility is built into the policy to allow additional employment growth to be accommodated should demand and evidence show that it is required.

**Details of Reasons for Soundess/ Legal Complaince:**

Policy WCS3 makes no provision for additional employment provision in the rural area (which includes Westham) even though the ELR2008 indicated that our client's site (Mountney Bridge Industrial Estate) could accommodate growth/development. Policy WCS3 does not therefore correspond with paragraphs 3.19 or 3.22 which support intensification of employment areas. Policy SPO6 is unclear and unsound, it is implied that any new jobs created will only make a positive contribution to the towns of Uckfield, Hailsham, Polegate and Willingdon.

**Details of Changes to be Made:**

Policy SPO6 should be amended to make it clear that new economic development will be encouraged across all settlements in the district, particularly those in South Wealden, such as Westham. We also consider that the Mountney Bridge Industrial Estate should be identified for intensification and expansion. WCS3 should refer to the other locations which can accommodate intensification and expansion and there should be recognition that some lower order settlements such as Westham can contribute to economic growth.

Sound  ☑ Yes  ☐ No  ☐ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No
Details of Reasons for Soundess/ Legal Complaince:
We would broadly support the distribution of housing growth around the edges of the towns in the district but we
will refer to the numbers allocated to rural villages further on. Similarly the distribution of employment as indicated
seems a little skewed, ignoring the rural villages altogether. We feel that the growth in employment opportunities is
the key to sustainability of rural communities. The Growth in employment opportunities is directly correlated to the
growth of housing.

Wealden Councillors for Crowborough

Details of Reasons for Soundness/ Legal Compliance:
Employment There is a statement in para 6.33 that the number of Crowborough people working in the town is low, there is substantial out-commuting and there are pockets of unemployment, yet no additional employment land is designated. At the consultation meetings in Crowborough leading up to the development of the core strategy, the need for more local employment was emphasized by many residents and it is the experience of local councillors that this is a key issue for Crowborough. The Crowborough councillors wish to reiterate their long-held view that land near the Army Camp should be allocated for expanding employment opportunities, in spite of it being within the AONB. This location would avoid the need for heavy traffic to travel through congested parts of Crowborough and in particular avoid the need for it to use Western Road. However, the area round the Army Camp is sufficiently close to the centre to be a sustainable location.

Details of Changes to be Made:

Concern raised at the reference to Polegate and Willingdon as one settlement

**Agent ID**: 516026

**WCS3 Distribution of Employment (B Class) and Retail (convenience and comparison)**

**Sound**: Yes  
**Legally Compliant**: Yes

**Details of Reasons for Soundness/Legal Compliance:**
The evidence base does not justify a zero increase in employment and retail provision in Crowborough up to 2030. This is particularly the case as the Council’s move of their offices to Hailsham will move jobs away from Crowborough.

**Details of Changes to be Made:**
Increase the dwelling allocation to Crowborough having regard to housing needs, economic growth objectives and wider housing requirements outside the District. This can be achieved by an overall increase in housing numbers rather than taking numbers away from other locations. It is also practicable without breaching capacity.

Policy 4

**Sound**  ✔ Yes  ☐ No  ☐ Justified  ☐ Effective  ☐ Consistent with national policy

**Legally Compliant**  ✔ Yes  ☐ No

**Details of Reasons for Soundess/ Legal Complaince:**
I do not consider any change is necessary in respect of WCS4: Para 5.10 and Fig 7 which is sound, subject to highway access requirements for SD2

**Details of Changes to be Made:**
The Core Strategy is not legally compliant and is unsound because of its proposals for an urban extension to the north west of Heathfield (Strategic Development Area SD11). Whilst the principle of accommodating housing growth in the broad location of north west Heathfield is supported, the Core Strategy’s proposals are deficient because they: (a) fail to take a comprehensive approach to the development of this area and so are not founded on a robust and credible evidence base and are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the soundness test in paragraph 4.36 of PPS12 that they are “justifiable”. (b) constitute an unjustified encroachment into the High Weald AONB and so are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12 and also the soundness test in paragraph 4.52 of PPS12 that they are “consistent with national policy”. Paragraph 16(v) of PPS7 requires the Council in preparing the Core Strategy to “conserve…sites of landscape…value, in accordance with statutory designations”. Paragraph 22(ii) of PPS7 requires that “major developments” should only take place within the AONB after “the most rigorous examination” and an assessment of “the scope for developing elsewhere outside the designated area or meeting the need for it in some other way”. The Council has failed to properly assess the scope for meeting the need for development on previously developed land at north west Heathfield that is not in the AONB. (c) utilise less accessible and less sustainable land and so are not the most appropriate strategy when considered against reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12. (d) fail to provide adequate safeguarding of amenities of existing dwellings (if those dwellings are to be excluded from the urban extension as currently proposed) and fail to integrate into the existing urban form, thus failing the soundness test in paragraph 4.52 of PPS12 that the proposals are consistent with national policy. Paragraph 34 of PPS1 and paragraph 13 of PPS3 require the Council to reject design which is “inappropriate in its context” and paragraph 35 of PPS1 requires development to be designed so that it will be “integrated into the existing urban form and the natural and built environments”. THE PROPOSED SUBMISSION CORE STRATEGY 3. We object to the following parts of the Core Strategy. Because the objections are interconnected, we have set out all the relevant matters in this response, although this particular objection only relates to the specific part of the Core Strategy identified in our response to Q1 above. Our objections are as follows: (i) The omission from Spatial Planning Objective SPO1 of any reference to minimising the loss of nationally designated landscapes, including the High Weald AONB. Paragraph 16(v) of PPS3 requires the Council to conserve the AONB and since it is clear that the Council is proposing to meet part of the District’s development needs by using land within the AONB, the Council should establish a clear objective that only the minimum AONB land should be used for this purpose and wherever possible non-AONB land should be used in preference. (ii) The reference in Policy WCS2 to the broad locations for housing development being shown as insets on the Key Diagram. We object to the inset for Heathfield in relation to the way it shows the proposal SD11 and consequently object to this reference to that inset plan in Policy WCS2. (iii) The reference in Policy WCS4 to SD11: Land at North West of Heathfield. We object to the way that SD11 is described in Chapter 6 of the Core Strategy and shown on the Key Diagram and as a result object to the reference to SD11 in Policy WCS4. (iv) The omission from paragraph 5.8 of any aim to maximise the use of previously developed land in meeting existing and future housing needs. Notwithstanding the recent changes to PPS3 it remains a national objective to prioritise the use of previously developed land, in accordance with paragraph 21 of PPS1 and paragraph 40 of PPS3. (v) The reference in paragraph 6.40 to the identification of potential sites for housing “through the SHLAA”. We object to the inclusion of Site 155/1210 in its current form as shown in the SHLAA and consequently object to this reference to that site in paragraph 6.40. (vi) The reference in paragraph 6.41 to the “most suitable location” being “within the AONB” and that this land could be developed “without strategic adverse impact on the landscape”. The Council’s evidence base does not demonstrate that the land within the AONB is more suitable for development than the non-AONB previously developed land on High Street. There is no assessment by the Council of the suitability of this non-AONB land (which includes the objector’s land at Lavender Cottage, High Street, Heathfield, TN21 0UP) and yet it is more suitable than the AONB land, being (i) not subject to a national landscape designation, (ii) previously developed land, (iii) within the existing settlement boundary, and (iv) well related and integrated into the urban area and existing transport connections. In addition, the Council’s evidence base does not show that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of 2 adjacent SHLAA sites at north west Heathfield (Site 155/1210 with a capacity of 123 dwellings at 40 dph and Site 307/1210 with a capacity of 35 dwellings at 35 dph).
Lavender Cottage, are willing to make their land available as part of a wider development. The objectors have made this known to the Council since at least August 2010. The principle of redevelopment for more intensive SD11 takes an opportunistic approach. It utilises substantial areas of greenfield land as the main development shareholders, the choice of this location seems to be influenced simply by the fact that these 2 sites were SHLAA indicates that Site 155/1210 is in multiple ownerships and Site 307/1210 is owned by a company with 7 areas (and by implication from the SHLAA one existing property simply as a means of access). Although the reason set out at (x) above. 4. We now propose to elaborate on these objections. Piecemeal not comprehensive 5. Proposal SD11 in the same way that they are shown on Figure 10 and they are not acceptable for the same previously developed land, the footprint of the buildings and their associated driveways and hardstandings clearly of. 7. The site of SD11 is on sloping ground set back behind existing development which separates the site from Heathfield as identified on the Proposals Map of the saved Local Plan and paragraph 6.48 of the Core Strategy confirms that within development boundaries “the principle of development is acceptable”. The principle of redeveloping this land to provide more intensive residential development has already been accepted by the Council, with the grant of planning permissions at Brackenside (WD/08/0329) for 3 dwellings in place of 1 dwelling, and at Oaksdown/Lowlands (WD/2011/0400) for 9 apartments in the place of 2 dwellings. The more intensive development of the non-AONB land on the High Street frontage would minimise (or may even remove) the need for the use of AONB land. This option would plainly be a more suitable alternative than the use only of land “within the AONB” as proposed in the Core Strategy. (viii) The reference in paragraph 6.41 to “no suitable alternative contingency land is available”. The land at Oaksdown/Lowlands is available for development (as confirmed by the recent renewal of planning permission). The objectors’ land at Lavender Cottage is available for development (and this has been made known to the Council since at least August 2010). The land at Woodhatch is relied on as being available for development in order to provide the access for SHLAA site 155/1210. The objectors understand that the land at Holmhurst could be made available for development. Thus, there is a continuous frontage of 5 plots of non-AONB land available (all with generous areas of garden land, most of which is excluded from the AONB) just on this part of the High Street. Were the Council to actively promote a comprehensive redevelopment of this area it is likely that other land in the vicinity would be made available. However, the Council has simply failed in its evidence base to assess this option. If it is necessary to identify contingency land then the hinterland of AONB land should be identified as contingency land, with priority being given to the development of the non-AONB land on the High Street frontage. Prioritising that land would be consistent with the policy objectives of minimising the loss of AONB land and maximising the use of previously developed land. (ix) The reference in paragraph 6.42 item 3 to SD11 being “on land adjacent to the urban area”. The proposal for SD11 should not be defined in a way which excludes the urban area and which focuses only on land within the AONB. The proposal should embrace the urban area and the development should maximise the use of previously developed land in the urban area to achieve the provision of 160 dwellings before any consideration is given to the use of land in the AONB. (x) Figure 10 Heathfield Area Strategy. This diagram shows SD11 as located within the AONB and beyond the existing settlement. The diagram should not exclude the inclusion of the existing built up area in this location within the scope of SD11. The built up area has the potential and the capacity to be redeveloped and this aim should be the first priority at north west Heathfield. (xi) Key Diagram: the inset for Heathfield. The inset shows Heathfield and Proposal SD11 in the same way that they are shown on Figure 10 and they are not acceptable for the same reason set out at (x) above. 4. We now propose to elaborate on these objections. Piecemeal not comprehensive 5. SD11 takes an opportunistic approach. It utilises substantial areas of greenfield land as the main development areas (and by implication from the SHLAA one existing property simply as a means of access). Although the SHLAA indicates that Site 155/1210 is in multiple ownerships and Site 307/1210 is owned by a company with 7 shareholders, the choice of this location seems to be influenced simply by the fact that these 2 sites were promoted in the SHLAA and so it is assumed they are available. Site 155/1210 is said to be under the control of a housing developer. We are not aware whether the Council has seen the terms of any option or other legal agreement giving such control but, given that the Proposed Submission Core Strategy is a long term strategy to 2030 and its trajectory does not anticipate the site coming forward before 2015/16, little weight can be given to the status of any current contractual arrangements. 6. Any sensible spatial planning approach to the development of this area would not look at the sites promoted in the SHLAA in isolation but would look to see how that development would relate to its local context and how it would relate to the settlement it is intended to form a part of. 7. The site of SD11 is on sloping ground set back behind existing development which separates the site from the rest of Heathfield. Development as proposed will not integrate the development with its local context as required by paragraph 35 of PPS1. Nor will it maximise the opportunities for the site to benefit from clear and easy links to the facilities in the local service centre by non-car modes. 8. A comprehensive approach would look at the whole of the area in this north western part of Heathfield and then seek to identify the land which is most suited to development. It is common sense that this would start by looking at the land with the best links by foot, cycle, and public transport to the rest of the settlement. That is of course the frontage land along Heathfield Road/High Street itself. The frontage land also contains the previously developed land comprising the existing dwellings and their various outbuildings. Whilst the recent revisions to PPP3 have removed garden land from the definition of previously developed land, the footprint of the buildings and their associated driveways and hardstandings clearly have a higher priority for development than a greenfield meadow. 9. The present objectors, as the owners of Lavender Cottage, are willing to make their land available as part of a wider development. The objectors have made this known to the Council since at least August 2010. The principle of redevelopment for more intensive
residential development has already been established on land to the wets (WD/08/0329) and on the adjoining site to the east of Lavender Cottage (WD/2011/0400). Although planning permission was granted for a block of flats (WD/2008/0276), that development has not come forward and the permission has recently had to be renewed. Clearly, the land is available for development, even if the form of development is not at present attractive to the market. We understand that the owner of the adjoining plot at Holmhurst would be prepared to make that site available. Woodhatch is relied on as available in the SHLAA (Site 155/1210 refers). Thus there is already a substantial amount of the frontage land which is available for development. A spatial approach to the planning of this area would look to utilise this developed frontage land, which plainly has development potential, before turning to the undeveloped hinterland to the rear. Unjustified Encroachment into the AONB 10. The Proposed Submission Core Strategy recognises that SD11 lies within the AONB, where there is strict control over new development. Paragraph 22 of PPS7 is clear that major development in the AONB requires “the most rigorous examination” and that such development should only be accepted after assessment of the scope for meeting the need elsewhere. Under the GDMO 2010 “major development” is a development of 10 or more dwellings. Under the Secretary of State’s arrangements for the recovery of appeals on the basis that they are large/controversial, the threshold is 150 residential units. On either basis, a development of 160 dwellings is major development. In any event, the Council has accepted in the SHLAA that “there is a requirement to demonstrate development is essential to meet local needs and that other more suitable sites do not exist elsewhere” (Site 155/1210). The claimed rationale for the use of AONB land in this case is that “no suitable alternative non-AONB location exists”. This is patently incorrect. As already noted, the frontage land is not within the AONB and if the desire is to achieve a development of some 160 dwellings there can be no justification for taking more AONB land than is absolutely necessary when there is non-AONB land in the same location which is available. 11. Whilst it may be doubtful that the frontage land which is known to be available could alone accommodate the full scale of the development sought, the need to encroach into the AONB would be very much reduced if the frontage land was used first. Such an approach would also enable the lower (and least accessible) parts of the meadow to be retained as open land, potentially providing a better buffer with the important woodland at Tilsmore Wood that makes up such a key component of the Wealden character. The need for such a buffer is recognised in the Landscape Character Assessment (Figure 5). In addition, if the Council made it clear that it was promoting the comprehensive development of the area, it is likely that other owners would also wish to make their land available, and the Council may therefore be able to avoid encroaching into the AONB to any material degree. 12. The Council’s claim that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape is not supported by the evidence base. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of the 2 adjacent SHLAA sites:Site 155/1210 and Site 307/1210. As already noted, the Council’s Landscape Character Assessment shows (Figure 5) that large parts of these SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. Using Less Accessible and Less Sustainable Land 13. Similar considerations in terms of minimising the amount of AONB land apply in relation to accessibility issues. The lower parts of the sloping meadow land are not only more remote by simple distance from the footways and bus route along Heathfield Road/High Street, there is also the fact that journeys from home will inevitably be uphill for residents of that area. There will therefore be a disinclination to use non-car modes for accessing local services, even if they might appear to be within walking distance. It must also be doubted whether much of the hinterland is within the preferred 400m distance for access to a bus route. 14. In contrast, the frontage development is already connected to existing pedestrian routes by the adjacent footways and there is only a shallow fall in the land closest to the roadside. Accessibility to the bus route is also much improved. 15. Again, on any sensible measure of accessibility and sustainability, it cannot make sense to use the more remote hinterland in preference to the frontage land. PPS1 is clear at paragraph 35 that new development needs to be integrated into the urban area and address connectivity issues. The choice of a backland location for SD11 when the more accessible frontage land is available is directly contrary to this guidance Inadequate safeguarding of amenities 16. We have already explained why a comprehensive approach needs to be taken to this area. However, if the Council persists in its piecemeal approach then it is apparent that inadequate consideration has been given to the relationship between the retained frontage properties and the new development to the rear. The existing development is at a very low density and has the established character of a mature residential area, with individual dwellings in spacious plots. 17. The SHLAA indicates a proposed density for the new development of some 40 dwellings per hectare for Site 155/120. This will be substantially different in character and could only be achieved by ensuring a substantial buffer between the 2 very different forms of development. However, this would push the new development further into the AONB and would further separate the new development from the settlement of which it is intended to form a part. Again, there would be a conflict with the advice in PPS1 on integrating the development with the urban area. Soundness Tests 18. It is clear from the objections set out above that the proposals for SD11 are not founded on a robust and credible evidence base, cannot be shown to be the most appropriate strategy when considered against the reasonable alternatives, and are not consistent with national policy in PPS1, PPS3, and PPS7 in several important respects. They therefore fail 2 of the key tests of soundness as set out at paragraph 4.52 of PPS12. Legal Tests 19. These objections also
have the consequence that the Council's failure to properly consider reasonable alternatives to its proposals at north west Heathfield, and in particular to consider the alternative of an area of growth in this location planned on a comprehensive basis and focused on maximising the use of previously developed land and minimising the use of land within the AONB, has the consequence that the Sustainability Appraisal/Strategic Environmental Assessment that accompanies the Core Strategy is legally deficient and the Core Strategy is consequently not legally compliant with the requirements of either Regulation 5(1) of the Environmental Assessment of Plans and Programmes Regulations 2004 or with the requirements of s.19(5) and s.20(2) Planning & Compulsory Purchase Act 2004. In addition, the same failings, together with the lack of a credible and robust evidence base to support those proposals and the conflicts with national policy mean that the Core Strategy is not “sound” as required by s.20(5)(b) PCPA 2004. 20. The SA/SEA considers, in broad terms, alternative locations for growth at Heathfield as between the north east, north west, and west of the town. However, what it fails to do is to look at reasonable alternatives within the selected north west location. It is no answer for the Council to suggest that this level of detail is a matter for a later DPD because the Core Strategy is already spatially specific that the location of north west Heathfield is an “urban extension” (i.e. an addition) and that it is “within the AONB” (i.e. outside the settlement boundary. The same spatial approach is shown on Figure 10 and on the Inset for the Key Diagram. The Council is not, therefore, able to avoid grappling with the spatial implications of this choice as part of the Core Strategy and testing it against reasonable alternatives. However, it is clear that this is not an exercise that has been attempted in the SA/SEA. 21. The Council will be well aware from the recent decision in Save Historic Newmarket Ltd v Forest Heath District Council [2011] EWHC 606 (Admin) that a failure in the SA/SEA to give proper consideration to identification and assessment of reasonable alternatives is likely to result in a quashing of the relevant parts of the Core Strategy. Conclusion 22. For all of these reasons the objectors strongly suggest that neither the Council nor the Inspector should endorse the present proposals for SD11. What is required is a fundamental rethink to achieve an integrated, sustainable and accessible development which minimises the impact on the AONB and provides a comprehensive spatial approach to the development of this area. Essentially this requires the focus to shift from the “easy target” of greenfield meadows to a more considered approach, giving priority to the previously developed frontage land, and only considering the AONB hinterland to the minimum extent necessary to achieve the required dwelling numbers.

Details of Changes to be Made:

WCS4: If the location and description of SD11 is changed on Figure 10 to remove the red/pink notation and replace it by a red dwelling house symbol located within the urban area to the immediate north of the A265, and replace the text annotation by the words “Comprehensive development area at north west Heathfield (SD11) (residential provision)” and if the location and description of SD11 is changed on the Heathfield Inset of the Key Diagram with a version of Figure 10 revised to remove the red/pink notation and replace it by a red dwelling house symbol located within the urban area to the immediate north of the A265, and replace the text annotation by the words “Comprehensive development area at north west Heathfield (SD11) (residential provision)”, no change is necessary.

Details of Reasons for Soundness/ Legal Compliance:

Greater Clarity is required regarding the development area SD3 North of Hailsham. The plan appears to show some potential for development north of New Rd, although is is very vague. To development the best sustainable and comprehensive development north of Hailsham at this sale and to ensure the non isolation of the development at the hospital site Park Farm should be included to enable the comprehensive master planning of the area. In this regard we object to the allocation of SD2 land east of Hailsham as this dispersed development objective will not deliver the best sustainable long term master planning of the area or ensure its deliverability over the plan period. These 600 dwellings should be re distributed onto Park Farm north of New Rd as part of the Master planning of SD3.

Details of Changes to be Made:

Identify SD3 to include land at Park farm north of New Rd North Hailsham for an additional 600 dwellings ie 1300 in total.

Details of Reasons for Soundness/ Legal Compliance:

Greater Clarity is required regarding the development area SD3 North of Hailsham. The plan appears to show some potential for development north of New Rd, although is is very vague. To development the best sustainable and comprehensive development north of Hailsham at this sale and to ensure the non isolation of the development at the hospital site Park Farm should be included to enable the comprehensive master planning of the area. In this regard we object to the allocation of SD2 land east of Hailsham as this dispersed development objective will not deliver the best sustainable long term master planning of the area or ensure its deliverability over the plan period. These 600 dwellings should be re distributed onto Park Farm north of New Rd as part of the Master planning of SD3.

Details of Changes to be Made:

Identify SD3 to include land at Park farm north of New Rd North Hailsham for an additional 600 dwellings ie 1300 in total.
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:

| Sound               | ☐ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy |
| Legally Compliant   | ☐ Yes ☐ No |

**Details of Reasons for Soundess/ Legal Complaince:**

The approach set out in Policy WCS4, which identifies a series of Strategic Development Areas is supported in principle. SD4, SD5, SD6 and SD7 all have the potential to assist Eastbourne in achieving its full economic potential. It is, however important to ensure that a green gap is incorporated into the development proposals for SD6: Land at East and South East of Stone Cross to ensure that the distinct identities of Stone Cross and Eastbourne are retained and to prevent the settlements from coalescing.
Details of Reasons for Soundess/ Legal Complaince:
I make reference to the proposed development in Ridgewood, my understanding is new housing should be on Brown Field land, not Green Field Land which is Ridgewood Farm. Its really disgraceful that Ridgewood has been thrown to the wolves, this is the 3rd Farm that will be built on plus Pipers Field and now Sandpits that was also Agricultural land. If this takes place we will lose all our lovely hedges, the wildlife, which we have plenty. This makes me so angry that all this would be lost for profit. I would like it put on record my objections, I know my neighbours all feel the same.

Details of Changes to be Made:

---

Details of Reasons for Soundess/ Legal Complaince:
The First Draft Local Plan included proposals for 1000 homes (HA2) on land north of the A271 and east of Park Road. Additionally a Lower Horsebridge/Hellingly Bypass (TR5) was proposed, essentially a prerequisite for the housing. The Local Plan was submitted for public consultation in 2003 and a large number of objections to the policy TR5 were registered, see GR0001.350 - the planning officers response for members consideration. At the meeting of the Wealden Local Plan Review Special Committee, held on 26th February 2004, the members of the planning committee endorsed the officers recommendations to delete policy TR5. The members approved an allocation of 400 homes at Hellingly Hospital (part of HA2), this was in spite of advice (which they had sought) from the Highways Authority that no more than 200 homes were acceptable following the abandonment of policy TR5. Subsequently an application, WD/2006/2440/MEA – Land north of Hailsham, east of Park Road and south of New Road, was received from a ‘developer’. This being the balance of HA2 site. The application was for 550 homes. This was refused on the 9th November 2006 at the Development Control South sub-committee meeting on the advice of officers of the council and the Hghways Authority (Agenda item 15 refers). Moving on. The core Infrastructure Position Statement, 2009, said “Further growth of the town would be likely to necessitate the provision of a Hellingly/Lower Horsebridge Bypass as part of overcoming the current deficiencies of the A271”. However, no specific mention of the bypass is included in Core Structure Infrastructure Delivery Plan (Feb.2011). Rather there are non-specific references to the A271 such as ‘severance issues’, shades of the Honey Farm inquiry ! In the light of the site’s planning history the planning inspector may wish to ask Wealden's representatives why SD3 forms part of the core submission.

<td>The principle of identifying Strategic Development Areas is supported. However, the Council has not identified or sought to justify what constitutes such an SDA - certainly in terms of numbers of additional dwellings involved. Indeed, it appears that SDL12 comprises a proposal for just 20 units, based upon the information provided in policy WCS6. whilst there is no objection to the development of this land, it is submitted that a proposal relating to 20 dwellings out of total figure 9,600 cannot be described as &quot;strategic&quot;. Nevertheless, and in the context of objections to policies SPO3, WCS1 and WCS2 it is requested that a further strategic development area be listed in policy WCS4. This should comprise SD13 and be described as &quot;Land west of Mayfield.&quot; Mayfield has a range of facilities: indeed, it is classified as a Local Service Centre and is thus larger than the neighbourhood centres. As some of these, such as Maresfield, Ripe and Selmeston are identified for development in policy WCS6, then it seems logical that the larger settlement of Mayfield could - and should - also be identified for development. In these circumstances, therefore, it is requested that the policy is amended by the addition of a further Strategic Development Area (SD13) &quot;Land west of Mayfield.&quot; In order for the District to meet its overall requirement of 17,300 dwellings in the plan period, the Council will also need to consider the identification of other locations within this policy.</td>

<td>I would like to register my strong objection to the building of 700 new homes plus employment floorspace on this greenfield site. Polegate, Willingdon and Eastbourne are soon going to merge into one big, sprawling town. We cannot afford to lose any more of our precious green spaces. Most of all, the traffic on the Eastbourne road is already horrendous. It won't take much more.</td>

Details of Reasons for Soundess/ Legal Complaince:
I am writing to register my objection to the proposed residential development south east of Stone Cross. We have lived in Eastbourne for the past 17 years and Borrowdale Close is right on the border with Wealden. Since living here we have seen Wealden build at least 3 developments on Eastbourne's boundary. This is grossly unfair on the residents of Eastbourne. It takes advantage of and places unacceptable pressure on the already stretched local infrastructure and services provided by Eastbourne. The position of this proposed site is at the rear of existing small estate roads which could not cope with this increase in traffic. Enough is enough.

Details of Changes to be Made:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

At the meeting of the Planning Committee South held on the 3rd February 2011 the planning officers advised the members to endorse supplementary agreements to amend the section 106 agreements entered into by the developers of the Hellingly Hospital Site and the Welbury/Woodholm sites. The amendments sought to remove the obligations for: 1. financial contributions towards the acquisition of land for (a) secondary school 2. financial contributions towards the provision of additional secondary school places 3. financial contributions towards the acquisition of land for (a) primary school. The members refused to accept the recommendations. Probably not out of concern for the impact on educational provision in the Hailsham/ Hellingly area but because striking out these obligations blows one hole in the big development/single developer strategy adopted by Wealden to meet the requirements of target based planning. The planning inspector may be minded to explore with WDC's planning officers and the LEA the reasons for their advice and the precedent set for other developers; of special concern are the educational, health centre and library/alternative obligations attached to WD/2009/2705. Moving to the issue of SD3, developers hold out against what they consider to be historic infrastructure deficit. I understand that S106 agreements are still required over and above (an introduction) of CIL. What, then, will be a credible position for requiring developer contributions for the Hellingly Hospital/SD3 catchment area? On a more general theme the LEA representative at the recent Honey Farm Inquiry characterised his organisation as the 'educational supplier of last resort', this in regard to the negotiations over section 106 agreements for that site. The inspector may wish to ask how a last resort supplier manages the provision of public schooling in the future. The planning inspector may also wish to examine the impact of educational 'choice' not only in regard to S106 agreements but also in respect to traffic generated in the Hellingly Hospital / SD3 c area. Just how many journeys will Four Wheel Drive Fiona and her partner Subsidised Electric Car Eric may during the morning rush hour?

#### Details of Reasons for Soundness/ Legal Compliance:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Reasons for Soundess/ Legal Complaince:
We feel that any development of the proposed areas does not serve the Wealden Community \as the areas are so close to Tunbridge Wells. The areas at Benhall Mill Road as detailed in the WDC SHLAA are particularly poorly located in relation to the nearest Wealden settlement. Development of these areas firmly places the burden on Tunbridge Wells to provide services which are already stretched. There are insufficiences in the wast water services to support additional housing and traffic congestion is already a considerable issue. We understand that it is the opinion of the landowner that the cological value of the land behind Benhall Mill Road has declined and that the SNCI status should be removed. It is our opinion that the land has been deliberately neglected to this aim.
Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
The Unit is concerned about the identification of a site at Heathfield - SD11- which proposes a large housing site within the AONB which may compromise the integrity of the AONB boundary. The site is bounded on the north by extensive ancient woodland and is the source of several small streams (see attached plan) that feed into the ancient woodland. Development in this location is likely to have significant impacts on the character of the AONB and is not considered appropriate.

Details of Changes to be Made:

---

Details of Reasons for Soundess/ Legal Complaince:
No housing should be built in Walshes Road or Palesgate Lane until the road transport problems have been properly addressed, by the building of a by-pass of Jarvis Brook and Rotherfield. An independent study of the effects of increased surface water from proposed development sites on existing residential areas should be undertaken and better surface water drainage planned for Jarvis Brook prior to the building of houses at South East Crowborough (SD10). An area already designated as at risk from flooding.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:
Our first and most paramount concern over any development is the loss of countryside and of wildlife living there. Poor animals and birds do not have any choice in us humans constantly eating away at their living environments, which has already been eroded enormously. We have far fewer plant life and other forms of life due to developments such as the above, and if we carry on the way we are going, even more plants and creatures will become extinct to add to the ones that already have. We wrote, to not avail, with our objections over the 550 homes and an industrial estate being built between Ditton's Corner and the Polegate Bypass. Unfortunately, building has already started there. Hopefully this letter will make a difference. As well as the loss of plants and wildlife, these building schemes make a huge impact on the people who already live here. Roads are not going to be able to cope with the extra traffic created by any development. The A27 already can't cope with the heavy traffic it already has. Plus the fact, there's too few parking spaces, and the few that we have - like the Co-op Car park has already had houses built on that! Public transport is also a joke. Often there is only standing room on our squashed trains. Our buses are also extremely infrequent. Eastbourne District General Hospital is full to bursting and can't cope with any more patients. The same is true for doctor's surgeries and dentists, who are only taking on private patients now. Schools here are in the same situation. We have therefore made a decision not to support this development for the above reasons.

Details of Changes to be Made:

Details of Reasons for Soundness/ Legal Complaince:
I am writing in protest at the proposal to build seven hundred homes on the Hindsland/Morning Mill Farm site. It appears from the Wealden Housing survey of 2009 that only a small number of new houses are needed and these could be built throughout the Wealden area. Our areas of natural habitat and beauty are being eroded and these areas are benificial for residents and wildlife alike. We do not have the infrastructure to support seven hundred houses, our roads are in appalling repair, our doctors are overworked and there are a shortage of schol places. Another major factor is that the proposed area being built on acts as a flood plane for local housing and as we have seen in recent years our weather is unpredictable and the incidence of flooding is more frequent and devastating. Therefore I strongly oppose the proposal for the building of seven hundred new houses on the aforementioned site.

I wish to comment regarding the above development plan involving land at Hindsland/Mornings Mill Farm. Flooding takes place during heavy rainfall. Should future development take place on the higher ground, this will result in further flooding in the Broad Road/Oldfield area. The proposed density of building will inevitably result in many more cars in the area. This will result in further car parking issues.

Details of Reasons for Soundess/ Legal Complaince:
Object to development on land adjacent to Tunbridge Wells, in the parish of Frant due to the area being poorly located in relation to the nearest Wealden Settlement. It increases the Tunbridge Wells Urban Fringe and does not serve the Wealden Community where infrastructure would be best placed to serve the Wealden Community. Development places a burden on Tunbridge Wells Services and may affect development in the Tunbridge Wells area. Traffic impact will require upgrades to the roads to the south including at least one bridge over railway lines. Insufficiences in waste water to support additional houses. There is no justification for using a greenfield site with SNCI status before more suitable brownfield sites particularly because it is not a sustainable settlement for Wealden District Council. WDC seem to agree it is unsuitable. Ecological assessments recognise the wildlife value of the whole site but particularly the proposed area for development. The site access will exacerbate the traffic and congestion problems for the road it adjoins adn requires a full traffic study. There is not emergency access and any access for development would affect SNCI status. The proposal is against current planning policies and responsibility is unclear because development crosses county boundaries.

Details of Reasons for Soundess/ Legal Complaince:
Object to building in the countryside at Mornings Mill Farm when in the future there may not be a need for the houses. Poor location of GP surgeries in the Polegate/Willingdon area. Concern regading the imact of increased traffic generated by new houses on existing road users.

Details of Changes to be Made:
Policy WCS4 identifies the Strategic Development Areas in the District that the Council considers to be critical to the delivery of the overall strategy. SD6 identifies land at East and South East of Stone Cross that includes land north of Rattle Road owned by my client. We support the approach adopted within Policy WCS4 and the importance attached to the identified Strategic Development Areas to deliver housing and employment opportunities and wider services and infrastructure to support the growth of the District. In particular we support the identification of SD6 - it being a logical location to accommodate strategic development given the status of Stone Cross as a Service Centre within the wider settlement hierarchy, its particularly good public transport connections to Langney and Estbourne, its existing level of services, employment opportunities and facilities and its close links with the A22/A27 primary and trunk routes. Indeed, the provision of housing and employment development in the area will, we believe, help to address the economic needs of the south of the District and the wider Sussex Coast sub-region whilst also delivering affordable housing in meaningful numbers and making a positive contribution to the sustainability of Stone Cross and the quality of life for existing and future residents. The South East Plan proposes that approximately 63% of Wealden’s new housing development is located in the Sussex Coast Sub-Region. The draft Core Strategy is in accordance with this as at present approximately 63% of new allocations (excluding rural areas) are within the Sussex Coast Policy Area. Overall therefore, this approach is consistent with policy within the South East Plan. including specific policy for the Sussex Coast Sub-Region and national planning policy (PPS3 paragraphs 36-38) by helping to create mixed and sustainable communities, developing housing and employment in suitable locations offering a range of community facilities with access to jobs and services. The approach also accords with the Government’s housing objectives in PPS3 in particular the approach identified in Paragraphs 10 and 36 of delivering housing developments in suitable locations, which offer a good range of community facilities and with good access to jobs, key services and infrastructure. Further, it is apparent that all of the requirements set out in paragraph 38 of PPS3 for finding the most suitable locations for growth have been carefully applied to the housing and employment land targets, resulting, at least in the south Wealden District area, in a comprehensive, credible and deliverable spatial plan to address the needs of the District. The Council’s SHLAA identified a number of development sites around Stone Cross that are suitable for development and unconstrained by ownership. In addition, development in this location is known to be viable based on the findings of the Strategic Housing Market Assessment. Having regard to all of the above points and when considered against the alternative of less or no development, this approach is considered to be sound. Less or no development at Stone Cross would be at odds with the established national and regional planning policy identified above. It would also fail to reflect the established settlement pattern in the District, would place greater development pressures on other locations in the District and would inevitably fail to achieve the aims of sustaining and enhancing local services, providing homes in parallel with jobs, providing affordable housing and combining growth with recreation and leisure development. Overall therefore, the approach to development within this area is largely justified in line with the requirements of PPS12 as it is founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. However, in the context of our comments concerning the overall scale of housing required in the District under Policy WCS1, we consider that the housing provision identified for Stone Cross under supporting text (Figure 5 and at paragraph 6.31) to Policy WCS1 (650 dwellings) should be increased to reflect existing local housing need and the anticipated growth in households during the Core Strategy period.

I am writing as the freeholder of the property known as Inglenook and part freehold owner of the land to its rear (SLHAA ref: 388/3280) to clarify my position following the identification of the land within Wealden District Council's Proposed Submission Core Strategy as part of a Proposed Strategic Development Area (SD6) The freehold title of the land to the rear of Inglenook is divided between myself and Mr Frederick Bird. I own the ground and subsoil down to 1metre depth and Mr Bird owns the subsoil below 1 metre and airspace above 2.7 metres. Both myself and Mr Bird have no objection to the inclusion of the land within the Proposed Strategic Development Area SD6 and indeed support this as a strategic allocation. In my view, it involves a logical and entirely appropriate extension to Stone Cross that would have minimal impact on the local environment, amenity of local residents and the operation of the surrounding highway system. I also support the extension of Stone Cross itself on the basis that its existing facilities, proximity to wider services and the employment opportunities and location outside of the South downs National Park makes it a sensible option to provide for the development needs of South Wealden District.

The identification of urban extensions is supported in principle. The policy identifies 12 Strategic Development Areas, all of which vary considerably in character. Some Strategic Allocations are challengeable, particularly that under designation SD1 (Uckfield). If these sites do not come forward, the Council has indicated that the Core Strategy will need to be reviewed. However this could interrupt housing supply. A contingency plan is therefore needed.

However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:

Details of Reasons for Soundness/ Legal Compliance:
Medical Infrastructure Threatened Para 6.22 refers to the 'limited range of facilities available locally', and states 'a new GP surgery and medical centre has recently been granted planning consent in Willingdon.' This is a change from the original draft wording that the centre would be built and there is now considerable doubt whether it will ever be built at this location. Given that uncertainty the provision of medical infrastructure cannot be sound. Drainage Issues Para 6.28 states 'development will only be allowed it can be accomodated by the existing works, unless an alternative location for the treatment and discharge of waste water is implemented.' There appears to be undue reliance on this infrastructure being provided and if it and other infrastructure is not provided the whole allocation at SD4 fails. There appears no fall back position should this be the case and that will make the whole core strategy unsound in terms of numbers of dwellings to be built.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:
We object to the content of the Policy as drafted on the basis that it has not been shown to be justified, effective or consistent with national policy.

Details of Changes to be Made:

---

Details of Reasons for Soundness/ Legal Compliance:
Object to the development at Hindslands/Morning Mill and the amount of traffic generated. Over the years, after the construction of the by-pass, the traffic has steadily risen and future development will mean this will increase. The noise pollution will increase, exacerbated by Tennis week and Airbourne. The two primary schools and secondary school in the area are over-subscribed and this will get worse. I understand that there is no provision for new schools in the development. If we allow developments on this scale there will be no open spaces.

Details of Changes to be Made:
Representations on behalf of Rich Tee Ltd. RPS has been instructed by Rich Tee Ltd. to make representations to Wealden District Council on the Draft Proposed Submission Core Strategy. Policy WCS4- Strategic Development Areas. Rich Tee Ltd. object to parts of policy WCS4. The parts of the policy which relate to Hailsham (SD2: Land at East Hailsham and SD3 Land at North Hailsham), make a significant contribution to meeting the District’s housing needs over the period of the Core Strategy. In their in their current form though, these Strategic Development Areas render the Core Strategy unsound, on the grounds that they are not justified. They are not justified because they are not founded on a robust and credible evidence base and because it is not the most appropriate strategy when considered against the reasonable alternatives. Rich Tee Ltd’s. concerns about the evidence base used to justify the inclusion of SD2 and SD3 within the policy are set out below. Rich Tee Ltd. consider that it is not the most appropriate strategy when considered against reasonable alternatives, for the following reason. Rich Tee Ltd., as the Council will be aware, have been promoting land at Mill Road, Hailsham as being suitable for residential development for a number of years now. Rich Tee Ltd. made representations to this effect to the Council on the Issue and Options Paper in 2007, and the on the Spatial Development Options document in 2009. Rich Tee Ltd. have also ensured that the site has been considered as part of the Strategic Housing Land Availability Assessment (SHLAA) (site no. 216/1310), where in the assessment report it is described as available for housing, and stated that it could yield approximately 190 new dwellings. Rich Tee Ltd. has carried out an extensive range of survey work in relation to the site to demonstrate that an allocation of the site for residential development would be founded on credible and robust evidence base. This evidence base has included: - Highways Appraisal; - Technical Note on Town Centre Traffic Impact; - A Desk Study and Extended Phase 12 Habitat Survey; - Initial screening Odour Assessment and Detailed odour Assessment ; - Urban Design study including masterplan options; and, - Landscape and Visual Assessment. These studies were commissioned in order to address the issues identified relating to the area (15d- Area along Hailsham’s Far Eastern Flank) in the 2007 Issues and Options Paper. Collectively, the studies all demonstrate that the site could be developed without detriment to the site immediate surrounding and wider area. These documents have all been made available to the Local Planning Authority. It should also be re-iterated that unlike the two identified Strategic Development Areas, the site at Mill Road is in single ownership. Notwithstanding this, neither the Proposed Submission Core Strategy, nor any of the supporting documents, explain with any clarity why this site has been discounted as an option for meeting the town’s housing needs. Table 8.9 of the Sustainability Appraisal of the Core Strategy dismisses land to the south east of Hailsham as a broad location for housing due to relatively low land values, potential odour mitigation requirements, poor accessibility to Hailsham Town Centre and lack of public transport provision, all in direct contradiction to Rich Tee Ltd’s. evidence base. Without such an explanation, and in the face of compelling evidence supporting the site at Mill Road, it is considered that the Core Strategy is unsound with policy WCS4 in its current form; the inclusion of Mill Road as part of policy WCS4 is a more appropriate strategy. While the site at Mill Road will not meet the town’s housing needs on its own, it provides a more solid platform upon which a more sustainable strategy for the town can be developed, given the difficulties with the identified Strategic Development Areas. Strategic Development Areas: SD2 Land east of Hailsham. Rich Tee Ltd. object to the identification of land to the east of Hailsham as a Strategic Development Area. The proposal for the Strategic Development Area in its current form and scale would render the Core Strategy unsound on the grounds that it is not founded on a robust and credible evidence base, it is not consistent with national policy and is not the most appropriate strategy when considered against the reasonable alternatives. In general terms, it is recognised that of all the potential sites for an urban extension of Hailsham, land to the east of the town is the more sustainable in terms of proximity to the town centre and it’s services. The site is however in multiple ownerships. There is no evidence in the Submission Document or its accompanying documents to explain how in this legal context 600 homes and ancillary infrastructure envisaged can be delivered, and the site thus fails the deliverability aspect of the effective test. More specifically, there are several problems with accessing this site. Access on to Battle Road would require a significant junction to be created and could send traffic through the Town Centre unless linked to a northern relief road through the SD3 area. As set out in Rich Tee Ltd’s. objections to SD3, there is a clear absence of a robust and credible evidence base to demonstrate that such a relief road is feasible. The alternative is to release traffic directly through the town centre, and this scenario just simply has not been tested in any meaningful way. The 2007 Issues and Options Paper noted that the town centre has considerable problems of

Without such an explanation, and in the face of compelling evidence supporting the site at Mill Road, it is considered that the Core Strategy is unsound with policy WCS4 in its current form; the inclusion of Mill Road as part of policy WCS4 is a more appropriate strategy. While the site at Mill Road will not meet the town’s housing needs on its own, it provides a more solid platform upon which a more sustainable strategy for the town can be developed, given the difficulties with the identified Strategic Development Areas. Strategic Development Areas: SD2 Land east of Hailsham. Rich Tee Ltd. object to the identification of land to the east of Hailsham as a Strategic Development Area. The proposal for the Strategic Development Area in its current form and scale would render the Core Strategy unsound on the grounds that it is not founded on a robust and credible evidence base, it is not consistent with national policy and is not the most appropriate strategy when considered against the reasonable alternatives. In general terms, it is recognised that of all the potential sites for an urban extension of Hailsham, land to the east of the town is the more sustainable in terms of proximity to the town centre and it’s services. The site is however in multiple ownerships. There is no evidence in the Submission Document or its accompanying documents to explain how in this legal context 600 homes and ancillary infrastructure envisaged can be delivered, and the site thus fails the deliverability aspect of the effective test. More specifically, there are several problems with accessing this site. Access on to Battle Road would require a significant junction to be created and could send traffic through the Town Centre unless linked to a northern relief road through the SD3 area. As set out in Rich Tee Ltd’s. objections to SD3, there is a clear absence of a robust and credible evidence base to demonstrate that such a relief road is feasible. The alternative is to release traffic directly through the town centre, and this scenario just simply has not been tested in any meaningful way. The 2007 Issues and Options Paper noted that the town centre has considerable problems of
traffic congestion. Like the site at SD3 further details, costs and timings are required before it can be said with any
certainty that this Strategic Development Area can be delivered in terms of accessibility. The site is not the subject
of any specific landscape designations. The area does however provide an attractive rural setting to the town,
extending the rural area as it does close to the edge of the commercial centre. While the upper part of the site is
fairly flat and enclosed to the south, meaning there aren’t any significant views from the town over the Pevensey
Levels, the same cannot be said of the lower part of the site. The land enclosed by Battle Road and Harebeating
Lane is very exposed towards Pevensey Levels, and there are extensive views from Vicarage Lane especially
towards Herstmoncuex and High Weald. The 2007 Issues and Options Paper stated that these views need to be
maintained as intrinsic to the character of the town, as should views of St. Mary’s Church from eastern vistas
including Harebeating Lane. The 2007 Paper also noted that there are remnants of an enclosed medieval field
system (Sallions) and that any development would need to integrate these historic landscape features. These
factors all reduce the net developable area of the site and place constraints on the effective delivery of integrated
services and infrastructure, and there is no evidence to demonstrate how this can be satisfactorily addressed. It is
also noted that the site is in close proximity to Hailsham North Sewage Treatment Works The access road through
the northern part of the Strategic Development Area is used by sludge lorries, and the 2007 Issues and Options
Paper stated that the potential expansion of this area for residential use would require the resolution of the odour
problem. There is no evidence that this problem is close to resolution, thus large parts of the Strategic
Development Area could be sterilised. In terms of ecology, the site is the closest possible development option to
the Pevensey Levels Ramsar site and is within its catchment, and no evidence appears to have been presented
with the consultation documents as to how the impact of development could be successfully mitigated. Policy
WCS4 – Strategic Development Areas: SD3 land north of Hailsham Rich Tee Ltd. object to the identification of
land to the north of Hailsham as a Strategic Development Area. The proposal for the Strategic Development Area
in its current form would render the Core Strategy unsound on the grounds that it is not founded on a robust and
credible evidence base, it is not consistent with national policy and is not the most appropriate strategy when
considered against the reasonable alternatives. In general terms, while the site is not the subject of any statutory
or non statutory landscape designations, the site is relatively flat and represents a deep incursion into the open
countryside which would reduce the quality of the rural gap between Hailsham the development at Hellingly
Hospital and other surrounding settlements, to the detriment of the wider area. The Hailsham and Hellingly
Masterplan notes that development to the north of Hailsham, would elongate the town and result in a less
accessible development which is likely to result in more car journeys. If the Hailsham and Hellingly Master Plan
observes that the land to the east of Battle Road is considered to be more sustainable in view of the proximity of
the site to the town centre and its services, it follows that this site is less sustainable than the Mill Road site as
well. The SHLAA summary of the part of the Strategic Development Area to the east of the Cuckoo Trail
acknowledges that care will have to be taken to avoid urban coalescence between the two settlements. More
specifically, Rich Tee Ltd. have concerns about the impact of the scale of development proposed on the local
highway network. It has long been acknowledged that large scale development in this location would require a
relief road/access road to the A22 providing relief for the existing A271. The 2007 Issues and Option Paper noted
that the Boship roundabout is approaching capacity, and that various alignment options for a relief road had been
considered at that stage. Some unspecified options, the document noted, had negative impacts on the Cuckmere
valley in terms of increased flood risk and impact on habitat, and another option would have resulted in the
severance of the school and the village hall from the rest of Hellingly village. Four years on from the publication of
this document, it appears that little progress has been made in addressing the issue as to how development on the
scale proposed in this location can be delivered without detriment to the existing highway network. It is noted from
the Infrastructure Delivery Plan (BP11) that that these issues are identified as critical requirements for the growth
of Hailsham and Hellingly, and that further assessments are required to physical and financial deliverability and
emphasises that development is contingent on the delivery of this infrastructure. It is understood that the Strategic
Development Area comprises two separate sites either side of Park Road, both of which are in different
ownerships, which will only complicate the delivery of the required highway improvements. This emphasises the
practical problems in delivering infrastructure which would be a key part of this particular Strategic Development
Area. Until the feasibility of the highway improvements required has been fully established, it cannot be said that
the Core Strategy has been founded on a robust and credible evidence base, and it is considered premature to
rely on this site to the extent that the Core Strategy does, in order to deliver the towns housing needs, on the basis
of the current evidence base. The 2007 Issues and Options Paper also highlighted several issues in relation to
Landscape and Biodiversity that have not been satisfactorily addressed in the Proposed Submission Core Strategy
and the supporting documentation. It was noted that the setting of the Cuckmere River limits the scale of
expansion to the north. Figure 7 of the proposed Submission Core Strategy gives no indication as to how this has
been addressed. In terms of cultural heritage, no evidence has been presented which shows how the development
would affect the setting of Hellingly, most of which is in a conservation area, and which contains a number of listed
buildings. Paragraph 15.12 of the Green Infrastructure Background Paper (BP6) emphasises the importance of
conserving and where possible improving the setting of Wealden’s designated cultural heritage including
landscape improvements. How this will be achieved in this case has not been demonstrated.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

Separation of Polegate and Willingdon Para 2.2 states that 'each settlement has its own unique characteristics and functions, depending on its location and historical influences.' This wording follows on from the wording in Chapter 17 of the Non Statutory Wealden Local Plan. However the Development of the SD4 area could either force two settlements (Willingdon and Polgate) into one, thus destroying the unique characteristics referred to or result in a remote settlement in Willingdon if the important green frontage to the A2270 is to be preserved. The vital green gap on that side of the A2270 between the built up areas of Willindon and Polegate is likely to be lost. Para 7.23 states 'in order to maximize the benefits, policy places the emphasis on the creation and maintenance of linkages between green spaces.' Changing the Character of Willingdon Para 2.21 states 'the strategy is not seeking to change the character of Wealden.' It is argued that development of the SD4 area will either force two settlements (the village of Willingdon and the town of Polegate) into one thus changing the character of the area or alternatively a remote and separate settlement will be created. It could also lead to a change in the character of Willingdon with encouragement of extensive business use where none currently exists. Community facilities are proposed in an area sufficiently remote from most of the village to need transport to access it. Development of Recreational Land Planning Policy Guidance 17: Planning for open space, sport and recreation para 17.10 states 'existing open space, sports and recreational buildings and land should not be built on unless an assessment has been undertaken which has clearly shown the open space or the buildings and land to be surplus to requirements.' The Core Strategy refers frequently to the lack of suitable recreational facilities so even if an assessment had been carried out the land is not surplus, so the proposal to develop existing land (Hindslands) (SD4) is inconsistent. Chapter 17 paragraphy 17.1 of the Wealden non statutory plan states that "Polegate and Willingdon are adjacent but distinctly different communities located at the foot of the South Downs to the north of Eastbourne." However, one outcome of the proposed Core Strategy is that the two settlements could merge for the first time on the east side of the A2270. Traffic Congestion Para 6.23 states 'the A2270 running through the urban area is still heavily congested and traffic flows on the strategic road network are very high.' Numerous references are made throughout the strategy to the need for infrastructure, and 5.16 states 'development at SD4 will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in South Wealden.' The impact of this number of additional vehicles will have a very bad effect on the already heavily congested road network of the A2270 and surrounding roads in Lower Willingdon. With the very limited changes proposed to junctions the policy is unsound and needs further examination. It is not understood how a quality bus service would improve matters. These proposals were not properly examined by the District Council because it was only a thte last moment that a decision was made to promote SD4 and the very late arrival of the SWETS document. Concerns about School Places Concern is expressed about whether adequate provision has been made for additional places at the primary and secondary schools in the local vicinity of SD4. Extensions to the existing school which are in heavily built up areas with heavy congestion on the roads is not the answer. The strategy appears to be unsound.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
The exit from the proposed Ridgewood Farm (346/1410) development has not been mentioned. Out on to an already busy bypass or out on to Lewes Road which would be difficult.

Details of Reasons for Soundess/ Legal Complaince:
I am writing to lodge my objection to the proposals in the Wealden Development Plan to allocate housing development for land south of the railway line adjacent to Eastbourne Borough boundary. Many of my constituents have contacted me on this matter. They are concerned about the effect of building around the green belt that borders on the Borough boundary. In addition to their desire to protect the green belt, they are also worried about the effect on local services in Eastbourne. I share their concern that there is already pressure on existing schools and health services in Eastbourne. The road and public transport infrastructure is already stretched. In view of the overwhelming concerns and objections from my constituents I urge that any reference to developments on the green belt around the Eastbourne Borough boundary be removed.

Details of Reasons for Soundess/ Legal Complaince:
Reliance of SD7 and SD5 will result in the coalescence of Polegate and Stone Cross to the detriment of maintaining the existing hierarchy and pattern and character of settlements. It would lead to a significant and irreversible change to the character of Wealden contrary to Core Strategy objectives (see for example 2.4, 2.7, 2.21 and 3.4 WCS)

Details of Changes to be Made:
Delete Stone Cross North from the town/ settlement list or amend to exclude the area beyond the existing western extreme of the settlement as defined on the Key Diagram. Include SD13 Land at South Hailsham (centred on Oaklands Farm/ Brickfields Ersham Road)

Details of Reasons for Soundess/ Legal Complaince:
The delivery of only 160 dwellings to Hethfield at Land to the north west is not sufficient to meet the Heathfield area strategy, and therefore the delivery of the overall strategy of the Document. it will not address the high housing demand for both market and affordable housing. There is no justification within the evidence base to limit growth in a town that is capable of accommodating sustainable growth despite being surrounded by AONB.
Details of Changes to be Made:
I nclude land at Tilsmore, Heathfield as a strategic development site. Implementation of this site could help to meet the acute need for housing in the town.

Details of Reasons for Soundess/ Legal Complaince:
Whilst it is clear that the Council have aspirations for the development of the current Council Offices site at Pine Grove, but it is not accepted that the redevelopment of this site can be considered to be of a scale and importance to warrant its inclusion within this policy. Moreover, whilst not specifically mentioned in this policy, the level of housing growth that is envisaged on this site is not supported by any detailed capacity study or indeed an assessment against the aims and objectives of the town Council as set out in the vision document, Top of the Weald which provides support for an employment centred re-use of the site to counter the loss of employment that will be created by the closure of the Council Offices. As stated above, my clients control a large area of land to the south side of Crowborough which is not actively farmed and which is therefore available for development within the current plan period. We would therefore welcome the opportunity to meet with the council to discuss how this site might fit into the Council's long term aims and objectives
Details of Changes to be Made:
Policy should be worded to accord with Town Council's vision document and provide for emploeyment led developments
WCS4 identifies the Strategic Development Areas that will deliver the new allocations to meet the overall housing requirements. WCS4 identifies 12 No. Strategic Development Areas (SD1 – SD12) to meet the overall housing growth including ‘SD11: Land at North West Heathfield’. The growth locations have primarily been based on the settlement hierarchy as identified in Section 7 of BP1: Development of the Proposed Submission Core Strategy and the directions of growth as tested in Section 8 of BP10: Sustainability Appraisal. The SHLAA (March 2010) and SHLAA Addendum (October 2010) has identified suitable sites in each of the 12 No. growth locations (SD1 – SD12) and demonstrates that there is sufficient supply of land in each location to meet the growth requirements. In North West Heathfield, the SHLAA has found 5 No. sites which could potentially accommodate 184 dwellings. Of these 5 No. sites, Summertree Estates owns 1 No. totalling 130 dwellings (based on SHLAA assumptions) and has legal control over 1 No. totalling 6 dwellings (based on SHLAA assumptions), refer to Table 2. Table 2: Suitable Sites Identified in SHLAA in North West Heathfield Site Name SHLAA Ref Capacity Ownership Land at the rear of Reynards, Woodhatch and rear of Police Station, High Street 155/1210 130 Summertree Estates Ltd Holmhurst, High Street 526/1210 6 Private Ownership (under legal control of Summertree Estates Ltd) Sub total 136 Land at Tilsmore Nurseries, off Nursery Way 307/1210 21 Seven equal Shareholders Land to the Rear of Rothershaw, High Street 525/1210 21 Private Ownership Lavender Cottage, High Street 519/1210 6 Private Ownership Sub Total 48 TOTAL 184 With regards to Heathfield, paragraph 8.28 – 8.32 of BP2: Managing the Delivery of Housing identifies a significant level of existing and future ‘need’ and concludes that ‘some housing growth is required in Heathfield to help support local services and facilities’. This includes the need for affordable homes. As such, Heathfield has been identified to deliver 452 dwellings in the plan period. WCS2 identifies 292 units are already committed and the remaining 160 dwellings are proposed to be new greenfield allocations in North West Heathfield. It should be noted that the 292 dwellings committed are all considered ‘windfall development’ and demonstrates the shortcoming of WDC’s approach in relying on windfall development to justify housing completions. Notwithstanding our concerns relating to the lack of evidence supporting the ‘committed’ units, we support the strategy for Heathfield in terms of direction of growth (i.e. North West). However, we consider the quantum of new allocations (160 dwellings) should be reviewed in the light of the lack of demonstrable evidence with regards to the committed sites and the potential failure to deliver these ‘windfall developments’. Any review would need to be assessed against the sensitive environmental considerations and sustainability credentials of Heathfield in the context of the wider District. The Sustainability Appraisal (BP10) provides a comprehensive appraisal of the overall strategy and provides a clear audit trail of the alternative options tested at the Spatial Development Options stage (June 2009) for the District and Heathfield. Table 1.1 (pages 4-5) of BP10: Sustainability Appraisal identifies the conclusions made by WDC on the previous alternative options. Table 1.1. demonstrates that the favoured Strategy comprises parts of the previous six spatial options already tested and is considered to represent the most suitable balance when all matters are taken into consideration. WDC’s justification for this route is further explored in paragraph 8.40 and Table 8.8 (p92) of BP10: Sustainability Appraisal, which identifies three particular growth scenarios and states, in part: ‘Table 8.8 indicates all three options for the strategic spatial distribution of housing and the reason for selecting options.’ Section 8 of BP10: Sustainability Appraisal assesses the broad locations of development within the main settlements. With regards to Heathfield, Table 8.3 (p68) of BP10: Sustainability Appraisal tested three potential alternative locations (as identified in Fig. 8.2). At that stage, the SA assessed these locations in Heathfield which the original SHLAA (March 2010) had found to be suitable as sites to accommodate potential growth. Subsequently, the SHLAA Addendum (October 2010), found that the area to West of Heathfield (SHLAA Ref. 149/1210) was no longer suitable for development based on a number of highway and AONB impact related issues. Section 3.3. (pp 27–29) of the Landscape Strategy (February 2009) assessed potential development areas in Heathfield in connection with the impact of general growth on the wider AONB and landscape setting. The strategy was prepared in the early stages of the Core Strategy and preceded the findings of the SHLAA. Nevertheless, the Landscape Strategy identified that: North Heathfield: § ‘Future development should be well designed, with good linkages to the town centre and in keeping with the local vernacular’ (para 3.3.2) § ‘The open slopes to the North East of the town afford long views across the High Weald Landscape to the Mayfield ridge in the North. (para 3.3.3) § ‘The capacity of the Tilsmore Wood Area is limited to areas of clearing at the edge of the urban area’ (para 3.3.3) East Heathfield: § ‘There is no scope for development within the park (to the East) which needs to be managed and protected’ (para 3.3.4) South Heathfield: § ‘The capacity of this area is constrained by steep topography and the need to retain the Ghyll
Woodland’ (para. 3.3.5) West Heathfield: § ‘There are urban fringe influences and areas of degraded landscape where capacity for development would rely on the conservation and enhancement in accordance with AONB policy’ (para 3.3.6) The Landscape Strategy identifies all the possible development locations in Heathfield will carry some landscape impact, albeit the Landscape Strategy does recognise that some areas would have significant impact and would therefore be inappropriate for growth (i.e. North East and East Heathfield). Page 69 of BP10: Sustainability Appraisal acknowledges that greenfield/AONB release is required to allow development to take place in Heathfield to meet the growth requirements, and we support this recognition. The SHLAA (March 2010) and SHLAA Addendum (October 2010), assessed the suitability of ‘the Site’ with the benefit of the conclusions of the Landscape Strategy and confirmed that ‘development would have limited impact on the wider landscape of the AONB’. It is therefore considered in terms of Landscape impact, WDC has assessed all the potential development options and concluded that on balance, North West Heathfield remains the most appropriate, and deliverable location for growth. Notwithstanding the above, Table 8.3 (p68) of BP10: Sustainability Appraisal clearly assesses the alternative potential growth locations for Heathfield and demonstrates that the scale of development proposed at Heathfield, and the preferred direction of growth, was acceptable and therefore the strategy for Heathfield is the most suitable when assessed against all the reasonable alternatives i.e. it is ‘justified’. Table 8.9 (p94) of BP10: Sustainability Appraisal, concludes on the potential growth options for Heathfield. It identifies that of the available areas, North West Heathfield was the most suitable direction to locate growth. An extract is provided below. Extract of Table 8.9 of BP10: Sustainability Appraisal Broad Locations for Heathfield North East Not taken forward – option raises concerns over its physical dislocation from the town centre and its ability to incorporate development into the Heathfield community. Further concern with this option over the possible adverse environmental impacts on the SSSI to the South. West Not taken forward – option is well located in relation to the town centre providing opportunities for good connectivity. The option offers relatively minimal landscape impacts. Transport implications were subsequently assessed and the area deemed unsuitable. North West Selected – option is well located in relation to the town centre providing the opportunities for good connectivity. The option offers relatively minimal landscape impacts. The Strategy in Heathfield is also ‘effective’ as the direction of growth is considered deliverable. This is based on the suitability of the sites found in the SHLAA and that Summertree Estates could deliver the growth in a comprehensive scheme and accords with paragraph 21 of the ‘Learning From Experience’ Guidance, which states: ‘in some instances the weakness derives from a failure to identify sufficient and/or appropriate land for development’. The Strategy is both ‘deliverable’ and ‘flexible’ as there are no overriding environmental or infrastructure constraints present in Heathfield that would require contingency sites. Therefore growth of this scale can be achieved in Heathfield from this location. This is explored further below.

Details of Changes to be Made:
INFRASTRUCTURE The local roads and traffic infrastructure is already running to its maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Cophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirm how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority’s responsibility. I refer to pages 69 and 70 of the East Sussex County Council Highways' Report dated 10 September 2010 for information of their findings, which is relevant to my submissions above. COPHALL ROUNDABOUT SENSITIVITY TEST 3.1 Using the Dittons Road trip rates, the development traffic from 520 dwellings on the PW1 site has been calculated as follows: Table 3.1: 520 Dwellings Trip Rates & Trip Generations Time Period Trip Rates Trip Generations AM Peak Arrive Depart Two way Arrive Depart Two way (0800 - 0900) 0.12 0.46 0.58 62 239 301 The data shows an increase of about 301 trips per hour, 5,016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain, this was not revealed until I questioned this at a cabinet meeting. PUBLIC TRANSPORT In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. PROPOSED SUBMISSION CORE STRATEGY OPTION CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindslands should not be developed and should remain as a green area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. PROPOSED SUBMISSION CORE STRATEGY OPTION CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindslands should not be developed and should remain as a green area.
area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindsland / Mornings Mill Farm. In addition, in the Wealden non-statutory local plan consultation in 2003, we presented a petition signed by 1000 Willingdon households to Wealden District Council. Hindsland / Mornings Mill Farm is not suitable to build extra 1000 new homes. I am pleased to say that the Council and Councillors had made a very sensible decision at the time, 8 years on, there are no changes or improvements within the infrastructure. We are continually facing shortage of secondary school places, primary school places, nursery places and facilities including sports and play facilities, amenity space, parking places an indoor sports hall and swimming pool and yet this Council considers that these will be provided, how? There is no mention of any sustainable or plausible proposal. GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green site between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues ignored

<td>M J</td>
<td>Mr Pickup</td>
<td>3.2 Crowborough is identified by the Council as a &quot;top tier&quot; District Centre within Wealden District which in strategic and locational terms is relatively close to two of the Council's three highest order &quot;Primary Centres&quot; at Tunbridge Wells and Tonbridge to the north of the District. The Council suggests however, tha the potential for future housing land release at Crowborough is limited, due mainly to landscape constraints. 3.3 No satisfactory evidence has been produced by the Council to show that Crowborough is any more constrained than development at other locations more favoured by the Council for strategic housing development, such as at Uckfield (within its historic flood risk problems and traffic congestion in its town centre) or within the Hailsham/Polegate/Stone Cross area (where there are wast water treatment constraints that could affect the high protected Pevensey Levels area within the southern part of the district). As it stands at present and for no sound reason, new housing provision would be heavily biased towards meeting housing requirements in the central and southern parts of the District rather than in the northern part, where demand is high as reflected by local house prices. 3.4 There is no sound evidence that the Crowborough area can only accommodate up to 300 new dwellings nor is any sound reason given for delaying such housing development until the middle and end part of the PSCS DPD period. In particular, this has major implications for the delivery of affordable housing, for which there is a recognised need in Crowborough. this would be limited to just 105 additional affordable dwellings between 2015 - 2030 (assuming 35% delivery within the strategic development areas identified by the Council) 3.5 he Council has provided no satisfactory explanation as to what is meant by a &quot;Strategic Development Area&quot; (either in relation to the settlement hierarchy or in terms of the size of potential housing sites or the number of houses). Furthermore, not only is the purposes of identifying such areas unclear, but also there are clear inconsistencies in the Council's overall identification of potential strategic development areas compared to other areas within the District (e.g. Horam) where a significant number of dwellings might be also delivered, but without SDA status. 3.6 The identification of 12 SDAs in draft Policy WCS4 also prejudices any proper or detailed examination and assessment of other potentially suitable housing land at Crowborough (and elsewhere) at the SS and DSA DPD stage. these representations have in particular, demonstrated that the Council's identification of SDAs at Crowborough (the subject of SD8 - SD10) are not based on any creditable or sound evidence, nor do they necessarily represent the best locations or land available for future housing development (contrary to national planning policy contained in PPS12, paragraph 4.38). The Council's contingency site, which although shown in figure 9 and on the key Diagram of the PSCS DPD is not referred to in any draft Core Strategy policy. In addition it is allocated for another purpose within the Non-Statutory Local Plan and is wholly within the HWAOBN. 3.7 The identification of SDAs in draft Policy WCS4 means that to be properly tested at the EIP, there would need to be a much wider consideration of all suitable candidate sites such as the land at Alderbrook, which is allocated for housing development in the Non-Statutory Local Plan (Policy CR4) and is within the Crowborough development boundary. This is immediately available to provide approximately 80 dwellings (24 affordable) and would not have to be delayed until either the middle or the end of the plan period unlike SD8, SD9 or SD10. 3.8 It must be highly questionable whether it would be appropriate to examine and compare the SDA sites with other candidate sites at the PSCS DPD EIP. It is also highly questionable as to whether the Council's proposed SS DPD would serve any purpose other than to merely identify site boundaries or provide 'development briefs' for the 12 DSAs listed in draft Policy WSC4. If so, it is questionable as to the purpose of the Council's proposed SS DPD as the site boundaries could be identified in the Council's proposed DSA DPD and development briefs could be provided in the form of Supplementary Planning Documents. 3.9 The Council's proposed Spatial Strategy Policy is a fundamental part of the PSCS DPD and if this is found to be fundamentally flawed for the cumulative reasons put forward in these representations, then the document would be intrinsically unsound. Rather than identifying suitable settlements and broad numbers for new housing delivery in each based upon the Council's proposed settlement hierarchy, the Council has largely ignored this and has instead identified SDAs at specif locations, thereby significantly restricting the scope of the Council's proposed SS DPD which would appear to be limited to merely defining site boundaries, rather than providing robust policy based on a full and proper assessment of all suitable and available candidate sites. Eight Appendices have been submitted, but are not attached, and these are available to view at the Council Offices by request.</td>

</tbody>
</table>

#### Details of Changes to be Made:

3.10 Indeed, the PSCS DPD is so defective that is difficult to see how it could be reasonably altered in view of the
fundamental nature of these representations and the only potential way forward in this situation would be for the Council to withdraw the document in order to either provide a detailed evidence base for each of its proposed SDAs or alternatively and more appropriately, for this to form part of a later SS DPD (if still relevant) or a DSA DPD, once the core strategy has been adopted. This would then provide a proper opportunity to assess in detail all the housing sites proposed by the Council together with other candidate sites having regard to the overall housing requirement and the hierarchy of settlements as set out in the Core Strategy DPD.
I write to register my objections to the Polegate and Willingdon and Stone Cross area strategy in the Core Strategy on the basis that it is not sound nor justified for the following reasons: INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain. This was not revealed until Cllr Stephen Shing questioned this at a cabinet meeting. PUBLIC TRANSPORT In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. The local roads and traffic infrastructure is already running to it’s maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Cophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirm how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road infrastructure can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority’s responsibility. The report does not even address how this traffic problem will be address at present or in the future. The increase of about 301 trips per hour, 5,016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. PROPOSED SUBMISSION CORE STRATEGY OPTION CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindslands should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from...
Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindslands / Mornings Mill Farm. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of it’s full capacity. Again these essential facilities continue remain outstanding and the issues ignored GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green lung between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. I trust that the above representations will be placed on record accordingly.

Details of Changes to be Made:
NUMBER OF ALLOCATED HOUSING CONTRADICTS THE AMOUNT WHICH IS CLAIMED TO EVEN BE SUSTAINABLE. It is very disappointing that despite repeatedly asked questions at Wealden District Council’s full council meetings and committees regarding the proposed 1265 new houses for this area, Wealden District Council’s position is that it is waiting for the outcome of the Honey Farm Appeal where the proposal is for up to 520 houses. So far, there has never been any mention of any alternative plans should the Council lose the appeal. The Council appears to be confident in defending this appeal, despite also contradicting itself with by using the exact same reasons in the rejection of Honey Farm at Committee to justify and support those proposals within the Core Strategy for the Polegate and Willingdon area, for a site which is only down the road where the same problems would apply. Wealden District Council clearly has no plan B and if Wealden District Council cannot successfully defend this appeal, Willingdon and Polegate will automatic be lumbered with 1785 extra houses. For this reason alone, the Proposed Submission Document is irresponsible and misleading the communities. In addition reason as below:

- INFRASTRUCTURE - SCHOOL AND HEALTH FACILITIES: As it stands, the local schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain. This was not revealed until Councillor Stephen Shing questioned this at a cabinet meeting.

- PUBLIC TRANSPORT: In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable. For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. The local roads and traffic infrastructure is already running to it’s maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Cophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirm how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways, which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority’s responsibility. The report does not even address how this traffic problem will be address at present or in the future. The increase of about 301 trips per hour, 5,016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40.
Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. PROPOSED SUBMISSION CORE STRATEGY OPTION
CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindsland should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindsland / Mornings Mill Farm. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues ignored GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green lung between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. I trust that the above representations will be placed on record accordingly.

Details of Reasons for Soundess/ Legal Compliance:

Rydon supports the identification of 'Land at East and South East of Stone Cross' under SD6 as an area critical to the delivery of the overall strategy. Rydon has a land interest to the south of Rattle Road which we can confirm meets the test of being 'suitable, achievable and available' for development in WDC's SHLAA and is therefore considered deliverable.

Details of Changes to be Made:
I write to register my objections to the Polegate and Willingdon and Stone Cross area strategy in the above document on the basis that it is not sound or justified for the following reasons: NUMBER OF ALLOCATED HOUSING CONTRADICTS THE AMOUNT WHICH IS CLAIMED TO EVEN BE SUSTAINABLE It is very disappointing that despite repeatedly asked questions at Wealden District Council’s full council meetings and committees regarding the proposed 1265 new houses for this area, Wealden District Council’s position is that it is waiting for the outcome of the Honey Farm Appeal where the proposal is for up to 520 houses. So far, there has never been any mention of any alternative plans should the Council lose the appeal. The Council appears to be confident in defending this appeal, despite also contradicting itself with by using the exact same reasons in the rejection of Honey Farm at Committee to justify and support those proposals within the Core Strategy for the Polegate and Willingdon area, for a site which is only down the road where the same problems would apply. Wealden District Council clearly has no plan B and if Wealden District Council cannot successfully defend this appeal, Willingdon and Polegate will automatic be lumbered with 1785 extra houses. For this reason alone, the Proposed Submission Document is irresponsible and misleading the communities. In addition reason as below; INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is simply misleading that the new medical center is part of the Infrastructure when the funding is so uncertain. This was not mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills Farm needs to address this issue addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways, which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority’s responsibility. The report does not even address how this traffic problem will be address at present or in the future. The increase of about 301 trips per hour, 5,016 cars per
minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, 
currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 
Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to 
enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. 
The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the 
site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, 
which this Council has failed to consider. PROPOSED SUBMISSION CORE STRATEGY OPTION 
CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to 
Wealden District Council and the majority of their views was that Hindsland should not be developed and should 
remain as a green area and recreational ground. However, Wealden District Council and other groups within the 
council decided not to accept their consultation slips and their views. At the same time, Wealden District Council 
received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon 
residents were ignored, as result this seems to have controlled the outcome. Most members of this Council 
opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that 
apply to Hindsland / Mornings Mill Farm. WATER AND SEWAGE On many occasions, our group has submitted 
that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have 
been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers 
are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues 
ignored GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green lung 
between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & 
Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of 
the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. 
I trust that the above representations will be placed on record accordingly.

Details of Changes to be Made:
Our client has been engaged in discussions with the Council regarding the suitability of this redundant land for development for some time, and has previously submitted representations promoting the site through local plan reviews, and more recently, through the emerging Local Development Framework. In August 2009 King Sturge submitted technical information in support of our submission to the Strategic Housing Land Availability Assessment and representations were made to the Core Strategy Spatial Development Options Consultation Document (July 2009). We support Wealden District Council’s identification of land to the south of Polegate and east of Willingdon as an urban extension for residential, employment, leisure, recreation and community uses (Strategic Development Area 4 in Policy WCS4). Considerable background work and research has been undertaken by the Council in preparing the submission draft of the Core Strategy and we consider the Council have a sound evidence base to support the allocation. We consider this area has significant advantages compared to other locations in the Polegate area, to accommodate future development needs: · This area is well located in relation to existing development at Polegate and Willingdon, and it would form a natural extension. In particular, the area is well related to Polegate town centre (with its facilities as well as the railway station) which is within easy walking distance. There is the opportunity to create links to the town centre as well as other parts of the existing built-up area. The area is well served by existing bus services on Eastbourne Road, as well as the local cycle network. This complies with Planning Policy Statement 3 (Housing) which states that housing developments should be in suitable locations which offer a good range of community facilities and good access to jobs, key services and infrastructure. This should be achieved by making effective use of land and existing infrastructure thus contributing to the achievement of sustainable development. · In terms of potential visual impact on the AONB, including the newly created South Downs National Park, this area has significant advantages compared to other potential locations elsewhere in the Polegate area. · The area is of sufficient size to meet the needs for development in the Polegate area during the plan period. · There are no significant constraints to the development of the area in terms of ecology, landscape features or flooding. · The area benefits from the potential to secure vehicular access from Eastbourne Road as well as from other parts of the built-up area of Polegate that lie immediately adjacent. The area is available for development, and offers the opportunity for phased development.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

4.1 We support the identification of the North Hailsham SDA in policy WCS4 Strategic Development Areas. However, further certainty needs to be included within the policy to ensure that the housing strategy is effective, flexible and deliverable. 4.2 The North Hailsham SDA includes two sites that were found “suitable” for the provision of housing in the SHLAA, the land at the east of the North Hailsham urban extension (site reference 243/1310), which is the subject of this representation, and land at the west of the North Hailsham urban extension (site reference 240/1310). 4.3 In line with the guidance in PPS12 the Core Strategy can, more definitively, allocate these strategic sites for development, as they are central to the achievement of the council’s spatial strategy. The site areas of the SDAs are evident and there is no need for further consideration in the Site Allocation DPD. 4.4 In order to ensure that sites within the SDAs have regard to each other and achieve the requirements outlined in the Core Strategy, the policy should require that frameworks for the delivery of the SDAs should be agreed between the interested parties and council. Not only will this help secure the delivery of the SDAs in a timely manner but it provides greater opportunity for effective and focussed community involvement in drawing up the frameworks - the Site Allocation DPD will not facilitate this level of involvement. The following text should be added to policy WCS4: “The following strategic development areas are the locations that are considered to be critical to the delivery of the overall strategy. Frameworks for the delivery of the strategic development areas will be prepared to ensure sites within them can be delivered independently and in a comprehensive manner ...”

Details of Reasons for Soundess/ Legal Complaince:
FULL REPRESENTATIONS ATTACHED In essence, these representations support proposed Policy WCS4 and Strategic Development Area SD2 in the Draft Core Strategy - in that it proposes strategic housing growth in the east part of Hailsham. The Amberstone Nursery Site, Magham Road, Hailsham which has a SLHAA reference: 128/1310 falls within the proposed east hailsham housing growth area. Notwithstanding, these representations object to the phased release of sites within SD2, and disagree with the Council's view that these sites could not be released before 2017.

Details of Changes to be Made:
FULL REPRESENTATIONS ATTACHED Of the sites shown in SD2, there are 4 potential housing development sites: 128/1310 (Amberstone Nursery) 523/1310 (Land adjacent to Amberstone Nursery) 215/1310 (Poplar Cottage Farm) 134/1310 (Land North of Harebeating Lane) It is our view that these four sites could be considered to be released ahead of those others set out in SD2 and that Amberstone Nursery could come forward first, without being held back until 2017.

Details of Reasons for Soundess/ Legal Complaince:

Details of Changes to be Made:
Core Strategy Policy WCS4 to be amended by SD12 to change from 120 to between 220 - 250 dwellings as set out in detail in the Bell Cornwall Supporting Statement.
Details of Reasons for Soundness/ Legal Complaince:
We object to the council’s identification of SD1 within policy WCS4. Many of the arguments that the council seems to have applied in identifying land to the west of Uckfield, are the same as those that were used to justify refusing the Downlands site to the north east of Uckfield. The site identified within SD1 is highly exposed in landscape terms, indeed the background evidence for the Core Strategy, particularly the Landscape Study identifies that only a small element of the site is developable. For the Council to suddenly ignore this supporting evidence seems somewhat perverse. Indeed, the same document identifies that an element of the Downlands site is similarly capable of development, yet the council are proposing a Core Strategy which completely contradicts and ignores this evidence. The council appear to accept the desperate need for housing and indeed the need for housing at Uckfield, which we agree is a suitable location for development, yet rely on the previous appeal decision for the Downlands site to now ignore it, even though many of the arguments against Downlands coming forward would apply equally well to SD1 (land west of Uckfield). We also question the council’s identification of the site within SD1 on the basis that as paragraph 6.11 identifies the “allocation of land is subject to the provision of a suitable access and a number of other factors to be addressed in the relevant Site Allocation DPD”. Paragraph 4.6 of PPS12 confirms that “Core strategies may allocate strategic sites for development. These should be those sites considered central to achievement of the strategy”. PPS 12 goes onto confirm that Core strategies must be; • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. It is obvious on the basis that the “allocation of land is subject to the provision of a suitable access” that the identification of SD1 is not founded on a robust or credible evidence base, with one of the fundamental principles of allocating a site for development; access still to be determined. PPS 12 paragraph 4.45 goes onto state that “Core Strategies should show how the vision, objectives and strategy for the area will be delivered and by whom, and when. This includes making it clear how infrastructure which is needed to support the strategy will be provided and ensuring that what is in the plan is consistent with other relevant plans and strategies relating to adjoining areas”. For those reasons above this is not the case with SD1, however, land at Downlands achieves all of the above and is therefore a clear and obvious alternative to SD1. Moreover, land identified within SD1 is distant from the services and facilities of the town centre and as a consequence, the potential for walking and cycling is limited. In these circumstances development in this location is heavily car dependent which is unsustainable and contrary to national guidance. Development in this location would have a material impact on town centre traffic congestion and safety which is already recognised to be a material problem and one which has not been resolved.

Details of Changes to be Made:
We would suggest that flexibility as suggested within paragraph 4.14 and 4.46 of PPS 12 is identified within the document and that land at Downlands is considered as an alternative to SD1, or at the very least as a contingency should last west of Uckfield fail to be deliverable.
Details of Reasons for Soundess/ Legal Complaince:
Planning Policy Guadance 217: Planning for open space, sport and recreation 17.10 states ’existing open space, sports and recreational buildings and land should not be built on unless an assessment has been undertaken which has clearly shown the open space or the buildings and land to be surplus to requirements.’ The Core Strategy refers frequently to the lack of suitable recreational facilities, so the plan to build on an existing on (SD4) is inconsistent.

Details of Changes to be Made:
Development of SD4 area will force Willingdon and Polegate into one destroying the unique characteristics of each area as acknowledged in paragraphy 2.2. and WCS4 + 6.31(1) and WCS4 6.32(2) and WCS4 + 6.31(3)
The SWETS Report indicates that the north of Polegate location does not need additional transport infrastructure. The broad location south of Polegate / east of Willingdon was included and assessed in detail. The Polegate Bypass was opened in 2002. The Polegate Bypass has changed the landscape character of the land south of the bypass. Mounding and planting have created an enclosed area which is not easily visible from the surrounding countryside. In the decade since the bypass was completed, the land has become well-screened and more owned and accessible Coombe Hill. The impact on the views from the setting of the National Park would be negligible; the impact of the south of Polegate / east of Willingdon over the alternative location north of Polegate. It states only that the Sustainability Appraisal ‘favoured’ the former. 7. the south of Polegate / east of Willingdon location needs to be compared with the alternative north of Polegate location in terms of: a. the preference of local opinion b. the effect on local, and nationally important, landscape c. the traffic impact. Local Opinion 8. The Polegate Town Masterplan supports the north of Polegate location. The Background Paper ‘Summary of Town Masterplanning documents’ at pp15-17, Polegate Masterplan, states (para 6.10): Polegate Town Council supports the ‘suitable’ sites identified in the SHLAA with the proviso that Hindslands Fields Eastbourne Road should only be considered for the provision of a new educational facility and not housing. Future development should only take place south of the A27 Bypass and should include a good mix of dwellings and should be of appropriate design to fit in with the existing character of the area.

1. The Core Strategy's proposal for a Broad Location south of Polegate and east of Willingdon, shown in Figure 8 and discussed at paragraphs 6.30-6.31, is not sound. 2. The broad housing locations shown in the Draft Core Strategy in October 2010 were (a) to the north of Polegate and (b) to the south of Polegate and east of Willingdon. It was indicated then that no choice between them was as yet possible. 3. The Sustainability Appraisal of the Plan Alternatives sets out the findings on the two broad locations in the summary table at p96, under ‘Broad Locations Polegate’. Both ‘North’ and ‘South Polegate and East Willingdon’ are listed as ‘selected’. 4. However, the Submitted Core Strategy approved for consultation in December 2010, the only option offered at Polegate as a broad location is the land south of Polegate and east of Willingdon (Hindslands and Mornings Mill). 5. The Sustainability Assessment (Background Paper 5) at pp39-41 analyses both the broad locations against a list of objectives the summary table (at p96) demonstrates that both perform sufficiently well to meet the aims of the Strategy. A detailed response on the Sustainability Assessment entries for Polegate broad locations is attached at Appendix 1. 6. The Core Strategy at para 6.30 does not give adequate reasons, or justify, the choice of the broad location south of Polegate / east of Willingdon over the alternative location north of Polegate. It states only that the Sustainability Appraisal ‘favoured’ the former. 7. the south of Polegate / east of Willingdon location needs to be compared with the alternative north of Polegate location in terms of: a. the preference of local opinion b. the effect on local, and nationally important, landscape c. the traffic impact. Local Opinion 8. The Polegate Town Masterplan supports the north of Polegate location. The Background Paper ‘Summary of Town Masterplanning documents’ at pp15-17, Polegate Masterplan, states (para 6.10): Polegate Town Council supports the ‘suitable’ sites identified in the SHLAA with the proviso that Hindslands Fields Eastbourne Road should only be considered for the provision of a new educational facility and not housing.

Comparison of impacts on local and national important landscape. 10. The landscape impact of the north of Polegate location would be less than that of the south of Polegate / east of Willingdon alternative. It would be out of view of the South Downs; whereas the south of Polegate / east of Willingdon location would be highly visible from the publicly-owned and accessible Coombe Hill. The impact on the views from and setting of the National Park would be negligible; the impact of the south of Polegate / east of Willingdon location on these views and settings would be large. 11. the north of Polegate locations has not been subject to a landscape appraisal since the A27 Polegate Bypass was opened in 2002. The Polegate Bypass has changed the landscape character of the land south of the bypass. Mounding and planting have created an enclosed area which is not easily visible from the surrounding countryside. In the decade since the bypass was completed, the land has become well-screened and more suitable for development.

Details of Changes to be Made:
17. The Draft Proposed Submission Core Strategy Policy WCS4 (p40) lists location SD4 as 'Land at...
Polegate/Willingdon’. This is the wording that should be restored to the text of the Core Strategy to make it sound.

18. Figure 8 should be amended to delete the broad location notation (red colour) at the south of Polegate / east of Willingdon location; the notation in the October 2010 draft Core Strategy Fig 8 should be restored to indicate that both north of Polegate and south of Polegate / east of Willingdon locations are potential strategic housing locations.

- **Legally Compliant**: Yes

**Details of Reasons for Soundness/ Legal Compliance:**

Employment There is a statement in para 6.33 that the number of Crowborough people working in the town is low, there is substantial out-commuting and there are pockets of unemployment, yet no additional employment land is designated. At the consultation meetings in Crowborough leading up to the development of the core strategy, the need for more local employment was emphasized by many residents and it is the experience of local councillors that this is a key issue for Crowborough. The Crowborough councillors wish to reiterate their long-held view that land near the Army Camp should be allocated for expanding employment opportunities, in spite of it being within the AONB. This location would avoid the need for heavy traffic to travel through congested parts of Crowborough and in particular avoid the need for it to use Western Road. However, the area round the Army Camp is sufficiently close to the centre to be a sustainable location.

**Details of Reasons for Soundness/ Legal Compliance:**

Allocation of Urban Extension SD10 for housing Development in this location would put severe pressure on the wholly inadequate highway infrastructure in this part of Crowborough. Fermor Road and Whitehill are of great concern, but of even greater concern is Western Road. There is no possibility of widening Western Road and any proposal for a one way system would put pressure on even less suitable roads, such as Mount Pleasant. For these reasons, any allocation of housing land which is near to and depends on Western Road is unsound.

Policy 4

**Sound** Yes  
**Legally Compliant** Yes

**Details of Reasons for Soundess/ Legal Complaince:**
The core development plan is flawed in a number of areas, some I have stated above but will reiterate here. Any development in Benhall Mill Road will not serve the Wealden community at large as if effectively isolated in a salient into Kent. It would be better to place any new housing nearer to existing communities and their support services, especially schools. The sites, apart from their natural beauty which should be maintained unspoilt, are poorly sited. There are no local support services and the road is completely unsuitable for traffic, both heavy and light. Waste water and rubbish collections will be an issue. Much of the burden of the extra population will be born by TW and not Wealde, which is both unfair and rather cynical on the part of WDC. Such development could also affect TWBC's own future development plans.

**Details of Changes to be Made:**
Details of Reasons for Soundness/ Legal Complaince:

HLM have reservations about: The scale of SD1 Uckfield. The deliverability of parts of SD2 East Hailsham within the timescales anticipated. The deliverability of SD4 and SD5 Polegate within the timescales anticipated. Object to scale of development proposed as part of SD6 and SD7 Stone Cross. Object to SD11 Heathfield on the grounds of suitability and deliverability. Object to SD12 Tunbridge Wells on the grounds that it will not contribute toward deliver of the Vision and Spatial Planning Objectives. Specifically in terms of Hailsham, HLM maintain that in order to provide the flexibility necessary to meet the housing needs of the town and for development to come forward in a sustainable manner, development to both the north and the east of Hailsham should be strategically planned as a single entity as opposed to two distinct areas. The PSCS should allocate the Strategic Development Area and include an overarching strategy, which provides the framework for delivery of the Strategic Development Area and knits together the individual sites, which form an integral part of that area (Section 6). Thereby avoiding the need for a further Site Allocations DPD, and the delay associated with preparation of such a document. This will allow for the most deliverable parcels, be they in the north or the east to come forward in the early part of the plan period to fund the rolling programme of investment in the infrastructure necessary to unlock the remainder of the site. This approach concurs with the proposals set out in Greg Clark's ministerial statement – ‘Planning for Growth’ (23 March 2011) which requires authorities to “take into account the need to maintain a flexible and responsive supply of land for key sectors” Hailsham has grown over time through a mosaic of sites coming forward to create successive, sustained and incremental growth required to meet demand. A sustained release of sites across both north and east Hailsham in tandem would maintain this historic pattern of growth, provide a sustainable approach to development, help new development integrate into existing communities, provide a realistic rate for the market to deliver and allow for the timely delivery of infrastructure improvements necessary to support the Strategic Development Area.

Details of Changes to be Made:

That the scale of development at Uckfield be reviewed. That the allocation at Stone Cross and Westham be reduced significantly. That the allocation at Heathfield and Waldron be deleted or replaced by a site, which is not so significantly constrained. That the allocation adjacent to Tunbridge Wells be deleted. That the allocations east and north of Hailsham be combined to form a single Strategic Development Area, allocated through this Plan.

WCS4 Strategic Development Areas  Policy 4

Details of Reasons for Soundess/ Legal Compliance:
The identification of urban extensions is supported in principle. The policy identifies 12 Strategic Development Areas, all of which vary considerably in character. A number of SDAs are identified north of Eastbourne, in the vicinity of the A27, with development distributed between South Polegate / East Willingdon (SD4), Dittons Road (SD5), West (SD7) and East (SD6) of Stone Cross. Key factors in determining the allocations appear to have included accessibility to the strategic and local highway network, impact upon the National Park and urban form (integrating with existing built development). Together, these allocations have a major role in delivering the emerging Core Spatial Strategy. The Core Strategy states that the South Polegate and East Willingdon allocation could accommodate around 700 dwellings with transport mitigation measures. It is not clear however that the improvements/mitigation required will accommodate this level of development. The Council needs to build in some flexibility into the Core Strategy to deal with this. The Plan states that the potential of land to the north of Polegate is limited because it is not as well connected to the town, and due to local access difficulties. The Core Strategy acknowledges however that it is considered acceptable in principle as a broad development location (Para 8.34, Development of the Proposed Submission Core Strategy Background Paper, February 2011). It is considered therefore that North Polegate should be identified as a Strategic Development Area in the Core Strategy – despite issues with access to the local highway network, land at this broad location has more direct access to the strategic highway network, and which is less constrained than the A2270. Proposed Change

Details of Changes to be Made:
Add North Polegate as a Strategic Development Area to the Core Strategy.

Hallam Land Management Limited (HLM) support the allocation SD3 North Hailsham. This SDA includes two sites which were found to be "available, suitable and achievable" in the SHLAA, the land to the east of Park Road (site reference 243/1310) and land to the west of Park Road (site reference 240/1310). Further supporting information on land to the west of Park Road, is included in the masterplan document produced by Faulks Perry Culley and Rech (FPCR) on behalf of HLM and submitted separately. FPCR Document available to view at Council Offices

Details of Changes to be Made:
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Details of Reasons for Soundness/ Legal Compliance:
The identification of urban extensions is supported in principle. The policy identifies 12 Strategic Development Areas, all of which vary considerably in character. Not all of proposed Strategic Development Area SD1 (Uckfield) is suitable for development. Uckfield is identified as having a key role in assisting with the delivery of the Core Strategy up to 2030: the strategy for Uckfield specifically is to enhance the role of the town as a District Level Centre, serving the local community and surrounding area. Para 6.11(3) states inter alia that the identification of SD1 as an allocation is subject to the provision of suitable access and a number of other factors, with these to be addressed in subsequent DPDs, and which may increase the risk to delivery. The Core Strategy recognises that if development has not started at West Uckfield by 2016, a review in relation to Uckfield will be required. Whether development has started by 2016 is one issue. Others are: i. Whether it is genuinely appropriate for development to take place over the whole allocation as indicated in the key diagram. The Sustainability Appraisal of the Proposed Submission Core Strategy, Background Papers, February 2011, recognises this issue by stating “potential landscape issues as the area is on high ground” (p.217). i. The uncertainty regarding what further studies may reveal about the practical ability of the site to accommodate development. If development has not commenced before 2016, the Council should know before then whether a review of the Core Strategy is required; why should the Core Strategy limit the potential scope of any review to the Uckfield area (Para 6.11)? SD1 is supported to the extent that it relates well to the strategic highway network. The impact of residential and other development upon SD1 will however be too prominent and intrusive along this part of the A22 corridor. Much of the development will not be easily capable of being screened. The southern part of SD1 is most exposed. It is recommended that the most sensitive landscape is retained in SD1 as open space and, as a consequence, that SD1 be extended to the south of Lewes Road to include Horsted Pond Farm and Ridgewood House – any development here could be better accommodated within the landscape. SD1, as presently drawn, is too narrowly defined in extent – the inclusion of Horsted Pond Farm and Ridgewood House within it would provide the Plan with flexibility in delivering new development to the west of Uckfield. Proposed Change

Details of Changes to be Made:
It is proposed that the SD1 allocation be extended to include Horsted Pond Farm (in part of in whole) and Ridgewood House, with consequential changes made to the Core Strategy and Key Diagram.
Details of Reasons for Soundess/ Legal Complaince:
The schedule of sites set out within WCS4 - Strategic Development Areas will not deliver a sufficient level of new housing within the Plan Period. The schedule has been prepared on the basis of an underprovision and shortfall inconsistent with the South East Plan which remains part of the development pla. The South East Plan remains the most-up-to date and authoritative development plan policy document, is evidenced based and fully tested. The schedule restricts legitimate development opportunity and accordingly will require revision should the Core Strategy be found to be unsound and inadequate. Particular attention is drawn to SD2 and SD3 where these sites are likely to have to be reconsidered in relation to the comparative distance between the site and the town centre when compared to land potentially available to the south of the town and SD3 in relation to odour constraints and resultant impact upon developable site area.

Details of Changes to be Made:
The schedule will require revision to accommodate additional strategic locations to accommodate the additional housing provision necessary to make up for the current level of planned under-provision.
The proposed urban extensions at Stone Cross (Strategic Development Areas SD6 & 7) would breach well defined development boundaries and would result in a significant encroachment of development into the countryside. This would be intrusive and damaging to the landscape and would contribute to the coalescence of Stone Cross with Polegate and Westham. This would be detrimental to the separate identities of the settlements and their rural settings. Together with the proposed employment floorspace on land south of Dittons Road (Strategic Development Area SD5), the proposed urban extensions at Stone Cross would result in a continuous built-up area along the majority A27/B2247 corridor between Polegate and Westham. The proposed urban extensions (SD6 & 7) are not justified having regard to the characteristics of the landscape and resulting impact of development as assessed in the Council’s Landscape Character Assessment and Development Option Evaluation Study. No justification has been given as to why the Core Strategy proposals have departed from the conclusions of this study. Furthermore, the Sustainability Appraisal of the Plan Alternatives as it relates to land at Stone Cross does not take full account of the findings of the Landscape Character Assessment and Development Option Evaluation Study. The objection is amplified below. The Stone Cross settlement: Stone Cross is an expanded residential settlement situated on a pronounced east-west ridge of high ground centred on the crossroads of Dittons Road/Rattle Road with Hailsham Road and Lion Hill. The A27 Pevensey Bypass lies to the north. The 1991 County Structure Plan identified Stone Cross as an area for significant growth. Wealden District Council allocated land in the South Wealden Local Plan for 1,000 new dwellings together with a primary school and other community facilities in accordance with the Structure Plan policy. As explained in paragraph 19.34.3 of the adopted Wealden Local Plan, when considering the appropriate location for future housing development, the Council felt development to the north of the ridge would be highly intrusive in a large area of open countryside beyond, whilst development to the east or west would conflict with the recognised strategic policy of maintaining existing countryside gaps between Stone Cross, Polegate and Westham. It was therefore considered by the Council that development of land to the south of the ridge was preferred as it would relate well to the existing settlement and to new housing at Langney, whilst being least intrusive to the landscape. The development boundary for Stone Cross essentially follows the physical extent of the expanded settlement and seeks to prevent further outward expansion of new development in view of the clear environmental and landscape constraints. As explained in paragraph 19.34.18 of the adopted Wealden Local Plan, in the west the development boundary incorporates the housing area but excludes land beyond as it is considered very important to prevent the lateral expansion of Stone Cross along Dittons Road towards Polegate which would lead to the coalescence of the settlements. This would be to the detriment of the identity of the settlements and to their rural settings. To the east of Stone Cross the line of trees along Beggars Lane forms a natural limit and an effective screen to development. The development boundary closely envelops frontage development along Rattle Road in order to prevent inappropriate outward expansion into the surrounding countryside or further development eastward along Rattle Road into the recognised strategic gap between Stone Cross and Westham. (Local Plan paragraph 19.34.20) The development boundary is drawn tightly around residential development south of Peels Lane. The substantial landscaping screen along the eastern edge of the development site creates an important buffer to the open and exposed farmland beyond which forms part of the strategic gap between Stone Cross and Westham, and is therefore excluded from the development boundary. To the north-west of the site the development boundary follows the well defined physical barrier of Peels Lane. (Local Plan paragraph 19.34.21) Proposed urban extensions (Strategic Development Areas SD6 & 7): It is evident from consideration of the adopted Wealden Local Plan that the extent of the expanded settlement at Stone Cross was planned with careful regard to environmental and landscape constraints, and to minimising impact on the countryside gaps between Stone Cross and Polegate and Westham. The major development proposed in Strategic Development Areas SD6 & 7 would breach the established boundaries of the Stone Cross settlement and result in the significant encroachment of development into sensitive countryside areas. The scale of the proposed development relative to the existing settlement can best be illustrated by the fact that the proposed 650 dwellings (referred to in paragraph 6.31.3) would result in a 65% increase on the amount of housing previously planned for Stone Cross. The scale of development proposed and the resultant impact is not justified when considered against the findings of the Council’s own Landscape Character Assessment and Development Option Evaluation Study. Landscape Character Assessment and Development Option Evaluation Study October 2007, The Landscape Group, ESCC: The proposed urban extension north of Stone Cross (SD7) where 430 dwellings are proposed is part covered by Stone Cross Character Areas A & B as shown on Figure 18.
of the study. Area A covers the land north and south of Dittons Road. The landscape character assessment states that "the site is so exposed it cannot absorb change and would lose even more of the little bit of character it has in common with the land further north." The assessment goes on to conclude that "there is insufficient width to mitigate the visual intrusion of the development. Extensive planting would be out of character with the open landscape. Any housing would suffer from the loud and persistent road noise. It is recommended that this strip to be buffer zone between road and existing housing." (Landscape Character Assessment Sheet Stone Cross A) Area B covers the triangle of land between the A27 and Peelings Lane. The landscape character assessment states that "it is irreplaceable as a buffer zone." (Landscape Character Assessment Sheet Stone Cross B) The proposed urban extension east and south east of Stone Cross (SD6) where 220 dwellings are proposed is covered by Stone Cross Character Areas C & D as shown on Figure 18 of the study. Area C covers the land adjacent to Friday Street. The landscape character assessment states that "the higher parts of this area are very exposed and so cannot absorb change; development would be very visible from the South Downs Way". The assessment goes on to conclude that "nothing can mitigate effects of any development on the ridge top and higher slopes. However, the lowest slopes are only visible from the urban area, and could be softened by planting." (Landscape Character Assessment Sheet Stone Cross C) Area D covers land that is part of Mountney Levels. The landscape character assessment states that "due to the open aspect of this little valley, with very little vegetation and a huge number of visual receptors, it would be very vulnerable to change. The natural beauty of this spot and the unity it has across the valley as it flattens seamlessly into The Levels is wonderful and should be conserved." With regard to the scope to mitigate visual intrusion the assessment concludes that there is "little scope for planting." (Landscape Character Assessment Sheet Stone Cross D) In the light of this assessment a summary of the landscape character and capacity of Stone Cross is contained in the February 2009 main report:- "3.11.11 The areas to the west of Stone Cross are open levels which form part of the gap between Polegate and Stone Cross and are similar in character to the area west of the A22 New Route into Eastbourne. To the north of Stone Cross the areas between the A27 by pass and urban edge are an important open buffer between the by-pass and the urban edge. These areas are influenced by urban fringe uses and a hard urban edge to the countryside. The extensive planting along the A27 reduces the impact of this from the wider levels and the road. 3.11.12 To the east of Stone Cross the Mountney Levels form an important and very open gap between the historic village of Pevensey and the built up edge of Stone Cross. There are some urban fringe influences and hard urban edges at Friday Street which impact on the rural character of the areas close to the built up edge." Potential development areas within the landscape character areas are shown on Figures 20A and 20B of the study. The potential development areas at Polegate and Stone Cross are compared in section 3.12 of the study’s main report. With regard to Stone Cross the report is emphatic in its conclusion about the harmful impact that development would have on the countryside around Stone Cross: "3.12.7 There are small areas of potential development opportunity identified around Stone Cross. These are not preferred over the areas of proposed extension to Polegate due to the need to retain strategic gaps between the settlements and to avoid coalescence. These areas would be widely visible from the Willingdon Levels and the A27." It is evident that the Council’s Landscape Character Assessment and Development Option Evaluation Study does not support major development at Stone Cross and does not justify the scale of new housing proposed in the Strategic Development Areas SD6 & 7. No justification has been given as to why the Council has departed from the Landscape Character Assessment and Development Option Evaluation Study which forms part of the Core Strategy evidence base. Sustainability Appraisal: The Council’s Sustainability Appraisal does not take full account of the findings of the Landscape Character Assessment and Development Option Evaluation Study regarding the Environmental Objective: Conserve, enhance and make accessible for enjoyment, the District’s countryside, landscape, historic and built environment as it relates to broad locations for development at Stone Cross. (p 76) Whilst the appraisal acknowledges that the east and southeastern locations raise landscape issues when considering new development and that this may reduce the developable area to facilitate the inclusion of buffer zones and edging techniques, the landscape assessment also identifies landscape constraints to west and north which are not acknowledged in the sustainability appraisal. (p76) Similarly, in considering the options selected and reasons (page 95) the sustainability appraisal states in relation to the selection of the east location that mitigation may be required in the form of landscape buffer zones and to ensure no adverse effects on the Eastbourne Levels. In relation to the selection of the southeast location mitigation for potential adverse landscape impacts and adverse impacts on the Eastbourne Levels will be required. However, the sustainability appraisal does not acknowledge the landscape constraints identified in the landscape assessment, the adverse impacts from development or the need for mitigation in the west and north locations, and is therefore flawed in this regard.

Details of Changes to be Made:

The scale of new housing proposed in Strategic Development Areas SD6 & 7 should be reconsidered with a view to reducing the amount of housing at Stone Cross and increasing the amount of housing in other parts of south Wealden including Hailsham and Polegate.

**Details of Reasons for Soundness/ Legal Compliance:**

The church supports the identification of the Jarvis Brook area for new housing at Crowborough although it believes that the allocation for the town should be greater. The church delivers both religious and secular services to its community and it is acutely aware of the deprivation in the area. As such it takes an active role, along with the local community group in providing services to the local area. The church premises itself is inadequate to cater for its needs and as a result has been looking for land to provide a new building for some time. The opportunity to deliver this and at the same time cater for the communities needs is an attractive one for the church to pursue. It is acutely aware that the public sector cannot fund this so the opportunity to achieve the community aims through development should be pursued. In this respect the church is concerned to ensure that the scale of development should be commensurate with the facilities that need to be provided. In its opinion this should be greater than the 300 allocated for the town. The church believes that the local community will welcome new development and the organisations which play an active role in nurturing the area wish to play a part in securing development which will improve the area's wellbeing and local economy. It is only by doing this that the vitality of the area can be sustained.

Proposed Change

**Details of Changes to be Made:**

Council to supply explanatory text.
Details of Reasons for Soundess/ Legal Complaince:

Policy WCS4 indentifies land at West Uckfield as critical to the delivery of overall Core Strategy. This is amplified in paragraphs 6.3 – 6.11 and the plan at Figure 6. These allocated some 1000 homes and 12650sqm of net employment floorpace and education provision as an extension to the urban area to the west of 'New Town', subject to a suitable access and other detailed considerations. In considering the most appropriate location for growth around the periphery of Uckfield, the Background Paper ‘Development of the Proposed Submission Core Strategy’ assessed land to the north, east, south and west of the town. North Uckfield is relatively disconnected from the town centre and the majority of the existing community and development here has the potential to encourage car use to other settlements. This would fail to secure maximum benefits for the aspirations of town regeneration and would also have a potentially detrimental impact on the Ashdown Forest through increased emissions (which is the subject or protection under the Habitats Directives). It is therefore considered that additional housing development to the north of the Uckfield would not be justified or consistent with national policy. East Uckfield has road access constraints, due to capacity issues of Framfield Road and the town centre. It is therefore relatively inaccessible, despite its physical proximity to the town centre. This raises doubts over the deliverability of new housing in this area and an allocation would therefore not be justified or effective. West Uckfield is in large parts, visually prominent from the towns bypass. The area to the north is also in close proximity to the sewage works and this poses odour impact issues. Whilst the principle of development in this location is considered appropriate in principle, it is considered that large areas of this land are likely to be unacceptable for housing and employment development. This reflects the conclusion of the Landscape Character Assessment and Development Option Evaluation Study of October 2007. South Uckfield, around Mount Ephraim is relatively disconnected from the remainder of the town and development here would extend the built up area of the town along the A22 in ‘ribbon’ form. It does not represent the most effective or justified location for housing growth in the town. South-West Uckfield comprises the area surrounding Ridgewood House. It is bordered by the Millennium Green and recreation ground to the east, Ridgewood Stream to the south, Lewes Road to the west, and New Road and the built up area of the town to the north. It is in close proximity to local employment sites, formal and informal public open space and is readily accessible to the town centre along the Lewes Road, including by frequent bus services. It is visually contained by screening along its boundaries, including to the west and south. It is not visually exposed when viewed from the town’s bypass in the way that occurs with land to the west of Uckfield.

Development in this area would represent a logical addition to the periphery of the built up area and the site’s characteristics facilitate development that could readily assimilate into the adjoining built-up area. Green Infrastructure could also be provided in conjunction with residential development that would act a link between the open space to the east and land to the west, an aspiration of the PSCS.

Details of Changes to be Made:

Policy WCS4 should be amended to note that SD1 is an allocation for strategic development to the west and south west of Uckfield. Consequential changes should also be made to Figure 6 of the PSCS to note the broad area of the urban extension includes land to the south-west of Uckfield, encompassing land at Ridgewood House. Residential development in this location is both justified, effective when considered against alternatives, and consistent with national planning policy.

Legally Compliant
☑ Yes  ☐ No

Details of Reasons for Soundness/ Legal Complaince:
The development area SD2 is outside of Hailsham's development boundary. There is cause to be concerned about the ability of WDC to realise planning gain. There are already two significant development areas that have not been started, WD/2009/2705 (previously WD/2007/2856/MAO) and WD/2009/1780 with a total housing capacity of 298 in tightly packed and frankly unattractive configurations. Overall there is currently a capacity of around 1100 not-yet-built dwellings in Hailsham and Hellingly. Hailsham currently offers some of the cheapest new builds in the district: with 7 major sites developers will be even slower than usual in releasing dwellings in an attempt to re-establish profits. Given the caveats outlined in the Core Strategy Infrastructure Delivery Plan why is this allocation of further housing sought at this time? I trust the planning inspector will ask the same question.

Policy 4

Sound
☑ Yes  ☐ No  ☐ Justified  ☐ Effective  ☐ Consistent with national policy

Legally Compliant
☐ Yes  ☐ No

Details of Reasons for Soundness/ Legal Complaince:
It is WSL's intention to promote Ridgewood Farm as an urban extension to the west of Uckfield in accordance with Policy WCS4. to this end, WSL acknowledges the infrastructure requirements that the Council envisages and the timing for the delivery of strategic development set out in paragraphs 6.3 - 6.11 of the document. WSL intends to work with the Council in order to deliver a comprehensive development that includes agreed infrastructure requirements. It is also the intention of WSL to work with the Council to commence the delivery of strategic development by 2016, in accordance with paragraph 6.11 of the Porposed Submission Core Strategy. WSL is confident that its master plan exercise will demonstrate the suitability, availability and ultimate deliverability of this site for strategic development. To this end, WSL is also confident that the master plan work will demonstrate that any matters raised through this consultation exercise can be positively addressed and therefore will not affect the deliverability of Ham Farm for strategic development.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

3.0 Policy WCS4: Strategic Development Areas Representation 3.1 We object to the content of the Policy as drafted on the basis that it has not been shown to be justified, effective or consistent with national policy. 3.2 The target figure of 9,600 dwellings to be met within the District during the period 2006 to 2030 is significantly lower than the strategic requirement set out in the South East Plan (adopted May 2009) and fails to address identified needs. This requires additional housing allocations to address identified needs. 3.3 Separate but related objections have been submitted in response to Policies WCS1 and WCS2 and these are of relevance in assessing the appropriateness of Policy WCS4 as drafted.

Details of Changes to be Made:

3.4 We object to the omission of land to the west of Station Road, south of Hailsham as a Strategic Development Area under Policy WCS4. The site should be identified as a “SD” for around 150 dwellings. Consequential changes should be made to paragraphs 6.12 to 6.20 of the supporting text.
3.3 Infrastructure Delivery

3.3.1 This section of our representations refers to policies WCS2 and WCS4. It is summarised below: Section of Core Strategy: Policy WCS2 Distribution of Housing Growth 2006-2030, and WCS4 Strategic Development Areas.

Legally Compliant: -Sound: No -Justified: No -Effective: Yes -Consistent with national policy

Details of Reasons for Soundess/ Legal Complaince:

3.3.3 The Proposed Submission Core Strategy acknowledges these uncertainties, for example in relation to delivering the proposed levels of growth at Hailsham / Hellingley and Polegate/Stone Cross / Willingdon and states: "The infrastructure requirements for the delivery of development and growth in Hailsham provides an element of risk for the delivery of the spatial strategy." (para 6.20) "The risk to delivery of this strategy relates to the highways infrastructure required for the South Wealden area, in order to mitigate the impact on the strategic routes and more localised junctions." (para 6.32). 3.3.4 A review of the Wealden IDP reveals the extent of this uncertainty, with the following transport schemes all classified as critical to ensure delivery of development in the South of the district. None have identified funding, other than as yet uncommitted developer contributions and /or unconfirmed Highways Agency / East Sussex CC funding. South Polegate and East Willingdon 1. Signals at Cophall Roundabout 2. Improvements at junctions between A22 Jubilee Way and A27 and Dittons Road and 3. Junction improvements at A22/ A27 / A2270 intersection Junction improvements at the A2270 and Polegate High Street and at the A2270 and Wannock Road. 4. Improvements to Hempstead lane junction to alleviate traffic congestion on the A271 and Hailsham Town Centre. 5. Junction improvements at the A2270 and Polegate High Street and at the A2270 and Wannock Road. Hailsham 1. Hailsham - Relieve town centre congestion and stress at Battle Road and London Road through re-routing traffic to Summer Heath Road, including signalised junctions 2. Hailsham - Relieve town centre capacity issues through signal improvements at Battle Road / London Road and North Road / High Street junctions 3. Hailsham - A2270 and A259 Quality Bus Corridors and Eastbourne - Hailsham express bus service. 3.3.5 The first two schemes listed in relation to South Polegate and East Willingdon are on the Strategic Highway network and would therefore be expected to be at least part funded by the Department for Transport. At present none of these schemes are included within the DfT’s forward programme to 2015 or in the list of schemes under review for possible funding post 2015. The IDP assumes that all schemes will be partly reliant on developer funding through planning obligations. However, it does not provide any cost estimates for these schemes and consequently it is not possible to assess the potential scale developer contributions that may be sought, and their implications for viability (taking account of other potential claims on developer contributions including affordable housing and education). As such it is not possible to ascertain whether or not there is a reasonable prospect of delivery of the schemes in question.

3.3.6 PPS12 acknowledges that information on funding and delivery may not always be available at the time the Core Strategy is prepared. However it goes on to state: It is important therefore that the core strategy makes proper provision for such uncertainty and does not place undue reliance on critical elements of infrastructure whose funding is unknown. The test should be whether there is a reasonable prospect of provision. Contingency planning – showing how the objectives will be achieved under different scenarios – may be necessary in circumstances where provision is uncertain. (PPS, para 4.10) 3.3.7.5 of the proposed submission Core Strategy which states that due to ‘potential unforeseen infrastructure constraints, which may prevent housing being delivered, this plan contains contingency arrangements in the towns in the event of housing delivery substantially falling behind the trajectory’. However, it is not evident what these contingency arrangements will be, other than a review of the Core Strategy. 3.3.8 We contend that a review of the Core Strategy in itself does not provide a sufficiently flexible mechanism for responding to delays in the provision of critical infrastructure jeopardising housing and employment delivery. This is of particular relevance to the delivery of a number of the Strategic Development Areas which are considered critical to the delivery of the overall strategy (Policy WCS4); specifically: 1. SD2: Land and East Hailsham (600 dwellings) 2. SD3: Land at North Haisham (700 dwellings) 3. SD4: Land at South Polegate and East Willingdon (700 dwellings) 4. SD5: Land at Ditton Rd Polegate (employment) 5. SD6: Land at East and South East Stone Cross and SD7: Land at North Stone Cross (650 dwellings) 3.3.9 Together, these account for 2,650 dwellings. The Core Strategy states that the
Council have already identified around 4,889 dwellings. This leaves 4,711 dwellings to be provided on other sites across the district. Therefore the five sites listed above account for more than half of the uncommitted housing supply over the plan period. Non-delivery of these units will thus undermine the housing trajectory and spatial distribution in the Core Strategy, requiring alternative housing sites to come forward elsewhere. In order to mitigate this risk, the Council should revised its spatial strategy and housing trajectory so that it is less dependent upon sites which remain dependent upon infrastructure for which costs and funding sources have yet to be identified and highly uncertain. The spatial distribution of housing and growth across the district thus needs to be reviewed and amended accordingly.

**Details of Changes to be Made:**

**SUMMARY 3.3.10** In summary we contend the Core Strategy is unsound on the grounds that it is not effective as it is not sufficiently flexible to respond to identified uncertainties surrounding the provision of infrastructure acknowledged by the Council as being critical to its delivery.

**Details of Reasons for Soundess/ Legal Complaince:**

The proposals for further population growth at Hailsham including urban extensions east (Policy SD2) and north (Policy SD3) of Hailsham are supported. The proposals themselves will create critical mass to provide economic and social benefit to the town. To maintain the viability of such large scale development, care should be taken to avoid excessive development contributions and to adhere strictly to the principles of Circular 05/05 namely that obligations must be: 1. relevant to planning ii necessary to make the proposed development acceptable in planning terms iii. directly related to the proposed development iv. fairly and reasonably related in scale and kind to the proposed development; and v. reasonable in all other respects. Given the scale of development and the lead time to first occupations where significant infrastructure works are required the respective 2017 and 2021 dates should be brought forward and treated with flexibility to ensure that planning permissions are granted well in advance of those dates in order to ensure completions in good time and so maintain housing land supply.

WCS4 Strategic Development Areas Policy 4

Sound ☐ Yes ☑ No ☐ Justified ☑ Effective ☑ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The allocation of site SD1@ land at west Uckfield is considered to be unsound as it is not justified or effective. 3.5. WCS4 Strategic Development Areas 3.5.1. The policy identifies twelve strategic development areas as broad locations for future development. In the light of our clients' landholding at Uckfield our comments relate to site SD1: Land at West Uckfield. It is considered that the allocation of the site as a strategic development location is unsound. This element of the Core Strategy is felt to be unsound as it is not justified or effective. 3.5.2. Paragraph 5.211 of the document states that the Council recognises that it needs to identify a "delivery" supply of housing land for both the short-medium and the longer term. The Strategic development areas are of such a scale that they are considered "critical to delivery of the overall strategy". Paragraph 5.12 goes on to note that the strategic development areas will be priority for inclusion in the Strategic sites DPD, in line with the housing trajectory and to ensure "delivery". The delivery of housing is recognised by the Council as key, and we agree as this accords with advice in PPS3. However in the case of SD1 as we note below, the evidence does not support an allocation as there appear to be many obstacles to its delivery. 3.5.3. In contrast, through its assessment of sites, the Council has considered that land on the east side of Uckfield, at Bird in Eye in South, the Inspector considered the site proposed at that time for 197 dwellings, to be a "natural or logical urban extension". 3.5.4 We consider how the Council has reached a conclusion in support of a strategic allocation SD1 following consideration of the Uckfield area strategy.

Details of Changes to be Made:
3.5. WCS4 Strategic Development Areas 3.5.1. The policy identifies twelve strategic development areas as broad locations for future development. In the light of our clients' landholding at Uckfield our comments relate to site SD1: Land at West Uckfield. It is considered that the allocation of the site as a strategic development location is unsound. This element of the Core Strategy is felt to be unsound as it is not justified or effective. 3.5.2. Paragraph 5.211 of the document states that the Council recognises that it needs to identify a "delivery" supply of housing land for both the short-medium and the longer term. The Strategic development areas are of such a scale that they are considered "critical to delivery of the overall strategy". Paragraph 5.12 goes on to note that the strategic development areas will be priority for inclusion in the Strategic sites DPD, in line with the housing trajectory and to ensure "delivery". The delivery of housing is recognised by the Council as key, and we agree as this accords with advice in PPS3. However in the case of SD1 as we note below, the evidence does not support an allocation as there appear to be many obstacles to its delivery. 3.5.3. In contrast, through its assessment of sites, the Council has considered that land on the east side of Uckfield, at Bird in Eye in South, the Inspector considered the site proposed at that time for 197 dwellings, to be a "natural or logical urban extension". 3.5.4 We consider how the Council has reached a conclusion in support of a strategic allocation SD1 following consideration of the Uckfield area strategy. 4.1 In summary we recommend that the following changes be made to the Core Strategy:- 1. Policy WCS4 - the inclusion of an additional strategic development area - SD: Land at Bird in Eye South, Uckfield. 2. Policy WCS4: the inclusion of strategic development area - SD1: Land at West Uckfield, only following further investigations and with a substantial reduction in the number of dwellings to a figure that reflects certainty of the deliverability of that number. 3. Figure 5. Phasing of Development - the phasing schedule to be amended to reflect the above, to include Bird in Eye South for 200 dwellings, and assign it to years 2013/14 - 2016/17 for delivery. 4. Chapter 6 - Uckfield area strategy: this subsection should reflect the above, in particular at para 6.11 to include Bird in Eye South for 200 dwellings as well as through amendments to Figure 6: Uckfield Area Strategy.
Representations on behalf of the Clarence Preston Will Trust: Policy WCS4 These representations are on behalf of the Clarence Preston Will Trust, freehold owners of Downlands Farm, Uckfield. While the selection of Uckfield as a location for further strategic growth with a new allocation of 1,000 dwellings in Policy WCS2 is strongly supported, the identification of a sole strategic development area at "West Uckfield" is not justified, is unlikely to be effective and would be contrary to national policy in its environmental and landscape impact. The selection of the proposed development area SD1 West Uckfield is based, so far as can be judged from the published background papers, on a fundamentally flawed approach to the assessment of the strategic development options for for Uckfield. For each town "broad locations" have been assessed and compared against each other and against sustainability criteria. The broad locations for Uckfield, however, exclude one of the principal potential areas, Downlands Farm, which in the non-site-specific CS vocabulary can be called North West Uckfield. Figure 1 of the Development of the Proposed Submission Core Strategy Background Paper shows that four broad areas were appraised: North, West, East and South Uckfield respectively. The broad north-west sector (principally Downlands Farm) is not included in the appraisal. There is no explanation for this. The site was subject to a planning appeal (together with sites at Bird-in-Eye Hill) which was dismissed and the site was subsequently deemed “unsuitable” in the SHLAA. However, this is not sufficient reason for omitting it from consideration altogether. The Bird-in-Eye sites were considered under the heading “East Uckfield”. Circumstances have changed since the appeal determination and the SHLAA, which based its conclusions substantially on the appeal decision. The requirements for broad location selection for CS purposes, differ from the considerations in appeal decision in the following critical respects: 1. The appeal was determined on the basis that a major peripheral expansion of Uckfield was not in accordance with the South East Plan. The draft CS is not being prepared in relation to the South East Plan and it proposes a major peripheral expansion of Uckfield, albeit in a different location. 2. The housing land supply position for the CS period is wholly different from the basis on which the appeal was determined. 3. The landscape conclusions in the appeal were in comparison with the sites at Bird-in-Eye Hill not with West Uckfield. There should have been a comparative landscape assessment between Downlands Farm/North West Uckfield and West Uckfield for the purpose of broad location selection in the CS process. There has been none (at least in published form) and this is a fundamental failure of the process that is highly prejudicial to the land at North West Uckfield. 4. Similarly with highways and ecology. There has been no proper comparison in the location selection process between the two main competing locations at Uckfield. The SHLAA report for Downlands Farm refers directly to the appeal decision. It is clear that there was no detailed re-examination of the comparative merits of all the major alternative strategic development locations around Uckfield. On the site specific issues, the SHLAA report gives only a superficial picture. For example, it concludes that the development of Downlands would “compromise its nature conservation integrity and biodiversity interests” whereas the inspector’s conclusion was that permission should not be refused outright on the basis of harm to its ecology or biodiversity.

Details of Changes to be Made:
There are landscape issues affecting both West Uckfield and North West Uckfield. These have not been compared in the CS process. The Council’s own comparative landscape analysis in 2001 concluded for West Uckfield (then referred to as Sector 3) “The broad, rolling landform ensures that most of the landscape is clearly visible and any large-scale development is likely to have a widespread influence, particularly along the elevated ridge-tops where it would impact upon the surrounding countryside”....“The characteristic open, visually exposed and rural qualities of this landscape make it highly sensitive to any form of significant new development”.

The SHLAA report concluded that approximately two-thirds of the site is considered unsuitable for housing in view of the harmful effect it would have on the landscape. The choice between these two peripheral sectors of Uckfield for urban extensions should have been subject to rigorous comparative analysis. That has not taken place and the Council has relied on the findings of a planning appeal that was held in an entirely different context and where the comparative merits of West Uckfield were not a matter for consideration. The omission from consideration of one of the main undeveloped peripheral sectors of Uckfield, particularly one with a complex planning history, is a significant failing in the draft document. These process failings render the CS Policy WCS4/SD1 unsound. To avoid compromising the CS as a whole, an option would be for the Council to redraft SD1 in more general terms without specifying locations or sectors at Uckfield. This would leave the detailed comparative site analysis where it should properly be, namely at site specific DPD stage. As a general comment, the way the Council has dealt with
the housing distribution issue is closer to site specific allocation than it should be at Core Strategy stage of the LDF process.

Details of Reasons for Soundess/ Legal Complaince:

7 Landscape 7.1 Introduction 7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below:

Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to be set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape...
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact of housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape...
but the identification of management opportunities is not relevant to determining the capacity of the landscape to accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also
refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but
elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph
of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The
photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment
sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to
the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1
below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views
with long views out towards the south from high ground in the north eastern parts of character area. Views into the
area are very limited and development within the area would have a minimal impact on views. However, in views
from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the
remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6
The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment,
Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate
Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and
access to countryside. Need to retain gap between Maresfield and Uckfield. Potential forMitigation Low Planting
would change open character and obscure long views out from recreation ground Capacity to Accept Change:
Housing Low Close to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the
record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most
of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of
the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of
the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning
policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8
By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land
sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and
pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well
defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover
and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors,
although it describes the land as sloping away from the urban edge with a strong field structure with arable and
pasture. The landscape condition is considered to be fair which is not defined in the methodology although this
changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it
records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26
and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded
ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’
(see table 7.2), Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality
Ordinary Value Medium Snow Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate
High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and
existing trees and hedges Potential for Mitigation Moderate Low on ridge as need to retain open fields. Soften urban
decay. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well
defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity
7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated
and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a
recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area,
with long views south and west and numerous views in to the area from the surrounding countryside (roads and
footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where
views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’
sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We
also note that under management opportunities it is considered that the area could contribute to managing the
urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading
is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure
11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13
These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the
judgements made. It does not give any confidence to the manner in which the Landscape Study has been
undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness
of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option
Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial
strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background
paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils
website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether
the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent
and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core
Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential
development area within a character area which has capacity to accommodate development. 7.4.3 The examples
referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and

Page 657 of 1511
arbitrary nature of the judgements made and it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WCS13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:
SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.

Details of Reasons for Soundess/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". In order to reflect the increased number of dwellings and the change of distribution required as set out at section 1.3.2. A total of 13,209 homes are proposed over the plan period 2006 - 2030 with 8,411 proposed for South Wealden and 4,798. This distribution takes into account the findings of the three reports on Landscape Transport and Waste water which are appended. 1.3.. In respect of Polegate the best placed area for development is that to the west of the town. Stone Cross is poorly placed in respect of landscape, sustainable transport and has few existing services and facilities within walking distance. Bramley Farm to the north of the bypass is actually favoured in the landscape assessment and could also be considered as an alternative employment location). the following amendment is required.

Details of Changes to be Made:
REVISION OUGHT SD5. Land at Dittons Road to be replaced with SD5: land to the north of the existing bypass at Poelgate. SD6: Land East and South East of Stone Cross to be replaced with land to the west of the A22 and north of the bypass at Polegate. SD6: Land adjoining Friday Street Farm at Stone Cross.

Details of Reasons for Soundess/ Legal Complaince:
6.23 states 'the A2270 running through the urban area is still heavily congested and traffic flows on the strategic road network are very high'. Numerous references are made throughout the strategy to the need for infrastructure, and 5.16 states 'development at SD4 will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in South Wealden'.

Details of Changes to be Made:
PTC has serious concerns over the impact of any additional vehicles on the heavily congested road network, and feel that the proposed transport strategy in unsound because of the numbers of extra vehicles any development would bring onto the A2270.
As an Association representing our residents, we don't want to build on green field sites unless absolutely necessary and the infrastructure and the flood planes must be taken into consideration. Since the Polegate bypass has been built, the traffic has quickly got back to being as bad as it was before through our Parish of Willingdon. The upgrading of the A27 to a dual carriageway should be a top priority to ease the congestion at the traffic lights on the A2270 and the A27 but whether this will ever be done in our lifetime remains to be seen. Mornings Mill site is a delicate site because it has a lot of flood plane and we wish to retain Hindsland Playing fields for both Willingdon and Polegate residents to use. It also acts as a good strategic gap between Polegate and Willingdon. The fields behind Hamlands which do flood could be dug out to form a lake to alleviate any flooding problem in Willingdon on the A2270 and also act as a good amenity linking with the Eastbourne Park and the cuckoo Trail and could be an excellent nature reserve. Any houses that might be built would need to be kept to a minimum and built near the railway line with the dirt from the lake acting as a bung which trees could be planted on to protect the view from the Downs. Also the residents could walk to the Railway Station, walk to Polegate to shop and this would help regenerate Polegate. Any access should go over the Railway Line on a flyover and link up with Dittons Road and then on to Jubilee Way via a roundabout where Morgan Est had their yard when they built the bypass. This would alleviate traffic problems on the A2270 which is almost to capacity now, before any extra houses are built. The land that adjoins the A2270 could be used for recreational and amenity use and still allow Willingdon to retain its rural/village appearance. By Mornings Mill Farm entrance there could possibly be a Community Centre/Cottage Hospital to serve the immediate area for minor injuries and outpatients like Uckfield Hospital. We would prefer not to have any extra housing and development in the area and when drawing up a plan you should consider the quality of life of the residents already here and the damage any over development will cause without the appropriate infrastructure in place. There are already many areas that flood and the sewerage and drainage would need considerable improvement as would the health service at a time when it is being suggested departments at our present hospital could well be closed in the not too distant future.

I am a regular driver through Benhall Mill Road and play golf at the Nevill Golf Club. I would like to comment on the proposals as follows: 1. The proposed area of potential development currently offers a semi rural and rural dimension to the edge of town. The impact of 220 dwellings would change the entire functionality of Benhall Mill Road. The road cannot support this level of development on highways grounds alone. The area would be wholly supported by the infrastructure already in place through KKC and that provision would not be provided in any way by WDC as the road and finances just don't allow for this. 2. Although the site may not be prominent in its current natural state, it most certainly would with high density development, additional traffic and demand on public transport (which is currently being reviewed as part of the cost cutting for KCC). 3 The Trust who owns the site Ref: 126/1610 was awarded an extensive Government Grant for tree plantation some years ago. The land now benefits from extensive woodland, which in principle Wealden should be looking under policy, to retain. The primary purpose of this was to enhance the natural habitat. To remove these trees now that they are ecologically and environmentally beneficial would be illogical. There are some fine examples of large Oak trees, which presumably have TPOs on them. 4. Any vehicles currently leave Acer Avenue currently look onto an extremely pleasing green vista. The proposed density of housing, with road frontage would change the environment from pasture to high density, which is extreme. 5. Many of the large trees on the boundary of the land and running along the length of the railway are old which will impact natural renewal and noise effect to any potential houses built near the railway both at the time of development and in the future. 6. The proposal of 220 dwellings equates to approximately 600 - 800 new residents to Benhall Mill Road. This additional volume is significant would undoubtedly have an ecological effect on the AONB: noise, litter, insufficient road infrastructure to support pavements and people walking their dogs, dog foul, lack of social infrastructure (access to libraries, supermarkets, administration offices, town centres, community centres etc) and an increase in crime. 7. The ground, be definition on site 126/1610 will continue to produce gases for years to come. This may pose a health risk to people living on the old tip and surrounding ground area where contamination may be an issue. 8. Benhall Mill Road is a very narrow road which would require widening to support that number of additional cars, buses, industrial vehicles and lorries. Even if the road was widened the access could only be into and from Forest Road, which is maintained and paid for by Kent County Council. The access onto Forest Road with a new resident number of approximately 600 people would cause significant delays and danger to pedestrians. The road south is narrow, for single vehicles only. Golfers use the road to walk, with their golf bags, between the two greens. There is insufficient road or verge width to expand or extend as there is a rail bridge dividing the road. Additional traffic would undoubtedly be a safety issue. 9. The additional volume of vehicles would be unacceptable for the road and again would affect the AONB. In addition to the environment factors many of the houses at the entrance to Benhall Mill Road, from Forest Road, do not have off road parking. As a result there is a high volume parking in the current built up part of that road, together with overflow parking from the new developments on the Crematorium side of the road. This more densely populated area means that due to the high number of parked vehicles only one car can pass. The road is not wide enough for two vehicles to pass at the same time; this would cause significant additional pressure with potentially 300 - 400 additional cars using the road. 10. Access of vehicles in and out of the proposed land would have a significant impact to the dwellings in Tunbridge Wells at the top of the Benhall Mill Road and the access into and out of the Cemetery and Crematorium. 11. The noise and light which is evident from the Hawkenbury Astro Turf when in use would go some way to demonstrate the impact a development of 220 dwellings (possible 800 people) would have on noise and light. 12. The density of dwellings proposed will not be in keeping with the large dwelling and proportional land at Birch lands, Little Mount Farm, Windmill Farm and Windmill Farmhouse. 13. The land immediately adjacent to Little Mount Farm is owned by the J Edmonton Trust. We believe there may be a restriction to develop in any way capacity on the new tree plantation which overlooks Little Mount Farm and edges the railway boundary foliage and trees. The proposed plan does not appear to account for this. 14. This site is urban fringe to Tunbridge Wells and Kent County Council. The residents will naturally look for environmental and social support from within KKC and not Wealden which would suggest this proposal is made by WDC with the sole purpose of offloading the support of dwellings and residents to KCC. This is a ridiculous idea. WDC have many rural villages and town which will face the same impact issues in relation to schooling, medical provision, transport etc. but, if they invest properly improvements in these provisions will be of benefit to neighbouring villages and towns in the future when WDC face similar developmental pressures. 15. Kent County Council requested inclusion of Social Housing in Ash Close, the development between the Nevill Golf Club and Acer Avenue. This
development has been built to allow localised internal recreation areas for children and high brick walls, in line with
the enclosed Acer Avenue development. There is no mention of any Social Housing allocation. More allocation of
Social Housing together with the issues potential health risks with the land being built on and the railway will
undoubtedly have a negative effect on house prices and the lack of medical provision, local shops and public
transport will mean the demand for these properties will be poor. The residents in Ash Close find the lack of public
transport and local shops very difficult. These properties are not in high demand even within KCC. 16. If the
address of these dwellings was Tunbridge Wells; are WDC presuming that social provision within Tunbridge Wells
will support this new development and its residents? 17. Developments of 220 dwellings (approx 600 - 800 people)
should be allocated for sites within Wealden where WDC are able to provide the social support required by this
size of residential community. 18. There is no provision of schooling within Wealden for miles. The nearest
Wealden funded primary school is Frant. The site has developmental restraints and if already year in year out 
subscribed. The nearest secondary school is Uplands in Wadhurst. There is no public transport from Benhall Mill
Road to Wadhurst. The children in Ash Close, who are Kent County Council, are largely allocated Broadwater
Down School. There is no transport to that school and many families walk that distance with their children. How
would new residents be expected to travel to schools within Wealden? 19. The nearest Doctor's surgery will be in
Frant. Has Wealden DC allocated fees for an extension of these medical services offered? The address for these
properties will presumably be Tunbridge Wells and therefore WDC are presumably hoping they will not have to
provide medical support to these residents. 20. The nearest hospital to the residents would be Pembury, already
hugely busy with residents from Kent. If you applied for residential within Uckfield where there is considerable
land between the town and the industrial area and which supports a local hospital provision. Crow Junior Colts Rackets
champion - borough also has just such a provision. 21. The provision of sewage, mains, water, gas, electricity etc.
There are no mains supplies from Wealden so again WDC would presumably be looking for the developers to tap
into Kent supplies. There have been significant delays recently on Forest Road as a result of traffic lights being
erected whilst essential repair and replacement work has been done.

WCS4 Strategic Development Areas

Sound  No  Justified  Effective  Consistent with national policy
Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:

6. Conclusion 6.1 The Core Strategy states in para. 6.18 that it aims ‘to help ensure that the aspirations of the
Hellingly Parish Council / Hailsham Town Council Masterplan and the local community can be realised’. However,
it has rejected a key component of that Masterplan which reflects local opinion. 6.2 The District Council fears that
development to the east of Hailsham ‘could adversely affect the health objective due to the significant odour issues
from waste water treatment works that would be likely to affect new residents on a prolonged basis’. However, no
development is scheduled to commence before 2017 which allows a lengthy period for investigations to be made
into improvement of the existing waste water treatment works or into an alternative locations. It is not yet a reason
for proposing or accepting a second best solution. Annual Monitoring Reports will identify the need to review any
elements of the Core Strategy where monitoring has identified a sustained failure to meet the targets set and this
is just one of a whole range of viability and other issues which remain to be investigated. 6.3 The North Hailsham
residential allocation is not consistent with government policy in that it will not provide for social inclusion and a
sustainable community; would not enhance the physical environment by diverting the A271 traffic through an
existing residential community; would not promote accessibility to jobs, shopping, leisure facilities and services by
public transport, walking and cycling; and would not reduce the need to travel, especially by car.

Details of Changes to be Made:

6.4 It is submitted, therefore, that the Core Strategy is not sound in its present form because its proposal to site
700 additional dwellings to the north of the A271 rather than to the east of Hailsham is neither justified nor
consistent with government policy. It is requested that this proposal be deleted and that, if necessary, the housing
allocation to the east of Battle Road be increased from 600 to 1,300 dwellings.
6. It is requested that this proposal be deleted and that, if necessary, the housing allocation to the east of Battle Road be increased from 600 to 1,300 dwellings.

Details of Reasons for Soundess/ Legal Complaince:

The housing trajectory is unhelpful in guiding future housing development. The Council's expectations on the level of housing completions in the period up to 2016 need to be revised down with a corresponding increase in the level of expected completions in the latter part of the Plan period. In the light of this uncertainty it is suggested figure 4 should be removed from the Core Strategy.

Details of Changes to be Made:

Delete figure 4 housing trajectory
Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the district, and the Council hopes that this level of delivery can be sustained throughout the plan period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable. The Council’s Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: 2004/2005 - 128 2005/2006 - 173 2006/2006 - 230 2007/2008 - 415 2008/2009 - 349 2009/2010 - 337 The average number of new dwellings delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for. Further more the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings was only 236. While there may be reasons why higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved.

Details of Changes to be Made:
To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase its overall level of housing numbers and, importantly, to increase the level of provision in the northern part of the District. It is considered that there should be increased provision for both Crowborough and Heathfield which is set out in more detail in the following sections. Higher provision at these locations can be accommodated in accordance with Policy SP03. Furthermore this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local community provision in these towns. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.
Details of Reasons for Soundness/ Legal Compliance:

1. Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the district, and the Council hopes that this level of delivery can be sustained throughout the plan period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable.

2. The Council’s Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: 2004/2005 - 128 2005/2006 - 173 2006/2007 - 230 2007/2008 - 415 2008/2009 - 349 2009/2010 - 337 The average number of new dwellings delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for/ furthermore, the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings average only 236.

3. While there may be reasons why the higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved.

4. To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase it overall level of housing numbers and, importantly, to increase the level of provision in the northern part of the District. It is considered that there should be increased provision for both Heathfield and Crowborough. Higher provision at these locations can be accommodated in accordance with Policy SP03. furthermore this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.

Details of Changes to be Made:
Significantly more housing should be allocated in the north part of the District in order to create the opportunity meet the known housing needs within the plan period.
## Details of Reasons for Soundess/ Legal Complaince:

3. We agree with the underlying objectives for the housing trajectory to ensure that there is a continuous supply of new housing over the plan period that takes account of market conditions, the ability for communities to assimilate new development and the provision of the necessary infrastructure. However whilst Policy WCS5 does include flexibility in itself, and this is implicit in the housing trajectory (figure 4) which is referred to in Policy WCS5, the status of figure 5 is unclear and the wording in paragraph 5.16 reduces the flexibility. For example, it is suggested that development at south Polegate and east Willingdon (SD4) will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in south Wealden. Transport analysis undertaken on behalf of our client suggests there may well be scope for some development before this date. We do not consider there is any advantage in artificially delaying the commencement of development if there is no good reason to do so. This approach would be consistent with paragraph 7.4 where it is stated that development should make the most effective use of existing infrastructure. It is possible to phase housing development to take advantage of existing infrastructure and ensure a satisfactory supply of housing is achieved and development should not be hindered by more strategic infrastructure concerns. One of the advantages of the area identified for growth in Polegate is that it will integrate more naturally into the existing built form, rather than satellite locations with intervening movement constraints such as main roads etc, will help to minimise the use of cars and therefore will create less need for highway infrastructure improvements. 4. The infrastructure constraints of the various Strategic Development Areas in the Core Strategy will become clearer through the Strategic Site Allocations DPD and we consider that more detailed phasing guidance should await this document and not be included in the Core Strategy. In addition the introduction of the Community Infrastructure Levy by 2014 may give better opportunities to fund transport (and other) infrastructure than has been the case in the past. In addition, Policy WCS7 (Effective Provision of Infrastructure) ensures that the release of land for development is conditional upon there being sufficient capacity in the existing local infrastructure to meet the requirements generated by the proposed development.

Details of Reasons for Soundess/ Legal Complaince:

1 Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the district, and the Council hopes that this level of delivery can be sustained throughout the plan period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable. 2 The Council’s Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: Year Additional Dwellings 2004/2005 128 2005/2006 173 2006/2007 230 2007/2008 415 2008/2009 349 2009/2010 337 The average number of new dwellings delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for. Furthermore, the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings average only 236. 3 While there may be reasons why higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved. 4 To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase its overall level of housing numbers and, importantly, to increase the level of provision in the northern part of the District. It is considered that there should be increased provision for both Heathfield and Crowborough. Higher provision at these locations can be accommodated in accordance with Policy SP03. Furthermore this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.

Details of Changes to be Made:

Significantly more housing should be allocated in the north part of the District in order to create the opportunity to meet the known housing needs within the plan period.
Details of Reasons for Soundess/ Legal Complaince:

1. Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the district and the Council hopes that this lever of delivery can be sustained throughout the plan period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable. 2. The Council's Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: 2004/2005 128 2005/2006 173 2006/2007 230 2007/2008 415 2008/2009 349 2009/2010 337. The average number of new dwellings delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for. Furthermore, the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings average only 236. 3. While there may be reasons why higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved. 4. To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase its overall level of housing numbers and to importantly to increase the level of provision in the northern part of the district. It is considered that there should be increased provision for both Heathfield and Crowborough which is set out in more detail in the following sections. High provision at these locations can be accommodated in accordance with Policy SP03. Further this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns and particularly in Heathfield. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.
Details of Reasons for Soundness/ Legal Compliance:
(paragraphs 5.13 – 5.16 and figure 4.1 Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the District and the Council hopes that this level of delivery can be sustained throughout the period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable. 2 The Council’s Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: Year Additional Dwellings 2004/2005 128 2005/2006 173 2006/2007 230 2007/2008 415 2008/2009 349 2009/2010 337 The average number of new dwelling delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for. Furthermore, the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings average only 236.

Details of Changes to be Made:
3 While there may be reasons why higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved. 4 To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council need to increase its overall level of housing numbers and importantly to increase the level of provision in the northern part of the District. It is considered that there should be increased provision for both Heathfield and Crowborough, which is set out in more details in the following sections. Higher provision at these locations can be accommodated in accordance with Policy SP03. Furthermore this approach will strengthen the ability of the Council to meet the objectives in Policy SP094. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns and particularly in Heathfield. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.

Details of Reasons for Soundness/ Legal Compliance:
With regard to figure 4.1, the application of a line across the Housing Trajectory at the 550 dwelling completion level (consistent with the South East Plan's District requirement) would reveal the inadequacy of the amount of housing development being planned for and the problems which will face the community in accessing homes and in providing an increased level of affordable housing.

Details of Changes to be Made:
The South East Plan's minum 550 dwellings completions per year should be reflected upon the Figure 4 Trajectory
Details of Reasons for Soundess/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request".

Details of Changes to be Made:
REVISION SOUGHT : the trajectory should be amended to reflect the housing delivery programme set out in revised paragraph 5.3. (REVISION SOUGHT Delete paragraph 5.13 and replace with "An average delivery rate of at least 550 dwellings per annum will be delivered with a split of 350 per annum in South Wealden adn 200 per annum in North Wealden").

---

Details of Reasons for Soundess/ Legal Complaince:
It is inappropriate to place the phasing of SD6 & SD7 together in Table 5. Asexplained prevoisly this does not accurately assess the deliverary of these 2 distinct areas or the seperate land parcels within. Due to the proximity to Polegate and its services and the intended employment provision at SD5 Land north of Stone Cross SD7 should be phased ahead of SD6.

Details of Changes to be Made:
Alter Table 5 SD7 & SD6 should be seperated and phased on the basis above ie SD7 first and that should mean land south of Dittons Rd, Stones Cross in the 1st phase of SD7.

---

Details of Reasons for Soundess/ Legal Complaince:
SD3 should become the 1st phase of development at Hailsham including land north of New Rd at Park farm( 2016/17 onwards). This will enable a comprehensive development together with the necessary highway improvement to be delivered. It will incorporate a master plan to improve connectivety and sustainability of the hospital development with provision of a country park with cycle and pedsetrian links into the town. It will include employment and all necessary social infrastructure that will improve the deliverary and sustainability of this part of the District whilst enhancing the significant bebfits to the local community.

Details of Changes to be Made:
Alter the figures and timetable in Fig 5 to bring forward SD3 into the 2016/17 phasing and increase the number from 700 to 1300 dwellings
Policy WSC4 identifies the Strategic Development Areas in the District that the Council considers to be critical to the delivery of the overall strategy. SD6 identifies land at East and South East of Stone Cross that includes land north of Rattle Road owned by my client. We support the approach adopted within Policy WCS4 and the importance attached to the identified Strategic Development Areas to deliver housing and employment opportunities and wider services and infrastructure to support the growth of the District. In particular we support the identification of SD6 - it being a logical location to accommodate strategic development given the status of Stone Cross as a Service Centre within the wider settlement hierarchy, its particularly good public transport connections to Langney and Estbourne, its existing level of services, employment opportunities and facilities and its close links with th A22/A27 primary and trunk routes. Indeed, the provision of housing and employment development in the area will, we believe, help to address the economic needs of the south of the District and the wider Sussex Coast Sub-region whilst also delivering affordable housing in meaningful numbers and making a positive contribution to the sustainability of Stone Cross and the quality of life for existing and future residents. The South East Plan proposes that approximately 63% of Wealden's new housing development is located in the Sussex Coast Sub-Region. The draft Core Strategy is in accordance with this as at present approximately 63% of new allocations (excluding rural areas) are within the Sussex Coast Policy Area. Overall therefore, this approach is consistent with policy within the South East Plan, including specific policy for the Sussex Coast Sub-Region and national planning policy (PPS3 paragraphs 36-38) by helping to create mixed and sustainable communities, developing housing and employment in suitable locations offering a range of community facilities with access to jobs and services. The approach also accords with the Government's housing objectives in PPS3 in particular the approach identified in Paragraphs 10 and 36 of delivering housing developments in suitable locations, which offer a good range of community facilities and with good access to jobs, key services and infrastructure. Further, it is apparent that all of the requirements set out in paragraph 38 of PPS3 for finding the most suitable locations for growth have been carefully applied to the housing and employment land targets, resulting, at least in the south Wealden District area, in a comprehensive, credible and deliverable spatial plan to address the needs of the District. The Council's SHLAA identified a number of development sites around Stone Cross that are suitable for development and unconstrained by ownership. In addition, development in this location is known to be viable based on the findings of the Strategic Housing Market Assessment. Having regard to all of the above points and when considered against the alternative of less or no development, this approach is considered to be sound. Less or no development at Stone Cross would be at odds with the established national and regional planning policy identified above. It would also fail to reflect the established settlement pattern in the District, would place greater development pressures on other locations in the District and would inevitably fail to achieve the aims of sustaining and enhancing local services, providing homes in parallel with jobs, providing affordable housing and combining growth with recreation and leisure development. Overall therefore, the approach to development within this area is largely justified in line with the requirements of PPS12 as it is founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. However, in the context of our comments concerning the overall scale of housing required in the District under Policy WCS1, we consider that the housing provision identified for Stone Cross under supporting text (Figure 5 and at paragraph 6.31) to Policy WCS1 (650 dwellings) should be increased to reflect existing local housing need and the anticipated growth in households during the Core Strategy period.

Phasing of Development Figure 5

Details of Reasons for Soundess/ Legal Complaince:

3. We agree with the underlying objectives for the housing trajectory to ensure that there is a continuous supply of new housing over the plan period that takes account of market conditions, the ability for communities to assimilate new development and the provision of the necessary infrastructure. However whilst Policy WCS5 does include flexibility in itself, and this is implicit in the housing trajectory (figure 4) which is referred to in Policy WCS5, the status of figure 5 is unclear and the wording in paragraph 5.16 reduces the flexibility. For example, it is suggested that development at south Polegate and east Willingdon (SD4) will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in south Wealden. Transport analysis undertaken on behalf of our client suggests there may well be scope for some development before this date. We do not consider there is any advantage in artificially delaying the commencement of development if there is no good reason to do so. This approach would be consistent with paragraph 7.4 where it is stated that development should make the most effective use of existing infrastructure. It is possible to phase housing development to take advantage of existing infrastructure and ensure a satisfactory supply of housing is achieved and development should not be hindered by more strategic infrastructure concerns. One of the advantages of the area identified for growth in Polegate is that it will integrate more naturally into the existing built form, rather than satellite locations with intervening movement constraints such as main roads etc, will help to minimise the use of cars and therefore will create less need for highway infrastructure improvements. 4. The infrastructure constraints of the various Strategic Development Areas in the Core Strategy will become clearer through the Strategic Site Allocations DPD and we consider that more detailed phasing guidance should await this document and not be included in the Core Strategy. In addition the introduction of the Community Infrastructure Levy by 2014 may give better opportunities to fund transport (and other) infrastructure than has been the case in the past. In addition, Policy WCS7 (Effective Provision of Infrastructure) ensures that the release of land for development is conditional upon there being sufficient capacity in the existing local infrastructure to meet the requirements generated by the proposed development.

Details of Reasons for Soundess/ Legal Complaince:

We support the Councils identification of an urban extension to the east of Hailsham to be commenced around 2017 as set out within SD2. The land is very logical and capable of supporting growth and can deliver the growth that the Council anticipates. We would however suggest, as with our earlier comments on policies WCS 1 and WCS 2 that additional growth should be planned for and with this in mind the land east of Hailsham has the ability to accommodate higher levels of growth than that presently planned for by the Council.

Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:

The Figure 5 Phasing of Development schedule does not include sufficient sites to meet the level of housing development considered appropriate for the District within the South East Plan. The South East Plan is the most relevant and up-to-date authoritative document against which to establish an effective housing delivery strategy. The schedule will need to be enlarged. The schedule also reveals the need for additional smaller scale sites to come forward within the period 2011 - 2019. These should come forward without compromising infrastructure requirements. The currently proposed land supply releases are heavily constrained and will require co ordination of infrastructure funding, possibly through advanced provision which reinforces the need for a Community Infrastructure Levy mechanism to be put into place. Objection is made to the extent of the area of land identified as SD3. This location is further away from the town centre than other identified (SHLAA) suitable options and should be reduced in scale. Objection is made to the inclusion of SD2 in the absence of the results of studies relating to potential odour issues and infrastructure constraints. Objection is made to the omission of land to the south of Hailsham which was identified as a suitable site within the SHLAA (ref: 245/1310) but rejected for superficial reasons. When compared to the location to the north of Hailsham this land is closer to the town centre with alternative means of transport available via the Cuckoo Trail which lies immediately adjacent to the site. Other land to the south of Hailsham (SHLAA ref: 207/1310) should be reconsidered in the light of the more immediate connectivity with the Town Centre via the Cuckoo Trail and potential for a well planned comprehensively planned release. See supporting report.

Details of Changes to be Made:

The schedule will require revision and recasting to accommodate additional sites.

The church considers that development at Crowborough should commence as soon as possible to deliver services and housing to those in need provided that the development constraint can be satisfactorily overcome.

**Details of Changes to be Made:**

The phasing of growth at Crowborough should be linked to the overcoming of constraints rather than a time period.

---

"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Paragraph 5.19 This paragraph refers to contigency arrangements which are not specified

**Details of Changes to be Made:**

REVISION SOUGHT Delete paragraph.

---

**Details of Reasons for Soundess/ Legal Complaince:**

There is no justification in the evidence base for the proposed phasing of development at Crowborough. The proposed phasing produces the anomaly of no housebuilding between 2019 and 2024. There is no reasoned justification to support this and it can only be to the detriment of the vitality and viability of this important town.

**Details of Changes to be Made:**

Provide for more housing at Crowborough in order to allow an even flow of housing delivery. Remove phasing proposals unless reasoned justification can be provided.

**Details of Reasons for Soundness/ Legal Complaince:**
WJPC is concerned at the numerous references to Polegate and Willingdon as one settlement, as highlighted in 3.3 Table 1, 3.11, SPO6, WCS2, WCS3, 5.13, 6.31(2), Figure 8 and Figure 12. In particular, Figure 2 showing settlement hierarchy, places Polegate and Willingdon as one settlement, yet details other settlements individually.

**Details of Changes to be Made:**
Details of Reasons for Soundness/ Legal Complaince:
1. Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the district, and the Council hopes that this level of delivery can be sustained throughout the plan period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable. 2. The Council’s Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: 2004/2005 - 128 2005/2006 - 173 2006/2007 - 230 2007/2008 - 415 2008/2009 - 349 2009/2010 - 337 The average number of new dwellings delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for/ furthermore, the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings average only 236. 3. While there may be reasons why the higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved. 4. To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase it overall level of housing numbers and, importantly, to increase the level of provision in the northern part of the Disstrict. It is considered that there should be increased provision for both Heathfield and Crowborough. Higher provision at these locations can be accommodated in accordance with Policy SP03. further more this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.

Details of Changes to be Made:
Significantly more housing should be allocated in the north part of the District in order to create the opportunity meet the known housing needs within the plan period.
Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the district, and the Council hopes that this level of delivery can be sustained throughout the plan period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable. The Council’s Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: 2004/2005 - 128 2005/2006 - 173 2006/2006 - 230 2007/2008 - 415 2008/2009 - 349 2009/2010 - 337 The average number of new dwellings delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for. Further more the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings was only 236. While there may be reasons why higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved.

Details of Changes to be Made:
To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase its overall level of housing numbers and, importantly, to increase the level of provision in the northern part of the District. <td>Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the district, and the Council hopes that this level of delivery can be sustained throughout the plan period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable. 2 The Council’s Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: Year Additional Dwellings 2004/2005 128 2005/2006 173 2006/2007 230 2007/2008 415 2008/2009 349 2009/2010 337 The average number of new dwellings delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for. Furthermore, the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings average only 236. 3 While there may be reasons why higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved. 4 To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase its overall level of housing numbers and, importantly, to increase the level of provision in the northern part of the District. It is considered that there should be increased provision for both Heathfield and Crowborough. Higher provision at these locations can be accommodated in accordance with Policy SP03. Furthermore this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.</td>

Details of Reasons for Soundness/ Legal Compliance:
Concern raised at the reference to Polegate and Willingdon as one settlement

Details of Changes to be Made:

To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase its overall level of housing numbers and, importantly, to increase the level of provision in the northern part of the District. It is considered that there should be increased provision for both Crowborough and Heathfield which is set out in more detail in the following sections. Higher provision at these locations can be accommodated in accordance with Policy SP03. Furthermore this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local community provision in these towns. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.
Paragraph 5.14

Details of Reasons for Soundness/ Legal Compliance:

1. Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the district, and the Council hopes that this level of delivery can be sustained throughout the plan period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable. 2. The Council's Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: 2004/2005 - 128 2005/2006 - 173 2006/2007 - 230 2007/2008 - 415 2008/2009 - 349 2009/2010 - 337 The average number of new dwellings delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for/ furthermore, the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings average only 236. 3. While there may be reasons why the higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved. 4. To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase it overall level of housing numbers and, importantly, to increase the level of provision in the northern part of the District. It is considered that there should be increased provision for both Heathfield and Crowborough. Higher provision at these locations can be accommodated in accordance with Policy SP03. further more this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.

Details of Changes to be Made:

Significantly more housing should be allocated in the north part of the District in order to create the opportunity meet the known housing needs within the plan period.

While there may be reasons why the higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved. 4. To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase it overall level of housing numbers and, importantly, to increase the level of provision in the northern part of the Disstrict. It is considered that there should be increased provision for both Heathfield and Crowborough. Higher provision at these locations can be accommodated in accordance with Policy SP03. Furthermore this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.

Details of Changes to be Made:

Significantly more housing should be allocated in the north part of the District in order to create the opportunity meet the known housing needs within the plan period.
Paragraph 5.16

Details of Reasons for Soundess/ Legal Complaince:

3. We agree with the underlying objectives for the housing trajectory to ensure that there is a continuous supply of new housing over the plan period that takes account of market conditions, the ability for communities to assimilate new development and the provision of the necessary infrastructure. However whilst Policy WCS5 does include flexibility in itself, and this is implicit in the housing trajectory (figure 4) which is referred to in Policy WCS5, the status of figure 5 is unclear and the wording in paragraph 5.16 reduces the flexibility. For example, it is suggested that development at south Polegate and east Willingdon (SD4) will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in south Wealden. Transport analysis undertaken on behalf of our client suggests there may well be scope for some development before this date. We do not consider there is any advantage in artificially delaying the commencement of development if there is no good reason to do so. This approach would be consistent with paragraph 7.4 where it is stated that development should make the most effective use of existing infrastructure. It is possible to phase housing development to take advantage of existing infrastructure and ensure a satisfactory supply of housing is achieved and development should not be hindered by more strategic infrastructure concerns. One of the advantages of the area identified for growth in Polegate is that it will integrate more naturally into the existing built form, rather than satellite locations with intervening movement constraints such as main roads etc, will help to minimise the use of cars and therefore will create less need for highway infrastructure improvements. 4. The infrastructure constraints of the various Strategic Development Areas in the Core Strategy will become clearer through the Strategic Site Allocations DPD and we consider that more detailed phasing guidance should await this document and not be included in the Core Strategy. In addition the introduction of the Community Infrastructure Levy by 2014 may give better opportunities to fund transport (and other) infrastructure than has been the case in the past. In addition, Policy WCS7 (Effective Provision of Infrastructure) ensures that the release of land for development is conditional upon there being sufficient capacity in the existing local infrastructure to meet the requirements generated by the proposed development.

Furthermore this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.

Details of Changes to be Made:

Significantly more housing should be allocated in the north part of the District in order to create the opportunity to meet the known housing needs within the plan period.
Details of Reasons for Soundness/ Legal Complaince:

1. Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the district and the Council hopes that this lever of delivery can be sustained throughout the plan period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable.

2. The Council's Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: 2004/2005 128, 2005/2006 173, 2006/2007 230, 2007/2008 415, 2008/2009 349, 2009/2010 337. The average number of new dwellings delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for. Furthermore, the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings was only 236.

3. While there may be reasons why higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved.

4. To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council needs to increase its overall level of housing numbers and to importantly increase the level of provision in the northern part of the district. It is considered that there should be increased provision for both Heathfield and Crowborough which is set out in more detail in the following sections. High provision at these locations can be accommodated in accordance with Policy SP03. Further this approach will strengthen the ability of the Council to meet the objectives in Policy SP04. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns and particularly in Heathfield. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.
Details of Reasons for Soundess/ Legal Complaince:
(paragraphs 5.13 – 5.16 and figure 4 1 Paragraph 5.13 states that over the last 21 years on average 400 dwellings have been built per annum across the District and the Council hopes that this level of delivery can be sustained throughout the period. It is considered that there must be significant doubt as to whether this level of delivery is reasonable and achievable. 2 The Council’s Annual Monitoring Report 2009/2010 identifies the annual net increase in dwellings in the district in recent years as follows: Year Additional Dwellings 2004/2005 128 2005/2006 173 2006/2007 230 2007/2008 415 2008/2009 349 2009/2010 337 The average number of new dwelling delivered over this 6 year period is 272, which is a very long way short of the 400 average that the Council is hoping for. Furthermore, the first four years of this period cover a time of relative boom in the housing development market, yet the average net increase in dwellings average only 236.

Details of Changes to be Made:
3 While there may be reasons why higher numbers of houses were delivered in the past, there is no indication in the above evidence that this is likely to be repeated to enable the identified annual average yield to be achieved. 4 To ensure that sufficient provision is made for housing to be delivered throughout the Core Strategy timescale, the Council need to increase its overall level of housing numbers and importantly to increase the level of provision in the northern part of the District. It is considered that there should be increased provision for both Heathfield and Crowborough, which is set out in more details in the following sections. Higher provision at these locations can be accommodated in accordance with Policy SP03. Furthermore this approach will strengthen the ability of the Council to meet the objectives in Policy SP094. As drafted, the Core Strategy will fail to protect or secure investment to enhance local and community provision in these towns and particularly in Heathfield. Higher levels of housing will provide the opportunity to secure greater levels of investment (including that from developer contributions) particularly where larger sites are allocated and developed in a more comprehensive way.

Details of Reasons for Soundess/ Legal Complaince:
5.16 states ‘development at south Polegate and east Willingdon will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in South Wealden.’

Details of Changes to be Made:
If these infrastructure requirements are not completed by 2019 how will this impact on any development within Polegate.
Details of Reasons for Soundess/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request".

Details of Changes to be Made:
REVISION SOUGHT Figure 5 should be amended to reflect the increased housing delivery numbers set out in revised Policy WCS2. Bullet point 2 should be amended to add land west of the A22 at Polegate. Bullet Point 8 should be amended to 800 dwellings principally in South Wealden.

Details of Reasons for Soundess/ Legal Complaince:
The evidence base does not demonstrate why development south east of Crowborough has to be delayed until after 2024. Evidence provided to WDC demonstrates how traffic conditions in Western Road can be addressed at an early stage. The plan strategy is therefoe based upon a false premise.

Details of Changes to be Made:
Remove any reference to constraints on developing SDA SD10 being unable to be addressed until 2024.

Details of Reasons for Soundess/ Legal Complaince:
2. Paragraph 5.9 confirms that housing figures set out in Policy WCS2 make no provision for windfall sites, but completions on windfall sites will count towards the overall house building totals achieved in Wealden. However, it should be clarified that these will be additional to the housing figures referred to in Policy WCS2. In this regard the wording of paragraph 5.17 is unclear and seems to potentially contradict Policy WCS2. In view of the higher housing allocation in the South East Plan, there is no justification for windfall sites to be counted against the total 9,600 housing figure.

Details of Changes to be Made:
Paragraph 5.18

Details of Reasons for Soundess/ Legal Complaince:
I cannot see the evidence submitted to suggest that the Councils have undertaken sufficient research they suggest in assessing the housing trajectory stated in their CS.

Details of Changes to be Made:
Greater clarity and evidence is required to prove the soundness of this statement.
Legally Compliant

Sound: No, Justified, Effective, Consistent with national policy

Details of Reasons for Soundess/ Legal Complaince:

We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no.1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,711 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council's attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Council's Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.
We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings are provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council's attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.
We are intrigued by the Council's intended adoption of an unsound housing position. The Council's proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council's Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council's Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as identified above of the chronic affordable housing issues that exist within the District.

Details of Reasons for Soundess/ Legal Complaince:
The Infrastructure Delivery Plan (IDP) is insufficiently informed as it does not benefit from the results of the waste water treatment study, particularly in relation to potential development options to the south of Haisham. The IDP must therefore be reviewed in the light of the findings and the site release sequence adjusted to reflect the need to identify additional capacity for residential development in the short-to-medium term in particular. At present the two broad locations for residential land releases identified at Hailsham are overly dependent on major infrastructure improvements therefore additional sites with flexibility require identification. The IDS needs to reflect the results of further research into this issue with a more responsive ability to release shorter term sites.

Details of Changes to be Made:
The IDS needs to be reviewed in the light of the outstanding research into the waste water treatment works' additional capacity particularly in relation to potential development land south of Hailsham.

WCS5 Managing the Policy 5  Release of Housing Land

Sound  ☑ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  ☑ Yes  ☑ No

Details of Reasons for Soundness/Legal Complaince:
This policy is predicated upon the contents of policy WCS2. Objection has already been made to that on the grounds that it is unsound and inadequate. The purpose of policy WCS5 will therefore need to adopt a different approach, namely one of encouraging development, rather than that of seeking to restrict it. Indeed, if there is demand for housing, why should a local authority look to restrict it? Sustainable development is all about meeting today's needs, and so attempting to restrict it appears illogical. Given the amount of additional housing that is required, then the emphasis of this policy should be on bringing that land forward. The policy therefore needs to be re-worded so as to reflect this.

Details of Changes to be Made:
Eastbourne Borough Council acknowledges the inclusion of a policy dealing specifically with the release of housing land and welcomes the inclusion of the wording, “The release of land will be dependent on the timely provision of infrastructure necessary to deliver housing, including affordable housing”. The reference to the Infrastructure Delivery Plan is also strongly supported and the acknowledgement in paragraph 5.20 that, “If infrastructure is critical to delivery of any proposed growth and is not able to be delivered this will have an impact on the delivery of growth” is welcomed. Failure to provide sufficient mechanisms for the delivery of essential infrastructure to support housing development has the potential to cause serious and wide-ranging problems, both within Wealden, and in neighbouring local authorities. This issue is likely to be particularly acute in the areas of Wealden close to the District boundary with Eastbourne where a large proportion of the District’s overall growth is proposed and where significant deficiencies in essential infrastructure have already been identified. It is therefore essential that the impacts on transport, waste water treatment, educational facilities and health care facilities, and the environment are fully understood and the additional needs generated by the additional growth firmly embedded into the Core Strategy. The Policy needs to provide a clear indication of what would happen if, for whatever reason, infrastructure delivery was not forthcoming, and what implications this would have for the overall deliverability of the Core Strategy. The Strategy places considerable emphasis on the delivery of a relatively small number of large urban extensions to provide the bulk of its overall housing target. A delay caused by issues relating to the provision of infrastructure in just one or two of these large urban extensions, could have serious implications for the Core Strategy’s ability to achieve the housing targets established within it. The extension of the overall time-period within which the Core Strategy needs to deliver the housing, from 2026, to 2030, might help to achieve the targets but the Core Strategy is still heavily reliant on a small number of urban extensions and this is something that requires further consideration.

Details of Changes to be Made:

WSC5 gives no evidence of the Councils Trajectory nor offers any contingency. The Council has stated the 9600 is a mimimum it is therefore unnecessary to control housing deliverary were it exceeds this minimum figure.

Details of Changes to be Made:
Current ref to control of over provision of housing and questions of the trajectory assumptions need to be debated. Evidence must be submitted to justify this policy statement.
Details of Reasons for Soundess/ Legal Complaince:
The County Council supports the principle in this policy that the release of land is to be dependent upon the timely provision of infrastructure necessary to deliver housing. The County Council also supports the need for reviews of the Infrastructure Delivery Plan, as both needs and funding streams are subject to change, and this may lead to necessary adjustments in the pace of housing delivery. The County Council is happy to help keep the Infrastructure Delivery Plan up to date.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
The recognition of SHLAA sites being an appropriate source of housing provision should be carried through all housing delivery policies.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
The policy should refer to monitoring the average completion rate figure against the actual completion rate figure. The policy should then allow the Council to take action if the two figures are significantly different.

Details of Changes to be Made:

Policy WCS5. Managing the release of Housing Land The Council will monitor the completions annually and compare the figure with the average annual completions required to meet the housing requirement of policy SP03. If over a period of 2 - 3 years the completions are significantly higher than predicted the provision of additional planning consents for housing on large sites will be restricted. If completions are significantly lower than predicted. Then planning consents for large sites will be supported even if this means that development is in advance of the provision of related infrastructure.
3.2 Crowborough is identified by the Council as a "top tier" District Centre within Wealden District which in strategic and locational terms is relatively close to two of the Council's three highest order "Primary Centres" at Tunbridge Wells and Tonbridge to the north of the District. The Council suggests however, that the potential for future housing land release at Crowborough is limited, due mainly to landscape constraints. 3.3 No satisfactory evidence has been produced by the Council to show that Crowborough is any more constrained than development at other locations more favoured by the Council for strategic housing development, such as at Uckfield (within its historic flood risk problems and traffic congestion in its town centre) or within the Hailsham/Polegate/Stone Cross area (where there are wast water treatment constraints that could affect the high protected Pevensey Levels area within the southern part of the district). As it stands at present and for no sound reason, new housing provision would be heavily biased towards meeting housing requirements in the central and southern parts of the District rather than in the northern part, where demand is high as reflected by local house prices. 3.4 There is no sound evidence that the Crowborough area can only accommodate up to 300 new dwellings nor is any sound reason given for delaying such housing development until the middle and end part of the PSCS DPD period. In particular, this has major implications for the delivery of affordable housing, for which there is a recognised need in Crowborough. this would be limited to just 105 additional affordable dwellings between 2015 - 2030 (assuming 35% delivery within the strategic development areas identified by the Council) 3.5 he Council has provided no satisfactory explanation as to what is meant by a "Strategic Development Area" (either in relation to the settlement hierarchy or in terms of the size of potential housing sites or the number of houses). Furthermore, not only is the purposes of identifying such areas unclear, but also there are clear inconsistencies in the Council's overall identification of potential strategic development areas compared to other areas within the District (e.g. Horam) where a significant number of dwellings might be also delivered, but without SDA status. 3.6 The identification of 12 SDAs in draft Policy WCS4 also prejudices any proper or detailed examination and assessment of other potentially suitable housing land at Crowborough (and elsewhere) at the SS and DSA DPD stage. these representations have in particular, demonstrated that the Council's identification of SDAs at Crowb orough (the subject of SD8 - SD10) are not based on any creditable or sound evidence, nor do they necessarily represent the best locations or land available for future housing development (contrary to national planning policy contained in PPS12, paragraph 4.38). The Council's contingency site, which although shown in figure 9 and on the key Diagram of the PSCS DPD is not referred to in any draft Core Strategy policy. In addition it is allocated for another purpose within the Non-Statutory Local Plan and is wholly within the HWAONB. 3.7 The identification of SDAs in draft Policy WCS4 means that to be properly tested at the EIP, there would need to be a much wider consideration of all suitable candidate sites such as the land at Alderbrook, which is allocated for housing development in the Non-Statutory Local Plan (Policy CR4) and is within the Crowborough development boundary. This is immediately available to provide approximately 80 dwellings (24 affordable) and would not have to be delayed until either the middle or the end of the plan period unlike SD8, SD9 or SD10. 3.8 It must be highly questionable whether it would be appropriate to examine and compare the SDA sites with other candidate sites at the PSCS DPD EIP. It is also highly questionable as to whether the Council's proposed SS DPD would serve any purpose other than to merely identify site boundaries or provide 'development briefs' for the 12 DSAs listed in draft Policy WSC4. If so, it is questionable as to the purpose of the Council's proposed SS DPD as the site boundaries could be identified in the Council's proposed DSA DPD and development briefs could be provided in the form of Supplementary Planning Documents. 3.9 The Council's proposed Spatial Strategy Policy is a fundamental part of the PSCS DPD and if this is found to be fundamentally flawed for the cumulative reasons put forward in these representations, then the document would be intrinsically unsound. Rather than identifying suitable settlements and broad numbers for new housing delivery in each based upon the Council's proposed settlement hierarchy, the Council has largely ignored this and has instead identified SDAs at specific locations, thereby significantly restricting the scope of the Council's proposed SS DPD, which would appear to be limited to merely defining site boundaries, rather than providing robust policy based on a full and proper assessment of all suitable and available candidate sites. Eight Appendices have been submitted, but are not attached, and these are available to view at the Council Offices by request.

Details of Changes to be Made:
3.10 Indeed, the PSCS DPD is so defective that is difficult to see how it could be reasonably altered in view of the
fundamental nature of these representations and the only potential way forward in this situation would be for the Council to withdraw the document in order to either provide a detailed evidence base for each of its proposed SDAs or alternatively and more appropriately, for this to form part of a later SS DPD (if still relevant) or a DSA DPD, once the core strategy has been adopted. This would then provide a proper opportunity to assess in detail all the housing sites proposed by the Council together with other candidate sites having regard to the overall housing requirement and the hierarchy of settlements as set out in the Core Strategy DPD.
We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,885 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preperation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and...
we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.
4.5 We object to policy WCS5 Managing the Release of Housing Land, figure 4 Housing Trajectory and figure 5 Phasing of Development on the grounds that phasing of development at the North Hailsham SDA should not be delayed. 4.6 The council’s grounds for phasing delivery are provided at paragraph 8.25 in BP1, “A number of developments are already underway within and around Hailsham, and as such it is considered desirable to delay the delivery of the additional housing proposed by the Core Strategy to allow this relatively weak housing market to deliver what amounts to a significant amount of growth. The need to provide additional infrastructure including transport … would also benefit from a plan period extending beyond 15 years from the date of adoption, providing the least risk to the timely delivery of infrastructure.” 4.7 This statement is entirely unjustified and is not the most appropriate strategy when considered against the reasonable alternatives. Need for greenfield sites to provide family and affordable housing 4.8 The North Hailsham SDA can provide much needed market and affordable housing, including starter homes and intermediate housing which will have the effect of strengthening the local housing market. 4.9 The Strategic Housing Market Assessment (SHMA) (Wealden Housing Market Assessment, 2007) suggests that there should be an emphasis on the provision of larger family properties in South Wealden, and a range of smaller units in north Wealden. The Core Strategy highlights that a focus on semi-detached and detached housing in south Wealden is appropriate and will help broaden the area’s housing stock, making it generally more attractive to working age families moving into the district. The SHMA recommends that within South Wealden the provision of larger dwellings (3 and 4 bedrooms) would be appropriate. 4.10 However, the projected housing trajectory (Core Strategy Figure 4) shows that a large proportion of housing completions at the start of the plan period, up to 2014/2015, will be on brownfield sites. As a consequence of planning policy, an often urban context and market viability, often brownfield sites will only support a high density housing, including a significant proportion of flats. Greenfield sites, like the SDA, will need to come forward earlier in the plan period to ensure that much needed, larger dwellings are delivered. Suitability of North Hailsham 4.11 BP1 highlights the benefits of development at the North Hailsham SDA, it: · is less sensitive in terms of landscape impact than the East Hailsham; · provides an opportunity to consolidate development at Hellingly Hospital; · has the necessary road linkages; · has the ability to create mixed housing and employment areas. 4.12 Provision of services in this location will not detract from the town centre and will help provide for the existing community that is somewhat removed from the town centre. There is even an opportunity for the provision of a primary school. Table 8.7 of the Sustainability Appraisal highlights other advantages: “Improve the health and well being of the population The location will not detract from the town centre and will help provide for the existing community that is somewhat road linkages; · has the ability to create mixed housing and employment areas. 4.12 Provision of services in this location will not detract from the town centre and will help provide for the existing community that is somewhat removed from the town centre. There is even an opportunity for the provision of a primary school. Table 8.7 of the Sustainability Appraisal highlights other advantages: “Improve the health and well being of the population The location will not detract from the town centre and will help provide for the existing community that is somewhat road linkages; · has the ability to create mixed housing and employment areas. 4.12 Provision of services in this location will not detract from the town centre and will help provide for the existing community that is somewhat removed from the town centre. There is even an opportunity for the provision of a primary school. Table 8.7 of the Sustainability Appraisal highlights other advantages: “Improve the health and well being of the population The location will not detract from the town centre and will help provide for the existing community that is somewhat road linkages; · has the ability to create mixed housing and employment areas. 4.12 Provision of services in this location will not detract from the town centre and will help provide for the existing community that is somewhat removed from the town centre. There is even an opportunity for the provision of a primary school. comprehensive solution will assist in the deliverability of east and north Hailsham and again supports the view that sites should not be held back artificially.

Details of Changes to be Made:

4.5 We object to policy WCS5 Managing the Release of Housing Land, figure 4 Housing Trajectory and figure 5 Phasing of Development on the grounds that phasing of development at the North Hailsham SDA should not be delayed. 4.6 The council’s grounds for phasing delivery are provided at paragraph 8.25 in BP1, “A number of developments are already underway within and around Hailsham, and as such it is considered desirable to delay the delivery of the additional housing proposed by the Core Strategy to allow this relatively weak housing market to deliver what amounts to a significant amount of growth. The need to provide additional infrastructure including transport … would also benefit from a plan period extending beyond 15 years from the date of adoption, providing the least risk to the timely delivery of infrastructure.” 4.7 This statement is entirely unjustified and is not the most appropriate strategy when considered against the reasonable alternatives. Need for greenfield sites to provide family and affordable housing 4.8 The North Hailsham SDA can provide much needed market and affordable housing, including starter homes and intermediate housing which will have the effect of strengthening the local housing market. 4.9 The Strategic Housing Market Assessment (SHMA) (Wealden Housing Market Assessment, 2007) suggests that there should be an emphasis on the provision of larger family properties in south Wealden, and a range of smaller units in north Wealden. The Core Strategy highlights that a focus on semi-detached and detached housing in south Wealden is appropriate and will help broaden the area’s housing stock, making it generally more attractive to working age families moving into the district. The SHMA recommends that within South Wealden the provision of larger dwellings (3 and 4 bedrooms) would be appropriate. 4.10 However, the projected housing trajectory (Core Strategy Figure 4) shows that a large proportion of housing completions at the start of the plan period, up to 2014/2015, will be on brownfield sites. As a consequence of planning policy, an often urban context and market viability, often brownfield sites will only support a high density housing, including a significant proportion of flats. Greenfield sites, like the SDA, will need to come forward earlier in the plan period to ensure that much needed, larger dwellings are delivered. Suitability of North Hailsham 4.11 BP1 highlights the benefits of development at the North Hailsham SDA, it: · is less sensitive in terms of landscape impact than the East Hailsham; · provides an opportunity to consolidate development at Hellingly Hospital; · has the necessary road linkages; · has the ability to create mixed housing and employment areas. 4.12 Provision of services in this location will not detract from the town centre and will help provide for the existing community that is somewhat removed from the town centre. There is even an opportunity for the provision of a primary school. Table 8.7 of the Sustainability Appraisal highlights other advantages: “Improve the health and well being of the population The northern area shows the best potential for beneficial effects on this objective, due to potential to deliver new health facilities and open space as well as links to the new development at Hellingly Hospital that includes sports facilities, a community hall and cycle ways…” 4.13 Whilst the SA states that, “the higher land values and may be more attractive to developers we do not concur with the view that some mitigation is required to ensure the eastern location with excellent connectivity potential to the town centre is not unduly overlooked…” This would be entirely contrary to the Government’s position on housing land deliverability, the presumption in favour of sustainable development and would underestimate the benefits to the wider community to be derived from development at North Hailsham and the potential. Transport infrastructure requirements 4.14 The Core Strategy identifies a number of highways infrastructure capacity issues at Hailsham. The A271 to the north of Hailsham has poor alignment, tight bends and a proliferation of access points into individual properties, which create traffic safety concerns. The South Wealden and Eastbourne Transport Study (SWETS) (November 2010) concluded that a number of transport interventions are required to deliver the spatial strategy in the south Wealden area. 4.15 Mitigation measures are required to address capacity, safety and severance issues along the A271. The measures could include improvements at Boship roundabout and/or at the junction of A22 and Hempstead Lane. The early delivery of the north Hailsham site will facilitate the early delivery of these interventions to the benefit of the community as a whole and the traffic management of the local highway network. 4.16 The Saturn modelling that has informed SWETS will be refined and used to examine the impacts of development at both north and east Hailsham. It is expected to highlight the requirement for mitigation measures at strategic locations on the highway network many of which can only be delivered by development at north Hailsham. 4.17 Development at east Hailsham will not only impact upon the town centre but also the A271 corridor to the north where improvements need to be in place pre rather than post development. Additionally development at north Hailsham has the ability to deliver alternative alignments for lengths of the A271 thereby addressing safety and severance concerns. 4.18 A comprehensive solution will assist in the deliverability of east and north Hailsham and again supports the view that sites should not be held back artificially.
We are intrigued by the Council's intended adoption of an unsound housing position. The Council's proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council's Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WCS1 and WCS2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS's and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Government's recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS's. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and
we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as identified above of the chronic affordable housing issues that exist within the District.
Details of Reasons for Soundness/ Legal Compliance:

3. We agree with the underlying objectives for the housing trajectory to ensure that there is a continuous supply of new housing over the plan period that takes account of market conditions, the ability for communities to assimilate new development and the provision of the necessary infrastructure. However whilst Policy WCS5 does include flexibility in itself, and this is implicit in the housing trajectory (figure 4) which is referred to in Policy WCS5, the status of figure 5 is unclear and the wording in paragraph 5.16 reduces the flexibility. For example, it is suggested that development at south Polegate and east Willingdon (SD4) will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in south Wealden. Transport analysis undertaken on behalf of our client suggests there may well be scope for some development before this date. We do not consider there is any advantage in artificially delaying the commencement of development if there is no good reason to do so. This approach would be consistent with paragraph 7.4 where it is stated that development should make the most effective use of existing infrastructure. It is possible to phase housing development to take advantage of existing infrastructure and ensure a satisfactory supply of housing is achieved and development should not be hindered by more strategic infrastructure concerns. One of the advantages of the area identified for growth in Polegate is that it will integrate more naturally into the existing built form, rather than satellite locations with intervening movement constraints such as main roads etc, will help to minimise the use of cars and therefore will create less need for highway infrastructure improvements. 4. The infrastructure constraints of the various Strategic Development Areas in the Core Strategy will become clearer through the Strategic Site Allocations DPD and we consider that more detailed phasing guidance should await this document and not be included in the Core Strategy. In addition the introduction of the Community Infrastructure Levy by 2014 may give better opportunities to fund transport (and other) infrastructure than has been the case in the past. In addition, Policy WCS7 (Effective Provision of Infrastructure) ensures that the release of land for development is conditional upon there being sufficient capacity in the existing local infrastructure to meet the requirements generated by the proposed development.

Details of Changes to be Made:
2.41 We consider that WCS5 could be improved by ensuring that specific criteria are set out to allow contingency sites to come forward in the event that a ‘Plan B’ approach is required. We also consider that reference to ‘adjusting the pace of housing delivery’ is removed. 2.40 We therefore recommend the following amendment to Policy WCS5: ‘The release of land for housing will be managed so that it will deliver the level and broad distribution of development as set out in Policy WCS2 and at the rate set out in the housing trajectory. The release of land will be dependent on the timely provision of infrastructure necessary to deliver housing, including affordable housing. The adequacy of housing land supply will be assessed regularly through the reviews of the Strategic Housing Land Availability Assessment, the Infrastructure Delivery Plan and through regular housing land availability monitoring. Depending on the results of monitoring, it may be necessary to adjust the pace of housing delivery by encouraging, or holding back, new development. to implement contingency sites as identified at any accessible greenfield land, which is well related to the existing urban areas; § Can be served by existing or new infrastructure; § Have good access to public transport services, footpath and cycling networks’ (proposed alteration: Strikethrough shows removal of existing text, underline shows insertion of additional text) 2.42 BP11: Infrastructure Delivery Plan is an integral part of the Evidence Base and is fundamental to ensure the delivery of the strategy. Notwithstanding that we are supportive of the contingency approach, we are concerned as to how the potential contingency sites could still be delivered in the event that the preferred sites and associated ‘critical’ infrastructure are not delivered and thus the housing target. 2.43 PPS12 para 4.46 relates to flexibility and in part states, ‘Plans should be able to show how they will handle contingencies’. Furthermore, paragraph 23 of ‘Learning From Experience’ Guidance states ‘where an element of infrastructure is critical but it is uncertain whether it can be delivered, the plan should deal with the question of what the consequences are and what contingency arrangements may be possible – in other words the ‘what if’ question’. 2.44 BP11: Infrastructure Delivery Plan is not clear as to how the/any contingency sites would deliver the necessary or alternative infrastructure requirements to ensure the level of growth required is achieved. The IDP should identify what the thresholds for growth are before the ‘critical’ elements of the IDP are required to be delivered. At what point do the contingency sites begin to be considered? We consider the future housing capacity at the growth locations needs to be made clearer in the context of the existing infrastructure constraints in order to become more ‘effective’ as a strategy. 2.45 In relation to Heathfield, Table 5 (p41) of BP11: Infrastructure Delivery Plan reinforces the suitability of Heathfield’s proposed growth and early delivery by identifying that there are no critical pieces of infrastructure required to be delivered prior to the development of SD11: North West Heathfield. Notwithstanding the lack of education data within Table 5 of BP11: Infrastructure Delivery Plan, we have provided within Appendix B to these representations, our understanding of the current and future local education capacity as of October 2010. Appendix B demonstrates there is sufficient future capacity in the local schools to accommodate the proposed...
levels of growth without any need to provide for ‘critical’ pieces of infrastructure delivery, other than those required through standard Section 106/CIL Contributions. 2.46 We therefore consider with the amendment to Policy WCS5 as set out above, and a clearer understanding as to how and when the implementation of contingency sites may begin, Policy WCS5 provides for a strong policy basis to deliver the strategy. It is therefore considered that subject to the above change, WCS5 is both ‘justified’ and ‘effective’ and therefore ‘sound’.

Details of Changes to be Made:
The release of land for housing will be managed so that it will deliver the level and broad distribution of development as set out in Policy WCS2 and at the rate set out in the housing trajectory. The release of land will be dependent on the timely provision of infrastructure necessary to deliver housing, including affordable housing. The adequacy of housing land supply will be assessed regularly through the reviews of the Strategic Housing Land Availability Assessment, the Infrastructure Delivery Plan and through regular housing land availability monitoring. Depending on the results of monitoring, it may be necessary to adjust the pace of housing delivery by encouraging or holding back, new development to implement contingency sites as identified at any subsequent Site Specific Development Plan Document, "Contingency sites should be subject to the following selection criteria: Are at sustainable locations, maximise the use of brownfield land Utilise sustainable and accessible greenfield land, which is well related to existing urban areas Can be served by existing or new infrastructure Have good access to public transport services, footpath and cycling networks

WCS5 Managing the Policy 5 Release of Housing Land

Sound ☑ Yes ☑ No ☑ Justified ☑ Effective ☑ Consistent with national policy

Legally Compliant ☑ Yes ☑ No

Details of Reasons for Soundess/ Legal Complaince:
Policy WCS5 is superfluous, unnecessary, is not supported by evidence and directly conflicts with the Government’s “Planning for Growth” agenda and more specifically the statement made by Rt Hon Greg Clark MP on 23 March 2011, which clearly sets out the Government’s expectation that development and growth should wherever possible be supported and that Local Authorities should plan “positively for new development” …and…”a flexible and responsive supply of land” and not prejudice development by imposing unnecessary restriction such as those proposed in Policy WCS5.

Details of Changes to be Made:
Policy WCS5 should be deleted.

WCS5 Managing the Release of Housing Land

Policy 5

Sound ☑ Yes  ☐ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant ☐ Yes  ☐ No

Details of Reasons for Soundness/ Legal Complaince:
The CS should take the lead in identifying future infrastructure requirements and tying their implementation into the rate of delivery of housing and employment. There should be no need to delay development to await infrastructure provision. The admission of this caveat detracts from the certainty of implementation and leaves the implementation of the plan proposals in the hands of statutory undertakers who should clearly understand what is required of them rather than be given the succour of an acceptance that they are controlling the delivery of development

Details of Changes to be Made:
Achieve the implementation of the plan proposals through securing the planned rate of infrastructure provision in parallel with the rate of development. Provide certainty of timing for the benefit of developers and infrastructure providers alike.

Paragraph 6.1

Sound  ☐ Yes  ☑ No  ☐ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant ☐ Yes  ☐ No

Details of Reasons for Soundness/ Legal Complaince:
6.23 states 'the A2270 running through the urban area is still heavily congested and traffic flows on the strategic road network are very high'. Numerous references are made throughout the strategy to the need for infrastructure, and 5.16 states 'development at SD4 will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in South Wealden'.

Details of Changes to be Made:
PTC has serious concerns over the impact of any additional vehicles on the heavily congested road network, and feel that the proposed transport strategy is unsound because of the numbers of extra vehicles any development would bring onto the A2270.
Details of Reasons for Soundness/ Legal Compliance:

Omission in Section 6 We are please that the Core Strategy acknowledges that odour control issues will need to be investigated in relation to development SD2 (east of Hailsham). It is imperative that the same acknowledgement is also included for SD1 (West of Uckfield) due to its location adjacent to the wastewater treatment works and in light of the recently published standards for odour by the Environment Agency. The Core Strategy is not sound because it is: Not justified as it does not rely on the evidence base available and that we have previously provided. Not effective as it does not consider all of the requirements to successfully deliver the west of Uckfield development.

Details of Changes to be Made:

We propose that odour control issues are acknowledged at the first bullet point on page 32 in relation to land west of Uckfield in the same way that they have been at the third bullet point regarding land east of Hailsham. We also request that an additional paragraph is inserted after paragraph 6.11 acknowledging the need for an odour control study to be carried out regarding the proposed site west of Uckfield when is located adjacent to a waste water treatment works.
Many of the aims set out for Uckfield seems to be contradictory, as well seemingly to be undeliverable or the chosen land is unavailable. As set out there are congestion problems in the town centre and the Framfield Road junction. Proposals to deal with this have been mooted for the last 5 to 7 years though no detail or costings have yet been produced. The only consultation some years ago only really amounted to a scheme to promoted by Tesco’s to meet their aim for a larger supermarket. This traffic proposal appears to involve a gyratory scheme though again no great details has ever been produced, and it appears to have major problems due to the various landowners not agreeing to join in. However whatever the scheme may be, it may cope with the current traffic levels but it would seem this will be totally negated by the proposed additional housing, retail and employment development. It is proposed to allow much larger supermarket space in the town centre plus an additional unspecified number of houses. Additionally the proposed SD1 allocation with no identified access at the moment can only realistically come out on the New town Road, since it would seem unlikely that the access to a large housing estate can go through the Bellbrook Industrial Estate. Thus all this extra development will immediately need to use any modified road scheme and just end up causing as much congestion if not more, as the current road system has, thus totally negating any road improvements. This is without even considering the negative effect of the council’s choice of limiting village growth, which will continue the decline of villages and their services, particularly local shops. Thus as all the supermarket space for the area is proposed to be in Uckfield Town centre even more rural dwellers will need to access this area as their local services die out adding even further to the congestion problem. The council are relying on the new houses to fund the town centre redevelopment, yet do not appear to have produced any figures to show how this will happen, or whether 1000 houses are too many or not enough. Similarly generally recent new housing has been looked on as the milch cow to provide everything to do with infrastructure and local services, yet the council do not either seem to have considered whether the funds they require per new house will make SD1 non viable to housing developers, at this time of national economic problems and falling house prices. The objectors have been involved in making submissions to local planning for 25 years. It appears to the objectors that WDC are totally incapable of dealing with any matters properly, and usually take 5 years to do what should be done in 1 year. Thus in this case it is only 4 years before the town centre plan and housing allocation should be started. Yet the proposals at the moment seem to be just a wish list of hopes with nothing behind them. What is the likelihood that a town scheme will be detailed and agreed with all, planning permission granted, S106’s matters detailed and agree, early infrastructure agreed, planning granted and it put in place, site DS1 sorted out, especially the access and planning and S106 matters sorted, so work on all this can start by 2016???? the answer is virtually nil as 4 years to far too short with all the parties and complications involved, plus it is likely to be another 2 years before and LDF is in place at best. The other main problem is that the land for SD1 does not appear to be available. The objectors are acquainted with the owners of the land, Ridgewood Farm who told the objectors only in recent months that they have been fighting development of 40 years an don’t want it on their land. So unless this has changed since, it would appear this land is unavailable for the development proposed. Presumably the council addes the site to the SHLAA themselves, and not the landowners. This allocation again shows how the council have incorrectly used the SHLAA, since only land that is available and deliverable should be considered for allocation. Not only does the land appear unavailable, but since the council have no idea where the access would be it, though 2 would be needed for such a large estate, it would appear undeliverable for this reason as well, so should not have been considered. It should also be noted that the towns sewage works is sited here, which would impact badly on any new housing or employment areas here, particularly as it would presumably need to be enlarged. Equally it would hardly be a nice green area to walk around either where the area near it to be POS. This site would also seem to be contrary to the council’s and national policy on landscape effect as it is on the highest ground for miles and is very open to short and long views. Many other sites in the SHLAA have been rejected for much less landscape effect than this. The plan on fig 6 shows 2 areas of green infrastructure potential. However the one next to the Bellbrook estate is a thin strip between the link road and existing housing mainly consisting of a tree covered noise bund, so it is difficult to see what extra could be done here. The area to the south goes off of the SD1 site into land in other ownership, and even were SD1 to ever happen, it is hard to see why other landowners would add their land in without considerable financial incentives which are not usually available for separate potential green land. Thus all in all the proposals in this area seem completely unsound and contrary to normal planning policy.
Details of Changes to be Made:
Site SD1 should be removed as it is undeliverable and unavailable. Some of the allocation can be moved to Maresfield as detailed in other objections, due to the adjacent Ashdown Business Park. Some of the allocation can go to deliverable and available sites around Uckfield, where they won’t impact so greatly on the town centre traffic. Some can also go to the extra village allocations as set out in objections to WCS6.

Uckfield Area Strategy  Figure 6

Sound  ☑ Yes  ☐ No  ☑ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The identification of urban extensions is supported in principle. The policy identifies 12 Strategic Development Areas, all of which vary considerably in character. Not all of proposed Strategic Development Area SD1 (Uckfield) is suitable for development. Uckfield is identified as having a key role in assisting with the delivery of the Core Strategy up to 2030: the strategy for Uckfield specifically is to enhance the role of the town as a District Level Centre, serving the local community and surrounding area. Para 6.11(3) states inter alia that the identification of SD1 as an allocation is subject to the provision of suitable access and a number of other factors, with these to be addressed in subsequent DPDs, and which may increase the risk to delivery. The Core Strategy recognises that if development has not started at West Uckfield by 2016, a review in relation to Uckfield will be required. Whether development has started by 2016 is one issue. Others are: i.Whether it is genuinely appropriate for development to take place over the whole allocation as indicated in the key diagram. The Sustainability Appraisal of the Proposed Submission Core Strategy, Background Papers, February 2011, recognises this issue by stating “potential landscape issues as the area is on high ground” (p.217). i. The uncertainty regarding what further studies may reveal about the practical ability of the site to accommodate development. If development has not commenced before 2016, the Council should know before then whether a review of the Core Strategy is required; why should the Core Strategy limit the potential scope of any review to the Uckfield area (Para 6.11)? SD1 is supported to the extent that it relates well to the strategic highway network. The impact of residential and other development upon SD1 will however be too prominent and intrusive along this part of the A22 corridor. Much of the development will not be easily capable of being screened. The southern part of SD1 is most exposed. It is recommended that the most sensitive landscape is retained in SD1 as open space and, as a consequence, that SD1 be extended to the south of Lewes Road to include Horsted Pond Farm and Ridgewood House – any development here could be better accommodated within the landscape. SD1, as presently drawn, is too narrowly defined in extent – the inclusion of Horsted Pond Farm and Ridgewood House within it would provide the Plan with flexibility in delivering new development to the west of Uckfield. Proposed Change

Details of Changes to be Made:
It is proposed that the SD1 allocation be extended to include Horsted Pond Farm (in part of in whole) and Ridgewood House, with consequential changes made to the Core Strategy and Key Diagram.

Uckfield Area Strategy  Figure 6

Sound  ☑ Yes  ☐ No  ☐ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
This appears to be the most logical and sustainable proposal for the development of Uckfield.

Details of Changes to be Made:
Representations on behalf of the Clarence Preston Will Trust: Policy WCS4 These representations are on behalf of the Clarence Preston Will Trust, freehold owners of Downlands Farm, Uckfield. While the selection of Uckfield as a location for further strategic growth with a new allocation of 1,000 dwellings in Policy WCS2 is strongly supported, the identification of a sole strategic development area at “West Uckfield” is not justified, is unlikely to be effective and would be contrary to national policy in its environmental and landscape impact. The selection of the proposed development area SD1 West Uckfield is based, so far as can be judged from the published background papers, on a fundamentally flawed approach to the assessment of the strategic development options for for Uckfield. For each town “broad locations” have been assessed and compared against each other and against sustainability criteria. The broad locations for Uckfield, however, exclude one of the principal potential areas, Downlands Farm, which in the non-site-specific CS vocabulary can be called North West Uckfield. Figure 1 of the Development of the Proposed Submission Core Strategy Background Paper shows that four broad areas were appraised: North, West, East and South Uckfield respectively. The broad north-west sector (principally Downlands Farm) is not included in the appraisal. There is no explanation for this. The site was subject to a planning appeal (together with sites at Bird-in-Eye Hill) which was dismissed and the site was subsequently deemed “unsuitable” in the SHLAA. However, this is not sufficient reason for omitting it from consideration altogether. The Bird-in-Eye sites were considered under the heading “East Uckfield”. Circumstances have changed since the appeal determination and the SHLAA, which based its conclusions substantially on the appeal decision. The requirements for broad location selection for CS purposes, differ from the considerations in appeal decision in the following critical respects: 1. The appeal was determined on the basis that a major peripheral expansion of Uckfield was not in accordance with the South East Plan. The draft CS is not being prepared in relation to the South East Plan and it proposes a major peripheral expansion of Uckfield, albeit in a different location. 2. The housing land supply position for the CS period is wholly different from the basis on which the appeal was determined. 3. The landscape conclusions in the appeal were in comparison with the sites at Bird-in-Eye Hill not with West Uckfield. There should have been a comparative landscape assessment between Downlands Farm/North West Uckfield and West Uckfield for the purpose of broad location selection in the CS process. There has been none (at least in published form) and this is a fundamental failure of the process that is highly prejudicial to the land at North West Uckfield. 4. Similarly with highways and ecology. There has been no proper comparison in the location selection process between the two main competing locations at Uckfield. The SHLAA report for Downlands Farm refers directly to the appeal decision. It is clear that there was no detailed re-examination of the comparative merits of all the major alternative strategic development locations around Uckfield. On the site specific issues, the SHLAA report gives only a superficial picture. For example, it concludes that the development of Downlands would “compromise its nature conservation integrity and biodiversity interests” whereas the inspector’s conclusion was that permission should not be refused outright on the basis of harm to its ecology or biodiversity.

Details of Changes to be Made:
There are landscape issues affecting both West Uckfield and North West Uckfield. These have not been compared in the CS process. The Council’s own comparative landscape analysis in 2001 concluded for West Uckfield (then referred to as Sector 3) “The broad, rolling landform ensures that most of the landscape is clearly visible and any large-scale development is likely to have a widespread influence, particularly along the elevated ridge-tops where it would impact upon the surrounding countryside”….”The characteristic open, visually exposed and rural qualities of this landscape make it highly sensitive to any form of significant new development”. The SHLAA report concluded that approximately two-thirds of the site is considered unsuitable for housing in view of the harmful effect it would have on the landscape. The choice between these two peripheral sectors of Uckfield for urban extensions should have been subject to rigorous comparative analysis. That has not taken place and the Council has relied on the findings of a planning appeal that was held in an entirely different context and where the comparative merits of West Uckfield were not a matter for consideration. The omission from consideration of one of the main undeveloped peripheral sectors of Uckfield, particularly one with a complex planning history, is a significant failing in the draft document. These process failings render the CS Policy WCS4/SD1 unsound. To avoid compromising the CS as a whole, an option would be for the Council to redraft SD1 in more general terms without specifying locations or sectors at Uckfield. This would leave the detailed comparative site analysis where it should properly be, namely at site specific DPD stage. As a general comment, the way the Council has dealt with the housing distribution issue is closer to site specific allocation than it should be at Core Strategy stage of the LDF.
Uckfield Area Strategy

3.6. Uckfield Area Strategy 3.6.1 Whilst the general thrust of the strategy is supported it is considered that certain elements are inappropriate and require amendment. As such although considered to be legally compliant the Core Strategy is considered to be unsound for these elements. 3.6.2. It is considered that the allocation of the land at West Uckfield is not appropriate. Consequently it is considered that this element of the Core Strategy should be removed. Whilst the level of growth proposed at Uckfield is supported it is considered that alternative locations for development exist which are more appropriate and able to achieve the Council's overall objectives for development. It is considered that our clients' landholding at Bird in Eye South represents one of these alternatives and has the potential to provide approximately 200 dwellings as an effective and logical urban extension to the settlement. The site is of course adjacent to the Mallards Drive Non-Statutory Local Plan allocation which has received planning consent, demonstrating the suitability of this part of Uckfield for development. In the light of the Council's recognition that the strategic development areas are critical to delivery of the overall strategy, and to ensure housing delivery, the allocation of a strategic development area at Bird in Eye South for 200 dwellings would meet this objective. Indeed, in terms of scale, it would be in line with a number of the other proposed SDAs (for example land east and south-east of Stone Cross (SD6), land south-east of Crowborough (SD10) and land to the north-west of Heathfield (SD11). 3.6.3. Before considering the merits of our client's land in more detail, we consider the appropriateness of proposed SD1. We start with the Council's Strategic Housing Land Availability Assessment (SHLAA). We note that the Council has prepared an update, via an addendum to its evidence base in October 2010. The update includes a number of sites but in respect of Uckfield the principal change affects site reference 346/1410, Ridgewood Farm, Lewes Road, Ridgewood. It would appear that this land holding broadly coincides with the proposed SDA, SD1. para. 1.5 of the Addendum states that further assessment of site potential in the areas considered for town extensions has been undertaken, including connectivity to local services and facilities, highway network capacities and infrastructure requirements. However Para 1.4 notes that this addendum report has taken account of the Council's emerging preferred spatial strategy. It is not clear how this specifically sits within the evidence base, alongside the original assessment of sites (in particular those that have not formed part of the eventual strategy, and have not been reassessed). We comment upon this further below in relation to our clients' land. 3.6.4. In relation to Ridgewood Farm, a substantial number of constraints are identified in the summary of its suitability. This summary highlights the following constraints. a. this is a substantial undulating site, a significant part of which (in the south) is prominent in the wider landscape and exposed to views from the Uckfield bypass (A22). b. It appears that only parts of the northern and central parts of this large site, together with some of the low lying land within the southern part of the site, are considered to be suitable for housing and could be considered as a logical extension to the urban area of the town. c. there will be a need for significant landscape buffer zones throughout the site to strengthen the landscape structure and create a new edge to the countryside. d. The existing access to the site would not be acceptable to serve further development on the scale envisaged and new vehicular access points will be required on to the A22. A full transport assessment would be necessary, and a caveat is adequate pedestrian, cycle and bus connectivity with the town centre. e. It is noted that there is potentially contaminated land associated with the sewage treatment works and within the site to the east, and that the extent of this and the implications will need to be the subject of further technical appraisal. f. The western edge of the site is within the Flood Zone 3, which also crosses the southern part in a fairly narrow band along the stream. g. It is noted that the western part of the site is affected by traffic noise from the A22 and any scheme designed will need to take this into account, as well as needing to mitigate possible noise issues from the sewage treatment works and the industrial area to the north. It is also noted that there may be an adverse impact from odour from the sewage works which requires more detailed assessment. 3.6.5 In respect of availability the SHLAA states that the site is controlled by multiple land owners. From our discussions with the Planning Department, we understand that the site was submitted by an agent on behalf of the landowners. The absence of a developer does not provide any viability evidence that has been undertaken to support this claim; c. The Council notes that the capacity of a developer to complete and sell housing in this area is considered to be good. However, as we note above we are not aware that a developer is involved in the site. d. The Council notes that there is a reasonable prospect, subject
to development plan policy that a proportion of development could be delivered in the short term. Without a substantial range of assessments being undertaken, and support for this site from a developer, there is no basis for this statement. 3.6.7. In respect of strategic infrastructure, the Council notes that there are a number of factors, including waste water treatment, Uckfield Town Centre traffic management, and improvements to bus services and infrastructure connections to Uckfield that would need to be considered. It is noted that in addition to residential, employment and potential education provision are anticipated. The above are clearly a range of constraints and uncertainties. In order to satisfy paragraph 54 of PPS3: Housing, local planning authorities should identify sufficient specific "deliverable" sites for the first 10 years of the plan. In our view the tests of deliverability, i.e. the assessments of availability, suitability and achievability are not met at this stage. It would therefore not be justifiable or effective for the Plan to go forward with a strategic site on this basis. We consider that far greater certainty can be provided if a strategy for Uckfield were adopted that included sites that are deliverable, such as our client's site at Bird in Eye South, and only if sufficient further evidence was available, should other locations be considered as part of this Core Strategy process (including that at Ridgewood Farm). 3.7 Land at Bird in Eye South 3.7.1. The site has previously been the subject of a Planning Appeal which resulted in a rigorous assessment of the site by both the Planning Inspector and the Secretary of State (SoS). The assessment included consideration of the potential impact of the development in relation to the following: a. Landscape - the SoS agreed with the Inspector that "there are no cogent reasons to resist the BIES proposals purely on landscape grounds". b. Ecology - The SoS agreed with the Inspector that there was no sound case for rejecting the BIES scheme "on the grounds of any harm to ecological/nature conservation interests". c. Transport Sustainability - The SoS agreed with the Inspector that the BIES site was advantaged in terms of its "intrinsic accessibility and sustainability". d. Impact on Uckfield Town Centre - Both parties were required to consider the impact of traffic through the town centre. In respect of this the the County Council determined that there was headroom to develop approximately 300 units within Uckfield prior to the implementation of a town centre improvement scheme being required. In respect of this issue it was therefore considered that the development of the site would in fact provide an early contribution to the proposed town centre improvement scheme. e. Effect on Listed Buildings - Like the Inspector, the SoS was satisfied that the setting of the nearby Grade II Listed Oast House would not be materially harmed by the BIES proposal. 3.7.2 Further to above, it was no surprise that both the SoS and Inspector in their conclusions determined that the bird in Eye South site was suitable in terms of the development proposed. However, key to the determination of the Appeal was that, at the time of the Inquiry, it was considered that there was no requirement for greenfield releases. The SoS therefore took the stance that in the absence of there being a good case to release greenfield sites at that time, it would be "preferable for housing sites to come forward via the LDF process, and in tandem with a town centre traffic scheme". The Council now considers that there is a need for greenfield releases around the town. 3.7.3 The Council has, therefore, considered that Bird in Eye South (Site Ref: 002A/1410) is suitable. It has referred to the appeal decision and the reference to the site being considered as a "natural or logical extension to the urban area". All of the issues that were of a technical or environmental nature were addressed prior to the appeal decision, and the Inspector, and in turn the SoS were therefore mindful of this information in coming to the above conclusion. This is acknowledged in the SHLAA summary of suitability. There are no major factors of concern, which contrasts substantially with the position relating to Ridgewood Farm 3.7.4. In terms of availability, it is noted that the site is in dual ownership and is assessed to be available for housing. Reference is made to the need for a Grampian condition to deal with the pedestrian/cycle link. Other than this, as fully rehearsed through the appeal process the site is deliverable. It is in the control of a consortium of developers, Gallagher Estates Limited, Heron Land Developments Limited and Persimmon Homes Limited. 3.7.5. In terms of achievability the Council has correctly determined that the site is suitable, available and economically viable with the capacity of a development to compete and sell the housing in the area considered to be good. However, it states that there is a reasonable prospect that in the short term a proportion of housing could be delivered with the remainder in the medium - long term. We consider that this assessment, which is the same as Ridgewood Farm is not appropriate. As we have noted above, the constrains relating to Ridgewood Farm would substantially delay the deliverability of the site, in contrast to our clients’ land which we believe could be delivered, in large part, in short term. 3.7.6 We are aware of the strategic infrastructure requirements which are set out in the SHLAA. 3.7.7. In summary, we stress the suitability and availability of our clients’ site, which was considered through the Planning Appeal process with a positive outcome in terms of detailed, site related, planning issues. We would also like to indicate our willingness to work with the Council to promote the Bird in Eye South site through the LDF process in particular the Site Allocations DPD, consultation on which is anticipated in late-Summer/early-Autumn 2011. 3.7.8 We therefore consider that land at Bird in Eye South should be a SDA, identified in this Core Strategy for commencement around 2013. 3.8. Other Matters. 3.8.1 Concern is also raised regarding the reference to the safeguarding of a potential rail link extension to Lewes where it would connect to another part of the national network. As highlighted in the Core Strategy there is no current operational or business case to reinstate the line to Lewes and this is a view we support. The Council however consider that circumstances and criteria for assessment of any business may change in the future and the Council continues to support the principle of the rail link extension. 3.8.2. Whilst we consider that there is a high demand for housing within Uckfield and that further development within the town would be easily occupied, we do not consider that many of the new residents would wish to access Lewes by rail. Rather, it would be more likely that they would be located to Uckfield to benefit from its existing rail service to London Bridge, which is of considerable benefit to the town. We therefore seek the removal of the potential rail link from the vision, on the basis that there is no demand for the service. In our
opinion, the Council's vision should be to continue to support the accessibility links which have been successful within the district such as the London - Uckfield link by locating additional housing to these areas to ensure its long term vitality. 3.8.3. As a result we consider that this element of the Core Strategy is unsound as there is no justification for the safeguarding of the link as identified by the recent studies referred to by the Council. Reference to this element should therefore be removed from the Core Strategy.

Details of Changes to be Made:

3.8. Other Matters. 3.8.1 Concern is also raised regarding the reference to the safeguarding of a potential rail link extension to Lewes where it would connect to another part of the national network. As highlighted in the Core Strategy there is no current operational or business case to reinstate the line to Lewes and this is a view we support. The Council however consider that circumstances and criteria for assessment of any business may change in the future and the Council continues to support the principle of the rail link extension. 3.8.2. Whilst we consider that there is a high demand for housing within Uckfield and that further development within the town would be easily occupied, we do not consider that many of the new residents would wish to access Lewes by rail. Rather, it would be more likely that they would be locating to Uckfield to benefit from its existing rail service to London Bridge, which is of considerable benefit to the town. We therefore seek the removal of the potential rail link from the vision, on the basis that there is no demand for the service. In our opinion, the Council's vision should be to continue to support the accessibility links which have been successful within the district such as the London - Uckfield link by locating additional housing to these areas to ensure its long term vitality. 3.8.3. As a result we consider that this element of the Core Strategy is unsound as there is no justification for the safeguarding of the link as identified by the recent studies referred to by the Council. Reference to this element should therefore be removed from the Core Strategy. 4.1 In summary we recommend that the following changes be made to the Core Strategy:- 1. Policy WCS4 - the inclusion of an additional strategic development area - SD: Land at Bird in Eye South, Uckfield. 2. Policy WCS4: the inclusion of strategic development area - SD1: Land at West Uckfield, only following further investigations and with a substantial reduction in the number of dwellings to a figure that reflects certainty of the deliverability of that number. 3. Figure 5. Phasing of Development - the phasing schedule to be amended to reflect the above, to include Bird in Eye South for 200 dwellings, and assign it to years 2013/14 - 2016/17 for delivery. 4. Chapter 6 - Uckfield area strategy: this subsection should reflect the above, in particular at para 6.11 to include Bird in Eye South for 200 dwellings as well as through amendments to Figure 6: Uckfield Area Strategy
7 Landscape 7.1 Introduction 7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area' 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development into the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and/or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity/capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation, (and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input/consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity/capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements/features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium NasAble for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe.Farm diversification pressure. Manage wood and existing trees and hedges. Potential for Mitigation Moderate LowPlanting on ridge as need to retain open fields. Soften urban edge. Create green network. Relocate recreation ground. Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:

SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
Many of the aims set out for Uckfield seem to be contradictory, as well seemingly to be undeliverable or the chosen land is unavailable. As set out there are congestion problems in the town centre and the Framfield Road junction. Proposals to deal with this have been mooted for the last 5 to 7 years though no detail or costings have yet been produced. The only consultation some years ago only really amounted to a scheme to promoted by Tesco’s to meet their aim for a larger supermarket. This traffic proposal appears to involve a gyratory scheme though again no great details has ever been produced, and it appears to have major problems due to the various landowners not agreeing to join in. However whatever the scheme may be, it may cope with the current traffic levels but it would seem will be totally negated by the proposed additional housing, retail and employment development. It is proposed to allow much larger supermarket space in the town centre plus an additional unspecified number of houses. Additionally the proposed SD1 allocation with no identified access at the moment can only realistically come out on the New town Road, since it would seem unlikely that the access to a large housing estate can go through the Bellbrook Industrial Estate. Thus all this extra development will immediately need to use any modified road scheme and just end up causing as much congestion if not more, as the current road system has, thus totally negating any road improvements. This is without even considering the negative effect of the council’s choice of limiting village growth, which will continue the decline of villages and their services, particularly local shops. Thus as all the supermarket space for the area is proposed to be in Uckfield Town centre even more rural dwellers will need to access this area as their local services die out adding even further to the congestion problem.

The council are reyling on the new houses to fund the town centre redevelopment, yet do not appear to have produced any figures to show how this will happen, or whether 1000 houses are too many or not enough. Similarly generally recent new housing has been looked on as the milk cow to provide everything to do with infrastructure and local services, yet the council do not either seem to have considered whether the funds they require per new house will make SD1 non viable to housing developers, at this time of national economic problems and falling house prices. The objectors have been involved in making submissions to local planning for 25 years. It appears to the objectors that WDC are totally incapable of dealing with any matters properly, and usually take 5 years to do what should be done in 1 year. Thus in this case it is only 4 years before the town centre plan and housing allocation should be started. Yet the proposals at the moment seem to be just a wish list of hopes with nothing behind them. What is the likelihood that a town scheme will be detailed and agreed with all, planning permission granted, S106's matters detailed and agree, early infrastructure agreed, planning granted and it put in place, site DS1 sorted out, especially the access and planning and S106 matters sorted, so work on all this can start by 2016???? the answer is virtually nil as 4 years to far too short with all the parties and complications involved, plus it is likely to be another 2 years before and LDF is in place at best. The other main problem is that the land for SD1 does not appear to be available. The objectors are acquainted with the owners of the land, Ridgewood Farm who told the objectors only in recent months that they have been fighting development of 40 years an don't want it on their land. So unless this has changed since, it would appear this land is unavailable for the development proposed. Presumably the council adde the site to the SHLAA themselves, and not the landowners. This allocation again shows how the council have incorrectly used the SHLAA, since only land that is available and deliverable should be considered for allocation. Not only does the land appear unavailable, but since the council have no idea where the access would be it, though 2 would be needed for such a large estate, it would appear undeliverable for this reason as well, so should not have been considered. It should also be noted that the towns sewage works is sited here, which would impact badly on any new housing or employment areas here, particularly as it would presumably need to be enlarged. Equally it would hardly be a nice green area to walk around either where the area near it to be POS. This site would also seem to be contrary to the council’s and national policy on landscape effect as it is on the highest ground for miles and is very open to short and long views. Many other sites in the SHLAA have been rejected for much less landscape effect than this. The plan on fig 6 shows 2 areas of green infrastructure potential. However the one next to the Bellbrook estate is a thin strip between the link road and existing housing mainly consisting of a tree covered noise bund, so it is difficult to see what extra could be done here. The area to the south goes off of the SD1 site into land in other ownership, and even were SD1 to ever happen, it is hard to see why other landowners would add their land in without considerable financial incentives which are not usually available for separate potential green land. Thus all in all the proposals in this area seem completely unsound and contrary to normal planning policy.
Details of Changes to be Made:

Site SD1 should be removed as it is undeliverable and unavailable. Some of the allocation can be moved to Maresfield as detailed in other objections, due to the adjacent Ashdown Business Park. Some of the allocation can go to deliverable and available sites around Uckfield, where they won't impact so greatly on the town centre traffic. Some can also go to the extra village allocations as set out in objections to WCS6.

Paragraph 6.1

Sound ☐ Yes ☑ No ☑ Justified ☐ Effective ☐ Consistent with national policy

Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:

The identification of urban extensions is supported in principle. The policy identifies 12 Strategic Development Areas, all of which vary considerably in character. Not all of proposed Strategic Development Area SD1 (Uckfield) is suitable for development. Uckfield is identified as having a key role in assisting with the delivery of the Core Strategy up to 2030: the strategy for Uckfield specifically is to enhance the role of the town as a District Level Centre, serving the local community and surrounding area. Para 6.11(3) states inter alia that the identification of SD1 as an allocation is subject to the provision of suitable access and a number of other factors, with these to be addressed in subsequent DPDs, and which may increase the risk to delivery. The Core Strategy recognises that if development has not started at West Uckfield by 2016, a review in relation to Uckfield will be required. Whether development has started by 2016 is one issue. Others are: i.Whether it is genuinely appropriate for development to take place over the whole allocation as indicated in the key diagram. The Sustainability Appraisal of the Proposed Submission Core Strategy, Background Papers, February 2011, recognises this issue by stating “potential landscape issues as the area is on high ground” (p.217). i.The uncertainty regarding what further studies may reveal about the practical ability of the site to accommodate development. If development has not commenced before 2016, the Council should know before then whether a review of the Core Strategy is required; why should the Core Strategy limit the potential scope of any review to the Uckfield area (Para 6.11)? SD1 is supported to the extent that it relates well to the strategic highway network. The impact of residential and other development upon SD1 will however be too prominent and intrusive along this part of the A22 corridor. Much of the development will not be easily capable of being screened. The southern part of SD1 is most exposed. It is recommended that the most sensitive landscape is retained in SD1 as open space and, as a consequence, that SD1 be extended to the south of Lewes Road to include Horsted Pond Farm and Ridgewood House – any development here could be better accommodated within the landscape. SD1, as presently drawn, is too narrowly defined in extent – the inclusion of Horsted Pond Farm and Ridgewood House within it would provide the Plan with flexibility in delivering new development to the west of Uckfield. Proposed Change

Details of Changes to be Made:

It is proposed that the SD1 allocation be extended to include Horsted Pond Farm (in part of in whole) and Ridgewood House, with consequential changes made to the Core Strategy and Key Diagram.

Paragraph  6.1

Sound  ☐ Yes  ☑ No  ☐ Justified  ☑ Effective  ☐ Consistent with national policy

Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundness/ Legal Compliance:
Policies to restrain traffic, obtain modal shift in travel, reducing need to travel and improve the experience of non-car travel need to be sharpened and focused. Aspirations for these to happen must have necessary circumstances incorporated into the policies.

Details of Changes to be Made:
Demand management techniques for traffic in Hailsham (6.15) should be included in all the related and equivalent policies. There should be a definite commitment to traffic reduction measures and targets throughout the Strategy Plan document.
In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: ‘...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’. 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the emerging South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development into the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation Low Planting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing Low Close to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snaw Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges Potential for Mitigation Moderate Low on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the

| Character Area | Uckfield Area L | Quality | High | Value | Medium | Sensitivity to Change | Moderate | Visual Sensitivity | Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges | Potential for Mitigation | Moderate | Low on ridge as need to retain open fields | Soften urban edge. Create green network. Relocate recreation ground. | Capacity to Accept Change: Housing Moderate | Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity |
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Council's Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a 'strategic development area' suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:

SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Council's Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to 'AONB and AONB Buffer Zones' as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of 'AONB buffers' in Planning Policy Statement No.7 or any other policy guidance.
Paragraph 6.11

Details of Reasons for Soundess/ Legal Complaince:
The identification of the urban extension of Uckfield in SD1 is not justified on the basis of research and fact finding. There are other sites which have been identified for housing under the SHLAA which are more appropriate for development first. The assessment for the area identified as SD1, under the SHLAA included references to significant infrastructure, noise and smell pollution, access and ownership issues. These are also referred to in the submission Core Strategy. Site 028/1410 known as Cysleys Farm does not have these significant issues and has been assessed as being available for housing. The site is controlled by one owner. Paragraph 33 of PPS3 sets out the still valid criteria for assessing an appropriate level of housing. This includes, amongst others, the use of SHLAA’s together with a sustainability appraisal. In addition figures contained within the RSS are still at this time, valid as a starting point for assessing the appropriate level of housing in the Wealden district. There is a significant shortfall between the RSS figures in the time frame of the Core Strategy and the figures put forward in this document. If the Core Strategy was consistent with RSS figures additional land for housebuilding would be required. The SHLAA assessments show that this additional house building could be located in the Low Weald towns and particularly on the southern sector of Uckfield. The Core Strategy sets out the phasing of development with SD1 commencing from 2016. None of the sites identified in the strategy start before 2015, however some sites can commence prior to this date including Cysleys Farm, where there is no impedence to an earlier development commencement. This area of land identified under site reference 028/1410 provides for a more logical extension to Uckfield without the issues identified within SD1 by the council themselves.

Details of Changes to be Made:
Figure 6, the Uckfield Area Strategy diagram and paragraph 6.11 should be revised to allow other land in the Uckfield area to be developed as part of the strategy to enhance the role of Uckfield as a district centre. In particular it should be made clear that the delivery and site allocations DPD will be allowed to be more flexible in deciding the precise location for development. It should not necessarily rely on the urban extension (SD1) to provide all of the necessary allocated land for housing, employment and educational provision.

Paragraph 6.11

Details of Reasons for Soundess/ Legal Complaince:
Whilst I am naturally aware of the necessity for a Core Strategy, I am somewhat perplexed and confused as to why such trouble was taken to identify my site, 287/1410 being HighTree House, Eastbourne Road, Uckfield, opposite the ongoing new development namely Cysleys Farm, in the SHLAA as suitable, available and achievable. The site is on the edge of the built up area and not in the area SD1 identified for development post 2016. Given that there is a big development opposite my site and the location of the industrial estate (Ridgewood) it appears to me that this is a logical location for short term highquality residential development. Clearly a fully policy compliant development will provide a range of housing, including affordable, and high quality amenity space. The basic infrastructure to enable this development already exists in terms of access (roundabout), water supply (the stop-cock for the Uckfield water main is situated outside my stile/gate). I also understand that it is not valuable agricultural land and I am willing to work directly with Wealden Planners in order to achieve a development of which this town would be proud. At best if permission were to be granted now then it would be some three years before houses could be occupied so should this not be granted for another five years then the whole process would be some eight away. Housing is desperately required. Mrs P Radcliffe, Land owner.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:
I make reference to the proposed development in Ridgewood, my understanding is new housing should be on Brown Field land, not Green Field Land which is Ridgewood Farm. Its really disgraceful that Ridgewood has been thrown to the wolves, this is the 3rd Farm that will be built on plus Pipers Field and now Sandpits that was also Agricultural land. If this takes place we will lose all our lovely hedges, the wildlife, which we have plenty. This makes me so angry that all this would be lost for profit. I would like it put on record my objections, I know my neighbours all feel the same.

Details of Changes to be Made:

---

Details of Reasons for Soundness/ Legal Compliance:
The exit from the proposed Ridgewood Farm (346/1410) development has not been mentioned. Out on to an already busy bypass or out on to Lewes Road which would be difficult.

Details of Changes to be Made:
Many of the aims set out for Uckfield seems to be contradictory, as well semingly to be undeliverable or the chosen land is unavailable. As set out there are congestion problems in the town centre and the Framfield Road junction. Proposals to deal with this have been mooted for the last 5 to 7 years though no detail or costings have yet been produced. The only consultation some years ago only really amounted to a scheme to promoted by Tesco’s to meet their aim for a larger supermarket. This traffic proposal appears to involve a gyratory scheme though again no great details has ever been produced, and it appears to have major problems due to the various landowners not agreeing to join in. However whatever the scheme may be, it may cope with the current traffic levels but it would seem this will be totally negated by the proposed additonal housing, retail and employment development. It is proposed to allow much larger supermarket space in the town centre plus an additional unspecified number of houses. Additionally the proposed SD1 allocation with no identified access at the moment can only realistically come out on the New town Road, since it would seem unlikely that the access to a large housing estate can go through the Bellbrook Industrial Estate. Thus all this extra development will immediately need to use any modified road scheme and just end up causing as much congestion if not more, as the current road system has, thus totally negating any road improvements. This is without even considering the negative effect of the council's choice of limiting village growth, which will continue the decline of villages and their services, particularly local shops. Thus as all the supermarket space for the area is proposed to be in Uckfield Town centre even more rural dwellers will need to access this area as their local services die out adding even further to the congestion problem. The council are relying on the new houses to fund the town centre redevelopment, yet do not appear to have produced any figures to show how this will happen, or whether 1000 houses are too many or not enough. Similarly generally recent new housing has been looked on as the milk cow to provide everything to do with infrastructure and local services, yet the council do not either seem to have considered whether the funds they require per new house will make SD1 non viable to housing developers, at this time of national economic problems and falling house prices. The objectors have been involved in making submissions to local planning for 25 years. It appears to the objectors that WDC are totally incapable of dealing with any matters properly, and usually take 5 years to do what should be done in 1 year. Thus in this case it is only 4 years before the town centre plan and housing allocation should be started. Yet the proposals at the moment seem to be just a wish list of hopes with nothing behind them. What is the likelihood that a town scheme will be detailed and agreed with all, planning permission granted, S106’s matters detaild and agree, early infrastructure agreed, planning granted and it put in place, site DS1 sorted out, especially the access and planning and S106 matters sorted, so work on all this can start by 2016???? the answer is virtually nil as 4 years to far too short with all the parties and complications involved, plus it is likely to be another 2 years before and LDF is in place at best. The other main problem is that the land for SD1 does not appear to be available. The objectors are acquainted with the owners of the land, Ridgewood Farm who told the objectors only in recent months that they have been fighting development of 40 years an don't want it on their land. So unless this has changed since, it would appear this land is unavailable for the development proposed. Presumably the council adds the site to the SHLAA themselves, and not the landowners. This allocation again shows how the council have incorrectly used the SHLAA, since only land that is available and deliverable should be considered for allocation. Not only does the land appear unavailable, but since the council have no idea where the access would be it, though 2 would be needed for such a large estate, it would appear undeliverable for this reason as well, so should not have been considered. It should also be noted that the towns sewage works is sited here, which would impact badly on any new housing or employment areas here, particularly as it would presumably need to be enlarged. Equally it would hardly be a nice green area to walk around either where the area near it to be POS. This site would also seem to be contrary to the council's and national policy on landscape effect as it is on the highest ground for miles and is very open to short and long views. Many other sites in the SHLAA have been rejected for much less landscape effect than this. The plan on fig 6 shows 2 areas of green infrastructure potential. However the one next to the Bellbrook estate is a thin strip between the link road and existing housing mainly consisting of a tree covered noise bund, so it is difficult to see what extra could be done here. The area to the south goes off of the SD1 site into land in other ownership, and even were SD1 to ever happen, it is hard to see why other landowners would add their land in without considerable financial incentives whih are not usually available for separate potential green land. Thus all in all the proposals in this area seem completely unsound and contrary to normal planning policy.
Details of Changes to be Made:
Site SD1 should be removed as it is undeliverable and unavailable. Some of the allocation can be moved to Maresfield as detailed in other objections, due to the adjacent Ashdown Business Park. Some of the allocation can go to deliverable and available sites around Uckfield, where they won't impact so greatly on the town centre traffic. Some can also go to the extra village allocations as set out in objections to WCS6.

Details of Reasons for Soundness/ Legal Complaince:
The identification of urban extensions is supported in principle. The policy identifies 12 Strategic Development Areas, all of which vary considerably in character. Not all of proposed Strategic Development Area SD1 (Uckfield) is suitable for development. Uckfield is identified as having a key role in assisting with the delivery of the Core Strategy up to 2030: the strategy for Uckfield specifically is to enhance the role of the town as a District Level Centre, serving the local community and surrounding area. Para 6.11(3) states inter alia that the identification of SD1 as an allocation is subject to the provision of suitable access and a number of other factors, with these to be addressed in subsequent DPDs, and which may increase the risk to delivery. The Core Strategy recognises that if development has not started at West Uckfield by 2016, a review in relation to Uckfield will be required. Whether development has started by 2016 is one issue. Others are: i. Whether it is genuinely appropriate for development to take place over the whole allocation as indicated in the key diagram. The Sustainability Appraisal of the Proposed Submission Core Strategy, Background Papers, February 2011, recognises this issue by stating “potential landscape issues as the area is on high ground” (p.217). i. The uncertainty regarding what further studies may reveal about the practical ability of the site to accommodate development. If development has not commenced before 2016, the Council should know before then whether a review of the Core Strategy is required; why should the Core Strategy limit the potential scope of any review to the Uckfield area (Para 6.11)? SD1 is supported to the extent that it relates well to the strategic highway network. The impact of residential and other development upon SD1 will however be too prominent and intrusive along this part of the A22 corridor. Much of the development will not be easily capable of being screened. The southern part of SD1 is most exposed. It is recommended that the most sensitive landscape is retained in SD1 as open space and, as a consequence, that SD1 be extended to the south of Lewes Road to include Horsted Pond Farm and Ridgewood House – any development here could be better accommodated within the landscape. SD1, as presently drawn, is too narrowly defined in extent – the inclusion of Horsted Pond Farm and Ridgewood House within it would provide the Plan with flexibility in delivering new development to the west of Uckfield. Proposed Change

Details of Changes to be Made:
It is proposed that the SD1 allocation be extended to include Horsted Pond Farm (in part of in whole) and Ridgewood House, with consequential changes made to the Core Strategy and Key Diagram.
7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 7.28 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: NoJustified: NoEffective: NoConsistent with national policy: No

Details of Reasons for Soundess/ Legal Complaince:

7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges
Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for
England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment
Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and
Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for
each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be
‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing
landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In
relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and
Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to
accommodate change without significant effect on its character, or overall change of landscape character type.
Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the
Landscape Study, in particular, the methodology set out in the document and whether this has been consistently
applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy.
7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the
guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape
sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific
type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of
different types or areas of landscape to the type of change in question must be combined with an assessment of
the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9
The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and
reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape
Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for
Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more
detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the
Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a
specific type of change and given the local scale of the assessment work it is considered that this is the
appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that:
‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of
change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out
the approach used by East Sussex County Council landscape group in undertaking the landscape study. However,
the assessment does not define the quantum of housing development used to assess the capacity of each
character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the
quantum of housing development used to assess each of the different character areas. The Landscape Study
does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the
capacity to accept the type of change being considered. This judgement is made according to the combination of
characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is
related to the potential of the area to accommodate development in a particular location without detracting from the
overall character of that landscape. The capacity evaluation of each character area does not assume that this is
the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above
paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at
paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity /
capacity is based on light industrial type uses which would be consistent with a residential environment and these
would be single storey units. However the Landscape Study does not define the full details of the housing use,
such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale
development) and we contend that the details of the change being considered is not transparent from the
Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is
unknown. These are important factors when considering the landscape capacity of an area to accommodate
development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the
business use (or range of assumptions) could have been used for assessing the impact on housing on landscape
sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1.
small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200
dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the
combination of the characteristics that contribute to a particular area, comments on these are made in later
sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and
management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to
determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper
No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1
above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that
inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes
capacity to accommodate development. In some cases mitigation would make an area less suitable to
accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The
existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape
but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation, (and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges Potential for Mitigation Moderate Low on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:

SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.

Details of Reasons for Soundess/ Legal Complaince:

It is WSL’s intention to promote Ridgewood Farm as an urban extension to the west of Uckfield in accordance with Policy WCS4. to this end, WSL acknowledges the infrastructure requirements that the Council envisages and the timing for the delivery of strategic development set out in paragraphs 6.3 - 6.11 of the document. WSL intends to work with the Council in order to deliver a comprehensive development that includes agreed infrastructure requirements. It is also the intention of WSL to work with the Council to commence the delivery of strategic development by 2016, in accordance with paragraph 6.11 of the Porposed Submission Core Strategy. WSL is confident that its master plan exercise will demonstrate the suitability, availability and ultimate deliverability of this site for strategic development. To this end, WSL is also confident that the master plan work will demonstrate that any matters raised through this consultation exercise can be positively addressed and therefore will not affect the deliverability of Ham Farm for strategic development.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Paragraph 6.11 Point 3 Bullet Point 2. Amend to reflect revised housing strategy.

Details of Changes to be Made:
REVISION SOUGHT Replace 1,000 homes with 1,450 homes.
Many of the aims set out for Uckfield seem to be contradictory, as well seemingly to be undeliverable or the chosen land is unavailable. As set out there are congestion problems in the town centre and the Framfield Road junction. Proposals to deal with this have been mooted for the last 5 to 7 years though no detail or costings have yet been produced. The only consultation some years ago only really amounted to a scheme to promoted by Tesco’s to meet their aim for a larger supermarket. This traffic proposal appears to involve a gyratory scheme though again no great details has ever been produced, and it appears to have major problems due to the various landowners not agreeing to join in. However whatever the scheme may be, it may cope with the current traffic levels but it would seem this will be totally negated by the proposed additional housing, retail and employment development. It is proposed to allow much larger supermarket space in the town centre plus an additional unspecified number of houses. Additionally the proposed SD1 allocation with no identified access at the moment can only realistically come out on the New town Road, since it would seem unlikely that the access to a large housing estate can go through the Bellbrook Industrial Estate. Thus all this extra development will immediately need to use any modified road scheme and just end up causing as much congestion if not more, as the current road systems has, thus totally negating any road improvements. This is without even considering the negative effect of the council’s choice of limiting village growth, which will continue the decline of villages and their services, particularly local shops. Thus as all the supermarket space for the area is proposed to be in Uckfield Town centre even more rural dwellers will need to access this area as their local services die out adding even further to the congestion problem. The council are relying on the new houses to fund the town centre redevelopment, yet do not appear to have produced any figures to show how this will happen, or whether 1000 houses are too many or not enough. Similarly generally recent new housing has been looked on as the milch cow to provide everything to do with infrastructure and local services, yet the council do not either seem to have considered whether the funds they require per new house will make SD1 non viable to housing developers, at this time of national economic problems and falling house prices. The objectors have been involved in making submissions to local planning for 25 years. It appears to the objectors that WDC are totally incapable of dealing with any matters properly, and usually take 5 years to do what should be done in 1 year. Thus in this case it is only 4 years before the town centre plan and housing allocation should be started. Yet the proposals at the moment seem to be just a wish list of hopes with nothing behind them. What is the likelihood that a town scheme will be detailed and agreed with all, planning permission granted, S106’s matters detailed and agree, early infrastructure agreed, planning granted and it put in place, site DS1 sorted out, especially the access and planning and S106 matters sorted, so work on all this can start by 2016???? the answer is virtually nil as 4 years to far too short with all the parties and complications involved, plus it is likely to be another 2 years before and LDF is in place at best. The other main problem is that the land for SD1 does not appear to be available. The objectors are acquainted with the owners of the land, Ridgewood Farm who told the objectors only in recent months that they have been fighting development of 40 years an don’t want it on their land. So unless this has changed since, it would appear this land is unavailable for the development proposed. Presumably the council adds the site to the SHLAA themselves, and not the landowners. This allocation again shows how the council have incorrectly used the SHLAA, since only land that is available and deliverable should be considered for allocation. Not only does the land appear unavailable, but since the council have no idea where the access would be it, though 2 would be needed for such a large estate, it would appear undeliverable for this reason as well, so should not have been considered. It should also be noted that the towns sewage works is sited here, which would impact badly on any new housing or employment areas here, particularly as it would presumably need to be enlarged. Equally it would hardly be a nice green area to walk around either where the area near it to be POS. This site would also seem to be contrary to the council’s and national policy on landscape effect as it is on the highest ground for miles and is very open to short and long views. Many other sites in the SHLAA have been rejected for much less landscape effect than this. The plan on fig 6 shows 2 areas of green infrastructure potential. However the one next to the Bellbrook estate is a thin strip between the link road and existing housing mainly consisting of a tree covered noise bund, so it is difficult to see what extra could be done here. The area to the south goes off of the SD1 site into land in other ownership, and even were SD1 to ever happen, it is hard to see why other landowners would add their land in without considerable financial incentive which are not usually available for separate potential green land. Thus all in all the proposals in this area seem completely unsound and contrary to normal planning policy.
Details of Changes to be Made:
Site SD1 should be removed as it is undeliverable and unavailable. Some of the allocation can be moved to Maresfield as detailed in other objections, due to the adjacent Ashdown Business Park. Some of the allocation can go to deliverable and available sites around Uckfield, where they won't impact so greatly on the town centre traffic. Some can also go to the extra village allocations as set out in objections to WCS6.

Paragraph 6.3
Sound ☑ Yes ☐ No ☑ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The identification of urban extensions is supported in principle. The policy identifies 12 Strategic Development Areas, all of which vary considerably in character. Not all of proposed Strategic Development Area SD1 (Uckfield) is suitable for development. Uckfield is identified as having a key role in assisting with the delivery of the Core Strategy up to 2030: the strategy for Uckfield specifically is to enhance the role of the town as a District Level Centre, serving the local community and surrounding area. Para 6.11(3) states inter alia that the identification of SD1 as an allocation is subject to the provision of suitable access and a number of other factors, with these to be addressed in subsequent DPDs, and which may increase the risk to delivery. The Core Strategy recognises that if development has not started at West Uckfield by 2016, a review in relation to Uckfield will be required. Whether development has started by 2016 is one issue. Others are: i. Whether it is genuinely appropriate for development to take place over the whole allocation as indicated in the key diagram. The Sustainability Appraisal of the Proposed Submission Core Strategy, Background Papers, February 2011, recognises this issue by stating “potential landscape issues as the area is on high ground” (p.217). i. The uncertainty regarding what further studies may reveal about the practical ability of the site to accommodate development. If development has not commenced before 2016, the Council should know before then whether a review of the Core Strategy is required; why should the Core Strategy limit the potential scope of any review to the Uckfield area (Para 6.11)? SD1 is supported to the extent that it relates well to the strategic highway network. The impact of residential and other development upon SD1 will however be too prominent and intrusive along this part of the A22 corridor. Much of the development will not be easily capable of being screened. The southern part of SD1 is most exposed. It is recommended that the most sensitive landscape is retained in SD1 as open space and, as a consequence, that SD1 be extended to the south of Lewes Road to include Horsted Pond Farm and Ridgewood House – any development here could be better accommodated within the landscape. SD1, as presently drawn, is too narrowly defined in extent – the inclusion of Horsted Pond Farm and Ridgewood House within it would provide the Plan with flexibility in delivering new development to the west of Uckfield. Proposed Change

Details of Changes to be Made:
It is proposed that the SD1 allocation be extended to include Horsted Pond Farm (in part of in whole) and Ridgewood House, with consequential changes made to the Core Strategy and Key Diagram.

As set out there are congestion problems in the town centre and the Framfield Road junction. Proposals to deal with this have been mooted for the last 5 to 7 years though no detail or costings have yet been produced. The only consultation some years ago only really amounted to a scheme to promoted by Tesco's to meet their aim for a larger supermarket. This traffic proposal appears to involve a gyratory scheme though again no great details has ever been produced, and it appears to have major problems due to the various landowners not agreeing to join in. However whatever the scheme may be, it may cope with the current traffic levels but it would seem this will be totally negated by the proposed additional housing, retail and employment development. It is proposed to allow much larger supermarket space in the town centre plus an additional unspecified number of houses. Additionally the proposed SD1 allocation with no identified access at the moment can only realistically come out on the New town Road, since it would seem unlikely that the access to a large housing estate can go through the Bellbrook Industrial Estate. Thus all this extra development will immediately need to use any modified road scheme and just end up causing as much congestion if not more, as the current road system has, thus totally negating any road improvements. This is without even considering the negative effect of the council's choice of limiting village growth, which will continue the decline of villages and their services, particularly local shops. Thus as all the supermarket space for the area is proposed to be in Uckfield Town centre even more rural dwellers will need to access this area as their local services die out adding even further to the congestion problem. The council are relying on the new houses to fund the town centre redevelopment, yet do not appear to have produced any figures to show how this will happen, or whether 1000 houses are too many or not enough. Similarly generally recent new housing has been looked on as the milch cow to provide everything to do with infrastructure and local services, yet the council do not either seem to have considered whether the funds they require per new house will make SD1 non viable to housing developers, at this time of national economic problems and falling house prices. The objectors have been involved in making submissions to local planning for 25 years. It appears to the objectors that WDC are totally incapable of dealing with any matters properly, and usually take 5 years to do what should be done in 1 year. Thus in this case it is only 4 years before the town centre plan and housing allocation should be started. Yet the proposals at the moment seem to be just a wish list of hopes with nothing behind them. What is the likelihood that a town scheme will be detailed and agreed with all, planning permission granted, S106's matters detailled and agree, early infrastructure agreed, planning granted and it put in place, site DS1 sorted out, especially the access and planning and S106 matters sorted, so work on all this can start by 2016???? the answer is virtually nil as 4 years to far too short with all the parties and complications involved, plus it is likely to be another 2 years before and LDF is in place at best. The other main problem is that the land for SD1 does not appear to be available. The objectors are acquainted with the owners of the land, Ridgewood Farm who told the objectors only in recent months that they have been fighting development of 40 years an don't want it on their land. So unless this has changed since, it would appear this land is unavailable for the development proposed. Presumably the council adds the site to the SHLAA themselves, and not the landowners. This allocation again shows how the council have incorrectly used the SHLAA, since only land that is available and deliverable should be considered for allocation. Not only does the land appear unavailable, but since the council have no idea where the access would be it, though 2 would be needed for such a large estate, it would appear undeliverable for this reason as well, so should not have been considered. It should also be noted that the towns sewage works is sited here, which would impact badly on any new housing or employment areas here, particularly as it would presumably need to be enlarged. Equally it would hardly be a nice green area to walk around either where the area near it to be POS. This site would also seem to be contrary to the council's and national policy on landscape effect as it is on the highest ground for miles and is very open to short and long views. Many other sites in the SHLAA have been rejected for much less landscape effect than this. The plan on fig 6 shows 2 areas of green infrastructure potential. However the one next to the Bellbrook estate is a thin strip between the link road and existing housing mainly consisting of a tree covered noise bund, so it is difficult to see what extra could be done here. The area to the south goes off of the SD1 site into land in other ownership, and even were SD1 to ever happen, it is hard to see why other landowners would add their land in without considerable financial incentives which are not usually available for separate potential green land. Thus all in all the proposals in this area seem completely unsound and contrary to normal planning policy.
Details of Changes to be Made:
Site SD1 should be removed as it is undeliverable and unavailable. Some of the allocation can be moved to Maresfield as detailed in other objections, due to the adjacent Ashdown Business Park. Some of the allocation can go to deliverable and available sites around Uckfield, where they won't impact so greatly on the town centre traffic. Some can also go to the extra village allocations as set out in objections to WCS6.

Paragraph 6.6

Sound ☑ Yes ☐ No ☑ Justified ☐ Effective ☐ Consistent with national policy

Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The identification of urban extensions is supported in principle. The policy identifies 12 Strategic Development Areas, all of which vary considerably in character. Not all of proposed Strategic Development Area SD1 (Uckfield) is suitable for development. Uckfield is identified as having a key role in assisting with the delivery of the Core Strategy up to 2030: the strategy for Uckfield specifically is to enhance the role of the town as a District Level Centre, serving the local community and surrounding area. Para 6.11(3) states inter alia that the identification of SD1 as an allocation is subject to the provision of suitable access and a number of other factors, with these to be addressed in subsequent DPDs, and which may increase the risk to delivery. The Core Strategy recognises that if development has not started at West Uckfield by 2016, a review in relation to Uckfield will be required. Whether development has started by 2016 is one issue. Others are: i. Whether it is genuinely appropriate for development to take place over the whole allocation as indicated in the key diagram. The Sustainability Appraisal of the Proposed Submission Core Strategy, Background Papers, February 2011, recognises this issue by stating “potential landscape issues as the area is on high ground” (p.217). i. The uncertainty regarding what further studies may reveal about the practical ability of the site to accommodate development. If development has not commenced before 2016, the Council should know before then whether a review of the Core Strategy is required; why should the Core Strategy limit the potential scope of any review to the Uckfield area (Para 6.11)? SD1 is supported to the extent that it relates well to the strategic highway network. The impact of residential and other development upon SD1 will however be too prominent and intrusive along this part of the A22 corridor. Much of the development will not be easily capable of being screened. The southern part of SD1 is most exposed. It is recommended that the most sensitive landscape is retained in SD1 as open space and, as a consequence, that SD1 be extended to the south of Lewes Road to include Horsted Pond Farm and Ridgewood House – any development here could be better accommodated within the landscape. SD1, as presently drawn, is too narrowly defined in extent – the inclusion of Horsted Pond Farm and Ridgewood House within it would provide the Plan with flexibility in delivering new development to the west of Uckfield.

Proposed Change

Details of Changes to be Made:
It is proposed that the SD1 allocation be extended to include Horsted Pond Farm (in part of in whole) and Ridgewood House, with consequent changes made to the Core Strategy and Key Diagram.
Paragraph 6.7

Sound ☐ Yes ☑ No ☑ Justified ☑ Effective ☑ Consistent with national policy

Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:

Many of the aims set out for Uckfield seems to be contradictory, as well seemingly to be undeliverable or the chosen land is unavailable. As set out there are congestion problems in the town centre and the Framfield Road junction. Proposals to deal with this have been mooted for the last 5 to 7 years though no detail or costings have yet been produced. The only consultation some years ago only really amounted to a scheme to promoted by Tesco's to meet their aim for a larger supermarket. This traffic proposal appears to involve a gyratory scheme though again no great details has ever been produced, and it appears to have major problems due to the various landowners not agreeing to join in. However whatever the scheme may be, it may cope with the current traffic levels but it would seem this will be totally negated by the proposed additional housing, retail and employment development. If development has not commenced before 2016, the Council should know before then whether a review of the Core Strategy is required; why should the Core Strategy limit the potential scope of any review to the Uckfield area (Para 6.11)? SD1 is supported to the extent that it relates well to the strategic highway network. The impact of residential and other development upon SD1 will however be too prominent and intrusive along this part of the A22 corridor. Much of the development will not be easily capable of being screened. The southern part of SD1 is most exposed. It is recommended that the most sensitive landscape is retained in SD1 as open space and, as a consequence, that SD1 be extended to the south of Lewes Road to include Horsted Pond Farm and Ridgewood House – any development here could be better accommodated within the landscape. SD1, as presently drawn, is too narrowly defined in extent – the inclusion of Horsted Pond Farm and Ridgewood House within it would provide the Plan with flexibility in delivering new development to the west of Uckfield. Proposed Change

Details of Changes to be Made:
It is proposed that the SD1 allocation be extended to include Horsted Pond Farm (in part of in whole) and Ridgewood House, with consequential changes made to the Core Strategy and Key Diagram.
Details of Reasons for Soundness/ Legal Compliance:

Policies to restrain traffic, obtain modal shift in travel, reducing need to travel and improve the experience of non-car travel need to be sharpened and focused. Aspirations for these to happen must have necessary circumstances incorporated into the policies.

Details of Changes to be Made:

Demand management techniques for traffic in Hailsham (6.15) should be included in all the related and equivalent policies. There should be a definite commitment to traffic reduction measures and targets throughout the Strategy Plan document.
Details of Reasons for Soundess/ Legal Complaince:

7 Landscape 7.1 Introduction 7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28 Legally Compliant: -Sound: No; Justified: No; Effective: No; Consistent with national policy: No 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation. 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the detail of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to...
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development into the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and/or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity/capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation, (and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity/capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements/features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snaw Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges. Potential for Mitigation Moderate Low on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. ‘

Details of Changes to be Made:
SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
Figure 7 fails to give any impression of the additional housing that will ‘benefit’ Hailsham during the years to 2030. What, for instance, lurks under the fetching yellow blob euphemistically labelled ‘town centre regeneration’? Why it’s an approved planning application, WD/2009/2705, for 170 houses. So the SD2 allocation of 600 is in fact 770 or to put it another way virtually two years towards the annual target of 400 for the WHOLE of Wealden!

Details of Changes to be Made:

I agree that the Core Strategy is Legally Compliant and Sound, and I support its objectives.

I do not consider any change is necessary in respect of WCS4: Para 5.10 and Fig 7 which is sound, subject to highway access requirements for SD2
Details of Reasons for Soundess/ Legal Complaince:
Amend Fig 7 to include land further north of New Rd at Park Farm to allow comprehensive planning of the whole area from the hospital site to land south of New Rd. This could indicate a strategic gap (Parkland setting) south of Hospital site and include additional housing, employment and social/community facilities in the area. Remove and maintain a greater gap between the Cookoo Trail and Hellingly village to preserve and enhance the setting of this heritage feature. (see Plan under separate cover)

Details of Changes to be Made:
To undertake the above amendments

Details of Reasons for Soundess/ Legal Complaince:
The attached plan Drawing No. A-07-01 illustrates the points raised on our online representations no. 140 and 141

Details of Changes to be Made:
Amend Fig7 in accordance with plan A-07-01
Details of Reasons for Soundess/ Legal Compliance:

It is contended that in presenting the Core Strategy for South East Hailsham that the Council have misdirected themselves on issues relevant to that area; have ignored the area owned by our client by this misdirection and as a consequence should include our client's land within the broad location area of South East Hailsham. Clearly, it is not at the present time. Our client's site was considered under the Strategic Housing Land Availability Assessment (SHLAA) under the reference number 379/1310. This indicated that 25 housing units could be delivered in the period up to 5 years and 209 after 6 years. The consideration was, at that stage, favourable. However in Development of the Proposed Core Strategy this location area has been largely included within other land around the Mill Road area and an area South of Hailsham. There is specific reference to the siting of the Wast Water Treatment Works, which would result in potential odour control issues. Clearly, land at Little Marshfoot Farm and Old Marshfoot Farm would not be affected by any potential odour control issues. It is not now, and, in any event any prevailing wind would carry any odour that may exist across the considerable area of residential areas before reaching Little Marshfoot Farm let alone Old Marshfoot Farm. If there are issues of odour control they exist now and will affect those properties at the western corner of the South East Haisham Sector and will need to be resolved for the benefit of existing properties. The prevailing wind is from the South West. Further, consideration of the South East Hailsham Sector refers to the distance from the town centre. In fact Little Marshfoot Farm and Old Marshfoot Farm as submitted in the SHLAA Applications are closer to the town centre than the majority of the land highlighted as being South East Hailsham or South Hailsham. There is no published evidence to suggest that our client's land cannot deliver lower cost housing both by the marketplace and the mechanisms in place to deliver affordable housing. Our client would want to put the Wealden District Council to the task to demonstrate how they conclude that this area could not deliver the required housing at the lower end of the housing market or any other sector of the market.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:

This huge increase of housing in this area is completely unsound as there is no rail service here. This will result in most journeys being made by car and so is unsustainable and contrary to the council's other policies. Whilst the council may say there is a rail service at Polegate this is some 7 or 8 miles away, and as already noted in that section, the station already has traffic and parking problems now, when most of the proposed housing in this South Wealden area has yet to be built. However if these allocations are to be kept it would show that WDC consider being within 7 or 8 miles away from a rail service is sustainable, and hence most areas in Wealden should therefore be accepted as sustainable since most areas are within 7 or 8 miles of a station. It is also contrary to planning policy and SHLAA to allocate land that is undeliverable. In this case there is insufficient sewage capacity, and the council have no idea how or if this can be overcome. The CS is supposed to provide certainly to development, not promote something that is completely uncertain. The comments in para. 6.20 are completely unacceptable in a CS. The above comment also applies to the identified highways problems. The council should know if they can overcome them or not now, leave it as a hope, which if it does not materialise will leave the allocations undeliverable at an unknown date in the future.

Details of Changes to be Made:
For the above reasons these allocations should be deleted and reallocated to deliverable site and sustainable areas.

Details of Reasons for Soundness/ Legal Complaince:
To meet the higher housing provision of 12,500 dwellings it is appropriate that Hailsham has additional allocated land. Land south of Hailsham is less contaminated that the proposed allocation north and east of the town. Access to land south of the town can be accommodated directly from the A22.

Details of Changes to be Made:
See attached amended Figure 7
Details of Reasons for Soundess/ Legal Complaince:
The removal of Stone Cross located land to prevent coalescence of settlements and to assist in delivery of housing in a sustainable and managed pattern that reflects the existing pattern of settlements would require the removal of at least part of SD7 from the Polegate and Stone Cross inset. Stone Cross has been incorrectly classified as a Service Centre and no regard has been made to settlement coalescence.

Details of Changes to be Made:
The designation of a South Hailsham urban extension that replaces part of the Stone Cross area as well as balancing the extension of the town to the north with development both closer to and more accessible to the town centre and employment areas.

Details of Reasons for Soundess/ Legal Complaince:
Consequential amendments to include a South Hailsham urban extension to provide for sustainable development in contrast to development in a wrongly classified settlement (Stone Cross) which is an unsuitable location attached to a settlement that does not benefit from the sustainable characteristics of Hailsham as well as preventing settlement coalescence and a change to the pattern of settlements in the district.

Details of Changes to be Made:
Amend Figure 7 to define an urban extension to South Hailsham centred on the Oaklands Farm area (100/1310)

Details of Reasons for Soundess/ Legal Complaince:
We support the Councils identification of an urban extension to the east of Hailsham to be commenced around 2017 as set out within SD2. The land is very logical and capable of supporting growth and can deliver the growth that the Council anticipates. We would however suggest, as with our earlier comments on policies WCS 1 and WCS 2 that additional growth should be planned for and with this in mind the land east of Hailsham has the ability to accommodate higher levels of growth than that presently planned for by the Council.

Area Strategy

**Sound**

- Yes
- No
- Justified
- Effective
- Consistent with national policy

**Legally Compliant**

- Yes
- No

**Details of Reasons for Soundess/ Legal Complaince:**
The classification of Stone Cross as a service centre is wholly unjustified having regard to its characteristics. The definition of a Service Centre is "sustainable locations with a range of jobs, services and facilities, servicing predominantly nearby communities and the wider rural area but with accessibility to larger centres". Stone Cross cannot be considered to prove a range of jobs or services or facilities and the very limited local facilities comprising a small Tesco Estate/community shop, Vet, Chinese takeaway, hairdress, Estate Agent, Pharmacy, Public House, Cattery and Car Dealer. There is no meaningful employment provision in Stone Cross. Contrast Stone Cross with Polegate and the range and accessibility of the settlement and its is evident that the two are of a different classification as Polegate provides a wide range of retail, service and community facilities that are accessible to and genuinely serve the settlement and the wider area (notably including Stone Cross). Stone Cross should more accurately be considered to a Local Service centre or even a neighbourhood centre having regard to its very limited employment, community and retail facilities. The settlement is almost wholly dependent on surrounding settlements (Polegate, Hailsham and Eastbourne) for all its day to day needs.

**Details of Changes to be Made:**
Stone Cross should be reclassified to be a Local Service centre or even a neighbourhood centre having regard to its very limited employment, community and retail facilities.

Area Strategy

**Sound**

- Yes
- No
- Justified
- Effective
- Consistent with national policy

**Legally Compliant**

- Yes
- No

**Details of Reasons for Soundess/ Legal Complaince:**
1. The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a 'District Centre' and not as a 'Service Centre'. The town fulfils the functions and characteristics of a District Centre as defined on Table 1. It is a far more important settlement within the district than the Council has suggested, evidenced in the Core Strategy paragraph 2.3 which identifies Heathfield as one of the five main towns in the district and in Policy SP04 which refers to "our five principal towns". The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities that serves a distinct part of the district. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

**Details of Changes to be Made:**
2. Paragraph 3.4 states that, "the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities services and site opportunites exist. It is considered that the Council has under-estimated the current and future roles that Heathfield can play in this respect by failing to properly recognise the character and function of the town."

Hailsham and Hellingly  Figure 7
Area Strategy

Sound  □ Yes  ☑ No  ☑ Justified  □ Effective  □ Consistent with national policy
Legally Compliant  □ Yes  □ No

Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a ‘District Centre’ and not as a ‘Service Centre’. The town fulfils the functions and characteristics of a District Centre as defined on table 1. It is a far more important settlement within the district than the Council has suggested. Indeed the Council itself identifies Heathfield as one of the five main towns in the District in paragraph 2.3 of the Proposed Core Strategy and Policy SP04 which refers to “our five principle towns”. The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities, that serves a distinct part of the district. Paragraph 3.4 states that, “the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities services and site opportunities exist. It is considered that the Council has under-estimated the current and future roles that Heathfield can play in this respect by failing to properly recognise the character and function of the town. 3 In order to make the Core Strategy sound, Heathfield should be redefined within the Settlement hierarchy as a District Centre.

Details of Changes to be Made:
Heathfield should be re-defined in the Settlement Hierarchy as a District Centre

Details of Reasons for Soundess/ Legal Complaince:
Figure 7 fails to give any impression of the additional housing that will 'benefit' Hailsham in the years from 2011. Situated north of Hailsham, the Hellingly Hospital development WD/2006/2435/MEA, when it's full complement of 400 dwellings is complete, will provide the opportunity for around 600 commuters to rat-run through the countryside or assist in exploring the potential of the A271 to move traffic in and around Hailsham.

Sound  ☐  Yes  ☒  No  ☒  Justified  ☐  Effective  ☐  Consistent with national policy
Legally Compliant  ☒  Yes  ☐  No

Details of Reasons for Soundess/ Legal Complaince:
Figure 7 fails to give any impression of the additional housing that will "benefit" Hailsham during the years from 2011 to 2030. This section of housing comprises: 1. WD/WD/2009/1780/MEA for 128 homes on land east of Battle Road, B2104, and south of the A271. This discharges the traffic directly into Battle Road. The application has been approved. No development on this site has started. The roundabout featured in this application has not been built. Technically could you be correct in describing SD2 as an urban extension to an urban extension which is yet to be built.? 2. WD/2010/2176/MAJ for 24 units on land east of Battle Road. This was started in mid 2010. It also appears to discharge traffic directly into Battle Road. Technically could you be correct in describing SD2 as an urban extension to an urban extension which is yet to be built.?

Hailsham and Hellingly Area Strategy

Sound ☑ Yes ☐ No ☑ Justified ☐ Effective ☑ Consistent with national policy

Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundness/ Legal Compliance:

6. Conclusion 6.1 The Core Strategy states in para. 6.18 that it aims ‘to help ensure that the aspirations of the Hellingly Parish Council / Hailsham Town Council Masterplan and the local community can be realised’. However, it has rejected a key component of that Masterplan which reflects local opinion. 6.2 The District Council fears that development to the east of Hailsham ‘could adversely affect the health objective due to the significant odour issues from waste water treatment works that would be likely to affect new residents on a prolonged basis’. However, no development is scheduled to commence before 2017 which allows a lengthy period for investigations to be made into improvement of the existing waste water treatment works or into an alternative locations. It is not yet a reason for proposing or accepting a second best solution. Annual Monitoring Reports will identify the need to review any elements of the Core Strategy where monitoring has identified a sustained failure to meet the targets set and this is just one of a whole range of viability and other issues which remain to be investigated. 6.3 The North Hailsham residential allocation is not consistent with government policy in that it will not provide for social inclusion and a sustainable community; would not enhance the physical environment by diverting the A271 traffic through an existing residential community; would not promote accessibility to jobs, shopping, leisure facilities and services by public transport, walking and cycling; and would not reduce the need to travel, especially by car.

Details of Changes to be Made:

6.4 It is submitted, therefore, that the Core Strategy is not sound in its present form because its proposal to site 700 additional dwellings to the north of the A271 rather than to the east of Hailsham is neither justified nor consistent with government policy. It is requested that this proposal be deleted and that, if necessary, the housing allocation to the east of Battle Road be increased from 600 to 1,300 dwellings.
Details of Reasons for Soundess/ Legal Complaince:

Hailsham and Hellingly Area Strategy

Sound ☑ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:

6. The proposals for further population growth at Hailsham including urban extensions east (Policy SD2) and north (Policy SD3) of Hailsham are supported. The proposals themselves will create critical mass to provide economic and social benefit to the town. To maintain the viability of such large scale development, care should be taken to avoid excessive development contributions and to adhere strictly to the principles of Circular 05/05 namely that obligations must be: 1. relevant to planning ii necessary to make the proposed development acceptable in planning terms iii. directly related to the proposed development iv. Fairly and reasonably related in scale and kind to the proposed development; and v. reasonable in all other respects. given the scale of development and the lead time to first occupations where significant infrastructure works are required the respective 2017 and 2021 dates should be brought forward and treated with flexibility to ensure that planning permissions are granted well in advance of those dates in order to ensure completions in good time and so maintain housing land supply.

Details of Changes to be Made:
Paragraph 6.12

Details of Reasons for Soundess/ Legal Compliance:

This huge increase of housing in this area is completely unsound as there is no rail service here. This will result in most journeys being made by car and so is unsustainable and contrary to the council's other policies. Whilst the council may say there is a rail service at Polegate this is some 7 or 8 miles away, and as already noted in that section, the station already has traffic and parking problems now, when most of the proposed housing in this South Wealden area has yet to be built. However if these allocations are to be kept it would show that WDC consider being within 7 or 8 miles away from a rail service is sustainable, and hence most areas in Wealden should therefore be accepted as sustainable since most areas are within 7 or 8 miles of a station. It is also contrary to planning policy and SHLAA to allocate land that is undeliverable. In this case there is insufficient sewage capacity, and the council have no idea how or if this can be overcome. The CS is supposed to provide certainty to development, not promote something that is completely uncertain. The comments in para. 6.20 are completely unacceptable in a CS. The above comment also applies to the identified highways problems. The council should know if they can overcome them or not now, leave it as a hope, which if it does not materialise will leave the allocations undeliverable at an unknown date in the future.

Details of Changes to be Made:
For the above reasons these allocations should be deleted and reallocated to deliverable site and sustainable areas.

Paragraph 6.12

Sound ☑ Yes ☐ No ☑ Justified ☑ Effective ☑ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Compliance:

We support the Councils identification of an urban extension to the east of Hailsham to be commenced around 2017 as set out within SD2. The land is very logical and capable of supporting growth and can deliver the growth that the Council anticipates. We would however suggest, as with our earlier comments on policies WCS 1 and WCS 2 that additional growth should be planned for and with this in mind the land east of Hailsham has the ability to accommodate higher levels of growth than that presently planned for by the Council.

Paragraph 6.14

Details of Reasons for Soundness/ Legal Complaince:

We support the Council's identification of an urban extension to the east of Hailsham to be commenced around 2017 as set out within SD2. The land is very logical and capable of supporting growth and can deliver the growth that the Council anticipates. We would however suggest, as with our earlier comments on policies WCS 1 and WCS 2 that additional growth should be planned for and with this in mind the land east of Hailsham has the ability to accommodate higher levels of growth than that presently planned for by the Council.

Details of Changes to be Made:

Paragraph 6.14 should be redrafted to reflect the outcome of outstanding research.

---

Paragraph 6.14

Details of Reasons for Soundness/ Legal Complaince:

The investigation of potential housing sites is incomplete and should await the outcome of the waste water treatment study relating to land south of Hailsham and also the traffic modelling of all options for development around Hailsham. The traffic modelling did not thoroughly examine all of the sites seen as potentially suitable including 254/1310 - Land to the West of the Sustrans Route, Ersham Farm, Ersham Road. The approach adopted by the Core Strategy in assessing the potential contribution which land to the south of Hailsham is considered arbitrary. Paragraph 8.21 of the Development of The Proposed Submission Core Strategy Background Paper, reveals a very poor explanation for the rejection of land to the south of Hailsham and suggests a predetermined site selection process more influenced by political preferences than by an impartial testing of the constraints and opportunities represented by each site put forward.

Details of Changes to be Made:

Paragraph 6.14 should be redrafted to reflect the outcome of outstanding research.
Details of Reasons for Soundess/ Legal Complaince:

For the above reasons these allocations should be deleted and reallocated to deliverable site and sustainable areas.

Details of Reasons for Soundess/ Legal Complaince:
We support the Councils identification of an urban extension to the east of Hailsham to be commenced around 2017 as set out within SD2. The land is very logical and capable of supporting growth and can deliver the growth that the Council anticipates. We would however suggest, as with our earlier comments on policies WCS 1 and WCS 2 that additional growth should be planned for and with this in mind the land east of Hailsham has the ability to accommodate higher levels of growth than that presently planned for by the Council.

Details of Changes to be Made:
I have examined the Proposed Submission Core Strategy (PSCS) against the Soundness Tool and found it wanting in terms of justification and effectiveness. The PSCS is a carefully prepared document, well thought out to offer a plan for the future but it does not take full account of the background research and documentation upon which it is based. In particular the proposals to expand Hailsham to the north do not comply with the sustainability or infrastructure objectives for Wealden and the proposals for development to the east and north of Hailsham are contrary to previous WDC research and to current Background Papers. Participation The consultation process has permitted all interested parties to engage but the options for answering have been strictly limited on a Yes or No or infrastructure objectives for Wealden and the proposals for development to the east and north of Hailsham are contrary to previous WDC research and to current Background Papers. Participation The consultation process has permitted all interested parties to engage but the options for answering have been strictly limited on a Yes or No basis when, in fact, more discursive answers are needed. Research/Fact Finding The content of the PSCS is not justified by the evidence, particularly in respect of infrastructure and especially highways and sewerage. Document No 7 Infrastructure Position Statement dated July 2009 refers under (A) Transport to the need to reduce travel distances. The PSCS shows strategic development to North and East Hailsham and towards Hellingly at distances from the town centre of up to 2.2 km. The South Wealden & Eastbourne Transport Study (SWETS) in paragraph 3.29 makes it clear that development for major housing allocations in north and east Hailsham would cause significant traffic pressure. Fewer pinch points and reduced traffic pressure are shown for development south of Hailsham. BP No 11 Infrastructure Delivery Plan defines the highways issue for development to the north and east as ‘CRITICAL’ and states ‘Development is contingent on delivery of this infrastructure’. Regarding sewerage/waste water capacity, as outlined in BP No 11, Hailsham North wastewater works had a consented discharge capacity at 1st Jan 2007 at 2900 dwellings. Hailsham South wastewater works had a capacity of 2400 dwellings at same date. This same document shows infrastructure developments in the Appendix for the North water treatment works is deemed CRITICAL to deliver 1500 dwellings. In the south of Hailsham ‘A scheme is not necessary to deliver the proposed Submission Core Strategy. However a scheme may be required for windfalls of housing and employment development.’ The same Background Paper states under ‘Further Supporting Evidence’: ‘Infrastructure is not necessary to achieve the full allocation of development in Hailsham, Polegate and Stone Cross as shown in the proposed Submission Core Strategy.’ This reliance on ‘massing’ in the north of Hailsham therefore has infrastructure issues which could be avoided by reducing the size of the Strategic Development Areas and spreading the housing to the south of the town. According to the Housing Needs Assessment the greatest number of low income families are located to the south and such development would help to balance with Affordable and mixed housing. The Table at the end of BP 11 sets out water treatment for extant Planning Permissions and completions from April 2006-April 2010 and states that there are capacity issues arising in the north from the Spatial Strategy but not in the south. The Conclusions to BP 11 state that wastewater funding has been secured from Offwat for works in 2012 to increase capacity in the Hailsham area and to undertake a study to investigate other technical solutions. The financial solution would be via appropriate developer contributions. In summary, therefore, according to BP11 there are no capacity issues in South Hailsham providing development is not beyond 2400 houses, less 885 already approved – namely 1515 dwellings in Polegate, Stonecross and South Hailsham. The Oaklands/Brickfield SHLAA site 100/1310 (224 dwellings) includes an East Sussex County Council approved road scheme to allow capacity for up to 300 dwellings. Landscape In January 2001 WDC prepared the ‘Low Weald Towns Sector Appraisal Landscape’ as part of the Background Papers for the then Local Plan Review. This document is partly incorporated in Background Paper No 6 Green Infrastructure. BP 6 does not include the following relevant paragraph about the landscape around Hailsham: ‘South of Hailsham: ….Urban Influence: On the western side of the sector the urban edge of Hailsham is generally well concealed by woodland often in deep ghylls or valleys. Scattered farms and houses are linked by a network of roads and lanes, the latter often sunk between high overgrown hedges. Horse grazing is common, a reflection of urban pressures, and as a result many of the pastures have the unkempt rather untidy appearance of paddocks. Rough sheds, water troughs and other paraphernalia are common place. ..’ Under the heading ‘Sensitivity to Development’ the Landscape Appraisal states: ‘The relatively open aspect of the landscape east of the Cuckmere flood plain makes it sensitive to change by new development and any large scale expansion of the built form beyond the existing urban edge of Hailsham in this location would tend to damage the rural setting of the town. .. ‘However there is very little scope for additional development on the western edge of the sector without threatening the intrinsic qualities of the landscape and more particularly the rural settings of Hellingly and Horselunges Manor. Importantly the urban influence of Hailsham is hardly noticeable in this reach of the Cuckmere valley apart from some ribbon development along the A271 on the immediate fringes of the town. Any significant expansion of the built form in this location (Hellingly/North Hailsham) would be likely to erode the historic landscape, structure and rural
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

character of this valuable landscape and irreparably damage the vulnerable gap of countryside between Hailsham and Hellingly.’ The Sustainability Appraisal sets out on p 42 the Sustainability Objectives for Wealden. The environmental objectives include: 7. ‘To make the most efficient use of land by prioritising brownfield sites for development, the re-use of existing buildings and promoting higher development densities.’ 11. ‘To conserve, enhance and make accessible for enjoyment the District’s countryside (in particular protecting the best and most versatile agricultural land) landscape, historic and built environment.’ 12. ‘Reduce the need to travel by car and promote alternative methods of transport.’ Development north and east of Hailsham is contrary to all or most of these objectives because it would increase travel distance, increase reliance on motor cars and damage the landscape and countryside, being on greenfield sites. SHLAA site 100/1310 Oaklands & The Brickfield are on a previously developed site, the Brickfield being defined as ‘Brownfield’. Oaklands, being used for business ‘horse culture’ and not agriculture is also classified as ‘brownfield/previously developed’ under PPS3. Development of these sites south of Hailsham therefore complies with the environmental objectives set out in the Sustainability Appraisal. Alternatives The Council’s chosen approach in the PSCS is therefore not the most appropriate given the reasonable alternatives and it goes against the Background Papers and existing evidence base. It would appear from the PSCS that sustainability considerations have not informed its content from the start. In particular, it is stated at Para 6.30 of the PSCS that the Polegate, Willingdon, Stonecross development of 700 dwellings can only take place when formal road infrastructure is in position. Therefore SD4 is not programmed to start until 2019/20. Similarly, Para 5.16 states that the proposed northern urban extension of Hailsham (SD2 & SD3) cannot occur without infrastructure improvements namely sewerage and roads. Hence SD2 cannot start until 2017 and SD3 until 2021. I would submit that this issue of roads indicates that, by definition, the Strategic Development Areas forming the northern extension of Hailsham towards Hellingly and those in Polegate, Willingdon and Stone cross are unsustainable. The PSCS was initially prepared in its Draft and Consultation forms on the basis of the requirements of the South East Plan. This is now being abandoned and will no longer be valid. Because the Draft Core Strategies and most of the evidence gathering and Background Papers were prepared in accordance with the South East Regional Plan, the current PSCS is probably invalid and I would submit that the Inspector should examine this. Delivery The Council has correctly identified the main issues that the PSCS is seeking to address but does not present a clear vision for Wealden District into the future, only the equivalent of a ‘wish list’ of construction of 400 houses a year and sufficient commercial development for employment. It does not clarify how to achieve this, particularly in respect of infrastructure. The major strategic development north and east of Hailsham introduce an unacceptable risk in the ability to provide the infrastructure. Cross boundary issues have not been adequately addressed. In particular with Mid Sussex District Council and associated County Council Highways liaison for a relief road around East Grinstead. Nor does it address the problems of coalescence between Polegate, Willingdon and Stonecross and Eastbourne Councils, nor does it address the cross boundary issues which will arise with Lewes District Council, particularly in connection with development around Uckfield. The PSCS sets out objectives in terms of construction and development but does not connect these in sufficient detail with the necessary infrastructure. The most obvious gap in the policies is related to transport, in that the entire PSCS is predicated on continued and developing use of motor vehicles, there being no positive action proposed in relation to the Uckfield-Lewes Railway line and only passing mention of the possibility of public transport or reinstated railway from Hailsham southwards to Polegate and Eastbourne. The timescales given in the Plan are governed by the moribund South East Plan and are not realistic, particularly in respect of infrastructure provision and especially given the proposals in the PSCS for development north of Hailsham which will rely on the motor car. This is contrary to Spatial Planning Objective 7. Currently the Strategic Development Areas SD2, SD3, SD4, SD6 & SD7 are all undeliverable as set out in Paras 3.16, 6.19 & 6.31 due to lack of existing highways infrastructure. This amounts to 2650 dwellings which cannot be delivered. Flexibility It is not clear whether the PSCS will be flexible enough to respond to a variety of, or unexpected changes in, circumstances, whether environmental, political or economic. Currently there is no clear plan for updating it. It cannot be very flexible because of the infrastructure constraints in Wealden District. Summary The PSCS does not explain how its key policy objectives will be achieved because it is based on the South East Plan which is being abolished. Most of the supporting documents are also based around the South East Plan and pre-date its abolition. The proposals for Strategic Development housing north and east of Hailsham and in Polegate, Willingdon & Stonecross are all undeliverable because of lack of highways infrastructure and, in the north, due to lack of sewerage capacity. These proposals therefore contradict Wealden’s own sustainability and environmental objectives. The PSCS does not take proper account of some sites in the SHLAA which are recognised as suitable and which meet sustainability objectives better than those selected for ‘Strategic Development’. The Oaklands and Brickfield site south of Hailsham (SHLAA 100/1300: 224 dwellings) is largely on previously-developed (brownfield) land and has a highways scheme for the Ersham Road roundabout agreed with East Sussex County Council and should be included in the SDAs to the exclusion of less suitable development. It meets the Hailsham Sustainability Objectives, being a local Urban Extension within walking distance of Hailsham town centre and offering proximity to open space, woodland and biodiversity – at a scale capable of delivering up to 224 dwellings with minimum impact on infrastructure and environmental amenity. This PSCS has given careful consideration to the issues within the Wealden area but falls short of achieving deliverability because of a decision to favour massing over locality, with all the consequent risks involved in reliance on a minimum number of SDAs and with an intention to release more greenfield sites than is compliant with government recommendations. I welcome the Review and monitoring procedures inherent in the PSCS but this document is currently unsound.
Details of Changes to be Made:
Development of SHLAA site 100/1310 would enable remodelling of the Ersham Road/South Road/Diplocks Way junction as set out above.

---

Details of Reasons for Soundess/ Legal Compliance:
Demand Management Techniques may include active and/or 'passive' measures to affect traffic behaviour they typically include charging for road use and parking and planning new build without parking or substantially reducing it. In regard to car parking charges are Tesco likely to charge for parking. Definitely not. Is other town centre parking to be charged? Probably not. Is it sensible to propose an office development with reduced parking allocations as in the HA's response to WD/2009/2705? What, then, is the passive approach? The traffic is allowed to find it's own level. There are some minor disadvantages to this approach. An increasing number of Hailsham's residents will be subjected to more and more noise and pollution over a greater period of the day. An unpredictable journey time won't help the viability of the Station Road Industrial Estate or increase the take-up of units at the Swann Barn Business Centre. An indeterminate journey time for a priority bus service to Eastbourne isn't helpful.

Details of Changes to be Made:

---

Details of Reasons for Soundess/ Legal Compliance:
Policies to restrain traffic, obtain modal shift in travel, reducing need to travel and improve the experience of non-car travel need to be sharpened and focused. Aspirations for these to happen must have necessary circumstances incorporated into the policies.

Details of Changes to be Made:
Demand management techniques for traffic in Hailsham (6.15) should be included in all the related and equivalent policies. There should be a definite commitment to traffic reduction measures and targets throughout the Strategy Plan document.
Details of Reasons for Soundess/ Legal Complaince:
The problems of the A271 are clearly detailed on Page 39 point 6.15 and in the Hailsham and Hellingly Masterplan and in ESCC reports. However, any changes/improvements will be the responsibility of ESCC Highways and outside the remit of Wealden District Council. As funding from S106 agreements is unlikely to be sufficient to fund any major changes, this issue should be addressed before extra housing is built

Details of Changes to be Made:
Yes
Sound

Effective
Consistent with national policy
Legally Compliant

This huge increase of housing in this area is completely unsound as there is no rail service here. This will result in most journeys being made by car and so is unsustainable and contrary to the council's other policies. Whilst the council may say there is a rail service at Polegate this is some 7 or 8 miles away, and as already noted in that section, the station already has traffic and parking problems now, when most of the proposed housing in this South Wealden area has yet to be built. However if these allocations are to be kept it would show that WDC consider being within 7 or 8 miles away from a rail service is sustainable, and hence most areas in Wealden should therefore be accepted as sustainable since most areas are within 7 or 8 miles of a station. It is also contrary to planning policy and SHLAA to allocate land that is undeliverable. In this case there is insufficient sewage capacity, and the council have no idea how or if this can be overcome. The CS is supposed to provide certainty to development, not promote something that is completely uncertain. The comments in para. 6.20 are completely unacceptable in a CS. The above comment also applies to the identified highways problems. The council should know if they can overcome them or not now, leave it as a hope, which if it does not materialise will leave the allocations undeliverable at an unknown date in the future.

Details of Changes to be Made:
For the above reasons these allocations should be deleted and reallocated to deliverable site and sustainable areas.
Details of Reasons for Soundess/ Legal Complaince:
We support the Councils identification of an urban extension to the east of Hailsham to be commenced around 2017 as set out within SD2. The land is very logical and capable of supporting growth and can deliver the growth that the Council anticipates. We would however suggest, as with our earlier comments on policies WCS 1 and WCS 2 that additional growth should be planned for and with this in mind the land east of Hailsham has the ability to accommodate higher levels of growth than that presently planned for by the Council.

Details of Changes to be Made:

---

Details of Reasons for Soundess/ Legal Complaince:
We are pleased to see that your development distribution in policy WCS2 can be accommodated within existing consented capacities at Waste Water Treatment Works (WWTW). This is particularly important at the Hailsham North and South Waste Water Treatment Works that discharge into the Pevensey Levels. The Review of Consents As you are already aware, we are currently undertaking a Review of Consents (RoC) for the Pevensey Levels. The purposes of the RoC is to assess the impact of existing discharge consents into the Pevensey Levels, and make suitable changes where appropriate and fully justified. We have currently reached Stage 3 of the RoC which we are awaiting sign off from our Area Manager. We will make these results available to you at the earliest opportunity at the end of April 2011. The results will identify those consents that will require further assessment under the final Stage 4 of the RoC. We expect the final recommendations to be available by April 2012. This will be in time to inform your Site Allocations Development Plan Document. Through the course of the RoC there is a possibility that the existing consent for Hailsham North and South WWTWs will be reviewed which would have implications for the capacity of the works to accept the waste water flows from new development. We are happy that your Strategy is based on the most up to date information available, and you have addressed potential changes to existing consents through the RoC by considering phasing development with the provision of necessary infrastructure. Southern Water have also commissioned a study into alternative solutions for waste water treatment in the south of Wealden should it be needed. We therefore consider your Core Strategy sound in this regard.

No Deterioration Policy We are awaiting the publication of a ‘No Deterioration’ policy from Defra. The policy will seek to achieve the Water Framework Directive (WFD) requirement of achieving good ecological status of all waterbodies and not allowing any deterioration in status. The impact of this Policy is similar to that of the Review of Consents, insofar as there is a potential risk that it will result in existing consents being tightened in line with WFD. Again, without this policy being in place, we are satisfied that your Strategy is based on the best available information and remains sound in this regard. Once the No Deterioration Policy is published we will consider how this will impact on your Site Allocations and the need for waste water infrastructure delivery.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:
Greater potential capacity to accommodate growth exists south of Hailsham than is being alluded to in this paragraph. This paragraph refers to the capped amount of development considered appropriate by the Environment Agency. No reference is made to the on-going study of this issue, the results of which may well enable the release of more land to the south of Hailsham thereby providing additional residential housing land as potentially available and as envisaged by the Panel reporting into the South East Plan (examination in public).

Details of Changes to be Made:
Paragraph 6.16 requires revision in the light of the completion of the study and the extended traffic modelling of additional site options not previously undertaken.

Details of Reasons for Soundness/ Legal Complaince:
Sewage capacity is insufficient to cope with any increased demand as noted on Page 39 point 6.16 and Page 41 Point 11 and also raised in Herstmonceux Parish Council's response to the Spatial Options Consultation in August 2009.

Details of Changes to be Made:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Paragraph 6.16. The waste water treatment plants have been shown not to be a constraint

Details of Changes to be Made:
REVISION SOUGHT Delete.

Paragraph

Sound  Yes  No  Justified  Effective  Consistent with national policy

Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:

As expressed earlier we feel that SD2 should be deleted if the housing figures remain at 9600. The 600 units proposed at SD2 should be re-distributed to land north of New Rd at Park farm (approx 65 hectares) This would allow for a comprehensive master planning including improving access and traffic movement at Bishop roundabout. It would enable the connectivity of the hospital site to the rest of Hailsham and provide a strategic gap in the form of a rural parkland. The concentration of development would provide an economy of scale with employment and other social and community infrastructure yet still maintaining an appropriate gap between Hellingly village and Hailsham. (See Plan sent under seperate cover)

Details of Changes to be Made:

Show extended area for possible development north of New Rd on Fig 7 with protential park land belt around hospital but with potential cycle and pedestrian links through SD3. Whilst at the same time reducing the area to the west to protect the Cookoo Trail and providing a greater gap between SD3 and Hellingly village to the west.
Details of Reasons for Soundess/ Legal Complaince:

Such talk of parks and 'quality of life' are fine words. Unfortunately fine words butter no parsnips. For realisation the never ending building activity should have been constrained within a long term plan. How would REAL PLANNING have placed a petrol station adjacent to a mini roundabout on a major traffic route serving the southern approaches to the town centre? I offer a short history lesson.......In 1970 a Hailsham Town Centre Map was approved for the purposes of development control by East Sussex County Council and ratified by the (then) Hailsham District Council. It featured a road system design aimed at increasing accessibility and aiding movement in and about the town. The redundant railway line and areas of the old Station yard were to form a two way road by passing the town centre. Further, a sensibly sized intersection with South Road ( on the same level! ) was proposed. The pedestrianised town centre, including the High Street, George Street and Market Street, would have been served by a one-way ring road. So, what happened? Other proposals for the immediate vicinity were the diversion of the A271 to form a northern by-pass and, after 1981, the extension of the new road along the railway cutting to Hellingly Station. This would have been matched with an improved South Road to form a viable route for north/south traffic meeting the A22.

Details of Changes to be Made:

It is contended that in presenting the Core Strategy for South East Hailsham that the Council have misdirected themselves on issues relevant to that area; have ignored the area owned by our client by this misdirection and as a consequence should include our client's land within the broad location area of South East Hailsham. Clearly, it is not at the present time. Our client's site was considered under the Strategic Housing Land Availability Assessment (SHLAA) under the reference number 379/1310. This indicated that 25 housing units could be delivered in the period up to 5 years and 209 after 6 years. The consideration was, at that stage, favourable. However in Development of the Proposed Core Strategy this location area has been largely included within other land around the Mill Road area and an area South of Hailsham. There is specific reference to the siting of the Wast Water Treatment Works, which would result in potential odour control issues. Clearly, land at Little Marshfoot Farm and Old Marshfoot Farm would not be affected by any potential odour control issues. It is not now, and, in any event any prevailing wind would carry any odour that may exist across the considerable area of residential areas before reaching Little Marshfoot Farm let alone Old Marshfoot Farm. If there are issues of odour control they exist now and will affect those properties at the western corner of the South East Hailsham Sector and will need to be resolved for the benefit of existing properties. The prevailing wind is from the South West. Further, consideration of the South East Hailsham Sector refers to the distance from the town centre. In fact Little Marshfoot Farm and Old Marshfoot Farm as submitted in the SHLAA Applications are closer to the town centre than the majority of the land highlighted as being South East Hailsham or South Hailsham. There is no published evidence to suggest that our client's land cannot deliver lower cost housing both by the marketplace and the mechanisms in place to deliver affordable housing. Our client would want to put the Wealden District Council to the task to demonstrate how they conclude that this area could not deliver the required housing at the lower end of the housing market or any other sector of the market.

### Details of Reasons for Soundess/ Legal Complaince:

This huge increase of jousing in this area is completely unsound as there is no rail service here. This will result in most journeys being made by car and so is unsustainable and contrary to the council's other policies. Whilst the council may say there is a rail service at Polegate this is some 7 or 8 miles away, and as already noted in that section, the station already has traffic and parking problems now, when most of the proposed housing in this South Wealden area has yet to be built. However if these allocations are to be kept it would show that WDC consider being within 7 or 8 miles away from a rail service is sustainable, and hence most areas in Wealden should therefore be accepted as sustainable since most areas are within 7 or 8 miles of a station. It is also contrary to planning policy and SHLAA to allocate land that is undeliverable. In this case there is insufficient sewage capacity, and the council have no idea how or if this can be overcome. The CS is supposed to provide certainly to development, not promote something that is completely uncertain. The comments in para. 6.20 are completely unacceptable in a CS. The above comment also applies to the identified highways problems. The council should know if they can overcome them or not now, leave it as a hope, which if it does not materialise will leave the allocations undeliverable at an unknown date in the future.

### Details of Changes to be Made:

For the above reasons these allocations should be deleted and reallocated to deliverable site and sustainable areas.
Details of Reasons for Soundness/ Legal Compliance:
We support the Council's identification of an urban extension to the east of Hailsham to be commenced around 2017 as set out within SD2. The land is very logical and capable of supporting growth and can deliver the growth that the Council anticipates. We would however suggest, as with our earlier comments on policies WCS 1 and WCS 2 that additional growth should be planned for and with this in mind the land east of Hailsham has the ability to accommodate higher levels of growth than that presently planned for by the Council.

Details of Changes to be Made:

---

Details of Reasons for Soundness/ Legal Compliance:
We support the council's identification of SD2 and the confirmation of details within paragraph 6.19 (3), specifically as it relates to the land identified under SHLAA reference 135/1310. The Council's background evidence, including the SHLAA and landscape study identify that the land is capable of accommodating development. The land is very sustainable and relates well to the existing built up boundary of Hailsham. The land is controlled by a single family, with Gleeson's having an interest in the land. It is deliverable and relates well to the other areas identified within the proposed policy within SD2. The land allows the deliverability of a not only housing, but supporting ancillary uses, whilst contributing to the councils overall Core Strategy aims. The council accepts the need for housing and indeed the need for housing at Hailsham, which we agree is a suitable location for development, and the land within SHLAA 135/1310 can go a long to achieving this.

Details of Changes to be Made:
Paragraph 6.19 reveals the underprovision of proposed residential development which is a contributory factor in the Core Strategy's failure to identify sufficient housing land within the Plan Period. For the reasons explained in other objections, the Trust considers that the Core Strategy has not adequately researched the full range of development options which could assist in delivering additional housing land. The Trust believes that the site selection process (albeit "broad locations") has been partially informed and that the research needed to fully test the available potential sites was not completed prior to the two broad locations being identified. This appears more a predetermined site selection process, evidenced by for instance the identification of SD2 (East of Hailsham) notwithstanding the acknowledgement that around 600 homes being planned for an extension to the east of Hailsham on land north of Vicarage Lane (SD2) may well be constrained by odour from sewage treatment plant and other physical infrastructure constraints. This is, in the Trust's view, therefore a premature identification of potential capacity in the absence of detailed study results. By contrast the land to the south of Hailsham (245/1310) was seemingly rejected for less onerous potentially constraining factors and suggests pre determination notwithstanding outstanding factual and informed analysis being incomplete.

Details of Changes to be Made:
The paragraph and related points require revision in the light of the completion of fully informed constraints analysis and an even-handed re evaluation of the potential development options.

Details of Reasons for Soundness/ Legal Complaince:
Policies to restrain traffic, obtain modal shift in travel, reducing need to travel and improve the experience of non-car travel need to be sharpened and focused. Aspirations for these to happen must have necessary circumstances incorporated into the policies.

Details of Changes to be Made:
Demand management techniques for traffic in Hailsham (6.15) should be included in all the related and equivalent policies. There should be a definite commitment to traffic reduction measures and targets throughout the Strategy Plan document.
Details of Reasons for Soundness/ Legal Compliance:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request".

Details of Changes to be Made:
REVISION SOUGHT Increase overall number of dwellings to "at least 2,500". Increase the number of homes north of Hailsham and at hellingly to at least 1,300. Add a further bullet point and indicate development to accommodate at least 600 and amend Figure 7 accordingly.

Details of Reasons for Soundness/ Legal Compliance:
The proposals for further population growth at Hailsham including urban extensions east (Policy SD2) and north (Policy SD3) of Hailsham are supported. The proposals themselves will create critical mass to provide economic and social benefit to the town. To maintain the viability of such large scale development, care should be taken to avoid excessive development contributions and to adhere strictly to the principles of Circular 05/05 namely that obligations must be. 1. relevant to planning ii necessary to make the proposed development acceptable in planning terms iii. directly related to the proposed development iv. Fairly and reasonably related in scale and kind to the proposed development; and v. reasonable in all other respects. given the scale of development and the lead time to first occupations where significant infrastructure works are required the respective 2017 and 2021 dates should be brought forward and treated with flexibility to ensure that planning permissions are granted well in advance of those dates in order to ensure completions in good time and so maintain housing land supply.

Details of Reasons for Soundness/ Legal Compliance:
6. Conclusion 6.1 The Core Strategy states in para. 6.18 that it aims ‘to help ensure that the aspirations of the Hellingly Parish Council / Hailsham Town Council Masterplan and the local community can be realised’. However, it has rejected a key component of that Masterplan which reflects local opinion. 6.2 The District Council fears that development to the east of Hailsham ‘could adversely affect the health objective due to the significant odour issues from waste water treatment works that would be likely to affect new residents on a prolonged basis’. However, no development is scheduled to commence before 2017 which allows a lengthy period for investigations to be made into improvement of the existing waste water treatment works or into an alternative locations. It is not yet a reason for proposing or accepting a second best solution. Annual Monitoring Reports will identify the need to review any elements of the Core Strategy where monitoring has identified a sustained failure to meet the targets set and this is just one of a whole range of viability and other issues which remain to be investigated. 6.3 The North Hailsham residential allocation is not consistent with government policy in that it will not provide for social inclusion and a sustainable community; would not enhance the physical environment by diverting the A271 traffic through an existing residential community; would not promote accessibility to jobs, shopping, leisure facilities and services by public transport, walking and cycling; and would not reduce the need to travel, especially by car.

Details of Changes to be Made:
6.4 It is submitted, therefore, that the Core Strategy is not sound in its present form because its proposal to site 700 additional dwellings to the north of the A271 rather than to the east of Hailsham is neither justified nor consistent with government policy. It is requested that this proposal be deleted and that, if necessary, the housing allocation to the east of Battle Road be increased from 600 to 1,300 dwellings.
Details of Reasons for Soundness/ Legal Compliance:

It is requested that this proposal be deleted and that, if necessary, the housing allocation to the east of Battle Road be increased from 600 to 1,300 dwellings.
Details of Reasons for Soundness/ Legal Compliance:
This huge increase of housing in this area is completely unsound as there is no rail service here. This will result in most journeys being made by car and so is unsustainable and contrary to the council's other policies. Whilst the council may say there is a rail service at Polegate this is some 7 or 8 miles away, and as already noted in that section, the station already has traffic and parking problems now, when most of the proposed housing in this South Wealden area has yet to be built. However if these allocations are to be kept it would show that WDC consider being within 7 or 8 miles away from a rail service is sustainable, and hence most areas in Wealden should therefore be accepted as sustainable since most areas are within 7 or 8 miles of a station. It is also contrary to planning policy and SHLAA to allocate land that is undeliverable. In this case there is insufficient sewage capacity, and the council have no idea how or if this can be overcome. The CS is supposed to provide certainty to development, not promote something that is completely uncertain. The comments in para. 6.20 are completely unacceptable in a CS. The above comment also applies to the identified highways problems. The council should know if they can overcome them or not now, leave it as a hope, which if it does not materialise will leave the allocations undeliverable at an unknown date in the future.

Details of Changes to be Made:
For the above reasons these allocations should be deleted and reallocated to deliverable site and sustainable areas.

---

Details of Reasons for Soundness/ Legal Compliance:
We support the Councils identification of an urban extension to the east of Hailsham to be commenced around 2017 as set out within SD2. The land is very logical and capable of supporting growth and can deliver the growth that the Council anticipates. We would however suggest, as with our earlier comments on policies WCS 1 and WCS 2 that additional growth should be planned for and with this in mind the land east of Hailsham has the ability to accommodate higher levels of growth than that presently planned for by the Council.

Details of Changes to be Made:
Proposed Urban Extension in North & East Hailsham Planning Policy Statement 1 (PPS1), states that; ‘In preparing development plans, planning authorities should seek to: Reduce the need to travel... and focus development in existing centres and near to major public transport interchanges.’ The urban extension to north Hailsham (SD3) identified in the Figure 7 of the Proposed Submission Core Strategy (PSCS) is 1.95 km from the centre. Although the southern sections of the east extension (SD2) would be close to the town centre the northern sections would be approximately 2.2 km from the town centre. In contrast, southern sites identified as being suitable in the SHLAA (in particular Oaklands & The Brickfield SHLAA Ref 100/1310) are located 1.2 km from the town centre. This shorter distance means that trips into the town centre are much more likely to be undertaken on foot or bicycle rather than in a car. On this basis, the proposed residential development to Hailsham as identified in Figure 7 for the PSCS is contradictory to PPS1. This point was also highlighted by the Strategic Housing Land Availability Assessment. The site at Danecroft Nursery, Station Road, Hellingly and adjacent site at 13 Station Road, Hellingly are both within the north extension (SD3), and were deemed to be unsuitable for development by the SHLAA. This was because as stated; ‘These sites are relatively isolated and are remote from local services and facilities. They are disconnected from the boundary of Hailsham which is some distance away. Housing development would be unsustainable and would have the effect of consolidating a linear form of built development in this semi-rural location.’ PPS 1 states that; ‘In some circumstances, a planning authority may decide in reaching a decision to give different weight to social, environmental, resource or economic considerations. Where this is the case, the reasons for doing so should be explicit and the consequences considered.’ The various studies undertaken in preparation for the PSCS do not address this issue. No compensatory positive reason is given for the location of development so removed from the town centre. The evidence base study; ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken in 2009 in preparation for the PSCS states that; ‘Development of the northern fringes of Hailsham would be north of the A271 and isolated from the town.....’ The isolated nature of this development which is removed from the town centre of Hailsham contradicts guidance in PPS1. PPS1 states that Planning Authorities should; ‘ensure that the impact of development on the social fabric of communities is considered and taken into account’. Hailsham is more able to accommodate smaller sites to the south than larger sites to north and east. Flood Risk According to Figure 7 of the PSCS, sites identified to the north of communities is considered and taken into account’. Hailsham is more able to accommodate smaller sites to the north and east of Hailsham (SD2 and SD3) are positioned alongside a flood prone area. The Strategic Housing Land Availability Assessment (SHLAA) also points out that; ‘the eastern side of the north site are within Flood Zones 2 & 3’. PPS 1 states that ‘new development should be avoided in areas at risk of flooding’. Strategic Gap Section 3.10.7 of the ‘Landscape Character Assessment and Development Option Evaluation Study’ states that; ‘The countryside to the south of Ersham Road and Ingrams Way is more enclosed and has a stronger character than areas to the east. This is the strategic gap between Polegate and Hailsham and should be protected to prevent coalescence.’ The land south and west of Ersham Road is associated with previous use as a brickfield. There are a number of existing residential developments dotted around this area with the predominant use of the land being for horses and riding. There is existing residential development adjacent to the B2104 (Ersham Road) which is further south than southern sites identified as being suitable by the SHLAA. Development at this location would provide infill between this isolated area of housing and the existing south urban fringe of Hailsham. There is also additional existing development south of this site adjacent to the A22 (Woodside Way). It is therefore not accurate to say that development south of Ersham Road and Ingrams Way would reduce the strategic gap between Hailsham and Polgate. There is currently a gap of 2.5 km between the south side of Oaklands Farm & The Brickfield and the north edge of Polegate. This is a considerable distance. The proposed development of the northern sites such as those identified in Figure 7 of the PSCS would mean that the historic village of Hellingly would effectively become engulfed by Hailsham. Referring to the Hellingly Hospital site; Section 4.9.2 of the Landscape Character Assessment and Development Option Evaluation Study’ states that; ‘The consideration of this area as a new settlement should avoid coalescence between the settlements at north Hailsham and the village of Hellingly..... A new community in this area would need to include the areas to the north of Upper Horsebridge.’ Since the north extension (SD3) identified in Figure 7 of the PSCS would be located 350m from Hellingly, it seems clear that coalescence would occur between north Hailsham and the village of Hellingly. This seems to be a blatant contradiction to the aims of the Landscape Character Assessment and Development Option Evaluation Study. BP1: ‘Development of the Proposed Submission Core Strategy’ Document BP1: ‘Development of the Proposed Submission Core Strategy’ – February 2011’ section 8.21 refers to south sites indentified in the SHLAA as: ‘area with rural character compared to other broad locations. The access to the town centre, and the proximity
of the A22 would not provide a suitable alternative to car use, and compared to other broad locations would not benefit the town centre and the wider population to such degree. This assessment is not accurate. Access to the town centre from the identified south sites is superior to that of the north sites identified, with an existing bus stop located on the adjacent B2104 providing regular 3 minute shuttles directly to the town centre. The south sites are significantly closer to Hailsham town centre (1.2km rather than 2.2km) than the north sites identified in the SHLAA and increase the likelihood that this journey would be taken by bicycle or foot. Section 8.24 of Document BP1 provides an assessment of the north sites identified in the SHLAA, stating: ‘In order to maximise the use of existing waste water capacity the strategy is directed to north Hailsham.’ The SHLAA contradicts the above, stating that the northern site at Upper Horsebridge, Hailsham for 520 dwellings is currently not deliverable due to the current wastewater capacity constraints at Hailsham North Wastewater Treatment Works. With reference to the north site, Section 8.24 of Document BP1 goes on to state: ‘It is less sensitive in terms of landscape impact, provides an opportunity to consolidate development at Hellingly Hospital and has the necessary road linkages and ability to create mixed housing and employment areas. Provision of services in this location will not detract from the town centre and will help provide for the wider area, and allows for the provision of additional primary school places.’ The assessment states that development at this site would be less sensitive in terms of landscape impact despite being adjacent to the historic village of Hellingly containing several listed properties. It is also contrary to the Assessment made in 2001 in the then Local Plan Review Landscape Appraisal. Conclusion The PSCS has been prepared using flawed evidence base studies such as BP1: ‘Development of the Proposed Submission Core Strategy’ and the ‘Landscape Study’. The use of such studies has meant that the PSCS has not been able to provide the most appropriate strategy for development of sites surrounding Hailsham. The PSCS is not consistent with national policy document PPS1 in that the proposed residential development at Hailsham is not positioned close to the town centre and existing facilities. The Council has not been able to provide clear and convincing reasoning to justify the approach of positioning development to the North of Hailsham which is isolated from the town centre and does not comply with PPS1. The Oaklands and Brickfield site south of Hailsham (SHLAA 100/1300: 224 dwellings) is largely on previously-developed (brownfield) land and has a highways scheme to be paid for by the developers agreed with East Sussex County Council and should be included in the SDAs to the exclusion of less suitable development. It meets the Hailsham Sustainability Objectives, being a local Urban Extension within walking distance of Hailsham town centre and offering proximity to open space, woodland and biodiversity – at a scale capable of delivering up to 224 dwellings with minimum impact on infrastructure and environmental amenity.

Details of Changes to be Made:
Strategic Development north and east of Hailsham and at Polegate, Willingdon and Stonecross should be abandoned or reduced because of insufficient infrastructure and urban extensions should be added around the south side of Hailsham where there are reduced infrastructure constraints.

Polegate and Willingdon Figure 8 and Stone Cross Area Strategy

Sound ☐ Yes ☑ No ☐ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The infrastructure delivery is vague and uncertain. The core strategy infrastructure delivery plan states Transport, Education and Waste Water are all critical elements yet the status/timescale notes are very weak, not definitive and aspirational only. Waste Management includes the phrase "likely to" and implies co-operation from Eastbourne BC with no evidence of support from them. There is also no evidence of coherence with Eastbourne BC's strategies in the area.

Details of Changes to be Made:
Choosing a sounder expansion proposal within the area and adding robust solutions to critical items would help. Note I do not know whether I wish to participate or not at the oral examination, further details as to what is involved would be helpful.

Polegate and Willingdon Figure 8 and Stone Cross Area Strategy

Sound ☑ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Polegate and Willingdon Figure 8 and Stone Cross Area Strategy
Sound ☐ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
WJPC is concerned at the numerous references to Polegate and Willingdon as one settlement, as highlighted in 3.3 Table 1, 3.11, SPO6, WCS2, WCS3, 5.13, 6.31(2), Figure 8 and Figure 12. In particular, Figure 2 showing settlement hierarchy, places Polegate and Willingdon as one settlement, yet details other settlements individually.

The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:

These allocations should be deleted and reallocated to deliverable and sustainable sites.
Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 ‘Land at South Polegate and East Willingdon’ Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:
Yes Sound
Yes Justified
Yes Effective
Yes Consistent with national policy

Legally Compliant
Yes
No
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 ‘Land at South Polegate and East Willingdon’ Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.
Details of Reasons for Soundess/ Legal Complaince:

Strategy

Sound  [ ]  Yes  [✓]  No  [ ]  Justified  [✓]  Effective  [ ]  Consistent with national policy
Legally Compliant  [ ]  Yes  [✓]  No

Details of Reasons for Soundess/ Legal Complaince:
The urban area shown green should include land which is allocated for development in the Non Statutory Local Plan to the north of Dittons Road, Polegate. Most of which now has planning consent. Accordingly Figure 8 should be amended as shown attached.

Details of Changes to be Made:
See attached amended Figure 8.
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 ‘Land at South Polegate and East Willingdon’ Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.
The SWETS Report indicates that the north of Polegate location does not need additional transport infrastructure. The broad location south of Polegate / east of Willingdon was included and assessed in detail. The Bypass was opened in 2002. The Polegate Bypass has changed the landscape character of the land south of the CS para 6.30; but there is considerable concern at the impact of that location on local roads and junctions. 14. The transport assessment is stated to show that 700 dwellings and employment could be accommodated at that location large. 11. The north of Polegate locations has not been subject to a landscape appraisal since the A27 Polegate included this broad location could be served by the existing and committed transport infrastructure. 13. In Phase 3 suitable for development. Comparison of traffic impacts. 12. The South Wealden and Eastbourne Transport Study (SWETS) at Phase 1 included the land north of Polegate. Its general conclusion was that the scenarios that were selected as suitable in the Sustainability Appraisal of Plan Alternatives sets out the findings on the two broad locations in the summary table at p96, under 'Broad Locations Polegate'. Both 'North' and 'South Polegate and East Willingdon' are listed as 'selected'. 4. However, the Submitted Core Strategy approved for consultation in December 2010, the only option offered at Polegate as a broad location is the land south of Polegate and east of Willingdon (Hindslands and Mornings Mill). 5. The Sustainability Assessment (Background Paper 5) at pp39-41 analyses both the broad locations against a list of objectives the summary table (at p96) demonstrates that both perform sufficiently well to meet the aims of the Strategy. A detailed response on the Sustainability Assessment entries for Polegate broad locations is attached at Appendix 1. 6. The Core Strategy at para 6.30 does not give adequate reasons, or justify, the choice of the broad location south of Polegate / east of Willingdon over the alternative location north of Polegate. It states only that the Sustainability Appraisal 'favoured' the former. 7. the south of Polegate / east of Willingdon location needs to be compared with the alternative north of Polegate location in terms of: a. the preference of local opinion b. the effect on local, and nationally important, landscape c. the traffic impact. Local Opinion 8. The Polegate Town Masterplan supports the north of Polegate location. The Background Paper 'Summary of Town Masterplanning documents' at pp15-17, Polegate Masterplan, states (para 6.10): Polegate Town Council supports the 'suitable' sites identified in the SHLAA with the proviso that Hindslands Fields Eastbourne Road should only be considered for the provision of a new educational facility and not housing. Future development should only take place south of the A27 Bypass and should include a good mix of dwellings and should be of appropriate design to fit in with the existing character of the area. 9. The Government policy principle of localism, which aims to give weight to local opinion and allow local people to determine the future for their area, supports giving weight to the local council's preference for the north of Polegate location for new housing instead of the south of Polegate (Hindslands Fields) site. Comparison of impacts on local and national important landscape 10. The landscape impact of the north of Polegate location would be less than that of the south of Polegate / east of Willingdon alternative. It would be out of view of the South Downs; whereas the south of Polegate / east of Willingdon location would be highly visible from the publicly-owned and accessible Coombe Hill. the impact on the views from and setting of the National Park would be negligible; the impact of the south of Polegate / east of Willingdon location on these views and settings would be large. 11. the north of Polegate locations has not been subject to a landscape appraisal since the A27 Polegate Bypass was opened in 2002. The Polegate Bypass has changed the landscape character of the land south of the bypass. Mounding and planting have created an enclosed area which is not easily visible from the surrounding countryside. In the decade since the bypass was completed, the land has become well-screened and more suitable for development. Comparison of traffic impacts. 12. The South Wealden and Eastbourne Transport Study (SWETS) at Phase 1 included the land north of Polegate. Its general conclusion was that the scenarios that included this broad location could be served by the existing and committed transport infrastructure. 13. In Phase 3 of SWETS the broad location south of Polegate / east of Willingdon was included and assessed in detail. The transport assessment is stated to show that 700 dwellings and employment could be accommodated at that location (CS para 6.30); but there is considerable concern at the impact of that location on local roads and junctions. 14. The SWETS Report indicates that the north of Polegate location does not need additional transport infrastructure of the same type. It would thus be more effective and justified in transport terms than the south of Polegate / east of Willingdon location, which would add to problems on the local road system. Lack of public participation 15. there was no public participation on the choice of broad house location at Polegate before the Submission Core Strategy was approved and published. Local opinion should be consulted on the choice between the two broad locations which were selected as suitable in the Sustainability Appraisal of Plan Alternatives. 16. the principle of locating some 700 house at Polegate should be included in the Core Strategy as sound; the choice between the two locations assessed should be made through a Strategic Sites Development Plan Document which should follow the Core Strategy.
Details of Changes to be Made:

17. The Draft Proposed Submission Core Strategy Policy WCS4 (p40) lists location SD4 as 'Land at Polegate/Willingdon'. This is the wording that should be restored to the text of the Core Strategy to make it sound.

18. Figure 8 should be amended to delete the broad location notation (red colour) at the south of Polegate / east of Willingdon location; the notation in the October 2010 draft Core Strategy Fig 8 should be restored to indicate that both north of Polegate and south of Polegate / east of Willingdon locations are potential strategic housing locations.

Strategy

Sound ☑ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy

Legally Compliant ☐ Yes ☑ No

Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 'Land at South Polegate and East Willingdon' Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:

Sound  ☑ Yes   ☐ No   ☐ Justified   ☐ Effective   ☐ Consistent with national policy

Legally Compliant  ☐ Yes   ☐ No
Details of Reasons for Soundness/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

1.1 We object to the Core Strategy Figure 8, this should show the urban extension land east and south east of Stone Cross (SD6) (residential) as extending north to Peelings Lane. This would ensure that the Core Strategy was sound by being the most appropriate strategy when considered against the reasonable alternatives and was sound by being flexible.

1.2 We note the comment in paragraph 5.10 that the exact extent and detailed form of the developments at a part of the strategic development areas will be precisely defined in the Site Allocations DPDs. However the Core Strategy in Figure 8 is not consistent with Figure 4 of the Wealden District Council document Development of the Proposed Submission Core Strategy Background Paper dated February 2011. This shows a similar plan of the urban extensions around Stone Cross, but in the Background paper the East Stone Cross urban extension extends north to Peelings Lane. Paragraph 8.38 of the Background Paper describes the East Stone Cross land as "well related to Eastbourne and Dittons Road, the main road running through Stone Cross. The potential extension of the urban form here is seen as a natural extension to an essentially sustainable location".

1.3 The Core Strategy should set out "clear and concise policies for delivering the strategy" (Planning Policy Statement 12 (PPS12) paragraph 2.12). the neighbouring Urban Extension north of Stone Cross (SD7) (residential) which is also shown in Figure 8 of the Core Strategy shows more clearly defined boundaries being the urban area or roads. Urban Extension SD6 should be similarly defined as at present it includes half of the field immediately to the south of Peelings Lane. The red shading should therefore extend further north to Peelings Lane and the A27. This would give the Core Strategy more flexibility by including more developable land in the urban extension.

1.4 At present the urban extension SD6 extends south below the railway line. The railway line may be a constraint to development preventing north south movement. Extending the urban extension north would provide more flexibility in the master planning stage and this change to the Core Strategy would not prejudice future decisions in the Strategic Site Allocations DPD but would provide more flexibility for this DPD. 1.5 Extending SD6 northwards would ensure that the area identified for the urban extension included all of a field some 4.25 hectares in size which is shown as the eastern most field edged red on the attached plan. This field has Peelings Lane to the North and is surrounded by belts of mature planting except for part of its southern boundary. Through its western boundary part of the 1998 Local Plan allocations built out in Stone Cross is visible, this gives the field a visual connection to the existing built up area. The A27 north of the site is well screened by trees and is in a cutting which will mitigate traffic noise. There is space to include additional noise mitigation if required. There are views into the site from the east however, any development on the site will be seen in the context of the existing development of Stone Cross and development to the south on the B2447 Dittons Road.

1.6 A significant advantage of including this field in the urban extension which currently in agricultural use is the benefit it would bring to master planning in the area. The inclusion of the field would provide a good link to Peelings Lane which is a well used footpath in the area. As currently drafted the Core Strategy would include part of the field in the urban extension and part outside it which would create problems of framing the land in the future and would leave an awkward area of land between urban development and the A27 which would make it unsuitable for agriculture.

Details of Changes to be Made:
The Core Strategy Figure 8 red shaded area showing the Urban Extension land east and south of Stone Cross (SD6) (residential) should be extented north as shown in the Figure 4 (page 54) of the February 2011 Development of the Proposed Submission Core Strategy Background Paper.
Details of Reasons for Soundess/ Legal Complaince:
The removal of Stone Cross located land to prevent coalescence of settlements and to assist in delivery of housing in a sustainable and managed pattern that reflects the existing pattern of settlements would require the removal of at least part of SD7 from the Polegate and Stone Cross inset. Stone Cross has been incorrectly classified as a Service Centre and no regard has been made to settlement coalescence.

Details of Changes to be Made:
The designation of a South Hailsham urban extension that replaces part of the Stone Cross area as well as balancing the extension of the town to the north with development both closer to and more accessible to the town centre and employment areas.

---

Details of Reasons for Soundess/ Legal Complaince:
Details of Changes to be Made:

Fig 8 We support the provision of a significant green gap between Polegate and Hailsham, and the use of the A22 as a clear western boundary for expansion. We also support the expansion of Stone Cross, but would wish to see a designated green gap to the east of Stone Cross providing clear separation from Westham.

However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link’ no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:
Paragraph 6.21

Details of Reasons for Soundess/ Legal Complaince:
Paragraphs 6.21 - 6.30 of the document provide further information to support the Council's policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accommodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirements of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client's land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:
Paragraph 6.21
Details of Reasons for Soundess/ Legal Complaince:
The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

Details of Changes to be Made:
Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 ‘Land at South Polegate and East Willingdon’. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Page 885 of 1511
Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 Shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. those affected by the Honey Farm site were not permitted in 2004-2005 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-2007. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. these arguments are: 1. The Honey Farm location would be an isloated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, ist park and garden would be damaged.

This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:

The council’s comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
The location of new medical facilities outside of Polegate is not Justified or Effective. The majority of Elderly residents, and residents with young families, will find it very difficult to access those proposed facilities. There is a site, I am led to believe, within Polegate, behind the new flats built near to the railway line. The site is effectively inaccessible to those who need it most. Transport costs to the elderly will be crippling, and danger to young families cross that busy Eastbourne road will be very real.

Details of Changes to be Made:
To provide the surgery with alternative site within Polegate centre, or provide for an outreach surgery (such as they maintain at Willingdon Triangle) to cater for the vulnerable in Polegate.
Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:

Paragraph 6.22

Details of Reasons for Soundess/ Legal Complaince:
6.22 refers to the 'limited range of facilities available locally', and states 'a new GP surgery and medical center has recently been granted planning consent in Willingdon.' This scheme is not progressing, and will leave the limited range of facilities increasingly stretched with the proposal for 700 additional dwellings.

Details of Changes to be Made:
Paragraph 6.22

Details of Reasons for Soundess/ Legal Complaince:

Paragraphs 6.21 - 6.30 of the document provide further infromation to support the Council's policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accomodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirems of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road , east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware , my client's land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Raod, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered agains the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consulation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

Details of Changes to be Made:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:

---

Paragraph 6.22

Details of Reasons for Soundness/ Legal Compliance:
The council’s comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and waste water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 ‘Land at South Polegate and East Willingdon’ Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:
Details of Reasons for Soundness/Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 ‘Land at South Polegate and East Willingdon’ Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:
Paragraph 6.22

Details of Reasons for Soundess/ Legal Complaince:
The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

Details of Changes to be Made:
Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.

Paragraph 6.22

Sound ☐ Yes ☑ No ☑ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Paragraph 6.22. The proportion of elderly residents is set to change as new housing is built. This paragraph also underestimates the facilities available at Polegate especially compared with Stone Cross.

Details of Changes to be Made:
REVISION SOUGHT Amend first sentence "....elderly residents reflecting the high proportion of bungalows but this is set to change as new committed housing is built. Future housing is also expected to attract a younger population
Details of Reasons for Soundess/ Legal Complaince:

6.22 refers to the 'limited range of facilities available locally' and states 'a new GP surgery and medical centre has recently been granted planning consent in Willingdon'. As this scheme’s progression is in question PCT question whether the medical infrastructure proposed is sound, being in mind the uncertainty of the location of current and future surgeries.

Details of Changes to be Made:

This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wooton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:
Paragraph 6.23

Details of Reasons for Soundess/ Legal Complaince:

Paragraphs 6.21 - 6.30 of the document provide further information to support the Council's policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accommodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirements of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forward to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client's land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

Paragraph 6.23

Details of Reasons for Soundess/ Legal Complaince:

6.23 states 'the A2270 running through the urban area is still heavily congested and traffic flows on the strategic road network are very high.' Numerous references are made throughout the strategy to the need for infrastructure, and 5.16 states 'development at SD4 will be phased to commence from 2019 to enable implementation of development in relation to transport infrastructure requirements and interventions in South Wealden.' WJPC has serious concerns over the impact of additional vehicles on the heavily congested road network, and seek assurances regarding the planned vehicular access routes for any new developments.

Details of Changes to be Made:
Paragraph 6.23

Details of Reasons for Soundness/ Legal Compliance:
The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

Details of Changes to be Made:
Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.

Reference is made to the potential for highway improvements to be made. The extent of these improvements ia as yet unknown. Greater clarity is required at this stage of the Core Strategy if certainty is to be given to the developers of the housing allocations to ensure delivery in accordance with the phasing plan. All contributions required to be made to highway improvements must be relevant to the proposed scale of developments.

Details of Changes to be Made:
Greater clarity on the extent and necessity of highway improvements relating to development in the Stone Cross area is required at this stage of the Core Strategy process. WEC must provide evidence base in support of the required improvements to justify the obligation.
Details of Reasons for Soundness/ Legal Compliance:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

The setting of the adjacent historic property Wootton Manor, ist park and garden would be damaged.

Details of Changes to be Made:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified.

These allocations should be deleted and reallocated to deliverable and sustainable sites.
Details of Reasons for Soundness/ Legal Complaince:

Paragraph 6.23 states 'the A2270 running through the urban area is still heavily congested and traffic flows on the strategic road network are very high'. Numerous references are made throughout the strategy to the need for infrastructure, and 5.16 states 'development at SD4 will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in South Wealden'.

Details of Changes to be Made:

PTC has serious concerns over the impact of any additional vehicles on the heavily congested road network, and feel that the proposed transport strategy is unsound because of the numbers of extra vehicles any development would bring onto the A2270.

Details of Reasons for Soundness/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link’ no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:
Paragraph 6.21 - 6.30 of the document provide further information to support the Council's policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accommodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirements of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client's land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
The council's comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and wast water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.

Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 'Land at South Polegate and East Willingdon' Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon' Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 -07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:
### Details of Reasons for Soundness/ Legal Complaince:

The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

### Details of Changes to be Made:

Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.

### Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:
Paragraph 6.25

Details of Reasons for Soundness/ Legal Complaince:

Paragraphs 6.21 - 6.30 of the document provide further information to support the Council's policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accommodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirements of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client's land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

Paragraph 6.25

Sound  Yes  No  Justified  Effective  Consistent with national policy

Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:

6.25 states 'our studies show the the town (Polegate) also lacks key infrastructure and facilities including sports and play facilities'. Hindsland Playing Fields is an established sports facility within Willingdon, which could be utilised for the benefit of both Parishes, yet it is identified in SD4 for housing development.

Details of Changes to be Made:
Paragraph 6.25
Details of Reasons for Soundness/ Legal Compliance:
The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

Details of Changes to be Made:
Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:

Yes  Sound  Yes  No  Justified  Yes  Effective  No  Consistent with national policy  Legally Compliant  Yes  No

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 ‘Land at South Polegate and East Willingdon’ Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Paragraph 6.25

Sound Yes No Justified Effective Consistent with national policy
Legally Compliant Yes No

Details of Reasons for Soundness/ Legal Compliance:
The council's comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and waste water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:

6.26 We support the continued use of the A27/A22 line as the western boundary for development in Polegate
Details of Reasons for Soundness/ Legal Compliance:

Paragraphs 6.21 - 6.30 of the document provide further information to support the Council's policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accommodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirements of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client's land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:

Details of Reasons for Soundness/ Legal Compliance:
The council's comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and waste water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 ‘Land at South Polegate and East Willingdon’ Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Paragraph 6.26

Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 'Land at South Polegate and East Willingdon' Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Yes  No
Paragraph 6.26

Details of Reasons for Soundess/ Legal Compliance:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 'Land at South Polegate and East Willingdon' Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:
### Details of Reasons for Soundess/ Legal Complaince:

The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

### Details of Changes to be Made:

Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.

---

### Details of Reasons for Soundess/ Legal Complaince:

Polegate and Willingdon: we very much welcome the principle that strategic land release for housing in this area is to be kept further away from the boundaries of the national park. We welcome the wording of para 6.26 to the effect that impact on views from the downs limits the potential for urban extension especially seen against a rural backdrop north and west of Polegate, and that existing main transport routes provide firm limits to expansion in these directions. Having worked hard in support of Wealden Council and others in opposing the Honey Farm development proposal, not least at the recent public inquiry, we very much support the deletion, following the SHLAA of Honey Farm from the locations included within the 2005 non-statutory plan - for all the reasons set out at the inquiry, including the absence of the Folkington Link from any meaningful programme, the recent national park confirmation and the inclusion of Wootton Manor in English heritage's Register of Historic Parks and Gardens

This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
Whilst the impact of the previous allocation at Honey Farm has been mentioned and re-assessed as no longer considered suitable for housing, the potential impact of other sites on the setting of the South Downs National Park has not been recognised. It may be that this has already been assessed but it should be recognised as a potential constraint within the proposed core strategy.

Details of Changes to be Made:
Paragraph 6.27

Details of Reasons for Soundness/ Legal Compliance:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27

Sound  Yes  No  Justified  Effective  Consistent with national policy

Legally Compliant  Yes  No

Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. Polegate area is over-populated as it is.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:
Paragraphs 6.21 - 6.30 of the document provide further information to support the Council’s policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accommodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirements of paragraphs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District Council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client's land (The Oaks, Rattle Road - SHLAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.
Details of Reasons for Soundess/ Legal Complaince:
The section fails to properly assess the suitability of Stone Cross as a settlement to accommodate future growth whilst recognising the significant development that has occurred in this modest settlement in the last 15 years of the twentieth century. The amalgamation of Stone Cross with Polegate/Willingdon is a disingenuous attempt to improve the credentials of Stone Cross and deflect from the fact that it should not be designated a Service Centre rather a Local Service Centre or Neighbourhood Centre. However the amalgamation of these settlements will be a consequence of the strategy if pursued thus leading to an erosion of local identity and a further erosion of the pattern and character of settlements within the district (see key diagram and the amalgamation of settlement if SD5, SD7 and SD6 go ahead leading to a linear continuance settlement along the A27 as the gaps between Polegate, Stone Cross and Westham are closed) contrary to the stated aims of the Core Strategy (see for example 2.4, 2.7, 2.21 and 3.4)

Details of Changes to be Made:
Delete reference to Stone Cross and deal with Polegate and Willingdon, remove urban extensions to Stone Cross or significantly amend to reduce the scale of provision at Stone Cross commensurate and proportionate to the settlement size (estimated 3000-4000). replace part of the Stone Cross northern urban extension with a more sustainable extension to the south of Hailsham (300 - 350 homes); which would also be served by the South Hailsham Water Treatment Plant and thus would not introduce any new infrastructure issues beyond those of Stone Cross allocations.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 Shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. those affected by the Honey Farm site were not permitted in 2004-2005 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-2007. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. these arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, ist park and garden would be damaged.

Details of Reasons for Soundess/ Legal Complainse:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Developmentt Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, list as Location SD4 ‘Land at South Polegate and East Willingdon’ Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isloated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chose. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Paragraph  
6.27

Sound  
☑ Yes  ☐ No  ☐ Justified  ☑ Effective  ☐ Consistent with national policy

Legally Compliant  
☐ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The council’s comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and waste water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.
Details of Reasons for Soundness/ Legal Compliance:

Polegate and Willingdon: we very much welcome the principle that strategic land release for housing in this area is to be kept further away from the boundaries of the national park. We welcome the wording of para 6.26 to the effect that impact on views from the downs limits the potential for urban extension especially seen against a rural backdrop north and west of Polegate, and that existing main transport routes provide firm limits to expansion in these directions. Having worked hard in support of Wealden Council and others in opposing the Honey Farm development proposal, not least at the recent public inquiry, we very much support the deletion, following the SHLAA of Honey Farm from the locations included within the 2005 non-statutory plan - for all the reasons set out at the inquiry, including the absence of the Folkington Link from any meaningful programme, the recent national park confirmation and the inclusion of Wootton Manor in English heritage's Register of Historic Parks and Gardens.

Details of Changes to be Made:
Paragraph 6.27

Details of Reasons for Soundess/ Legal Complaince:

"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". The Council has undertaken a SHLAA exercise and has identified sufficient land for a total of 22,000 dwellings which can be built during the plan period. The Council has prepared a SHLAA under the guidance of a Housing market Partnership including house builders, Housing Associations planning agents the Environment Agency the Sussex Wildlife Trust and East Sussex County Council. The Appellants have not been involved in this process and object strongly to the omission of the appeal site from the SHLAA. At a recent public inquiry the Council were unable to substantiate the claims made in this paragraph concerning the Honey Farm site. In particular the site is not dependent on the completion of the Folkington Link and a Highways SoCG signed by both East Sussex County Council and the Highways Agency agreed this point. furthermore, the landscape appraisal of the Polegate sites appended demonstrates that the Honey Farm site (PW1 west of the A22 at Polegate) is preferable to the other sites in the Draft Core Strategy as proposed by the Council.

Details of Changes to be Made:

The Council also states that since the allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally be included in the English Heritage register of Historic Parks and Gardens. And "this site has been re-assessed as part of SHLAA and is not longer considered suitable for housing" The methodology of the SHLAA has specifically excluded consideration of planning policy matters in respect of the sites under consideration and includes sites which are actually within both the AONB and the National Park designated areas. It is, therefore, not acceptable that the PW1 site should be excluded on either the change of status of the Wootton Manor land or the change in designation of the South Downs (which the site does not even adjoining) from AONB to National Park. these issues are matters which should be balanced as part of the allocation process when the merits of various sites identified within the SHLAA can be compared. In any event at the recent Honey Farm (PW1) Inquiry in respect of an appeal agains the refusal of planning permission for the PW1 site the Council's witness acknowledged under cross examination that the registration of the Wootton Manor gardens occurred before the PW1 site was allocated and in terms of landscape under Government guidance PPS7 in landscape matters AONB status carries similar weight to National Park status. With regard to access facilities, public transport etc and whether a site is suitable for housing development these factors are not identified in any part of the SHLAA (See Stage 7a page 11, suitability for housing assessment). It is therefore, patently wrong that the PW1 site should have been assessed as not being suitable on this basis. This is particularly the case because there are sites in the Polegate area which are significantly less accessible to facilities in Polegate, including the railway station, shops etc. and these remain in the SHLAA. REVISION SOUGHT Delete paragraph.
Details of Reasons for Soundness/ Legal Compliance:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link’ no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Details of Changes to be Made:
Paragraph 6.28

Details of Reasons for Soundess/ Legal Complaince:

Paragraphs 6.21 - 6.30 of the document provide further infromation to support the Council's policy approach towards further development at Stone Cross and this is supported. Text at paragraph 6.31 identifies the potential split in housing delivery between the two strategic development areas of Stone Cross (SD6 and SD7) although it is noted that there is flexibility here subject to the local highway improvements required to accomodate the development. This flexibility within the overall strategy to deal with changing circumstances is welcomed and is considered to ensure the Core Strategy is effective in line with the requirments of paragrahs 4.44 and 4.46 of PPS12. Sites north of Rattle Road, east of Stone Cross within SD6 have been determined within the SHLAA to be deliverable housing sites. It is acknowledged that the development of these sites would have a limited impact on the landscape and that structural planning can mitigate any local impact as well as protect against potentially conflicting land uses. Between the two sites in the SHLAA east of Stone Cross, north of Rattle Road, the landowners are collaborating with regard to access and evidence of this will be forwarded to the District council in due course. Likewise, a Phase 1 Habitats Survey has been commissioned to support the general masterplan development of this location and again this will be forwarded to the Council following its completion to provide further evidence of the suitability of this location for development. As the Council will be aware, my client's land (The Oaks, Rattle Road - SLHAA ref: 415/3280) fronts directly onto Rattle Road, is in the control of one single landowner, can be brought forward for development at any time and to the best of our knowledge is free from any environmental constraint. In this respect, we consider its inclusion within the identified SD6 Strategic Development Area is sensible and reflects a sound approach that will contribute to ensuring the Core Strategy is deliverable, founded on a robust and credible evidence base and is the most appropriate strategy when considered against the reasonable alternatives. The Council has engaged with the community in its consultations on the Issues and Options Paper 2007 and the Spatial Development Options Consultation in 2009. The comments from these consultations, particularly with regard to the need for affordable housing, have been reflected in the emerging policies. We are also aware that the Council continues to engage with Parish Councils in the area, including Jevington and Westham Parish Councils, to help reflect their vision for the settlements and service provision. As a result I agree that the Core Strategy is generally sound (subject to my comments concerning Policy WCS1), and demonstrates effectiveness in the delivery of development in this part of the District. I therefore consider Strategic Development Area SD6 in the Proposed Submission Core Strategy to be 'sound' in terms of the tests in Planning Policy Statement 12. I consider it justified, based on credible and robust evidence and effective with regard to delivery and flexibility and is consistent with national policy.

This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. Polegate area is over-populated as it is.

Details of Changes to be Made:
Paragraph 6.28

Details of Reasons for Soundness/ Legal Compliance:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
The council’s comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and wast water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.
Details of Reasons for Soundness/ Legal Compliance:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 ‘Land at South Polegate and East Willingdon’ Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been reassessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the ‘Folkington Link’ no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. these arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified.

Paragraph 6.28

Details of Reasons for Soundness/ Legal Complaint:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 Shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. those affected by the Honey Farm site were not permitted in 2004-2005 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-2007. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. these arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, ist park and garden would be damaged.
