Summary of Individual Representations made in accordance with Regulation 28(2) in order of the Proposed Submission Core Strategy.
Details of Reasons for Soundness/ Legal Compliance:
The current proposed submission of the Core Strategy does not clarify the amount of convenience and comparison floorspace to be delivered in Uckfield through future retail and town centre development.

Details of Changes to be Made:
Suggested revised wording for Para. 6.11 to clarify future convenience and comparison floorspace provision in Uckfield. Supporting the sensitive redevelopment and expansion of the town centre, including additional retail floorspace of around 10,707 sqm net retail floorspace (convenience and comparison) as part of a comprehensive masterplan scheme of future retail developments and improvements which will increase the attractiveness of Uckfield and help create a vibrant and inclusive town centre.

Details of Reasons for Soundess/ Legal Complaince:
I am not qualified to state the strategy us either Legally compliant or Sound. thus there should be a don't know option.
Details of Changes to be Made:
There is a reference to a possibility of housing North West of Crowborough but it is not clear what area is considered. If this is the area next to the swimming pool I am not sure this is North West. Perhaps this should be made clear. The document makes claims for 400 houses per year but indicates that there would not be any increase in the population without immigration. The document makes claims for sustainability, carbon footprint and biodiversity but fails to mention that the major influence on these is population. While accepting politicians only deal with easy issues is nobody of the view that perhaps we need to encourage a lower regional, national and world population before man is the only animal left on the planet.

There needs to be another box to indicate "unfinished". Having set out the proposal to build 1000 dwellings in Uckfield, there is an ideal site for a sustainable urban extension. The site is assessed in WDC’s recent Strategic Housing Land Availability Assessment (SHLAA) as suitable, available and economically viable (achievable) with a total net dwelling capacity of 35 and I would suggest that it is brought within the development boundary for the council’s reasons given in the SHLAA Site Reference: 290/1990 Settlement: Five Ash Down Address: Land adjacent to Pine Cottage, Coopers Green Submitted site area (ha): 1.47 Indicative developable area (ha): 1.00

FAILS TO MEET GUIDANCE IN PPG 17 - "PLANNING FOR OPEN SPACE, SPORT AND RECREATION". PROPOSED HOUSING SITE SD4 (POLEGATE/WILLINGDON) WOULD LEAD TO A LOSS OF PLAYING FIELDS. UNLESS AND UNTIL THE COUNCIL HAS UNDERTAKEN THE THE ROBUST ASSESSMENT OF THE EXISTING AND FUTURE NEEDS OF THEIR COMMUNITIES FOR OPEN SPACE, SPORTS AND RECREATIONAL FACILITIES AS REQUIRED UNDER PARA. 1 OF PPG17, THEN IT IS PREMATURE TO CONSIDER ALLOCATING SITE SD4 FOR HOUSING. PARA. 15 OF PPG17 ALSO STATES THAT IN ADVANCE OF AN ASSESSMENT OF NEED, PLANNING PERMISSION SHOULD NOT BE GRANTED FOR DEVELOPMENT ON PLAYING FIELDS AND THAT, EVEN IF SUCH PLAYING FIELDS ARE TO BE LOST, THEY NEED TO BE REPLACED BY PLAYING FIELDS OF EQUIVALENT OR BETTER QUALITY AND IN A SUITABLE LOCATION. THE COUNCIL HAVE NOT UNDERTAKEN THIS ASSESSMENT, NOR IDENTIFIED ALTERNATIVE PROVISION, THUS THEY ARE "PUTTING THE CART BEFORE THE HORSE" IN PREMATURELY ALOCATING SITE SD4 FOR ANOTHER USE, CONTRARY TO PPG 17 OBJECTIVES AND GOVERNMENT GUIDANCE. THE NEED FOR THE RETENTION/REPLACEMENT OF EXISTING PLAYING FIELDS SHOULD BE ASSESSED AS PART OF DEVELOPMENT PLAN POLICY AND AS PART OF THE LDF BEFORE ANY ALTERNATIVE USE ALLOCATION CAN BE CONSIDERED. THERE IS ALSO NO EVIDENCE THAT THE COUNCIL HAS CONSULTED SPORT ENGLAND ABOUT DEVELOPMENT THAT AFFECTS LAND USED AS PLAYING FIELDS, AS REQUIRED UNDER STATUTORY INSTRUMENT 1996 NO. 1817.

Details of Changes to be Made:
Site Reference: 290/1990 Settlement: Five Ash Down Address: Land adjacent to Pine Cottage, Coopers Green Submitted site area (ha): 1.47 Indicative developable area (ha): 1.00 The site is assessed in WDC's recent Strategic Housing Land Availability Assessment (SHLAA) as suitable, available and economically viable (achievable) with a total net dwelling capacity of 35 and I would suggest that it is brought within the development boundary for the council's reasons given in the SHLAA
Details of Reasons for Soundness/ Legal Complaince:
The Decentralisation and Localisation Bill sweeps away the need to comply with the top down housing targets imposed by New Labour and its unloved and undemocratic love-child SEERA. In short, the South East Plan is dead!. Wealden District Council's 'consultation process', started in 2007, only presented respondents with a 'choice' of where to place the blocks of housing demanded by the South East Plan. I trust that the Planning Inspector will therefore take the view that Wealden District Council's consultation process now has no validity.

Details of Changes to be Made:
I hope that a Public Inquiry will insist that WDC seek a valid public mandate for both the number of houses that insists are required and where they are to be placed. It should at least address the need for WDC to undertake a genuine analysis of local housing needs. By way of explanation take, for example, Hailsham which expanded from 8000 souls to around 20,000 in the years between 1960 and 2000, It has an adequate supply of family housing in a good state of repair. I know that there has been no genuine demographic analysis of housing use in Hailsham or indeed the rest of the towns of the Low Weald. It seems to me to be reasonable to suggest that many of these family homes will be recycled as families go through the normal cycle of 'hatching, despatching, retirement and death'. Is there, therefore, any need or any justification for more housing in Hailsham that cannot be matched with new job opportunities? A cornerstone of any housing strategy is sustainability, indeed , the reams of paper produced by WDC proclaim it's importance. How can building further houses in Hailsham be a sustainable option? Any economically active newcomers will have to commute to work in other places in the district or even beyond. Any planning process should give some consideration to present conditions and a reasonably predicatable future. Is it unreasonable to suggest that the many workers in the UK will find it increasingly difficult to afford to commute using 'the car'? Future home buyers in Hailsham may, in quite short order, find themselves trapped in Hailsham and unable to travel any distance to the workplace. The Decentralisation and Localisation Bill invisages active collaboration with 'adjacent' planning authorities. WDC have no demonstrable history of collaboration with Eastbourne Borough in regard to housing targets, This is somewhat strange as both recognise the connectivity issues of Eastbourne, Polegate and Hailsham. This is particularly unfortunate as Wealden insists that greenfield sites will play a significant part in housing provision from 2016 and will by 2022 be the only choice of housing sites. I believe that the Planning Inspector will need to be convinced that there are no brownfield sites available in the older and well established towns such as Eastbourne before rubber-stamping greenfield sites. I trust that the allocation of greenfield sites for housing will continue to be, as a national policy, a last resort that requires a justification of significant and demonstrable merit. I believe that the Planning Inspector will find that the increasing allocation, in the WDC plans, of greenfield sites has neither justification or merit.
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy basically states continuation and catchment. I assume the best for Wealden and that means 21c measures to face the Truth of Human Dilemmas we all face therefore any builds should depend on self producing sustainabilities for heat, waste, garbage disposal and off road parking. This may send the right message to all now well off the beaten tracks of any reality. Incineration in all material which simultaneously produces heat for water etc cannot go amiss for a species destroying its lease on life and all creation which took much longer to develope. The prospects of being swept away by delicately balanced planetary platforms running amock - or nuclear wars must be faces as on the planets own defence mechanisms. Wind farms would end up at the bottom of the sea to land on shores drifted in a past we cannot relate to as future! Nuke stations must have fail safe 'sprinklers' etc etc etc only solar power and incineration can balance its creation.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
Additional Policy: Sustainable Travel Eastbourne Borough Council supports the inclusion of an additional policy in the Core Strategy relating to sustainable travel and specifically the inclusion of a new railway station at Stone Cross on the border of Eastbourne and Wealden. Paragraphs 6.17 of Background Paper BP1: Development of the Proposed Submission Core Strategy acknowledges that the “South Wealden and Eastbourne Transport Study shows that future development in the south Wealden area will require investment into transport infrastructure, in order to mitigate the potential impact of additional vehicle movements created by additional development”. Background Paper BP11: Infrastructure Delivery Plan, provides further clarification on the type of transport infrastructure required but does not refer to the provision of the new railway station at Stone Cross (on the border or South Wealden/Eastbourne), which is included in the Eastbourne Plan: Proposed Core Strategy 2006-2027) and is strongly supported by Eastbourne Borough Council. Given that part of the proposed new railway station would be within Wealden, and considering its potential to provide sustainable travel for Stone Cross’ existing residents and new residents of the proposed urban extensions, it should be referred to in the Infrastructure Delivery Plan (IDP). In addition to the inclusion of Stone Cross railway station in the IDP, a policy on transport infrastructure should be included within the Core Strategy identifying sustainable travel improvements to support the new developments. This policy should make specific reference to the provision of a new railway station at Stone Cross. Finally, the Council welcomes Wealden District Council’s decision to exclude “the reinstatement of the Willingdon Chord” from its Infrastructure Delivery Plan on the basis that it is “unlikely to be delivered within the Core Strategy timeframe (2006 - 2030) and [is] not critical to growth proposed within the Proposed Submission Core Strategy” (BP11: paragraph 4.12). East Sussex County Council’s inclusion of the Willingdon Chord within its Third Local Transport Plan would enable rail services along to Coastway Line to bypass Eastbourne leading to a potential degradation in the frequency of rail services to Hampden Park and Eastbourne railway stations.

Details of Changes to be Made:
Dear Sir,

We are writing in support of Strategic Development Area SD4 which we believe represents an appropriate area in planning and community terms for a sustainable urban extension to the Polegate / Willingdon area. We are first and foremost a local family whose history is rooted in this area and we have worked and owned agricultural land here at Mornings Mill Farm for many generations. We believe that this ownership carries with it some real responsibility. We are committed to improving this area in any way that we can and would take great pride in being part of a development that we can influence and participate in. We will continue to live on the farm and to conduct a business on the remaining acreage. So for us, this is not just about doing something acceptable for the area but rather doing something worthwhile and valuable, remarkable even. We feel a strong responsibility to make sure that this happens and in particular we would like to create more housing for local people and have an influence on the commercial growth and overall enjoyment of the area by the people that live here, including ourselves. We are not experts in large housing developments but we do have some sense of the scope of the task that may lie ahead and we are local business people with a passion for the area. We very much hope that this means we can have a useful role in this project. We understand the importance of working with the local community, Local Councils and adjoining landowners to establish the objectives for building up proposals for the development of the area and ensuring the right mix of land uses. In overall terms, we firmly believe that Polegate is a suitable and very sustainable location for growth; indeed it is one of the areas recognised and put forward in the South East Regional Plan. Turning to the broad Strategic Development Area SD4, we believe development here could be well integrated into the Polegate / Willingdon area. Development would have a limited visual impact being seen against the backdrop of the surrounding built up areas. Being to the east of the town, it would have a minimal visual impact on the South Downs National Park compared with land to the west or north of Polegate. In terms of sustainability, the urban extension in SD4 would provide very good accessibility for residents to Polegate town centre and to the railway station by walking, cycling or taking the bus. Residents could also gain the wider range of services and facilities at Eastbourne by taking the bus. This is recognised by Wealden Council which is promoting the Eastbourne / Hailsham Quality Bus Corridor. We are aware the local community would wish to retain the character of an open frontage to the old Eastbourne Road (A 2270); this is an objective we share and is supported by Polegate Town Council and Willingdon and Jevington Parish Council. The Council also state the need to retain playing fields or relocate them to a well drained location. Again this is supported by the Local Councils and we agree with this objective for the benefit of the community, subject to an assessment of need with all the parties involved. New informal open spaces would also provide opportunities for nature conservation. Strategic Development Area SD4 includes 700 dwellings, 8600 sq. metres of employment floorspace, the probable need for a new primary School site, community uses and the open spaces referred to above. It seems to us that this urban extension will require a considerable amount of land in order to properly accommodate all the proposed uses put forward by Wealden Council and the local community. Whilst we appreciate the area shown in Figure 8 of the Submission Document is only a broad indication at this time, we would like to say that further land to the east of that area within Mornings Mill Farm could be made available if necessary. We are aware that housebuilders and landowners have previously put forward other areas for development to the west and north of Polegate. While the urban expansion proposed in SD4 is contained by surrounding existing development, we consider that building on the land to west of Polegate would create significant visual intrusion into an open landscape and have a detrimental affect on the South Downs National Park. A similar view is expressed by Wealden Council in paragraph 6.27 of the Submission Document. Development on land to the north would also be exposed to the north and hard against the Pevensey By Pass. Consequently we find these other locations in the Polegate / Willingdon area objectionable from a planning perspective and should they be submitted as alternatives to SD4, we would wish for the opportunity to make representations on them at the Examination in order to help the Inspector come to his or her conclusions.

Yours sincerely,

David and Eileen Vine
Details of Reasons for Soundness/ Legal Compliance:

Thank you for consulting Lewes District Council on the above document. Lewes District Council supports the distribution of development set out in the Proposed Submission Core Strategy and does not consider it necessary to submit a formal representation in respect of soundness or legal compliance. The District Council particularly welcomes the recognition of the need for appropriate mitigation and avoidance measures to ensure that future housing and employment development in Uckfield is not subject to flood risk and will not exacerbate flood risk elsewhere, and also the precautionary approach taken in respect of the potential impact on the Lewes Downs Special Area of Conservation from the proposed housing growth at Uckfield and Crowborough. Lewes District Council does have some concerns about the impact of this growth on the capacity and safety of the A26 and A272 and their associated junctions. Lewes District Council is aware that further transport evidence is being prepared with regards to the proposed strategic development area to the west of Uckfield. Through its discussions with ESCC, the District Council is under the impression that through this transport work it will be possible to establish the potential impact upon the A26 and A272 in Lewes District. If ESCC establish that the proposed strategic development would create an unacceptable impact on either road, including its junctions in both Wealden and Lewes District Council areas, Lewes District Council wish to seek assurances that appropriate mitigation measures are identified and agreed with ESCC, in consultation with both District Councils. This will include identifying how these mitigation measures will be secured. It may be that development proposed through the emerging Lewes District Core Strategy will also need to mitigate potential impact on the highway network. If the mitigation measures are the same as that required for the Uckfield development, a way of apportioning the cost of implementing the measure(s) will need to be agreed by both ESCC and the two District Councils. For all other proposed strategic development areas, the District Council assumes that ESCC, as the local highway authority, is confident that a sufficient level of analysis has been undertaken to understand the potential transport impact of the proposed spatial strategy on the highway network beyond the Wealden boundary, and does not consider that mitigation measures on these roads are critical to the delivery if the proposed housing and employment growth. If any mitigation measures are required to be delivered in Lewes District, then the Council wishes to re-iterate the points highlighted in the previous paragraph. The District Council looks forward to continuing its strong working relationship with Wealden District Council in order to further strengthen links between the two areas and address cross-boundary issues in partnership.

Details of Changes to be Made:

Yes  Sound  No  Justified  Effective  Consistent with national policy

Legally Compliant  Yes  No
Details of Reasons for Soundness/ Legal Compliance:

1. The Core Strategy is not legally compliant and is unsound because of its proposals for an urban extension to the north west of Heathfield (Strategic Development Area SD11). 2. Whilst the principle of accommodating housing growth in the broad location of north west Heathfield is supported, the Core Strategy’s proposals are deficient because they: (a) fail to take a comprehensive approach to the development of this area and so are not founded on a robust and credible evidence base and are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the soundness test in paragraph 4.36 of PPS12 that they are “justifiable”. (b) constitute an unjustified encroachment into the High Weald AONB and so are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12 and also the soundness test in paragraph 4.52 of PPS12 that they are “consistent with national policy”. Paragraph 16(v) of PPS7 requires the Council in preparing the Core Strategy to “conserve…sites of landscape…value, in accordance with statutory designations”. Paragraph 22(ii) of PPS7 requires that “major developments” should only take place within the AONB after “the most rigorous examination” and an assessment of “the scope for developing elsewhere outside the designated area or meeting the need for it in some other way”. The Council has failed to properly assess the scope for meeting the need for development on previously developed land at north west Heathfield that is not in the AONB. (c) utilise less accessible and less sustainable land and so are not the most appropriate strategy when considered against reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12. (d) fail to provide adequate safeguarding of amenities of existing dwellings (if those dwellings are to be excluded from the urban extension as currently proposed) and fail to integrate into the existing urban form, thus failing the soundness test in paragraph 4.52 of PPS12 that the proposals are consistent with national policy. Paragraph 34 of PPS1 and paragraph 13 of PPS3 require the Council to reject design which is “inappropriate in its context” and paragraph 35 of PPS1 requires development to be designed so that it will be “integrated into the existing urban form and the natural and built environments”. THE PROPOSED SUBMISSION CORE STRATEGY 3. We object to the following parts of the Core Strategy. Because the objections are interconnected, we have set out all the relevant matters in this response, although this particular objection only relates to the specific part of the Core Strategy identified in our response to Q1 above. Our objections are as follows: (i) The omission from Spatial Planning Objective SPO1 of any reference to minimising the loss of nationally designated landscapes, including the High Weald AONB. Paragraph 16(v) of PPS7 requires the Council to conserve the AONB and since it is clear that the Council is proposing to meet part of the District’s development needs by using land within the AONB, the Council should establish a clear objective that only the minimum AONB land should be used for this purpose and wherever possible non-AONB land should be used in preference. (ii) The reference in Policy WCS2 to the broad locations for housing development being shown as insets on the Key Diagram. We object to the inset for Heathfield in relation to the way it shows the proposal SD11 and consequently object to this reference to that inset plan in Policy WCS2. (iii) The reference in Policy WCS4 to SD11: Land at North West of Heathfield. We object to the way that SD11 is described in Chapter 6 of the Core Strategy and shown on the Key Diagram and as a result object to the reference to SD11 in Policy WCS4. (iv) The omission from paragraph 5.8 of any aim to maximise the use of previously developed land in meeting existing and future housing needs. Notwithstanding the recent changes to PPS3 it remains a national objective to prioritise the use of previously developed land, in accordance with paragraph 21 of PPS1 and paragraph 40 of PPS3. (v) The reference in paragraph 6.40 to the identification of potential sites for housing “through the SHLAA”. We object to the inclusion of Site 155/1210 in its current form as shown in the SHLAA and consequently object to this reference to that site in paragraph 6.40. (vi) The reference in paragraph 6.41 to the “most suitable location” being “within the AONB” and that this land could be developed “without strategic adverse impact on the landscape”. The Council’s evidence base does not demonstrate that the land within the AONB is more suitable for development than the non-AONB previously developed land on High Street. There is no assessment by the Council of the suitability of this non-AONB land (which includes the objector’s land at Lavender Cottage, High Street, Heathfield, TN21 0UP) and yet it is more suitable than the AONB land, being (i) not subject to a national landscape designation, (ii) previously developed land, (iii) within the existing settlement boundary, and (iv) well related and integrated into the urban area and existing transport connections. In addition, the Council’s evidence base does not show that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of 2 adjacent SHLAA sites at north west Heathfield (Site 155/1210 with a capacity of 123 dwellings at 40 dh and Site 307/1210 with a capacity of 35 dwellings at 35
The Council's Landscape Character Assessment (February 2009) shows at Figure 5 that large parts of these SHLAA sites are required to be retained as open space to provide a "landscape buffer" to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. (vii) The reference in paragraph 6.41 to the release of AONB land being justified "as no suitable alternative non-AONB location exists". The Council's evidence base does not substantiate this assertion. The Council has not assessed the suitability of the non-AONB land in this location which fronts High Street (including the objectors' land at Lavender Cottage). This non-AONB land is within the settlement limits of Heathfield as identified on the Proposals Map of the saved Local Plan and paragraph 6.48 of the Core Strategy confirms that within development boundaries "the principle of development is acceptable". The principle of redeveloping this land to provide more intensive residential development has already been accepted by the Council, with the grant of planning permissions at Brackenside (WD/08/0329) for 3 dwellings in place of 1 dwelling, and at Oaksdown/Lowlands (WD/2011/0400) for 9 apartments in the place of 2 dwellings. The more intensive development of the non-AONB land on the High Street frontage would minimise (or may even remove) the need for the use of AONB land. This option would plainly be a more suitable alternative than the use only of land "within the AONB" as proposed in the Core Strategy. (viii) The reference in paragraph 6.41 to "no suitable alternative contingency land is available". The land at Oaksdown/Lowlands is available for development (as confirmed by the recent renewal of planning permission). The objectors' land at Lavender Cottage is available for development (and this has been made known to the Council since at least August 2010). The land at Woodhatch is relied on as being available for development in order to provide the access for SHLAA site 155/1210. The objectors understand that the land at Holmhurst could be made available for development. Thus, there is a continuous frontage of 5 plots of non-AONB land available (all with generous areas of garden land, most of which is excluded from the AONB) just on this part of the High Street. Were the Council to actively promote a comprehensive redevelopment of the area it is likely that other land in the vicinity would be made available. However, the Council has simply failed in its evidence base to assess this option. If it is necessary to identify contingency land then the hinterland of AONB land should be identified as contingency land, with priority being given to the development of the non-AONB land on the High Street frontage. Prioritising that land would be consistent with the policy objectives of minimising the loss of AONB land and maximising the use of previously developed land. (ix) The reference in paragraph 6.42 item 3 to SD11 being "on land adjacent to the urban area". The proposal for SD11 should not be defined in a way which excludes the urban area and which focuses only on land within the AONB. The proposal should embrace the urban area and the development should maximise the use of previously developed land in the urban area to achieve the provision of 160 dwellings before any consideration is given to the use of land in the AONB. (x) Figure 10 Heathfield Area Strategy. This diagram shows SD11 as located within the AONB and beyond the existing settlement. The diagram should not exclude the inclusion of the existing built up area in this location within the scope of SD11. The built up area has the potential and the capacity to be redeveloped and this aim should be the first priority at north west Heathfield. (xi) Key Diagram: the inset for Heathfield. The inset shows Heathfield and Proposal SD11 in the same way that they are shown on Figure 10 and they are not acceptable for the same reason set out at (x) above. 4. We now propose to elaborate on these objections. Piecemeal not comprehensive 5. SD11 takes an opportunistic approach. It utilises substantial areas of greenfield land as the main development areas (and by implication from the SHLAA one existing property simply as a means of access). Although the SHLAA indicates that Site 155/1210 is in multiple ownerships and Site 307/1210 is owned by a company with 7 shareholders, the choice of this location seems to be influenced simply by the fact that these 2 sites were promoted in the SHLAA and so it is assumed they are available. Site 155/1210 is said to be under the control of a housing developer. We are not aware whether the Council has seen the terms of any option or other legal agreement giving such control but, given that the Proposed Submission Core Strategy is a long term strategy to 2030 and its trajectory does not anticipate the site coming forward before 2015/16, little weight can be given to the status of any current contractual arrangements. 6. Any sensible spatial planning approach to the development of this area would not look at the sites promoted in the SHLAA in isolation but would look to see how that development would relate to its local context and how it would relate to the settlement it is intended to form a part of. 7. The site of SD11 is on sloping ground set back behind existing development which separates the site from the rest of Heathfield. Development as proposed will not integrate the development with its local context as required by paragraph 35 of PPS1. Nor will it maximise the opportunities for the site to benefit from clear and easy links to the facilities in the local service centre by non-car modes. 8. A comprehensive approach would look at the whole of the area in this north western part of Heathfield and then seek to identify the land which is most suited to development. It is common sense that this would start by looking at the land with the best links by foot, cycle, and public transport to the rest of the settlement. That is of course the frontage land along Heathfield Road/High Street itself. The frontage land also contains the previously developed land comprising the existing dwellings and their various outbuildings. Whilst the recent revisions to PPS3 have removed garden land from the definition of previously developed land, the footprint of the buildings and their associated driveways and hardstandings clearly have a higher priority for development than a greenfield meadow. 9. The present objectors, as the owners of Lavender Cottage, are willing to make their land available as part of a wider development. The objectors have made this known to the Council since at least August 2010. The principle of redevelopment for more intensive
residential development has already been established on land to the wets (WD/08/0329) and on the adjoining site to the east of Lavender Cottage (WD/2011/0400). Although planning permission was granted for a block of flats (WD/2008/0276), that development has not come forward and the permission has recently had to be renewed. Clearly, the land is available for development, even if the form of development is not at present attractive to the market. We understand that the owner of the adjoining plot at Holmhurst would be prepared to make that site available. Woodhatch is relied on as available in the SHLAA (Site 155/1210 refers). Thus there is already a substantial amount of the frontage land which is available for development. A spatial approach to the planning of this area would look to utilise this developed frontage land, which plainly has development potential, before turning to the undeveloped hinterland to the rear. Unjustified Encroachment into the AONB 10. The Proposed Submission Core Strategy recognises that SD11 lies within the AONB, where there is strict control over new development. Paragraph 22 of PPS7 is clear that major development in the AONB requires “the most rigorous examination” and that such development should only be accepted after assessment of the scope for meeting the need elsewhere. Under the GDMO 2010 “major development” is a development of 10 or more dwellings. Under the Secretary of State’s arrangements for the recovery of appeals on the basis that they are large/controversial, the threshold is 150 residential units. On either basis, a development of 160 dwellings is major development. In any event, the Council has accepted in the SHLAA that “there is a requirement to demonstrate development is essential to meet local needs and that other more suitable sites do not exist elsewhere” (Site 155/1210). The claimed rationale for the use of AONB land in this case is that “no suitable alternative non-AONB location exists”. This is patently incorrect. As already noted, the frontage land is not within the AONB and if the desire is to achieve a development of some 160 dwellings there can be no justification for taking more AONB land than is absolutely necessary when there is non-AONB land in the same location which is available. 11. Whilst it may be doubtful that the frontage land which is known to be available could alone accommodate the full scale of the development sought, the need to encroach into the AONB would be very much reduced if the frontage land was used first. Such an approach would also enable the lower (and least accessible) parts of the meadow to be retained as open land, potentially providing a better buffer with the important woodland at Tilsmore Wood that makes up such a key component of the Wealden character. The need for such a buffer is recognised in the Landscape Character Assessment (Figure 5). In addition, if the Council made it clear that it was promoting the comprehensive development of the area, it is likely that other owners would also wish to make their land available, and the Council may therefore be able to avoid encroaching into the AONB to any material degree. 12. The Council’s claim that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape is not supported by the evidence base. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of the 2 adjacent SHLAA sites: Site 155/1210 and Site 307/1210. As already noted, the Council’s Landscape Character Assessment shows (Figure 5) that large parts of these SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. Using Less Accessible and Less Sustainable Land 13. Similar considerations in terms of minimising the amount of AONB land apply in relation to accessibility issues. The lower parts of the sloping meadow land are not only more remote by simple distance from the footways and bus route along Heathfield Road/High Street, there is also the fact that journeys from home will inevitably be uphill for residents of that area. There will therefore be a disinclination to use non-car modes for accessing local services, even if the form of development is not at present attractive to the market. We understand that the owner of the adjoining plot at Holmhurst would be prepared to make that site available. Woodhatch is relied on as available in the SHLAA (Site 155/1210 refers). Thus there is already a substantial amount of the frontage land which is available for development. A spatial approach to the planning of this area would look to utilise this developed frontage land, which plainly has development potential, before turning to the undeveloped hinterland to the rear. Unjustified Encroachment into the AONB 10. The Proposed Submission Core Strategy recognises that SD11 lies within the AONB, where there is strict control over new development. Paragraph 22 of PPS7 is clear that major development in the AONB requires “the most rigorous examination” and that such development should only be accepted after assessment of the scope for meeting the need elsewhere. Under the GDMO 2010 “major development” is a development of 10 or more dwellings. Under the Secretary of State’s arrangements for the recovery of appeals on the basis that they are large/controversial, the threshold is 150 residential units. On either basis, a development of 160 dwellings is major development. In any event, the Council has accepted in the SHLAA that “there is a requirement to demonstrate development is essential to meet local needs and that other more suitable sites do not exist elsewhere” (Site 155/1210). The claimed rationale for the use of AONB land in this case is that “no suitable alternative non-AONB location exists”. This is patently incorrect. As already noted, the frontage land is not within the AONB and if the desire is to achieve a development of some 160 dwellings there can be no justification for taking more AONB land than is absolutely necessary when there is non-AONB land in the same location which is available. 11. Whilst it may be doubtful that the frontage land which is known to be available could alone accommodate the full scale of the development sought, the need to encroach into the AONB would be very much reduced if the frontage land was used first. Such an approach would also enable the lower (and least accessible) parts of the meadow to be retained as open land, potentially providing a better buffer with the important woodland at Tilsmore Wood that makes up such a key component of the Wealden character. The need for such a buffer is recognised in the Landscape Character Assessment (Figure 5). In addition, if the Council made it clear that it was promoting the comprehensive development of the area, it is likely that other owners would also wish to make their land available, and the Council may therefore be able to avoid encroaching into the AONB to any material degree. 12. The Council’s claim that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape is not supported by the evidence base. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of the 2 adjacent SHLAA sites: Site 155/1210 and Site 307/1210. As already noted, the Council’s Landscape Character Assessment shows (Figure 5) that large parts of these SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. Using Less Accessible and Less Sustainable Land 13. Similar considerations in terms of minimising the amount of AONB land apply in relation to accessibility issues. The lower parts of the sloping meadow land are not only more remote by simple distance from the footways and bus route along Heathfield Road/High Street, there is also the fact that journeys from home will inevitably be uphill for residents of that area. There will therefore be a disinclination to use non-car modes for accessing local services, even if they might appear to be within walking distance. It must also be doubted whether much of the hinterland is within the preferred 400m distance for access to a bus route. 14. In contrast, the frontage development is already connected to existing pedestrian routes by the adjacent footways and there is only a shallow fall in the land closest to the roadside. Accessibility to the bus route is also much improved. 15. Again, on any sensible measure of accessibility and sustainability, it cannot make sense to use the more remote hinterland in preference to the frontage land. PPS1 is clear at paragraph 35 that new development needs to be integrated into the urban area and address connectivity issues. The choice of a backland location for SD11 when the more accessible frontage land is available is directly contrary to this guidance Inadequate safeguarding of amenities 16. We have already explained why a comprehensive approach needs to be taken to this area. However, if the Council persists in its piecemeal approach then it is apparent that inadequate consideration has been given to the relationship between the retained frontage properties and the new development to the rear. The existing development is at a very low density and has the established character of a mature residential area, with individual dwellings in spacious plots. 17. The SHLAA indicates a proposed density for the new development of some 40 dwellings per hectare for Site 155/120. This will be substantially different in character and could only be achieved by ensuring a substantial buffer between the 2 very different forms of development. However, this would push the new development further into the AONB and would further separate the new development from the settlement of which it is intended to form a part. Again, there would be a conflict with the advice in PPS1 on integrating the development with the urban area. Soundness Tests 18. It is clear from the objections set out above that the proposals for SD11 are not founded on a robust and credible evidence base, cannot be shown to be the most appropriate strategy when considered against the reasonable alternatives, and are not consistent with national policy in PPS1, PPS3, and PPS7 in several important respects. They therefore fail 2 of the key tests of soundness as set out at paragraph 4.52 of PPS12. Legal Tests 19. These objections also
have the consequence that the Council’s failure to properly consider reasonable alternatives to its proposals at north west Heathfield, and in particular to consider the alternative of an area of growth in this location planned on a comprehensive basis and focused on maximising the use of previously developed land and minimising the use of land within the AONB, has the consequence that the Sustainability Appraisal/Strategic Environmental Assessment that accompanies the Core Strategy is legally deficient and the Core Strategy is consequently not legally compliant with the requirements of either Regulation 5(1) of the Environmental Assessment of Plans and Programmes Regulations 2004 or with the requirements of s.19(5) and s.20(2) Planning & Compulsory Purchase Act 2004. In addition, the same failings, together with the lack of a credible and robust evidence base to support those proposals and the conflicts with national policy mean that the Core Strategy is not “sound” as required by s.20(5)(b) PCPA 2004. 20. The SA/SEA considers, in broad terms, alternative locations for growth at Heathfield as between the north east, north west, and west of the town. However, what it fails to do is to look at reasonable alternatives within the selected north west location. It is no answer for the Council to suggest that this level of detail is a matter for a later DPD because the Core Strategy is already spatially specific that the location of north west Heathfield is an “urban extension” (i.e. an addition) and that it is “within the AONB” (i.e. outside the settlement boundary. The same spatial approach is shown on Figure 10 and on the Inset for the Key Diagram. The Council is not, therefore, able to avoid grappling with the spatial implications of this choice as part of the Core Strategy and testing it against reasonable alternatives. However, it is clear that this is not an exercise that has been attempted in the SA/SEA. 21. The Council will be well aware from the recent decision in Save Historic Newmarket Ltd v Forest Heath District Council [2011] EWHC 606 (Admin) that a failure in the SA/SEA to give proper consideration to identification and assessment of reasonable alternatives is likely to result in a quashing of the relevant parts of the Core Strategy. Conclusion 22. For all of these reasons the objectors strongly suggest that neither the Council nor the Inspector should endorse the present proposals for SD11. What is required is a fundamental rethink to achieve an integrated, sustainable and accessible development which minimises the impact on the AONB and provides a comprehensive spatial approach to the development of this area. Essentially this requires the focus to shift from the “easy target” of greenfield meadows to a more considered approach, giving priority to the previously developed frontage land, and only considering the AONB hinterland to the minimum extent necessary to achieve the required dwelling numbers.

Details of Changes to be Made:

As advised, this electronic comment section is for comments to be read against the entire document; having made specific comments throughout the document, but being unable to submit a comment electronically against “10 Key Diagram”. This comment relates to the Key Diagram and is linked to 8 other comments made throughout the document. The specific comment is to replace the Heathfield Inset with a version of Figure 10 revised as per point (viii) below. Owing to the general nature of this section for comment, the suite of 9 objections/comments are set out below: (i) Add to SPO1 the words “We will minimise the loss of, or impact on, nationally designated landscapes, including the High Weald AONB, to the fullest extent possible in meeting the needs of the plan area”. (ii) Add to paragraph 5.8 the words “We will, nonetheless, maximise the use of brownfield land and will minimise the use of greenfield land, with brownfield opportunities having priority in meeting needs.” (iii) WCS2: If the Heathfield Inset to the Key Diagram is changed as per point (ix) below, no change is necessary. Otherwise, delete the sentence “Broad locations...Key Diagram”. (iv) WCS4: If the location and description of SD11 is changed on Figure 10 as per point (viii) below and on the Heathfield Inset of the Key Diagram as per point (ix) below, no change is necessary. (v) Delete from the first sentence of paragraph 6.40, all words from “although potential sites...” onwards. (vi) Change paragraph 6.41 to read: “The most suitable location for housing lies at the north west of the town where access to the town centre is good and bus routes exist. The location includes the existing developed frontage along Heathfield Road/High Street and there is some potential for the use of some of the AONB land to the rear, provided that the use of previously developed land is maximised and the use of AONB land is minimised. A comprehensive approach to development is required to achieve an accessible and sustainable development that is well integrated into the existing settlement and avoids significant adverse impact on the AONB. The release of some AONB land to meet local needs may be justified if the necessary scale of provision cannot be achieved from the previously developed land alone. The AONB land may be identified as a contingency if not all of the previously developed land comes forward.” (vii) Change para 6.42 item 3 to read: “meeting the housing and community needs of Heathfield by allocating deliverable housing sites for around 160 homes on land within and potentially adjoining the urban area at north west Heathfield (SD11). Sites for housing development within this broad location will be identified and phased on a comprehensive basis as part of the Site Allocations DPD.” (viii) Change Figure 10 to remove the red/pink notation and replace it by a red dwellinghouse symbol located within the urban area to the immediate north of the A265, and replace the text annotation by the words “Comprehensive development area at north west Heathfield (SD11) (residential provision).” (ix) Key Diagram: replace the Heathfield Inset with a version of Figure 10 revised as per point (viii) above. The reasons for these changes are set out in the responses provided to Q4 above.
Details of Reasons for Soundess/ Legal Complaince:

Details of Changes to be Made:

It is noted that the Core Strategy plan proposes 700 additional homes north of Hailsham in Hellingly together with
8650 M2 of employment floorspace. We feel the Danecroft Nursery site is ideal for inclusion as an employment
site for the following reasons:- 1. The site until recently employed up to 50 persons. it is ready and available for
employment creation. 2. It is well located being close to the new Hellingly Hospital development site and Hellingly
Village with the Cuckoo Trail adjacent. Road re-development and traffic calming measures associated with the
Hellingly Hospital site (currently in progress) will bring the road network up to a good safe standard. There is a
strong possibility of alternative primary access from our Client's land onto Park Road, which would direct traffic
away from Station Road and Hellingly village. 3. Part of the Danecroft Nurseries site is already in use for B1/B8
(non-depot) use. It is ideally situated away from most residential properties and shielded from view. If accepted in
principle, our Client will be prepared to negotiate the scale and pace of re-development of the site. 4.
Environmentally the site is highly suitable for re-development as it would make better use of land already fully built
upon, and reduce vehicular journeys for those living in the area. There are two existing boreholes which can
supply water to the site, and a sewage treatment plant can assist in reducing effluent discharging to the
Pevensey Levels. Surface water will discharge to soakaways as the sub-soil is suitably porous. The site is not on a
flood plain. The Danecroft Nurseries site, if included as an employment site within the North Hailsham Strategic
Development Area (SDA 3) would make a valuable contribution to achieving the new employment space required
to support the new housing development in the area, in accordance with the strategy of Hailsham and Hellingly
outlined in paragraph 6.19, Point 3.

Details of Changes to be Made:

This response is on behalf of the Old Heathfield and Cade Street Society. 'Our Society welcomes the Framework's
approach of locating the bulk of new development in areas that are close to recognised centres of employment
and that offer the infrastructure capable of supporting the growth of their local population. In the case of Heathfield,
locating the proposed development of 160 new dwellings over the Strategy period close to existing bus routes on
the A267 (and within one mile of the town centre) seems extremely sensible. Significantly, this location also avoids
making an unnecessary impact on the Area of Outstanding Natural Beauty (which would have been the case with
the sites to the east of the town centre, as suggested in the SHLAA recommendations). Our Society does regard
the development of as many as 100 new dwellings in Horam with some suspicion. Whilst the old Merrydown site
represents a logical location for new development, the absence of any real infrastructure creates unnecessary
pressures on the locality, in particular in terms of increased traffic movements (whether to educational or
employment centres).

Proposed Submission
Core Strategy

Sound  ☐ Yes  ☑ No  ☑ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
East Dean, unlike the twelve other service centres, local service centres and neighbourhood centres within rural areas is the only one which lies within the South Downs National Park. The SDNP is the planning authority for this area and is in the process of producing its own LDF. WDC has agreed to provide a planning service for the SDNP where minor developments are involved but SDNP has made it clear that three or more dwellings on the edge of a small village would be considered to be ‘major’ and would be called in and dealt with by SDNP’s in-house planning department. In any case WDC is required to observe the SDNP’s role which is to enhance the natural beauty, wildlife and cultural heritage of the area and to promote opportunities for the understanding and enjoyment of the Park’s special qualities by the public.

Details of Changes to be Made:
East Dean should be omitted from the Table 11 allocating housing numbers to the rural villages.

Details of Reasons for Soundess/ Legal Complaince:
Many villages in rural areas, including Maresfield, suffer severe environmental damage from high levels of speeding traffic. We wish to see specific policies introduced to provide for better management and traffic diversion where appropriate to protect village centres and particular mention should be made to the already prepared Transport Plan for Maresfield.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:

We note that the proposed submission makes little or no reference to Conservation Areas even though earlier consultation documents did. We wish to see specific policies introduced to provide for better protection and enhancement of Conservation Areas, such as Maresfield.

Details of Changes to be Made:
CPRE Sussex does not wish to take an overall view at this stage on whether or not the draft Core Strategy is legally compliant. However, there is no third box to tick. CPRE does wish to submit the comments and suggested changes below on draft Core Strategies WCS1-WCS13. Some draft strategies are supported, some are not supported and some need additional clarification. WCS1 Provision of homes & jobs 2006-2030 CPRE Sussex has no objection to the plans to deliver 9,600 new dwellings in the District over the period 2006-2030 at an average rate of 400/year or to the plans to provide an additional 40,000 square metres of new employment space over the same period. However, the delivery of the two policies should be more explicitly linked and they should be monitored together. If the new housing planned were to be delivered or exceeded without the planned increase in District economic activity, the consequence would be additional long-distance out-commuting, contrary to objectives SPO6, SPO7, SPO9 & SPO13, and/or decreased local economic wellbeing due to under-employment or low local wage rates, contrary to objectives SPO3, SPO4 & SPO6. WCS2 Distribution of local housing growth 2006-2030 CPRE Sussex supports the intention to provide most new housing in the main towns in the District, with only about 10% of new housing being built in rural communities. This is consistent with objective SPO1. However, we note that about 20% of new housing already built or approved is in rural areas. Building houses in rural areas unconnected to local needs is inherently unsustainable and contrary to objectives SPO1, SPO6, SPO7, SPO9 & SPO13. It is essential for monitoring to ensure that the 10% proportion of new housing in rural communities is not exceeded during the remainder of the planning period and to make provision in the Core Strategy for remedial action should this become necessary. WCS3 Distribution of Employment CPRE Sussex questions whether a zero allocation of new employment land to rural areas is appropriate. This appears to conflict with objective SPO8. Some rural areas are currently characterised by high levels of out-commuting, and would benefit from additional local employment opportunities, which may require provision of new employment sites. Conversion of redundant farm buildings into new employment sites will often be more appropriate than their conversion to additional commuter residences. Additional rural employment would help achieve objectives SPO6 & SPO13. While identification of specific new rural employment sites should be left to Neighbourhood Development Plans, and not attempted centrally, an allocation for the overall provision of such sites should be made within the employment total, with appropriate monitoring to ensure that it is achieved. WCS4 & WCS5 Strategic development areas & Managing the release of housing land Formal allocation in the Core Strategy of all the strategic development areas proposed in WCS4 is very likely to lead to a far greater rate of housebuilding than that proposed in policy WCS1. This is because no allowance is made within the 9,600 total for continued redevelopment of brownfield land after 2015, or for continued windfall developments. Both of these can be expected to make a substantial and sustainable continuing contribution to total housebuilding in the District. There is also no allowance for development on rural exception sites. The proposal that new residential development should be almost exclusively on greenfield sites from 2015 onwards (Fig.4, p.30) is directly contrary to objective SPO14. It is essential that the Core Strategy should include policies to promote this objective. The predictable consequence of housebuilding above the target level would be additional long-distance out-commuting, contrary to objectives SPO6, SPO7, SPO9 & SPO13, and/or decreased local economic wellbeing due to under-employment or low local wage rates, contrary to objectives SPO3, SPO4 & SPO6. The sites included in WCS4 should thus be prioritised not only on the basis of the times at which they might come forward, but also on their desirability. Some sites, over half the total, should be allocated only provisionally at this time, with the explicit recognition that they may not actually be brought forward for development within the period to 2030, if monitoring demonstrates that more sustainable brownfield or windfall sites have become available to meet the total provision planned. CPRE Sussex strongly objects to the proposal SD11, for the development of land at North West Heathfield, because this AONB land has exceptional landscape value and must be protected. Housebuilding here on the scale envisaged is directly contrary to policy SPO1. CPRE Sussex also objects, for the same reason, to housebuilding on the reserve area to the north of Crowborough. WCS6 Rural areas strategy CPRE Sussex does not object to the overall allocation of new housing to the rural areas. CPRE Sussex supports rural site allocations being determined by DPD, with the proviso that the rural communities concerned must have the opportunity to develop Neighbourhood Development Plans for this purpose should they so wish. The rationale for the distribution proposed between settlements is unexplained. Is the allocation of 50-100 new houses each to Horam, Herstmonceux, Wadhurst, Maresfield and Ninfield, smaller allocations to several other settlements, but zero allocations to many more including fairly large rural settlements such as Forest Row, Mayfield, Alfriston, Buxted, East Hoathly, Framfield, Fletching and Laughton based on local
choice or centrally imposed? There is a recognised shortage of affordable housing in many rural communities. The Core Strategy should include stronger policies to recognise and meet this need for rural affordable housing for local needs, with details delegated to DPD or NDP, but total provision included within the planning totals. Even quite small settlements will surely need some new housing, especially affordable housing, to meet local needs over the 15-20 year planning period. Zero allocations are surely impossible to justify except in the most exceptional circumstances. High allocations should not be imposed on rural settlements without their consent, and should only be considered if there is evidence of local employment need. Otherwise they will cause increased unsustainable out-commuting, contrary to objectives SPO6, SPO7, SPO9 & SPO13. There should be an explicit policy to recognise that large monolithic developments will almost certainly have substantial negative impacts on the character and economy of a rural settlement, contrary to objective SPO13. The Core Strategy should include a policy for a maximum size for such rural developments, no more than 20-25 houses at a time. If a larger rural site is identified for development, it should be split into smaller sites to be developed at different times and in different styles. Such small sites are also likely to prove attractive to local housebuilders and thus be of more benefit to the local economy than large sites constructed by national developers. CPRE Sussex supports the proposal that overall rural housebuilding, including affordable housebuilding, should be carefully monitored, with effective policies to ensure that it does not in total exceed the planned level. WCS7 Effective provision of infrastructure CPRE Sussex supports this strategy. WCS8 Affordable housing CPRE Sussex broadly supports this policy. The policy that affordable housing should be integrated, and indistinguishable in design terms from associated market housing, is particularly welcomed. In estimating housing need, the needs for affordable and market housing should be estimated and monitored separately. Constructing market housing will not meet the need for affordable housing (or vice versa) and building additional market housing risks exacerbating the already unsustainable levels of out-commuting from the District, contrary to objectives SPO6, SPO7, SPO9 & SPO13. It is accepted that in certain cases the otherwise desirable development of brownfield sites may incur higher costs that make the provision of affordable housing at the level specified in policy WCS8 uneconomic. However, the profitability of greenfield development is such that affordable housing to at least the level specified should always be a precondition of development. If a developer finds that residential development of an allocated greenfield site has costs such that the specified level of affordable housing is uneconomic, then there should be a policy for that site to be removed from the list of allocated sites, and replaced by an alternative site that can provide the necessary affordable housing. There should be provision in the Core Strategy for DPDs and NDPs for rural areas to specify higher levels of affordable housing, up to 100%, to meet local needs. WCS9 Rural Exception Affordable Housing This policy states that “in exceptional circumstances” planning permission may be granted for small scale affordable housing development in rural areas outside development boundaries, to meet an identified local housing need for people unable to compete in the normal housing market. CPRE Sussex believes that there is nothing exceptional about such needs in prosperous rural areas such as Wealden. They are present in virtually every rural settlement. Thus policy WCS9 should assume that such needs will be present in rural communities throughout the District, and that suitable exception sites will be identified in every settlement, at some stage during the 20 year planning period. Sites should be identified by the parish or settlement concerned through a Neighbourhood Development Plan or other DPD. The numbers of such exception sites needed in each settlement should be determined by the community concerned, but the overall total estimated and included within the new rural housing allocation (455) in the Core Strategy. This will reduce the need for new market housing allocations for rural communities. This is appropriate, as it is affordable housing for local needs that is in particularly short supply in rural areas. This policy should apply equally to all rural areas in Wealden District, including those in the High Weald AONB and the SDNP. The wording of WCS9 should be amended to make it clear that exception site housing is exclusively intended for people with a strong connection to that particular rural community. Secure local employment should be considered a particularly strong connection, as this will reduce commuting. WCS12 Biodiversity CPRE Sussex strongly supports this policy. Wealden District is particularly characterised by a high proportion of ancient woodland, which makes a strong contribution to the District’s biodiversity, and CPRE Sussex would wish to see this particular local importance of ancient woodland identified in the Core Strategy. WCS13 Green infrastructure CPRE Sussex broadly supports this policy. However, it is noted that some greenfield land proposed for strategic allocation for housing or employment contribute to the existing green infrastructure, so there appears to be some inherent tension between this strategy and strategy WCS4.

Details of Changes to be Made:
The amendments CPRE Sussex believes to be required to draft Core Strategies WCS1-WCS13 are indicated below. WCS1 Provision of homes & jobs 2006-2030 CPRE Sussex has no objection to the plans to deliver 9,600 new dwellings in the District over the period 2006-2030 at an average rate of 400/year or to the plans to provide an additional 40,000 square metres of new employment space over the same period. However, the delivery of the two policies should be more explicitly linked and they should be monitored together. If the new housing planned were to be delivered or exceeded without the planned increase in District economic activity, the consequence would be additional long-distance out-commuting, contrary to objectives SPO6, SPO7, SPO9 & SPO13, and/or decreased local economic wellbeing due to under-employment or low local wage rates, contrary to objectives SPO3, SPO4 & SPO6. WCS2 Distribution of local housing growth 2006-2030 CPRE Sussex supports the intention to provide most new housing in the main towns in the District, with only about 10% of new housing being built in rural communities. This is consistent with objective SPO1. However, we note that about 20% of new housing already built or approved
is in rural areas. Building houses in rural areas unconnected to local needs is inherently unsustainable and contrary to objectives SPO1, SPO6, SPO7, SPO9 & SPO13. It is essential for monitoring to ensure that the 10% proportion of new housing in rural communities is not exceeded during the remainder of the planning period and to make provision in the Core Strategy for remedial action should this become necessary. WCS3 Distribution of Employment CPRE Sussex questions whether a zero allocation of new employment land to rural areas is appropriate. This applies to conflict with objective SPO8. Some rural areas are currently characterised by high levels of out-commuting, and would benefit from additional local employment opportunities, which may require provision of new employment sites. Conversion of redundant farm buildings into new employment sites will often be more appropriate than their conversion to additional commuter residences. Additional rural employment would help achieve objectives SPO6 & SPO13. While identification of specific new rural employment sites should be left to Neighbourhood Development Plans, and not attempted centrally, an allocation for the overall provision of such sites should be made within the employment total, with appropriate monitoring to ensure that it is achieved. WCS4 & WCS5 Strategic development areas & Managing the release of housing land Formal allocation in the Core Strategy of all the strategic development areas proposed in WCS4 is very likely to lead to a far greater rate of housebuilding than that proposed in policy WCS1. This is because no allowance is made within the 9,600 total for continued redevelopment of brownfield land after 2015, or for continued windfall developments. Both of these can be expected to make a substantial and sustainable continuing contribution to total housebuilding in the District. There is also no allowance for development on rural exception sites. The proposal that new residential development should be almost exclusively on greenfield sites from 2015 onwards (Fig.4, p.30) is directly contrary to objective SPO14. It is essential that the Core Strategy should include policies to promote this objective. The predictable consequence of housebuilding above the target level would be additional long-distance out-commuting, contrary to objectives SPO6, SPO7, SPO9 & SPO13, and/or decreased local economic wellbeing due to under-employment or low local wage rates, contrary to objectives SPO3, SPO4 & SPO6. The sites included in WCS4 should thus be prioritised not only on the basis of the times at which they might come forward, but also on their desirability. Some sites, over half the total, should be allocated only provisionally at this time, with the explicit recognition that they may not actually be brought forward for development within the period to 2030, if monitoring demonstrates that more sustainable brownfield or windfall sites have become available to meet the total provision planned. CPRE Sussex strongly objects to the proposal SD11, for the development of land at North West Heathfield, because this AONB land has exceptional landscape value and must be protected. Housebuilding here on the scale envisaged is directly contrary to policy SPO1. CPRE Sussex also objects, for the same reason, to housebuilding on the reserve area to the north of Crowborough. WCS6 Rural areas strategy CPRE Sussex does not object to the overall allocation of new housing to the rural areas. CPRE Sussex supports rural site allocations being determined by DPD, with the proviso that the rural communities concerned must have the opportunity to develop Neighbourhood Development Plans for this purpose should they so wish. The rationale for the distribution proposed between settlements is unexplained. Is the allocation of 50-100 new houses each to Horam, Herstmonceux, Wadhurst, Maresfield and Ninfield, smaller allocations to several other settlements, but zero allocations to many more including fairly large rural settlements such as Forest Row, Mayfield, Alfriston, Buxted, East Hoathly, Framfield, Fletching and Laughton based on local choice or centrally imposed? There is a recognised shortage of affordable housing in many rural communities. The Core Strategy should include stronger policies to recognise and meet this need for rural affordable housing for local needs, with details delegated to DPD or NDP, but total provision included within the planning totals. Even quite small settlements will surely need some new housing, especially affordable housing, to meet local needs over the 15-20 year planning period. Zero allocations are surely impossible to justify except in the most exceptional circumstances. High allocations should not be imposed on rural settlements without their consent, and should only be considered if there is evidence of local employment need. Otherwise they will cause increased unsustainable out-commuting, contrary to objectives SPO6, SPO7, SPO9 & SPO13. There should be an explicit policy to recognise that large monolithic developments will almost certainly have substantial negative impacts on the character and economy of a rural settlement, contrary to objective SPO13. The Core Strategy should include a policy for a maximum size for such rural developments, no more than 20-25 houses at a time. If a larger rural site is identified for development, it should be split into smaller sites to be developed at different times and in different styles. Such small sites are also likely to prove attractive to local housebuilders and thus be of more benefit to the local economy than large sites constructed by national developers. CPRE Sussex supports the proposal that overall rural housebuilding, including affordable housebuilding, should be carefully monitored, with effective policies to ensure that it does not in total exceed the planned level. WCS7 Effective provision of infrastructure CPRE Sussex supports this strategy. WCS8 Affordable housing CPRE Sussex broadly supports this policy. The policy that affordable housing should be integrated, and indistinguishable in design terms from associated market housing, is particularly welcomed. In estimating housing need, the needs for affordable and market housing should be estimated and monitored separately. Constraining market housing will not meet the need for affordable housing (or vice versa) and building additional market housing risks exacerbating the already unsustainable levels of out-commuting from the District, contrary to objectives SPO6, SPO7, SPO9 & SPO13. It is accepted that in certain cases the otherwise desirable development of brownfield sites may incur higher costs that make the provision of affordable housing at the level specified in policy WCS8 uneconomic. However, the profitability of greenfield development is such that affordable housing to at least the level specified should always be a precondition of development. If a developer finds that residential development of an allocated greenfield site has costs such that the specified level of affordable housing
is uneconomic, then there should be a policy for that site to be removed from the list of allocated sites, and replaced by an alternative site that can provide the necessary affordable housing. There should be provision in the Core Strategy for DPDs and NDPs for rural areas to specify higher levels of affordable housing, up to 100%, to meet local needs. WCS9 Rural Exception Affordable Housing This policy states that “in exceptional circumstances” planning permission may be granted for small scale affordable housing development in rural areas outside development boundaries, to meet an identified local housing need for people unable to compete in the normal housing market. CPRE Sussex believes that there is nothing exceptional about such needs in prosperous rural areas such as Wealden. They are present in virtually every rural settlement. Thus policy WCS9 should assume that such needs will be present in rural communities throughout the District, and that suitable exception sites will be identified in every settlement, at some stage during the 20 year planning period. Sites should be identified by the parish or settlement concerned through a Neighbourhood Development Plan or other DPD. The numbers of such exception sites needed in each settlement should be determined by the community concerned, but the overall total estimated and included within the new rural housing allocation (455) in the Core Strategy. This will reduce the need for new market housing allocations for rural communities. This is appropriate, as it is affordable housing for local needs that is in particularly short supply in rural areas. This policy should apply equally to all rural areas in Wealden District, including those in the High Weald AONB and the SDNP. The wording of WCS9 should be amended to make it clear that exception site housing is exclusively intended for people with a strong connection to that particular rural community. Secure local employment should be considered a particularly strong connection, as this will reduce commuting. WCS12 Biodiversity CPRE Sussex strongly supports this policy. Wealden District is particularly characterised by a high proportion of ancient woodland, which makes a strong contribution to the District’s biodiversity, and CPRE Sussex would wish to see this particular local importance of ancient woodland identified in the Core Strategy. WCS13 Green infrastructure CPRE Sussex broadly supports this policy. However, it is noted that some greenfield land proposed for strategic allocation for housing or employment contribute to the existing green infrastructure, so there appears to be some inherent tension between this strategy and strategy WCS4.

Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:

Details of Changes to be Made:
"The Strategy promotes sustainable growth to meet our needs by balancing the ability of our environment and infrastructure to accommodate that growth" It is important to note that the differing needs of growth and the environment cannot be balanced. What is planned might include mitigation schemes, but will lead to the degrading of the environment in Wealden. There will be a loss of brownfield sites which are often wildlife rich, and of greenfield sites which reduce the capacity of the county to produce food.
The Core Strategy fails to provide for an adequate and appropriate level housing development within the Plan Period to 2030. This is essentially as the anticipated completion rate of 400 dwellings per year falls below that set within the South East Plan (Regional Strategy) at 550 dwellings per year and will create a significant shortfall in housing provision. The Core Strategy acknowledges that the an overall target for housing provision has been set in the "context" of the South East Plan and that the South East Plan established a sound evidence base against which to prepare the plan. The Core Strategy however significantly departs from the South East Plan which remains part of the development figures for the Plan. Whilst the Secretary of State's intention to revoke the South East Plan (together with all other Regional Strategies) is a "material consideration", it remains in place during the course of preparation and consideration of the Core Strategy, for the purposes of the Planning Acts and related legislation, national planning statements (PPSs) and planning guidance (PPGs). The Core Strategy is premature in relying upon the revocation of the South East Plan. The Strategy represents "opportunism" to abandon previously fully debated and considered levels of development which emerged following extensive public consultation and participation, the considered advice of the constituent local planning authorities, infrastructure providers (including waste water treatment and transportation), Government Departments, NGOs, land owners, developers, etc all of which constitutes (within the finally published South East Plan) a substantial and evidenced based strategic planning document. The total production cost of the South East Plan to the public purse alone warrants extreme care and substantial justification should Wealden District Council ("the Council") be permitted to depart from the policies and proposals of that Plan. From an assessment of the justification for departing from the South East Plan's housing provision figures for the District, the Core Strategy's background papers and other related documents reveal a relatively superficial level of systematic analysis (despite the extent of the suite of background documents) in terms of infrastructure capacity and improvement through developer funding options, together with, in Hailsham's case, an unpreparedness to identify and include other growth options which could provide for an increased new housing yield within the Plan Period. The Core Strategy does not contain any infrastructure co-ordination and delivery policy which could establish a Community Infrastructure Levy (or CIL). Policy WCS7 does not enable such an approach towards cumulative funding from developer contributions to be established. Given the concerns expressed throughout the Core Strategy and supporting documentation regarding the infrastructure constraints which have been applied, this seems an omission of an essential tool which could be used to overcome such constraints enabling the level of growth to be increased in line with that envisaged within the South East Plan. The basis for rejecting additional but otherwise suitable growth locations around Hailsham for instance relies, upon a predetermined "cap" set essentially by sewage treatment works and local road network capacity despite the fact that this was all well understood and considered by the South East Plan Examination-In-Public Panel, but who nevertheless recommended an increase in housing provision for the District. The Panel report clearly addressed these matters and the text of the Report indicates that the Panel was also made aware of proposed studies into these matters but identified no obviously fundamental obstacle to higher levels of housing development than are now being proposed within the Core Strategy. These matters have been further investigated by PFA (consulting engineers) and their report is attached to these representations. The conclusion is that, in the case of Hailsham, there was no completed transport modelling of the various site options identified during the formulation of the Core Strategy and that the sewage treatment works studies identified by the Panel are nearing completion. The decision to restrict development around Hailsham without having completed the traffic modelling options and awaiting the outcome of the sewage treatment works study implies an unwillingness to fully explore the potential for growth around Hailsham and related funding / phasing options for infrastructure improvements or increased capacity. Curiously elsewhere, the Core Strategy is sanguine about the potentially serious odour constraint applicable to the intended urban extension east of Hailsham, and whilst acknowledging the need for a study is, nevertheless, content to include that area within the Key Diagram for growth. This represents an inconsistent approach to plan making. The incomplete factual analysis which surrounds the various growth options for Hailsham for instance, demonstrates that this Core Strategy is unsound. The decision to underprovide based upon incomplete analysis and in so doing depart from the "tried and tested" level of housing provision identified within the South East Plan remains a significant flaw within the Core Strategy.

**Details of Changes to be Made:**
The Core Strategy should be reformulated following the completion of various infrastructure capacity studies and...
the re-assessment of further development options which could deliver increased levels of housing consistent with
the South East Plan i.e. 550 dpa or 13,200 new dwellings within the period 2006-2030 taking into account the
extended plan period. These studies should provide detailed information regarding the likely level of cost
associated with the increased infrastructure capacity necessary to support the additional growth and would then
provide a basis for establishing a developer funding regime through the application of a Community Infrastructure
Levy or CIL. The absence of an effective Core Strategy Policy to address the provision and collective funding of
infrastructure, co-ordination and delivery of sites in tandem with or through phased implementation represents a
serious omission which needs to be addressed.

Details of Reasons for Soundess/ Legal Compliance:
It is alright on paper building dwellings to house people but when the approved site only has parking spaces for one car per dwelling, it is obvious in the day and age that a social disaster is in the planning for the future. One only has to look at the side roads to find cars parked on the kerb, double yellow lines and across junctions. We all like our own space but when one can't park their car on their own property, friction between families results and the roads heal up.

Details of Reasons for Soundess/ Legal Compliance:
I refer to BR5 (Biodiversity) Appendix 1 Tables 4 and 5. Table 4 includes Arlington Reservoir as and LNR Table 5 includes Ludlay Coppice as an SNCI The woodland is an important habitat for wildlife and plant species as appears from the enclosed statements by Michael Hawkins and the Rev. Peter Blee. The reason is, of course, that is has not been disturbed for over fifty years. There cannot be many such sites in East Sussex, certainly none on such a large scale. It is essential that it remains undisturbed if we care at all about biodiversity, as we should. This is all the more important because of the woodland's proximity to Arlington Reservoir and Ludlay Coppice. As Mr Hawkins explains in his statement the development of the woodland for housing would inevitably have an adverse impact on the other sites. This would be a tragedy. It should therefore be included in Table 4 or 5. At the very least it should be designated a Biodiversity Opportunity Area, and included in Table 7.

Details of Reasons for Soundness/ Legal Compliance:

The Core strategy is therefore unsound because: 1. It is not justified as the DPD does not show how the policies and proposals help to ensure that the objectives of sustainable waste management will be achieved; 2. It is not effective as it is not coherent with the approach to sustainable waste management contained in the Regional Spatial Strategy and the emerging ESCC Minerals and Waste Core Strategy; It is not consistent with national policy contained in PPS10 as it fails to either reflect or seek to implement the key planning objectives for sustainable waste management.

All proposed housing allocations shouldbe tested through the publication/consultation of the Site Allocations DPD before such areas are proposed/allocated in the Core Strategy

Details of Changes to be Made:
All proposed housing allocations should be tested through the publication/ consultation of the Site Allocations DPD before such areas are proposed/Allocated in the Core Strategy
Details of Reasons for Soundness/ Legal Complaince:
There seems to be a lack of a holistic view of what our communities should look like in the future. Unless there is the funding available for new schools and local facilities like libraries and places where people can meet in the evenings and at weekends, we will just create dormitory settlements where people come home at night, shut their door, and disappear after breakfast in the morning. That is neither sustainable environmentally not desirable from a social point of view.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

I am writing in response to the consultation on the Local Development Framework and following discussions during our Transport and Environment Lead Member’s meeting at County Hall yesterday. You may be interested to know that the revised conclusion and recommendation, stressing that the Core Strategy is sound, was accepted without question. During the meeting I raised several points about the Sustainability Appraisal. Let me start by saying that I fully appreciate the pressures on planning authorities and have been clear throughout my discussions with colleagues and the public that Wealden District Council have the difficult task of balancing genuine housing need with a host of influences which include developers who are concerned with making money and the priorities of planning inspectors which may be far away from those of local people. The appraisal document includes the spatial vision which states its purposes as ‘protecting and enhancing its essential rural character and high quality environment and promoting the countryside as a resource for recreation and tourism.’ Whilst I have no difficulty with these aims I suggest that the most important function of the countryside particularly in East Sussex is food production. I am sure you are aware that Article 5 of The European Directive 42 of 2001 sets out requirements for a Strategic Environmental Assessment (SEA) to address a range of subjects including environmental evolution if the LDF were not implemented; current environmental aspects; problems in respect of a range of environmental conditions which include water supply and waste, soil and habitat; social, environmental and economic effects and monitoring measures. Turning to the sustainability issues under the environment heading, the appraisal cites two documents as evidence in its support of sustainable use of land: East Sussex in Figures (ESiF) and the Annual Monitoring Report (AMR). ESiF is a data set which I do not believe could be taken as evidence in itself. The existence of one document can not be construed as evidence for sustainability in another. The AMR does offer some analysis and evidence and significantly points out DefRA’s assessment of the Weald as a water stress area. I believe that the only way to achieve best evidence of sustainability in respect of land use would be to evaluate the extent to which the environmental objectives set out in the assessment (pp29 and 30) have been met so far. Since agriculture in all its forms is a major economic, social and environmental feature of our county I suggest that the requirements of Directive 42 cannot be met without a thorough evaluation of the consequences of building on greenfield sites which are being or could be farmed. Such an evaluation should, I suggest, include an assessment of the yield per acre for different crops according to the grade of the land. In this way the true worth of farmland can be determined in terms of its potential productivity. This ‘true worth’ can then be weighed against the need for other uses, such as housing, where, if built, its true worth as farmland would be lost forever. The EU Directive is not optional; it has legal status and must be fully addressed. An SEA is mandatory for plans which are prepared for agriculture, forestry, fisheries, energy, industry, transport, waste and water management, telecommunications, tourism, town and country planning or land use and which set the framework for future development consent.

Details of Changes to be Made:

There are solutions to the building pressures on the South East and these must include regeneration of those parts of the country which are currently unpopular and I will continue to ask our MPs to work towards this within the scope of the localism agenda. More immediately, the production of food and provision of water are essential to our well-being and I ask you to ensure the issues I raise concerning sustainable land use within the context of the sustainability appraisal are addressed in full.

Details of Reasons for Soundess/ Legal Complaince:
3.0 CONCLUSION 3.1 In conclusion, these representations demonstrate the majority of the Evidence Base supports the Proposed Submission Core Strategy which we therefore find to be largely ‘sound’, but also identifies where amendments could be made to strengthen its ‘soundness’. 3.2 We have suggested specific proposed amendments to the following policies: · WCS 5: Managing the Release of Housing Land; and, · WCS 8: Affordable Housing. 3.3 We have commented, but not proposes specific amendments, on the following issues: · Vision and Spatial Planning Objectives; · Policy WCS1: Provisions of Homes and Jobs 2006-2030; · Policy WCS2: Distribution of Housing growth; · Policy WCS3: Distribution of Employment (B Class) and Retail (Convenience and Comparison); · Policy WCS4: Strategic Development Areas; · Heathfield Area Strategy; and · Key Diagram and Errata dated 24 February 2011 3.4 In relation to Heathfield, the Proposed Submission Core Strategy is considered to be ‘sound’. The direction of growth has been suitably tested and considered ‘justified’, ‘effective’ and ‘consistent with National Policy’ (including emerging) as well as adhering to PINS Guidance. However, the overall requirement for new allocations should be reviewed in the light of a lack of evidence relating to ‘committed sites’. 3.5 The direction of growth in Heathfield is considered ‘deliverable’ within the phasing timescales as set out within the CS. Furthermore, site specific technical reports/surveys have been undertaken by Summertree Estates Ltd., to confirm the ‘deliverability’ of ‘the Site’. We therefore consider the Core Strategy is ‘effective’ in this respect. 3.6 Consultation has been undertaken with Heathfield and Waldron Parish Council who recognise the benefits development in this location could bring to the wider community. It is envisaged ‘the Site’ would deliver much needed Affordable Housing and would have good linkages to the Town Centre. 3.7 The Infrastructure Delivery Plan identifies no ‘critical’ infrastructure provision is require to deliver the Strategy in Heathfield. The Evidence Base provides for a clear audit trail which identifies the alternative options tested for Heathfield. This is considered a sound approach as it meets the ‘justified’ tests of PPS12. 3.8 In reviewing the CS and the Evidence Base relating to growth in Heathfield, we consider the CS is ‘sound’ in its approach. However, as set out in these representations, we consider specific amendments could be made to improve the overall ‘soundness’ of the CS. With this in mind we, therefore, request to attend and participate (where necessary) at the subsequent Examination Hearing Sessions.

Details of Reasons for Soundess/ Legal Complaince:
As an Eastbourne resident I have no desire to interfere with an adjoining Council's plan other than where it impacts upon Eastbourne. In that context I wish to object to two elements of the plan. 1. Plans to provide dwellings to the South of the Stone Cross railway line. The reason for this is that I believe that it is important for both authorities to ensure that there is a clear "green belt" between the two areas which clearly demonstrates where one Council ends and the next begins. The plans for this area would remove this "green belt" and take away an important rural area between the two authorities. 2. Plans to develop on Hindslands Playing fields. I oppose this as I believe that there is clear evidence that this area is required as a recreational/leisure facility and whilst I accept the importance of housing, to provide this without the correct community infrastructure this causes more problems. In this locations such problems will impact upon both Wealden and Eastbourne as many residents in this area will look to Eastbourne (as the nearest large town) for these facilities which will put pressure upon existing provision. David Tutt

Details of Reasons for Soundess/ Legal Complaince:
Following the Cala Homes (South) legal case on 10 November 2010 the judge found that the Government did not have discretionary powers to revoke the Regional Strategies. Therefore, the South East Region Spatial Strategies apply and the Wealden District Council must comply with the requirement for the number of houses to be built as set out by the South East Region Plan. The current proposals fall short of these and are thus illegal and not consistent with national policy. The Government has estimated a population growth for the Wealden District of 19,000 over the plan period - which could equal to demand for 16,800 houses according to Cllr Roy Galley. The proposed Core Strategy falls well short of this expected demand. The reason given by Cllr Galley (in an interview with Rushlake Green parishoners) for the proposals falling short of demand is that the Council does not have adequate plans to improve the infrastructure. Any effective Core Strategy would include proposals to improve the infrastructure. These proposals do not and are therefore ineffective.

Details of Changes to be Made:
To make the Core Strategy sound requires the Core Strategy to increase the planned increase in the number of houses to 16,800 to meet demand. The Core strategy should also include proposals to improve the infrastructure in line with the increase in the number of houses. To meet the increase in the number of houses to be built, a revised Core Strategy should increase the number of houses planned to be built in several towns, in particular there is scope to do this in Heathfield, around the Tilsmore area close to the town centre.

I have examined the Proposed Submission Core Strategy (PSCS) against the Soundness Tool and found it wanting in terms of justification and effectiveness. The PSCS is a carefully prepared document, well thought out to offer a plan for the future but it does not take full account of the background research and documentation upon which it is based. In particular the proposals to expand Hailsham to the north do not comply with the sustainability or infrastructure objectives for Wealden and the proposals for development to the east and north of Hailsham are contrary to previous WDC research and to current Background Papers. Participation The consultation process has permitted all interested parties to engage but the options for answering have been strictly limited on a Yes or No basis when, in fact, more discursive answers are needed. Research/Fact Finding The content of the PSCS is not justified by the evidence, particularly in respect of infrastructure and especially highways and sewerage. Document No 7 Infrastructure Position Statement dated July 2009 refers under (A) Transport to the need to reduce traffic distances. The PSCS shows strategic development to North and East Hailsham and towards Hellingly at distances from the town centre of up to 2.2 km. The South Wealden & Eastbourne Transport Study (SWETS) in paragraph 3.29 makes it clear that development for major housing allocations in north and east Hailsham would cause significant traffic pressure. Fewer pinch points and reduced traffic pressure are shown for development south of Hailsham. BP No 11 Infrastructure Delivery Plan defines the highways issue for development to the north and east as ‘CRITICAL’ and states ‘Development is contingent on delivery of this infrastructure’. Regarding sewerage/waste water capacity, as outlined in BP No 11, Hailsham North wastewater works had a consented discharge capacity at 1st Jan 2007 at 2900 dwellings. Hailsham South wastewater works had a capacity of 2400 dwellings at same date. This same document shows infrastructure developments in the Appendix for the North water treatment works is deemed CRITICAL to deliver 1500 dwellings. In the south of Hailsham ‘A scheme is not necessary to deliver the proposed Submission Core Strategy. However a scheme may be required for windfalls of housing and employment development.’ The same Background Paper states under ‘Further Supporting Evidence’: ‘Infrastructure is not necessary to achieve the full allocation of development in Hailsham, Polegate and Stone Cross as shown in the proposed Submission Core Strategy.’ This reliance on ‘massing’ in the north of Hailsham therefore has infrastructure issues which could be avoided by reducing the size of the Strategic Development Areas and spreading the housing to the south of the town. According to the Housing Needs Assessment the greatest number of low income families are located to the south and such development would help to balance with Affordable and mixed housing. The Table at the end of BP 11 sets out water treatment for extant Planning Permissions and completions from April 2006-April 2010 and states that there are capacity issues arising in the north from the Spatial Strategy but not in the south. The Conclusions to BP 11 state that wastewater funding has been secured from Offwat for works in 2012 to increase capacity in the Hailsham area and to undertake a study to investigate other technical solutions. The financial solution would be via appropriate developer contributions. In summary, therefore, according to BP11 there are no capacity issues in South Hailsham providing development is not beyond 2400 houses, less 885 already approved – namely 1515 dwellings in Polegate, Stonecross and South Hailsham. The Oaklands/Brickfield SHLAA site 100/1310 (224 dwellings) includes an East Sussex County Council approved road scheme to allow capacity for up to 300 dwellings. Landscape In January 2001 WDC prepared the ‘Low Weald Towns Sector Appraisal Landscape’ as part of the Background Papers for the then Local Plan Review. This document is partly incorporated in Background Paper No 6 Green Infrastructure. BP 6 does not include the following relevant paragraph about the landscape around Hailsham: ‘South of Hailsham: ….Urban Influence: On the western side of the sector the urban edge of Hailsham is generally well concealed by woodland often in deep ghylls or valleys. Scattered farms and houses are linked by a network of roads and lanes, the latter often sunk between high overgrown hedges. Horse grazing is common, a reflection of urban pressures, and as a result many of the pastures have the unkempt rather untidy appearance of paddocks. Rough sheds, water troughs and other paraphernalia are common place. ..’ Under the heading ‘Sensitivity to Development’ the Landscape Appraisal states: ‘The relatively open aspect of the landscape east of the Cuckmere flood plain makes it sensitive to change by new development and any large scale expansion of the built form beyond the existing urban edge of Hailsham in this location would tend to damage the rural setting of the town. .. ‘ However there is very little scope for additional development on the western edge of the sector without threatening the intrinsic qualities of the landscape and more particularly the rural settings of Hellingly and Horselunges Manor. Importantly the urban influence of Hailsham is hardly noticeable in this reach of the Cuckmere valley apart from some ribbon development along the A271 on the immediate fringes of the town. Any significant expansion of the built form in
this location (Hellingly/North Hailsham) would be likely to erode the historic landscape, structure and rural character of this valuable landscape and irreparably damage the vulnerable gap of countryside between Hailsham and Hellingly.' The Sustainability Appraisal sets out on p 42 the Sustainability Objectives for Wealden. The environmental objectives include: 7. 'To make the most efficient use of land by prioritising brownfield sites for development, the re-use of existing buildings and promoting higher development densities.' 11. 'To conserve, enhance and make accessible for enjoyment the District’s countryside (in particular protecting the best and most versatile agricultural land) landscape, historic and built environment.' 12. 'Reduce the need to travel by car and promote alternative methods of transport.' Development north and east of Hailsham is contrary to all or most of these objectives because it would increase travel distance, increase reliance on motor cars and damage the landscape and countryside, being on greenfield sites. SHLAA site 100/1310 Oaklands & The Brickfield are on a previously developed site, the Brickfield being defined as 'Brownfield'. Oaklands, being used for business ‘horsey culture’ and not agriculture is also classified as ‘brownfield/previously developed’ under PPS3. Development of these sites south of Hailsham therefore complies with the environmental objectives set out in the Sustainability Appraisal. Alternatives The Council’s chosen approach in the PSCS is therefore not the most appropriate given the reasonable alternatives and it goes against the Background Papers and existing evidence base. It would appear from the PSCS that sustainability considerations have not informed its content from the start. In particular, it is stated at Para 6.30 of the PSCS that the Polegate, Willingdon, Stonecross development of 700 dwellings can only take place when formal road infrastructure is in position. Therefore SD4 is not programmed to start until 2019/20. Similarly, Para 5.16 states that the proposed northern urban extension of Hailsham (SD2 & SD3) cannot occur without infrastructure improvements namely sewerage and roads. Hence SD2 cannot start until 2017 and SD3 until 2021. I would submit that this issue of roads indicates that, by definition, the Strategic Development Areas forming the northern extension of Hailsham towards Hellingly and those in Polegate, Willingdon and Stone cross are unsustainable. The PSCS was initially prepared in its Draft and Consultation forms on the basis of the requirements of the South East Plan. This is now being abandoned and will no longer be valid. Because the Draft Core Strategies and most of the evidence gathering and Background Papers were prepared in accordance with the South East Regional Plan, the current PSCS is probably invalid and I would submit that the Inspector should examine this. Delivery The Council has correctly identified the main issues that the PSCS is seeking to address but does not present a clear vision for Wealden District into the future, only the equivalent of a ‘wish list’ of construction of 400 houses a year and sufficient commercial development for employment. It does not clarify how to achieve this, particularly in respect of infrastructure. The major strategic development north and east of Hailsham introduce an unacceptable risk in the ability to provide the infrastructure. Cross boundary issues have not been adequately addressed. In particular with Mid Sussex District Council and associated County Council Highways liaison for a relief road around East Grinstead. Nor does it address the problems of coalescence between Polegate, Willingdon and Stonecross and Eastbourne Councils, nor does it address the cross boundary issues which will arise with Lewes District Council, particularly in connection with development around Uckfield. The PSCS sets out objectives in terms of construction and development but does not connect these in sufficient detail with the necessary infrastructure. The most obvious gap in the policies is related to transport, in that the entire PSCS is predicated on continued and developing use of motor vehicles, there being no positive action proposed in relation to the Uckfield-Lewes Railway line and only passing mention of the possibility of public transport or reinstated railway from Hailsham southwards to Polegate and Eastbourne. The timescales given in the Plan are governed by the moribund South East Plan and are not realistic, particularly in respect of infrastructure provision and especially given the proposals in the PSCS for development north of Hailsham which will rely on the motor car. This is contrary to Spatial Planning Objective 7. Currently the Strategic Development Areas SD2, SD3, SD4, SD6 & SD7 are all undeliverable as set out in Paras 3.16, 6.19 & 6.31 due to lack of existing highways infrastructure. This amounts to 2650 dwellings which cannot be delivered. Flexibility It is not clear whether the PSCS will be flexible enough to respond to a variety of, or unexpected changes in, circumstances, whether environmental, political or economic. Currently there is no clear plan for updating it. It cannot be very flexible because of the infrastructure constraints in Wealden District. Summary The PSCS does not explain how its key policy objectives will be achieved because it is based on the South East Plan which is being abolished. Most of the supporting documents are also based around the South East Plan and pre-date its abolition. The proposals for Strategic Development having north and east of Hailsham and in Polegate, Willingdon & Stonecross are all undeliverable because of lack of highways infrastructure and, in the north, due to lack of sewerage capacity. These proposals therefore contradict Wealden’s own sustainability and environmental objectives. The PSCS does not take proper account of some sites in the SHLAA which are recognised as suitable and which meet sustainability objectives better than those selected for ‘Strategic Development’. The Oaklands and Brickfield site south of Hailsham (SHLAA 100/1300: 224 dwellings) is largely on previously-developed (brownfield) land and has a highways scheme for the Ersham Road/South Road/ Diplocks Way junction agreed with East Sussex County Council and should be included in the SDAs to the exclusion of less suitable development. It meets the Hailsham Sustainability Objectives, being a local Urban Extension within walking distance of Hailsham town centre and offering proximity to open space, woodland and biodiversity – at a scale capable of delivering up to 224 dwellings with minimum impact on infrastructure and environmental amenity. This PSCS has given careful consideration to the issues within the Wealden area but falls short of achieving deliverability because of a decision to favour massing over locality, with all the consequent risks involved in reliance on a minimum number of SDAs and with an intention to release more greenfield sites than is compliant with government recommendations. I welcome the
Review and monitoring procedures inherent in the PSCS but this document is currently unsound.

Details of Changes to be Made:
Strategic Developments SD2, SD3, SD4, SD6 & SD7 should be abandoned or reduced in order to meet sustainability objectives and urban extensions should be added around the south side of Hailsham including SHLAA site 100/1310.

Proposed Submission
Core Strategy

Sound ☐ Yes ☑ No ☐ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☑ No

Details of Reasons for Soundess/ Legal Complaince:
There has been a lack of publicity to Wealden District residents to the degree where many that I know are unaware of the existence of and/or implications of this proposal. The title "Core Strategy" itself is confusing since it does not describe what the document really is (a plan for development of the District for the next 18 years).

Details of Changes to be Made:
There should have been a leaflet sent out to every household in the District summarising the main points of the document, with summary maps showing where new housing is proposed (not done). There should have been full-page articles in the local papers to similar effect during (not done). The name of the document should have been more accurate eg "Proposed Wealden District Development Plan to 2030".
Details of Reasons for Soundess/ Legal Complaince:

I reserve my position as to whether the core strategy is legally compliant. That may well be determined by other factors rather than this specific representation. It is argued that it is unsound in so far as WCS6 - Rural Areas Strategy - is concerned for the reasons stated below.

Details of Changes to be Made:

In WCS6 - Rural Areas Strategy - ten dwellings are allocated to Selmeston which is classed as a neighbourhood Centre. The Parish Meeting's view is that this is an incorrect classification based on a wrong understanding of the facilities currently offered by the local shop on the A27 and that the village should have been classed as an unclassified rural settlement. I support that view. I also have concerns whether ten new dwellings in this village - some 20% increase in dwellings in the centre - is justified and sustainable particularly given the poor access to the wider road network via The Street and the very difficult junction at the A27. A lesser number would have been preferable.
The very late change in favour solely of allocation SD4 did not allow local communities and their representatives proper time to make representations on the proposal and the evidence which is said to support the allocation nor District Councillors to consider it. On that basis it may not be legally compliant. The proposal is not justified on the evidence base, the local community does not support it, and it is unlikely to be found to be sustainable.

These comments relate to allocations in areas SD4 and SD5 Polegate, Willingdon and Stone Cross have been put together in one strategy. All three places are very different as was recognised in the Non Statutory Wealden Local Plan when the District Council accepted that the town of Polegate and the village of Willingdon are distinctly different communities. Stone Cross was not then even thought about as being linked with the other two separated as it is by Willingdon levels from Willingdon. The confusion over the differences between Polegate and Willingdon is demonstrated in the Paragraphs from 6.21 onwards which seem to be on a “mix and match” basis which results in a confusing, incomplete and an inaccurate summary of the communities. The proposed policies clearly state that Polegate is earmarked for additional growth, not Willingdon. In Paragraph 6.30 reference is made to “land south of Polegate and east of Willingdon” which seems to have been an attempt to disguise what is actually proposed. The land at SD4 is almost entirely in the Parish of Willingdon which is inconsistent with the stated strategy for growth in Polegate. It is stated that the strategy is not seeking to change the character of Wealden but proposal SD4 seeks to change the character of Willingdon with a likely remote and separate settlement from the rest of Willingdon of 700 dwellings created on Mornings Mill Farm and Hindsland Playing Fields and 8,600 square metres allocated for business use. Very little business use currently exists in Willingdon which has a high retired population. That is inconsistent. Even with this large allocation the wish to provide leisure, recreation and community facilities which are certainly needed from “planning gain” would seem to be unsustainable. Despite the lack of capacity on the A2270 to take any more traffic, all vehicular access to this site is proposed from the A2270 at Lower Willingdon. It is said that promoting a quality bus corridor and better road/rail transport integration and small alterations to some junctions is all that is necessary to increase the capacity of the A2270 to provide the extra capacity needed. This is not a sustainable argument. The SWETS document was not fully examined by District Councillors at their meetings when they supported this allocation nor even available until virtually the last moment. There are no proposals for a green gap to remain between Polegate and Willingdon, and the frontage along the A2270 and there is no support for the long stated wish of Willingdon residents for Hindsland Playing Fields to be used by the community. There can be no confidence that proposals for educational facilities, improvements to the current inadequate medical provision and sewerage disposal will be brought forward to support this allocation. With regard to proposal SD5, if implemented this will block any possibility of any development at or near Mornings Mill Farm being linked by road to the Dittons area of Polegate to access the main road network. To fill this gap at present is premature until the future road network in this area becomes clearer. If the Honey Farm appeal is successful the numbers allocated to Polegate will need to be reviewed so this allocation and others in this area should not be set until the appeal is determined. If the allocation SD4 is found to be unsustainable in the future that will leave a shortfall in the overall numbers allocated. SD4 should be deleted and the allocation made in line with the primary strategy for growth in Polegate. If SD4 is not deleted, SD5 should not be confirmed to leave open the possibility of road links to Dittons.
Proposed Submission
Core Strategy

Sound ☐ Yes  ☑ No  ☑ Justified  ☑ Effective  ☐ Consistent with national policy
Legally Compliant ☐ Yes  ☑ No

Details of Reasons for Soundess/ Legal Complaince:
I reserve my position as far as whether or not the Core Strategy is legally compliant. The change to solely advocating SD4 was very much a last minute change which resulted in no proper scrutiny at District Council, by local representatives nor the communities over the proposal and the supporting documents. The proposal is not justified on the evidence base and is not likely to be sustainable.

Details of Changes to be Made:
These representations relate to the Core Strategy in so far as they affect Polegate and Willingdon specifically allocations SD4 and SD5 and Stone Cross SD6. There are many references to Polegate and Willingdon as one settlement, as for example Paras 3.3 Table 1, 3.11, SPO6, WCS2, WCS3, 5.13, 6.21, 6.31 (2), Figure 8 and Figure 12. In particular, Figure 2 - settlement hierarchy, shows Polegate and Willingdon as one settlement, yet details other settlements individually. The summary document states the ‘strategy proposes significant growth within Hailsham and Uckfield with additional growth at Stone Cross and Polegate.’ and declares ‘the best options focused growth on Uckfield, Polegate and Hailsham.’ The area identified in SD4 is site specific rather than a more general area and refers to Hindsland Playing Fields and Mornings Mill Farm, where only a very small part of the overall allocation is in Polegate. Area SD4 is not directly linked by road to Polegate and it is said it is intended vehicular access will be via the Eastbourne Road at Lower Willingdon. This, therefore, is inconsistent with the declared aim for growth at Polegate. Para 2.2 states that ‘each settlement has its own unique characteristics and functions, depending on its location and historical influences.’ The wording in Chapter 17 of the Non Statutory Wealden Local Plan refers to "distinctively different communities". Development of the SD4 area could either force two settlements (Willingdon and Polegate) to merge for the first time east of the A2270, thus destroying the unique characteristics referred to or more likely result in a remote settlement in Willingdon. There is no indication that the important green gap on that side of the A2270 between the built up areas of Willingdon and Polegate is to be preserved. Para 7.23 states ‘in order to maximize the benefits, policy places the emphasis on the creation and maintenance of linkages between green spaces.’ Para 2.21 states ‘the strategy is not seeking to change the character of Wealden but this is exactly what this proposal will do to Willingdon - change its character - particularly with encouragement of extensive business use where none currently exists. Community facilities are proposed in an area sufficiently remote from most of the village to need transport to access them. The area proposed for development is viewed from the South Downs National Park and there are clear views over it from the Butts Lane area of the South Downs. The proposed new development will fill much of the currently open land beyond the build up area of Willingdon which will clearly be seen from the National Park. Planning Policy Guidance 17: Planning for open space, sport and recreation para 17.10 states ‘existing open space, sports and recreational buildings and land should not be built on unless an assessment has been undertaken which has clearly shown the open space or the buildings and land to be surplus to requirements.’ The Core Strategy refers frequently to the lack of suitable recreational facilities so even if an assessment had been carried out the land is not surplus, so the proposal to develop an existing one (Hindslands) (SD4) is inconsistent. Para 6.22 refers to the ‘limited range of facilities available locally’, and states ‘a new GP surgery and medical centre has recently been granted planning consent in Willingdon.’ This is a change from the original draft wording that stated the centre would be built. There is now considerable doubt whether it will ever be built at this location. Given that uncertainty the adequate provision of, what even the doctors say is currently unsatisfactory, medical infrastructure cannot be sound. Para 6.23 states ‘the A2270 running through the urban area is still heavily congested and traffic flows on the strategic road network are very high.’ Numerous references are throughout the strategy to the need for infrastructure, and 5.16 states ‘development at SD4 will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in South Wealden.’ The impact of the number of additional vehicles from this proposed development will have a very bad effect on the already heavily congested road network of the A2270 and surrounding roads in Lower Willingdon. With the very limited changes proposed to junctions the policy is unsound and needs further examination. It is not understood how a quality bus service would improve matters. These proposals were not properly examined by the District Council because it was only at the very last moment that a decision was made to promote solely SD4 and the very late arrival of the SWETS document. Local residents and their representatives did not have the opportunity to comment. If the A2270 is found not to be suitable for the large numbers of vehicular movements arising from this proposal the alternative access is from the Dittons area of Polegate. The employment provision SD5 will effectively remove any possibility
of accessing the Mornings Mill Farm area from the east. Concern is expressed about whether adequate provision has been made for additional places at the primary and secondary schools in the local vicinity of SD4. Extensions to the existing schools which are in heavily built up areas with heavy congestion on the roads is not the answer. The strategy appears to be unsound. Para 6.28 states ‘development will only be allowed if it can be accommodated by the existing works, unless an alternative location for the treatment and discharge of waste water is implemented.’ There appears to be undue reliance on this infrastructure being provided and if it and other infrastructure is not provided the whole allocation at SD4 fails. There appears no fall back position should this be the case and that will make the whole core strategy unsound in terms of numbers of dwellings to be built. Para 7.2 states ‘the fundamental principle is that development that generates a need for infrastructure or enhancements to existing infrastructure will only be permitted if the necessary infrastructure to support it is either already in place, or there is a reliable mechanism to ensure that it will be provided at the right time, when it is needed.’ Given the history of difficulties in providing the necessary infrastructure to support development there is little confidence that development will not be allowed in the future without the infrastructure being in place first. There have to be questions whether the policies relating to infrastructure are sound. With regard to the overall housing numbers proposed, if the Honey Farm planning appeal (APP/C1435/A/10/2130580) is successful, this will increase your numbers of dwellings in the Polegate and Willingdon area to above that proposed. There is no fall back position and in housing numbers terms the Core Strategy is unsound. On the basis of the evidence and supporting information the allocation SD4 should be deleted and replaced with a policy for growth in Polegate in line with the overall policy. If SD4 is not deleted, SD5 should be put on hold and until the final layout of the road network to adequately support development of SD4 is determined. With regard to SD6 the proposal does not appear to have taken account of the effect on the residents in the adjoining area within the Borough of Eastbourne. Any development south of the railway line will need to be accessed through the congested narrow estate roads in Langney. That part of the allocation needs to be reconsidered for housing development.

Proposed Submission Core Strategy

Sound ☑ No ☐ Justified ☑ Effective ☐ Consistent with national policy

Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The Proposed Submission Core Strategy Development Plan is consistent with the Hailsham and Hellingly Masterplan however it is unsound as the 700 homes and employment provision to be built in North Hailsham can only be built if the highways infrastructure capacity is improved to support the development which is very questionable according to the Infrastructure Delivery Plan. There is no detailed contingency plan available to show where the development would be placed if the highways infrastructure cannot be improved. The Town Council believes that a co-ordinated development of the 1300 homes and employment provision on the site to the East of Battle Road will result in a better opportunity to deliver the infrastructure for the development area, and the Town Council would request that a sixth form college is included in the infrastructure of the development to meet the identified needs of the expanding town.

Details of Changes to be Made:

Proposed Submission
Core Strategy

Details of Reasons for Soundness/ Legal Compliance:
The Proposed Submission Core Strategy Development Plan is unsound and not effective as the sewerage
treatment works are already operating at full capacity and will not support the proposed 1300 dwellings and
employment provision. In section 4 of the Core Strategy Infrastructure Delivery Plan, table 3, it is stated that it is
critical that there is additional capacity at the existing water treatment works to enable the delivery of the 1300
dwellings. There is no contingency plan submitted showing where the shortfall of any homes will be placed if not
achieved in this location.

Details of Changes to be Made:
A contingency plan must be drawn up to identify alternative development sites for Hailsham if it is found that there
is no additional capacity at the water treatment works.
The degree of uncertainty at this point would suggest the need for further work to be undertaken in order to delivery by the HA. Even as developer funded schemes there are risks – the need for third party land for example. are not certain to be delivered. The improvements required consist of; the signalisation of the Cophall roundabout, improvements to the A27/A22 and improvements to the A27/A2270 none of which are not currently scheduled for in Polegate and Willingdon are identified as critically dependent on SRN junction improvements which, at present, Delivery Policies Core Strategy Infrastructure Delivery Plan (IDP) We are concerned that a number of allocations development in Uckfield instead stating that a scheme will be considered within the Site Allocations DPD. 7. Core are concerned that at this stage, relevant supporting evidence is not included to demonstrate deliverability in transport terms. 5. Spatial Strategy Policies We note that with respect to housing land supply the council has should be provided throughout the Core Strategy to demonstrate deliverability particularly in transport terms. We are particularly SP07 and SP14 which aim to reduce the reliance on private car journeys by closely relating development to sustainable transport infrastructure and making best use of previously developed land. This accords with the principles of PPG13 and could help reduce the impact of development on the SRN. It is important that the spatial planning objectives are shown to be deliverable in accordance with PPS12. Relevant evidence should be provided throughout the Core Strategy to demonstrate deliverability particularly in transport terms. We are concerned that at this stage, relevant supporting evidence is not included to demonstrate deliverability in transport terms. 5. Spatial Strategy Policies We note that with respect to housing land supply the council has decided not to continue with the SE Plan target of 11,000 dwellings but to reduce the target to 9,600. The plan period has also been amended from 2026 to 2030 with further details of specific allocations being included in the Site Allocations DPD. Although we acknowledge that it is acceptable practice to defer detail of non-strategic housing allocations to the Site Allocations DPD we will expect sufficient detail to be included in the Core Strategy to allow an assessment to be made of the likely impact of development. Paragraph 5.7 states that the use of brownfield land for housing development is likely to reduce from 80% to 35% over the plan period. This implies that there will be an increased reliance on greenfield land for future development. PPG 13 Paragraph 6(3) identifies the importance of locating development 'principally within urban areas' to promote accessibility. Greenfield land sites may not have existing sustainable transport infrastructure to support development. To ensure that the development at such sites is deliverable in transport terms we would expect sustainable transport infrastructure to come forward alongside development in locations where a need is identified. Paragraph 5.19 states that contingency arrangements have been identified in the event of infrastructure constraints preventing housing development on identified sites. Whilst this demonstrates flexibility in accordance with PPS12, it would be helpful to know those arrangements so we can advise whether they too have implications for the SRN that could affect deliverability. 6. Local Spatial Implications of the Strategy We are generally supportive of plans to promote sustainable transport connections within the development areas particularly the A2270 and A259 quality bus corridors between Eastbourne and Hailsham / Polegate which could help reduce the congestion on the A27 by improving connectivity and providing a viable alternative to car based travel. We are concerned however that in some development areas transport appears to be being considered as an afterthought. For example, the Core Strategy does not appear to provide any details regarding the transport measures needed to mitigate the impact of development in Uckfield instead stating that a scheme will be considered within the Site Allocations DPD. 7. Core Delivery Policies Core Strategy Infrastructure Delivery Plan (IDP) We are concerned that a number of allocations in Polegate and Willingdon are identified as critically dependent on SRN junction improvements which, at present, are not certain to be delivered. The improvements required consist of; the signalisation of the Cophall roundabout, improvements to the A27/A22 and improvements to the A27/A2270 none of which are not currently scheduled for delivery by the HA. Even as developer funded schemes there are risks – the need for third party land for example. The degree of uncertainty at this point would suggest the need for further work to be undertaken in order to
develop the schemes beyond the ‘concept’ stage as detailed in the IDP (Appendix A) and demonstrate deliverability. In accordance with PPS12 Paragraph 4.52, in order for the Core Strategy to be sound it must demonstrate that the plan is deliverable. To be deliverable the infrastructure needs, costs and funding sources should be identified. At present, the Core Strategy does not demonstrate sufficiently that the transport infrastructure required to deliver the Core Strategy allocations is deliverable and as such the plan is at risk of not being found sound in its current form. Transport It is noted that the Core Strategy does not contain a separate transport policy. Spatial Planning objective SP07 aims to reduce the need to travel by car. It is therefore recommended that a policy is developed to detail the overarching transport strategy for Wealden and how the objective will be achieved. It is also advised that the policy covers road safety together with Transport Assessment and Travel Plan requirements for new development.

Sound: No
Legally Compliant: No

Details of Reasons for Soundess/ Legal Complaince:
It is unjustifiable to classify Stone Cross as a "service centre" (3.3 Table 1). It has only six shops, a medical centre, a pub, a church and two halls. The facilities (garage, post office?) are otherwise non-existent, jobs are very limited and would generally mean travel to Eastbourne or Hailsham. There are bus services and Polegate station is relatively close - but again travel is involved. Effectiveness requires "sound infrastructure delivery planning" but detail is absent. Residential developments in Stone Cross are often with only a single entry point which makes them almost inaccessible for bus operation.

Legally Compliant: No

Details of Reasons for Soundess/ Legal Complaince:
Cross reference of facilities and services There is a lack of cross-referencing or joined-up thinking in the Core Strategy between topics such as transport, education and employment. Nowhere do there seem to be any imaginative proposals for public transport which might enable people to access higher education or wider employment possibilities, particularly to the south of Crowborough. Currently, people access these facilities by private car or not at all and a visionary Core Strategy should be the opportunity to improve this situation.

Core Strategy

**Sound**  ☐ Yes  ☑️ No  ☐ Justified  ☑️ Effective  ☐ Consistent with national policy

**Legally Compliant**  ☐ Yes  ☐ No

**Details of Reasons for Soundess/ Legal Complaince:**
The basic premise that development should not (generally) be allowed in neighbourhood centres and other unclassified settlements mitigates against the sustainability for which we aim. These are the very places which are most appropriate for the establishment and nurture of sustainable communities, able to provide for themselves or locally of food, energy and appropriate employment without having to import so much from further afield. Expanding larger centres increases their need for a greater transport and logistical infrastructure to bring in all those most vital things which they are unable to provide for themselves and renders the whole structure more fragile and more susceptible to disruption.

**Details of Changes to be Made:**
Allow or even encourage rural (and indeed urban) communities which are substantially self sufficient or exporting in energy, food, care, employment etc.

Q.4 & Q.5 - covered by the following representation from Ringmer PC This Development Plan Document (DPD) is of interest to Ringmer Parish Council (RPC) because the parish adjoins the Wealden District Council area. The most significant consequence of this is that most traffic passing through Ringmer Parish, form whatever direction, will either have been generated in, or will be going to Wealden. This will also be true for Earwig Corner and Malling Hill, where traffic jams are common place, despite the Beddingham Bridge. A summary of the DPD shows 1) Housing development is to be concentrated in Uckfield (1000 new houses + employment opportunities); Hailsham (1200 new houses partly dependent on road works + employment opportunities); Polegate / Stonecross (1350 new houses partly dependent on road works + employment opportunities) 2) There will also be limited housing opportunities elsewhere, principally in Heathfield (160) and Crowborough (300) 3) Housing is focussed on ‘providing houses with good access to work in London, Brighton and Eastbourne as well as local employers’. 4) ‘It may be possible to limit any adverse impact on congestion, particularly on the A27, with an even distribution.’ (Are you thinking of the B2122 and B2192, we wonder?). Also ‘significant funds would be needed to deliver necessary improvements to the A27’. 5) ‘The combined allocations in Uckfield, Forest Row and Crowborough may help support the long term case for establishing a rail link to Lewes’. (the rail route remains protected) 6) On Gypsies the policies include: not in AONBs (therefore not in SDNP either); not near refuse sites; not in areas of high flooding risk; but near a bus route. (The last three appear to disqualify Laughton – the application there has been withdrawn). For Ringmer therefore there will be some increase in traffic through the village unless the A27 is improved, which is unlikely. However the bigger problem remains – even more congestion at Earwig Corner. The lack of significant development at Heathfield is good news. In conclusion, we are concerned at a lack of a joined-up approach, not least at County level, to prevent pushing traffic problems into adjoining Councils’ areas. Building more houses for out – commuters cannot be deemed to be sustainable by any measure, but building them so that commuters sit in traffic jams polluting the neighbourhood is so much worse. Ideally the extra houses should be built in Eastbourne, Brighton and London, but at the very lease, the A27 needs to be upgraded so there is a strong incentive to actually use the main arterial road.

Core Strategy

Sound  ☑ Yes  ☐ No  ☐ Justified  ☑ Effective  ☑ Consistent with national policy

Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
National Policy (i) Government policy to give priority to re-use of previously used land – little consideration given to this and no consideration given to the adjoining area of Eastbourne which in the current economic climate has the potential for providing housing by re-use of shops, offices and other commercial premises. (ii) Not effective because General Dev. Principles (Wealden Local Plan 2005) (f) “protecting recreational area and other public and private open spaces” violated in proposed land development at Hindsland (Willingdon). (iii) Not effective because does not adhere to Wealden Local Plan 2005 (Part d) “Protecting development which would lead to the coalescence of settlements and to the loss of individual identities”. Not taken into account in proposed extension to Polegate / Willingdon leading to loss of identity between Eastbourne / Willingdon and Polegate. (iv) Little consideration given to the fact that the areas bordering the National Park will come under pressure from the demand for second homes in the area. No Council strategy to deal with protection of housing.

Details of Changes to be Made:
Polegate Town Council (PCT) draws attention to the following inconsistencies in the Proposed Submission Core Strategy. 1. PTC is concerned at the numerous references to Polegate and Willingdon as one settlement as highlighted in 3.3 Table 1, 3.11, SP06, WCS2, WCS3, 5.13, 6.21, 6.32(2) Figure 8 and Figure 12. In particular Figure 2 showing settlement hierarchy, places Polegate and Willingdon as one settlement, yet details other settlements individually. 2. The Summary of Town Master planning Documents Background Paper 6.4 states that the Masterplan was adopted on minute number 9410 on 27 September 2010. 3. 2.2 acknowledges that 'each settlement has its own unique characteristics and functions, depending on its location and historical influences'. PCT believes development of the SD4 area will force two settlements (Willingdon and Polegate) into one, thus destroying the unique characteristics referred to. 4. 2.21 declares ‘the strategy is not seeking to change the character of Wealden’. PTC believes development of the SD4 area will force two settlements (Willingdon and Polegate) into one thus changing the character of the area. 5. Figure 3 page 53 of the Development of the proposed submission core strategy Background Paper (broad locations Polegate and Willingdon) shows development north of the bypass, which Polegate Town Council opposes. 6. Planning Policy Guidance17: Planning for open space, sport and recreation 17.10 states 'existing open space, sports and recreational buildings and land should not be built on unless an assessment has been undertaken which has clearly shown the open space or the buildings and land to be surplus to requirements.' the Core Strategy refers frequently to the lack of suitable recreational facilities, so the plan to build on an existing one (SD4) is inconsistent. 7. Chapter 17 Paragraph 17.1 of the Wealden non statutory plan states that 'Polegate and Willingdon are adjacent but distinctively different communities located at the foot of the South Downs to the north of Eastbourne. 'However the proposed Core Strategy is likely to merge the two settlements for the first time on the east side of the A2270. PTC makes the following observations in regard to the Polegate and Willingdon and Stone Cross Area Strategy: 1. The urban extension designated SD4 extends across land within both PTC and Willingdon and Jevington Parish Council boundaries. PTC is concerned as to exactly where the development is planned, and how it will impact on the separate Councils in Polegate and Willingdon. 2. 6.22 refers to the 'limited range of facilities available locally' and states 'a new GP surgery and medical centre has recently been granted planning consent in Willingdon'. As this scheme’s progression is in question PCT question whether the medical infrastructure proposed is sound, being in mind the uncertainty of the location of current and future surgeries. 3. 6.23 states 'the A2270 running through the urban area is still heavily congested and traffic flows on the strategic road network are very high'. Numerous references are made throughout the strategy to the need for infrastructure, and 5.16 states 'development at SD4 will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in South Wealden'. PTC has serious concerns over the impact of any additional vehicles on the heavily congested road network, and feel that the proposed transport strategy in unsound because of the numbers of extra vehicles any development would bring onto the A2270. 4. 6.29 states that the provision of housing in Polegate would allow for opportunities to maximize the potential for shopping provision within the town centre of Polegate. Polegate Town Council feel this statement is flawed in that it is more likely that residents would use the road system to access Eastbourne retail facilities. What is the potential for shopping provision within Polegate town centre, when elsewhere the document states there is a physical constraint on the High Street. 5. 6.31.4 does not make it clear how this development of services and improvement of the High Street will be achieved. 6. 7.2 states 'the fundamental principle is that development that generates a need for infrastructure or enhancements to existing infrastructure will only be permitted, if the necessary infrastructure to support it is either already in place, or there is a reliable mechanism to ensure that it will be provided at the right time, when it is needed.' PTC is concerned whether this fundamental principle will be applied prior to the commencement of any development. PTC has no confidence that necessary infrastructure will be provided in the future, as this has not been the case with the Wealden Local Plan and the Wealden non statutory plan, development has been allowed without the infrastructure being in place. 7. WCS7 states ‘the release of land for development will be conditional upon there being sufficient capacity in the existing local infrastructure to meet the requirements generated by the proposed development.’ PTC seeks assurances that this condition will be enforced prior to the commencement of any development. PTC raises the following questions in regard to the Proposed Submission Core Strategy: 1. 5.16 states ‘development at south Polegate and east Willingdon will be phased to commence from 2019 to enable integration of development in relation to transport infrastructure requirements and interventions in South Wealden. If these infrastructure requirements are not completed by 2019, how will this impact on any development within
Polegate. 2. 6.28 states 'development will only be allowed if it can be accommodated by the existing works, unless an alternative location for the treatment and discharge of waste water is implemented'. What assurances can be provided to PTC that the existing works are suitable? What options have been explored for alternative locations? 

3. 7.23 states 'in order to maximize the benefits, policy places the emphasis on the creation and maintenance of linkages between green spaces.' What assurances can be provided to PTC that this policy will be applied to protect and maintain the existing green space at Hindsland playing fields which separates the town of Polegate from the parish of Willingdon and Jevington? 4. WSC13 states 'development proposals will not be permitted which would result in the loss of existing open space or harm to Wealden's network of green spaces unless measures are incorporated within the development that will either mitigate the effects of development or alternative and suitable provision is made that is accessible, of good quality and value to its users, in an appropriate location, at an appropriate scale and nature and would positively contribute to the overall network of green space.' If SD4 is developed for housing, what alternative and suitable provision is the District making available to the residents of Polegate? This area has always been seen as an important green gap between Polegate and Willingdon. 5. PTC is seriously concerned about the lack of provision is being made to relieve the pressure on the oversubscribed primary and secondary schools in the local vicinity of SD4 and is opposed to the continuing extensions to the existing schools. PTC believes that the strategy is unsound in that it does not provide the appropriate school infrastructure for an increased population and is unlikely to provide sufficient places for that increase within the Polegate area. 6. If the planning appeal APP/C1435/A/10/2130580 Honey Farm is successful, the whole allocation would no longer be relevant or necessary and the policy in housing numbers terms would be unsound.

<td>Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request. It has been identified above that there is insufficient housing allocated in the Core Strategy and that the distribution of that housing is not appropriate. In respect of soundness the Core Strategy fails because it has been shown in this report that the chosen approach is not the most appropriate as there is an alternative which is more sustainable. The Sustainability Appraisal has failed to properly consider alternatives, in particular in respect of properly testing total housing numbers and deliverability. This is the result of improper analysis of the infrastructure constraints. Also the Core Strategy is unsound in respect of Government targets on greenhouse gases and the provision of affordable homes. The proposed amendments will make the Core Strategy sound although it should be noted that an early review is recommended in respect of housing numbers.</td>

Details of Reasons for Soundess/ Legal Complaince:
Sustainability Appraisal. the Sustainability Appraisal sets out 22 Outcomes which the CS is seeking to achieve. Using the number system on pages 9 to 15 of the SA set out below is an analysis of how the CS has failed to meet the outcomes. 1. Insufficient housing to meet the affordability outcome. 2. Likely to result in reduced health and well being of the population due to lack of affordable and market homes at affordable prices. 3. Social inclusion will be inhibited as house prices rise and those on lower incomes are forced out of Wealden. 8. Air pollution will be worse under the Core Strategy because the distribution of housing is car based. 9. Reduction in green house gases will not be possible because the housing distribution is not based on the public transport network. 12. Reducing the need to travel by car will not be achieved see 8 and 9 above. 20. Failure to provide sufficient new family housing will reduce the number of skilled workers available. 22. No provision in the plan to support the development of a dynamic, diverse and knowledge based economy. Overall the SA includes many detailed statements which are not supported by facts. The key points which lead to errors making the Core Strategy unsound have been dealt with below

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Infrastructure Delivery. The Infrastructure Delivery Plan is not a coherent document. As it has been produced changes have been made which have not been carried through to the supporting text. This is particularly the case in respect of wastewater treatment in South Wealden. The Council in the IDP identified Nature Conservation, transport, wastewater treatment and secondary education in particular at Uckfield as critical to ensuring housing delivery. These topics are dealt with below followed by other infrastructure delivery in relation to the proposed increase in housing numbers. 1.6.1 Nature Conservation. In respect of the Ashdown Forest mitigation is proposed which the Council and Natural England are satisfied will allow the amount of housing proposed by the Council to be built without detriment to the protected area. Whilst further housing in the north of the district is proposed as a revision. The increase in the number for North Wealden is 640 dwellings over the 20 year period. These dwellings whilst being concentrated at the key settlements can be located so as to minimise any effect on Ashdown Forest. Furthermore if necessary mitigation can be increased. 1.6.2 Transport. Appended to this document is a statement which demonstrates that transport issues in South Wealden where it is proposed that the majority of the increased housing will be located are not critical to delivery. In fact by redistributing the housing closer to the Hailsham/Polegate/Eastbourne bus corridor and the mainline railway station increased headroom on the highway network will be created to accommodate the proposed increase in development in South Wealden. 1.6.3 Wastewater treatment. Appended to this document is a note which demonstrates that with appropriate controls on development in South Wealden a total of 7,618 dwellings can be built without any improvement to waste water treatment. This means that on the basis of building 350 dwellings per annum in South Wealden 22 years out of the total 24 years of the plan period can be accomplished. It is there, quite feasible that the full quantum of 8,400 homes for South Wealden can be achieved with very little risk. 1.6.4 Secondary education provision at Uckfield. The provision of all education requirements in respect of new development is well established. Nothing in the IDP suggests that either at Uckfield or at any of the towns the well tested methodology for education provision will not delivery sufficient funds to provide for the education requirements of the occupants of the new development. The SHLAA has identified enough land for 22,000 new homes and therefore land will be available where needed for new buildings. 1.6.5 Other infrastructure. Affordable housing. The shortfall in affordable housing provision has been noted above and can only be rectified by increasing the amount of housing to be built. It is recommended that at least 13,200 homes are provided over the plan period and that the Council should commit to an early review to establish whether more housing can be built. Education. See above. Social Infrastructure. Identified needs can be met. Green Infrastructure. Identified needs can be met. Public Services. Identified needs can be met. Health. identified needs can be met. Utilities. Identified needs can be met.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:
Southern Water owns and manages Bewl Reservoir – a strategic water resource. The reservoir lies partially within Wealden District and serves large parts of Kent and East Sussex in addition to Wealden District. This water resource is used by both Southern Water and South East Water which supplies water to Wealden District. As foreshadowed in Wealden’s Core Strategy Spatial Development Options document, enlarging Bewl reservoir is one of the strategic options which may need to be implemented within the planning horizon of Wealden’s Core Strategy; therefore it is vital that this option is recognised in said strategy. Due to the planned revocation of the South East Plan there is an increased need in Southern Water’s opinion, for a policy statement that supports the planning and delivery of strategic infrastructure within Wealden that is required to meet demand arising outside the district. The omission of a policy or text recognising the potential need for this expansion renders the core strategy unsound. Wealden's Core Strategy is not effective due to the lack of recognition of the potential need and mechanism for supporting the enlargement of Bewl Reservoir.

Details of Changes to be Made:
The following sentence should be added to policy WCS7 to facilitate delivery of utility infrastructure, and to phase development with provision of necessary infrastructure.: “The provision and delivery of additional utility infrastructure (water, wastewater, energy, communications) will be encouraged and permitted in order to meet the identified needs of the district. We believe this policy will make the Core Strategy sound because it will support delivery of utility infrastructure required to serve the planned development i.e. it will be effective.

Details of Reasons for Soundness/ Legal Complaince:
New and improved wastewater infrastructure will be necessary to serve the development proposed in the Core Strategy to 203. the need for this infrastructure is not recognised in the Core Strategy, despite previously highlighting this issue. There is therefore a lack of policy to facilitate delivery of utility infrastructure. We are therefore unable to support the Core Strategy as sound on the grounds that it is not effective because it does not support delivery of utility infrastructure required to serve the proposed new development.

Details of Changes to be Made:
The following sentence should be added to policy WCS7 to facilitate delivery of utility infrastructure, and to phase development with provision of necessary infrastructure.: “The provision and delivery of additional utility infrastructure (water, wastewater, energy, communications) will be encouraged and permitted in order to meet the identified needs of the district. Core Strategy
Sound  ☑ Yes  ☑ No  ☑ Justified  ☑ Effective  ☐ Consistent with national policy
Legally Compliant  ☐ Yes  ☐ No

Details of Reasons for Soundness/ Legal Complaince:
Infrastructure delivery plan. Southern Water is unable to support the Core Strategy as sound because the infrastructure delivery plan, in particular the schedule at Appendix A is incomplete. This is contrary to PPS12, which says that the core strategy should identify the infrastructure required to support it. The omissions relate to odour mitigation and sewerage infrastructure. We are therefore unable to support the Core Strategy as sound, on the basis that it is: Not justified as it does not take into account the evidence provided. Not effective as it does not consider all of the requirements to successfully deliver the planned development.

Details of Changes to be Made:
We propose the addition of three rows to the infrastructure delivery schedule and suitable amendments to the relevant site specific chapters of the infrastructure delivery plan to ensure internal consistency.

Details of Reasons for Soundess/ Legal Complaince:

Herstmonceux C of E Primary School would not be able to accommodate any significant increase in pupil numbers; the present Year 1 class already has 39 children and who started in the school in September 2009, exceeding the ESCC guidelines of 30 pupils. The problems associated with these high numbers both in teaching and of physical space will continue through the subsequent school life of these children. This point was also raised in the Parish Council’s response to the Spatial Options Consultation in August 2009, which noted that the ESCC Report on Primary Schools 1 May 2009 stated that the current site of the school is too small for the pupil numbers and it has insufficient outside space for the children. There are no current plans to build or expand the school to proved extra school spaces for new families.

Details of Reasons for Soundess/ Legal Complaince:

Hailsham Community College, the nearest secondary school to Herstmonceux Parish has already been identified in an ESCC report as being too small for the current size of the college intake. Current building programmes in Hailsham will increase the pressure on space at the college, and so the issue of school capacity should be addressed with some urgency. Herstmonceux Parish Council is concerned that contributions under S106 Agreements for the acquisition of land and contributions for building costs for both a new secondary and a primary school in Hailsham have been returned to developers. Based on 2009 figures East Sussex County Council had stated that sufficient capacity for the expected rise in school numbers could be met by an increase in class sizes or the provision of some temporary classrooms. this decision appears to contradict ESCC guidelines on class sizes and could have a negative effect on children's education. The increase in housing detailed in the Core Strategy for the period up to 2030 will generate a need for several hundred more school places, and so it is important that issue of identifying sites for new schools is undertaken urgently. The Parish Council hopes that as approximately 1700 of the proposed dwellings for Hailsham are already approved, sufficient contributions will be available for the remaining 1300 to ensure an improvement in this vital infrastructure requirement for the future growth of this area. 6. Herstmonceux Parish Council supports the need for a mix of housing in the parish with a particular need for supported housing for older residents.

Details of Changes to be Made:

---

Details of Reasons for Soundess/ Legal Complaince:

Water - the Parish Council repeats its concerns about the provision of water for the district which has previously suffered problems with water shortages as was shown by the need to implement hosepipe restrictions in 2006/7. The increased demand from extra housing completed since that date and by the current building schemes will add to the problems. Any measures taken to expand the capacity will take many years to implement.

Details of Changes to be Made:
For Herstmonceux I don’t believe we should build along the road from the village hall to Collins garage, we should not allow the road side to become a new row of houses. Wealden may say that they don’t like the idea of houses being built on the land towards Lime park going down the lane besides the new houses and building opposite the recreation ground, the view is not seen by the people but would be great for those in houses there, but I suggest a tiered development as enclosed. The Windmill hill plan at the monkey puzzle has enough houses; this site where the garage still stands should be a social centre for the people in the area. That’s to say accommodation for a couple of families that can be on site to have a coffee shop, library, youth club open every evening, a place for young and older people that can be for a number of events. I don’t believe this plan is deliverable, I believe that there is no evidence of neighbouring authorities coherence if they have to consider developing in a similar way to Wealden with the lack of infrastructure, the lack of water and sewage disposal, school placements and hospitals the entire county will be unbearable to live in. Whilst there has been previous consultation with this document, the final Wealden recommendation has not had enough consultation time, in order to give a detailed response. Introduction I feel that there hasn’t been enough time for proper consultation to discuss all the facts in this final document and each village should of have had its own area document, plus more than one document that could cover the whole Wealden area for example in Herstmonceux we have had one document that went round the parish councillors and the public could not see it. I went in to Hailsham Town Council to see their strategy document to find one huge document which would have taken several days to read and understand. In the introduced project the view is not seen by the people but would be great for those in houses there, but I suggest a tiered development as enclosed. The Windmill hill plan at the monkey puzzle has enough houses; this site where the garage still stands should be a social centre for the people in the area. who don’t know known the area and councillors who appear to be controlled by developers. We have the South Downs National park south of Wealden and a large area of outstanding national beauty which well mean the area Polegate, Hailsham which will be taking the majority of proposed housing. Traffic becomes grid locked twice a day; strategy plan has to be short sighted document. Schools / Education I understand that there are 700 children in Eastbourne that are unable to attend a school in Eastbourne with lack of places, with more development proposed in Wealden the case for more educational centres are needed. I understand some developers are not willing to pay the contribution to schools infrastructure; they should be told if you don’t pay, go away! Travellers It would appear again that the councillors are burying their head in the sand regarding this issue, the travelling community aren’t all bade people and with proper sites they could fit into the community, which may wish to do. If you were to see the 10 biggest crooks in Britain, you would find 9 of them living in large houses. Burial grounds There is one thing that everyone will do and that is die and there appears there is no provision to extend existing burial grounds or to build new ones. Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry.

Details of Changes to be Made:
I feel that there hasn't been enough time for proper consultation to discuss all the facts in this final document and each village should of have had its own area document, plus more than one document that could cover the whole Wealden area for example in Herstmonceux we have had one document that went round the parish councillors and the public could not see it. I went in to Hailsham Town Council to see their strategy document to find one huge document which would have taken several days to read and understand. In the proposed development areas there appeared no more than a blob; the whole document needed more defined detail.

Proposed Submission
Core Strategy
Sound    ☐ Yes    ☑ No    ☐ Justified    ☐ Effective    ☐ Consistent with national policy
Legally Compliant ☐ Yes    ☐ No
Details of Reasons for Soundess/ Legal Complaince:
The major defects The lack of clean water is a problem that already exists and we are already building more houses and that is without the additional that are being proposed over the next 20 years, surface water is also a problem that hasn’t been addressed and covering more land with houses and roads will increase this problem, we already have over flowing sewage problems and further development would cause an even bigger issue.

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry

Proposed Submission
Core Strategy
Sound  □ Yes  ☑ No  □ Justified  □ Effective  □ Consistent with national policy
Legally Compliant  □ Yes  □ No
Details of Reasons for Soundess/ Legal Complaince:
Community centre / churches On all new large developments there needs to be a place where a couple of couples could live full time that could run a coffee shop, library, youth club that can be available every evening, used for worshipping purposes.

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry

Sound  □ Yes  □ No  □ Justified  □ Effective  □ Consistent with national policy
Legally Compliant  □ Yes  □ No
Details of Reasons for Soundess/ Legal Complaince:
Roads The infrastructure for present development, let alone future development is inadequate, this making the strategy document unworkable. One hopes that the localism bill will allow the local people to have more say in the future development in Wealden and we should not be ruled by parliamentary MPs who don’t know known the area and councillors who appear to be controlled by developers. We have the South Downs National park south of Wealden and a large area of outstanding national beauty which well mean the area Polegate, Hailsham which will be taking the majority of proposed housing. Traffic becomes grid locked twice a day now on this; strategy plan has to be short sighted document.

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry
Details of Reasons for Soundness/ Legal Compliance:
Schools / Education I understand that there are 700 children in Eastbourne that are unable to attend a school in Eastbourne with lack of places, with more development proposed in Wealden the case for more educational centres are needed. I understand some developers are not willing to pay the contribution to schools infrastructure; they should be told if you don’t pay, go away!

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry

Details of Reasons for Soundness/ Legal Compliance:
Care homes Whilst this may be a county council area, Wealden should be consulting with the social services being that we have a large number of older people in the district; there is a need for care homes under my land community trust plan. There is also a need for new houses to have 2 kitchens or an annex so older people can be looked after by younger people of the family. The extra accommodation can be used to take in lodgers that are seeking accommodation or young people that need their own space.

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry

Details of Reasons for Soundness/ Legal Compliance:
Burial grounds There is one thing that everyone will do and that is die and there appears there is no provision to extend existing burial grounds or to build new ones.

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry
Details of Reasons for Soundess/ Legal Complaince:
I don’t believe this plan is deliverable, I believe that there is no evidence of neighbouring authorities coherence if they have to consider developing in a similar way to Wealden with the lack of infrastructure, the lack of water and sewage disposal, school placements and hospitals the entire county will be unbearable to live in. Whilst there has been previous consultation with this document, the final Wealden recommendation has not had enough consultation time, in order to give a detailed response

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry

Details of Reasons for Soundess/ Legal Complaince:
The plan period 2006 - 2030 is too long. PPS12 suggests at least 15 years from the date of adoption which in this case is proposed to be 2011 taking us to 2026. This coincides with the SEPlan period. The CS evidence base is too uncertain beyond this date and insufficiently robust to justify policies or to be considered effective beyond 2026

Details of Changes to be Made:
Change the plan period to 2006 - 2026. To address the deficiencies identified inQ4 above.

Details of Reasons for Soundess/ Legal Complaince:
Due to recent reductions in the range of services available it would appear that Table 1- Settlement Hierachy should be amended by changing Polgate to Local Service Centre and Pevensey Bay to Neighbourhood Center. Pevensey and Pevensey Bay should be added to the Rural Area Strategy list since both can provide some increase in housing.
Details of Reasons for Soundess/ Legal Complaince:
This paragraph should refer to the South East Plan as it forms part of the development plan, is relevant to the matters being addressed within the Core Strategy and was published following extensive formulation, consultation, participation and thorough examination by the Panel prior to the (then) Secretary of State's consideration of the Panel's Report and final publication of the modified Plan. It is a well informed, evidence based and significant part of the development plan which should be fully acknowledged and addressed within the Core Strategy.

Details of Changes to be Made:
The Core Strategy should be redrafted to refer to those directly relevant and important aspects of the South East Plan which apply to the District.
### Details of Reasons for Soundness/ Legal Complaince:

6 Sustainability Appraisal 6.1 Introduction 6.1.1 This section of our representations addresses soundness issues raised by a review of the Sustainability Appraisal (SA) of the Wealden Proposed Submission Core Strategy. In considering soundness issues relating to the SA due consideration has been given to the following: § The Town and Country Planning (Local Development) (England) Regulations 2004 (as amended in 2008 and 2009) (SI 2004 No.2204/ SI 2008 No. 1371/ SI 2009 No. 401) § EU Directive 2001/42/EC on the assessment of the effects of certain plans and programmes on the environment (the ‘SEA Directive’) § Environmental Assessment of Plans and Programmes Regulations 2004 (SI 2004 No. 1633) (the ‘SEA Regulations’) § EU Directive 92/43/EEC on the conservation of natural habitats and of wild fauna and flora (The Habitats Directive) § The Conservation (Natural Habitats, &c) Regulations 1994 (as amended 1997, 2000, 2007, 2008, 2009, 2010) § The Conservation of Habitats and Species Regulations 2010 (as amended 2011) 6.1.2 Our representations are summarised below: Section of Core Strategy: Paragraphs 1.5 to 1.7, particularly paragraph 1.6, and bullet point BP10: Sustainability Appraisal of the Proposed Submission Core StrategyLegally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy: - 6.1.3 There a number of separate but related issues in relation to the SA which highlight that the Proposed Submission Core Strategy is not sufficiently justified. These are summarised as follows: § The justification for the preferred option for housing growth within the SA, which we consider to be inadequate. § The weight afforded to the landscape character assessment within the SA, which is considered inadequate and flawed. § SA scores for Maresfield within the SA of the Rural Settlement Hierarchy, which we consider to be inadequately justified. § The South East Plan considered that the lower growth options for the sub-region had beneficial effects in terms of lower environmental impacts, but would not address existing housing supply problems or support higher levels of economic growth. We consider therefore that the SA for the Proposed Submission Core Strategy underplays the potential economic benefits of maintaining higher levels of housing growth for Wealden. 6.2 Justification for the preferred option for housing growth using within the SA 6.2.1 The Proposed Submission Core Strategy for Wealden identifies, at para 1.6, that it contributes to “the achievement of sustainable development through Sustainability Appraisal where alternative options have been assessed against the Council’s agreed sustainability criteria, meeting the requirements of the Strategic Environmental Assessment Directive”. A key consideration in terms of soundness is that the Core Strategy needs to be ‘justified’ in that it is founded on a robust and credible evidence base and it is the most appropriate strategy when considered against reasonable alternatives. In this respect, the Sustainability Appraisal has a key role to play in showing how different options perform and demonstrating how sustainability considerations have informed the content of the Wealden Core Strategy. 6.2.2 Following the Secretary of State’s announcement of the Government’s intention to revoke Regional Strategies (27th May 2010) and a letter dated 6th July 2010 from DCLG Chief Planning Office advising on this decision, Wealden District Council has taken the decision to reduce the required number of homes in the District from 11,000 to 9,600 new dwellings. However, it is not clear how the sustainability appraisal informed this decision in light of testing against the Council’s agreed sustainability objectives. 6.2.3 Para 2.9, Figure 2.1 and Section 8 of the Sustainability Appraisal describes the approach taken in considering ‘reasonable alternatives’ for the Wealden Core Strategy. Para 8.4 of the Sustainability Appraisal identifies that an initial two scenarios, Scenarios A and B, were tested based on an allocated quantum of housing development as identified by the South East Plan (ie. 11,000 new dwellings). Reference to the Sustainability Appraisal of Spatial Development Options (July 2009) shows that a considerable amount of testing was undertaken of potential spatial distributions of the housing based on South East Plan growth levels. 6.2.4 However, a new scenario, Scenario C, developed after the Secretary of State’s announcement of the intention to revoke Regional Strategies, emerges as the preferred option for growth based on a quantum of housing development of 9,600 new dwellings. The SA includes only a brief justification for adopting Scenario C as the preferred option, describing it as having emerged later as a result of more detailed infrastructure testing and risk assessment, as well as the results of the SA of Scenarios A and B and ongoing work on the Appropriate Assessment. 6.2.5 Para 8.13 provides the only justification for Scenario C when compared to Scenarios A and B. In para 8.13 Scenarios A and B are described as “not supported by infrastructure capacity or environmental constraints”, whilst Scenario C “seeks to maximise housing delivery within acknowledged capacity constraints and directs growth to areas of need and with local aspirations”. Scenario C is deemed more beneficial overall in sustainability terms “as it places less pressure on environmental resources on infrastructure and on communities and is evidence-based at a local level using the most up to date evidence”. However, whilst the SA does include this brief justification for the reasons for selecting and rejecting these Scenarios, it does not include any analysis of these three options tested against the Council’s agreed sustainability objectives. Indeed, no further
not take sufficient consideration of the sustainability benefits of opportunities to improve social infrastructure within poor public transport links to the local secondary school in Uckfield. The SA acknowledges Maresfield will provide facilities with its centre. The population is noted as having a large component of retired and elderly people and are identified. In terms of economic factors, the SA scores Maresfield poorly in relation to workforce and limited that bus services are not suitable for working people. Some minor issues are noted in relation to crime, including the village for almost all significant services (GP, dentist, optician, hospital, banking and shopping). It also notes SA notes no GP, dispensary or dentist services available locally and that much of the population must travel out of Maresfield within the SA of the Rural Settlement Hierarchy 6.4.1 It is noted that the SA scores Maresfield poorly in comparison to the proposed Wealden Core Strategy rural settlement hierarchy. Maresfield is listed 8th in the rural settlement hierarchy for the north of the District. Notably, Maresfield scores poorly in the social sustainability hierarchy (24th out of 24) and economic sustainability hierarchy (18th out of 24). In terms of social factors the SA scores Maresfield poorly due to social exclusion and poor access to health and other services and facilities. The SA notes no GP, dispensary or dentist services available locally and that much of the population must travel out of the village for almost all significant services (GP, dentist, optician, hospital, banking and shopping). It also notes that bus services are not suitable for working people. Some minor issues are noted in relation to crime, including occasional incidents of minor vandalism and illegal driving offences. However, no major environmental constraints are identified. In terms of economic factors, the SA scores Maresfield poorly in relation to workforce and limited facilities with its centre. The population is noted as having a large component of retired and elderly people and poor public transport links to the local secondary school in Uckfield. The SA acknowledges Maresfield will provide significant employment opportunities with Ashdown Business Park soon to provide local jobs, although this does not appear to be borne out in the economic scoring for the settlement. 6.4.2 We contend that these scorings do not take sufficient consideration of the sustainability benefits of opportunities to improve social infrastructure within Maresfield or take advantage of its close proximity to a key employment site in the district. 6.5 How the SA for the South East Plan viewed the lower growth options for the sub-region 6.5.1 The option 1 South East Plan housing figures proposed 8,000 houses (equivalent to 400 per annum) to be provided within Wealden between 2006 and 2026 in the published draft Spatial Strategy. At Examination, the Inspector’s Panel revised that to 9,600 and the Secretary of State subsequently increased the figure to 11,000 new homes. 6.5.2 The SA for the South East Plan assessed three scales of regional growth, expressed in terms of annual rates of housing development for the period 2006-2026: 1. 25,500 pa (This equates to either 300 or 400 new homes for ‘Rest of East Sussex’) 2. 32,000 pa (This equates to 500 new homes for ‘Rest of East Sussex’) 3. 32,000 pa (This equates to 500 new homes for ‘Rest of East Sussex’) 6.5.3 In assessing the sustainability implication of these growth options, the SA summarises the assessment as follows: § The higher growth options (i.e. those which propose a housing growth rate of 32,000/year) were more likely to meet housing demands (and therefore ease problems of affordability) and provide for higher rates of economic growth, but would place more pressure on environmental resources, in particular transport infrastructure, water resources, land use, waste arisings, climate change etc. § The lower growth options (i.e. based on a housing growth rate of 25,500/year), conversely would have lower environmental impacts, but would not address existing housing supply problems or support as much economic growth. 6.5.4 The above comments from the SA of the South East Plan highlights the key issue with the SA of the Wealden Proposed Submission Core Strategy, namely that it underplays the potential economic benefits of maintaining the higher growth rates for the District.

**Details of Changes to be Made:**

**SUMMARY 6.2.7** In summary, we contend that the plan is unsound as it is not justified: the SA has not adequately justified the decision for selecting Scenario C over Scenarios A and B as the preferred option for housing growth. **SUMMARY 6.3.3** We therefore contend that the plan is unsound as it is not justified: justifications for the assessment of the landscape element of SA are based on a Landscape Character Assessment methodology and appraisal which is inadequate and flawed. **SUMMARY 6.4.3** In summary, we contend that the plan is unsound as it is not justified: the justifications for the scoring within the SA of the Rural Settlement Hierarchy give insufficient weight to the development opportunities in Maresfield to support improvements to local community, social, transport and educational facilities. In addition, insufficient weight has been afforded in the SA to opportunities to support business strength and economic growth in Maresfield, particularly through the adjacent Ashdown Business Park. **SUMMARY 6.5.5** In summary, we contend that the plan is unsound as the SA is not justified in that it does not take sufficient account of the economic benefits of maintaining the higher growth rates for the District.
6 Sustainability Appraisal 6.1 Introduction 6.1.1 This section of our representations addresses soundness issues raised by a review of the Sustainability Appraisal (SA) of the Wealden Proposed Submission Core Strategy. In considering soundness issues relating to the SA due consideration has been given to the following: § The Town and Country Planning (Local Development) (England) Regulations 2004 (as amended in 2008 and 2009) (SI 2004 No.2204/ SI 2008 No. 1371/ SI 2009 No. 401) § EU Directive 2001/42/EC on the assessment of the effects of certain plans and programmes on the environment (the ‘SEA Directive’) § Environmental Assessment of Plans and Programmes Regulations 2004 (SI 2004 No. 1633) (the ‘SEA Regulations’) § EU Directive 92/43/EEC on the conservation of natural habitats and of wild fauna and flora (The Habitats Directive) § The Conservation (Natural Habitats, &c) Regulations 1994 (as amended 1997, 2000, 2007, 2008, 2009, 2010) § The Conservation of Habitats and Species Regulations 2010 (as amended 2011) 6.1.2 Our representations are summarised below: Section of Core Strategy: Paragraphs 1.5 to 1.7, particularly paragraph 1.6, and bullet point BP10: Sustainability Appraisal of the Proposed Submission Core StrategyLegally Compliant: -Sound: No -Justified: No -Effective: No -Consistent with national policy: - 6.1.3 There a number of separate but related issues in relation to the SA which highlight that the Proposed Submission Core Strategy is not sufficiently justified. These are summarised as follows: § The justification for the preferred option for housing growth within the SA, which we consider to be inadequate. § The weight afforded to the landscape character assessment within the SA, which is considered inadequate and flawed. § SA scores for Maresfield within the SA of the Rural Settlement Hierarchy, which we consider to be inadequately justified. § The South East Plan considered that the lower growth options for the sub-region had beneficial effects in terms of lower environmental impacts, but would not address existing housing supply problems or support higher levels of economic growth. We consider therefore that the SA for the Proposed Submission Core Strategy underplays the potential economic benefits of maintaining higher levels of housing growth for Wealden. 6.2 Justification for the preferred option for housing growth using within the SA 6.2.1 The Proposed Submission Core Strategy for Wealden identifies, at para 1.6, that it contributes to “the achievement of sustainable development through Sustainability Appraisal where alternative options have been assessed against the Council’s agreed sustainability criteria, meeting the requirements of the Strategic Environmental Assessment Directive”. A key consideration in terms of soundness is that the Core Strategy needs to be ‘justified’ in that it is founded on a robust and credible evidence base and it is the most appropriate strategy when considered against reasonable alternatives. In this respect, the Sustainability Appraisal has a key role to play in showing how different options perform and demonstrating how sustainability considerations have informed the content of the Wealden Core Strategy. 6.2.2 Following the Secretary of State’s announcement of the Government’s intention to revoke Regional Strategies (27th May 2010) and a letter dated 6th July 2010 from DCLG Chief Planning Office advising on this decision, Wealden District Council has taken the decision to reduce the required number of homes in the District from 11,000 to 9,600 new dwellings. However, it is not clear how the sustainability appraisal informed this decision in light of testing against the Council’s agreed sustainability objectives. 6.2.3 Para 2.9, Figure 2.1 and Section 8 of the Sustainability Appraisal describes the approach taken in considering ‘reasonable alternatives’ for the Wealden Core Strategy. Para 8.4 of the Sustainability Appraisal identifies that an initial two scenarios, Scenarios A and B, were tested based on an allocated quantum of housing development as identified by the South East Plan (ie. 11,000 new dwellings). Reference to the Sustainability Appraisal of Spatial Development Options (July 2009) shows that a considerable amount of testing was undertaken of potential spatial distributions of the housing based on South East Plan growth levels. 6.2.4 However, a new scenario, Scenario C, developed after the Secretary of State’s announcement of the intention to revoke Regional Strategies, emerges as the preferred option for growth based on a quantum of housing development of 9,600 new dwellings. The SA includes only a brief justification for adopting Scenario C as the preferred option, describing it as having emerged later as a result of more detailed infrastructure testing and risk assessment, as well as the results of the SA of Scenarios A and B and ongoing work on the Appropriate Assessment. 6.2.5 Para 8.13 provides the only justification for Scenario C when compared to Scenarios A and B. In para 8.13 Scenarios A and B are described as “not supported by infrastructure capacity or environmental constraints”, whilst Scenario C “seeks to maximise housing delivery within acknowledged capacity constraints and directs growth to areas of need and with local aspirations”. Scenario C is deemed more beneficial overall in sustainability terms “as it places less pressure on environmental resources on infrastructure and on communities and is evidence-based at a local level using the most up to date evidence”. However, whilst the SA does include this brief justification for the reasons for selecting and rejecting these Scenarios, it does not include any analysis of these three options tested against the Council’s agreed sustainability objectives. Indeed, no further
justification is provided for selecting Scenario C over Scenarios A and B, apart from this brief discussion in para 8.13. 6.2.6 From the evidence provided, it is not possible to determine how Scenario C performs overall against the full range of SA criteria in comparison the higher levels of housing growth proposed in Scenarios A and B. This we suggest is a well established and sound, common sense approach to the evaluation of reasonable alternatives. The failure to evaluate and compare these three options using the SA framework of objectives demonstrates that SA does not adequately justify the selection of Scenario C against other reasonable alternatives. We therefore dispute the statement in para 1.6 of the Proposed Submission Core Strategy for Wealden that the plan contributes to "the achievement of sustainable development the Sustainability Appraisal where alternative options have been assessed against the Council's agreed sustainability criteria". 6.3 Weight afforded to the landscape character assessment within the SA 6.3.1 Consideration of landscape issues is a requirement of the SEA Directive. This is addressed in the SA of Wealden Core Strategy through the Sustainability Appraisal framework of objectives. SA Objective 11 address landscape issues alongside a range of other topic areas, including access to the countryside, and historic and built environment. Whilst this could be argued to 'water down' the landscape component, much of the SA information on landscape is drawn from a separate Landscape Study, undertaken as part of the evidence base for the Core Strategy. 6.3.2 As highlighted elsewhere in this representation (see section 7) we consider the Landscape Character Assessment and the resulting appraisal to be inadequate and flawed. Our comments on the inadequacy of the Landscape Study are relevant here as they form the direct basis for the assessment of landscape issues with the SA of the Proposed Submission Core Strategy. 6.4 SA scores for Maresfield within the SA of the Rural Settlement Hierarchy 6.4.1 It is noted that the SA scores Maresfield poorly in comparison to the proposed Wealden Core Strategy rural settlement hierarchy. Maresfield is listed 8th in the rural settlement hierarchy for the north of the District. Notably, Maresfield scores poorly in the social sustainability hierarchy (24th out of 24) and economic sustainability hierarchy (18th out of 24). In terms of social factors the SA notes no GP, dispensary or dentist services available locally and that much of the population must travel out of the village for almost all significant services (GP, dentist, optician, hospital, banking and shopping). It also notes that bus services are not suitable for working people. Some minor issues are noted in relation to crime, including occasional incidents of minor vandalism and illegal driving offences. However, no major environmental constraints are identified. In terms of economic factors, the SA scores Maresfield poorly in relation to workforce and limited facilities with its centre. The population is noted as having a large component of retired and elderly people and poor public transport links to the local secondary school in Uckfield. The SA acknowledges Maresfield will provide significant employment opportunities with Ashdown Business Park soon to provide local jobs, although this does not appear to be borne out in the economic scoring for the settlement. 6.4.2 We contend that these scorings do not take sufficient consideration of the sustainability benefits of opportunities to improve social infrastructure within Maresfield or take advantage of its close proximity to a key employment site in the district. 6.5 How the SA for the South East Plan assessed three scales of regional growth, expressed in terms of annual rates of housing development for the period 2006-2026: 1. 25,500 pa (This equates to either 300 or 400 new homes for ‘Rest of East Sussex’) 2. 28,000 pa (This equates to 400 new homes for ‘Rest of East Sussex’) 3. 32,000 pa (This equates to 500 new homes for ‘Rest of East Sussex’) 6.5.3 In assessing the sustainability implication of these growth options, the SA summarises the assessment as follows: § The higher growth options (i.e. those which propose a housing growth rate of 32,000/year) were more likely to meet housing demands (and therefore ease problems of affordability) and provide for higher rates of economic growth, but would place more pressure on environmental resources, in particular transport infrastructure, water resources, land use, waste arisings, climate change etc. § The lower growth options (i.e. based on a housing growth rate of 25,500/year), conversely would have lower environmental impacts, but would not address existing housing supply problems or support as much economic growth. 6.5.4 The above comments from the SA of the South East Plan highlights the key issue with the SA of the Wealden Proposed Submission Core Strategy, namely that it underplays the potential economic benefits of maintaining the higher growth rates for the District.

Details of Changes to be Made:
SUMMARY 6.2.7 In summary, we contend that the plan is unsound as it is not justified: the SA has not adequately justified the decision for selecting Scenario C over Scenarios A and B as the preferred option for housing growth. SUMMARY 6.3.3 We therefore contend that the plan is unsound as it is not justified: justifications for the assessment of the landscape element of SA are based on a Landscape Character Assessment methodology and appraisal which is inadequate and flawed. SUMMARY 6.4.3 In summary, we contend that the plan is unsound as it is not justified: the justifications for the scoring within the SA of the Rural Settlement Hierarchy give insufficient weight to the development opportunities in Maresfield to support improvements to local community, social, transport and educational facilities. In addition, insufficient weight has been afforded in the SA to opportunities to support business strength and economic growth in Maresfield, particularly through the adjacent Ashdown Business Park. SUMMARY 6.5.5 In summary, we contend that the plan is unsound as the SA is not justified in that it does not take sufficient account of the economic benefits of maintaining the higher growth rates for the District.

Details of Reasons for Soundness/ Legal Complaince:

6 Sustainability Appraisal 6.1 Introduction 6.1.1 This section of our representations addresses soundness issues raised by a review of the Sustainability Appraisal (SA) of the Wealden Proposed Submission Core Strategy. In considering soundness issues relating to the SA due consideration has been given to the following: § The Town and Country Planning (Local Development) (England) Regulations 2004 (as amended in 2008 and 2009) (SI 2004 No.2204/ SI 2008 No. 1371/ SI 2009 No. 401) § EU Directive 2001/42/EC on the assessment of the effects of certain plans and programmes on the environment (the ‘SEA Directive’) § Environmental Assessment of Plans and Programmes Regulations 2004 (SI 2004 No. 1633) (the ‘SEA Regulations’) § EU Directive 92/43/EEC on the conservation of natural habitats and of wild fauna and flora (The Habitats Directive) § The Conservation (Natural Habitats, &c) Regulations 1994 (as amended 1997, 2000, 2007, 2008, 2009, 2010) § The Conservation of Habitats and Species Regulations 2010 (as amended 2011) 6.1.2 Our representations are summarised below: Section of Core Strategy: Paragraphs 1.5 to 1.7, particularly paragraph 1.6, and bullet point BP10: Sustainability Appraisal of the Proposed Submission Core StrategyLegally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy: - 6.1.3 There a number of separate but related issues in relation to the SA which highlight that the Proposed Submission Core Strategy is not sufficiently justified. These are summarised as follows: § The justification for the preferred option for housing growth within the SA, which we consider to be inadequate. § The weight afforded to the landscape character assessment within the SA, which is considered inadequate and flawed. § SA scores for Maresfield within the SA of the Rural Settlement Hierarchy, which we consider to be inadequately justified. § The South East Plan considered that the lower growth options for the sub-region had beneficial effects in terms of lower environmental impacts, but would not address existing housing supply problems or support higher levels of economic growth. We consider therefore that the SA for the Proposed Submission Core Strategy underplays the potential economic benefits of maintaining higher levels of housing growth for Wealden. 6.2 Justification for the preferred option for housing growth using within the SA 6.2.1 The Proposed Submission Core Strategy for Wealden identifies, at para 1.6, that it contributes to “the achievement of sustainable development through Sustainability Appraisal where alternative options have been assessed against the Council’s agreed sustainability criteria, meeting the requirements of the Strategic Environmental Assessment Directive”. A key consideration in terms of soundness is that the Core Strategy needs to be ‘justified’ in that it is founded on a robust and credible evidence base and it is the most appropriate strategy when considered against reasonable alternatives. In this respect, the Sustainability Appraisal has a key role to play in showing how different options perform and demonstrating how sustainability considerations have informed the content of the Wealden Core Strategy. 6.2.2 Following the Secretary of State’s announcement of the Government’s intention to revoke Regional Strategies (27th May 2010) and a letter dated 6th July 2010 from DCLG Chief Planning Office advising on this decision, Wealden District Council has taken the decision to reduce the required number of homes in the District from 11,000 to 9,600 new dwellings. However, it is not clear how the sustainability appraisal informed this decision in light of testing against the Council’s agreed sustainability objectives. 6.2.3 Para 2.9, Figure 2.1 and Section 8 of the Sustainability Appraisal describes the approach taken in considering ‘reasonable alternatives’ for the Wealden Core Strategy. Para 8.4 of the Sustainability Appraisal identifies that an initial two scenarios, Scenarios A and B, were tested based on an allocated quantum of housing development as identified by the South East Plan (ie. 11,000 new dwellings). Reference to the Sustainability Appraisal shows that a considerable amount of testing was undertaken of potential spatial distributions of the housing based on South East Plan growth levels. 6.2.4 However, a new scenario, Scenario C, developed after the Secretary of State’s announcement of the intention to revoke Regional Strategies, emerges as the preferred option for growth based on a quantum of housing development of 9,600 new dwellings. The SA includes only a brief justification for adopting Scenario C as the preferred option, describing it as having emerged later as a result of more detailed infrastructure testing and risk assessment, as well as the results of the SA of Scenarios A and B and ongoing work on the Appropriate Assessment. 6.2.5 Para 8.13 provides the only justification for Scenario C when compared to Scenarios A and B. In para 8.13 Scenarios A and B are described as “not supported by infrastructure capacity or environmental constraints”, whilst Scenario C “seeks to maximise housing delivery within acknowledged capacity constraints and directs growth to areas of need and with local aspirations”. Scenario C is deemed more beneficial overall in sustainability terms “as it places less pressure on environmental resources on infrastructure and on communities and is evidence-based at a local level using the most up to date evidence”. However, whilst the SA does include this brief justification for the reasons for selecting and rejecting these Scenarios, it does not include any analysis of these three options tested against the Council’s agreed sustainability objectives. Indeed, no further
justification is provided for selecting Scenario C over Scenarios A and B, apart from this brief discussion in para 8.13. 6.2.6 From the evidence provided, it is not possible to determine how Scenario C performs overall against the full range of SA criteria in comparison the higher levels of housing growth proposed in Scenarios A and B. This we suggest is a well established and sound, common sense approach to the evaluation of reasonable alternatives. The failure to evaluate and compare these three options using the SA framework of objectives demonstrates that SA does not adequately justify the selection of Scenario C against other reasonable alternatives. We therefore dispute the statement in para 1.6 of the Proposed Submission Core Strategy for Wealden that the plan contributes to "the achievement of sustainable development the Sustainability Appraisal where alternative options have been assessed against the Council’s agreed sustainability criteria". 6.3 Weight afforded to the landscape character assessment within the SA 6.3.1 Consideration of landscape issues is a requirement of the SEA Directive. This is addressed in the SA of Wealden Core Strategy through the Sustainability Appraisal framework of objectives. SA Objective 11 address landscape issues alongside a range of other topic areas, including access to the countryside, and historic and built environment. Whilst this could be argued to 'water down' the landscape component, much of the SA information on landscape is drawn from a separate Landscape Study, undertaken as part of the evidence base for the Core Strategy. 6.3.2 As highlighted elsewhere in this representation (see section 7) we consider the Landscape Character Assessment and the resulting appraisal to be inadequate and flawed. Our comments on the inadequacy of the Landscape Study are relevant here as they form the direct basis for the assessment of landscape issues with the SA of the Proposed Submission Core Strategy. 6.4 SA scores for Maresfield within the SA of the Rural Settlement Hierarchy 6.4.1 It is noted that the SA scores Maresfield poorly in relation to workforce and limited occasional incidents of minor vandalism and illegal driving offences. However, no major environmental constraints are identified. In terms of social factors the SA scores Maresfield poorly due to social exclusion and poor access to health and other services and facilities. The SA notes no GP, dispensary or dentist services available locally and that much of the population must travel out of the village for almost all significant services (GP, dentist, optician, hospital, banking and shopping). It also notes that bus services are not suitable for working people. Some minor issues are noted in relation to crime, including occasional incidents of minor vandalism and illegal driving offences. However, no major environmental constraints are identified. In terms of economic factors, the SA scores Maresfield poorly in relation to workforce and limited facilities with its centre. The population is noted as having a large component of retired and elderly people and poor public transport links to the local secondary school in Uckfield. The SA acknowledges Maresfield will provide significant employment opportunities with Ashdown Business Park soon to provide local jobs, although this does not appear to be borne out in the economic scoring for the settlement. 6.4.2 We contend that these scorings do not take sufficient consideration of the sustainability benefits of opportunities to improve social infrastructure within Maresfield or take advantage of its close proximity to a key employment site in the district. 6.5 How the SA for the South East Plan viewed the lower growth options for the sub-region 6.5.1 The option 1 South East Plan housing figures proposed 8,000 houses (equivalent to 400 per annum) to be provided within Wealden between 2006 and 2026 in the published draft Spatial Strategy. At Examination, the Inspector’s Panel revised that to 9,600 and the Secretary of State subsequently increased the figure to 11,000 new homes. 6.5.2 The SA for the South East Plan assessed three scales of regional growth, expressed in terms of annual rates of housing development for the period 2006-2026: 1. 25,500 pa (This equates to either 300 or 400 new homes for ‘Rest of East Sussex’) 2. 28,000 pa (This equates to 400 new homes for ‘Rest of East Sussex’) 3. 32,000 pa (This equates to 500 new homes for ‘Rest of East Sussex’). 6.5.3 In assessing the sustainability implication of these growth options, the SA summarises the assessment as follows: § The higher growth options (i.e. those which propose a housing growth rate of 32,000/year) were more likely to meet housing demands (and therefore ease problems of affordability) and provide for higher rates of economic growth, but would place more pressure on environmental resources, in particular transport infrastructure, water resources, land use, waste arisings, climate change etc. § The lower growth options (i.e. based on a housing growth rate of 25,500/year), conversely would have lower environmental impacts, but would not address existing housing supply problems or support as much economic growth. 6.5.4 The above comments from the SA of the South East Plan highlights the key issue with the SA of the Wealden Proposed Submission Core Strategy, namely that it underplays the potential economic benefits of maintaining the higher growth rates for the District. Details of Changes to be Made: SUMMARY 6.2.7 In summary, we contend that the plan is unsound as it is not justified: the SA has not adequately justified the decision for selecting Scenario C over Scenarios A and B as the preferred option for housing growth. SUMMARY 6.3.3 We therefore contend that the plan is unsound as it is not justified: justifications for the assessment of the landscape element of SA are based on a Landscape Character Assessment methodology and appraisal which is inadequate and flawed. SUMMARY 6.4.3 In summary, we contend that the plan is unsound as it is not justified: the justifications for the scoring within the SA of the Rural Settlement Hierarchy give insufficient weight to the development opportunities in Maresfield to support improvements to local community, social, transport and educational facilities. In addition, insufficient weight has been afforded in the SA to opportunities to support business strength and economic growth in Maresfield, particularly through the adjacent Ashdown Business Park. SUMMARY 6.5.5 In summary, we contend that the plan is unsound as the SA is not justified in that it does not take sufficient account of the economic benefits of maintaining the higher growth rates for the District.
Details of Reasons for Soundness/ Legal Compliance:
There is no sound justification as to why it is considered that trend-based household projections are in excess of that which could be accommodated or delivered within Wealden. To be effective the Plan should aim to provide for household needs in the District and also to have regard to wider Regional Housing need. The figures in paragraph 3.10 and Note 1 appear to be inconsistent.

Details of Changes to be Made:
Revise the text to encompass the objective referred to in Q4 above.

Details of Reasons for Soundness/ Legal Compliance:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request".

Details of Changes to be Made:
REVISION SOUGHT. Delete this paragraph as it is inconsistent with the overall aims of the CS in respect of reducing the need to travel by car, climate change and several other aims. It is also unclear as to the spatial nature of the statement in respect of providing greater choice.

Details of Reasons for Soundness/ Legal Compliance:
Again support is given to the strategy that: overall the Core Strategy is not seeking to change the character of Wealden.

Details of Changes to be Made:
Paragraph 2.4 notes: Any significant change to this settlement pattern has the potential to change the way in which the settlements co-exist, and the vibrancy of our main towns. This approach is strongly supported in the context of maintaining the hierarchical dominance of the 5 main towns in particular Hailsham.

Details of Changes to be Made:

---

Paragraph 2.6

The references to ‘dispersed settlement pattern’ in Wealden, with 93 per cent of the district containing half of its population are misleading, so affecting the policies derived from that thinking. It ignores the significance of nucleated villages as well as the main towns.

Details of Changes to be Made:

The settlement pattern seen as ‘dispersed’ for half of the population needs refining in the document. The proportions of those living in places larger than 500 and 1,000 should be identified. There is great scope for serving these by public transport evolving from the present network, with limited strict dependence on cars.

---

Paragraph 2.7

Again support is given to the strategy of focussing growth where it is most accessible and sustainable. It is also recognised that in less sustainable locations, additional growth will simply encourage more travel and out commuting and the potential for increasing social inequality.

Paragraph 2.11
Sound  ☐ Yes  ☑ No  ☐ Justified  ☑ Effective  ☐ Consistent with national policy
Legally Compliant  ☐ Yes  ☐ No
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy fails to acknowledge that climate change will have a ‘double impact’ on the provision of water infrastructure. On the demand side it could result in higher summer peaks and higher than average usage. On the supply side, longer drier summers could significantly reduce the deployable output of surface water resources and impact on groundwater resources. To be effective in managing the affects of climate change and therefore be sound, the Core Strategy must support South East Water in its efforts to manage water efficiency and develop new resources.
Details of Changes to be Made:
Paragraph 2.11 should include a statement that the Core Strategy will adapt and mitigate climate change by supporting water efficiency measures and the development of new water resources, where necessary. In addition, South East Water considers it imperative that the Core Strategy provides explicit policy support for necessary new water supply infrastructure, and is sufficiently flexible to deliver planned water demand and infrastructure improvements identified within the company’s statutory Water Resource Management Plan. These are improvements identified as being required to maintain the fine balance between what water is naturally available and the demand for water from customers, while supporting new development and meeting the challenges of climate change and changing environmental standards. A policy that supports the provision of additional water supply infrastructure that maintains, improves and, where necessary, expands the water supply network is considered essential by South East Water. See also comments on policy SP09 in respect of water efficiency measures and section 8.1 in respect of infrastructure planning.

Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundness/ Legal Compliance:
The environment of Wealden we welcome the references to the high quality environment within the District, including the national park and its role in affording prospects for recreation and enjoyment.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
The Council state that the District has a much smaller proportion of the population in the 15-39 age range than the national average, with a significantly above average number of people of pensionable age. They note that without intervention, this age structure is set to continue with predicted increases in the proportion of the population over 75 years, and a continuing net loss of the population within the 15-24 year age range. The changing nature of household formation, means that the average numbers of persons per household is declining. On this basis, a nil increase in the net number of dwellings units would result in a decline in the resident population. The Council acknowledge that without in-migration, there will be a reduction in the District’s population with an associated detrimental impact on the economy, town centres and services. They conclude that the District requires in-migration and that this requires additional housing. Paragraph 2.20 therefore notes that there is ‘an overall increased need and demand for housing and accompanying growth’. In response, the PSCS seeks to enable the phased delivery of 400 dwellings per annum over the 24 year period of the DPD (ie 2006 – 2030). However, paragraph 5.13 notes that in the District, over the last 21 years, an average of 400 dwellings per annum have been built. Therefore the planned growth seeks to mirror exactly the level of growth that has occurred in recent years. Given the Council’s acknowledgement that housing growth is required, it is considered that a housing trajectory that merely reflects past recent completion rates is insufficient. This will compound the existing demographic structure, which the PSCS acknowledges will continue without intervention. Such a demographic profile will have a detrimental impact on the local economy and vitality of town centres and services.

Details of Changes to be Made:
Given the overall reduction in household size, and the age structure of the District it is considered that an annual growth rate of 400dpa will not result in the requisite level of in-migration and an associated demographic profile that is required to facilitate growth of the local economy, regenerate town centres and preserve local services. The proposed level of housing growth is therefore ineffective and renders the PSCS unsound. The PSCS should plan for an annual net additional housing growth rate that delivers a step change increase over the last 21 years.
Paragraph 2.19

Details of Reasons for Soundness/ Legal Compliance:
The environment of Wealden we welcome the references to the high quality environment within the District, including the national park and its role in affording prospects for recreation and enjoyment.

Details of Changes to be Made:

Yes ☐ Sound ☑ No ☐ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Paragraph 2.21

Details of Reasons for Soundness/ Legal Compliance:
Whilst this paragraph reveals socio-economic issues which face the District it does not refer to the severe shortage of affordable housing and likely scale of residential development necessary to support increased delivery. The Core Strategy's text should refer to this issue and cross refer to the way in which the District will tackle the need to increase delivery.

Details of Changes to be Made:
The Core Strategy needs to fully reflect the national planning policy set out within PPS 3 - Housing and this section requires further development.

Paragraph 2.21

Details of Reasons for Soundness/ Legal Compliance:
2.21 Declares "the strategy is not seeking to change the character of Wealden" PTC believes development of the SD4 area will force two settlements (Willingdon and Polegate) into one thus changing the character of the area.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
Object to the inclusion of Maresfield as a neighbourhood centre when it is clearly much more than this, and should be a Local Service Centre. Maresfield is much larger than the other villages in the neighbourhood centre group and contrary to the council's assessment has similar or greater facilities than most of those in the Local Service Centre group. In particular it is immediately adjacent to the Ashdown Business Park which is planned to provide 1000 jobs. It also has as many if not more shops, garages, pubs than most of the LSC Group and certainly has much more than those in the NC group. In particular if Buxted is considered a LSA where there is minimal local employment, no more shops than Maresfield, no garage, and the local shop appears to have closed, is considered an LSC then clearly Maresfield should also be in this group. Maresfield should retain a development boundary. given that the council state that one of the aims of the strategy is to limit car travel and enable people to live where they work, clearly the uniqueness of Maresfield having the large employment site next to it means much more new housing should be allowed there as well. As otherwise as things stand at the moment, with the small older retired current population in Maresfield, the vast majority of workers at the Ashdown Business Park will have to drive in from other parts of the area.

Details of Changes to be Made:
Change Maresfield to where it should be a Local Service Centre. Retain a development boundary. Allocate 300 to 400 houses to Maresfield to allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other parts of the area.

Details of Reasons for Soundess/ Legal Complaince:
WJPC is concerned at the numerous references to Polegate and Willingdon as one settlement, as highlighted in 3.3 Table 1, 3.11, SPO6, WCS2, WCS3, 5.13, 6.31(2), Figure 8 and Figure 12. In particular, Figure 2 showing settlement hierarchy, places Polegate and Willingdon as one settlement, yet details other settlements individually.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
The Wealden settlement hierarchy does not adequately reflect the settlement structure in the district and, as such, it is unsound. Westham should be identified as a Service Centre due to the facilities and employment areas it contains. The hierarchy constrains positive development in lower order settlements, that may contribute to sustainable growth of the area. paragraph 3.4 should clarity that some local service centres are capable of accommodating sustainable growth.

Details of Changes to be Made:
The Wealden settlement hierarchy should be redrafted to reflect the settlement structure in the district and allow for growth to meet future economic and social needs. We consider that Westham should be allocated as a service centre due to the facilities and employment areas it contains. Paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth. Please see Indigo Planning letter dated 15 April 2011
4.1 Introduction

4.1.1 This section of our representations refers to the settlement hierarchy set out in the proposed submission Core Strategy. Our representation is summarised below: Section of Core Strategy: Table 1, Settlement Hierarchy Figure 2, Settlement Hierarchy, and Paras 3.2 – 3.7

Legally Compliant - Sound: No Justified: No Effective: No Consistent with national policy

Details of Reasons for Soundess/ Legal Complaince:

4.2 Issues

4.2.1 In the Core Strategy, the Settlement hierarchy is a key determinant in distributing housing growth across settlements. It has been used at all stages in the plan process. However, the terminology to describe settlements at different levels of the hierarchy has changed and the criteria have been incorrectly applied. The results of this are that Maresfield has been classified incorrectly and the potential to accommodate growth here has thus been underplayed. The issues here are thus: § The assessment of Maresfield against the criteria used to classify villages in the hierarchy has changed over time § The assessment has been inappropriately applied. It does not, in Maresfield, acknowledge the employment offer that will be forthcoming at the Ashdown Business Park, even though this has planning permissions § The assessment is static and does not allow for change or reclassification over time § Why has the classification and thus the associated potential for development changed between different iterations of the Core Strategy?

4.2.2 We present this section in chronological order, starting with the 2007 Core Strategy Issues and Options, through the 2009 Spatial Options to the 2011 Proposed Submission Core Strategy. 2007 Core Strategy Issues and Options: 4.2.3 The 2007 Draft Settlement Strategy for the Villages (Core Strategy Issues and Options Background Paper) identifies Maresfield as a local service centre and a village with growth potential. It states (para 6.49): ‘Maresfield is identified as a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both of these. This ignores the fact that the Ashdown Business Park, which received planning permission in 2010, is located in Maresfield. The submission Core Strategy acknowledges this at para 3.21, so why does the settlement hierarchy not take this into consideration? 4.2.4 At this time, the Council identified the potential level of growth in Maresfield as being between 350 – 500 new homes. 2009 Core Strategy Spatial Options 4.2.5 In the 2009 Rural Settlement Classification (Core Strategy Spatial Options Background Paper 6), the status of Maresfield had changed to an ‘Accessible Settlement with Limited Facilities’. The Rural Settlement Classification allocated the following amount of homes to each settlement type: § Accessible Local Service Centre: 250 dwellings § Local Service Centre: 150 dwellings § Accessible Settlement with Limited Facilities: 100 dwellings § Accessible Settlement: 40 dwellings 4.2.6 Under these criteria, Maresfield would be a location for 100 new homes. The potential level of housing development increases to 250 dwellings for ‘accessible local service centres’. There are only two criteria which differentiate an ‘accessible local service centre’ from an ‘accessible settlement with limited facilities’; the former benefitting from a GP service and a business area or ‘other locally significant employment opportunities’. Maresfield meets the second of these given the recent planning permission for the Ashdown Business Park. 4.2.7 Furthermore in Barratt’s consultation response submitted to the 2009 Core Strategy Spatial Options we stated that the inclusion of the existence of a GP surgery within the criteria is considered inappropriate as it does not recognise the functional relationships between settlements whereby villages in close proximity will share facilities which none in their own right would have the scale of population to support. PPS 3 paragraph 38 makes this point. The nearest GP surgeries to Maresfield are in Buxted and Uckfield, both of which are within 5 km of Maresfield. We would also contend that the future pattern of provision of rural GP surgeries is uncertain and not a robust basis on which to allocate development to individual settlements. Given the above, we recommended that the criteria be changed to ‘access to health care facilities by sustainable modes of travel’ rather than provision of a GP service within the settlement itself. 2011 Core Strategy Submission Draft 4.2.8 Policy WSC6 establishes that provision will be made for at least 455 new dwellings across the following categories of settlement: service centre, local service centre, neighbourhood centre and unclassified settlements. Table 1 and associated Figure 2 of the Submission Core Strategy classify Maresfield as a Neighbourhood Centre. The rationale for this is set out in Appendix 3 to the Core Strategy Background Paper 1: Development of the Proposed Submission Core Strategy (February 2011). Appendix 4 establishes how each settlement was classified. 4.2.9 We contend that the settlement classification significantly underplays the role and potential of Maresfield. Criteria for classifying settlements include presence of a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both of these. This ignores the fact that the Ashdown Business Park, which received planning permission in 2010, is located in Maresfield. The submission Core Strategy acknowledges this at para 3.21, so why does the settlement hierarchy not take this into consideration? 4.2.10 We have compared the assessment undertaken in the Background Paper with the draft Settlement Strategy for the Villages (July 2007, Core Strategy Issues and Options).
Options) and the Rural Settlement Classification (July 2009, Core Strategy Spatial Development Options Background Paper). In both the 2007 and 2009 classifications, Maresfield receives a tick against both ‘business area’ and ‘other locally significant employment opportunities’. There is no reason why the assessment set out in the February 2011 background paper should change this, particularly given that the Ashdown Business Park now has planning permission. 4.2.11 The Councils Employment Land review identifies the Ashdown Business Park as the most strategically significant employment site in North Wealden. It will provide in the region of 600 – 700 jobs in a mix of office and B1 light industrial space. The planning application submitted for the Business Park makes the link between housing and employment growth and contribution to sustainable patterns of development and local employment opportunities. Para 3.18 of the submission Core Strategy states ‘The strategy is aimed at increasing the opportunity for people to work close to where they live’. 4.2.12 The criteria for assessing Maresfield also include a cross against ‘provision of changing facilities’ (for sports). Again, this is incorrect. Changing facilities exist at the recreation ground – for football and cricket – and at the Bowls Club. 4.2.13 So, the question here is why has the classification of Maresfield has changed from a local centre with growth potential (in 2007) to a Neighbourhood Centre with limited potential (in 2011), bearing in mind that the criteria have effectively remained the same and that, as we point out above, the assessment actually underplays the potential of Maresfield? The justification and rationale for changing the classification of Maresfield is not clear. 4.2.14 The Core Strategy aspires to retaining the rural character and high quality environment of the district, whilst also providing sufficient growth to improve the performance of the economy, regenerate market towns and provide a more vital future for villages. 4.2.15 However, the settlement classification is static and does not allow for any reclassification of settlements during the period covered by the LDF. It does not acknowledge that villages may become more sustainable through additional population arising from new development increasing the viability of local shops and services. PPS 3 is clear here that the need for housing provision in rural areas, not only in market towns and local service centres but also in villages in order to enhance or maintain their sustainability.

Details of Changes to be Made:
SUMMARY 4.2.16 In summary, we contend that the assessment is incorrect, previous consultation responses have not been addressed and the potential for growth and change in Maresfield is being suppressed. The assessment should be reconsidered in light of the planning permission granted for the Ashdown Business Park and the potential for balancing homes and jobs in this part of the district recognised. 4.2.17 We thus contend that, on this matter, the Core Strategy is unsound, because: 1. It is not justified, as the evidence used is incorrect; and 2. It is not effective, as the boundaries are ‘static’ and thus not flexible.

Change Maresfield to where it should be a Local Service Centre. Retain a development boundary. Allocate 300 to 400 houses to Maresfield to allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other parts of the area.

Details of Reasons for Soundess/ Legal Complaince:
The Wealden settlement hierarchy does not adequately reflect the settlement structure in the district and, as such, it is unsound. Westham should be identified as a Service Centre due to the facilities and employment areas it contains. The hierarchy constrains positive development in lower order settlements, that may contribute to sustainable growth of the area. paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth.

Details of Changes to be Made:
The Wealden settlement hierarchy should be redrafted to reflect the settlement structure in the district and allow for growth to meet future economic and social needs. We consider that Westham should be allocated as a service centre due to the facilities and employment areas it contains. Paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth. Please see Indigo Planning letter dated 15 April 2011
Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a ‘District Centre’ and not as a ‘Service Centre’. The town fulfils the functions and characteristics of a District Centre as defined on Table 1. It is a far more important settlement within the district than the Council has suggested. Indeed the Council itself identifies Heathfield as one of the five main towns in the District in paragraph 2.3 of the Proposed Core Strategy and Policy SP04 which refers to “our five principle towns”. The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities, that serves a distinct part of the district. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

Heathfield should be re-defined in the Settlement Hierarchy as a District Centre

Details of Reasons for Soundess/ Legal Complaince:

1. The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a ‘District Centre’ and not as a ‘Service Centre’. The town fulfils the functions and characteristics of a District Centre as defined on Table 1. It is a far more important settlement within the district than the Council has suggested, evidenced in the Core Strategy paragraph 2.3 which identifies Heathfield as one of the five main towns in the district and in Policy SP04 which refers to “our five principal towns”. The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities that serves a distinct part of the district. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

2. Paragraph 3.4 states that, “the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities services and site opportunities exist. It is considered that the Council has under-estimated the current and future roles that Heathfield can play in this respect by failing to properly recognise the character and function of the town. In order to make the Core Strategy sound, Heathfield should be redefined within the Settlement hierarchy as a District Centre.
4.1 Introduction 4.1.1 This section of our representations refers to the settlement hierarchy set out in the proposed submission Core Strategy. Our representation is summarised below: Section of Core Strategy: Table 1, Settlement Hierarchy Figure 2, Settlement Hierarchy, and Paras 3.2 – 3.7Legally Compliant: NoSound: NoConsistent with national policy: YesEffective: YesJustified: Yes

Details of Reasons for Soundness/ Legal Compliance:

4.2 Issues 4.2.1 In the Core Strategy, the Settlement hierarchy is a key determinant in distributing housing growth across settlements. It has been used at all stages in the plan process. However, the terminology to describe settlements at different levels of the hierarchy has changed and the criteria have been incorrectly applied. The results of this are that Maresfield has been classified incorrectly and the potential to accommodate growth here has thus been underplayed. The issues here are thus: § The assessment of Maresfield against the criteria used to classify villages in the hierarchy has changed over time § The assessment has been inappropriately applied. It does not, in Maresfield, acknowledge the employment offer that will be forthcoming at the Ashdown Business Park, even though this has planning permissions § The assessment is static and does not allow for change or reclassification over time § Why has the classification and thus the associated potential for development changed between different iterations of the Core Strategy? 4.2.2 We present this section in chronological order, starting with the 2007 Core Strategy Issues and Options, through the 2009 Spatial Options to the 2011 Proposed Submission Core Strategy. 2007 Core Strategy Issues and Options: 4.2.3 The 2007 Draft Settlement Strategy for the Villages (Core Strategy Issues and Options Background Paper) identifies Maresfield as a local service centre and a village with growth potential. It states (para 6.49): ‘Maresfield is a Smaller Local Service Centre and is within 5km of Uckfield (2.1miles/3.4km). It is also 2.3 miles/3.7km from the mainline station at Buxted. The village has a development boundary and is not subject to significant planning constraints. Part of the village however, is designated as a Conservation Area, which extends beyond the development boundary. There are flood zones to the east and west of the village, and the settlement is surrounded by parcels of ancient woodland’. 4.2.4 At this time, the Council identified the potential level of growth in Maresfield as being between 350 – 500 new homes. 2009 Core Strategy Spatial Options 4.2.5 In the 2009 Rural Settlement Classification (Core Strategy Spatial Options Background Paper 6), the status of Maresfield had changed to an ‘Accessible Settlement with Limited Facilities’. The Rural Settlement Classification allocated the following amount of homes to each settlement type: § Accessible Local Service Centre: 250 dwellings § Local Service Centre: 150 dwellings § Accessible Settlement with Limited Facilities: 100 dwellings § Accessible Settlement: 40 dwellings 4.2.6 Under these criteria, Maresfield would be a location for 100 new homes. The potential level of housing development increases to 250 dwellings for ‘accessible local service centres’. There are only two criteria which differentiate an ‘accessible local service centre’ from an ‘accessible settlement with limited facilities’; the former benefiting from a GP service and a business area or ‘other locally significant employment opportunities’. Maresfield meets the second of these given the recent planning permission for the Ashdown Business Park. 4.2.7 Furthermore in Barratt’s consultation response submitted to the 2009 Core Strategy Spatial Options we stated that the inclusion of the existence of a GP surgery within the criteria is considered inappropriate as it does not recognise the functional relationships between settlements whereby villages in close proximity will share facilities which none in their own right would have the scale of population to support. PPS 3 paragraph 38 makes this point. The nearest GP surgeries to Maresfield are in Buxted and Uckfield, both of which are within 5 km of Maresfield. We would also contend that the future pattern of provision of rural GP surgeries is uncertain and not a robust basis on which to allocate development to individual settlements. Given the above, we recommended that the criteria be changed to ‘access to health care facilities by sustainable modes of travel’ rather than provision of a GP service within the settlement itself. 2011 Core Strategy Submission Draft 4.2.8 Policy WSC6 establishes that provision will be made for at least 455 new dwellings across the following categories of settlement: service centre, local service centre, neighbourhood centre and unclassified settlements. Table 1 and associated Figure 2 of the Submission Core Strategy classify Maresfield as a Neighbourhood Centre. The rationale for this is set out in Appendix 3 to the Core Strategy Background Paper 1: Development of the Proposed Submission Core Strategy (February 2011). Appendix 4 establishes how each settlement was classified. 4.2.9 We contend that the settlement classification significantly underplays the role and potential of Maresfield. Criteria for classifying settlements include presence of a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both of these. This ignores the fact that the Ashdown Business Park, which received planning permission in 2010, is located in Maresfield. The submission Core Strategy acknowledges this at para 3.21, so why does the settlement hierarchy not take this into consideration? 4.2.10 We have compared the assessment undertaken in the Background Paper with the draft Settlement Strategy for the Villages (July 2007, Core Strategy Issues and...
Options) and the Rural Settlement Classification (July 2009, Core Strategy Spatial Development Options Background Paper). In both the 2007 and 2009 classifications, Maresfield receives a tick against both ‘business area’ and ‘other locally significant employment opportunities’. There is no reason why the assessment set out in the February 2011 background paper should change this, particularly given that the Ashdown Business Park now has planning permission. 4.2.11 The Councils Employment Land review identifies the Ashdown Business Park as the most strategically significant employment site in North Wealden. It will provide in the region of 600 – 700 jobs in a mix of office and B1 light industrial space. The planning application submitted for the Business Park makes the link between housing and employment growth and contribution to sustainable patterns of development and local employment opportunities. Para 3.18 of the submission Core Strategy states ‘The strategy is aimed at increasing the opportunity for people to work close to where they live’. 4.2.12 The criteria for assessing Maresfield also include a cross against ‘provision of changing facilities’ (for sports). Again, this is incorrect. Changing facilities exist at the recreation ground – for football and cricket – and at the Bowls Club. 4.2.13 So, the question here is why has the classification of Maresfield has changed from a local centre with growth potential (in 2007) to a Neighbourhood Centre with limited potential (in 2011), bearing in mind that the criteria have effectively remained the same and that, as we point out above, the assessment actually underplays the potential of Maresfield? The justification and rationale for changing the classification of Maresfield is not clear. 4.2.14 The Core Strategy aspires to retaining the rural character and high quality environment of the district, whilst also providing sufficient growth to improve the performance of the economy, regenerate market towns and provide a more vital future for villages. 4.2.15 However, the settlement classification is static and does not allow for any reclassification of settlements during the period covered by the LDF. It does not acknowledge that villages may become more sustainable through additional population arising from new development increasing the viability of local shops and services. PPS 3 is clear here that the need for housing provision in rural areas, not only in market towns and local service centres but also in villages in order to enhance or maintain their sustainability.

Details of Changes to be Made:
SUMMARY 4.2.16 In summary, we contend that the assessment is incorrect, previous consultation responses have not been addressed and the potential for growth and change in Maresfield is being suppressed. The assessment should be reconsidered in light of the planning permission granted for the Ashdown Business Park and the potential for balancing homes and jobs in this part of the district recognised. 4.2.17 We thus contend that, on this matter, the Core Strategy is unsound, because: 1. It is not justified, as the evidence used is incorrect; and 2. It is not effective, as the boundaries are ‘static’ and thus not flexible.
Object to the inclusion of Maresfield as a neighbourhood centre when it is clearly much more than this, and should be a Local Service Centre. Maresfield is much larger than the other villages in the neighbourhood centre group and contrary to the council’s assessment has similar or greater facilities than most of those in the Local Service Centre group. In particular it is immediately adjacent to the Ashdown Business Park which is planned to provide 1000 jobs. It also has as many if not more shops, garages, pubs than most of the LSC Group and certainly has much more than those in the NC group. In particular if Buxted is considered a LSA where there is minimal local employment, no more shops than Maresfield, no garage, and the local shop appears to have closed, is considered an LSC then clearly Maresfield should also be in this group. Maresfield should retain a development boundary. given that the council state that one of the aims of the strategy is to limit car travel and enable people to live where they work, clearly the uniqueness of Maresfield having the large employment site next to it means much more new housing should be allowed there as well. As otherwise as things stand at the moment, with the small older retired current population in Maresfield, the vast majority of workers at the Ashdown Business Park will have to drive in from other parts of the area.

Details of Changes to be Made:
Change Maresfield to where it should be a Local Service Centre. Retain a development boundary. Allocate 300 to 400 houses to Maresfield to allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other parts of the area.

The Wealden settlement hierarchy does not adequately reflect the settlement structure in the district and, as such, it is unsound. Westham should be identified as a Service Centre due to the facilities and employment areas it contains. The hierarchy constrains positive development in lower order settlements, that may contribute to sustainable growth of the area. paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth.

Details of Changes to be Made:
The Wealden settlement hierarchy should be redrafted to reflect the settlement structure in the district and allow for growth to meet future economic and social needs. We consider that Westham should be allocated as a service centre due to the facilities and employment areas it contains. Paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth. Please see Indigo Planning letter dated 15 April 2011.

The Wealden settlement hierarchy does not adequately reflect the settlement structure in the district and, as such, it is unsound. Westham should be identified as a Service Centre due to the facilities and employment areas it contains. The hierarchy constrains positive development in lower order settlements, that may contribute to sustainable growth of the area. paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth.

Details of Changes to be Made:
The Wealden settlement hierarchy should be redrafted to reflect the settlement structure in the district and allow for growth to meet future economic and social needs. We consider that Westham should be allocated as a service centre due to the facilities and employment areas it contains. Paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth. Please see Indigo Planning letter dated 15 April 2011.
Details of Reasons for Soundness/ Legal Compliance:

1. The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a ‘District Centre’ and not as a ‘Service Centre’. The town fulfils the functions and characteristics of a District Centre as defined on Table 1. It is a far more important settlement within the district than the Council has suggested, evidenced in the Core Strategy paragraph 2.3 which identifies Heathfield as one of the five main towns in the district and in Policy SP04 which refers to “our five principal towns”. The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities that serves a distinct part of the district. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:
2. Paragraph 3.4 states that, “the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities services and site opportunities exist. It is considered that the Council has under-estimated the current and future roles that Heathfield can play in this respect by failing to properly recognise the character and function of the town.

Details of Reasons for Soundness/ Legal Compliance:

The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a ‘District Centre’ and not as a ‘Service Centre’. The town fulfils the functions and characteristics of a District Centre as defined on table 1. It is a far more important settlement within the district than the Council has suggested. Indeed the Council itself identifies Heathfield as one of the five main towns in the District in paragraph 2.3 of the Proposed Core Strategy and Policy SP04 which refers to “our five principle towns”. The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities, that serves a distinct part of the district. 2 Paragraph 3.4 states that, “the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities services and site opportunities exist. It is considered that the Council has under-estimated the current and future roles that Heathfield can play in this respect by failing to properly recognise the character and function of the town. 3 In order to make the Core Strategy sound, Heathfield should be redefined within the Settlement hierarchy as a District Centre.

Details of Changes to be Made:
Heathfield should be re-defined in the Settlement Hierarchy as a District Centre.
Paragraph 3.3

Details of Reasons for Soundness/ Legal Compliance:
Policies to restrain traffic, obtain modal shift in travel, reducing need to travel and improve the experience of non-car travel need to be sharpened and focused. Aspirations for these to happen must have necessary circumstances incorporated into the policies.

Details of Changes to be Made:
Demand management techniques for traffic in Hailsham (6.15) should be included in all the related and equivalent policies. There should be a definite commitment to traffic reduction measures and targets throughout the Strategy Plan document.

Details of Reasons for Soundness/ Legal Compliance:
This seems to be an attempt to unload responsibility for a section of Wealdens population on to a town outside its area. TW already carries a considerable burden with regard to population services and jobs. Extra strain would not be fair on the existing residents, especially in the present economic conditions, and shoukd be bourne by Wealden urban centres.

Details of Changes to be Made:
4.2 Issues

4.2.1 In the Core Strategy, the settlement hierarchy is a key determinant in distributing housing growth across settlements. It has been used at all stages in the plan process. However, the terminology to describe settlements at different levels of the hierarchy has changed and the criteria have been incorrectly applied. The results of this are that Maresfield has been classified incorrectly and the potential to accommodate growth has thus been underplayed. The issues here are thus: § The assessment of Maresfield against the criteria used to classify villages in the hierarchy has changed over time § The assessment has been inappropriately applied. It does not, in Maresfield, acknowledge the employment offer that will be forthcoming at the Ashdown Business Park, even though this has planning permissions § The assessment is static and does not allow for change or reclassification over time § Why has the classification and thus the associated potential for development changed between different iterations of the Core Strategy? 4.2.2 We present this section in chronological order, starting with the 2007 Core Strategy Issues and Options, through the 2009 Spatial Options to the 2011 Proposed Submission Core Strategy. 2007 Core Strategy Issues and Options: 4.2.3 The 2007 Draft Settlement Strategy for the Villages (Core Strategy Issues and Options Background Paper) identifies Maresfield as a local service centre and a village with growth potential. It states (para 6.49): ‘Maresfield is identified as a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both ‘business area’ and ‘other locally significant employment opportunities’. Maresfield meets the second of these given the recent planning permission for the Ashdown Business Park. 4.2.4 At this time, the Council identified the potential level of growth in Maresfield as being between 350 – 500 new homes. 2009 Core Strategy Spatial Options 4.2.5 In the 2009 Rural Settlement Classification (Core Strategy Spatial Options Background Paper 6), the status of Maresfield had changed to an ‘accessible local service centre’ from an ‘accessible settlement with limited facilities’. The Rural Settlement Classification allocated the following amount of homes to each settlement type: § Accessible Local Service Centre: 250 dwellings § Local Service Centre: 150 dwellings § Accessible Settlement with Limited Facilities: 100 dwellings § Accessible Settlement: 40 dwellings 4.2.6 Under these criteria, Maresfield would be a location for 100 new homes. The potential level of housing development increases to 250 dwellings for ‘accessible local service centres’. There are only two criteria which differentiate an ‘accessible local service centre’ from an ‘accessible settlement with limited facilities’; the former benefiting from a GP service and a business area or ‘other locally significant employment opportunities’. Maresfield meets the second of these given the recent planning permission for the Ashdown Business Park. 4.2.7 Furthermore in Barratt’s consultation response submitted to the 2009 Core Strategy Spatial Options we stated that the inclusion of the existence of a GP surgery within the criteria is considered inappropriate as it does not recognise the functional relationships between settlements whereby villages in close proximity will share facilities which none in their own right would have the scale of population to support. PPS 3 paragraph 38 makes this point. The nearest GP surgeries to Maresfield are in Buxted and Uckfield, both of which are within 5 km of Maresfield. We would also contend that the future pattern of provision of rural GP surgeries is uncertain and not a robust basis on which to allocate development to individual settlements. Given the above, we recommend that the criteria be changed to ‘access to health care facilities by sustainable modes of travel’ rather than provision of a GP service within the settlement itself. 2011 Core Strategy Submission Draft 4.2.8 Policy WSC6 establishes that provision will be made for at least 455 new dwellings across the following categories of settlement: service centre, local service centre, neighbourhood centre and unclassified settlements. Table 1 and associated Figure 2 of the Submission Core Strategy classify Maresfield as a Neighbourhood Centre. The rationale for this is set out in Appendix 3 to the Core Strategy Background Paper 1: Development of the Proposed Submission Core Strategy (February 2011). Appendix 4 establishes how each settlement was classified. 4.2.9 We contend that the settlement classification significantly underplays the role and potential of Maresfield. Criteria for classifying settlements include presence of a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both of these. This ignores the fact that the Ashdown Business Park, which received planning permission in 2010, is located in Maresfield. The submission Core Strategy acknowledges this at para 3.21, so why does the settlement hierarchy not take this into consideration? 4.2.10 We have compared the assessment undertaken in the Background Paper with the draft Settlement Strategy for the Villages (July 2007, Core Strategy Issues and
Options) and the Rural Settlement Classification (July 2009, Core Strategy Spatial Development Options Background Paper). In both the 2007 and 2009 classifications, Maresfield receives a tick against both ‘business area’ and ‘other locally significant employment opportunities’. There is no reason why the assessment set out in the February 2011 background paper should change this, particularly given that the Ashdown Business Park now has planning permission. 4.2.11 The Councils Employment Land review identifies the Ashdown Business Park as the most strategically significant employment site in North Wealden. It will provide in the region of 600 – 700 jobs in a mix of office and B1 light industrial space. The planning application submitted for the Business Park makes the link between housing and employment growth and contribution to sustainable patterns of development and local employment opportunities. Para 3.18 of the submission Core Strategy states ‘The strategy is aimed at increasing the opportunity for people to work close to where they live’. 4.2.12 The criteria for assessing Maresfield also include a cross against ‘provision of changing facilities’ (for sports). Again, this is incorrect. Changing facilities exist at the recreation ground – for football and cricket – and at the Bowls Club. 4.2.13 So, the question here is why has the classification of Maresfield has changed from a local centre with growth potential (in 2007) to a Neighbourhood Centre with limited potential (in 2011), bearing in mind that the criteria have effectively remained the same and that, as we point out above, the assessment actually underplays the potential of Maresfield? The justification and rationale for changing the classification of Maresfield is not clear. 4.2.14 The Core Strategy aspires to retaining the rural character and high quality environment of the district, whilst also providing sufficient growth to improve the performance of the economy, regenerate market towns and provide a more vital future for villages. 4.2.15 However, the settlement classification is static and does not allow for any reclassification of settlements during the period covered by the LDF. It does not acknowledge that villages may become more sustainable through additional population arising from new development increasing the viability of local shops and services. PPS 3 is clear here that the need for housing provision in rural areas, not only in market towns and local service centres but also in villages in order to enhance or maintain their sustainability.

Details of Changes to be Made:

SUMMARY 4.2.16 In summary, we contend that the assessment is incorrect, previous consultation responses have not been addressed and the potential for growth and change in Maresfield is being suppressed. The assessment should be reconsidered in light of the planning permission granted for the Ashdown Business Park and the potential for balancing homes and jobs in this part of the district recognised. 4.2.17 We thus contend that, on this matter, the Core Strategy is unsound, because: 1. It is not justified, as the evidence used is incorrect; and 2. It is not effective, as the boundaries are ‘static’ and thus not flexible.

Paragraph 3.3

Sound ☐ Yes ☑ No ☐ Justified ☐ Effective ☐ Consistent with national policy

Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
Concern raised at the reference to Polegate and Willingdon as one settlement

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
Object to the inclusion of Maresfield as a neighbourhood centre when it is clearly much more than this, and should be a Local Service Centre. Maresfield is much larger than the other villages in the neighbourhood centre group and contrary to the council's assessment has similar or greater facilities than most of those in the Local Service Centre group. In particular it is immediately adjacent to the Ashdown Business Park which is planned to provide 1000 jobs. It also has as many if not more shops, garages, pubs than most of the LSC Group and certainly has much more than those in the NC group. In particular if Buxted is considered a LSA where there is minimal local employment, no more shops than Maresfield, no garage, and the local shop appears to have closed, is considered an LSC then clearly Maresfield should also be in this group. Maresfield should retain a development boundary. given that the council state that one of the aims of the strategy is to limit car travel and enable people to live where they work, clearly the uniqueness of Maresfield having the large employment site next to it means much more new housing should be allowed there as well. As otherwise as things stand at the moment, with the small older retired current population in Maresfield, the vast majority of workers at the Ashdown Business Park will have to drive in from other parts of the area.

Details of Changes to be Made:
Change Maresfield to where it should be a Local Service Centre. Retain a development boundary. Allocate 300 to 400 houses to Maresfield to allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other parts of the area.

Details of Reasons for Soundess/ Legal Complaince:
Heathfield is identified as one of the five main towns in the District. Wealden clearly acknowledges the town's sustainability in its Settlement Hierarchy as its assessment ranks Heathfield as a 'Service Centre' alongside Polegate and Willingdon, Stone Cross, Wadhurst and Forest Row. It concludes that the town has a range of jobs, services and facilities that serves not only its nearby communities but also the wider hinterland. Paragraph 3.4 states that the spatial strategy seeks to reinforce the Settlement Hierarchy. Yet the proportion of numbers allocated to Heathfield does not reflect the level of facilities and services available in the settlement and therefore its ability to accommodate greater growth.

Details of Changes to be Made:
It is necessary to re-assess the potential for Heathfield to accommodate growth.
AGain support is given to the strategy of reinforce the existing settlement pattern and focussing growth where it is most accessible and sustainable Strong support is also given to the strategy in terms of the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities, services and site opportunities exist.

**Details of Changes to be Made:**

The Wealden settlement hierarchy should be redrafted to reflect the settlement structure in the district and allow for growth to meet future economic and social needs. We consider that Westham should be allocated as a service centre due to the facilities and employment areas it contains. Paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth. Please see Indigo Planning letter dated 15 April 2011
The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a ‘District Centre’ and not as a ‘Service Centre’. The town fulfils the functions and characteristics of a District Centre as defined on table 1. It is a far more important settlement within the district than the Council has suggested. Indeed, the Council itself identifies Heathfield as one of the five main towns in the District in paragraph 2.3 of the Proposed Core Strategy and Policy SP04 which refers to “our five principle towns”. The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities, that serves a distinct part of the district. Due to the size of additional appendices they have not been uploaded but are available to view at the Council’s offices.

Details of Changes to be Made:
Healthfield should be re-defined in the Settlement Hierarchy as a District Centre.

Details of Reasons for Soundness/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Paragraph 3.4. There is no explanation as to why the existing settlement hierarchy is to be reinforced rather than changed. there is a conflict between reinforcing the pattern in the second sentence and promoting more sustainable patterns of development in the third sentence.

Details of Changes to be Made:
REVISION SOUGHT. "Our spatial strategy is to broadly follow this pattern whilst clearly acknowledging that future development in some of these settlements is more sustainable than in others."
4.1 Introduction 4.1.1 This section of our representations refers to the settlement hierarchy set out in the proposed submission Core Strategy. Our representation is summarised below: Section of Core Strategy: Table 1, Settlement Hierarchy Figure 2, Settlement Hierarchy, and Paras 3.2 – 3.7Legally Compliant: -Sound: NoJustified: NoEffective: NoConsistent with national policy: - 4.2 Issues 4.2.1 In the Core Strategy, the Settlement hierarchy is a key determinant in distributing housing growth across settlements. It has been used at all stages in the plan process. However, the terminology to describe settlements at different levels of the hierarchy has changed and the criteria have been incorrectly applied. The results of this are that Maresfield has been classified incorrectly and the potential to accommodate growth here has thus been underplayed. The issues here are thus: § The assessment of Maresfield against the criteria used to classify villages in the hierarchy has changed over time § The assessment has been inappropriately applied. It does not, in Maresfield, acknowledge the employment offer that will be forthcoming at the Ashdown Business Park, even though this has planning permissions § The assessment is static and does not allow for change or reclassification over time § Why has the classification and thus the associated potential for development changed between different iterations of the Core Strategy? 4.2.2 We present this section in chronological order, starting with the 2007 Core Strategy Issues and Options, through the 2009 Spatial Options to the 2011 Proposed Submission Core Strategy. 2007 Core Strategy Issues and Options: 4.2.3 The 2007 Draft Settlement Strategy for the Villages (Core Strategy Issues and Options Background Paper) identifies Maresfield as a local service centre and a village with growth potential. It states (para 6.49): ‘Maresfield is a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both development increases to 250 dwellings for ‘accessible local service centres’. There are only two criteria which differentiate an ‘accessible local service centre’ from an ‘accessible settlement with limited facilities’; the former benefiting from a GP service and a business area or ‘other locally significant employment opportunities’. Maresfield meets the second of these given the recent planning permission for the Ashdown Business Park. 4.2.7 Furthermore in Barratt’s consultation response submitted to the 2009 Core Strategy Spatial Options we stated that the inclusion of the existence of a GP surgery within the criteria is considered inappropriate as it does not recognise the functional relationships between settlements whereby villages in close proximity will share facilities which none in their own right would have the scale of population to support. PPS 3 paragraph 38 makes this point. The nearest GP surgeries to Maresfield are in Buxted and Uckfield, both of which are within 5 km of Maresfield. We would also contend that the future pattern of provision of rural GP surgeries is uncertain and not a robust basis on which to allocate development to individual settlements. Given the above, we recommended that the criteria be changed to ‘access to health care facilities by sustainable modes of travel’ rather than provision of a GP service within the settlement itself. 2011 Core Strategy Submission Draft 4.2.8 Policy WSC6 establishes that provision will be made for at least 455 new dwellings across the following categories of settlement: service centre, local service centre, neighbourhood centre and unclassified settlements. Table 1 and associated Figure 2 of the Submission Core Strategy classify Maresfield as a Neighbourhood Centre. The rationale for this is set out in Appendix 3 to the Core Strategy Background Paper 1: Development of the Proposed Submission Core Strategy (February 2011). Appendix 4 establishes how each settlement was classified. 4.2.9 We contend that the settlement classification significantly underplays the role and potential of Maresfield. Criteria for classifying settlements include presence of a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both of these. This ignores the fact that the Ashdown Business Park, which received planning permission in 2010, is located in Maresfield. The submission Core Strategy acknowledges this at para 3.21, so why does the settlement hierarchy not take this into consideration? 4.2.10 We have compared the assessment undertaken in the Background Paper with the draft Settlement Strategy for the Villages (July 2007, Core Strategy Issues and
Options) and the Rural Settlement Classification (July 2009, Core Strategy Spatial Development Options Background Paper). In both the 2007 and 2009 classifications, Maresfield receives a tick against both ‘business area’ and ‘other locally significant employment opportunities’. There is no reason why the assessment set out in the February 2011 background paper should change this, particularly given that the Ashdown Business Park now has planning permission.

4.2.11 The Councils Employment Land review identifies the Ashdown Business Park as the most strategically significant employment site in North Wealden. It will provide in the region of 600 – 700 jobs in a mix of office and B1 light industrial space. The planning application submitted for the Business Park makes the link between housing and employment growth and contribution to sustainable patterns of development and local employment opportunities. Para 3.18 of the submission Core Strategy states ‘The strategy is aimed at increasing the opportunity for people to work close to where they live’. 4.2.12 The criteria for assessing Maresfield also include a cross against ‘provision of changing facilities’ (for sports). Again, this is incorrect. Changing facilities exist at the recreation ground – for football and cricket – and at the Bowls Club. 4.2.13 So, the question here is why has the classification of Maresfield has changed from a local centre with growth potential (in 2007) to a Neighbourhood Centre with limited potential (in 2011), bearing in mind that the criteria have effectively remained the same and that, as we point out above, the assessment actually underplays the potential of Maresfield? The justification and rationale for changing the classification of Maresfield is not clear. 4.2.14 The Core Strategy aspires to retaining the rural character and high quality environment of the district, whilst also providing sufficient growth to improve the performance of the economy, regenerate market towns and provide a more vital future for villages. 4.2.15 However, the settlement classification is static and does not allow for any reclassification of settlements during the period covered by the LDF. It does not acknowledge that villages may become more sustainable through additional population arising from new development increasing the viability of local shops and services. PPS 3 is clear here that the need for housing provision in rural areas, not only in market towns and local service centres but also in villages in order to enhance or maintain their sustainability.

Details of Changes to be Made:
SUMMARY 4.2.16 In summary, we contend that the assessment is incorrect, previous consultation responses have not been addressed and the potential for growth and change in Maresfield is being suppressed. The assessment should be reconsidered in light of the planning permission granted for the Ashdown Business Park and the potential for balancing homes and jobs in this part of the district recognised. 4.2.17 We thus contend that, on this matter, the Core Strategy is unsound, because: 1. It is not justified, as the evidence used is incorrect; and 2. It is not effective, as the boundaries are ‘static’ and thus not flexible.

Paragraph  3.5
Sound ☑ Yes ☐ No ☑ Justified ☑ Effective ☑ Consistent with national policy
Legally Compliant ☐ Yes ☐ No
Details of Reasons for Soundess/ Legal Complaince:
Object to the inclusion of Maresfield as a neighbourhood centre when it is clearly much more than this, and should be a Local Service Centre. Maresfield is much larger than the other villages in the neighbourhood centre group and contrary to the council's assessment has similar or greater facilities than most of those in the Local Service Centre group. In particular it is immediately adjacent to the Ashdown Business Park which is planned to provide 1000 jobs. It also has as many if not more shops, garages, pubs than most of the LSC Group and certainly has much more than those in the NC group. In particular if Buxted is considered a LSA where there is minimal local employment, no more shops than Maresfield, no garage, and the local shop appears to have closed, is considered an LSC then clearly Maresfield should also be in this group. Maresfield should retain a development boundary, given that the council state that one of the aims of the strategy is to limit car travel and enable people to live where they work, clearly the uniqueness of Maresfield having the large employment site next to it means much more new housing should be allowed there as well. As otherwise as things stand at the moment, with the small older retired current population in Maresfield, the vast majority of workers at the Ashdown Business Park will have to travel in from other parts of the area.

Details of Changes to be Made:
Change Maresfield to where it should be a Local Service Centre. Retain a development boundary. Allocate 300 to 400 houses to Maresfield to allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other parts of the area.
Details of Reasons for Soundness/Legal Compliance:
The Wealden settlement hierarchy does not adequately reflect the settlement structure in the district and, as such, it is unsound. Westham should be identified as a Service Centre due to the facilities and employment areas it contains. The hierarchy constrains positive development in lower order settlements, that may contribute to sustainable growth of the area. Paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth.

Details of Changes to be Made:
The Wealden settlement hierarchy should be redrafted to reflect the settlement structure in the district and allow for growth to meet future economic and social needs. We consider that Westham should be allocated as a service centre due to the facilities and employment areas it contains. Paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth. Please see Indigo Planning letter dated 15 April 2011.
Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a ‘District Centre’ and not as a ‘Service Centre’. The town fulfils the functions and characteristics of a District Centre as defined on table 1. It is a far more important settlement within the district than the Council has suggested. Indeed the Council itself identifies Heathfield as one of the five main towns in the District in paragraph 2.3 of the Proposed Core Strategy and Policy SP04 which refers to “our five principle towns”. The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities, that serves a distinct part of the district. 2 Paragraph 3.4 states that, “the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities services and site opportunities exist. It is considered that the Council has under-estimated the current and future roles that Heathfield can play in this respect by failing to properly recognise the character and function of the town. 3 In order to make the Core Strategy sound, Heathfield should be redefined within the Settlement hierarchy as a District Centre.

Details of Changes to be Made:
Heathfield should be re-defined in the Settlement Hierarchy as a District Centre
4.1 Introduction 4.1.1 This section of our representations refers to the settlement hierarchy set out in the proposed submission Core Strategy. Our representation is summarised below: Section of Core Strategy: Table 1, Settlement Hierarchy Figure 2, Settlement Hierarchy, and Paras 3.2 – 3.7Legally Compliant: YesJustified: YesEffective: YesConsistent with national policy: Yes

4.2 Issues 4.2.1 In the Core Strategy, the Settlement hierarchy is a key determinant in distributing housing growth across settlements. It has been used at all stages in the plan process. However, the terminology to describe settlements at different levels of the hierarchy has changed and the criteria have been incorrectly applied. The results of this are that Maresfield has been classified incorrectly and the potential to accommodate growth here has thus been underplayed. The issues here are thus: § The assessment of Maresfield against the criteria used to classify villages in the hierarchy has changed over time § The assessment has been inappropriately applied. It does not, in Maresfield, acknowledge the employment offer that will be forthcoming at the Ashdown Business Park, even though this has planning permissions § The assessment is static and does not allow for change or reclassification over time § Why has the classification and thus the associated potential for development changed between different iterations of the Core Strategy? 4.2.2 We present this section in chronological order, starting with the 2007 Core Strategy Issues and Options, through the 2009 Spatial Options to the 2011 Proposed Submission Core Strategy. 2007 Core Strategy Issues and Options: 4.2.3 The 2007 Draft Settlement Strategy for the Villages (Core Strategy Issues and Options Background Paper) identifies Maresfield as a local service centre and a village with growth potential. It states (para 6.49): ‘Maresfield is an ‘accessible local service centre’ from an ‘accessible settlement with limited facilities’; the former benefiting from a GP service and a business area or ‘other locally significant employment opportunities’. Maresfield meets the second of these given the recent planning permission for the Ashdown Business Park. 4.2.4 At this time, the Council identified the potential level of growth in Maresfield as being between 350 – 500 new homes. 2009 Core Strategy Spatial Options 4.2.5 In the 2009 Rural Settlement Classification (Core Strategy Spatial Options Background Paper 6), the status of Maresfield had changed to an ‘Accessible Settlement with Limited Facilities’. The Rural Settlement Classification allocated the following amount of homes to each settlement type: § Accessible Local Service Centre: 250 dwellings § Local Service Centre: 150 dwellings § Accessible Settlement with Limited Facilities: 100 dwellings § Accessible Settlement: 40 dwellings 4.2.6 Under these criteria, Maresfield would be a location for 100 new homes. The potential level of housing development increases to 250 dwellings for ‘accessible local service centres’. There are only two criteria which differentiate an ‘accessible local service centre’ from an ‘accessible settlement with limited facilities’; the former benefiting from a GP service and a business area or ‘other locally significant employment opportunities’. Maresfield meets the second of these given the recent planning permission for the Ashdown Business Park. 4.2.7 Furthermore in Barratt’s consultation response submitted to the 2009 Core Strategy Spatial Options we stated that the inclusion of the existence of a GP surgery within the criteria is considered inappropriate as it does not recognise the functional relationships between settlements whereby villages in close proximity will share facilities which none in their own right would have the scale of population to support. PPS 3 paragraph 38 makes this point. The nearest GP surgeries to Maresfield are in Buxted and Uckfield, both of which are within 5 km of Maresfield. We would also contend that the future pattern of provision of rural GP surgeries is uncertain and not a robust basis on which to allocate development to individual settlements. Given the above, we recommended that the criteria be changed to ‘access to health care facilities by sustainable modes of travel’ rather than provision of a GP service within the settlement itself. 2011 Core Strategy Submission Draft 4.2.8 Policy WSC6 establishes that provision will be made for at least 455 new dwellings across the following categories of settlement: service centre, local service centre, neighbourhood centre and unclassified settlements. Table 1 and associated Figure 2 of the Submission Core Strategy classify Maresfield as a Neighbourhood Centre. The rationale for this is set out in Appendix 3 to the Core Strategy Background Paper 1: Development of the Proposed Submission Core Strategy (February 2011). Appendix 4 establishes how each settlement was classified. 4.2.9 We contend that the settlement classification significantly underplays the role and potential of Maresfield. Criteria for classifying settlements include presence of a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both of these. This ignores the fact that the Ashdown Business Park, which received planning permission in 2010, is located in Maresfield. The submission Core Strategy acknowledges this at para 3.21, so why does the settlement hierarchy not take this into consideration? 4.2.10 We have compared the assessment undertaken in the Background Paper with the draft Settlement Strategy for the Villages (July 2007, Core Strategy Issues and
Options) and the Rural Settlement Classification (July 2009, Core Strategy Spatial Development Options Background Paper). In both the 2007 and 2009 classifications, Maresfield receives a tick against both ‘business area’ and ‘other locally significant employment opportunities’. There is no reason why the assessment set out in the February 2011 background paper should change this, particularly given that the Ashdown Business Park now has planning permission. 4.2.11 The Councils Employment Land review identifies the Ashdown Business Park as the most strategically significant employment site in North Wealden. It will provide in the region of 600 – 700 jobs in a mix of office and B1 light industrial space. The planning application submitted for the Business Park makes the link between housing and employment growth and contribution to sustainable patterns of development and local employment opportunities. Para 3.18 of the submission Core Strategy states ‘The strategy is aimed at increasing the opportunity for people to work close to where they live’. 4.2.12 The criteria for assessing Maresfield also include a cross against ‘provision of changing facilities’ (for sports). Again, this is incorrect. Changing facilities exist at the recreation ground – for football and cricket – and at the Bowls Club. 4.2.13 So, the question here is why has the classification of Maresfield has changed from a local centre with growth potential (in 2007) to a Neighbourhood Centre with limited potential (in 2011), bearing in mind that the criteria have effectively remained the same and that, as we point out above, the assessment actually underplays the potential of Maresfield? The justification and rationale for changing the classification of Maresfield is not clear. 4.2.14 The Core Strategy aspires to retaining the rural character and high quality environment of the district, whilst also providing sufficient growth to improve the performance of the economy, regenerate market towns and provide a more vital future for villages. 4.2.15 However, the settlement classification is static and does not allow for any reclassification of settlements during the period covered by the LDF. It does not acknowledge that villages may become more sustainable through additional population arising from new development increasing the viability of local shops and services. PPS 3 is clear here that the need for housing provision in rural areas, not only in market towns and local service centres but also in villages in order to enhance or maintain their sustainability.

Details of Changes to be Made:
SUMMARY 4.2.16 In summary, we contend that the assessment is incorrect, previous consultation responses have not been addressed and the potential for growth and change in Maresfield is being suppressed. The assessment should be reconsidered in light of the planning permission granted for the Ashdown Business Park and the potential for balancing homes and jobs in this part of the district recognised. 4.2.17 We thus contend that, on this matter, the Core Strategy is unsound, because: 1. It is not justified, as the evidence used is incorrect; and 2. It is not effective, as the boundaries are ‘static’ and thus not flexible.

Paragraph 3.6
Sound ☐ Yes ☑ No ☑ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundness/ Legal Complaince:

It is important to understand the relationship between the Council’s settlement hierarchy, proposed Rural Growth Areas (Figure 11) and proposed amendments to settlement boundaries (WCS6). If the relationship is unclear, the Core Strategy is unclear. The SHLAA is predominantly 'site centred'; Rural Growth Areas need to consider the impact individual sites, most often identified in the SHLAA, will have upon a village / rural settlement. Designation of a village / rural settlement as a Growth Area indicates that there will be development for new housing with infrastructure to support it over a substantial time frame (up to 2030). The Core Strategy proposes to continue to apply countryside constraints to neighbourhood centres. To achieve this, some Growth Areas identified in Figure 11 in the Plan will have their development boundaries removed; other Growth Areas will not have development boundaries defined. There is a risk these policies could work against each other. In combination, these policies send out a mixed message to residents in the villages concerned – on the one hand, it is indicated that rural character will be preserved and yet on the other, with Growth Area designation, that there will be change with some degree of urbanisation. Proposed Change

Details of Changes to be Made:

That Growth Areas indentified in Figure 11 have development boundaries retained and Growth Areas presently without development boundaries have boundaries defined in later DPDs, with consequential amendments made to Paras 3.6 and 3.7.
4.1 Introduction 4.1.1 This section of our representations refers to the settlement hierarchy set out in the proposed submission Core Strategy. Our representation is summarised below: Section of Core Strategy: Table 1, Settlement Hierarchy Figure 2, Settlement Hierarchy, and Paras 3.2 – 3.7 Legally Compliant: -Sound: NoJustified: NoEffective: NoConsistent with national policy: - 4.2 Issues 4.2.1 In the Core Strategy, the Settlement hierarchy is a key determinant in distributing housing growth across settlements. It has been used at all stages in the plan process. However, the terminology to describe settlements at different levels of the hierarchy has changed and the criteria have been incorrectly applied. The results of this are that Maresfield has been classified incorrectly and the potential to accommodate growth has thus been underplayed. The issues here are thus: § The assessment of Maresfield against the criteria used to classify villages in the hierarchy has changed over time § The assessment has been inappropriately applied. It does not, in Maresfield, acknowledge the employment offer that will be forthcoming at the Ashdown Business Park, even though this has planning permissions § The assessment is static and does not allow for change or reclassification over time § Why has the classification and thus the associated potential for development changed between different iterations of the Core Strategy? 4.2.2 We present this section in chronological order, starting with the 2007 Core Strategy Issues and Options, through the 2009 Spatial Options to the 2011 Proposed Submission Core Strategy. 2007 Core Strategy Issues and Options: 4.2.3 The 2007 Draft Settlement Strategy for the Villages (Core Strategy Issues and Options Background Paper) identifies Maresfield as a local service centre and a village with growth potential. It states (para 6.49): ‘Maresfield is identified as a local service centre and village with growth potential’. The submission Core Strategy acknowledges this at para 3.21, so why does the settlement classification significantly underplay the role and potential of Maresfield? 4.2.4 At this time, the Council identified the potential level of growth in Maresfield as being between 350 – 500 new homes. 2009 Core Strategy Spatial Options 4.2.5 In the 2009 Rural Settlement Classification (Core Strategy Spatial Options Background Paper 6), the status of Maresfield had changed to an ‘accessible settlement with limited facilities’. The Rural Settlement Classification allocated the following amount of homes to each settlement type: § Accessible Local Service Centre: 250 dwellings § Local Service Centre: 150 dwellings § Accessible Settlement with Limited Facilities: 100 dwellings § Accessible Settlement: 40 dwellings 4.2.6 Under these criteria, Maresfield would be a location for 100 new homes. The potential level of housing development increases to 250 dwellings for ‘accessible local service centres’. There are only two criteria which differentiate an ‘accessible local service centre’ from an ‘accessible settlement with limited facilities’; the former benefitting from a GP service and a business area or ‘other locally significant employment opportunities’. Maresfield meets the second of these given the recent planning permission for the Ashdown Business Park. 4.2.7 Furthermore in Barratt’s consultation response submitted to the 2009 Core Strategy Spatial Options we stated that the inclusion of the existence of a GP surgery within the criteria is considered inappropriate as it does not recognise the functional relationships between settlements whereby villages in close proximity will share facilities which none in their own right would have the scale of population to support. PPS 3 paragraph 38 makes this point. The nearest GP surgeries to Maresfield are in Buxted and Uckfield, both of which are within 5 km of Maresfield. We would also contend that the future pattern of provision of rural GP surgeries is uncertain and not a robust basis on which to allocate development to individual settlements. Given the above, we recommended that the criteria be changed to ‘access to health care facilities by sustainable modes of travel’ rather than provision of a GP service within the settlement itself. 2011 Core Strategy Submission Draft 4.2.8 Policy WSC6 establishes that provision will be made for at least 455 new dwellings across the following categories of settlement: service centre, local service centre, neighbourhood centre and unclassified settlements. Table 1 and associated Figure 2 of the Submission Core Strategy classify Maresfield as a Neighbourhood Centre. The rationale for this is set out in Appendix 3 to the Core Strategy Background Paper 1: Development of the Proposed Submission Core Strategy (February 2011). Appendix 4 establishes how each settlement was classified. 4.2.9 We contend that the settlement classification significantly underplays the role and potential of Maresfield. Criteria for classifying settlements include presence of a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both of these. This ignores the fact that the Ashdown Business Park, which received planning permission in 2010, is located in Maresfield. The submission Core Strategy acknowledges this at para 3.21, so why does the settlement hierarchy not take this into consideration? 4.2.10 We have compared the assessment undertaken in the Background Paper with the draft Settlement Strategy for the Villages (July 2007, Core Strategy Issues and
Options) and the Rural Settlement Classification (July 2009, Core Strategy Spatial Development Options Background Paper). In both the 2007 and 2009 classifications, Maresfield receives a tick against both ‘business area’ and ‘other locally significant employment opportunities’. There is no reason why the assessment set out in the February 2011 background paper should change this, particularly given that the Ashdown Business Park now has planning permission. 4.2.11 The Councils Employment Land review identifies the Ashdown Business Park as the most strategically significant employment site in North Wealden. It will provide in the region of 600 – 700 jobs in a mix of office and B1 light industrial space. The planning application submitted for the Business Park makes the link between housing and employment growth and contribution to sustainable patterns of development and local employment opportunities. Para 3.18 of the submission Core Strategy states ‘The strategy is aimed at increasing the opportunity for people to work close to where they live’. 4.2.12 The criteria for assessing Maresfield also include a cross against ‘provision of changing facilities’ (for sports). Again, this is incorrect. Changing facilities exist at the recreation ground – for football and cricket – and at the Bowls Club. 4.2.13 So, the question here is why has the classification of Maresfield has changed from a local centre with growth potential (in 2007) to a Neighbourhood Centre with limited potential (in 2011), bearing in mind that the criteria have effectively remained the same and that, as we point out above, the assessment actually underplays the potential of Maresfield? The justification and rationale for changing the classification of Maresfield is not clear. 4.2.14 The Core Strategy aspires to retaining the rural character and high quality environment of the district, whilst also providing sufficient growth to improve the performance of the economy, regenerate market towns and provide a more vital future for villages. 4.2.15 However, the settlement classification is static and does not allow for any reclassification of settlements during the period covered by the LDF. It does not acknowledge that villages may become more sustainable through additional population arising from new development increasing the viability of local shops and services. PPS 3 is clear here that the need for housing provision in rural areas, not only in market towns and local service centres but also in villages in order to enhance or maintain their sustainability.

Details of Changes to be Made:

SUMMARY 4.2.16 In summary, we contend that the assessment is incorrect, previous consultation responses have not been addressed and the potential for growth and change in Maresfield is being suppressed. The assessment should be reconsidered in light of the planning permission granted for the Ashdown Business Park and the potential for balancing homes and jobs in this part of the district recognised. 4.2.17 We thus contend that, on this matter, the Core Strategy is unsound, because: 1. It is not justified, as the evidence used is incorrect; and 2. It is not effective, as the boundaries are ‘static’ and thus not flexible.
5 Removal of Settlement Boundaries 5.1 Introduction

5.1.1 This section of our representations refers to the removal of settlement boundaries as set out in policy WCS6 and supporting paragraphs 3.6 and 3.7. Our representation is summarised below: Section of Core Strategy: Policy WCS6 Rural Areas Strategy, paras 3.6 & 3.7 Legally Compliant: -Sound: No-Justified: No-Effective: No-Consistent with national policy: No

5.2 Issues

5.2.1 The draft Submission Core Strategy addresses, at para 3.6, the rationale for development boundaries. At para 3.7, it is stated that in neighbourhood centres and other unclassified settlements, countryside constraints will be applied. Policy WCS6 then lists thirteen villages where development boundaries will be removed. 5.2.2 Issues here for consideration are: § The option for removing boundaries was not asked in either the 2007 or 2009 consultation and no responses were made to suggest that they should be removed § Initial officer comments, based on consultation responses to the 2007 consultation, suggest that boundaries should be retained as a positive planning tool. § Why has the concept of removing development boundaries been introduced? § Where is the evidence for introducing this concept?

5.2.3 The removal of development boundaries was discussed at the WDC Committee meetings towards the end of 2010. The minutes of the meetings expressly state that consultation had taken place on this issue in both 2007 and 2009 (see, for example, minutes of meeting dated 19 October 2010). 5.2.4 Despite this, the minutes of the 10 November 2010 Committee record ‘Members expressed concerns regarding the proposal to remove a number of development boundaries from some settlements’. The minutes of the 19 October 2010 Committee record ‘The Chairman… felt that the parishes had been consulted and that ward councillors also have a responsibility to liaise with their parishes and feedback through the process’. 5.2.5 At the Maresfield Parish Council meeting of 16 November 2010 the removal of the development boundaries was raised. The minutes record that Cllr Galley stated: ‘Parishes had been asked for their views on development boundaries in 2007, and some 300 responses had been received which were equally divided for and against keeping the boundaries. Possibly not all respondents had comprehended the question. Many parishes could not recall being asked.’ 5.2.6 So, were the Parishes asked? The 2007 Core Strategy Issues and Options did not expressly ask a question about removing the boundaries. Rather, the questions posed were: Do you agree with the following options: 5a: Settlement boundaries should be maintained, but should be expanded where needed to allow for necessary growth 5b: There should be a policy which allows for some small scale development to take place outside settlement boundaries subject to strict criteria 5c: If you have any further brief comments (including any changes to boundaries you would like to make) please tell us 5.2.7 None of the options ask whether the boundaries should be removed. 5.2.8 The responses to these questions are summarised in page 54 of Agenda Item 8, Appendix C, Technical Summary of Issues Raised through the Issues and Options Consultation Process, Cabinet Local Development Framework Sub Committee Date: 15th October 2007. All comments can also be viewed via the Councils LDF consultation portal. There is no suggestion from any of the responses that the boundaries should be removed. Indeed, responses highlight the importance of maintaining the boundaries, and, in some instances, extended these. 5.2.9 In relation to question 5c, the agenda paper reports that a number of settlements were suggested where the boundary could be changed. These include Maresfield (see page 58). This is closely related to responses to option 21a asking whether people agreed or disagreed with the possible level of growth potential for Maresfield, which at this point was between 350 – 500 homes. Page 163 summarises responses in regard to the option. Support was made for growth in Maresfield and for a change to the boundary to the south of the village to accommodate this growth. No reference is made here to the removal of the development boundary. 5.2.10 The statement made by Cllr Galley at the Maresfield Parish Council (16 November 2010 – see above) meeting raises another issue. Did the options being consulted upon actually reflect the question the Council was trying to ask, i.e.: should development boundaries be removed from some settlements? If this is the case, and consultees have submitted responses unaware of this, then the consultation undertaken must be flawed. Question 5a is perhaps the closest to asking the question about removal, but it is clearly couched in the context of growth and development, i.e.: should they be maintained, reflecting the status quo, or expanded to allow for growth. The question does not ask whether the boundaries should be removed. 5.2.11 Either way, it is clear from the officer recommendation based on the responses to the 2007 consultation (see page 60) that settlement boundaries are a positive planning tool and should be retained. There is no mention of removal: ‘It would appear that, from the comments received, settlement boundaries are a positive planning policy tool and as an initial recommendation that they should be retained. It is preferable, taking into account the comments raised, that any review of development boundaries should be comprehensive in nature with transparent criteria and consultation. In addition to the use of settlement boundaries, there appears to be some agreement to allowing development in the
countryside to meet local need and this will also need to be considered’. 5.2.12 This recommendation also refers to the use of transparent criteria and consultation when reviewing development boundaries. We can not see (a) any evidence of what transparent criteria have been employed to suggest that the development boundaries should be removed, nor (b) what consultation was undertaken that expressly asked whether the boundaries should be removed. 5.2.13 Para 4.40 of the paper prepared under Agenda Item 8 of the LDF sub Committee on 15th October 2007 states: (i) There is a need for a comprehensive review of boundaries to reflect the current situation on the ground, with appropriate community involvement; (ii) A balance needs to be found between preventing urban sprawl, preventing town cramming and not stifling the development needs of individual communities, particularly where no specific allocations are envisaged. The High Weald AONB Unit was amongst those considering boundaries to have been applied too rigidly and that they have not necessarily taken into account the historic pattern of village development. (iii) That any redefinition of settlement boundaries should have regard to the need to retain the distinct and separate identity of nearby settlements; (iv) Not to limit appropriate design and force high densities in locations where new development is proposed; (v) There could be a need for settlement boundaries to be drawn for villages not identified for growth in any event; (vi) There could be a need to redraw more tightly the boundaries for certain villages, a view shared (cautiously) by the South Downs Joint Committee. (vii) The need for well-defined and systematic criteria for defining settlement boundaries and for the selection of settlements where settlement boundaries should be applied. 5.2.14 This response: (a) acknowledges support for the retention of settlement boundaries; (b) that, even in those settlements where there would be no growth, settlement boundaries are required; and (c) there is a need for a well-defined and systematic criteria for defining settlement boundaries and where they should be applied. It is quite clear that there is no intention to remove development boundaries and, in fact, the consultation strengthened the rationale for retention and, where appropriate, modification and expansion. 5.2.15 The 2009 Spatial Options consultation presents options in regard to the quantum and distribution of growth across the District, but does not present options about settlement boundaries nor ask whether they should be removed. 5.2.16 Although responses were made to the 2009 consultation in terms of the level of growth that might be appropriate and which spatial growth option should be progressed, there is no specific response which states that the Maresfield development boundary should be removed.

Details of Changes to be Made:
SUMMARY 5.2.17 In conclusion, we contend that the Core Strategy is unsound because: 1. it is not justified because (i) it is not based on evidence as no question was asked and (ii) it has not been considered against alternatives; 2. it is not effective, because it is not flexible; and 3. it is not consistent with national policy, specifically that set out in the Local Growth White Paper . 5.2.18 Representations made in previous sections indicate that the level of housing growth set out in the submission Core Strategy is too low, that the housing distribution and trajectory should be reconsidered, and that Maresfield is a suitable and sustainable location to accommodate additional housing growth. We thus suggest that Maresfield should (a) have a settlement boundary, and (b) that this should be drawn to allow for additional housing growth.

We believe that to remove all small settlements (neighbourhood centres and smaller) from the development boundaries, and to make them subject to countryside policies only, is too general an assumption to make at Core Strategy level. The decision as to whether a settlement should have a development boundary or not should be when the Proposals Map DPD is considered - such consideration should not be prejudiced by generalisations contained within the Core Strategy. The Core Strategy should only be for large strategic allocations, not the smaller allocations that may be found in smaller centres.

Details of Changes to be Made:
The Core Strategy should restrict itself to categorisation of settlements only. Development boundaries should be considered at the Site Allocations DPD stage. The Core Strategy should only be for large strategic allocations, not the smaller allocations that may be found in smaller centres.

**Details of Reasons for Soundness/ Legal Complaint:**

Object to the inclusion of Maresfield as a neighbourhood centre when it is clearly much more than this, and should be a Local Service Centre. Maresfield is much larger than the other villages in the neighbourhood centre group and contrary to the council's assessment has similar or greater facilities than most of those in the Local Service Centre group. In particular it is immediately adjacent to the Ashdown Business Park which is planned to provide 1000 jobs. It also has as many if not more shops, garages, pubs than most of the LSC Group and certainly has much more than those in the NC group. In particular if Buxted is considered a LSA where there is minimal local employment, no more shops than Maresfield, no garage, and the local shop appears to have closed, is considered an LSC then clearly Maresfield should also be in this group. Maresfield should retain a development boundary. given that the council state that one of the aims of the strategy is to limit car travel and enable people to live where they work, clearly the uniqueness of Maresfield having the large employment site next to it means much more new housing should be allowed there as well. As otherwise as things stand at the moment, with the small older retired current population in Maresfield, the vast majority of workers at the Ashdown Business Park will have to drive in from other parts of the area.

**Details of Changes to be Made:**

Change Maresfield to where it should be a Local Service Centre. Retain a development boundary. Allocate 300 to 400 houses to Maresfield to allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other parts of the area.

Paragraph 3.7

Details of Reasons for Soundness/ Legal Compliance:

The Wealden settlement hierarchy does not adequately reflect the settlement structure in the district and, as such, it is unsound. Westham should be identified as a Service Centre due to the facilities and employment areas it contains. The hierarchy constrains positive development in lower order settlements, that may contribute to sustainable growth of the area. Paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth.

Details of Changes to be Made:

The Wealden settlement hierarchy should be redrafted to reflect the settlement structure in the district and allow for growth to meet future economic and social needs. We consider that Westham should be allocated as a service centre due to the facilities and employment areas it contains. Paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth. Please see Indigo Planning letter dated 15 April 2011.

---

Paragraph 3.7

Details of Reasons for Soundness/ Legal Compliance:

1. The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a 'District Centre' and not as a 'Service Centre'. The town fulfils the functions and characteristics of a District Centre as defined on Table 1. It is a far more important settlement within the district than the Council has suggested, evidenced in the Core Strategy paragraph 2.3 which identifies Heathfield as one of the five main towns in the district and in Policy SP04 which refers to "our five principal towns". The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities that serves a distinct part of the district. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

2. Paragraph 3.4 states that, "the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities services and site opportunities exist. It is considered that the Council has under-estimated the current and future roles that Heathfield can play in this respect by failing to properly recognise the character and function of the town."

Paragraph  3.7
Sound  ☐ Yes  ☑ No  ☑ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant  ☐ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a 'District Centre' and not as a 'Service Centre'. The town fulfils the functions and characteristics of a District Centre as defined on table 1. It is a far more important settlement within the district than the Council has suggested. Indeed the Council itself identifies Heathfield as one of the five main towns in the District in paragraph 2.3 of the Proposed Core Strategy and Policy SP04 which refers to "our five principle towns". The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities, that serves a distinct part of the district. 2 Paragraph 3.4 states that, "the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities services and site opportunities exist. It is considered that the Council has under-estimated the current and future roles that Heathfield can play in this respect by failing to properly recognise the character and function of the town. 3 In order to make the Core Strategy sound, Heathfield should be redefined within the Settlement hierarchy as a District Centre.

Details of Changes to be Made:
Heathfield should be re-defined in the Settlement Hierarchy as a District Centre

Paragraph  3.7
Sound  ☐ Yes  ☑ No  ☑ Justified  ☑ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
It is important to understand the relationship between the Council’s settlement hierarchy, proposed Rural Growth Areas (Figure 11) and proposed amendments to settlement boundaries (WCS6). If the relationship is unclear, the Core Strategy is unclear. The SHLAA is predominantly 'site centred'; Rural Growth Areas need to consider the impact individual sites, most often identified in the SHLAA, will have upon a village / rural settlement. Designation of a village / rural settlement as a Growth Area indicates that there will be development for new housing with infrastructure to support it over a substantial time frame (up to 2030). The Core Strategy proposes to continue to apply countryside constraints to neighbourhood centres. To achieve this, some Growth Areas identified in Figure 11 in the Plan will have their development boundaries removed; other Growth Areas will not have development boundaries defined. There is a risk these policies could work against each other. In combination, these policies send out a mixed message to residents in the villages concerned – on the one hand, it is indicated that rural character will be preserved and yet on the other, with Growth Area designation, that there will be change with some degree of urbanisation. Proposed Change

Details of Changes to be Made:
That Growth Areas indentified in Figure 11 have development boundaries retained and Growth Areas presently without development boundaries have boundaries defined in later DPDs, with consequential amendments made to Paras 3.6 and 3.7.
Council meeting of 16 November 2010 the removal of the development boundaries was raised. The minutes record that Cllr Galley stated: ‘Parishes had been asked for their views on development boundaries in 2007, and some 300 responses had been received which were equally divided for and against keeping the boundaries.

Settlement boundaries should be maintained, but should be expanded where needed to allow for necessary growth. No reference is made here to the removal of the development boundary.

The minutes of the meetings expressly state that consultation had taken place on this issue in both 2007 and 2009 (see, for example, minutes of meeting dated 19 October 2010). 5.2.4 Despite this, the minutes of the 10 November 2010 Committee record ‘Members expressed concerns regarding the proposal to remove a number of development boundaries from some settlements’. The minutes of the 19 October 2010 Committee record ‘The Chairman… felt that the parishes had been consulted and that ward councillors also have a responsibility to liaise with their parishes and feedback through the process’. 5.2.5 At the Maresfield Parish Council meeting of 16 November 2010 the removal of the development boundaries was raised. The minutes record that Cllr Galley stated: ‘Parishes had been asked for their views on development boundaries in 2007, and some 300 responses had been received which were equally divided for and against keeping the boundaries. Possibly not all respondents had comprehended the question. Many parishes could not recall being asked.’ 5.2.6 So, were the Parishes asked? The 2007 Core Strategy Issues and Options did not expressly ask a question about removal. Instead, question 5c asks whether respondents should support the removal of settlement boundaries as set out in policy WSC6 and supporting paragraphs 3.6 and 3.7. Our representation is summarised below: Section of Core Strategy: Policy WCS6 Rural Areas Strategy, paras 3.6 & 3.7Legally Compliant: -Sound: No-Justified: NoEffective: NoConsistent with national policy: No 5.2 Issues 5.2.1 The option for removing boundaries was not asked in either the 2007 or 2009 consultation and no responses were made to suggest that they should be removed § Initial officer comments, based on consultation responses to the 2007 consultation, suggest that boundaries should be retained as a positive planning tool. § Why has the concept of removing development boundaries been introduced? § Where is the evidence for introducing this concept? 5.2.3 The removal of development boundaries was discussed at the WDC Committee meetings towards the end of 2010. The minutes of the meetings expressly state that consultation had taken place on this issue in both 2007 and 2009 (see, for example, minutes of meeting dated 19 October 2010). 5.2.4 Despite this, the minutes of the 10 November 2010 Committee record ‘Members expressed concerns regarding the proposal to remove a number of development boundaries from some settlements’. The minutes of the 19 October 2010 Committee record ‘The Chairman… felt that the parishes had been consulted and that ward councillors also have a responsibility to liaise with their parishes and feedback through the process’. 5.2.5 At the Maresfield Parish Council meeting of 16 November 2010 the removal of the development boundaries was raised. The minutes record that Cllr Galley stated: ‘Parishes had been asked for their views on development boundaries in 2007, and some 300 responses had been received which were equally divided for and against keeping the boundaries. Possibly not all respondents had comprehended the question. Many parishes could not recall being asked.’ 5.2.6 So, were the Parishes asked? The 2007 Core Strategy Issues and Options did not expressly ask a question about removing the boundaries. Rather, the questions posed were: Do you agree with the following options: 5a: Settlement boundaries should be maintained, but should be expanded where needed to allow for necessary growth 5b: There should be a policy which allows for some small scale development to take place outside settlement boundaries subject to strict criteria 5c: If you have any further brief comments (including any changes to boundaries you would like to make) please tell us 5.2.7 None of the options ask whether the boundaries should be removed. 5.2.8 The responses to these questions are summarised in page 54 of Agenda Item 8, Appendix C, Technical Summary of Issues Raised through the Issues and Options Consultation Process, Cabinet Local Development Framework Sub Committee Date: 15th October 2007. All comments can also be viewed via the Councils LDF consultation portal. There is no suggestion from any of the responses that the boundaries should be removed. Indeed, responses highlight the importance of maintaining the boundaries, and, in some instances, extended these. 5.2.9 In relation to question 5c, the agenda paper reports that a number of settlements were suggested where the boundary could be changed. These include Maresfield (see page 58). This is closely related to responses to option 21a asking whether people agreed or disagreed with the possible level of growth potential for Maresfield, which at this point was between 350 – 500 homes. Page 163 summarises responses in regard to the option. Support was made for growth in Maresfield and for a change to the boundary to the south of the village to accommodate this growth. No reference is made here to the removal of the development boundary. 5.2.10 The statement made by Cllr Galley at the Maresfield Parish Council (16 November 2010 – see above) meeting raises another issue. Did the options being consulted upon actually reflect the question the Council was trying to ask, i.e.: should development boundaries be removed from some settlements? If this is the case, and consultees have submitted responses unaware of this, then the consultation undertaken must be flawed. Question 5a is perhaps the closest to asking the question about removal, but it is clearly couched in the context of growth and development, i.e.: should they be maintained, reflecting the status quo, or expanded to allow for growth. The question does not ask whether the boundaries should be removed. 5.2.11 Either way, it is clear from the officer recommendation based on the responses to the 2007 consultation (see page 60) that settlement boundaries are a positive planning tool and should be retained. There is no mention of removal: ‘It would appear that, from the comments received, settlement boundaries are a positive planning policy tool and as an initial recommendation that they should be retained. It is preferable, taking into account the comments raised, that any review of development boundaries should be comprehensive in nature with transparent criteria and consultation. In addition to the use of settlement boundaries, there appears to be some agreement to allowing development in the
countryside to meet local need and this will also need to be considered’. 5.2.12 This recommendation also refers to the use of transparent criteria and consultation when reviewing development boundaries. We can not see (a) any evidence of what transparent criteria have been employed to suggest that the development boundaries should be removed, nor (b) what consultation was undertaken that expressly asked whether the boundaries should be removed. 5.2.13 Para 4.40 of the paper prepared under Agenda Item 8 of the LDF sub Committee on 15th October 2007 states: (i) There is a need for a comprehensive review of boundaries to reflect the current situation on the ground, with appropriate community involvement; (ii) A balance needs to be found between preventing urban sprawl, preventing town cramming and not stifling the development needs of individual communities, particularly where no specific allocations are envisaged. The High Weald AONB Unit was amongst those considering boundaries to have been applied too rigidly and that they have not necessarily taken into account the historic pattern of village development. (iii) That any redefinition of settlement boundaries should have regard to the need to retain the distinct and separate identify of nearby settlements; (iv) Not to limit appropriate design and force high densities in locations where new development is proposed; (v) There could be a need for settlement boundaries to be drawn for villages not identified for growth in any event; (vi) There could be a need to redraw more tightly the boundaries for certain villages, a view shared (cautiously) by the South Downs Joint Committee. (vii) The need for well-defined and systematic criteria for defining settlement boundaries and for the selection of settlements where settlement boundaries should be applied. 5.2.14 This response: (a) acknowledges support for the retention of settlement boundaries; (b) that, even in those settlements where there would be no growth, settlement boundaries are required; and (c) there is a need for a well-defined and systematic criteria for defining settlement boundaries and where they should be applied. It is quite clear that there is no intention to remove development boundaries and, in fact, the consultation strengthened the rationale for retention and, where appropriate, modification and expansion. 5.2.15 The 2009 Spatial Options consultation presents options in regard to the quantum and distribution of growth across the District, but does not present options about settlement boundaries nor ask whether they should be removed. 5.2.16 Although responses were made to the 2009 consultation in terms of the level of growth that might be appropriate and which spatial growth option should be progressed, there is no specific response which states that the Maresfield development boundary should be removed.

**Details of Changes to be Made:**

**SUMMARY** 5.2.17 In conclusion, we contend that the Core Strategy is unsound because: 1. it is not justified because (i) it is not based on evidence as no question was asked and (ii) it has not been considered against alternatives; 2. it is not effective, because it is not flexible; and 3. it is not consistent with national policy, specifically that set out in the Local Growth White Paper. 5.2.18 Representations made in previous sections indicate that the level of housing growth set out in the submission Core Strategy is too low, that the housing distribution and trajectory should be reconsidered, and that Maresfield is a suitable and sustainable location to accommodate additional housing growth. We thus suggest that Maresfield should (a) have a settlement boundary, and (b) that this should be drawn to allow for additional housing growth.
4.1 Introduction 4.1.1 This section of our representations refers to the settlement hierarchy set out in the proposed submission Core Strategy. Our representation is summarised below: Section of Core Strategy: Table 1, Settlement Hierarchy Figure 2, Settlement Hierarchy, and Paras 3.2 – 3.7.Legally Compliant: -Sound: No-Justified: No-Effective: No-Consistent with national policy: - 4.2 Issues 4.2.1 In the Core Strategy, the Settlement hierarchy is a key determinant in distributing housing growth across settlements. It has been used at all stages in the plan process. However, the terminology to describe settlements at different levels of the hierarchy has changed and the criteria have been incorrectly applied. The results of this are that Maresfield has been classified incorrectly and the potential to accommodate growth here has thus been underplayed. The issues here are thus: § The assessment of Maresfield against the criteria used to classify villages in the hierarchy has changed over time § The assessment has been inappropriately applied. It does not, in Maresfield, acknowledge the employment offer that will be forthcoming at the Ashdown Business Park, even though this has planning permissions § The assessment is static and does not allow for change or reclassification over time § Why has the classification and thus the associated potential for development changed between different iterations of the Core Strategy? 4.2.2 We present this section in chronological order, starting with the 2007 Core Strategy Issues and Options, through the 2009 Spatial Options to the 2011 Proposed Submission Core Strategy. 2007 Core Strategy Issues and Options: 4.2.3 The 2007 Draft Settlement Strategy for the Villages (Core Strategy Issues and Options Background Paper) identifies Maresfield as a local service centre and a village with growth potential. It states (para 6.49): 'Maresfield is a Smaller Local Service Centre and is within 5km of Uckfield (2.1miles/3.4km). It is also 2.3 miles/3.7km from the mainline station at Buxted. The village has a development boundary and is not subject to significant planning constraints. Part of the village however, is designated as a Conservation Area, which extends beyond the development boundary. There are flood zones to the east and west of the village, and the settlement is surrounded by parcels of ancient woodland'. 4.2.4 At this time, the Council identified the potential level of growth in Maresfield as being between 350 – 500 new homes. 2009 Core Strategy Spatial Options 4.2.5 In the 2009 Rural Settlement Classification (Core Strategy Spatial Options Background Paper 6), the status of Maresfield had changed to an ‘Accessible Settlement with Limited Facilities’. The Rural Settlement Classification allocated the following amount of homes to each settlement type: § Accessible Local Service Centre: 250 dwellings § Local Service Centre: 150 dwellings § Accessible Settlement with Limited Facilities: 100 dwellings § Accessible Settlement: 40 dwellings. 4.2.6 Under these criteria, Maresfield would be a location for 100 new homes. The potential level of housing development increases to 250 dwellings for ‘accessible local service centres’. There are only two criteria which differentiate an ‘accessible local service centre’ from an ‘accessible settlement with limited facilities’; the former benefiting from a GP service and a business area or ‘other locally significant employment opportunities’. Maresfield meets the second of these given the recent planning permission for the Ashdown Business Park. 4.2.7 Furthermore in Barratt’s consultation response submitted to the 2009 Core Strategy Spatial Options we stated that the inclusion of the existence of a GP surgery within the criteria is considered inappropriate as it does not recognise the functional relationships between settlements whereby villages in close proximity will share facilities which none in their own right would have the scale of population to support. PPS 3 paragraph 38 makes this point. The nearest GP surgeries to Maresfield are in Buxted and Uckfield, both of which are within 5 km of Maresfield. We would also contend that the future pattern of provision of rural GP surgeries is uncertain and not a robust basis on which to allocate development to individual settlements. Given the above, we recommended that the criteria be changed to ‘access to health care facilities by sustainable modes of travel’ rather than provision of a GP service within the settlement itself. 2011 Core Strategy Submission Draft 4.2.8 Policy WSC6 establishes that provision will be made for at least 455 new dwellings across the following categories of settlement: service centre, local service centre, neighbourhood centre and unclassified settlements. Table 1 and associated Figure 2 of the Submission Core Strategy classify Maresfield as a Neighbourhood Centre. The rationale for this is set out in Appendix 3 to the Core Strategy Background Paper 1: Development of the Proposed Submission Core Strategy (February 2011). Appendix 4 establishes how each settlement was classified. 4.2.9 We contend that the settlement classification significantly underplays the role and potential of Maresfield. Criteria for classifying settlements include presence of a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both of these. This ignores the fact that the Ashdown Business Park, which received planning permission in 2010, is located in Maresfield. The submission Core Strategy acknowledges this at para 3.21, so why does the settlement hierarchy not take this into consideration? 4.2.10 We have compared the assessment undertaken in the Background Paper with the draft Settlement Strategy for the Villages (July 2007, Core Strategy Issues and
Options) and the Rural Settlement Classification (July 2009, Core Strategy Spatial Development Options Background Paper). In both the 2007 and 2009 classifications, Maresfield receives a tick against both ‘business area’ and ‘other locally significant employment opportunities’. There is no reason why the assessment set out in the February 2011 background paper should change this, particularly given that the Ashdown Business Park now has planning permission. 4.2.11 The Councils Employment Land review identifies the Ashdown Business Park as the most strategically significant employment site in North Wealden. It will provide in the region of 600 – 700 jobs in a mix of office and B1 light industrial space. The planning application submitted for the Business Park makes the link between housing and employment growth and contribution to sustainable patterns of development and local employment opportunities. Para 3.18 of the submission Core Strategy states ‘The strategy is aimed at increasing the opportunity for people to work close to where they live’. 4.2.12 The criteria for assessing Maresfield also include a cross against ‘provision of changing facilities’ (for sports). Again, this is incorrect. Changing facilities exist at the recreation ground – for football and cricket – and at the Bowls Club. 4.2.13 So, the question here is why has the classification of Maresfield has changed from a local centre with growth potential (in 2007) to a Neighbourhood Centre with limited potential (in 2011), bearing in mind that the criteria have effectively remained the same and that, as we point out above, the assessment actually underplays the potential of Maresfield? The justification and rationale for changing the classification of Maresfield is not clear. 4.2.14 The Core Strategy aspires to retaining the rural character and high quality environment of the district, whilst also providing sufficient growth to improve the performance of the economy, regenerate market towns and provide a more vital future for villages. 4.2.15 However, the settlement classification is static and does not allow for any reclassification of settlements during the period covered by the LDF. It does not acknowledge that villages may become more sustainable through additional population arising from new development increasing the viability of local shops and services. PPS 3 is clear here that the need for housing provision in rural areas, not only in market towns and local service centres but also in villages in order to enhance or maintain their sustainability.

Details of Changes to be Made:

SUMMARY 4.2.16 In summary, we contend that the assessment is incorrect, previous consultation responses have not been addressed and the potential for growth and change in Maresfield is being suppressed. The assessment should be reconsidered in light of the planning permission granted for the Ashdown Business Park and the potential for balancing homes and jobs in this part of the district recognised. 4.2.17 We thus contend that, on this matter, the Core Strategy is unsound, because: 1. It is not justified, as the evidence used is incorrect; and 2. It is not effective, as the boundaries are ‘static’ and thus not flexible.

Details of Reasons for Soundess/ Legal Complaince:

Table 1 Settlement Hierarchy : Polegate and Stone Cross should be included in the District Centre category not Service Centre as this would raise its status comparable with settlements identified for growth within the Wealden District.

Details of Changes to be Made:

Table 1 District Centre Polegate and Stone Cross
Details of Reasons for Soundess/ Legal Complaince:
We support the identification of the hierarchy of settlements indentified in Table 1 which outlines the role and function of individual towns and villages to inform the future allocation of development and growth. Furthermore we support the settlement classification of Primary Centres, Secondary Centres, District Centres, Service Centres, Local Service Centres, Neighbourhood Centres and Other Unclassified Settlements. This hierarchy and classification is important in identifying those places that "have the greatest amount and range of employment, community facilities and support services, and which are best served by public transport" (Para3.3) and thus guiding future development. In the context of the above we further support the identification of Horam as a Local Service Centre, defined as "Settlements that have a more limited supply of social and economic infrastructure including employment and where local residents depend upon other centres to meet a broad range of needs with some form of accessibility to those centres" (Table 1: Settlement Hierarchy) Given this role we support the contribution the settlement can make in providing a focus for future development as outlined in paragraph 3.4 which states "Evidence confirms that if more sustainable patters of living are to be promoted, the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities, services and site opportunities exist." The acceptability of Horam as an appropriate location for future development is further confirmed within Policy WCS6- Rural Areas Policy, which is subject to separate representation.

Details of Reasons for Soundess/ Legal Complaince:
In a District such as Wealden where "the rural areas outside of the main urban areas cover almost 93% of Wealden District. And contain around 50% of its population" (para 6.43 of the Core Strategy) it is important that the principles as outlined in para 3 of PPS7: Sustainable Development in Rural Areas are adhered to, in that, within rural areas "most new development [should be focused] in or near to local service centres where employment, housing (including affordable housing), services and other facilities can be provided close together". The paragraph continues that "These centres (which might be a country town, a single large village or a group of villages) should be identified in the development plan as the preferred location for such development". The acceptability of Horam as a Local Service Centre and this its role in accommodating new development is further highlighted in para 7.19 of the supporting Sustainability Appraisal which states that "Rotherfield, Horam and East Hoathly perform well in sustainability terms and feature higher in the SA hierarchy, due to strong social and economic assessments". In the context of above we support the inclusion of Horam within the settlement categorisation of Local Service Centre as per Table 1: Settlement Hierarchy and the proposed allocation at Horam of 100 additional dwellings as contained in Policy WCS6 - Rural Area Strategy.

Details of Reasons for Soundness/ Legal Compliance:
The designation of some villages is not well thought out. Maresfield is designated a Neighbourhood centre whilst Buxted a Local Service Centre. Maresfield has a good road network, a bus service and accessible employment. Buxted on the other hand does not. Maresfield should be reclassified.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

WJPC is concerned at the numerous references to Polegate and Willingdon as one settlement, as highlighted in 3.3 Table 1, 3.11, SPO6, WCS2, WCS3, 5.13, 6.31(2), Figure 8 and Figure 12. In particular, Figure 2 showing settlement hierarchy, places Polegate and Willingdon as one settlement, yet details other settlements individually.

Details of Changes to be Made:

Change Maresfield to where it should be a Local Service Centre. Retain a development boundary. Allocate 300 to 400 houses to Maresfield to allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other parts of the area.

Details of Reasons for Soundess/ Legal Complaince:

Object to the inclusion of Maresfield as a neighbourhood centre when it is clearly much more than this, and should be a Local Service Centre. Maresfield is much larger than the other villages in the neighbourhood centre group and contrary to the council’s assessment has similar or greater facilities than most of those in the Local Service Centre group. In particular it is immediately adjacent to the Ashdown Business Park which is planned to provide 1000 jobs. It also has as many if not more shops, garages, pubs than most of the LSC Group and certainly has much more than those in the NC group. In particular if Buxted is considered a LSA where there is minimal local employment, no more shops than Maresfield, no garage, and the local shop appears to have closed, is considered an LSC then clearly Maresfield should also be in this group. Maresfield should retain a development boundary. given that the council state that one of the aims of the strategy is to limit car travel and enable people to live where they work, clearly the uniqueness of Maresfield having the large employment site next to it means much more new housing should be allowed there as well. As otherwise as things stand at the moment, with the small older retired current population in Maresfield, the vast majority of workers at the Ashdown Business Park will have to drive in from other parts of the area.

Details of Changes to be Made:

Change Maresfield to where it should be a Local Service Centre. Retain a development boundary. Allocate 300 to 400 houses to Maresfield to allow workers at the Ashdown Business Park to live where they work, and not have to travel in by car from other parts of the area.

Details of Reasons for Soundness/ Legal Compliance:
The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a ‘District Centre’ and not as a ‘Service Centre’. The town fulfils the functions and characteristics of a District Centre as defined on table 1. It is a far more important settlement within the district than the Council has suggested. Indeed the Council itself identifies Heathfield as one of the five main towns in the District in paragraph 2.3 of the Proposed Core Strategy and Policy SP04 which refers to “our five principle towns”. The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities, that serves a distinct part of the district. 2 Paragraph 3.4 states that, “the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities services and site opportunities exist. It is considered that the Council has under-estimated the current and future roles that Heathfield can play in this respect by failing to properly recognise the character and function of the town. 3 In order to make the Core Strategy sound, Heathfield should be redefined within the Settlement hierarchy as a District Centre.

Details of Changes to be Made:
Heathfield should be re-defined in the Settlement Hierarchy as a District Centre
Details of Reasons for Soundess/ Legal Complaince:
The Wealden settlement hierarchy does not adequately reflect the settlement structure in the district and, as such, it is unsound. Westham should be identified as a Service Centre due to the facilities and employment areas it contains. The hierarchy constrains positive development in lower order settlements, that may contribute to sustainable growth of the area. paragraph 3.4 should clarity that some local service centres are capable of accommodating sustainable growth.

Details of Changes to be Made:
The Wealden settlement hierarchy should be redrafted to reflect the settlement structure in the district and allow for growth to meet future economic and social needs. We consider that Westham should be allocated as a service centre due to the facilities and employment areas it contains. Paragraph 3.4 should clarify that some local service centres are capable of accommodating sustainable growth. Please see Indigo Planning letter dated 15 April 2011

Details of Reasons for Soundess/ Legal Complaince:
1. The Core Strategy is unsound because it has defined Heathfield incorrectly within the settlement hierarchy. This is unjustified. It should be viewed as a ‘District Centre’ and not as a ‘Service Centre’. The town fulfils the functions and characteristics of a District Centre as defined on Table 1. It is a far more important settlement within the district than the Council has suggested, evidenced in the Core Strategy paragraph 2.3 which identifies Heathfield as one of the five main towns in the district and in Policy SP04 which refers to "our five principal towns". The character of the town is very different to the other Service Centres identified. It is a largely self-contained settlement, with a wide range of services and facilities that serves a distinct part of the district. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:
2. Paragraph 3.4 states that, “the large majority of future planned growth in Wealden needs to be focused on the towns and larger villages in the hierarchy, where facilities services and site opportunities exist. It is considered that the Council has under-estimated the current and future roles that Heathfield can play in this respect by failing to properly recognise the character and function of the town.

### Details of Reasons for Soundness/ Legal Complaince:
St Richards Church supports to identification of Crowborough as a district centre and considers that this is a key matter in determining the potential and the need for growth in the town. The status of district centre acknowledges that the town has potential to accommodate growth without reliance on outside areas and that any growth occurring in this location is sustainable. It believes that Crowborough has an importance within the northern part of Wealden District which supports a strategy of growth for the town and that the growth should be of a size to support the adequate provision of local services for the town and the surrounding rural areas reliant on Crowborough. We consider that this should be reflected in the housing and employment allocations set out in the core strategy.

The following representations are made by Smiths Gore on behalf of the Trustees of the Firle Estate. The Estate are significant local landowners in the southern part of the District as well as in the adjoining part of Lewes District. As such, the Trustees take a great deal of interest in the emerging planning policy framework in Wealden, and are particularly keen that the southern part of the District is developed and allowed to grow in a way that is sustainable and proportionate to the capacity for that part of the District to support additional development. The representations outlined below focus on the Estate’s landholdings in and around the settlement of Berwick Station. As the Council will know, this area has been under consideration for a possible new settlement of 1500-2000 dwellings, indeed being included within the shortlist of three possible locations. It is clear that the presence of the excellent transport links in the form of the location of a well served train station in the Village combined with easy access to the trunk road network via the A27 meant that Berwick is considered a particularly sustainable location for housing growth. Around this time, Atkins was commissioned to assess the capacity of the Village and put forward suggested development options. The Atkins report, Land at Berwick Station: Proposed Rural Housing Development provides a good deal of background which Smiths Gore do not intend to repeat, including the Gage family’s discomfort at the level of growth then being discussed for Berwick. As responsible local landowners and community members, the family feel quite strongly that development of Villages such as Berwick Station should be allowed to happen in an organic, incremental way so as not to overwhelm existing communities or outpace the provision of social and physical infrastructure. That is not to say however, that growth should not be properly planned and the existing Atkins study should perhaps be seen as a much longer term vision of where Berwick Station may wish to head towards. With that in mind, Smiths Gore have been asked to prepare and submit the following representations to the Core Strategy which we hope will be taken into account during the examination of the Development Plan Document. We and the Estate look forward to a continued positive and effective relationship with the Local Development Framework process.

Core Strategy Representations

This paragraph, and the settlement strategy set out in Table 1, is considered to be inconsistent with national policy insofar as it relates to the need to promote sustainable patterns of development, particularly in relation to public transport accessibility and/or means other than the private car (PPS1, PPS3 and PPS7). This is particularly important for Wealden District since, as stated in Para.5.21 of Background Document 1, The Development of Proposed Submission Core Strategy, the many areas of poor public transport accessibility has led to a heavy reliance on the use of the private motor vehicle. It is therefore vitally important that the distribution of development moving forward does not exacerbate this issue. Whilst it is not suggested that public transport accessibility should be the only consideration, it is suggested that the definition of Accessible Settlements set out in the 2009 Spatial Development Options Background Paper Rural Settlement Classification, is perhaps more consistent with national planning policy than the current strategy and should be re-included. In addition, PPS3 requires LPAs to give consideration to the functional relationship between settlements in rural areas, and it is considered that the relative sustainability of smaller settlements that may in themselves have limited facilities, may in fact be greatly enhanced through a close functional relationship with larger dwellings. Arguably therefore, housing growth in such settlements would be as sustainable as development adjoining the urban area of those larger settlements. To use the example of Berwick Station, the extremely close functional relationship with the Primary Centres of Lewes and Eastbourne, make this Village, as well as all villages that are within easy walking of cycling distance such as Alciston, Berwick and Selmeston much more sustainable that they are if viewed in isolation. Unfortunately the fact that these Primary Centres are located outside of the plan area has meant that this relationship has not been explored more fully. It is also suggested that the Settlement Hierarchy is not justified since it is also not clear how the decisions that led up to the identification of various categories of settlement are supported by evidence. In particular, it would appear that weighting has been afforded to some facilities, for example primary school provision but not to others such as public transport provision that may be more significant indicators of the sustainability of a settlement. However, since no evidence is provided or indeed does there appear to have been any meaningful consultation around this point during earlier rounds of community involvement, it is impossible to counter this assumption. At the same time, the contribution of certain facilities that have been listed in the matrix that was attached to the 2009 Rural Settlement Classification appears to be arbitrary and not necessarily, it is suggested, good indicators of the vitality or indeed capacity for growth of a settlement. Turning to two examples within the south of the District, Horam and Herstmonceaux are both identified within the Rural Strategy for relatively significant levels of growth, 100 and 70 dwellings respectively. However, neither settlement are served by train stations and whilst bus based public transport is available, it is suggested relying on this mode of transport will not lead to greater uptake of public transport.
transport as would be the case if settlements that are served by rail services were identified for a similar level of growth. This is recognised in the Sustainability Assessment that accompanies the Core Strategy where Herstmonceaux in particular scores particularly low on environmental sustainability.

Details of Changes to be Made:
Whilst it is not suggested that public transport accessibility should be the only consideration, it is suggested that the definition of Accessible Settlements set out in the 2009 Spatial Development Options Background Paper Rural Settlement Classification, is perhaps more consistent with national planning policy than the current strategy and should be re-included. In addition, the Settlement Strategy should be amended to give consideration to the functional relationship between settlements in rural areas. This should include the close functional relationship exhibited by the villages of Alciston, Berwick, Berwick Station and Selmeston as well as the relationship that these villages have – though the station at Berwick Station – with the Primary Centres of Lewes and Eastbourne. The Core Strategy should also provide evidence in support of the weighting that has been applied to the provision of certain facilities in rural settlements, backed up by empirical evidence about what facilities serve to make such communities – and the wider rural area – sustainable. Lastly, the settlement strategy should differentiate between rail based and bus based public transport provision – in order to take account of the relative attractiveness and therefore use of the former over the latter.

REVISION SOUGHT . Amend to place Polegate/Willingdon as a District Centre to take into account the Secondary School at Willingdon which is spatially as close as secondary schools at Crowborough, Uckfield and Hailsham to the majority of residents in the town. also to reflect the importance of the mainline railway station at Polegate. The lack of public transport opportunities at Hailsham should also be noted.
4.1 Introduction

This section of our representations refers to the settlement hierarchy set out in the proposed submission Core Strategy. Our representation is summarised below: Section of Core Strategy: Table 1, Settlement Hierarchy Figure 2, Settlement Hierarchy, and Paras 3.2 – 3.7

Legally Compliant: -Sound: No -Justified: No -Effective: No -Consistent with national policy: Yes

4.1.1 This section of our representations refers to the settlement hierarchy set out in the proposed submission Core Strategy. Our representation is summarised below: Section of Core Strategy: Table 1, Settlement Hierarchy Figure 2, Settlement Hierarchy, and Paras 3.2 – 3.7

Legally Compliant: -Sound: No -Justified: No -Effective: No -Consistent with national policy: Yes

4.2 Issues

4.2.1 In the Core Strategy, the Settlement hierarchy is a key determinant in distributing housing growth across settlements. It has been used at all stages in the plan process. However, the terminology to describe settlements at different levels of the hierarchy has changed and the criteria have been incorrectly applied. The results of this are that Maresfield has been classified incorrectly and the potential to accommodate growth here has thus been underplayed. The issues here are thus: § The assessment of Maresfield against the criteria used to classify villages in the hierarchy has changed over time § The assessment has been inappropriately applied. It does not, in Maresfield, acknowledge the employment offer that will be forthcoming at the Ashdown Business Park, even though this has planning permissions § The assessment is static and does not allow for change or reclassification over time § Why has the classification and thus the associated potential for development changed between different iterations of the Core Strategy?

4.2.2 We present this section in chronological order, starting with the 2007 Core Strategy Issues and Options, through the 2009 Spatial Options to the 2011 Proposed Submission Core Strategy. 2007 Core Strategy Issues and Options: 4.2.3 The 2007 Draft Settlement Strategy for the Villages (Core Strategy Issues and Options Background Paper) identifies Maresfield as a local service centre and a village with growth potential. It states (para 6.49): ‘Maresfield is a Smaller Local Service Centre and is within 5km of Uckfield (2.1miles/3.4km). It is also 2.3 miles/3.7km from the mainline station at Buxted. The village has a development boundary and is not subject to significant planning constraints. Part of the village however, is designated as a Conservation Area, which extends beyond the development boundary. There are flood zones to the east and west of the village, and the settlement is surrounded by parcels of ancient woodland’. 4.2.4 At this time, the Council identified the potential level of growth in Maresfield as being between 350 – 500 new homes. 2009 Core Strategy Spatial Options 4.2.5 In the 2009 Rural Settlement Classification (Core Strategy Spatial Options Background Paper 6), the status of Maresfield had changed to an ‘Accessible Settlement with Limited Facilities’. The Rural Settlement Classification allocated the following amount of homes to each settlement type: § Accessible Local Service Centre: 250 dwellings § Local Service Centre: 150 dwellings § Accessible Settlement with Limited Facilities: 100 dwellings § Accessible Settlement: 40 dwellings

Under these criteria, Maresfield would be a location for 100 new homes. The potential level of housing development increases to 250 dwellings for ‘accessible local service centres’. There are only two criteria which differentiate an ‘accessible local service centre’ from an ‘accessible settlement with limited facilities’; the former benefiting from a GP service and a business area or ‘other locally significant employment opportunities’.

Maresfield meets the second of these given the recent planning permission for the Ashdown Business Park. 4.2.7 Furthermore in Barratt’s consultation response submitted to the 2009 Core Strategy Spatial Options we stated that the inclusion of the existence of a GP surgery within the criteria is considered inappropriate as it does not recognise the functional relationships between settlements whereby villages in close proximity will share facilities which none in their own right would have the scale of population to support. PPS 3 paragraph 38 makes this point. The nearest GP surgeries to Maresfield are in Buxted and Uckfield, both of which are within 5 km of Maresfield.

We would also contend that the future pattern of provision of rural GP surgeries is uncertain and not a robust basis on which to allocate development to individual settlements. Given the above, we recommended that the criteria be changed to ‘access to health care facilities by sustainable modes of travel’ rather than provision of a GP service within the settlement itself. 2011 Core Strategy Submission Draft 4.2.8 Policy WSC6 establishes that provision will be made for at least 455 new dwellings across the following categories of settlement: service centre, local service centre, neighbourhood centre and unclassified settlements. Table 1 and associated Figure 2 of the Submission Core Strategy classify Maresfield as a Neighbourhood Centre. The rationale for this is set out in Appendix 3 to the Core Strategy Background Paper 1: Development of the Proposed Submission Core Strategy (February 2011).

Appendix 4 establishes how each settlement was classified. 4.2.9 We contend that the settlement classification significantly underplays the role and potential of Maresfield. Criteria for classifying settlements include presence of a ‘business area’ and ‘other locally significant employment opportunities’. Maresfield receives a cross against both of these. This ignores the fact that the Ashdown Business Park, which received planning permission in 2010, is located in Maresfield. The submission Core Strategy acknowledges this at para 3.21, so why does the settlement hierarchy not take this into consideration? 4.2.10 We have compared the assessment undertaken in the Background Paper with the draft Settlement Strategy for the Villages (July 2007, Core Strategy Issues and
Options) and the Rural Settlement Classification (July 2009, Core Strategy Spatial Development Options Background Paper). In both the 2007 and 2009 classifications, Maresfield receives a tick against both ‘business area’ and ‘other locally significant employment opportunities’. There is no reason why the assessment set out in the February 2011 background paper should change this, particularly given that the Ashdown Business Park now has planning permission. 4.2.11 The Councils Employment Land review identifies the Ashdown Business Park as the most strategically significant employment site in North Wealden. It will provide in the region of 600 – 700 jobs in a mix of office and B1 light industrial space. The planning application submitted for the Business Park makes the link between housing and employment growth and contribution to sustainable patterns of development and local employment opportunities. Para 3.18 of the submission Core Strategy states ‘The strategy is aimed at increasing the opportunity for people to work close to where they live’. 4.2.12 The criteria for assessing Maresfield also include a cross against ‘provision of changing facilities’ (for sports). Again, this is incorrect. Changing facilities exist at the recreation ground – for football and cricket – and at the Bowls Club. 4.2.13 So, the question here is why has the classification of Maresfield has changed from a local centre with growth potential (in 2007) to a Neighbourhood Centre with limited potential (in 2011), bearing in mind that the criteria have effectively remained the same and that, as we point out above, the assessment actually underplays the potential of Maresfield? The justification and rationale for changing the classification of Maresfield is not clear. 4.2.14 The Core Strategy aspires to retaining the rural character and high quality environment of the district, whilst also providing sufficient growth to improve the performance of the economy, regenerate market towns and provide a more vital future for villages. 4.2.15 However, the settlement classification is static and does not allow for any reclassification of settlements during the period covered by the LDF. It does not acknowledge that villages may become more sustainable through additional population arising from new development increasing the viability of local shops and services. PPS 3 is clear here that the need for housing provision in rural areas, not only in market towns and local service centres but also in villages in order to enhance or maintain their sustainability.

Details of Changes to be Made:
SUMMARY 4.2.16 In summary, we contend that the assessment is incorrect, previous consultation responses have not been addressed and the potential for growth and change in Maresfield is being suppressed. The assessment should be reconsidered in light of the planning permission granted for the Ashdown Business Park and the potential for balancing homes and jobs in this part of the district recognised. 4.2.17 We thus contend that, on this matter, the Core Strategy is unsound, because: 1. It is not justified, as the evidence used is incorrect; and 2. It is not effective, as the boundaries are ‘static’ and thus not flexible.

Settlement Hierarchy Table 1
Sound ☑ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
3.2 Table Settlement Hierarchy 3.2.1. It is considered that the identification of Uckfield as a District Centre is an appropriate classification for the settlement which is both legally compliant and sound. The settlement meets the requirements of the classification being an accessible settlement by road and public transport containing a range of shops, employment opportunities and facilities including secondary school. 3.2.2 As such it is considered that the settlement is an appropriate location for development in the District due to its sustainability credentials. Although District Centre is not the highest classification of settlement overall, it is the highest type found within Wealden District. Consequently Uckfield is identified as forming one of the main three settlements located within the District

Concern raised at the reference to Polegate and Willingdon as one settlement

Details of Changes to be Made:
classification of rural settlements is based on flawed and incomplete assessment of relevant considerations. 3.2 Introduction 3.2.1 Section 3 of the Consultation document sets out key elements of the Wealden Spatial Strategy and in particular the Council's approach to settlement classification. Decisions taken on this matter are extremely significant in so far as the hierarchy provides the basis for the distribution of development. In respect of rural settlements in particular, it results in the distinction being drawn between those settlements where new development will be allowed and others where it will not. 3.2.2 In our submission the approach to the categorisation of rural settlements is based on a flawed assessment of settlement characteristics and the role that new development can play in sustaining and enhancing vitality in rural areas, consistent with national policy as set out above. 3.2.3. Our objections to the settlement hierarchy focus on the village of Framfield which falls within the designation "other unclassified settlement" in Table 1 on page 10 of the Core Strategy. By virtue of this classification, the Core Strategy describes the function of Framfield in the following terms - a settlement "with few or no facilities and services, and where further development would be unsustainable". 3.2.4. As such no development provisions are made for Framfield and it is proposed that the designated settlement boundary is removed in a subsequent DPD. Our clients contest this proposal and consider it to be unsound. 3.2.5 It is instructive to note that when the Draft document was presented to Committee in October 2010, Framfield was proposed to have an allocation of 25 dwellings and a classification of Neighbourhood Centre. As such the Council considered its function to be: "A settlement with limited basic or no facilities but with access to another centre or a settlement with facilities but poor accessibility or access only to a service or local centre." 3.2.6 Our Representations therefore focus on the rationale for the Council's approach overall, and the validity of the change in status which occurred between October 2010 and February 2011. 3.3. Framfield 3.3.1 BP1 (Development of the Proposed Submission CoreStrategy Background paper) includes in its Appendices various information about individual settlements. The Council draws on that material in its assessment of growth potential in each settlement in Section 8 of BP1. 3.3.2. Appendix 4 (Settlement Facilities Matrix) includes information on all minor settlements in the District and concludes with an accessibility rating. Appendix 3 takes this material but adds what appears to be a subjective measure of "settlement self sufficiency" to determine the relative status of individual settlements. Decisions about how new development should be distributed are based on that assessment. 3.3.3. In our submission this is an incomplete and flawed approach. Indeed it omits to take into account other relevant considerations contained in BP1 itself. For example: a. Appendix 1 identifies the comments made by Parish Councils in response to the 2009 Spatial Development Options Consultation. Those views must carry some weight. In the case of Framfield for example there was a preference for 26 - 50 dwellings with 51 - 100 as "worst case". b. Appendix 2 identifies settlements with potentially available housing land, including Framfield. c. Section 8 of BP1 provides information on affordable housing needs but omits to consider those settlements which have not already been pre-selected as suitable for rural growth. 3.3.4 These are all material considerations to be taken into account in determining the appropriateness of a settlement to accommodate additional development. 3.3.5 The Council's approach to settlement classification as regards Framfield results in flawed conclusions in the following respects. a. Facilities - The Council's decision to down-grade Framfield at the end of 2010 was apparently based on the closure of an existing shop in Blackboys and a re-assessment of local bus services. The fact that Framfield has lost some of its facilities in recent times demonstrates the vulnerability of its future vitality. It may be difficult in the short-term to secure the re-opening of local shops etc., but additional population should at least arrest any further decline and may, in the longer-term, pave the way for additional services. That is the intention of Government policy (PPS3 para 38 and PPS7 para 4. b. Accessibility: the key distinction in the Council's settlement hierarchy between "other unclassified settlements" and "neighbourhood centres" is access to another settlement which does have facilities. Framfield is located approximately 2.25 kms to the east of Uckfield. The village therefore fulfils not only the role of a defined rural settlement but it also acts as a satellite to Uckfield, benefiting from its services, facilities and wider public transport options. In the main these are less than 3 kms. Away from the village. In the Draft version of the Core Strategy submitted to Committee in October 2010 Framfield was identified as a Neighbourhood Centre, consistent with these characteristics. The Council's decision to reclassify it in the published Pre-Submission Core Strategy ignores this consideration. c. Housing Need: the need for additional housing has consistently been recognised in Framfield District. The Council's Housing Needs Study of 2009 estimated a gross annual housing need in Framfield of 21 units. It noted furthermore that over the past five years members of some 47 households had had to move out of the Parish to find a suitable home. The percentage of households in need is broadly consistent with the District average, as is the ability to afford market
accommodation. A further indication of local housing need was contained in a survey carried out by Framfield Parish Council in 2006. This identified 69 households requiring alternative housing within the next five-year period. The effect of the Council's classification of Framfield is that there will be no opportunity to meet any of this housing need, contrary to the intention of the national policy set out in PPS3. Capacity: Appendix 2 of BP1 indicates that Framfield has the capacity for additional development. The Wealden SHLAA identifies a number of "potentially suitable sites". Excluding sites within Framfield Parish but on the edge of Uckfield, the SHLAA identified a total of 7 "potentially suitable" sites with a capacity for 717 dwellings. 3.2.6 An illustration of the potential benefits which a modest housing allocation could generate at Framfield is provided in the Appendix. 3.4 Conclusion 3.4.1 Our criticisms of the Council's settlement hierarchy focus specifically on Framfield. However the flaws identified in the assessment process may well be applicable in other cases. 3.4.2 National policy stresses the importance of making provision for housing in rural settlements to meet housing needs and to protect and enhance their vitality. In the context of Wealden District there is a well established precedent that this should take through a "balanced dispersal" strategy. 3.4.3. A modest amount of development in Framfield can make a valuable contribution to the vitality of the village as well as responding to meeting market and affordable housing needs. The village should be reinstated in the settlement hierarchy as a Neighbourhood Centre.

**Details of Changes to be Made:**
Framfield should be classified as a neighbourhood centre.

**Details of Reasons for Soundness/ Legal Compliance:**
The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 2. paragraph 3.10 of the Ppoused Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to address the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.

**Details of Changes to Be Made:**
The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the district where the market is stronger and a known need for housing exists.
We are intrigued by the Councils intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permission and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as identified above of the chronic affordable housing issues that exist within the District.
We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. **Legally Compliant**
- ✅ Yes
- No

**Details of Reasons for Soundness/ Legal Compliance:**
1.1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 1.2 paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

**Details of Changes to be Made:**
On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.
Details of Reasons for Soundess/ Legal Complaince:

1. The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2030. This is made up as follows: Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed additional housing 4685 TOTAL 9579 2. Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,600, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

3. On this basis the Core Strategy is unsound because the numbers of dwellings that are proposed to be delivered are deficient and do not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations.

Details of Reasons for Soundess/ Legal Complaince:

1. The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed additional housing 4685 TOTAL 9579 2. Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

3. On this basis the Core Strategy is unsound because the numbers of dwellings that are proposed to be delivered are deficient and do not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations.

Details of Reasons for Soundess/ Legal Complaince:

3. On this basis the Core Strategy is unsound because the numbers of dwellings that are proposed to be delivered are deficient and do not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. The total should be closer to the number of new households expected to be created over the plan period.

Details of Changes to be Made:

The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the District where the market is stronger and a known need for housing exists.
Details of Reasons for Soundness/ Legal Compliance:
The Number of Dwelling Proposed to be delivered. (Paragraphs 3.8 – 3.17, Policy WCS1) 1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already build (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579

Details of Changes to be Made:
2 Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

Details of Reasons for Soundness/ Legal Compliance:
We are concerned that under present proposals the essential housing needs for market and affordable housing will not be met. 3.10 Trend based projections show demand for market and affordable housing is high “and in excess of what Wealden could accommodate or deliver” 3.11 Confusingly it goes on to meet this need in urban extensions at Heathfield, Uckfield, Hailsham, Polegate, Willingdon, Stone Cross and Frant.

Details of Changes to be Made:
Paragraph 3.1
Details of Reasons for Soundess/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Paragraph 3.10 Fails to acknowledge the true need for new housing during the plan period and in particular affordable housing which is not as a result of migration and which can only be delivered by the building of market housing. The Council has no delivery mechanism for affordable housing other than through the requirement of a % of the housing allocations being delivered by developers as affordable housing. there is no evidence that the trend based requirement cannot be delivered in Walden with any insurmountable environmental impacts or infrastructure delivery failure. the SHLAA has identified that 22,000 dwellings can be delivered in the plan period.

Details of Changes to be Made:
REVISION SOUGHT. Delete second sentence and revise third sentence as follows; "To meet this need the Strategic Housing Land Available Assessment has identified a number of individual sites where housing amounting to some 22,000 dwellings would be suitable, available and achievable.

Representation ID
39

Paragraph 3.11
Details of Reasons for Soundess/ Legal Complaince:
The Councils figure of 9600 over the period 2006 -2030 acquates to 400 dwellings per annum inconsistant with RSS evidence based figures of 550 between 2006-2026 ie 11000 dwellings over 20 years. Under this analysis over the 24 year period based on the RSS thefigure would be 13200. Therefore cuurently the Council is proposing a reduction on the RSS figure of 3600 or 37.5% of the Council housing farget of 9600.

Details of Changes to be Made:
The Council need to relate its figures to a regional figure to make sense of the population matrix and must reionstate the RSS figure for Wealden as the starting calculation for housing requirement for its district. It must refer to the Councils Strategic Housing Marketing Assessment, SHLAA capacity Housing Needs and Census.
Details of Reasons for Soundness/ Legal Complaince:
The Council fig of 9600 over the 2006 -2030 amounts to 400 dwellings per annum in consistant with the RSS evidence based figs of 550 between the period of 2006 -2026 ie 11000 dwellings over 20 yrs. Under this analysis over the 24 yr period based on RSS figures would amount to 13200 dwellings. Therefore currently the Council is proposing a reduction on the RSS figs of 3600 or 37.5% of the Councils current target figure.

Details of Changes to be Made:
The Council need to relate its fig to Regional figures to make sense of the strategic importance of the district meeting its regional targets. Consideration must be given to the population matrix and must re instate the RSS figure for Wealden as the starting point for its housing requirements. It must refer to the Councils Strategic Housing Marketing Assessment, SHLAA capacity housing needs and Census predictions.

Details of Reasons for Soundness/ Legal Complaince:
WJPC is concerned at the numerous references to Polegate and Willingdon as one settlement, as highlighted in 3.3 Table 1, 3.11, SPO6, WCS2, WCS3, 5.13, 6.31(2), Figure 8 and Figure 12. In particular, Figure 2 showing settlement hierarchy, places Polegate and Willingdon as one settlement, yet details other settlements individually.

Details of Changes to be Made:
Paragraph 3.11

Details of Reasons for Soundness/ Legal Complaince:

The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 2. paragraph 3.10 of the Porposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to reddress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.

Details of Changes to be Made:

The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the district where the market is stronger and a known need for housing exists.
1.1 The Amount of New Housing – Policy WCS1 and WCS2 and paragraphs 5.3 etc 1.1.1 We note that the proposed Submission Core Strategy looks to accommodate 9574 new dwellings in the district across the plan period (2006 – 2030) i.e. 399 a year. This is circa 27.5% less than the 11,000 dwellings proposed across the district in the South East Plan (SEP) (May 2009) for the period 2006 and 2026. 1.1.2 PPS12 requires Core Strategies to conform generally to the regional policy. We do not consider the amount of new housing proposed in the district to be legally compliant as it is not consistent with regional policy as set out in the SEP. 1.1.3 Whilst the LPA appears to be progressing with a lower level of growth on the assumption that the SEP will be revoked by the time the Core Strategy gets to examination, the fact is the SEP remains part of the development plan at present and the CS should have regard to the aims and objectives of the SEP/ justify why it is necessary and appropriate to depart from it. The proposed Submission Core Strategy contains no such justification. 1.1.4 A detailed understanding of the background to the amount of new housing proposed in the district in the SEP is important in considering the soundness of the housing land supply strategy now being advocated in the proposed Submission Core Strategy document. 1.1.15 The Chief Planning Officer (CPO) in his letter of the 6th July made it clear that in the context of the revocation of the RSS LPAs would be responsible for determining the housing numbers in the absence of a regional target, and that the housing numbers promoted by LPAs would need to be justified, as LPAs would need to defend them through the LDF examination process. 1.1.19 The District Council has an obligation to assess and provide for the housing needs and demands of the District. Paragraph 33 of PPS3 makes it very clear that in determining local levels of housing provision local planning authorities should, in preparing their Core Strategies take into account evidence of current and future levels of housing need and demand, e.g. as set out in Housing Market Assessment and the Housing Needs Assessment. 1.1.22 Having regard to the above we feel the DC should give consideration to the accommodation of at least 13,200 (i.e. the 11,000 set out in the SEP plus 4 x 550) to cover the additional years to 2030). Given the 4,889 units are already committed this would leave a residual requirement of 8,311 i.e. a residual requirement equivalent to 415 dwellings pa. If, 75% of the 13,200 units were on sites that generated an affordable housing need under the new policy WCS8, this level of provision could provide for circa 3,465 affordable dwellings i.e. 18% of the affordable need identified in the HNA. Which demonstrates how sever the need is relative to the supply 1.1.23 WDC’s aversion to higher housing numbers appears to be related to the effect these could have on infrastructure and services, especially in the southern part of the district. However, it is often the case that the strategic housing allocations help to address this issue, providing new transport links/highway improvements, contributing to new sustainable drainage facilities, new schools, medical facilities etc. Higher levels of growth need not prejudice existing infrastructure and services; they could in fact help address existing problems. 1.2 Housing Distribution 1.2.1 We do not consider the housing distribution strategy to be legally compliant. It is not consistent with regional policy as set out in the SEP. PPS12 requires Core Strategies to conform generally to the regional policy. Paragraph 4.33 states that choices to be made on where growth should take place should follow national and regional policy. 1.2.2 The southern part of Wealden district is located within the Sussex Coast Sub Region, one of the nine sub regions identified in the SEP. These sub regions were to be ‘the focus for growth and regeneration’. Policy SP1 of the SEP refers 1.2.3 Policy H1 of the SEP deals with regional housing provision. It stipulates that in the Sussex Coast Sub Region, 69,300 net additional dwellings should be provided between 2006 and 2026. 1.2.4 Policy SCT5 of the SEP sets out the scale and distribution of housing across the Sussex Coast sub region. It indicates that that part of Wealden District which falls within the Sussex Coast Sub Region should seek to accommodate 7000 dwellings during the plan period (2006 – 2026) i.e. 350 dwellings per annum. 1.2.5 Given the above, and having regard to the requirements of policy H1b of the SEP (wherein WDC are required to provide some 11,000 units across the district during the plan period (2006-2026)), it is clear that the SEP looks to focus growth within that part of the district that falls within the Sussex Coast Sub Region, with only a small proportion of development (4000 homes) to be accommodated within what was called the Rest of the District. 1.2.6 The SEP also makes it clear that the Sussex Coast Sub Region was identified as an area where the government was looking to proactively pursue and promote economic growth and regeneration. As a result over 60% of WDC’s housing requirement was located within the Sussex Coast Sub Region. The spatial strategy being promoted in the proposed Submission Core Strategy document is, according to paragraph 5.5. of the proposed Submission Core 493/A3/JA April 2011 Strategy document, predicated upon the strategy objectives and the settlement hierarchy. Thus only circa 51% of the proposed level of housing growth is to be located within what was referred to as the Sussex Coast Sub Region in the SEP. 1.2.7 Not only is the spatial strategy inconsistent with the SEP, but it fails to take on board the reason for
the spatial strategy proposed in the SEP i.e. the economic regeneration of the Sussex coastal area. WDC have, in their sustainability appraisal of the proposed Submission Core Strategy Document failed to assess the implications of the spatial strategy advocated in the proposed Submission Core Strategy Document on the economic regeneration of the Sussex coastal area. The council’s failure to undertake this work means that the proposed Submission Core Strategy Document is not soundly based. 1.2.9 In promoting an annual housing requirement of just 400 units WDC, in their proposed Submission Core Strategy document, are in our opinion actively stifling economic growth. Furthermore, the council’s decision to treat the whole district as a single entity, with no emphasis placed on the regeneration of the Sussex Coast Sub Region, is in our opinion, despite the aspirations of policies SP03, 04 and 06, actively prejudicing the economic regeneration of the coastal area, to the detriment of the wider area. 1.2.11 As currently drafted the housing distribution strategy advocated by WDC in their Proposed Submission Core Strategy is not in ‘general conformity’ with the RSS as required by Paragraph 4.2 and 4.33 of PPS12 and is not therefore sound.

Details of Changes to be Made:

3.1 The Amount of New Housing:- 3.1.1 We feel the housing targets set out in policy WCS1 should having regard to our position on the scale of housing growth be amended from 9600 to 13,200 dwellings. 3.1.2 Similarly we feel the housing targets set out in policy WCS2 of the CS should, having regard to our position on the scale of housing growth, the spatial strategy, and the level of housing proposed in Stone Cross specifically, be amended thus:- WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 980 New allocations; total dwellings 2006 - 2030 1,022. Total Wealden 4,889 Built or already committed; 8,311 new allocations; 13,200 Total Dwellings 2006 - 2030. 3.1.3 We would also suggest that the number of new allocations is revised to ensure that 60% of the proposed growth is located in the Sussex Coast Sub Region, as per the SEP, which should be identified on a plan. 3.1.4 Having regard to the above there would also be a need to amend policy SPO3 to address the increase in housing supply we advocate, and the reinstatement of the Sussex Coast Sub Region. Similarly paragraphs 3.11 and 3.16 would need to be revised to reflect our position, with the economic policies (SPO6 and WSC3 reviewed accordingly). 3.1.5 If the scale of housing proposed during the plan period is not revised as recommended, we would suggest that policy WCS2 is revised thus:- WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 850 New allocations; total dwellings 2006 - 2030 892. Total Wealden 4,889 Built or already committed; 4,835 new allocations; 9,724 Total Dwellings 2006 - 2030. 3.1.6 Given our recommended changes to the scale of growth proposed at Stone Cross and Westham we would also recommend that paragraph 6.31 (3) and paragraph 6.31 (3 bullet points 3, and 4 be amended thus:- ‘allocating a range of deliverable housing sites for up to 700 dwellings, and leisure, recreation and community facilities in Polegate and Willingdon, around 850 dwellings in Stone Cross, with some 16,890 sq. metres employment floorspace in the Polegate and Willingdon area. Sites for development will be identified and phased through the Site Allocation DPDs including: · provision of around 550 homes within an extension to the urban area of Stone Cross to the east and south east (SD6), with flexibility between SD6 and SD7, subject to highway improvements; · provision of around 300 homes within an extension to the urban area of Stone Cross to the north (SD7), with flexibility between SD6 and SD7, subject to highway improvements’
Paragraph 3.11

Details of Reasons for Soundess/ Legal Complaince:
Generally support the strategy with the exception of including Stone Cross as a location for sustainable new development. Stone Cross as a matter of fact finding cannot be considered to be a service centre or a sustainable location for new development given the paucity of local facilities and its reliance on surrounding towns to provide for its needs. In no rational and reasonable analysis can Stone Cross be considered to provide a range of jobs, services and facilities.... This is a matter wherein I have found the Background Papers and supporting documentation to be misleading and rather than rely on the Sustainability Appraisal I would urge the Inspector to visit the settlements and assess whether Stone Cross falls within the classification of a Service Centre and contrast it with say Polegate

Details of Changes to be Made:
Amend 3.11 to read: To ensure maximum sustainability, east of access to services and to reduce the carbon footprint of development most of our growth is proposed in the form of sustainable urban extensions. In order to improve the performance of our economy, regenerate our market towns and meet housing needs 4230 additional dwellings have been identified as urban extensions or infill in Heathfield, Uckfield, Hailsham, Polegate and Willingdon and adjacent to the boundary with Tunbridge Wells in the Parish or Frant.
Details of Reasons for Soundness/ Legal Compliance:

The justification for changing the target number of dwellings for the 2006-2030 is not robust. The dismissal of the Office of National Statistics projected population and household on the basis that the trend is attributed to inward migration and therefore not a Wealden problem is unreasonable. Wealden is not an island with border controls. The Core Strategy must take due account of the clear trend projection of 16,800 additional households between 2006 - 2030. The arbitrary reduction of this trend to a figure of 9,600 based on consultation with Parish Councils and other parties who are seeking to reduce housing provisions is not the correct methodology to prepare the Core Strategy. A reduction of 42.8% on the trend projections must be fully justified. The adopted South East Plan, May 2009 examined the constraints on Wealden and the projected housing requirements and come to the conclusion that the District should accommodate an additional 11,000 dwellings within the shorter period of 2006-2027 (14,800 - 11,000) = 3,800 households, this reflecting the constrains on the district. This being a 25.7% reduction on the trend. On this basis the figure for the district for the period 2006 - 2030 should be 16,800 - 25% (16,800 - 4,318) = 12,482 (say 12,500). Not the 9,600 proposed in the Core Strategy. A figure of 12,500 households over the 24 years of the plan represents an average annual provision of 520 dwellings per year. An additional 120 dwellings pa over the 400 proposed in the proposed submission Core Strategy is not such an unreasonable figure in view of the scale of the alterations proposed and the time scale of the plan allowance in the market to recover from its current low level. A high figure for housing provision also has the advantage of creating more revenue in the form of S106 Planning Agreement funds or by way of the Community Infrastructure Levy to fund the related infrastructure. This relates particularly to the big cost items such as bypasses and improvements to water treatment works.

Details of Changes to be Made:

In the light of this submission we would like to see SP03 re written as follows: To meet the needs of the population of Wealden and for Wealden to meet its role in providing housing in the South East of England, which protection the environment, the Core Strategy will seek to provide 2,500 between 2006 and 2030. The delivery of these homes will be dependent on the delivery of developable sites and market conditions. Over the whole of the 24 plans the average provision of 520 dwellings per year will be sort and monitored. The provision of social and physical infrastructure will be as far as possible provided in conjunction with the development proposed. Funding for such provision will be sent from all sources including the housing development itself. The of the development shall be in accord with the Spatial Strategy of the...
Details of Reasons for Soundness/Legal Compliance:

1.1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 1.2 paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

Details of Changes to be Made:
On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.
We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no.1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,711 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

**Details of Changes to be Made:**

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.
We are intrigued by the Council's intended adoption of an unsound housing position. The Council's proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council's Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council's Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council's BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as identified above of the chronic affordable housing issues that exist within the District.

Paragraph 3.11

**Sound**

- Yes ■ No □
- Justified □ Effective ■
- Consistent with national policy □

**Legally Compliant**

- Yes ■ No □

**Details of Reasons for Soundess/ Legal Complaince:**

The Number of Dwelling Proposed to be delivered. (Paragraphs 3.8 – 3.17, Policy WCS1) 1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already build (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579

**Details of Changes to be Made:**

2 Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.
Paragraph 3.11

Details of Reasons for Soundess/ Legal Complaince:
1. The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed additional housing 4685 TOTAL 9579 2. Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3 On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. The total should be closer to the number of new households expected to be created over the plan period.

Details of Changes to be Made:
The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the District where the market is stronger and a known need for housing exists.

Paragraph 3.11

Sound ☐ Yes ☑ No ☑ Justified ☑ Effective ☐ Consistent with national policy

Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
1. The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2030. This is made up as follows: Houses already built to April 2010 1331 Existing commitments 3558 Proposed additional housing 4685 TOTAL 9579 2. Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:
3. On this basis the Core Strategy is unsound because the numbers of dwellings that are proposed to be delivered are deficient and do not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations.
Details of Reasons for Soundess/ Legal Complaince:

No mention is made in the text to the proposed allocation of land at Crowborough for housing development. We consider that the need for an urban extension to the town is necessary in order to deliver for those in housing need and those services that are urgently required to support the area of deprivation in the town.

Details of Changes to be Made:
The text should be amended to include Crowborough within the list of towns to be extended.

Details of Reasons for Soundess/ Legal Complaince:
The inability of the Wealden District to accommodate all of the housing needs and demands associated with this part of the South East is acknowledged however it is considered that an artificial level of self-imposed constraint has resulted in a Core Strategy which fails to meet the identified annual completion rate established within the South East Plan. The self-imposed constraint results from, in Hailsham’s case, the incomplete studies relating to development options and related traffic modelling and additionally the decision to restrict growth on the basis of waste water treatment works capacity. The latter is currently the subject of a study which will become available shortly. These studies may well identify sufficient scope to accommodate further growth linked to the funding of key infrastructure. At present the Core Strategy simply assumes that there will be no flexibility or potential for additional growth. In the case of Hailsham the "community aspiration" is clearly a reference to the Hailsham & Hellingly Masterplan (Jan 2009). This was jointly produced by the Hailsham Town and Hellingly Parish Councils. Significantly it did not attempt to accommodate growth in response to the provisions of the South East Plan but instead drew upon the former East Sussex Structure Plan (for the Period to 2011) as the numerical basis for housing provision. To that extent therefore the community aspiration as translated into the Masterplan failed to set the most appropriate level of strategic planning policy as the context within which to inform and develop the community's Masterplan. Again this appears as a self-imposed constraint based upon a predetermined view as to preferred sites as opposed to an informed choice based upon the requirements of the South East Plan.

Details of Changes to be Made:
The "...other environmental, economic, social, infrastructure and community aspirations..," which have have been applied in setting the level of residential development require re evaluation in the light of for instance, the completion of studies into infrastructure provision, the assessment of development led funding and phasing options and the potential application of a Community Infrastructure Levey (or CIL).
Paragraph 3.11

Details of Reasons for Soundess/ Legal Complaince:

"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Paragraph 3.22 The Council have relied on environmental and infrastructure provision constraints in order to argue that it is not possible to meet the trend based household projections for the district. This report has demonstrated that there are not either environment or infrastructure constraints which prevent the trend based household forecasts for the district being met. In fact there are pressing needs relating to the provision of affordable housing, workforce requirements and service support why the trend based rather than some lower figure should be met and as demonstrated in this report.

Details of Changes to be Made:

REVISION SOUGHT. !In order to improve the performance of our economy, regenerate our market towns and meet housing needs at least 7,211 dwellings have been identified as urban extensions or infill in Heathfield, Uckfield, Hailsham Polegate and Willingdon, Stone Cross and adjacent to the boundary with Tunbridge Wells in the parish of Frant. In total, with commitments, this provides for around 12,100 dwellings between 2006 and 2030

Details of Reasons for Soundess/ Legal Complaince:

We are concerned that under present proposals the essential housing needs for market and affordable housing will not be met. 3.10 Trend based projections show demand for market and affordable housing is high “and in excess of what Wealden could accommodate or deliver” 3.11 Confusingly it goes on to meet this need in urban extensions at Heathfield, Uckfield, Hailsham, Polegate, Willingdon, Stone Cross and Frant.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:

We are intrigued by the Councils intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WCS1 and WCS2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council's attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Council’s Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as identified above of the chronic affordable housing issues that exist within the District.
We are intrigued by the Council's intended adoption of an unsound housing position. The Council's proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council's Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council's Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council's BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly
we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in
supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background
Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of
affordable housing need within the District and it is noted that the main means of achieving affordable housing
delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes
onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in
Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the
delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by
paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is
obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed
accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore,
paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two
different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the
period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600
dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400
dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the
SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development
Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the
substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been
made as to why the council fails to take on board the evidence which clearly supports a higher housing provision
than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant
development plan, including the South East Plan’s housing target at the very least, but with a recognition for a
higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of
flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5
sought to provide a contingency within the document, this does not go far enough and needs to be far more robust
to take account, as indentified above of the chronic affordable housing issues that exist within the District.

Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundness/ Legal Complaince:
1. The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2030. This is made up as follows: Houses already built to April 2010 1331 Existing commitments 3558 Proposed additional housing 4685 Total 9579
2. Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:
3. On this basis the Core Strategy is unsound because the numbers of dwellings that are proposed to be delivered are deficient and do not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations.
1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 TOTAL 9579 2 Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3 On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. The total should be closer to the number of new households expected to be created over the plan period.

Details of Changes to be Made:
The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the District where the market is stronger and a known need for housing exists.

Details of Reasons for Soundness/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". Paragraph 3.12. It is important to note that those in need of affordable housing in the district cannot have been taken into account in the amount of housing proposed by the Council in the CS because this would mean that some of those currently on the housing waiting list will not be allocated a home in the plan period. This fact is evidence in the Council’s paragraph 8.10 of the BP2 Managing the Delivery of Housing where it is recognised that households currently on the Council’s waiting list for homes in Polegate will wait 34/235 years to be housed.

Paragraph  3.12
Sound  □ Yes  ☑ No  ☑ Justified  ☑ Effective  □ Consistent with national policy
Legally Compliant  □ Yes  ☑ No
Details of Reasons for Soundness/ Legal Complaince:
The CS is not supportive of the aims and aspirations set out in the Town Council document entitled "Crowborough Vision". Considerably more certainty about the relevant location and a greater scale of economic and housing growth are required to achieve local aspirations.

Details of Changes to be Made:
Re-visit the scale and location of economic and housing growth in Crowborough to make the plan compatible with the delivery of the Town Council vision
Paragraph 3.13 does not accurately reflect Heathfield’s ability to accommodate greater growth. The factors identified do not justify limiting growth to only 160 dwellings in the town and therefore the spatial strategy applied to Heathfield is misconceived. Planning Policy Statement 7: Sustainable Development Rural Areas, states (para21): National designated areas comprising National Parks, the Broads the New Forest Heritage Area and Areas of Outstanding Natural Beauty (AONB) have been confirmed by the Government as having the highest status of protection in relation to landscape and scenic beauty. The conservation of the natural beauty and countryside should therefore be given great weight in planning policy and development control decisions.... as well as reflecting these priorities planning policies in LDDs and where appropriate, RSS, should also support suitably located and designed development necessary to facilitate the economic and social well-being of these designated areas and their communities, including the provision of adequate housing to meet indemnified local need* PPS7 therefore states that development in the AONB should be subject of rigorous examination. However it also recognises that planning policies should support suitably located and designed development that contributes to the economic and social wellbeing of these designated areas and their communities, including the provision of adequate housing to meet identified local needs. Restricting development in a sustainable location such as Heathfield due to its landscape characteristics and AONB is therefore unjustifiable. Delivery of only 160 dwellings over the next 19 years is not sufficient to contribute towards meeting the local need for general market housing and affordable housing, nor will it support the retention of local services and the local economy. Consequently the aspiration to ‘retain and enhance the role of the centres providing services not only to local residents but also to surround villages’ will not be achieved.

Details of Changes to be Made:
It is necessary to re-assess the potential for Heathfield to accommodate growth.
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

 Agent ID 261712
 Paragraph 3.13
 Representation Details of Reasons for Soundess/ Legal Complaince:
 This paragraph is not supported by the evidence collected during the preparation of the Core Strategy. In particular the statement that the growth potential of Crowborough is constrained by the AONB is not justified since there are sites located to the south of the town - outside of the AONB - which the SHLAA identifies as having capacity for 764 dwellings. In addition, the lack of employment facilities in Crowborough is put forward as a constraint to growth. It is recognised that the town currently underperforms in employment provision but that it is clear that this does not serve to make Crowborough an unattractive place to live - far from it since the town exhibits significant housing need - as justified by affordable housing 'first choice' figures. It is also instructive that the town Council's own visioning document Top of the Weald has 'Supporting Business and Enterprise' as a key aim (5) of the document. In this context, the town council clearly aspires to make Crowborough a more attractive place to start and do business. It is suggested that the attractiveness of Crowborough to London bound commuters and also those travelling relatively short distances to the Primary Centres at Tunbridge Wells and Tonbridge - would assist the Council in meeting its objectives set out in Paragraph 6.14 of the Managing the Delivery of Housing Backgroud paper (Feb 2011) which reads as follows: "There is therefore a need for housing provision which would enable some in-migration and halt the natural change towards a declining and more elderly population". Indeed it is suggested that growth at Crowborough - which benefits from better transport links to Primary Centres and London than the settlements which have been identified for growth - Hailsham and Uckfield, which would tend to encourage longer travel distances to workplaces. Although the creation of more self sufficient settlements is a laudable aspiration, there is no evidence that co-location of residential and employment development actually helps to reduce travel demand.

 Details of Changes to be Made:
 Provide adequate development land for sustainable growth and continued vitality of Crowborough

 Paragraph 3.13
 Representation Details of Reasons for Soundess/ Legal Complaince:
 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 2. paragraph 3.10 of the Porposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.

 Details of Changes to be Made:
 The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the district where the market is stronger and a known need for housing exists.

 Page 147 of 1511
1.1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 1.2 paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

Details of Changes to be Made:
On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.
We are intrigued by the Councils intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WCS1 and WCS2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.
We are intrigued by the Councils intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,711 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as identified above of the chronic affordable housing issues that exist within the District.

Details of Reasons for Soundess/ Legal Complaince:
The Number of Dwelling Proposed to be delivered. (Paragraphs 3.8 – 3.17, Policy WCS1) 1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already build (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579

Details of Changes to be Made:
2 Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

Details of Reasons for Soundness/ Legal Complaince:
1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2030. This is made up as follows: Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 TOTAL 9579 2 Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:
3 On this basis the Core Strategy is unsound because the numbers of dwellings that are proposed to be delivered are deficient and do not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations.
Paragraph 3.13

Details of Reasons for Soundness/ Legal Compliance:
The church is concerned that the limiting of growth at Crowborough in view of the perceived landscape constraints fails to take account of the following issues. The need to deliver housing for those in need. At present there are 302 on the Housing Register and 120 households in need. Housing growth in the order of 400-450 homes will be required for the private sector to deliver 120 units. Other facilities and services are also required to satisfy need and these again can only be provided by the private sector. The church believes that the landscape issue has not been adequately assessed and unnecessarily constrains the development potential of the area.

Details of Changes to be Made:
Growth at Crowborough should be set at a level which will deliver local services and housing to meet the predicted needs of the population provided that it can be demonstrated that there will be no adverse impact on the AONB.

Paragraph
3.13

Sound □ Yes ✔ No □ Justified ✔ Effective □ Consistent with national policy

Legally Compliant ✔ Yes □ No

Details of Reasons for Soundness/ Legal Compliance:
This paragraph does not accurately reflect the potential for Crowborough to accommodate growth. The factors identified do not justify limiting growth to an additional 300 dwellings in Crowborough and the policy approach to Crowborough is therefore misconceived.

Details of Changes to be Made:
It is necessary to re-assess the potential for Crowborough to accommodate growth. The SHLAA exercise and other parts of the evidence base demonstrate that it is able to accommodate more housing and employment growth. In particular it should meet housing need and play the role of a principal town meeting wider needs and providing employment opportunities.
Paragraph 3.14

Sound  ☑ Yes   ☐ No    ☑ Justified   ☐ Effective    ☑ Consistent with national policy

Legally Compliant  ☐ Yes   ☐ No

Details of Reasons for Soundness/ Legal Complaince:

We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Council’s Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

**Details of Changes to be Made:**

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.

#### Details of Reasons for Soundness/ Legal Complaince:

We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,711 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.

Paragraph 3.14

Sound ☑ Yes ☑ No ☑ Justified ☑ Effective ☑ Consistent with national policy
Legally Compliant ☑ Yes ☑ No

Details of Reasons for Soundess/ Legal Complaince:
1.1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 1.2 paragraph 3.10 of the Porposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

Details of Changes to be Made:
On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.
Paragraph 3.14

Details of Reasons for Soundness/ Legal Compliance:
The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows: Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed additional housing 4685 Total 9579. REVISION SOUGHT Amend to reflect increased number of dwellings at uckfield to 1,450.
Details of Reasons for Soundess/ Legal Complaince:
The Benhall Mill Road Land Association, local residents and TWBC have objected since 2004 to Wealden during previous consultations, all the points raised in those previous consultations still apply. The areas under consideration in the Wealden district in the border area between Tunbridge Wells and Wealden referred to as the rural Frant Parish and outlined in the Wealden SHLAA, site ref 126/1610 and 059/1610 and the 063/1610 are not suitable for possible housing development. Housing development in these areas do not serve the Wealden community but firmly place the housing burden upon the neighbouring borough Tunbridge Wells. The nearest Wealden settlements, Bells Yew Green and Frant are too far away to offer any infrastructure, support or any community provision. Urban extension of these areas are not urban extensions of Wealden settlements but extensions to Tunbridge Wells with no contributions, provisions or discussions with the neighbouring authority. Section 106 agreements would have to be in place and agreements with TWBC would have to be made to contribute to the infrastructure in Tunbridge Wells to serve any possible residents in the Frant rural fringe area. Development proposals by Wealden in these areas are opposed by TWBC. The possible housing numbers as indicated in the Wealden SHLAA of 140 could significantly effect the housing strategies of TWBC. The wider housing needs of Wealden should be firmly located to Wealden's established settlements. The nearest Wealden Settlements are small and provide very little infrastructure and as a result any residents would look to Tunbridge Wells for their needs and services. The site 063/1610 has been deemed unsuitable by Wealden, the area was not adopted into any Wealden development plan or strategy and that has not stopped a developer attempting to bring the area forward for development. Recent comments, we assume by an interested party has questioned the continued SNCI status of the 063/1610 site, so they are still intent on the site being available for adoption and still have development ideas. This area if it were to be pushed by a developer would present housing in addition to the 140 stated in the Wealden SHLAA. The other two proposed areas may be open to earlier development pressure if adopted into the Wealden LDF. The Wealden SHLAA suggests the areas mentioned above, would not be developed until 2028. The owner/developer could move forward at any time without having the obstacle off justifying a development on land which is not allocated for possible development. To afford the area protection against development the areas in the Tunbridge Wells/ Frant rural fringe area should remain outside of any adopted plan. Wealden's should ensure that all possible housing development sites that are better located in their district are developed before the Frant Parish rural area is even considered for development. Traffic impact on the already congested and busy Tunbridge Wells roads would be significant with 140 houses. The Kent Highways Authority and Sussex Highways would have to make a full assessment ahead of any development also taking into account possible housing developments in the adjacent borough that will also impact on the area. Any proposed development site adjacent to Tunbridge Wells should be subject to stringent checks and assessment to determine if development is sustainable.

Details of Changes to be Made:
The rural area in the Parish of Frant adjacent to Tunbridge Wells is unsuitable for development because it impacts on the neighbouring borough Tunbridge Wells, and housing development in this area does not serve the Wealden community.
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Person ID Dekl 344781
Agent ID Mr Nightingale 102571
Kember Loudon Williams

Paragraph 3.15
Sound ☐ No ☑ Yes ☑ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 2. paragraph 3.10 of the Porposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to reddress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.

Details of Changes to be Made:
The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the district where the market is stronger and a known need for housing exists.

Details of Reasons for Soundess/ Legal Complaince:
1.1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 1.2 paragraph 3.10 of the Porposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to reddress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.

Details of Changes to be Made:
On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to reddress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.
We are intrigued by the Councils intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,889 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Council’s Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

**Details of Changes to be Made:**

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as identified above of the chronic affordable housing issues that exist within the District.
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

We are intrigued by the Councils intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: "In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly
we draw the council's attention to the evidence base it has at its disposal and indeed comments it makes in
supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background
Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of
affordable housing need within the District and it is noted that the main means of achieving affordable housing
delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes
onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in
Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the
delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by
paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is
obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed
accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore,
paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two
different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the
period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600
dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400
dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the
SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development
Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the
substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been
made as to why the council fails to take on board the evidence which clearly supports a higher housing provision
than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant
development plan, including the South East Plan's housing target at the very least, but with a recognition for a
higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of
flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5
sought to provide a contingency within the document, this does not go far enough and needs to be far more robust
to take account, as identified above of the chronic affordable housing issues that exist within the District.

Details of Reasons for Soundess/ Legal Complaince:
The Number of Dwelling Proposed to be delivered. (Paragraphs 3.8 – 3.17, Policy WCS1) 1 The Council states
that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030.
This is made up as follows: Houses already build (to April 2010) 1331 Existing commitments 3558 Proposed
Additional Housing 4685 Total 9579

Details of Changes to be Made:
2 Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the
District to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is
clear therefore that the number of new households likely to be created in the district over the plan period will be far
in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will
only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing
need.
Paragraph 3.15

Details of Reasons for Soundness/Legal Compliance:

1. The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed additional housing 4685 Total 9579 2. Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. The total should be closer to the number of new households expected to be created over the plan period.

Details of Changes to be Made:

The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the District where the market is stronger and a known need for housing exists.

Sound □ Yes ✔ No ✔ Justified ✔ Effective □ Consistent with national policy
Legally Compliant □ Yes □ No
Details of Reasons for Soundess/ Legal Complaince:
The sites under consideration are situated off a country lane which would not be able to cope with anything like the construction traffic or subsequent residents' traffic that would result from anything other than a small scale development of a few houses. Similarly, the local infrastructure (e.g. schools, emergency services, drainage etc) are inadequate to support any material development in this area. The nearest school, Claremont, is currently greatly oversubscribed and would be unable to accommodate an influx of any pupils of any scale. The land is right on the edge of the Wealden boundary with Tunbridge Wells and would result in a totally unwarranted (and unwanted) expansion of Tunbridge Wells – you would in effect be creating a problem for a neighbouring town / council that does not want to see its urban fringe creeping further outwards. I understand that Tunbridge Wells Borough Council are also making known their views to this end. There are also substantial environmental concerns, with one of the possible sites having previously used as a rubbish tip which would require substantial contamination remediation works to make it suitable for any housing. The rest of the area is primarily rural / agricultural, supporting many species of plant and animal life which would be lost if any substantial development were to be permitted.

Details of Changes to be Made:
Remove any references in the Core Strategy to potential development on the Tunbridge Wells fringe

Details of Reasons for Soundess/ Legal Complaince:
Tunbridge Wells is already overloaded with regard to access to schools, especially primary, and medical services. Traffic is also a problem in the town and adding additional traffic load on an area not in Wealden to support Wealden population would seem rather cynical. Any developments should be closer to Wealden centres of population, where urban support services can be provided and suffer the traffic consequences.

Details of Reasons for Soundess/ Legal Complaince:
We are pleased that the constraints of the Hailsham waste water treatment works and potential impacts on Pevensey Levels have been recognised and taken into consideration within the document.

Details of Changes to be Made:
Paragraph 3.16

Details of Reasons for Soundness/Legal Compliance:
Generally support the strategy with the exception of including Stone Cross as a location for sustainable new development. Stone Cross is not a sustainable location or solution it comprises essentially a dormitory settlement providing a workforce to Eastbourne, Hailsham and surrounding areas that relies on the facilities in surrounding settlements such as Hailsham and Eastbourne

Details of Changes to be Made:
delete reference to Stone Cross
1. The Amount of New Housing – Policy WCS1 and WCS2 and paragraphs 5.3 etc 1.1.1 We note that the proposed Submission Core Strategy looks to accommodate 9574 new dwellings in the district across the plan period (2006 – 2030) i.e. 399 a year. This is circa 27.5% less than the 11,000 dwellings proposed across the district in the South East Plan (SEP) (May 2009) for the period 2006 and 2026. 1.1.2 PPS12 requires Core Strategies to conform generally to the regional policy. We do not consider the amount of new housing proposed in the district to be legally compliant as it is not consistent with regional policy as set out in the SEP. 1.1.3 Whilst the LPA appear to be progressing with a lower level of growth on the assumption that the SEP will be revoked by the time the Core Strategy gets to examination, the fact is the SEP remains part of the development plan at present and the CS should have regard to the aims and objectives of the SEP/ justify why it is necessary and appropriate to depart from it. The proposed Submission Core Strategy contains no such justification. 1.1.4 A detailed understanding of the background to the amount of new housing proposed in the district in the SEP is in our opinion important in considering the soundness of the housing land supply strategy now being advocated in the proposed Submission Core Strategy document. 1.1.15 The Chief Planning Officer (CPO) in his letter of the 6th July made it clear that in the context of the revocation of the RSS LPAs would be responsible for determining the housing numbers in the absence of a regional target, and that the housing numbers promoted by LPAs would need to be justified, as LPAs would need to defend them through the LDF examination process. 1.1.19 The District Council has an obligation to assess and provide for the housing needs and demands of the District. Paragraph 33 of PPS3 makes it very clear that in determining local levels of housing provision local planning authorities should, in preparing their Core Strategies take into account evidence of current and future levels of housing need and demand, e.g. as set out in Housing Market Assessment and the Housing Needs Assessment. 1.1.22 Having regard to the above we feel the DC should give consideration to the accommodation of at least 13,200 (i.e. the 11,000 set out in the SEP plus 4 x 550) to cover the additional years to 2030). Given the 4,889 units are already committed this would leave a residual requirement of 8,311 i.e. a residual requirement equivalent to 415 dwellings pa. If, 75% of the 13,200 units were on sites that generated an affordable housing need under the new policy WCS8, this level of provision could provide for circa 3,465 affordable dwellings i.e. 18% of the affordable need identified in the HNA. Which demonstrates how severe the need is relative to the supply 1.1.23 WDC’s aversion to higher housing numbers appears to be related to the effect these could have on infrastructure and services, especially in the southern part of the district. However, it is often the case that the strategic housing allocations help to address this issue, providing new transport links/highway improvements, contributing to new sustainable drainage facilities, new schools, medical facilities etc. Higher levels of growth need not prejudice existing infrastructure and services; they could in fact help address existing problems. 1.2 Housing Distribution 1.2.1 We do not consider the housing distribution strategy to be legally compliant. It is not consistent with regional policy as set out in the SEP. PPS12 requires Core Strategies to conform generally to the regional policy. Paragraph 4.33 states that choices to be made on where growth should take place should follow national and regional policy. 1.2.2 The southern part of Wealden district is located within the Sussex Coast Sub Region, one of the nine sub regions identified in the SEP. These sub regions were to be ‘the focus for growth and regeneration’. Policy SP1 of the SEP refers 1.2.3 Policy H1 of the SEP deals with regional housing provision. It stipulates that in the Sussex Coast Sub Region, 69,300 net additional dwellings should be provided between 2006 and 2026. 1.2.4 Policy SCT5 of the SEP sets out the scale and distribution of housing across the Sussex Coast sub region. It indicates that that part of Wealden District which falls within the Sussex Coast Sub Region should seek to accommodate 7000 dwellings during the plan period (2006 – 2026) i.e. 350 dwellings per annum. 1.2.5 Given the above, and having regard to the requirements of policy H1b of the SEP (wherein WDC are required to provide some 11,000 units across the district during the plan period (2006-2026)), it is clear that the SEP looks to focus growth within that part of the district that falls within the Sussex Coast Sub Region, with only a small proportion of development (4000 homes) to be accommodated within what was called the Rest of the District. 1.2.6 The SEP also makes it clear that the Sussex Coast Sub Region was identified as an area where the government was looking to proactively pursue and promote economic growth and regeneration. As a result over 60% of WDC’s housing requirement was located within the Sussex Coast Sub Region. The spatial strategy being promoted in the proposed Submission Core Strategy document is, according to paragraph 5.5 of the proposed Submission Core 493/A3/JA April 2011 Strategy document, predicated upon the strategy objectives and the settlement hierarchy. Thus only circa 51% of the proposed level of housing growth is to be located within what was referred to as the Sussex Coast Sub Region in the SEP. 1.2.7 Not only is the spatial strategy inconsistent with the SEP, but it fails to take on board the reason for
the spatial strategy proposed in the SEP i.e. the economic regeneration of the Sussex coastal area. WDC have, in their sustainability appraisal of the proposed Submission Core Strategy Document failed to assess the implications of the spatial strategy advocated in the proposed Submission Core Strategy Document on the economic regeneration of the Sussex coastal area. The council’s failure to undertake this work means that the proposed Submission Core Strategy Document is not soundly based. 1.2.9 In promoting an annual housing requirement of just 400 units WDC, in their proposed Submission Core Strategy document, are in our opinion actively stifling economic growth. Furthermore, the council’s decision to treat the whole district as a single entity, with no emphasis placed on the regeneration of the Sussex Coast Sub Region, is in our opinion, despite the aspirations of policies SP03, 04 and 06, actively prejudicing the economic regeneration of the coastal area, to the detriment of the wider area. 1.2.11 As currently drafted the housing distribution strategy advocated by WDC in their Proposed Submission Core Strategy is not in ‘general conformity’ with the RSS as required by Paragraph 4.2 and 4.33 of PPS12 and is not therefore sound.

Details of Changes to be Made:

3.1 The Amount of New Housing:- 3.1.1 We feel the housing targets set out in policy WCS1 should having regard to our position on the scale of housing growth be amended from 9600 to 13,200 dwellings. 3.1.2 Similarly we feel the housing targets set out in policy WCS2 of the CS should, having regard to our position on the scale of housing growth, the spatial strategy, and the level of housing proposed in Stone Cross specifically, be amended thus:-

WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 980 New allocations; total dwellings 2006 - 2030 1,022. Total Wealden 4,889 Built or already committed; 8,311 new allocations; 13,200 Total Dwellings 2006 - 2030. 3.1.3 We would also suggest that the number of new allocations is revised to ensure that 60% of the proposed growth is located in the Sussex Coast Sub Region, as per the SEP, which should be identified on a plan. 3.1.4 Having regard to the above there would also be a need to amend policy SPO3 to address the increase in housing supply we advocate, and the reinstatement of the Sussex Coast Sub Region. Similarly paragraphs 3.11 and 3.16 would need to be revised to reflect our position, with the economic policies (SPO6 and WSC3 reviewed accordingly).

3.1.5 If the scale of housing proposed during the plan period is not revised as recommended, we would suggest that policy WCS2 is revised thus:-

WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 850 New allocations; total dwellings 2006 - 2030 892. Total Wealden 4,889 Built or already committed; 4,835 new allocations; 9,724 Total Dwellings 2006 - 2030. 3.1.6 Given our recommended changes to the scale of growth proposed at Stone Cross and Westham we would also recommend that paragraph 6.31 (3) and paragraph 6.31 (3 bullet points 3, and 4 be amended thus:- ‘allocating a range of deliverable housing sites for up to 700 dwellings, and leisure, recreation and community facilities in Polegate and Willingdon, around 850 dwellings in Stone Cross, with some 16,890 sq. metres employment floorspace in the Polegate and Willingdon area. Sites for development will be identified and phased through the Site Allocation DPDs including: · provision of around 550 homes within an extension to the urban area of Stone Cross to the east and south east (SD6), with flexibility between SD6 and SD7, subject to highway improvements; · provision of around 300 homes within an extension to the urban area of Stone Cross to the north (SD7), with flexibility between SD6 and SD7, subject to highway improvements’
We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,711 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WCS1 and WCS2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as identified above of the chronic affordable housing issues that exist within the District.
we maintain therefore that the Council’s emerging Core Strategy is not only deficient because it ignores the question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We

---

**Details of Reasons for Soundess/ Legal Complaince:**

We are intrigued by the Councils intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. **Sound** Yes No Justified Effective Consistent with national policy

**Legally Compliant** Yes No

**Details of Reasons for Soundess/ Legal Complaince:**

1.1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 1.2 paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

**Details of Changes to be Made:**

On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.
Paragraph 3.16

Details of Reasons for Soundess/ Legal Complaince:
The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows: Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed additional housing 4685 Total 9579 2. Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:
3. On this basis the Core Strategy is unsound because the numbers of dwellings that are proposed to be delivered are deficient and do not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations.

A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations.
1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 TOTAL 9579

2 Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. The total should be closer to the number of new households expected to be created over the plan period.

The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the District where the market is stronger and a known need for housing exists.
Details of Reasons for Soundness/ Legal Compliance:
See earlier comments and objection to paragraph 3.11. The constraints applicable to Hailsham have not been fully evaluated and tested. There remain outstanding studies into these matters i.e. traffic modelling of development location options, waster water treatment works capacity and odour issues relating to land to the east of Hailsham town centre.

Details of Changes to be Made:
The Core Strategy should be further informed by current and further research into infrastructure constraints, funding and phasing of development options in association with increased capacity and the introduction of a Community Infrastructure Levy (or CIL).

Details of Reasons for Soundess/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request".

Details of Changes to be Made:
REVISION SOUGHT Increase number of additional dwellings at Hailsham to 2,500 and Polegate to 2,500. Reduce the number of dwellings at Stone Cross to 300 and delete sentence on Stone Cross in relation to it's sustainability.

Details of Reasons for Soundess/ Legal Complaince:
The area around Willingdon is already short of Doctors, school places and leisure facilities. To add extra housing at Hindsland playing fields is going to put extreme pressure on our already very congested road systems. These are sometimes at a complete standstill now, traffic is backed up into Eastbourne and through Polegate. It seems that local views are being sidelined ( The Big Society??) and the already over used area being targetted without any thought for the residents here now.

Details of Changes to be Made:
More local consultation with the people it affects.
Details of Reasons for Soundess/ Legal Complaince:
There are no environmental considerations or infrastructure capacity reasons why development at Stone Cross should be preferred over more development in or around Hailsham. Development around Hailsham would assist in reinforcing the pattern of existing settlements within the district as opposed to working against such Core Strategy objectives in the way development at stone cross would.

Details of Changes to be Made:
Delete reference to Stone Cross

Details of Reasons for Soundess/ Legal Complaince:
The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 2. paragraph 3.10 of the Porposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to reddress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.

Details of Changes to be Made:
The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the district where the market is stronger and a known need for housing exists.
Details of Reasons for Soundness/ Legal Complaince:

1.1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 1.2 paragraph 3.10 of the Porposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. ---

Details of Reasons for Soundness/ Legal Complaince:

Housing: We support the strategy for supporting some growth within sustainable villages

Details of Changes to be Made:
We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the...
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Council’s Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

**Details of Changes to be Made:**

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as identified above of the chronic affordable housing issues that exist within the District.
We are intrigued by the Council's intended adoption of an unsound housing position. The Council's proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,711 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.

#### Paragraph 3.17

**Details of Reasons for Soundness/ Legal Complaince:**

1. The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already built (to April 2010) 1331, Existing commitments 3558, Proposed Additional Housing 4685, TOTAL 9579.

2. Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

3. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations.

**Details of Changes to be Made:**

The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the District where the market is stronger and a known need for housing exists.

Details of Reasons for Soundess/ Legal Complaince:
The figure of 4,889 has been omitted from the allocation north of Dittons Road, Polegate which accommodate 60 dwellings.

Details of Changes to be Made:
Paragraph 3.8, change 4,889 to 4,949

Details of Reasons for Soundess/ Legal Complaince:
The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 2. paragraph 3.10 of the Porposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to reddress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.

Details of Changes to be Made:
The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the district where the market is stronger and a known need for housing exists.
Consistent with national policy

We maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the question whether the council's unjustified Housing Growth figures meet this simple test as presently emerging and the Core Strategies; ”4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible back to the founding principles of the emerging local development framework. For example PPS 12 confirms that development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council remains committed to the delivery of more housing and it therefore seems perverse for the council to be of the development plan for a good period to come. Nonetheless, even ignoring the above the Government Environmental Assessment will now be carried out to consider the removal of the RSS's. By any reasonable given that it would not comply with statute, particularly given the Governments recent announcement that an RSS's and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound attempts to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft PoliciesWSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: ”In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; ”4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

**Details of Changes to be Made:**

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.
We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Government’s recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Council’s emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 450 dwellings per annum (i.e. a reduction of 100 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.

Paragraph 3.8

Sound ☑ Yes ☐ No ☑ Justified ☑ Effective ☑ Consistent with national policy

Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
1.1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2040. This is made up as follows. Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579 1.2 paragraph 3.10 of the Porposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000 which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

Details of Changes to be Made:
On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.

Yes

Sound ☐ No ☑ Justified ☑ Effective ☑ Consistent with national policy

Legally Compliant ☑ Yes ☐ No

Details of Changes to be Made:
On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be deliverd does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. the total should be closer to the number of new households expected to be created over the plan period.
Details of Reasons for Soundness/Legal Compliance:

1. The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2030. This is made up as follows: Houses already built (to April 2010) 1,331. Existing commitments 3,558. Proposed Additional Housing 4,685. Total 9,579.

2. Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,600, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. Due to the size of additional appendices they have not been uploaded but are available to view at the Council's offices.

Details of Changes to be Made:

3. On this basis the Core Strategy is unsound because the numbers of dwellings that are proposed to be delivered are deficient and do not properly reflect the expected housing need. A larger number of dwellings should therefore be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations.
The Number of Dwelling Proposed to be delivered. (Paragraphs 3.8 – 3.17, Policy WCS1) The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already build (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579

Details of Changes to be Made:

2 Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

Details of Reasons for Soundess/ Legal Complaince:
The Council acknowledge that that over the past 6 years 600 persons per year have moved into the District. This figure and those from regional statistics suggest the Council will not meet its housing needs over the plan period.

Details of Changes to be Made:
The regional Spacial Strategy is the most robust assessment of Population change, migration, immigration, and household formation but this is ignored.

The Council acknowledge that that over the past 6 years 600 person per year have moved into the District. This figure and those from regional statistics suggest the Council will not meet its housing needs over the plan period.

Details of Changes to be Made:
The Regional Spacial Strategy is the most robust assessment of Population change, migration, immigration and household formation but is ignored.

Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as identified above of the chronic affordable housing issues that exist within the District.
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

**Details of Changes to be Made:**

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.
Details of Reasons for Soundess/ Legal Complaince:

1. The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 - 2030. This is made up as follows: Houses already built (to April 2010) 1331, Existing commitments 3558, Proposed additional housing 4685. TOTAL 9579.

2. Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.

3. On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. The total should be closer to the number of new households expected to be created over the plan period.

Details of Changes to be Made:

The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the District where the market is stronger and a known need for housing exists.
Paragraph 3.19
Details of Reasons for Soundess/ Legal Compliance:
Policy WCS3 makes no provision for additional employment provision in the rural area (which includes Westham) even though the ELR2008 indicated that our client's site (Mountney Bridge Industrial Estate) could accommodate growth/development. Policy WCS3 does not therefore correspond with paragraphs 3.19 or 3.22 which support intensification of employment areas. Policy SPO6 is unclear and unsound, it is implied that any new jobs created will only make a positive contribution to the towns of Uckfield, Hailsham, Polegate and Willingdon.

Details of Changes to be Made:
Policy SP06 should be amended to make it clear that new economic development will be encouraged across all settlements in the district, particularly those in South Wealden, such as Westham. We also consider that the Mountney Bridge Industrial Estate should be identified for intensification and expansion. WCS3 should refer to the other locations which can accommodate intensification and expansion and there should be recognition that some lower order settlements such as Westham can contribute to economic growth.

---

Paragraph 3.22
Details of Reasons for Soundess/ Legal Compliance:
Employment and Business: we endorse the Council's recognition of the importance of leisure and tourism and the support expressed for rural diversification - including the conversion of redundant agricultural buildings - to the benefit of the landscape. We welcome the recognition of the implications of poor broadband infrastructure in the rural areas, and the importance of maintaining services in rural settlements that support local jobs.

Details of Changes to be Made:

WCS3 should refer to the other locations which can accommodate intensification and expansion and there should be recognition that some lower order settlements such as Westham can contribute to economic growth.

Details of Reasons for Soundness/ Legal Compliance:
‘Suitable parking provision’ to support retailing and other business is ambiguous. There is clear concern of traffic impact on Ashdown Forest (3.32), parking issues at Polegate station (6.25) and limited supply of brownfield development opportunity (5.8). Policies rightly aspire to cut traffic, combat climate change, avoid flood risk areas, improve safety and maximise use of previously developed land. Parking is a key element in making these effective

Details of Changes to be Made:
‘Suitable parking provision’ should clearly avoid being ‘excessive’, in pursuit of these policies. A significant quantity of current parking space should be available for brownfield redevelopment. Car free developments should be encouraged and supported.

Details of Reasons for Soundness/ Legal Compliance:

Tesco supports vision and spatial planning objective SP04 of the proposed submission of the Core Strategy, to allow the five towns long term vitality commercial centres, serving their respective local areas and maintaining the role of the market town with more substantial investment in Uckfield, Crowborough and Hailsham. However, no information is provided on future retail and town centre development, to ensure the five town centres achieve the Core Strategy aim of becoming ‘thriving commercial centres’. Tesco considers that the Core Strategy should provide options for the future development of retail uses within the five town centres. A number of strategic retail policy options were set out in the Wealden District Council Interim Shopping Study (WDC ISS, 2008) which was prepared as part of the evidence based to support the Core Strategy. However, the Core Strategy does not appear to have taken into consideration the findings of the Shopping Study. We consider that it is necessary to consider the findings of the study and examine policy options for the future provision of retail floorspace in the district. In this respect, we consider that the shopping study's findings on need for more retail floorspace are unduly cautious, and thus the Core Strategy should treat these findings as the District's minimum requirements. Furthermore, the shopping study found that there is a high level of convenience outflow from the district (WDD ISS Para 4.12). This is acknowledge in the Spatial Development options background Paper 4 ‘Summary Guide to Evidence Studies’ (Para 5.6) but there has been no reference in the Core Strategy to the scope for future retail development which might address this convenience outflow and ensure the district is more self sufficient. Tesco therefore considers the Core Strategy should address future retail and town centre development.

Paragraph 3.25

**Sound**

- Yes
- No [☑]  Justified [☑]  Effective [☐]  Consistent with national policy

**Legally Compliant**

- Yes [☑]  No [☐]

**Details of Reasons for Soundess/ Legal Complaince:**

Together with Uckfield and Hailsham, Crowborough is one of the largest settlements within the District and a major provider of retail space, although this is affected to a degree by the proximity to Primary Centres. However it is clear from the evidence - notably the Summary of Town Planning Documents Background Paper and the related Town Council vision document Top of the Weald that there is significant local demand for an enhancement of the local retail offer - both to improve the vitality and liveability of the town and to achieve tourism objectives. It is therefore suggested that not to include any provision for upgrading and improving the retail offer is a major omission.

**Details of Changes to be Made:**

To recognise that there is local demand for the enhancement of the retail offer at Crowborough.

Paragraph 3.25

**Sound**

- Yes [☐]  No [☑]  Justified [☑]  Effective [☐]  Consistent with national policy

**Legally Compliant**

- Yes [☑]  No [☐]

**Details of Reasons for Soundess/ Legal Complaince:**

‘Suitable parking provision’ to support retailing and other business is ambiguous. There is clear concern of traffic impact on Ashdown Forest (3.32), parking issues at Polegate station (6.25) and limited supply of brownfield development opportunity (5.8). Policies rightly aspire to cut traffic, combat climate change, avoid flood risk areas, improve safety and maximise use of previously developed land. Parking is a key element in making these effective.

**Details of Changes to be Made:**

‘Suitable parking provision’ should clearly avoid being ‘excessive’, in pursuit of these policies. A significant quantity of current parking space should be available for brownfield redevelopment. Car free developments should be encouraged and supported.
Details of Reasons for Soundess/ Legal Complaince:
As with many other, wholly laudable, aspirations expressed in this document WDC has no actual ability to deliver. We can however review one of the recent developments that have occurred as a direct result of it's planning decisions. The combined muscle power of East Sussex County Council and Tesco ensured that an additional mainstream supermarket opened in Hailsham. In spite of the fact that we already had a mainstream outlet, The Co-op, as well as the slightly up-market Waitrose. I understand that the Co-op will not now be renewing it's lease in the Quintins shopping centre. As a direct result of this the Post Office will now have to move from it's current reasonably spacious outlet. to, I understand, a newsagent in the High Street. The current square footage of this outlet is less than the PO currently uses. Moving it to this location would be a joke! I am sure that in due course we will have no Post Office - this in a town of more than 20,000. Thanks a bunch Wealden!

Details of Changes to be Made:
Wealden has no power to deliver. Hailsham has sufficient available retail outlet space, Polegate (and Eastbourne) have sufficient available retail outlet space. The only planning issue is what to do with the empty shops! Is it within the Planning Inspector's remit to question why the document does not address the issue of what to do with empty retail outlets? Considering a practical and radical review of classification would be a relevant activity for a planning authority. I feel that this 'strategy' as with others in this submission is presented to justify the existence of an increasingly expensive yet increasingly ineffective and irrelevant organisation.

Environment: this section surprisingly omits any specific mention of the downs - other than within Lewes District! This should be rectified.

Details of Changes to be Made:
7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it is considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as; ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation Low Planting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing Low Close to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snaw Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges. Potential for Mitigation Moderate Low on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:

SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.

Details of Changes to be Made:
7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “…and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges
Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact of housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and/or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation Low Planting

By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: 'Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep'. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is 'moderate' (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snaw Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges. Potential for Mitigation Moderate Low on ridge as need to retain open fields. Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: 'Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep'. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is 'moderate' (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snaw Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges. Potential for Mitigation Moderate Low on ridge as need to retain open fields. Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:

SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
Details of Reasons for Soundness/ Legal Compliance:

We feel that the proposed avoidance and mitigation measures of SANGS and contributions for onsite access management will ensure that housing within 7km will not have a likely significant impact on Ashdown Forest.

Details of Changes to be Made:

---

Details of Reasons for Soundness/ Legal Compliance:

It should be recognised in these sections that Ashdown Forest is also a Special Area of Conservation (SAC) for its habitat of Northern Atlantic wet heaths and European dry heaths. The SAC interest is also relevant for the proposed 400 metre exclusion zone for net increases in dwellings as the potential impacts from this area also include SAC damaging activities such as garden encroachment and bonfires etc and not just recreational pressure. The wording of Section 3.32 should be amended to take this into account.

Details of Changes to be Made:

---

Details of Reasons for Soundness/ Legal Compliance:

Environment: this section surprisingly omits any specific mention of the downs - other than within Lewes District! This should be rectified.

<td>Officers at Mid Sussex District Council are continuing to work jointly with Wealden in developing and implementing a strategic and co-ordinated approach to protecting the Ashdown Forest SAC/SPA. Work already undertaken between the two Councils has identified a series of measures to limit the impact of new development on the conservation interests of the Ashdown Forest. These measures include new development contributing to an appropriate level of mitigation in the form of providing Suitable Alternative Natural Green Space (SANGS) and support via developer contributions towards the Ashdown Forest Access Management Strategy. This strategy will need to specify measures for the management of visitors to Ashdown Forest in such a way that reduces their impact on the interest features of the designated site and will need be prepared and implemented in association with the conservators of Ashdown Forest, Natural England and other partners. In addition, further joint working will be required to develop and implement site management measures to reduce nitrogen emissions emanating from the increased number of vehicles using the roads crossing Ashdown Forest. In combination with this, both Councils through their Local Development Frameworks will also need to deliver initiatives to reduce reliance on the motor vehicle, through creating sustainable communities, providing improvements to public transport, cycling and walking facilities. Pollution monitoring on the Forest will be required to assess the effectiveness of these measures. The recognition of this situation in paragraphs 3.22 6.34 and policy SPO1 is welcomed. The recognition within the Core Strategy of the impact on the Ashdown Forest that development within rural villages (such as Forest Road and Danehill) would have is welcomed. The strategy focusing growth at Uckfield, Crowborough, Heathfield and Hailsham and smaller- scale growth at villages within the Wealden District will go some way to minimising the negative impact development would have on the Ashdown Forest, especially in combination with further mitigation measures (such as SANGS).</td>

### Details of Changes to be Made:

**Yes**

### Details of Changes to be Made:

**Demand management techniques for traffic in Hailsham (6.15) should be included in all the related and equivalent policies. There should be a definite commitment to traffic reduction measures and targets throughout the Strategy Plan document.**
Details of Reasons for Soundess/ Legal Compliance:
The references to ‘dispersed settlement pattern’ in Wealden, with 93 per cent of the district containing half of its population are misleading, so affecting the policies derived from that thinking. It ignores the significance of nucleated villages as well as the main towns.

Details of Changes to be Made:
The settlement pattern seen as ‘dispersed’ for half of the population needs refining in the document. The proportions of those living in places larger than 500 and 1,000 should be identified. There is great scope for serving these by public transport evolving from the present network, with limited strict dependence on cars.
Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paragraphs 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28Legally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to be set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact of housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development into the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation, (and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value MediumSnawAccessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe.Farm diversification pressure.Manage wood and existing trees and hedges Potential for Mitigation ModerateLow on ridge as need to retain open fieldsSof ten urban edge. Create green network.Relocate recreation ground Capacity to Accept Change: Housing ModerateNeed well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. ’

Details of Changes to be Made:
SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
Details of Reasons for Soundess/ Legal Complaince:

3.2 Suitable Alternative Natural Green Space 3.2.1 This section of our representations refers to policy WCS7 and supporting paragraph 3.32. It is summarised below: Section of Core Strategy: Policy WCS7 Effective Provision of Infrastructure and para 3.32Legally Compliant: -Sound: NoJustified: -Effective: NoConsistent with national policy: -

3.2.2 We contend that the Council has not demonstrated that there is a reasonable prospect of delivery of Suitable Alternative Natural Green Space (SANGS) on time to mitigate impacts from development on the Ashdown Forest Special Protection Area (SPA) which means that the quantum of housing identified in the Core Strategy can not be delivered. 3.2.3 Para 3.32 of the submission Core Strategy states that for developments within seven km of the Ashdown Forest, there will be a requirement for SANGS to be provided. This has a particular impact on the deliverability of homes in Uckfield and Crowborough. 3.2.4 The housing trajectory set out in Figure 5 of the submission Core Strategy shows homes being delivered in Uckfield from 2016/17 onwards, and in Crowborough from 2015/16 onwards. 3.2.5 In respect of Crowborough, this is just five years away (from the time of submitting these responses). Para 6.34 of the submission Core Strategy notes that for land to come forward for development in Crowborough SANGS will be required. However, no land for SANGS has been identified. 3.2.6 According to the Wealden Local Development Scheme (LDS) 2009-2013 (March 2010), the Councils Strategic Sites DPD is not due to be adopted until the end of 2012, with a Delivery and Site Allocations DPD following for adoption at the end of 2013. The LDS notes that public consultation on the Site Allocations document will be undertaken in January / February 2011. This did not take place. There is no publically available timeframe to establish when this consultation will now take place. The programme for delivery has slipped and it is unclear when these documents will be adopted. The end of 2014 may be a more realistic date now for the Delivery and Site Allocations DPD. 3.2.7 We would expect one of the DPDs to identify development sites and land for SANGS. The timing here is critical: if land for SANGS is not identified until 2014 this does not allow sufficient time for this to be incorporated within planning applications and proposals for new homes in Crowborough, and for these to be determined in enough time to allow for the first units to be delivered in the phasing period 2015/16. 3.2.8 The Core Strategy Infrastructure Delivery Plan (Background Paper 11) explicitly identifies the issue of SANGS as critical to supporting growth. It states (see Table 1): ‘Development within and around Crowborough is constrained by proximity to the Ashdown Forest and Special Protection Area / Special Area of Conservation’. ‘A number of avoidance and mitigation measures required, including visitor management and the provision of a local SANG in Crowborough’.

Details of Changes to be Made:
SUMMARY 3.2.9 We thus contend that the housing trajectory is unsound because it is not effective as the Council has not demonstrated that quantum of growth identified in Crowborough can be delivered.

Paragraph  3.33

Sound  ☑ Yes  ☐ No  ☐ Justified  ☑ Effective  ☐ Consistent with national policy

Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundness/ Legal Complaince:

There is no mention in this section about the environmental impact of the traffic levels along the A259 through the South Downs National Park. The section of the A259 passes through the south Wealden area. For example: noise pollution; exhaust emissions; increasing amounts of litter and debris; increased congestion and accidents.

Details of Changes to be Made:

The general wording of the document, and the way the information was given to me, makes me unsure of how I should comment about an issue that could be relevant but is not mentioned. The only evidence that I can provide is empirical. My home is in the South Down National Park next to the A259 and I travel daily along the road by motorcar, bicycle or on foot. Moreover, for a number of years, I have collected information written by the local authority and newspapers about traffic issues related to the A259 through the National Park.

Paragraph  3.33

Sound  ☑ Yes  ☐ No  ☐ Justified  ☑ Effective  ☐ Consistent with national policy

Legally Compliant  ☐ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:

We feel that the proposed avoidance and mitigation measures of SANGS and contributions for onsite access management will ensure that housing within 7km will not have a likely significant impact on Ashdown Forest.

Details of Changes to be Made:
7 Landscape 7.1 Introduction 7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: NoJustified: NoEffective: -Consistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SLHAA’. 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SLHAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and: 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy.

7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’. 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings, 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value MediumSnawAccessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange hedges and grazing. Farm diversification pressure. Manage wood and existing trees and hedges Potential for Mitigation ModerateLow on ridge as need to retain open fieldsSoftens urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing ModerateNeed well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land to Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity/capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:

SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
Details of Reasons for Soundess/ Legal Complaince:
I am entirely unsure as to whether a council invested with planning authority is required to have a 'VISION' and therefore whether a Planning Inspector is required to tick a box or comment on this particular vision.

Details of Changes to be Made:
Is WDC's vision the same as the Mission Statements that businesses use to find it necessary to produce? The general view held at the time was that any business needing to produce such a mission statement was in serious trouble! What is my vision:-. I see my new Unitary Council decoupling the provision of council housing, sorry - of course I mean affordable housing, from the planning process for new builds. I see my new council offering it's electorate the choice of how or if Affordable Housing is to be provided and who pays. I see my council administering the Low Weald and the enclosed major towns such as Hailsham, Polegate Eastbourne, Bexhill and Hastings. I see it honest and brave enough to offer it's electorate the choice of continued expansion via huge green field sites or containment within the quite well defined existing boundaries of it's settlements and towns.. I see my council honest enough to recognise the limits of it's influence in the anarchic new world order initiated by New Labour and further fractured by the CONdems. It follows therefore that my Planning Authority will be a light weight and low cost operation without the need for external consultants for this and that.. Without the prospect of major financial gains from huge building sites, after an initial battle or two ( handled by class actions at a national level), it will be free to make decisions undeterred by legal threats from Outline Planning Permission traders. My vision for my local planning authority is that it will be free to concentrate on the basics: ensuring that building work conforms to legal and professional standards and ensuring a balance is struck between individual aspiration and local acceptability.

Agent ID  Southern Water
Agent ID  Box 1
Sound  ☑ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  ☑ Yes  ☑ No

Details of Reasons for Soundess/ Legal Complaince:
Southern Water owns and manages Bewl Reservoir – a strategic water resource. The reservoir lies partially within Wealden District and serves large parts of Kent and East Sussex in addition to Wealden District. This water resource is used by both Southern Water and South East Water which supplies water to Wealden District. As foreshadowed in Wealden’s Core Strategy Spatial Development Options document, enlarging Bewl Reservoir is one of the strategic options which may need to be implemented within the planning horizon of Wealden’s Core Strategy; therefore it is vital that this option is recognised in said strategy. The need for this resource is evidenced by: o Southern Water’s Water Resources Management Plan o South East Water’s Water Resources Management Plan o Modelling work carried out by the Water Resources for the South East Group o Policy NRM3 of the South East Plan Wealden’s Core Strategy is: o Not justified as it does not rely on the evidence base available. Instead, it appears to disregard evidence provided concerning the potential need to enlarge Bewl reservoir. o Not effective due to the lack of recognition of the potential need and mechanism for supporting the enlargement of Bewl reservoir. o Not consistent with national policy as it does not look beyond its own boundaries as required in PPS 12

Details of Changes to be Made:
Please set out what change(s) you consider necessary to make the Core Strategy legally compliant or sound. Southern Water has previously submitted representations seeking the inclusion of a reference to safeguarding land for the raising of Bewl water in the Core Strategy. Furthermore, Wealden foreshadowed its inclusion in its Core Strategy Spatial Development Options document which was published and put out to consultation in the summer of 2009 Southern Water considers that the Wealden District’s Core Strategy should clearly state the planning authority’s intention to safeguard appropriate land for the enlargement of Bewl reservoir. A subsequent Site Allocations DPD could then identify the site specific requirements associated with any future enlargement of the reservoir, including the land to which the policy relates. We propose the addition of the following paragraph to the core strategy: In accordance with the evidence set out in: o Southern Water’s Water Resources Management Plan o South East Water’s Water Resources Management Plan o Modelling work carried out by the Water Resources for the South East Group o Policy NRM3 of the South East Plan Wealden District Council will safeguard the land necessary for the potential need to expand Bewl reservoir in the future in the site allocations DPD.

Sound  ☑ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  ☑ Yes  ☑ No

Details of Reasons for Soundess/ Legal Complaince:
The CS policies are evidently not aiming to meet future housing needs based on Government projections and the local needs evidence. Similarly it is evidently not proposed to secure regeneration and economic growth at Crowborough. Policy SP03 only aims to “help address the need for houses”. If the vision is not intended to meet all of Wealden’s housing needs, then it should say so.

Details of Changes to be Made:
Revise the wording of the vision to confirm the intention that housing need should not be met in full or revise the policies to ensure that there is a prospect of the vision being achieved. In either case fundamental re-consultation is required.
Details of Reasons for Soundess/ Legal Complaince:
The vision should aspire to see all villages and rural settlements have their sustainability enhanced. In this Section we comment on the Vision and Spatial Planning objectives which the Council has set out in Section 4 of the Consultation document. The final part of the stated Vision is that by 2030 in Wealden "a number of its villages and rural settlements will have enhanced their sustainability through successful growth including provision of affordable housing." Whilst that may be a realistic view of the outcome, the Vision should be aspirational. Consistent with national policy, the Council should be seeking to ensure that all of its villages and rural settlements will have enhanced their sustainability. Accordingly we propose that "a number of" is deleted from line 6 of the Vision.

Details of Changes to be Made:
Specifically, we object to SP03 and the proposed level of housing provision for the reasons stated in Section Five Delete "a number of" in line 6.

Details of Reasons for Soundess/ Legal Complaince:
Natural England commends the Council on its recognition of the importance of the environment and green infrastructure and the need to provide resilience for climate change. We particularly support spatial planning objectives SP01, SP07 SP09 and SP011

Details of Changes to be Made:
We generally support all 15 of the Spatial objectives but SPO1 (countryside and rural areas) should make specific mention of the downs.
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

**Details of Reasons for Soundness/ Legal Compliance:**

'Suitable parking provision' to support retailing and other business is ambiguous. There is clear concern of traffic impact on Ashdown Forest (3.32), parking issues at Polegate station (6.25) and limited supply of brownfield development opportunity (5.8). Policies rightly aspire to cut traffic, combat climate change, avoid flood risk areas, improve safety and maximise use of previously developed land. Parking is a key element in making these effective.

**Details of Changes to be Made:**

'Suitable parking provision' should clearly avoid being 'excessive', in pursuit of these policies. A significant quantity of current parking space should be available for brownfield redevelopment. Car free developments should be encouraged and supported.

**Details of Reasons for Soundness/ Legal Compliance:**

See comments in respect of paragraph 2.11. It is essential that development, in taking full account (by mitigation or adaptation) of the likely forecast impacts of climate change, includes measures to minimise water use. Without this, the policy and therefore the Core Strategy will not be effective in mitigation or adapting to climate change.

**Details of Changes to be Made:**

Amend policy SP09 as follows: We will ensure development takes full account (by mitigation or adaptation) of the likely forecast impacts of climate change including: minimising the emissions of greenhouse gases; the use of non-renewable energy, natural resources and water; and by encouragement of construction using sustainable techniques.

SPO10 should include restrictions on development in areas where it could increase the risk of flooding elsewhere.
Details of Reasons for Soundness/ Legal Complaince:
Sites which include access road over medium and high risk flooding areas should not be subject to this policy. Such sites should be confirmed as developable subject to specific Flood Risk Assessment demonstrating that this site is suitable for development.

Details of Changes to be Made:

---

Details of Reasons for Soundness/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindslands and Mornings Mill is sound and justified.

Details of Changes to be Made:

Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 Shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. those affected by the Honey Farm site were not permitted in 2004-2005 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-2007. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. these arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, ist park and garden would be damaged.

Details of Changes to be Made:
Paragraph 6.29

Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The overwhelming arguments against the Honey Farm Location have now been accepted by the District Council. these arguments are: 1. The Honey Farm location would be an isloated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified.

There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation for South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage Register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Honey Farm of West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a Public Inquiry. Those affected by the Honey Farm Site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005 - 07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: 1. The Honey Farm location would be an isolated development cut off by the A27 trunk road - the 'Folkington Link' no longer being in the trunk road programme. 2. Foot and cycle access to the Honey Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate. 3. The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement. 4. The setting of the South Downs National Park would be harmed. 5. The setting of the adjacent historic property Wootton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Mornings Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 bypass which is also considered suitable in the 2010 Strategic Housing Lane Availability Assessment.

Agent ID
106034
Paragraph 6.29
Sound ☑ Yes ☐ No ☑ Justified ☑ Effective ☑ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The council’s comments make it clear that these allocations are undeliverable as things stand at the moment, and they seem to have no idea how and if it will be possible to overcome the identified constraints regarding the roads and waste water infrastructure. There these allocations are unsound and contrary to national policy and SHLAA criteria.

Details of Changes to be Made:
These allocations should be deleted and reallocated to deliverable and sustainable sites.
Details of Reasons for Soundess/ Legal Complaince:

6.29 states that the provision of housing in Polegate would allow for opportunities to maximize the potential for shopping provision within the town centre of Polegate. Polegate Town Council feel this statement is flawed in that it is more likely that residents would use the road system to access Eastbourne retails facilities. What is the potential for shopping provision within Polegate town centre, when elsewhere the document states there is a physical constraint on the High Street.

Details of Changes to be Made:

Sound  No  Justified  Effective  Consistent with national policy
Legally Complainant  No

Details of Reasons for Soundess/ Legal Complaince:

The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link’ no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.

Paragraph 6.3
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy is sound and sets out a justified and effective land use strategy for the Polegate area which is consistent with national planning policy. Policy WCS4, Strategic Development Areas, lists as Location SD4 'Land at South Polegate and East Willingdon'. Chapter 6, paragraphs 6.21 to 6.32 and Figure 8 (pages 43-46) show a clear and suitable set of proposals. There is to be no development west of Polegate; housing is proposed to be located in an urban extension south of Polegate and east of Willingdon (Hindslands and Mornings Mill). Paragraph 6.27 of the Core Strategy states: A site was allocated in the 2005 Non Statutory Wealden Local Plan for an urban extension to the north west of Polegate, in the vicinity of Honey Farm. However, this proposal was dependent upon the provision of the Folkington Link and other community infrastructure to enable the integration of development into the town. No such infrastructure has been provided or is known to be planned. Since this allocation the South Downs has achieved National Park status and the adjacent Wootton Manor has formally been included in the English Heritage register of Historic Parks and Gardens. This site has been re-assessed as part of SHLAA and is no longer considered suitable for housing. Figure 8 shows that the land west of Polegate north of the railway line will stay as open countryside adjacent to the National Park. Paragraph 6.27 of the Core Strategy is strongly supported. The Hone Farm or West of Polegate (Pelham Homes) site was included in the Non-Statutory Local Plan in 2004 but that Plan was never subject to a public inquiry. Those affected by the Honey Farm site were not permitted in 2004-05 to oppose it by advancing a different location for the housing, as the opportunity to propose a different location was stated then to be given by the Local Development Framework process in 2005-07. That was delayed and this stage has only now been reached with this Core Strategy. The overwhelming arguments against the Honey Farm location have now been accepted by the District Council. These arguments are: The Honey Farm location would be in isolated development cut off by the A27 trunk road - the 'Folkington Link’ no longer being in the trunk road programme; Foot and cycle access to the Honest Farm site would be permanently by footbridges and alleyways directly affecting residents in the Brookside Avenue area of Polegate; The Honey Farm location could not be integrated into the community of Polegate and would be a separate settlement; The setting of the South Downs National Park would be harmed; The setting of the adjacent historic property Wooton Manor, its park and garden would be damaged. The Core Strategy is justified in rejecting the Honey Farm location. The proposed housing location at Hindsland and Morning Mill is sound and justified. If that housing location does not prove to be the best site on further study, the preferred location for housing in the Polegate Town Council Masterplan should be chosen. This is the area north of Polegate and south of the A27 Bypass which is also considered suitable in the 2010 Strategic Housing Land Availability Assessment.
Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

I understand that although a proposal to develop the Hindsland/ Mornings Mill area was rejected only a few years ago, another such plan is under consideration. Whilst the original deadline (28 March 2011) has passed, my local parish council officer advises me that the period for representations has now been extended. Would you therefore please register my disapproval to the plans to create a large development, which will add to the already rapid increase in the size of Eastbourne over the past thirty years. The rate of development in and around Eastbourne in that period seems to far exceed that of other neighbouring seaside towns (e.g. Hastings and Brighton). In my view one of the problems of planning in the local area is that Eastbourne and its surrounding villages are governed by separate authorities, when dual, all- encompassing approach is needed. Development inside or just outside the town can have great ramifications for those living either side of the town boundary. My reasons for opposing this proposal can be summarised as follows: Environmental The area provides a rare green lowland corridor in the otherwise unbroken development which threatens to swallow Polegate (in the same way as has happened to Stone Cross) into the Eastbourne conurbation. The area at risk includes old woodland which provides a home to much wildlife. Traffic Problems Secondly, the traffic on Eastbourne Road, Willingdon is already too heavy due to the peculiar geographical location of Eastbourne (hemmed in by the Downs) and the lack of approach roads. In high season the number of people in the town doubles, exacerbating the problem. Furthermore the lack of good roads linking Brighton, Crawley/ Gatwick and Greater London with Eastbourne and Hastings already causes unacceptable levels of traffic congestion and has hindered local economic growth. Encouraging more people to live in the Eastbourne conurbation which hosts a dwindling number of jobs will only cause more traffic problems. Local industrial development needs modern road networks to the east of the A23/ M23 road. Any attempt at boosting the local economies without providing a dual carriageway road from Lewes to Hastings, and on the A22 from Hailsham to Uckfield and beyond along the A272, will, I believe, be doomed to failure. Impact on local Services Lastly, whilst I believe good roads are the main pre-requisite for commercial or residential development, sufficient infrastructure provided by local services needs to be in place. Currently local health services are overstretched. Units at the Eastbourne District General hospital are under threat and Eastbourne charities are struggling to cope. Cuts in local Social Services are likely. If such housing developments are necessary, in my view they should be small scale and in areas nearer to good transport links and jobs. The East/ West Sussex border areas near Burgess Hill, Haywards Heath, Uckfield and East Grinstead at present offer more suitable locations for such developments. Only if there is a serious upgrading of the road network as mentioned above and considerable long term investment in the local social infrastructure, would a slight increase in housing and commercial property development in the Willingdon/ Polegate/ Stone Cross area possibly be justified.

Details of Changes to be Made:

Undertake the above proposals.
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics) 2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

<td>We are pleased that you have avoided all areas at risk of flooding for strategic allocations in your Core Strategy. You have identified Uckfield Town Centre as a broad location for development which, as you know, is at risk of flooding from the River Uck which runs through the town centre. The preferred approach recommended by the River Ouse Catchment Flood Management Plan (CFMP) is a reinstatement of functional floodplain through Uckfield by implementing sustainable land management. This approach is also supported by the Government’s Strategy for flood and coastal erosion management, ‘Making Space for Water’ (Defra 2005). This would also be consistent with your Strategy Objective to reduce the risk of flooding and the consequential damage to property and public well being. You will need to take this into account in your Site Allocations DPD.</td>

Page 263 of 1511
Details of Reasons for Soundness/ Legal Compliance:
Policy SPO10 is unsound as it is ambiguous and does not reflect national planning policy. Planning Policy Statement 25, Development and Flood Risk (PPS25) clearly states the acceptability of development in the various flood zones for example, PPS25 advises that areas with a high probability of flooding (3A) are suitable for 'less vulnerable' development such as industry, storage and distribution, offices, shops etc. As drafted policy SP010 is misleading as it implies that all economic development in areas of medium and high flood risk will be treated unfavourably. Please see the Indigo Planning letter dated 15 April 2011.

Details of Changes to be Made:
Policy SPO10 is unnecessary as there is sufficient national planning policy on the subject. PPS25 provides clear and effective planning guidance on development in areas of flood risk. Therefore, SPO10 should be deleted.

Details of Reasons for Soundness/ Legal Complaince:
Support for the overarching objectives that contribute to the Vision. They are laudable and, we believe, achievable in broad terms across the district.

Details of Changes to be Made:
'Suitable parking provision' to support retailing and other business is ambiguous. There is clear concern of traffic impact on Ashdown Forest (3.32), parking issues at Polegate station (6.25) and limited supply of brownfield development opportunity (5.8). Policies rightly aspire to cut traffic, combat climate change, avoid flood risk areas, improve safety and maximise use of previously developed land. Parking is a key element in making these effective.
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

We generally support all 15 of the Spatial objectives but SPO1 (countryside and rural areas) should make specific mention of the downs.

**Details of Changes to be Made:**
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).
dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12.

2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics) 2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

Details of Changes to be Made:
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay
dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail and are therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

Details of Reasons for Soundness/ Legal Complaince:

7 Landscape 7.1 Introduction 7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.6 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and...
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’. 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan and through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development into the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value MediumSnawAccessible for recreational Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges Potential for Mitigation ModerateLow on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing ModerateNeed well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 

Details of Changes to be Made:
SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.

Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed
Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable
accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 –
Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11
quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic
sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the
appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the
local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to
sure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan
making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the
Objectives therefore provide a clear vision and are specific to the challenges of the District. They are
the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is
The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which
states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are
supplied by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).
Details of Changes to be Made:
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 –
Wealden’s aspiration to retain its rural character and high quality environment whilst achieving
sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the
‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives”
needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the
local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to
ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan
making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay
dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)  

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

Support for the overarching objectives that contribute to the Vision. They are laudable and, we believe, achievable in broad terms across the district.  
Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:

‘Suitable parking provision’ to support retailing and other business is ambiguous. There is clear concern of traffic impact on Ashdown Forest (3.32), parking issues at Polegate station (6.25) and limited supply of brownfield development opportunity (5.8). Policies rightly aspire to cut traffic, combat climate change, avoid flood risk areas, improve safety and maximise use of previously developed land. Parking is a key element in making these effective.

Details of Changes to be Made:

‘Suitable parking provision’ should clearly avoid being ‘excessive’, in pursuit of these policies. A significant quantity of current parking space should be available for brownfield redevelopment. Car free developments should be encouraged and supported.

---

Details of Reasons for Soundness/ Legal Complaince:

Policies to restrain traffic, obtain modal shift in travel, reducing need to travel and improve the experience of non-car travel need to be sharpened and focused. Aspirations for these to happen must have necessary circumstances incorporated into the policies.

Details of Changes to be Made:

Demand management techniques for traffic in Hailsham (6.15) should be included in all the related and equivalent policies. There should be a definite commitment to traffic reduction measures and targets throughout the Strategy Plan document.

---

Details of Reasons for Soundness/ Legal Complaince:

We generally support all 15 of the Spatial objectives but SPO1 (countryside and rural areas) should make specific mention of the downs.

Details of Changes to be Made:
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. **Details of Reasons for Soundess/ Legal Complaince:**

I leave the planning inspector to decide whether WDC have presented a sound and justifiable case for it's virtual reliance on Greenfield to meet it's housing targets from 2016 to 2030.

**Details of Changes to be Made:**

The recognition that re-use of Bownfield is important is acknowledged by this document. However the devil is in the detail. The supporting background paper, Managing the Delivery of Housing, includes at 10.4, and labelled Figure 2 a housing trajectory. This bar chart shows projected completions for the plan period. What is deeply worrying is that it also shows that: between 2012 and 2015 completion on green field sites exceeds brown field, between 2016 and 2018 brown field site completions are insignificant and that FROM 2020 - ALL COMPLETIONS ARE ON GREEN FIELD SITES.

**Details of Reasons for Soundess/ Legal Complaince:**

We support Spatial Planning Objectives SPO14 in relation to the use and preference for previously developed land in accordance with national policy contained within PPS 3: Housing, in particular paragraphs 10 and 40, both of which encourage Local Planning Authorities to make efficient use of land by re-using previously developed land. The importance of the continued use of previously developed land is outlined in PPS1: Delivering Sustainable Development. Paragraph 21 states that in order to utilise resources in an efficient and sustainable way "The broad aim should be to ensure that outputs are maximised whilst resources used are." Criteria (viii) of paragraph 27 further states that in preparing development plans, planning authorities should seek to "Promote the more efficient use of land through higher density, mixed use development and the use of suitably located previously developed land and buildings. Planning should seek actively to bring vacant and underused previously developed land and buildings back into beneficial use to achieve the targets the Government has set for development on previously developed land." The redevelopment of the Former Merrydown Cider site within the Local Service Centre of Horam as a mixed use scheme will assist the Authority in meeting both the objectives in national planning policy and SPO14 in that it can deliver at least 70% of Horam's housing requirement (100 units), as outlined in representations to Strategic Policy WCS6 - Rural Area Strategy, on Brownfield land.

**Details of Changes to be Made:**
Details of Reasons for Soundess/ Legal Complaince:

New development should not mimic past development. This proposed strategic objective states that housing density should be compatible with a particular location. Whilst this is expressed as an objective, this could be unduly prescriptive when some sites have the capacity to be able to accommodate higher building densities than, for example, indicated within the Council’s SHLAA.

Details of Changes to be Made:

Amend wording so that the objective states that housing densities will be compatible with the need to make efficient use of land and with the particular location.
2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

Details of Changes to be Made:
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic.…if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).
dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics) 2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). Details of Reasons for Soundness/ Legal Compliance:
Hallam Land Management (HLM) support SP015 and propose that any requirement for phasing can be adequately addressed through the development control process. HLM maintain that there is no justification to include a phasing policy (WSC5) within this plan.

Details of Changes to Be Made:
Details of Reasons for Soundness/ Legal Compliance:
This policy should refer to the creation of a Community Infrastructure Levy (or CIL) to far more effectively deal with the identified infrastructure constraints within the District. The absence of such a mechanism will make the identification and resolution of common infrastructure constraints less effective, more costly in terms of delays and financial burdens, increased pressure on resources for both the Council and the construction industry and less certainty within the local community.

Details of Changes to be Made:
The Core Strategy should establish a Community Infrastructure (or CIL) mechanism and this policy should refer to it.
1. The Core Strategy is not legally compliant and is unsound because of its proposals for an urban extension to the north west of Heathfield (Strategic Development Area SD11). 2. Whilst the principle of accommodating housing growth in the broad location of north west Heathfield is supported, the Core Strategy's proposals are deficient because they: (a) fail to take a comprehensive approach to the development of this area and so are not founded on a robust and credible evidence base and are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the soundness test in paragraph 4.36 of PPS12 that they are “justifiable”. (b) constitute an unjustified encroachment into the High Weald AONB and so are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12 and also the soundness test in paragraph 4.52 of PPS12 that they are “consistent with national policy”. Paragraph 16(v) of PPS7 requires the Council in preparing the Core Strategy to “conserve…sites of landscape…value, in accordance with statutory designations”. Paragraph 22(ii) of PPS7 requires that “major developments” should only take place within the AONB after “the most rigorous examination” and an assessment of “the scope for developing elsewhere outside the designated area or meeting the need for it in some other way”. The Council has failed to properly assess the scope for meeting the need for development on previously developed land at north west Heathfield that is not in the AONB. (c) utilise less accessible and less sustainable land and so are not the most appropriate strategy when considered against reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12. (d) fail to provide adequate safeguarding of amenities of existing dwellings (if those dwellings are to be excluded from the urban extension as currently proposed) and fail to integrate into the existing urban form, thus failing the soundness test in paragraph 4.52 of PPS12 that the proposals are consistent with national policy. Paragraph 34 of PPS1 and paragraph 13 of PPS3 require the Council to reject design which is “inappropriate in its context” and paragraph 35 of PPS1 requires development to be designed so that it will be “integrated into the existing urban form and the natural and built environments”. THE PROPOSED SUBMISSION CORE STRATEGY 3. We object to the following parts of the Core Strategy. Because the objections are interconnected, we have set out all the relevant matters in this response, although this particular objection only relates to the specific part of the Core Strategy identified in our response to Q1 above. Our objections are as follows: (i) The omission from Spatial Planning Objective SPO1 of any reference to minimising the loss of nationally designated landscapes, including the High Weald AONB. Paragraph 16(v) of PPS7 requires the Council to conserve the AONB and since it is clear that the Council is proposing to meet part of the District’s development needs by using land within the AONB, the Council should establish a clear objective that only the minimum AONB land should be used for this purpose and wherever possible non-AONB land should be used in preference. (ii) The reference in Policy WCS2 to the broad locations for housing development being shown as insets on the Key Diagram. We object to the inset for Heathfield in relation to the way it shows the proposal SD11 and consequently object to this reference to that inset plan in Policy WCS2. (iii) The reference in Policy WCS4 to SD11: Land at North West of Heathfield. We object to the way that SD11 is described in Chapter 6 of the Core Strategy and shown on the Key Diagram and as a result object to the reference to SD11 in Policy WCS4. (iv) The omission from paragraph 5.8 of any aim to maximise the use of previously developed land in meeting existing and future housing needs. Notwithstanding the recent changes to PPS3 it remains a national objective to prioritise the use of previously developed land, in accordance with paragraph 21 of PPS1 and paragraph 40 of PPS3. (v) The reference in paragraph 6.40 to the identification of potential sites for housing “through the SHLAA”. We object to the inclusion of Site 155/1210 in its current form as shown in the SHLAA and consequently object to this reference to that site in paragraph 6.40. (vi) The reference in paragraph 6.41 to the “most suitable location” being “within the AONB” and that this land could be developed “without strategic adverse impact on the landscape”. The Council’s evidence base does not demonstrate that the land within the AONB is more suitable for development than the non-AONB previously developed land on High Street. There is no assessment by the Council of the suitability of this non-AONB land (which includes the objector’s land at Lavender Cottage, High Street, Heathfield, TN21 0UP) and yet it is more suitable than the AONB land, being (i) not subject to a national landscape designation, (ii) previously developed land, (iii) within the existing settlement boundary, and (iv) well related and integrated into the urban area and existing transport connections. In addition, the Council’s evidence base does not show that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of 2 adjacent SHLAA sites at north west Heathfield (Site 155/1210 with a capacity of 123 dwellings at 40 dph and Site 307/1210 with a capacity of 35 dwellings at 35 dph). The Council’s Landscape Character Assessment (February 2009) shows at Figure 5 that large parts of these
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. (vii) The reference in paragraph 6.41 to the release of AONB land being justified “as no suitable alternative non-AONB location exists”. The Council’s evidence base does not substantiate this assertion. The Council has not assessed the suitability of the non-AONB land in this location which fronts High Street (including the objectors’ land at Lavender Cottage). This non-AONB land is within the settlement limits of Heathfield as identified on the Proposals Map of the saved Local Plan and paragraph 6.48 of the Core Strategy confirms that within development boundaries “the principle of development is acceptable”. The principle of redeveloping this land to provide more intensive residential development has already been accepted by the Council, with the grant of planning permissions at Brackenside (WD/08/0329) for 3 dwellings in place of 1 dwelling, and at Oaksdown/Lowlands (WD/2011/0400) for 9 apartments in the place of 2 dwellings. The more intensive development of the non-AONB land on the High Street frontage would minimise (or may even remove) the need for the use of AONB land. This option would plainly be a more suitable alternative than the use only of land “within the AONB” as proposed in the Core Strategy. (viii) The reference in paragraph 6.41 to “no suitable alternative contingency land is available”. The land at Oaksdown/Lowlands is available for development (as confirmed by the recent renewal of planning permission). The objectors’ land at Lavender Cottage is available for development (and this has been made known to the Council since at least August 2010). The land at Woodhatch is relied on as being available for development in order to provide the access for SHLAA site 155/1210. The objectors understand that the land at Holmhurst could be made available for development. Thus, there is a continuous frontage of 5 plots of non-AONB land available (all with generous areas of garden land, most of which is excluded from the AONB) just on this part of the High Street. Were the Council to actively promote a comprehensive redevelopment of this area it is likely that other land in the vicinity would be made available. However, the Council has simply failed in its evidence base to assess this option. If it is necessary to identify contingency land then the hinterland of AONB land should be identified as contingency land, with priority being given to the development of the non-AONB land on the High Street frontage. Prioritising that land would be consistent with the policy objectives of minimising the loss of AONB land and maximising the use of previously developed land. (ix) The reference in paragraph 6.42 item 3 to SD11 being “on land adjacent to the urban area”. The proposal for SD11 should not be defined in a way which excludes the urban area and which focuses only on land within the AONB. The proposal should embrace the urban area and the development should maximise the use of previously developed land in the urban area to achieve the provision of 160 dwellings before any consideration is given to the use of land in the AONB. (x) Figure 10 Heathfield Area Strategy. This diagram shows SD11 as located within the AONB and beyond the existing settlement. The diagram should not exclude the inclusion of the existing built up area in this location within the scope of SD11. The built up area has the potential and the capacity to be redeveloped and this aim should be the first priority at north west Heathfield. (xi) Key Diagram: the inset for Heathfield. The inset shows Heathfield and Proposal SD11 in the same way that they are shown on Figure 10 and they are not acceptable for the same reason set out at (x) above. 4. We now propose to elaborate on these objections. Piecemeal not comprehensive 5. SD11 takes an opportunistic approach. It utilises substantial areas of greenfield land as the main development areas (and by implication from the SHLAA one existing property simply as a means of access). Although the SHLAA indicates that Site 155/1210 is in multiple ownerships and Site 307/1210 is owned by a company with 7 shareholders, the choice of this location seems to be influenced simply by the fact that these 2 sites were promoted in the SHLAA and so it is assumed they are available. Site 155/1210 is said to be under the control of a housing developer. We are not aware whether the Council has seen the terms of any option or other legal agreement giving such control but, given that the Proposed Submission Core Strategy is a long term strategy to 2030 and its trajectory does not anticipate the site coming forward before 2015/16, little weight can be given to the status of any current contractual arrangements. 6. Any sensible spatial planning approach to the development of this area would not look at the sites promoted in the SHLAA in isolation but would look to see how that development would relate to its local context and how it would relate to the settlement it is intended to form a part of. 7. The site of SD11 is on sloping ground set back behind existing development which separates the site from the rest of Heathfield. Development as proposed will not integrate the development with its local context as required by paragraph 35 of PPS1. Nor will it maximise the opportunities for the site to benefit from clear and easy links to the facilities in the local service centre by non-car modes. 8. A comprehensive approach would look at the whole of the area in this north western part of Heathfield and then seek to identify the land which is most suited to development. It is common sense that this would start by looking at the land with the best links by foot, cycle, and public transport to the rest of the settlement. That is of course the frontage land along Heathfield Road/High Street itself. The frontage land also contains the previously developed land comprising the existing dwellings and their various outbuildings. Whilst the recent revisions to PPS3 have removed garden land from the definition of previously developed land, the footprint of the buildings and their associated driveways and hardstandings clearly have a higher priority for development than a greenfield meadow. 9. The present objectors, as the owners of Lavender Cottage, are willing to make their land available as part of a wider development. The objectors have made this known to the Council since at least August 2010. The principle of redevelopment for more intensive residential development has already been established on land to the wets (WD/08/0329) and on the adjoining site.
to the east of Lavender Cottage (WD/2011/0400). Although planning permission was granted for a block of flats (WD/2008/0276), that development has not come forward and the permission has recently had to be renewed. Clearly, the land is available for development, even if the form of development is not at present attractive to the market. We understand that the owner of the adjoining plot at Holmhurst would be prepared to make that site available. Woodhatch is relied on as available in the SHLAA (Site 155/1210 refers). Thus there is already a substantial amount of the frontage land which is available for development. A spatial approach to the planning of this area would look to utilise this developed frontage land, which plainly has development potential, before turning to the undeveloped hinterland to the rear. Unjustified Encroachment into the AONB 10. The Proposed Submission Core Strategy recognises that SD11 lies within the AONB, where there is strict control over new development. Paragraph 22 of PPS7 is clear that major development in the AONB requires “the most rigorous examination” and that such development should only be accepted after assessment of the scope for meeting the need elsewhere. Under the GDMO 2010 “major development” is a development of 10 or more dwellings. Under the Secretary of State’s arrangements for the recovery of appeals on the basis that they are large/controversial, the threshold is 150 residential units. On either basis, a development of 160 dwellings is major development. In any event, the Council has accepted in the SHLAA that “there is a requirement to demonstrate development is essential to meet local needs and that other more suitable sites do not exist elsewhere” (Site 155/1210). The claimed rationale for the use of AONB land in this case is that “no suitable alternative non-AONB location exists”. This is patently incorrect. As already noted, the frontage land is not within the AONB and if the desire is to achieve a development of some 160 dwellings there can be no justification for taking more AONB land than is absolutely necessary when there is non-AONB land in the same location which is available. 11. Whilst it may be doubtful that the frontage land which is known to be available could alone accommodate the full scale of the development sought, the need to encroach into the AONB would be very much reduced if the frontage land was used first. Such an approach would also enable the lower (and least accessible) parts of the meadow to be retained as open land, potentially providing a better buffer with the important woodland at Tilsmore Wood that makes up such a key component of the Wealden character. The need for such a buffer is recognised in the Landscape Character Assessment (Figure 5). In addition, if the Council made it clear that it was promoting the comprehensive development of the area, it is likely that other owners would also wish to make their land available, and the Council may therefore be able to avoid encroaching into the AONB to any material degree. 12. The Council’s claim that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape is not supported by the evidence base. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of the 2 adjacent SHLAA sites:Site 155/1210 and Site 307/1210. As already noted, the Council’s Landscape Character Assessment shows (Figure 5) that large parts of these SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. Using Less Accessible and Less Sustainable Land 13. Similar considerations in terms of minimising the amount of AONB land apply in relation to accessibility issues. The lower parts of the sloping meadow land are not only more remote by simple distance from the footways and bus route along Heathfield Road/High Street, there is also the fact that journeys from home will inevitably be uphill for residents of that area. There will therefore be a disinclination to use non-car modes for accessing local services, even if they might appear to be within walking distance. It must also be doubted whether much of the hinterland is within the preferred 400m distance for access to a bus route. 14. Again, on any sensible measure of accessibility and sustainability, it cannot make sense to use the more remote hinterland in preference to the frontage land. PPS1 is clear at paragraph 35 that new development needs to be integrated into the urban area and address connectivity issues. The choice of a backland location for SD11 when the more accessible frontage land is available is directly contrary to this guidance Inadequate safeguarding of amenities 16. We have already explained why a comprehensive approach needs to be taken to this area. However, if the Council persists in its piecemeal approach then it is apparent that inadequate consideration has been given to the relationship between the retained frontage properties and the new development to the rear. The existing development is at a very low density and has the established character of a mature residential area, with individual dwellings in spacious plots. 17. The SHLAA indicates a proposed density for the new development of some 40 dwellings per hectare for Site 155/120. This will be substantially different in character and could only be achieved by ensuring a substantial buffer between the 2 very different forms of development. However, this would push the new development further into the AONB and would further separate the new development from the settlement of which it is intended to form a part. Again, there would be a conflict with the advice in PPS1 on integrating the development with the urban area. Soundness Tests 18. It is clear from the objections set out above that the proposals for SD11 are not founded on a robust and credible evidence base, cannot be shown to be the most appropriate strategy when considered against the reasonable alternatives, and are not consistent with national policy in PPS1, PPS3, and PPS7 in several important respects. They therefore fail 2 of the key tests of soundness as set out at paragraph 4.52 of PPS12. Legal Tests 19. These objections also have the consequence that the Council’s failure to properly consider reasonable alternatives to its proposals at
north west Heathfield, and in particular to consider the alternative of an area of growth in this location planned on a comprehensive basis and focused on maximising the use of previously developed land and minimising the use of land within the AONB, has the consequence that the Sustainability Appraisal/Strategic Environmental Assessment that accompanies the Core Strategy is legally deficient and the Core Strategy is consequently not legally compliant with the requirements of either Regulation 5(1) of the Environmental Assessment of Plans and Programmes Regulations 2004 or with the requirements of s.19(5) and s.20(2) Planning & Compulsory Purchase Act 2004. In addition, the same failings, together with the lack of a credible and robust evidence base to support those proposals and the conflicts with national policy mean that the Core Strategy is not “sound” as required by s.20(5)(b) PCPA 2004. 20. The SA/SEA considers, in broad terms, alternative locations for growth at Heathfield as between the north east, north west, and west of the town. However, what it fails to do is to look at reasonable alternatives within the selected north west location. It is no answer for the Council to suggest that this level of detail is a matter for a later DPD because the Core Strategy is already spatially specific that the location of north west Heathfield is an “urban extension” (i.e. an addition) and that it is “within the AONB” (i.e. outside the settlement boundary. The same spatial approach is shown on Figure 10 and on the Inset for the Key Diagram. The Council is not, therefore, able to avoid grappling with the spatial implications of this choice as part of the Core Strategy and testing it against reasonable alternatives. However, it is clear that this is not an exercise that has been attempted in the SA/SEA. 21. The Council will be well aware from the recent decision in Save Historic Newmarket Ltd v Forest Heath District Council [2011] EWHC 606 (Admin) that a failure in the SA/SEA to give proper consideration to identification and assessment of reasonable alternatives is likely to result in a quashing of the relevant parts of the Core Strategy. Conclusion 22. For all of these reasons the objectors strongly suggest that neither the Council nor the Inspector should endorse the present proposals for SD11. What is required is a fundamental rethink to achieve an integrated, sustainable and accessible development which minimises the impact on the AONB and provides a comprehensive spatial approach to the development of this area. Essentially this requires the focus to shift from the “easy target” of greenfield meadows to a more considered approach, giving priority to the previously developed frontage land, and only considering the AONB hinterland to the minimum extent necessary to achieve the required dwelling numbers.

Details of Changes to be Made:
Add to SPO1 the words “We will minimise the loss of, or impact on, nationally designated landscapes, including the High Weald AONB, to the fullest extent possible in meeting the needs of the plan area”.

Details of Reasons for Soundess/ Legal Complaince:
Natural England commends the Council on its recognition of the importance of the environment and green infrastructure and the need to provide resilience for climate change. We particularly support spatial planning objectives SP01, SP07, SP09 and SP011.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
Why bother to say the council "will assist in the development of the rural economy" when there is no mention of this anywhere else in the document, or how it will be achieved.

Details of Changes to be Made:
Amend the objective to say "The council is not bothered about the rural economy but will help manage countryside resources, protecting and enhancing ....."
Details of Reasons for Soundness/ Legal Compliance:

1.1 We object to Spatial Planning Objective 1. Whilst we welcome the support for the rural economy support for this part of the economy must be more positive. Our clients have six rural businesses occupying converted buildings close to Stone Cross. These businesses provide valuable employment in the rural area and importantly sustain the upkeep of the historic buildings in which the businesses are accommodated and provide vital income to maintain the historic Peelings Manor. Rural businesses of this type can therefore be very valuable in rural areas.

1.2 Planning Policy Statement 4: Planning for Sustainable Economic Growth (PPS4) states in paragraph 10 that planning should "raise the quality of life and the environment in rural areas by promoting thriving, inclusive and locally distinctive communities."

1.3 The 2009 report of Matthew Taylor MP into the rural Economy and Affordable Housing. His report included the following recommendations and findings:

   a. The flight from the cities to the countryside has increased the rural population by 800,000 in the last decade twice the rate of increase in urban areas;
   b. Average wages for people in rural communities are below the national average;
   c. The planning system by looking at a narrow range of sustainability criteria is leading to many villages being classed as unsustainable and falling into decline; many villages are becoming exclusive enclaves of the wealthy and elderly;
   d. New planning policy should recognise that all forms of businesses can be appropriate in the countryside, existing businesses in the countryside should be allowed to grow in rural areas rather than being forced to move to towns, new planning policies should be devised to support rural business and employment. This shows the recognition in national planning policy that development should be used to raise the quality of life in rural areas, and that it can be a positive benefit as our clients experience demonstrates. The Taylor Review highlighted the needs of rural areas and how these needs should be addressed.

Details of Changes to be Made:

We consider that the first sentence in Spatial Planning Objective 1 should be changed to state "We will help manage countryside resources and promote the development of the rural economy whilst protecting and enhancing recognised biodiversity and geodiversity attributes, in particular we will protect the internationally important sites of the Pevensey levels and Ashdown Forest and other designated areas of bio and geodiversity."
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics) 2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

Details of Changes to be Made:
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay
dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12.

2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

Officers at Mid Sussex District Council are continuing to work jointly with Wealden in developing and implementing a strategic and co-ordinated approach to protecting the Ashdown Forest SAC/SPA. Work already undertaken between the two Councils has identified a series of measures to limit the impact of new development on the conservation interests of the Ashdown Forest. These measures include new development contributing to an appropriate level of mitigation in the form of providing Suitable Alternative Natural Green Space (SANGS) and support via developer contributions towards the Ashdown Forest Access Management Strategy. This strategy will need to specify measures for the management of visitors to Ashdown Forest in such a way that reduces their impact on the interest features of the designated site and will need be prepared and implemented in association with the conservators of Ashdown Forest, Natural England and other partners. In addition, further joint working will be required to develop and implement on site management measures to reduce nitrogen emissions emanating from the increased number of vehicles using the roads crossing Ashdown Forest. In combination with this, both Councils through their Local Development Frameworks will also need to delivery initiatives to reduce reliance on the motor vehicle, through creating sustainable communities, providing improvements to public transport, cycling and walking facilities. Pollution monitoring on the Forest will be required to assess the effectiveness of these measures. The recognition of this situation in paragraphs 3.22 6.34 and policy SPO1 is welcomed. The recognition within the Core Strategy of the impact on the Ashdown Forest that development within rural villages (such as Forest Road and Danehill) would have is welcomed. The strategy focussing growth at Uckfield, Crowborough, Heathfield and Hailsham and smaller- scale growth at villages within the Wealden District will go some way to minimising the negative impact development would have on the Ashdown Forest, especially in combination with further mitigation measures (such as SANGS).

Details of Reasons for Soundness/ Legal Complaince:
We are pleased to see that your development distribution in policy WCS2 can be accommodated within existing consented capacities at Waste Water Treatment Works (WWTW). This is particularly important at the Hailsham North and South Waste Water Treatment Works that discharge into the Pevensey Levels. The Review of Consents As you are already aware, we are currently undertaking a Review of Consents (RoC) for the Pevensey Levels. The purposes of the RoC is to assess the impact of existing discharge consents into the Pevensey Levels, and make suitable changes where appropriate and fully justified. We have currently reached Stage 3 of the RoC which we are awaiting sign off from our Area Manager. We will make these results available to you at the earliest opportunity at the end of April 2011. The results will identify those consents that will require further assessment under the final Stage 4 of the RoC. We expect the final recommendations to be available by April 2012. This will be in time to inform your Site Allocations Development Plan Document. Through the course of the RoC there is a possibility that the existing consent for Hailsham North and South WWTWs will be reviewed which would have implications for the capacity of the works to accept the waste water flows from new development. We are happy that your Strategy is based on the most up to date information available, and you have addressed potential changes to existing consents through the RoC by considering phasing development with the provision of necessary infrastructure. Southern Water have also commissioned a study into alternative solutions for waste water treatment in the south of Wealden should it be needed. We therefore consider your Core Strategy sound in this regard. No Deterioration Policy We are awaiting the publication of a ‘No Deterioration’ policy from Defra. The policy will seek to achieve the Water Framework Directive (WFD) requirement of achieving good ecological status of all waterbodies and not allowing any deterioration in status. The impact of this Policy is similar to that of the Review of Consents, insofar as there is a potential risk that it will result in existing consents being tightened in line with WFD. Again, without this policy being in place, we are satisfied that your Strategy is based on the best available information and remains sound in this regard. Once the No Deterioration Policy is published we will consider how this will impact on your Site Allocations and the need for waste water infrastructure delivery.

Details of Changes to be Made:

---

Details of Reasons for Soundess/ Legal Complaince:
In your Appropriate Assessment you have identified that Sustainable Drainage Systems (SuDS) will be necessary for all new development to mitigate the impact of surface water discharge on the Pevensey Levels. Given that your Core Strategy is very strategic we are satisfied that you can identify the types of SuDS appropriate for individual sites through your Site Allocations and Development Management Policies DPDs.

Details of Reasons for Soundess/ Legal Complaince:
Support for the overarching objectives that contribute to the Vision. They are laudable and, we believe, achievable in broad terms across the district.

Details of Changes to be Made:
7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: No -Effective: No -Consistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: ‘...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to be set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper June 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issued raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation Low Planting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing Low Close to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butcher’s Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snap Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges Potential for Mitigation Moderate Low on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity/capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:

SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound.

Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: NoJustified: NoEffective: NoConsistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 - 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to be set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development into the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation, (and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation LowPlanting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing LowClose to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value MediumSnawAccessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges Potential for Mitigation ModerateLow on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing ModerateNeed well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity/capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. ’

Details of Changes to be Made:
SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.

Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

Details of Changes to be Made:

**Details of Reasons for Soundess/ Legal Complaince:**

SP02 Currently states that the intrinsic quality of the historic environment is to be "protected". This language, and the resultant policy test, does not conform with that in Planning Policy Statement 5 "Planning for the Historic Environment" (PPS5). PPS5 states in paragraphs 6, 7 and HE3.1 that the historic environment and its heritage assessets are to be "conserved".

**Details of Changes to be Made:**

The reference in SPO2 to the historic environment being "protected" should be replaced with "conserved". This will make the objective compliant with national guidance.

Details of Reasons for Soundess/ Legal Complaince:
Local authorities are required to produce their Core Strategies in accordance with the Regional Spatial Strategies - which in this instance is the South East Plan. That document required Wealden Council, inter alia, to make provision for an additional 11,000 dwellings over the period 2006 - 2026, at an average rate of 550 dwellings during the years 2006 - 2030 at 400 dpa is therefore completely at odds with the RSS. As it stands, therefore, the policy is unsound. A substantial increase is thus required to rectify this situation. It is surprising that the Core Strategy does not refer to the RSS or government policy in its explanatory text. Whilst it is acknowledges that it is the governments intention to abolish Regional Spatial Strategic, that event has not take place. Furthermore, it is not beyond the bounds of possibility that the government could change its mind on this matter. The starting point for the Council's strategic housing provision is thus the RSS and its policy for the delivery of 11,000 dwellings in the period 2006 - 2026. whilst the proposal to cover the years to 2030 in this Core Strategy is welcomed, it is contended that the housing provision should be at the rate of 550 dpa unless material considerations indicate otherwise. In this context it is interesting to see that in paragraph 3.10 the Council states that trend-based projections show an increase in population in Wealden from 2006 - 2030 of around 19,000 persons, which itself equates to around 16,800 households. If that is the case - and that forecast is not being challenged in this response, - then, with an allowance for vacancies of 3%, some 17,300 additional dwellings will be required. The Council's vision statement in paragraph 4.1 that "by 2030 Wealden will have successfully accommodated growth to meet future needs...." is therefore welcomed. However, this is in sharp contrast with the statement in paragraph 3.10 relating to the trend - based projection of around 16,800 households that this "shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered in Wealden." The Council's housing policy thus appears to be based upon its unwillingness to meet the requirements in the RSS or those emanating from other projections. Indeed, the statement in paragraph 3.10 that the housing demands cannot be accommodated is not justified in any way at all. As it stands, the policy is unsound. It is also contrary to the very basis of sustainability which required today's needs to be met. This policy does no such thing. In order to put matters right, provision needs to be made for some 17,300 additional dwellings in the plan period. This should largely be in the form of extensions to existing towns and villages, together with infilling where it does not have a detrimental effect upon its surroundings.

There is no justification within the evidence base to limit growth in a town that is capable of accommodating sustainable growth despite being surround by AONB. The deliverability of only 160 additional homes to Heathfield over the next 19 years is not sufficient to address the local need for general market housing and the acute need for affordable homes.

**Details of Changes to be Made:**

Direct greater growth to Heathfield. Due to its importance as a local service centre it is essential that sufficient allocations are identified in order to wide local housing choice to meet local needs. It is also imperative for the vitality and viability of the town.
1.1 The Amount of New Housing – Policy WCS1 and WCS2 and paragraphs 5.3 etc. 1.1.1 We note that the proposed Submission Core Strategy looks to accommodate 9574 new dwellings in the district across the plan period (2006 – 2030) i.e. 399 a year. This is circa 27.5% less than the 11,000 dwellings proposed across the district in the South East Plan (SEP) (May 2009) for the period 2006 and 2026. 1.1.2 PPS12 requires Core Strategies to conform generally to the regional policy. We do not consider the amount of new housing proposed in the district to be legally compliant as it is not consistent with regional policy as set out in the SEP. 1.1.3 Whilst the LPA appear to be progressing with a lower level of growth on the assumption that the SEP will be revoked by the time the Core Strategy gets to examination, the fact is the SEP remains part of the development plan at present and the CS should have regard to the aims and objectives of the SEP/ justify why it is necessary and appropriate to depart from it. The proposed Submission Core Strategy contains no such justification. 1.1.4 A detailed understanding of the background to the amount of new housing proposed in the district in the SEP is in our opinion important in considering the soundness of the housing land supply strategy now being advocated in the proposed Submission Core Strategy document. 1.1.15 The Chief Planning Officer (CPO) in his letter of the 6th July made it clear that in the context of the revocation of the RSS LPAs would be responsible for determining the housing numbers in the absence of a regional target, and that the housing numbers promoted by LPAs would need to be justified, as LPAs would need to defend them through the LDF examination process. 1.1.19 The District Council has an obligation to assess and provide for the housing needs and demands of the District. Paragraph 33 of PPS3 makes it very clear that in determining local levels of housing provision local planning authorities should, in preparing their Core Strategies take into account evidence of current and future levels of housing need and demand, e.g. as set out in Housing Market Assessment and the Housing Needs Assessment. 1.1.22 Having regard to the above we feel the DC should give consideration to the accommodation of at least 13,200 (i.e. the 11,000 set out in the SEP plus 4 x 550) to cover the additional years to 2030). Given the 4,889 units are already committed this would leave a residual requirement of 8,311 i.e. a residual requirement equivalent to 415 dwellings pa. If, 75% of the 13,200 units were on sites that generated an affordable housing need under the new policy WCS8, this level of provision could provide for circa 3,465 affordable dwellings i.e. 18% of the affordable need identified in the HNA. Which demonstrates how severe the need is relative to the supply. 1.1.23 WDC’s aversion to higher housing numbers appears to be related to the effect these could have on infrastructure and services, especially in the southern part of the district. However, it is often the case that the strategic housing allocations help to address this issue, providing new transport links/highway improvements, contributing to new sustainable drainage facilities, new schools, medical facilities etc. Higher levels of growth need not prejudice existing infrastructure and services; they could in fact help address existing problems. 1.2 Housing Distribution 1.2.1 We do not consider the housing distribution strategy to be legally compliant. It is not consistent with regional policy as set out in the SE. PPS12 requires Core Strategies to conform generally to the regional policy. Paragraph 4.33 states that choices to be made on where growth should take place should follow national and regional policy. 1.2.2 The southern part of Wealden district is located within the Sussex Coast Sub Region, one of the nine sub regions identified in the SEP. These sub regions were to be ‘the focus for growth and regeneration’. Policy SP1 of the SEP refers 1.2.3 Policy H1 of the SEP deals with regional housing provision. It stipulates that in the Sussex Coast Sub Region, 69,300 net additional dwellings should be provided between 2006 and 2026. 1.2.4 Policy SCT5 of the SEP sets out the scale and distribution of housing across the Sussex Coast sub region. It indicates that that part of Wealden District which falls within the Sussex Coast Sub Region should seek to accommodate 7000 dwellings during the plan period (2006 – 2026) i.e. 350 dwellings per annum. 1.2.5 Given the above, and having regard to the requirements of policy H1b of the SEP (wherein WDC are required to provide some 11,000 units across the district during the plan period (2006-2026)), it is clear that the SEP looks to focus growth within that part of the district that falls within the Sussex Coast Sub Region, with only a small proportion of development (4000 homes) to be accommodated within what was called the Rest of the District. 1.2.6 The SEP also makes it clear that the Sussex Coast Sub Region was identified as an area where the government was looking to proactively pursue and promote economic growth and regeneration. As a result over 60% of WDC’s housing requirement was located within the Sussex Coast Sub Region. The spatial strategy being promoted in the proposed Submission Core Strategy document is, according to paragraph 5.5 of the proposed Submission Core 493/A3/JA April 2011 Strategy document, predicated upon the strategy objectives and the settlement hierarchy. Thus only circa 51% of the proposed level of housing growth is to be located within what was referred to as the Sussex Coast Sub Region in the SEP. 1.2.7 Not only is the spatial strategy inconsistent with the SEP, but it fails to take on board the reason for
the spatial strategy proposed in the SEP i.e. the economic regeneration of the Sussex coastal area. WDC have, in their sustainability appraisal of the proposed Submission Core Strategy Document failed to assess the implications of the spatial strategy advocated in the proposed Submission Core Strategy Document on the economic regeneration of the Sussex coastal area. The council's failure to undertake this work means that the proposed Submission Core Strategy Document is not soundly based. 1.2.9 In promoting an annual housing requirement of just 400 units WDC, in their proposed Submission Core Strategy document, are in our opinion actively stifling economic growth. Furthermore, the council's decision to treat the whole district as a single entity, with no emphasis placed on the regeneration of the Sussex Coast Sub Region, is in our opinion, despite the aspirations of policies SP03, 04 and 06, actively prejudicing the economic regeneration of the coastal area, to the detriment of the wider area. 1.2.11 As currently drafted the housing distribution strategy advocated by WDC in their Proposed Submission Core Strategy is not in ‘general conformity’ with the RSS as required by Paragraph 4.2 and 4.33 of PPS12 and is not therefore sound.

Details of Changes to be Made:

3.1 The Amount of New Housing:- 3.1.1 We feel the housing targets set out in policy WCS1 should have regard to our position on the scale of housing growth be amended from 9600 to 13,200 dwellings. 3.1.2 Similarly we feel the housing targets set out in policy WCS2 of the CS should, having regard to our position on the scale of housing growth, the spatial strategy, and the level of housing proposed in Stone Cross specifically, be amended thus:- WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 980 New allocations; total dwellings 2006 - 2030 1,022. Total Wealden 4,889 Built or already committed; 8,311 new allocations; 13,200 Total Dwellings 2006 - 2030. 3.1.3 We would also suggest that the number of new allocations is revised to ensure that 60% of the proposed growth is located in the Sussex Coast Sub Region, as per the SEP, which should be identified on a plan. 3.1.4 Having regard to the above there would also be a need to amend policy SPO3 to address the increase in housing supply we advocate, and the reinstatement of the Sussex Coast Sub Region. Similarly paragraphs 3.11 and 3.16 would need to be revised to reflect our position, with the economic policies (SPO6 and WSC3 reviewed accordingly). 3.1.5 If the scale of housing proposed during the plan period is not revised as recommended, we would suggest that policy WCS2 is revised thus:- WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 850 New allocations; total dwellings 2006 - 2030 892. Total Wealden 4,889 Built or already committed; 4,835 new allocations; 9,724 Total Dwellings 2006 - 2030. 3.1.6 Given our recommended changes to the scale of growth proposed at Stone Cross and Westham we would also recommend that paragraph 6.31 (3) and paragraph 6.31 (3 bullet points 3, and 4 be amended thus:- ‘allocating a range of deliverable housing sites for up to 700 dwellings, and leisure, recreation and community facilities in Polegate and Willingdon, around 850 dwellings in Stone Cross, with some 16,890 sq. metres employment floorspace in the Polegate and Willingdon area. Sites for development will be identified and phased through the Site Allocation DPDs including: · provision of around 550 homes within an extension to the urban area of Stone Cross to the east and south east (SD6), with flexibility between SD6 and SD7, subject to highway improvements; · provision of around 300 homes within an extension to the urban area of Stone Cross to the north (SD7), with flexibility between SD6 and SD7, subject to highway improvements’

Sound  ☐ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy

Legally Compliant  ☐ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
The housing provision is too low as set out in the objectors detailed submissions. As equally most of the sites/area are undeliverable or unsustainable.

Details of Changes to be Made:
Any changes made to the CS due to objections will need to be reflected in the wording of this spatial planning objective
Details of Reasons for Soundess/ Legal Complaince:
It is suggested that the focus for development in the other major centres in the District to the exclusion of Crowborough is not justified by evidence - which tends to favour a more equitable approach. In particular, the statements contained within the Town Council's vision document Top of the Weal would indicate that Crowborough town centre is in particular need of regeneration that would struggle to be delivered by the level of development currently proposed. To constrain development in this location risks not achieving the overaching vision of the Core Strategy (*set out at Para 4.1) or indeed the objectives of Policy SP04

Details of Changes to be Made:
In the light of this submission we would like to see SP03 re written as follows: To meet the needs of the population of Wealden and for Wealden to meet its role in providing housing in the South East of England, which protection the environment, the Core Strategy will seek to provide 2,500 between 2006 and 2030. The delivery of these homes will be dependent on the delivery of developable sites and market conditions. Over the whole of the 24 plans the average provision of 520 dwellings per year will be sort and monitored. The provision of social and physical infrastructure will be as far as possible provided in conjuction with the development proposed. Funding for such provision will be sent from all sources including the housing development itself. The of the development shall be in accord with the Spatial Strategy of the...
Details of Reasons for Soundness/ Legal Compliance:
Stone Cross is not a sustainable location for future housing development of such a scale to be considered a strategic location. Its inclusion as a location for strategic allocations of housing is inconsistent with SP04, SP06 and SP07 and would not as a matter of fact stimulate investment in the centre given Stone Cross does not benefit from any employment land or a designated centre.

Details of Changes to be Made:
Delete reference to Stone Cross

Details of Reasons for Soundness/ Legal Compliance:
We generally support all 15 of the Spatial objectives but SPO1 (countryside and rural areas) should make specific mention of the downs.

Details of Changes to be Made:
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics) 2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need). Details of Changes to be Made:

Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay...
dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12.

2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).
We are intrigued by the Council's intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,711 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the
adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Council’s Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:
We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.
We are intrigued by the Councils intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WSC1 and WSC2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.
Details of Reasons for Soundess/ Legal Complaince:
As you know, the Wealden Local Strategic Partnership (LSP) sits alongside Wealden District Council (WDC) with a remit to engage in long-term strategic planning. Its members include people from WDC, East Sussex County Council and almost all the major service providers and public bodies (such as Sussex Police, East Sussex Fire & Rescue Service, the Environment Agency, the Primary Care Trust), the community and voluntary sector, and other representative groups. The LSP has been accompanying the Council on its Local Development Framework journey since the beginning of the process. It has been quite a steep learning curve for many of our partner organisations and their representatives. Together we have developed a deeper understanding of how the strategic spatial planning process is a means to delivering the overarching vision for Wealden, as expressed through the eight themes of Wealden's Sustainable Community Strategy. Since 2005, the LSP agenda has had a standing item on the Wealden LDF to ensure close and continuing engagement in the development of the emerging Core Strategy. As the background documentation details, this engagement has involved a range of workshops, activities and events, with expert input from a wide range of professionals in addition to the local authority planners. For example we held specialised events to explore housing need and housing delivery in the district, infrastructure need and provision, and awareness raising events for parish councils and businesses. We recognised the danger that very local priorities identified in community-led parish and village plans were difficult to take into account in the more formal planning process. As a result we created a bridging template based on the eight Community Strategy themes and worked with parishes to formulate up to three local priorities under each heading. LSP partners have also been participants in the LDF engagement workshops which has enabled them to not only to contribute from their own knowledge and expertise, but also to listen to and appreciate the perspectives and concerns of others. Whilst the LSP does not wish to make any representations on compliance or content of the draft Core Strategy, or comment on area-specific detail, we would like to make a formal representation to endorse the overall approach to development as set out in the proposed submission draft. We believe it takes a robust yet sensitive approach to the complex issues and constraints faced in Wealden, and represents a balanced and reasonable approach to meeting our future community needs. The predominant urban extension approach is both pragmatic and practical, but the LSP has also championed the cause of villages and rural communities. We therefore appreciate the attention paid to those settlements in rural areas which are suitable for growth, and particularly the care with which the assessment hierarchy has been created. This demonstrates a balanced commitment both to the quality of the rural environment and quality of life for those living within it.

Details of Changes to be Made:

---

Details of Reasons for Soundess/ Legal Complaince:
Support for the overarching objectives that contribute to the Vision. They are laudable and, we believe, achievable in broad terms across the district.

### Details of Reasons for Soundess/ Legal Complaince:

The level of housing provision is too low. The Core Strategy should respond to the level of housing considered appropriate for the District as contained within the South East Plan. The South East Plan is the most authoritative strategic planning policy document available against which to plan for future growth. The South East Plan forms part of the development plan and the Core Strategy should be consistent with it. The annual completion rate considered appropriate for Wealden District by the South East Plan is 550 dwellings per year. The Core Strategy should plan for this level of provision. None of the constraints cited in justification for a reduction in provision to a completion rate of 400 dwellings per year are new and were made known to the Panel reporting on the Regional Strategy for the South East and were fully considered. To that extent no new material considerations have emerged which would challenge the findings of the Panel in relation to environmental constraints (including infrastructure) and accordingly the 550 dwellings per year completion rate should be restored and planned for within the Core Strategy.

### Details of Changes to be Made:

The Core Strategy Policy SPO3 should be revised to provide for at least 13,200 dwellings. The phased delivery of 550 dwellings per year should also be referred to within the policy.

Crowborough should be included in the text.

### Details of Changes to be Made:

The Core Strategy Policy SPO3 should be revised to provide for at least 13,200 dwellings. The phased delivery of 550 dwellings per year should also be referred to within the policy.
Details of Reasons for Soundess/ Legal Complaince:
Given the evidence presented within the Strategy and the ‘Managing the Delivery of Housing Background Paper’, South East Water is concerned that the level of housing growth proposed within the Core Strategy has not been sufficiently justified and as a result, may not be realistic. It is for this reason that the plan is not considered to be sound. South East Water has a statutory duty to develop and maintain an efficient and economical system of water supply within their area and to provide water to meet the demand of local residents and businesses. To do this, South East Water needs to understand local planning authorities' proposals for where and when new growth will take place so this can be accounted for in their forecasts. It is through accurate forecasting that South East Water can ensure that they can meet any increased need for water. Section 3.10 of the Proposed Submission Core Strategy states that trend based projections (the Office of National Statistics) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households. East Sussex County Council’s projections 2006 to 2031 show a population increase of around 20,000 persons equating to 13,500 households and 13,000 additional dwellings. The South East Plan, which has yet to be abolished, had required the provision of 11,000 homes in Wealden District between 2006 and 2026. It therefore brings into question whether the provision of 9600 homes within Wealden from 2006 and 2030 is indeed realistic. The addition of ‘at least’ within the SP03 implies that the Council consider that more housing, probably in addition to windfall sites, is likely to come forward within the plan period. The Secretary of State in December 2010, following a Public Inquiry, approved South East Water’s Water Resource Management Plan (WRMP). The job of the WRMP is to set out the company’s long term strategy (the current plan covers the period to 2035) for investment in water infrastructure and demonstrate that it can serve the level of growth proposed within its area. The Public Inquiry looked in some detail at the forecast growth. At the time the WRMP was devised, the South East Plan was in force and its growth assumptions were incorporated into the forecasting. South East Water did not however rely purely upon policy based projections but utilised a ‘most likely’ projection; this was in effect a policy-based projection for the region constrained to the national trend-based projections. The ‘most likely’ projection used by South East Water was higher than the level of growth set out within the South East Plan. Based on the evidence presented at the WRMP Inquiry, the Inspector accepted that the housing numbers within the South East Plan were not targets and that they may be exceeded. Indeed, the Inspector concluded that, “setting the rates too low could put at risk SEW’s ability to comply with its statutory duty to supply” (Paragraph 7.37, South East Water: Water Resource Management Plan – Inspector’s Report 23 September 2010). It is this risk that is of concern to South East Water. With the introduction of the Localism Bill and the abolition of Regional Spatial Strategies the process of long term forecasting is more uncertain. It is our understanding that it is the Government's intention that the Localism Bill and the abolition of Regional housing targets will stimulate growth. There are also measures such as the New Homes Bonus that are proposed to encourage housing growth that are as yet untested. South East Water appreciates that, as set out in paragraph 3.11 of the Core Strategy, environmental, economic, social, infrastructure and community considerations have tempered the amount of growth being put forward within Wealden but nevertheless a “significant housing need has been identified”. The nature of planning for water is such that new water resource infrastructure often has a long lead in time. If it materialises that housing is needed above and beyond that set out in the Core Strategy and this has not been incorporated into water forecasting then it is feasible that South East Water will have no choice but to put doubt on further growth coming forward.

Details of Changes to be Made:
South East Water is seeking assurance from Wealden District Council that the growth that is proposed within the Core Strategy can be justified, given the likely demand for housing, and is realistic. Without this justification, South East Water is concerned that the Plan is not sound.
Details of Reasons for Soundess/ Legal Complaince:
Hallam Land Management Limited (HLM) raise objection on the grounds that the Council is not planning for sufficient new dwellings having regard to the adopted South East Plan and the Council’s own estimates of housing demand based on population and household projections, and this is explored in more detail in the submission made on behalf of HLM by Turley Associates. Furthermore HLM object to the distribution of new homes, which proposes a reduction by 20% of the total number of new homes proposed being allocated within the Sussex Coast Sub region, as defined in the South East Plan. This in the opinion of HLM will seriously prejudice the regeneration of this area.

Details of Changes to be Made:
The Proposed Submission Core Strategy should provide for at least 11,000 (and arguably up to around 16,000) dwellings over the period 2006-2030, to comply with the requirements of the SEP and the available evidence on household and dwelling formation with some 64% of the total provision being directed to that part of the District which falls within the Sussex Coast Sub Region.
7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. 7.1.2 For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Council’s website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Council’s website). 7.1.3 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent and one that would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.1.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Council’s Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Figure 6 Uckfield Area Strategy, Paras 6.9 and 6.11, Policy WSC13 Green Infrastructure, Paras 7.23 - 7.28Legally Compliant: -Sound: No -Justified: Yes -Effective: No -Consistent with national policy: No Proposed Submission Core Strategy Paragraphs 3.30 – 3.33 7.1.6 Paragraph 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “…and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Council’s website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 7.1.10 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is discordant with its character, for instance managing the land to encourage woodland growth or planting extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity of these areas has been considered according to the landscape character to achieve a balanced comparison with AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’ approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this approach is flawed and unsound. Firstly, the Structure Plan has been superseded by the South East Plan and at the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex County Council and Wealden District Council would have been aware of the emerging South East Plan policies through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring measures to integrate the development in to the landscape. Thirdly, there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does not prohibit development within the boundaries or adjoining an AONB but merely seeks to ensure that the landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text. We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine the purposes and status of the AONB designation,(and its planning policy protection), by attaching increased value to a character area that adjoins the AONB which although it may be of a similar character, does not meet the quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees, such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. This gives an early indication of sites which would be worthy of further consideration for development in landscape terms. We contend that the comparative assessment of character areas within the District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.2.25 Notwithstanding the above point, Section 2.15.4 of the Landscape Study states that: ‘Prior to coming to a firm view on the full potential and scope in these areas further investigation would be required’. 7.2.26 However, the Study does not present evidence of this further investigation or how preferred development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape character is to be assessed and the information recorded using landscape character assessment sheets (section 2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to recording baseline information on each character area such as planning designation, Public Right of Way and key viewpoint, focal point, landscape features and detractors (which should be read with the assessment record sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to assess the robustness of the landscape capacity study for the purpose of this representation, the area around Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of elements / features not recorded or identified for some areas and therefore these factors were not able to inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands and plantations, (some of which are ancient woodlands and provide screening, containment and form visual barriers). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation Low Planted would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing Low Close to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snaw Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange recreational spaces and access to countryside. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is under estimated and should be ‘good’ as most of the land is attractive farmed landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity/capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:
SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study Listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent. It is not clear how the assessment of housing sites in the district, the spatial strategy and the Council’s Sustainability Appraisal, and thus the Core Strategy, is unsound. Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and the Core Strategy, is unsound.

Details of Reasons for Soundness/ Legal Complaince:

7 Landscape 7.1 Introduction 7.1.1 In this section of the report we present our representations in regard to landscape matters in and informing the Core Strategy. Our representation is made in regard to paragraphs 3.30 – 3.33 of the submission Core Strategy, Policies WC4 and WC13 and supporting background papers. For the purposes of this representation we have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken for the district (referred hereinafter as the ‘Landscape Study’), which is included as a background paper to the Core Strategy on the Councils website. However, it is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the text of Core Strategy nor is the Landscape Study Listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough and transparent. It is not clear how the assessment of housing sites in the district, the spatial strategy and the Council’s Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, Paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, paras 3.30 - 3.33, Policy WCS4 Strategic Development Areas, Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal, and thus the Core Strategy, is unsound. 7.1.5 Our representation is summarised below: Section of Core Strategy: Spatial Planning Objectives 1, 3 and 11, para 3.30 of the Proposed Submission Core Strategy refers to Wealden’s environmental attributes and that they have an important part to play in the development of the spatial strategy and ‘had a significant impact upon the assessment of the suitability of housing land in relation to the SHLAA’. 7.1.7 Paragraph 3.30 goes on to state that: “...and sites have been carefully scrutinised with regards to landscape impact.” 7.1.8 Paragraph 3.33 refers to Government guidance and the level of protection this provides for the environment, particularly nationally and internationally designated sites, which are not duplicated in the Core Strategy. The paragraph goes on to state: “However, our strategy has been guided by high levels of protection on local and national levels, and more detailed policies are contained within the Core Strategy and further ones in subsequent DPDs.” 7.1.9 Paragraph 1.7 in the Introduction to the Core Strategy refers to a number of specialist studies that have been produced to provide a robust evidence base to inform the Local Development Framework. The Landscape Study is not listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). Policy WCS4 Strategic Development Areas and Paragraphs 6.9 and 6.11 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. Paragraph 6.9 refers to the SHLAA and assessment of the potential sites at the fringes of the urban area. 7.1.11 In the light of the comments that follow in this section of our representations on the Landscape Study, it considered that this proposal be reassessed and, taking into account other representations made on other parts and policies contained in the Core Strategy, greater emphasis should be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. Policy WSC13 Green Infrastructure, Paragraphs 7.23 - 7.28 and Background Paper BP6 7.1.12 Policy WSC13 and paragraph 7.23 to 7.28 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to be set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy. 7.1.13 It is not clear from reading the Core Strategy, how the Landscape Study has been used to inform the above policies. 7.2 Consideration of the Methodology employed in the Landscape Study 7.2.1 Wealden Council commissioned the Landscape Study from the Landscape Group at East Sussex County Council, in September 2007. It was published in February 2009. The purpose of the Study is to: 1. Inform the preparation of WDC Local Development Framework Core Strategy and; 2. Inform the development policies on landscape management and protection. 7.2.2 The Landscape Study states that it will: 1. Assess the existing landscape character of key search areas 2. Assess the quality and value of the existing landscape in these key search areas 3. Assess the sensitivity if the existing landscape and its capacity to accept change or having regard to the scope for mitigation 4. Make recommendations on preferred locations from a landscape perspective. 7.2.3 The Landscape Study purports to use a number of methodologies for the assessment and
identifies these as being: 1. For Landscape Character/ Quality and Value - Design Manual for Roads and Bridges Vol 11, section 3, Part 5 (DT) which has been further refined by the Landscape Character Assessment Guidance for England and Scotland (CA/SNH 2002) and; 2. For landscape sensitivity – Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002). 7.2.4 The Landscape Study sets out, in section 2.0, the methodology and criteria used for each aspect of the landscape being assessed, including the following: 1. Landscape Quality (this should be ‘condition’ if following latest LCA guidance as the term quality is now a discredited approach to assessing landscapes) 2. Landscape Value 3. Landscape Sensitivity 4. Visual Sensitivity 5. Landscape Capacity 7.2.5 In relation to the assessment of landscape capacity, capacity is defined in Topic Paper No.6: ‘Techniques and Criteria for Judging Capacity and Sensitivity’ as: ‘The degree to which a particular landscape type or area is able to accommodate change without significant effect on its character, or overall change of landscape character type. Capacity is likely to vary according to the type and nature of change being proposed’. 7.2.6 We have reviewed the Landscape Study, in particular, the methodology set out in the document and whether this has been consistently applied to form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. 7.2.7 The review of the Core Strategy background paper indicates that the Landscape Study has not followed the guidance in Topic Paper No.6. Topic Paper No.6 suggests that there are two approaches to assessing landscape sensitivity. These are: 1. Judging Overall Landscape Sensitivity and; 2. Judging Landscape Sensitivity to a specific type of change. 7.2.8 However, in order to assess landscape capacity, the assessment of the sensitivity of different types or areas of landscape to the type of change in question must be combined with an assessment of the more subjective or perceptual aspects of the landscape and of the value attached to the landscape. 7.2.9 The stages for assessing landscape capacity of a landscape are set out in Section 3.0 of Topic Paper No.6 and reproduced in Figure 7.1 below. Figure 7.1: Stages for assessing landscape capacity Source: Landscape Character Assessment Guidance for England and Scotland, Topic Paper No.6: Techniques and criteria for Judging Capacity and Sensitivity (CA 2002) 7.2.10 Sections 5.0 and 6.0 of Topic Paper No.6 provide the more detailed considerations that need to be taken into account. 7.2.11 The boxed text, at paragraph 2.11.2 of the Landscape Study, follows the same assessment stages used to assess the landscape capacity to accommodate a specific type of change and given the local scale of the assessment work it is considered that this is the appropriate method to use. 7.2.12 However, Topic Paper No.6, at paragraph 6.5, also goes on to state that: ‘Capacity is all a question of the interaction between the sensitivity of the landscape, the type and amount of change and the way that the landscape is valued’. 7.2.13 Sections 2.11 and 2.12 of the Landscape Study set out the approach used by East Sussex County Council landscape group in undertaking the landscape study. However, the assessment does not define the quantum of housing development used to assess the capacity of each character area, nor is the LDF Core Issues and Options Consultation Paper July 2007 referred to as a guide to the quantum of housing development used to assess each of the different character areas. The Landscape Study does however state at paragraph 2.12.3 that: ‘an overall assessment can be made for each character area on the capacity to accept the type of change being considered. This judgement is made according to the combination of characteristics that contribute to a particular area of landscape. The capacity of an area to accept change is related to the potential of the area to accommodate development in a particular location without detracting from the overall character of that landscape. The capacity evaluation of each character area does not assume that this is the capacity across the entire character area’ 7.2.14 There are a number interrelated issues raised in the above paragraph which we now turn to. 7.2.15 In relation to the type of change, the Landscape Study defines, at paragraph 2.12.6, the assumptions used for the assessment business uses, i.e. the assessment of sensitivity / capacity is based on light industrial type uses which would be consistent with a residential environment and these would be single storey units. However the Landscape Study does not define the full details of the housing use, such as type (housing - single storey / two storey / three storey etc) or amount (large / medium / small scale development) and we contend that the details of the change being considered is not transparent from the Landscape Study, as although the type of change (i.e. housing) is known, the form and amount of housing is unknown. These are important factors when considering the landscape capacity of an area to accommodate development, especially if using the stages set in the Landscape Study. 7.2.16 A similar assumption to the business use (or range of assumptions) could have been used for assessing the impact of housing on landscape sensitivity / capacity of each character area. For example two to three storey houses at the following ranges: 1. small scale housing between five to 50 dwellings 2. medium scale housing development between 50 to 200 dwellings, and 3. large scale housing development between 200 to 500 dwellings. 7.2.17 In relation to the combination of the characteristics that contribute to a particular area, comments on these are made in later sections (See paragraphs 7.4.1 to 7.4.14 below). 7.2.18 The Landscape Study also refers to mitigation and management of the landscape (Section 2.13) and, in paragraph 2.13.1, it highlights that mitigation has been used to determine the visual and character sensitivity of the landscape. This approach does not accord with Topic Paper No.6 as mitigation should only be used to inform the visual sensitivity of the area assessed, (See Figure 7.1 above), and not directly the character sensitivity of an area (although visual aspects are one of the aspects that inform the character of an area). Mitigation in itself can have a significant effect on character and the landscapes capacity to accommodate development. In some cases mitigation would make an area less suitable to accommodate development not more suitable. Again this, we would contend, is a flaw in the assessment. The existing management of the landscape is relevant to determining the condition (or quality) of an area of landscape but the identification of management opportunities is not relevant to determining the capacity of the landscape to
accommodate development. Management of the land could in itself bring about a change to the landscape which is
discordant with its character, for instance managing the land to encourage woodland growth or planting
extensive woodlands in a very open exposed landscape would lead to a significant change. 7.2.19 The
methodology section of the Landscape Study also includes a part dealing with the Areas of Outstanding Natural
Beauty (AONB) within the district. Section 2.14 refers to ‘AONBs and AONB Buffer Zones’ as a way of identifying
higher value landscapes within Wealden. At paragraph 2.14.2 the Landscape Study states: ‘There is, in some
areas adjacent to the AONB boundary a buffer zone to the AONB landscape. This is usually an area of similar
character but not of the same quality as the AONB landscape and not covered by the same planning policy. Where
relevant these areas are indicated in the figures’. 7.2.20 Paragraph 2.14.4, the Landscape Study goes on the state
the following: ‘These buffer zones have been identified through the character area analysis. The relative sensitivity
of these areas has been considered according to the landscape character to achieve a balanced comparison with
AONB and AONB landscapes’. 7.2.21 The Landscape Study considers that there is support for this ‘buffer zone’
approach due to Policy EN2 (f) of the East Sussex and Brighton and Hove Structure Plan. We contend that this
approach is flawed and unsound. Firstly, the Study has not been superseded by the emerging South East Plan and at
the time of preparing the Landscape Study during the period August 2007 to February 2009, both East Sussex
County Council and Wealden District Council would have been aware of the emerging South East Plan policies
through the draft regional plan. Secondly, Policy EN2 (f) does not prohibit development but seeks to protect the
Sussex Downs and High Weald AONBs and minimise the impact of development within them by requiring
measures to integrate the development into the landscape. Thirdly, there is no Government policy support for the
concept of ‘AONB buffers’ in Planning Policy Statement No.7. Like Policy EN2 of the Structure Plan, PPS 7 does
not prohibit development within the boundaries or adjoin an AONB but merely seeks to ensure that the
landscapes within AONBs are considered carefully and appropriate measures taken to mitigate the harm that
potential development may cause. 7.2.22 The fourth point is that, whilst the Council would seek support from
Policy EN2 (f) as a way of ‘balancing the comparison between AONB and non AONB areas’ especially the areas of
landscape close to the AONB boundary, the East Sussex and Brighton and Hove Structure Plan does not define
the extent of the buffer zone on the Key Diagram nor is the extent of the buffer area set out in its explanatory text.
We contend that the justification for this approach must be given very little weight. 7.2.23 Lastly, it is
acknowledged that some areas of landscape within an AONB may be of poorer condition (quality) score and / or
lower visual and character sensitivity than areas outside of the AONB but the adjustment in the landscape
sensitivity / capacity scoring by introducing what appears to be an arbitrary AONB buffer zone seems to undermine
the purposes and status of the AONB designation, (and its planning policy protection), by attaching increased value
to a character area that adjoins the AONB which although it may be of a similar character, does not meet the
quality criteria for inclusion within the AONB. In addition, it is noted that the Landscape Study has not been subject
to peer review and there is no evidence that it has had stakeholder input / consultation with statutory consultees,
such Natural England / High Weald AONB Joint Advisory Committee and other interested bodies to agree this
approach to the AONBs. 7.2.24 The Study goes on to set out the method used to undertake a comparative
evaluation of a potential development area within a character area which has capacity to accommodate
development. This gives an early indication of sites which would be worthy of further consideration for
development in landscape terms. We contend that the comparative assessment of character areas within the
District is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound
for the reason given above. 7.2.25 However, the Study does not present evidence of this further investigation or how preferred
development areas have been chosen; for example there is no detailed assessment of the west of Uckfield area
although this has been identified as a major urban extension area under Policy WCS4 - SD1. 7.3 Critical Review of
the findings of the Landscape Study 7.3.1 The Landscape Study methodology sets out how each landscape
classification is to be assessed and the information recorded using landscape character assessment sheets (section
2.5) whilst section 2.17 of the Landscape Study refers to mapping which is split into two stages. Stage 1 relates to
recording baseline information on each character area such as planning designation, Public Right of Way and key
viewpoint, focal point, landscape features and detractors (which should be read with the assessment record
sheets). Stage 2 relates to the identification of potential development areas with indicative boundaries and also
identifies key woods, shaws, hedges, tree belts etc and also the potential for mitigation planting. 7.3.2 In order to
assess the robustness of the landscape capacity study for the purpose of this representation, the area around
Uckfield, Maresfield and Five Ash Down were visited and the baseline information recorded on the landscape
assessment sheets checked and the judgements reached reviewed. This check revealed that that were a number of
elements / features not recorded or identified for some areas and therefore these factors were not able to
inform the judgement reached. 7.3.3 For example, ‘Maresfield Area A’, is described as: ‘An open, undulating
landscape used for pasture to the west and pleasure to the east. It is ungrazed showing some scrub. Wide long
views to the south. Surrounded on other sides by mature trees and exotic Eucalyptus and Cedars from nearby
Park. Fine houses on outskirts and within site. Fine clumps of Pines. Some road noise adjoins picturesque
recreation ground’. 7.3.4 The assessment sheet omits a number of important features such as areas of woodlands
and plantations, (some of which are ancient woodlands and provide screening, containment and form visual
boundaries). Hedges, fences, footpaths and reference to the bypass were not recorded. The assessment sheet also
refers to parkland and that the majority of the land is amenity land lacking management. A wide long view(s) out to
the south is highlighted as a key feature which is correct when looking south from a small part of the area but elsewhere views are contained and obscured by landform and vegetation. The record sheet includes a photograph of the view south but this is not taken from the recreation ground as recorded on the map Figure 52. The photograph was taken from private land on the footpath. 7.3.5 In the visual appraisal section of the assessment sheet it records the local receptors as amenity land and houses, types of view as long views from top of ridge to the south and visual barriers as landform / trees and hedges. It concludes that the sensitivity is high (see table 7.1 below). It is acknowledged that there are views within the area but these tend to be short partial or glimpsed views with long views out towards the south from high ground in the north eastern parts of character area. Views into the area are very limited and development within the area would have a minimal impact on views. However, in views from the ridge to the south the recreation occupying the north eastern parts of the character area is seen whilst the remaining areas are hidden from view and therefore the visual sensitivity of the majority of the area is low. 7.3.6 The resultant evaluation of this area was considered as follows: Table 7.1: Landscape Study Assessment, Maresfield Area A Character Area Maresfield A Quality Good Value Medium Sensitivity to Change Moderate Visual Sensitivity High Management Opportunities Mange hedges and grazing. Mange recreational spaces and access to countryside. Need to retain gap between Maresfield and Uckfield. Potential for Mitigation Low Planting would change open character and obscure long views out from recreation ground Capacity to Accept Change: Housing Low Close to village edge only Capacity to Accept Change: Business Low 7.3.7 We contend that the record sheets are incorrect and the judgement on quality / condition is erroneous and should be ‘ordinary’ as most of the land is unmanaged comprising rank grassland of little intrinsic landscape value and the visual sensitivity of the area is ‘moderate or low’ due to the strong enclosure afforded to the area. It is interesting to note that one of the management opportunities is to retain a gap between Maresfield and Uckfield although there is no planning policy support for the retention of gaps in the Core Strategy or previous Non Statutory Wealden Local Plan. 7.3.8 By comparison, another example is Character Area L – land to the west of Uckfield, which is described as: ‘Land sloping away from urban edge to Uck valley and A26 Uckfield by pass. Strong field structure with arable and pasture. Some large fields. Sewage works detractors. Few focuses of character. Development would need a well defined edge to prevent creep’. 7.3.9 The assessment sheet for this character area has recorded the land cover and landscape elements correctly but has not recorded any landform features and relatively few aesthetic factors, although it describes the land as sloping away from the urban edge with a strong field structure with arable and pasture. The landscape condition is considered to be fair which is not defined in the methodology although this changes to ordinary in the comparison table. 7.3.10 In the visual appraisal section of the assessment sheet it records the local receptors as countryside on the other side of Uck Valley, isolated properties, footpaths and A26 and houses on the urban edge, types of view as views across to woods at West Park / Butchers Wood, wooded ridge of Shortbridge across Uckfield Valley and visual barriers as few. It concludes that the sensitivity is ‘moderate’ (see table 7.2). Table 7.2: Landscape Study Assessment, Uckfield Area L Character Area Uckfield L Quality Ordinary Value Medium Snaw Accessible for recreation Sensitivity to Change Moderate Visual Sensitivity Moderate High on ridge Management Opportunities Mange urban fringe. Farm diversification pressure. Manage wood and existing trees and hedges Potential for Mitigation Moderate Low on ridge as need to retain open fields Soften urban edge. Create green network. Relocate recreation ground Capacity to Accept Change: Housing Moderate Need well defined boundaries close to urban edge avoid high ground Capacity to Accept Change: Business No capacity 7.3.11 We contend that the record sheets are incorrect and the judgement on quality / condition is underestimated and should be ‘good’ as most of the land is attractive farmland landscape with some distinctiveness features with a recognisable landscape structure. The assessment sheet ignores the open exposed nature of this character area, with long views south and west and numerous views in to the area from the surrounding countryside (roads and footpaths), and therefore the visual sensitivity of the area should be ‘high’ due the number of viewpoints where views can be obtained. This can be compared to the Maresfield A area which is considered to have ‘high’ sensitivity rating but with a few vantage points available where development impacts will be perceived. 7.3.12 We also note that under management opportunities it is considered that the area could contribute to managing the urban fringe, which could equally apply to the land at Maresfield, and that under the potential for mitigation heading is considered that the area has a ‘moderate’ ability, although the introduction of mitigate planting as shown Figure 11 of the landscape Study would dramatically and significantly change the landscape character of the area. 7.3.13 These examples illustrate the inconsistency of the landscape assessment record sheet and the arbitrary nature of the judgements made. It does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4 Implications for the soundness of the Core Strategy 7.4.1 We have reviewed the ‘Landscape Character Assessment and Development Option Evaluation Study’ of the district. It is not clear how this Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy, nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy (although it is included as a background paper on the Councils website). 7.4.2 We have reviewed the methodology set out in the document and we have also reviewed whether the methodology has been consistently applied resulting in a final report that is robust, thorough, and transparent and that it would form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Study also includes a methodology employed to undertake a comparative evaluation of a potential development area within a character area which has capacity to accommodate development. 7.4.3 The examples referred to in our analysis above illustrate the inconsistency of the landscape assessment record sheets and arbitrary nature of the judgements made and it does not give any confidence to the manner in which the
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Landscape Study has been undertaken or to the transparent way that the judgements have been reached. 7.4.4 We contend that the Landscape Study is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. In addition, in relation to the comparison assessment of sites within the district surrounding the towns and villages; we contend that this comparative assessment of character areas is flawed as the starting point for the assessment the landscape sensitivity / capacity analysis is unsound for the reason given above. 7.4.5 The Core Strategy proposes that the land to the west of Uckfield be identified as a ‘strategic development area’ suitable for accommodating 1,000 homes and some 12,650 sq metres net of employment floor space and education provision as an extension to the urban area to the west of New Town. In the light of the comments made on the Landscape Study, it is considered that this proposal be reassessed and, (taking into account the other representations made on other parts and policies contained in the Core Strategy), greater emphasis be given to the suitability of land at Maresfield to accommodate increased housing numbers and a larger proportion of the housing requirements for the district. 7.4.6 Policy WSC13 relating to Green Infrastructure is supported although it is considered that the anomalies and errors in the Landscape Study be addressed before this document is used to inform and guide the implementation of Green Infrastructure Strategy and also formulation of the specific measures for the protection and enhancement of the landscape which are to set out in the Delivery and Site Allocations DPD referred to at paragraph 7.28 of the Core Strategy.

Details of Changes to be Made:
SUMMARY 7.4.7 In conclusion, we contend that the Core Strategy is unsound because: 1. It is not justified as it is not based on a sound evidence base as the Landscape Study (Landscape Character Assessment and Development Options Evaluation Study of the District) is flawed and therefore the assessment of housing sites in the district, the spatial strategy and the Councils Sustainability Appraisal is unsound. It is not clear how the Landscape Study has been used to inform the spatial strategy as it is not specifically referred to in the Core Strategy nor is the Landscape Study listed as a background paper at paragraph 1.7 of the Core Strategy; 2. It is not justified because the Landscape Study as it is not robust, thorough, and transparent and that it does not form a credible evidence base suitable to inform the spatial strategy contained in the Core Strategy. The Landscape Study contains a number inconsistencies set out in the landscape assessment record sheets and contains a number of arbitrary judgements and so it does not give any confidence to the manner in which the Landscape Study has been undertaken or to the transparent way that the judgements have been reached 3. It is not consistent with national policy as the methodology for undertaking the Landscape Study (which has been used to inform the spatial strategy) refers to ‘AONB and AONB Buffer Zones’ as a way of identifying higher value landscapes. There are a number of reasons why this approach is unsound but there is no Government policy support for the concept of ‘AONB buffers’ in Planning Policy Statement No.7 or any other policy guidance.
2.1 Introduction 2.1.1 This section of our representations relates to the housing growth figures set out within the draft Submission Core Strategy. Our representation is summarised below: Section of Core Strategy: Spatial Planning Objective 3 (SPO3) and Policy WCS1 Provision of Homes and Jobs 2006-2030Legally Compliant: - Sound: NoJustified: NoEffective: NoConsistent with national policy: - 2.1.2 In making this representation there are a number of separate but inter-related issues to raise: § The Council have taken the opportunity presented by the ‘Dear Chief Planner’ letter of July 2010 regarding the revocation of the South East Plan to reduce the scale back the required quantum of new housing in the district over the Plan period to the Option 1 RSS figures. However, evidence used to inform the South East Plan is still valid and suggests that a higher growth figure is required. Indeed, the South East Plan itself acknowledged that the level of growth within it was below forecast growth. § Published data regarding housing growth, need and demand shows that this outstrips the quantum of development allocated in the submission Core Strategy. The submission Core Strategy does not acknowledge how this has been reconciled and why a lower figure has been set in the Core Strategy. § The Core Strategy establishes a minimum housing growth figure of 400 units per annum, based on historic delivery. § Whether the 400 units per annum is a maximum or minimum § Why the scale of growth allocated to the villages, and Maresfield in particular, has reduced so significantly between 2007 and 2011. 2.1.3 These issues are discussed in the following sections. 2.2 Reverting back to the RSS Tier 1 Figure 2.2.1 The ‘Dear Chief Planner’ letter from CLG to all authorities dated July 2010 states that ‘evidence that informed the preparation of the revoked Regional Strategies may also be a material consideration, depending on the facts of the case’, and ‘authorities may base revised housing targets on demographic information, that the Council should not simply roll back to the option 1 figures. Taking each in turn: (i) South East Plan Panel Report 2.2.3 The recommendations of the Panel were made based on the availability of technical evidence and material submitted to them. Importantly, they were not an expression of political will or influence. 2.2.4 The Panel noted that draft South East Plan housing level for the Rest of East Sussex area – including the north of Wealden - was at the lower end of the 300-500 dpa range included in the consultation draft RSS, January 2005, and that the district-wide rate proposed for Wealden was significantly below provision levels in the last structure plan. 2.2.5 The panel also noted that the proposed distribution of housing for the Rest of East Sussex area, following consultation in September 2005, was termed “balanced dispersal”, and takes account of the role and accessibility of each rural settlement moderated by environmental designations. The Panel noted that this appeared to be a sound approach. 2.2.6 However, the Panel considered that a modest increase (600 dwellings equating to 30 dpa) could be justified in the rest of Wealden focused on Uckfield. Recommendation 26.6 stated that, ‘In the rest of East Sussex, add 600 dwellings (30 dpa) to the rest of Wealden based on the potential for sustainable growth at Uckfield’. 2.2.7 So, the Panel recognise the importance of Uckfield as a focus for growth and that this should be in accordance with the balanced dispersed growth strategy which they considered to be sound. 2.2.8 The Core Strategy should not ignore these recommendations. 2.2.9 The Panel report makes specific reference to the technical evidence submitted by Wolf Bond Planning LLP (respondent no. 7095) in regard to Matter 9D of the South East Plan EIP (session date 9 March 2007). Their evidence made the point that the ‘option 1’ figures: § failed to result in a step change in housing supply, rather they resulted in an overall reduction against previous Structure Plan targets; § result in the provision of even fewer affordable homes; § failed to sully explore the potential to provide additional housing growth in sustainable locations previously approved; § artificially constrained housing supply – particularly around Uckfield – and prevented otherwise suitable land coming forward for development; and § did not recognise that Uckfield is unconstrained by environmental designations – unlike most of Wealden – and thus represents the principal and most suitable location to accommodate additional housing in the rest of the East Sussex area during the plan period. 2.2.10 In our response to the Council’s Core Strategy consultation (July 2009), we noted that Maresfield has a major role to play in contributing to the future growth and development of the District, particularly in relation to the housing requirements for the Low Weald area and identification of Uckfield as a growth location. We noted: § Uckfield is an area that was identified for housing growth in both the South East Plan and the East Sussex Structure Plan, but Uckfield itself has environmental and physical constraints to growth. § A strategy of balanced dispersal (as advocated in the South East Plan and the Panel Report) would point to Maresfield as a sustainable location for some growth that cannot be accommodated
sustainably within Uckfield town. Maresfield could make a sustainable contribution to delivering the housing needs of the Uckfield area. § The shortage of previously developed land due to the rural character of the District, necessitates greenfield release, and Maresfield represents a relatively unconstrained location for development (compared to the majority of the district). § Maresfield has a range of facilities that meet the day to day needs of residents and benefits from a close proximity to Uckfield with the potential for significantly enhanced accessibility by sustainable modes. § Community representatives support a comprehensive, holistic approach to development at Maresfield rather than a piecemeal development that offers little community benefit. 2.2.11 Maresfield benefits from a sustainable location close to Uckfield; a town identified for significant housing growth within the South East Plan. We contend that Maresfield can play a positive role in delivering the aspirations for the Uckfield area, and in doing so the settlement will benefit from a clear long term framework for its long term future. Further, if the strategic role of the village is not recognised in the Core Strategy there is a real threat of small scale, piecemeal development will occur in the village which would fail to bring the benefits associated with a sustainable long term strategy. 2.2.12 In summary, we contend that, in reconsidering the growth figures for the District following the ‘Dear Chief Planner’ letter of July 2010, it is not appropriate for the council to ignore the recommendations of the South East Plan Panel, whose decisions were based on technical evidence. Their recommendations should be reflected in the Core Strategy. 2.2.14 The South East Plan still comprises part of the development plan and the policies within this need to be considered. The South East Plan sets a housing requirement of 11,000 homes to be provided in Wealden over the period 2006-2026 at an average of 550 homes per annum. However, the South East Plan states that in relation to housing requirements: ‘the level that is set here [i.e.: in the plan] is still significantly below the forecast growth of households and even more so by the more recent 2006-based population projections’ (paragraph 7.6). 2.2.15 It goes on to say that: ‘the review of this RSS will examine the current levels of housing and a rate of provision higher than 32,700 dwellings per annum is likely to be necessary to meet the strategic needs in the region’. 2.2.16 So, the RSS itself acknowledges that the housing figures for the area were being suppressed and that higher targets should in fact have been set. This point is made in Wealden’s own Housing Market Assessment. At paragraph 1.23 it states that: ‘trend based projections predict growth of 700 households per annum in Wealden district over the next 20 years. This is around 20% more than the target dwelling provision set for the district in the draft South East Plan (550 dwellings pa).… The data therefore suggests that in an unconstrained market, demand for new housing in North Wealden would exceed current dwelling targets’. 2.2.17 The Housing Market Assessment recognises the importance of regional policy interventions rather than purely using trend forecasting, but it also acknowledges the linkages between housing growth, job creation and economic activity. The report notes (at para 1.32) that Wealden, and the north of the district in particular, is an area where ‘job and workforce growth has been buoyant in recent years’. In this context, the report notes that ‘the lower rates of housing development proposed for North Wealden are likely to mean that the area will continue to experience pressure within the housing market in the future’. SUMMARY 2.2.18 We contend that the Core Strategy is unsound, because it is not justified, as it is not consistent with the policy and evidence set out in the South East Plan and the Council’s own Housing Market Assessment. (iii) Availability of new Information and Data / Household Growth 2.2.19 In November 2010 CLG published its most recent household projections, for the period 2008 – 2033. This data shows that by 2026, the number of households in Wealden is expected to grow to 73,000: a 12,000 increase from 2006. 2.2.20 The CLG Housing Statistics release states that: ‘The projections are an important part of the evidence base for assessing future housing demand and informing national and local policies on housing and planning’. 2.2.21 And: ‘Planning Policy Statement 3 requires that assessment of future housing requirements in local strategies should have regard to, amongst other factors, current and future demographic trends and profiles and take into account evidence including the Government’s latest published household projections’. 2.2.22 Although published in advance of the proposed submission Core Strategy, no reference to this information is made in the proposed submission draft. 2.2.23 The figures are lower than previous data sets – including that produced by the DCLG and used to inform the Councils Housing Market Assessment, 2007 – but are reflective of recent economic circumstances and thus take a more cautious approach to future housing growth and demand. However, the figures are substantial, and are in excess of the level of housing planned for in the Core Strategy. It is entirely unclear how these have informed the level of growth. 2.2.24 Technical Note 5 to the South East Plan explains how household projections are converted into dwelling numbers. The Chelmer Model of long-term migration projections derives a household to dwelling ratio of 1.03. Using this ratio, the most recent CLG household projections (12,000 additional households 2006-2026) would result in a need for 12,360 new dwellings over the same period. This equates to an annual average of 618 new homes across Wealden: 218 per year more than the proposed submission Core Strategy plans for. 2.2.25 In addition to overall housing numbers is the important issue of affordable housing. The proposed submission Core Strategy acknowledges that provision of affordable housing is a priority. However, across the district, the number of affordable units required on a per annum basis far exceeds the level of growth set out in the housing trajectory. 2.2.26 The Council’s Housing Needs Assessment (January 2010) estimates that there are currently 1,215 households in need of affordable housing across the District but that there is only an estimated 325 properties available to offset this current need. In addition to current need, the Housing Needs Assessment also addresses future need. This states (at para 6.42): ‘The data suggests that on an annual basis there will be 152 newly forming households requiring affordable housing and a further 831 existing households. The total future need for affordable housing is therefore estimated to be 983 units per annum’. 2.2.27 So, not only is the Core Strategy planning for the provision of fewer homes than is needed, it will not deliver on its priorities for affordable housing. 2.2.29 The Core Strategy should thus be
reviewed and amended to reflect the housing demand indicated by the household projections and need, and the implication for their spatial distribution considered. 2.3 Housing Trajectory – 400 units per annum 2.3.1 There are two issues to address here, (i) whether the targets are minima or maxima, and (b) justification for the 400 unit per annum target: (i) Minima or Maxima 2.3.2 We note that policy SPO3 states that ‘we will provide for at least 9,600 homes within Wealden….. on average 400 dwellings per annum’. Policies and supporting text elsewhere in the plan also make reference to the level of housing being ‘at least’ (see, for example, para 5.3). 2.3.3 Through the use of the term ‘at least’ we welcome the recognition that housing figures should be treated as floors rather than ceilings. They are in effect minima. This is in line with advice from PINS (Advice Note 1062, May 2008): that housing targets are to be regarded as floors and not ceilings and if suitable sites for housing come forward which are not allocated in plans, that to be seen as a bonus and not detrimental. The South East Plan also recognised this. It stated, at para 7.8: ‘the fact that an annual provision or local trajectory number has been met should not in itself be a reason for rejecting a planning application. Decisions should be taken on their merit and local circumstances – including longer term housing needs and affordability in an area’. 2.3.4 We support the fact that housing targets in the Core Strategy are minima, but are concerned as to how this will be interpreted, particularly given experience elsewhere in the district where the Council are using completions and housing land supply as a means to refuse planning applications. 2.3.5 In respect of establishing minimum housing targets, we consider the Core Strategy sound, albeit that the minimum figure of 400 units per annum should be greater. However, if the housing figure established in the submission Core Strategy is truly a minima, then planning applications that provide housing over and above this level must be determined on their merits: they can not be refused simply because the annual housing target has already been met in the district. We request that this is clarified within the Core Strategy. (ii) Rationale for 400 units per annum 2.3.6 Para 5.13 of the submission Core Strategy states ‘over the last 21 years on average 400 dwellings have been built per annum across the District… It is considered that a similar rate in the future is achievable’. 2.3.7 We do not agree that this is an appropriate rationale for the housing trajectory. Over the last 21 years the rate of delivery has fluctuated dramatically. Over the last ten years there has been a history of underperformance when compared to structure plan, the South East Plan and local plan targets. Indeed, there is a ‘backlog’ of housing delivery against these plan targets. Over the period 1991 – 2009 there have been 7,320 completions across the district. This is set against a requirement for 1.9,240 homes based on Structure Plan (and thus Local Plan) figures for the same period, 2.8,250 homes based on the Structure Plan targets up to 2006 and the adopted South East Plan targets for the remaining period (2006 - 2009), or 3.7,800 if the adopted South East Plan figures are replaced with the South East Plan tier 1 figures. 2.3.8 At the recent inquiry relating to the Honey Farm site in Polegate in the south of the district, the Council and the appellant agreed the base for completions across the district for the four and a half year period running from April 2006 – September 2010. There were 1,642 completions over the period. This is a shortfall against both the Core Strategy (of 158 units) for that period, and the South East Plan (833 units). Perhaps more significantly, it represents a significant shortfall against the projections contained within the Councils own Housing Market Assessment. As noted previously, this predicted growth of 700 households per annum in the district. Against this, the appellants demonstrated a shortfall of 1,508 units for the period April 2006 – September 2010. 2.3.9 Underperformance against targets has not been helped by the lack of an up-to-date local plan and associated identified and allocated development sites (The 1998 Local Plan and its saved policies are still being used for development control purposes) and the focus on reusing brownfield land, which restricted housing development in places characterised by their countryside setting, such as Wealden. Recent Ministerial Statements now make it clear there will be a presumption in favour of sustainable development and the intention is to increase housing delivery. There is also no brownfield target that may constrain development in places such as Wealden. 2.3.10 Interestingly, delivery rates in Wealden in the last few years have been their highest for some time, despite the economic climate. The Core Strategy now provides the opportunity not only to address previous underperformance but to proactively plan for the future. So why does the housing trajectory seek to constrain the market in Wealden at the very time when it is showing it can actually delivery increased levels of new homes? Establishing a figure of 400 units per annum, based on historic delivery, is an artificial constraint. The fact that there has been historic underperformance in housing delivery in the district should not be a determinant of what the future level of growth should be. 2.3.11 The annual housing requirement must also be assessed in light of housing need and demand, to which we have referred in section 2.2 above. This demonstrates that housing growth should be in excess of that identified in the Core Strategy. This also needs to be set in the context of historic undersupply against previous Structure Plan targets, resulting in a backlog of housing. So, the 400 per unit target is artificially low and should be increased. 2.4 No justification / rationale provided for changes to growth figures allocated to Maresfield between 2007 Issues and Options and 2011 Proposed Submission Draft 2.4.1 The 2007 Issues and Options Core Strategy identified that the potential scale of growth in Maresfield was between 350 - 500 new homes. Consultation responses to this (option 21a of the Issues and Options draft) received both support and objection. 109 responses were received. 2.4.2 The Maresfield Conservation Group agreed with the level of growth, though stating that ‘any development should be carefully planned in terms of traffic management, sensitive integration with the village and energy saving’. 2.4.3 Other respondents (for example, respondent ID: 107127) noted: ‘Agree as this site has well defined and defensible boundaries, is next to an employment site, near to 2 stations and traffic is easily dispersed by the village roundabouts, there is little landscape quality to the site’. 2.4.4 The chart copied below has been extracted from the paper prepared for Agenda Item 8, WDC Cabinet Local Development Framework Sub Committee, 15th October 2007. As expected, both support and objection was made in regard to the quantum of growth identified for
Maresfield. However, what is important is that the majority of responses - almost 60% - were in support (see column titled option 21a). What is perhaps even more significant here is that of the Villages around Uckfield where a question about growth was posed in the 2007 Issues and Options, the only one that received a majority in agreement with the specified level of growth was Maresfield. So why was this ignored? Figure 2.1: Summary of Consultation Responses: 2007 Core Strategy Issues and Options, Option 21 Source: page 82, Agenda Item 8, WDC Cabinet Local Development Framework Sub Committee, 15th October 2007 2.4.5 The 2009 Spatial Options Core Strategy presented six options for growth across the district. This dramatically reduced the potential for growth in Maresfield to between 11 and 150 new homes. None of these are for the same level of growth as in 2007. Given that the majority of responses to the 2007 consultation indicated support for the level of growth identified (between 350 – 500 homes) it is not clear why the decision was made to reduce the potential growth figure by more than half. There should have at least been some acknowledgement of the previous figures and this should have been presented as an option. 2.4.6 The only rationale we can see for reducing the potential level of growth in Maresfield is in regard to the settlement hierarchy, which, between 2007 and 2009, changed the status of Maresfield from a ‘local centre with growth potential’ to an ‘accessible settlement with limited facilities’. As we point out in section 3.1 of this response, the settlement classification significantly underplays the potential of Maresfield, ignoring, for example, the fact that a very real opportunity exists to balance homes and jobs in the area given the planning permission granted for the Ashdown Business Park, which will generate between 600 – 700 jobs in what has been termed ‘the most strategically significant employment site in North Wealden’. 2.4.7 Based on consultation responses to the 2009 spatial options, the submission Core Strategy now sets the housing figure for Maresfield at just 50 units. This represents just 10 percent of the originally identified potential for Maresfield. It is not clear what the rationale and justification for such a significant reduction is. We note that responses made by Maresfield Parish Council to the 2009 spatial options Core Strategy note that the Parish would accept up to 50 units in Maresfield, but that greater than 50 would be considered acceptable if substantial local benefit can be demonstrated / delivered. 2.4.8 The biggest change to the level of growth was made between 2007 and 2009. Conversely, this is when housing figures in the South East Plan were in the process of being increased. There does not appear to be any evidence to suggest why the housing figure in Maresfield should be reduced so dramatically: indeed, submissions made to the 2007 consultation expressly state that a limited number of 300 units should be accommodated in Maresfield (see page 163 of Agenda Item 8, Appendix C, Technical Summary of Issues Raised through the Issues and Options Consultation Process, Cabinet Local Development Framework Sub Committee Date: 15th October 2007).

Details of Changes to be Made:
SUMMARY 2.2.13 Having ignored these recommendations, we contend that the Core Strategy is unsound, because it is not justified, as it is not founded on the evidence available and considered robust by the independent Panel conducting the examination in public of the South East Plan. (ii) Adopted South East Plan SUMMARY 2.2.28 We contend that the Core Strategy is unsound because (i) it is not justified as it is not based on the available evidence which points to a need for substantially more homes to be provided across the district and, furthermore, does not explain how this has been taken into consideration; and (ii) it is not effective, because the level of housing growth set out will mean the plan can not deliver on its priorities to deliver affordable housing. SUMMARY 2.3.12 We thus contend that the Core Strategy is unsound because (i) it is not justified as does not accord with the evidence base, which indicates higher rates of housing delivery is required and (ii) it is not effective because it is not deliverable: simply achieving 400 units per annum will not deliver the quantum of growth required to meet the requirements in the district. SUMMARY 2.4.9 In summary, we contend that the plan is unsound as the housing growth is not justified as it does not appropriately reflect the evidence base.

Details of Reasons for Soundess/ Legal Complaince:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request". SPO3. Increase the total number of dwellings to be built as set out in in section 1.2.

Details of Changes to be Made:
REVISION SOUGHT Amend number of dwellings to be delivered from 2006 to 2030 to 13,200 at an average of 550 dwellings per annum
### Details of Reasons for Soundess/ Legal Complaince:
The proposed total of 9,600 houses is not justified by the evidence base. The proposed phasing figure is arbitrary and unsubstantiated. Crowborough is in need of stimulation of investment as much as the other higher order settlements and should not be downgraded. Housing need will not be met by the Plan as it currently stands. There is no reference to wider needs outside the District.

### Details of Changes to be Made:
The housing numbers should reflect the SE Plan housing provision figures and provide 11,000 dwellings in the period 2006 - 2026. This accords with a more robust evidence base. Links between the evidence base and conclusions on phasing need to be re-visited and strengthened. The role of Crowborough needs to be elevated. It is difficult to see how this can be achieved simply by amendments to the submitted plan.
Herstmonceux Parish Council SP03 Herstmonceux Parish Council supports the statements relating to the delivery of infrastructure particularly in respect of development in Herstmonceux and Hailsham. However, although the document notes the intent, Wealden District Council is not capable of the delivery of the schemes as these are the functions of other bodies. If there are procedures in place for Wealden District Council to materially influence the delivery of infrastructure, explicit details of how it will be achieved should be listed. 1. The problems of the A271 are clearly detailed on Page 39 point 6.15 and in the Hailsham and Hellingly Masterplan and in ESCC reports. However, any changes/improvements will be the responsibility of ESCC Highways and outside the remit of Wealden District Council. As funding from S106 agreements is unlikely to be sufficient to fund any major changes, this issue should be addressed before extra housing is built. 2. Sewage capacity is insufficient to cope with any increased demand as noted on Page 39 point 6.16 and Page 41 Point 11 and also raised in Herstmonceux Parish Council's response to the Spatial Options Consultation in August 2009. 3. Water - the Parish Council repeats its concerns about the provision of water for the district which has previously suffered problems with water shortages as was shown by the need to implement hosepipe restrictions in 2006/7. The increased demand from extra housing completed since that date and by the current building schemes will add to the problems. Any measures taken to expand the capacity will take many years to implement. 4. Herstmonceux C of E Primary School would not be able to accommodate any significant increase in pupil numbers; the present Year 1 class already has 39 children and who started in the school in September 2009, exceeding the ESCC guidelines of 30 pupils. The problems associated with these high numbers both in teaching and of physical space will continue through the subsequent school life of these children. This point was also raised in the Parish Council's response to the Spatial Options Consultation in August 2009, which noted that the ESCC Report on Primary Schools 1 May 2009 stated that the current site of the school is too small for the pupil numbers and it has insufficient outside space for the children. There are no current plans to build or expand the school to proved extra school spaces for new families. 5. Hailsham Community College, the nearest secondary school to Herstmonceux Parish has already been identified in an ESCC report as being too small for the current size of the college intake. Current building programmes in Hailsham will increase the pressure on space at the college, and so the issue of school capacity should be addressed with some urgency. Herstmonceux Parish Council is concerned that contributions under S106 Agreements for the acquisition of land and contributions for building costs for both a new secondary and a primary school in Hailsham have been returned to developers. Based on 2009 figures East Sussex County Council had stated that sufficient capacity for the expected rise in school numbers could be met by an increase in class sizes or the provision of some temporary classrooms. this decision appears to contradict ESCC guidelines on class sizes and could have a negative effect on children's education. The increase in housing detailed in the Core Strategy for the period up to 2030 will generate a need for several hundred more school places, and so it is important that issue of identifying sites for new schools is undertaken urgently. The Parish Council hopes that as approximately 1700 of the proposed dwellings for Hailsham are already approved, sufficient contributions will be available for the remaining 1300 to ensure an improvement in this vital infrastructure requirement for the future growth of this area. 6. Herstmonceux Parish Council supports the need for a mix of housing in the parish with a particular need for supported housing for older residents. SP07 Herstmonceux Parish Council expresses concern that the current public transport service to Herstmonceux is inadequate for residents as it only provides a limited hourly service. There are no buses in the evenings or on Sundays, and so it is not possible to reduce the need to travel by car. Page 41 6.19 (8) and (9)

Details of Reasons for Soundness/ Legal Complaince:

Housing target is not justified by robust evidence. SECTION FIVE - HOUSING PROVISION 5.1 In this Section we set out our comments in response to Policy WCS1 and specifically regarding the provision of homes. 5.2 Policy WCS1 proposes a provision of 9,600 dwellings in Wealden District over the period 2006 - 2030, equivalent to 400 dwellings per annum (dpa). This represents a locally-derived target which is explained in para. 3.11 of the Consultation document to be based on estimates of capacity and community aspirations. This proposed level of provision must be compared with the intention of the South East Plan whereby housing provision of 550 dpa was proposed. 5.3 National policy emphasises the need to increase the provision of housing overall and in particular so as to achieve a wider choice and improve affordability. Thus, whilst it is the intention of Government policy that Local Authorities should decide their own housing targets, these must continue to be justified by robust evidence. This point was emphasised in the CLG Guidance dated 6th July 2010 (pursuant to the purported abolition of RS). National policy (PPS12 para. 4.52) continues to require Core Strategies to be "justified, effective and consistent with national policy". 5.4 PPS3 identifies the range of considerations that need to be taken into account in determining the appropriate level of housing at Local Authority level. Para. 33 states: "Regard should be had to evidence including Strategic Housing Market Assessments, the latest Household Projections, Strategic Housing Land Availability Assessments, affordability and the impact on infrastructure." 5.5 In light of the Council's proposal to reduce significantly housing provision in the District, it is therefore instructive to compare the results of recent Household Projections published by the Government. Sub National Household Projections Wealden Household Growth 2006 - 2026 Wealden Household Growth 2006 – 2030** 2004 Base + 14,000 N/A 2006 Base + 14,000 N/A

5.6 Thus it can be seen that whilst the latest projections imply a slightly lower level of household generation than at the time the South East Plan was issued, the projection is still substantially above the housing provision included in the South East Plan, and therefore even higher than that proposed in Policy WCS1. Other indicators (national and local) similarly point to a need for housing provision at a higher level. 5.7 Using the 2008-based data and adding a 3% allowance for vacancies indicates a locally-generated demand within Wealden District of 15,450 over the Plan period. 5.8 At para. 3.10 of the Core Strategy, the Council identifies a trend-based projection of 16,800 households, slightly higher than this. Based on the lower of the two figures, the Council proposes to make provision for only 62% of the requirement. 5.9 Furthermore, the Council has not provided any robust evidence as to why a higher figure should not be proposed. Moreover para 3.10 of the Core Strategy confirms that suitable, available and achievable sites to meet this need have been identified in the SHLAA.

Details of Changes to be Made:

5.10 Accordingly we submit that Policy WCS1 is unsound and that a housing provision of at least 550 dpa (13,200 over the period 2006 - 2030) should be proposed. Housing target is not justified by robust evidence.

#### Details of Reasons for Soundess/ Legal Complaince:

Housing We develop as proposed as in the core strategy we will continue to build some awful estates which I believe are the Cause of family breakdown, depression, mental health issues, vandalism as these estates are lacking in open space and open marketing housing makes most people have a mortgage that is beyond their means, again may I refer you to look at my campaign for change document under land community trust we should not allow developers to build what they want buy they should be instructed to build what is needed, we cannot have open market housing with part time jobs. In the document it states that there is a need for 812 affordable dwellings annually, it then goes on to say that Wealden will deliver 400 homes per year, whilst some of these may be called affordable but in reality they are not and the vast majority of those on the market can bring more people in to the area putting more pressure on social services and school placements. We should stop building open market housing for the life time of this planet.

#### Details of Changes to be Made:

Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry.

#### Details of Reasons for Soundess/ Legal Complaince:

The Council should recognise the the settlement of Hailsham/Hellingly requires significant investment only likely to be achieved through contribution from major development. 1300 dwelling is well below the commercial threshold capable of delivering the improvements needed. The settlement of north Hailshem/Hellingly is capable of providing greater connectivety to Hailsham if land at Park farm is allocated for possible housing, employment and parkland boundary preserving the setting of the Hospital site.

#### Details of Changes to be Made:

Increase the housing allocation at Hailsham/Hellingly to accord with the RSS and to improve sustainability and delivery of an area of strategic importance to meeting the needs of the Hailsham/Hellingly community.

Details of Reasons for Soundess/ Legal Complaince:
There is no justification within the evidence base for directing more substantial investment to Uckfield and Hailsham than to Heathfield. The town plays an important role as a Service Centre and provides vital everyday facilities and services to its local community and its hinterland. Future investment for the long term vitality of Heathfield is therefore crucial to avoid decline of the town.

Details of Changes to be Made:
Direct greater investment in Heathfield
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics) 2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

Sound ☐ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundness/ Legal Complaince:
WJPC is concerned at the numerous references to Polegate and Willingdon as one settlement, as highlighted in 3.3 Table 1, 3.11, SPO6, WCS2, WCS3, 5.13, 6.31(2), Figure 8 and Figure 12. In particular, Figure 2 showing settlement hierarchy, places Polegate and Willingdon as one settlement, yet details other settlements individually.

Sound ☐ Yes ☑ No ☑ Justified ☑ Effective ☑ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundness/ Legal Complaince:
The wording of this objective and its aims are not something that can be achieved by planning policy or control. WDC can provide sites and buildings via planning where people can learn or gain skills. However it cannot "meet the learning needs of local people" or "ensure that the local workforce has the necessary skills" by planning control, this is entirely a function of the teachers or trainers who utilise those facilities.

Details of Changes to be Made: The objective should be amended to apply only to providing sites, and buildings for learning and training.

Sound ☑ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundness/ Legal Complaince:
We generally support all 15 of the Spatial objectives but SPO1 (countryside and rural areas) should make specific mention of the downs.

Details of Changes to be Made:
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics) 2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).
dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. Details of Reasons for Soundess/ Legal Complaince:

In order to improve economic prosperity and support growth of the Wealden economy, provision needs to be made to meet forecast requirements. There is a need for around 17,300 dwellings in the plan period, as stated in the objections to policy SPO3 above. The construction of these dwellings will not only stimulate the local economy, but will help ensure that the workforce is properly housed. Without an adequate supply of housing employers will not be attracted to, or continue to invest in Wealden. Employees, furthermore, will find it difficult to acquire housing. The policy should therefore be reworded so as to recognise and accept this.

Details of Reasons for Soundess/ Legal Complaince:
there is no justification for failing to include Heathfield in the objective of improving economic prosperity. There is no reason why Hethfield as one of the five main towns should not be included in the objective of creating new jobs and increasing economic prospects.

Details of Changes to be Made:
Include Heathfield in the strategic objective of improving economic performance and providing new jobs.
Details of Reasons for Soundness/ Legal Compliance:

1.1 We object to Spatial Planning Objective 6 because for it to be sound reference should be made to the importance of tourism in the District. Paragraphs 3.27 to 3.29 set out the importance of tourism in the District. They describe the importance of the natural environment in the District and the Council's strategy to increase visitor spending. 1.2 Published in May 2006 the Good Practice Guide on Planning for Tourism stresses in chapter 2 that "tourism is of crucial importance to this country". It states that tourism revenue can aid the diversification of the rural economy. The guide goes on to state in paragraph 2.7 that the planning system must facilitate and promote the implementation of good quality development, to ensure that the industry can thrive and develop. 1.3 The Guide requires in paragraph 3.18 that local planning authorities should develop tourism policies to maximise the benefits of tourism. In paragraph 3.19 the guide states that while it is a principle of the planning system to seek to promote more sustainable transport choices, improve accessibility and reduce the need to travel this may be particularly difficult for some types of tourism projects or for areas that are poorly served by public transport. In paragraph 3.24 the Guide recognises that tourism can be a key element in rural and farm diversification. The Guide goes on to state that in rural areas wherever possible tourist and visitor facilities should be housed in existing or replacement buildings.

Details of Changes to be Made:

We therefore consider that to be sound the importance of tourism to the District should be recognised in the Spatial objectives which set the aims for the policies in the Core Strategy and later DPDs. A further sentence should be added stating that "tourist development can bring economic benefits and will be encouraged through planning policies."
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics)

2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

Sound ☑ Yes ☐ No ☐ Justified ☐ Effective ☐ Consistent with national policy
Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:
Support for the overarching objectives that contribute to the Vision. They are laudable and, we believe, achievable in broad terms across the district.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Complaince:

Policy WCS3 makes no provision for additional employment provision in the rural area (which includes Westham) even though the ELR2008 indicated that our client's site (Mountney Bridge Industrial Estate) could accommodate growth/development. Policy WCS3 does not therefore correspond with paragraphs 3.19 or 3.22 which support intensification of employment areas. Policy SPO6 is unclear and unsound, it is implied that any new jobs created will only make a positive contribution to the towns of Uckfield, Hailsham, Polegate and Willingdon.

Details of Changes to be Made:

Policy SP06 should be amended to make it clear that new economic development will be encouraged across all settlements in the district, particularly those in South Wealden, such as Westham. We also consider that the Mountney Bridge Industrial Estate should be identified for intensification and expansion. WCS3 should refer to the other locations which can accommodate intensification and expansion and there should be recognition that some lower order settlements such as Westham can contribute to economic growth.

Details of Reasons for Soundness/ Legal Complaince:

Hallam Land Management Limited (HLM) support the commitment to improve economic prosperity, although HLM believe there should be a stronger link between SP03 and SP06 and that the focus should more specifically be concentrated on the Eastbourne - Hailsham Triangle.

Details of Changes to be Made:

That the focus of SP06 be more specifically concentrated on the Eastbourne - Hailsham Triangle.

Details of Reasons for Soundness/ Legal Complaince:

There is no justification for failing to include Crowborough in the objective of improving economic prosperity. The Plan needs to compensate for the loss of jobs from the relocation of the Council Offices and to address out-commuting to Tunbridge Wells and elsewhere. There is no reason why Crowborough, as one of the main towns should not be included in the objective of creating new jobs and increasing economic prospects.

Details of Changes to be Made:

Include Crowborough in the strategic objective of improving economic performance and providing new jobs.

Details of Reasons for Soundness/ Legal Compliance:
Employment This is a primary problem whereby people will need an income to pay the mortgages and rents affordable. Start up work units is something that is lacking in the area; I invite you to look at my campaign for change documents especially under new homes and land use. Affordable units could be created on rented land as on the document, we should also be creating business units in villages to spread employment over this area. Work from home should be considered when building new houses.

Details of Changes to be Made:
Conclusion Whilst the strategy plan will appear to have a lot of effort put into it, as it stands it would be a disaster if implemented and I would like to see the secretary of state to call in a public inquiry

Details of Reasons for Soundness/ Legal Compliance:
Reference should be made to other forms of sustainable travel ie cycle and walking. Connectivity to settlements through these means should be stated in the CS.

Details of Changes to be Made:
Include Cycle and walking in accordance with points raised above.
Details of Reasons for Soundess/ Legal Complaince:
Reference should be made to other forms of sustainable travel ie cycle and walking. Connectivity to settlements through these means should be stated in the CS. This is particularly relevant to the north Hailsham area surrounding the Hospital site and its connectivity to the rest of Hailsham. This would be significantly improved if Park Farm was included in the strategy master planning of the area.

Details of Changes to be Made:
Amend the Box% policy and consider broadening the strategy area of the north Hailsham area to include the Park Farm area north of New Rd? south of Hellingly Hospital

Details of Reasons for Soundess/ Legal Complaince:
Natural England commends the Council on its recognition of the importance of the environment and green infrastructure and the need to provide resilience for climate change. We particularly support spatial planning objectives SP01, SP07 SP09 and SP011

Details of Changes to be Made:
The policy should support mixed use developments as part of the objective of improving sustainable modes of transport

Details of Changes to be Made:
Policy SPO7 Add Development which includes a mix of housing and employment will be supported
Details of Reasons for Soundness/ Legal Compliance:
Since the council are not adhering to this objective in their detailed policies it should be amended or removed. This particularly applies to the first part where they claim they want to reduce the need to travel by car, yet as set out in details in objections to the relevant policies or paragraphs the council has mostly done the opposite. The greatest of these being the housing provision for the Hailsham area. This is a third of the whole districts provision, yet there is no rail service here, where as there is elsewhere. This will only lead to greater car use not less. Equally 2 of the 3 proposed main employment areas at the Ashdown Business Park and the Hackhurst Lane Estate are both some miles from the towns where most workers will come from, mostly by car

Details of Changes to be Made:
This objective so poorly adhered to in the detailed policies that it should be deleted.

Details of Reasons for Soundness/ Legal Compliance:
We generally support all 15 of the Spatial objectives but SPO1 (countryside and rural areas) should make specific mention of the downs.

Details of Changes to be Made:
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics) 2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

Details of Changes to be Made:
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. Details of Reasons for Soundess/ Legal Complaince:
The statement of Strategic Policy concerning the wish to ‘encourage a reduction in the need to travel by car’ is not supported by sufficient evidence or indeed exhibited through the locaitonal policy established by the Core Strategy - which provides too little opportunity for sustainable - particularly rail based - modes of transport.

Details of Changes to be Made:
The wording of this policy should be changed to reflect the differential in uptake and user preference between rail based and other forms of public transport provision.
Details of Reasons for Soundess/ Legal Complaince:

‘Suitable parking provision’ to support retailing and other business is ambiguous. There is clear concern of traffic impact on Ashdown Forest (3.32), parking issues at Polegate station (6.25) and limited supply of brownfield development opportunity (5.8). Policies rightly aspire to cut traffic, combat climate change, avoid flood risk areas, improve safety and maximise use of previously developed land. Parking is a key element in making these effective.

Details of Changes to be Made:

‘Suitable parking provision’ should clearly avoid being ‘excessive’, in pursuit of these policies. A significant quantity of current parking space should be available for brownfield redevelopment. Car free developments should be encouraged and supported.

Details of Reasons for Soundess/ Legal Complaince:

Policies to restrain traffic, obtain modal shift in travel, reducing need to travel and improve the experience of non-car travel need to be sharpened and focused. Aspirations for these to happen must have necessary circumstances incorporated into the policies.

Details of Changes to be Made:

Demand management techniques for traffic in Hailsham (6.15) should be included in all the related and equivalent policies. There should be a definite commitment to traffic reduction measures and targets throughout the Strategy Plan document.

Details of Reasons for Soundess/ Legal Complaince:

SP07 Herstmonceux Parish Council expresses concern that the current public transport service to Herstmonceux is inadequate for residents as it only provides a limited hourly service. There are no buses in the evenings or on Sundays, and so it is not possible to reduce the need to travel by car. Page 41 6.19 (8) and (9)

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:
As Wealden is a predominantly rural district we support the enhancement and encouragement of growth for villages, as outlined in Policy SPO8 and in accordance with para 3 of PPS7: Sustainable Development in Rural Areas which states that "Planning authorities should focus most new development in or near to local service centres where employment, housing (including affordable housing), services and other facilities can be provided close together". In particular we support the enhancement and encouragement of growth in Horam which is able to accommodate the largest proportion of additional growth as per Strategic Policy WCS6 - Rural Area Strategy. In fact the redevelopment of the Former Merrydown Cider site within the Local Service Centre of Horam as a mixed use scheme will assist the Authority in meeting the objectives in national planning policy and can deliver at least 70% of Horam's housing requirement (100 units), on Brownfield land.

Details of Changes to be Made:

Details of Reasons for Soundness/ Legal Compliance:
The aim of this policy is supported. However, given the restrictive approach to the provision of housing throughout the plan period, this policy is bound to fail. Villages will slowly decline if they are not allowed to grow in order to meet the housing and economic needs of the District.

Details of Changes to be Made:
Vision and Spatial Planning Objectives - Support 2.1 We support the WDC’s Spatial Planning Objectives (SPO1 – SP15). We consider the Objectives promote sustainable growth and strike an appropriate balance to accommodate that growth given the environmental and infrastructure requirements of the District. The Objectives will support Wealden’s aspiration to retain its rural character and high quality environment whilst achieving sufficient growth to support its economy, regenerate market towns and tackle deprivation. 2.2 To meet the ‘justified’ test of soundness, “the most appropriate strategy when considered against reasonable alternatives” needs to be explored. PPS12 expands on this further: ‘the ability to demonstrate that the plan is the most appropriate when considered against reasonable alternatives delivers confidence in the strategy. It requires the local planning authority to seek out and evaluate reasonable alternatives promoted by themselves and others to ensure that they bring forward those alternatives which they consider the LPA should evaluate as part of the plan making process. There is no point in inventing alternatives if they are not realistic. Being able to demonstrate that the plan is the most appropriate having gone through an objective process of assessing alternatives will pay dividends in terms of easier passage for the plan through the examination process. It will assist in evaluating the claims of those who wish to oppose the strategy.’ (PPS12, para 4.38 – PPS12’s own emphasis shown in italics) 2.3 In order to provide for a suitable strategy that strikes the right balance, WDC has prepared an extensive Evidence Base which identifies and assesses the various options available to WDC. These options are reviewed within the Background Papers (BP), in particular, BP1: Development of the Proposed Submission Core Strategy (section 5) and BP10: Sustainability Appraisal of Proposed Submission Core Strategy (Table 1.2). The Background Papers demonstrate the ‘appropriateness’ of the current proposed strategy, that ‘reasonable alternatives’ have been tested and that the Spatial Planning Objectives are found on ‘robust evidence’ i.e. the visions are ‘justified’ as required by PPS12. 2.4 The previous Spatial Development Options (June 2009) Consultation tested up to six different housing scenarios to accommodate the South East Plan (May 2009) housing target. In the light of the revocation of the RSS paragraphs 5.9 and 5.10 of BP1: Development of the Proposed Submission Core Strategy set out the steps which were addressed in determining the overall revised quantum of growth and the suitability of the proposed locations to accommodate this growth: ‘The Local Strategic Partnership focused upon meeting housing needs across the District, whilst Parish and Town Council’s within Wealden provided information on local growth issues and preferences’. This is further explored in paragraphs 5.11 – 5.37 and Section 7 of BP1: Development of the Proposed Submission Core Strategy including an assessment of the settlement hierarchy. 2.5 Section 8 of BP1: Development of the Proposed Submission Core Strategy is supported by section 8 of BP10: Sustainability Appraisal of Proposed Submission Core Strategy which in turn supports the Spatial Planning Objectives within the Core Strategy. The Options tested are considered realistic and are not ‘artificial’ as set out in paragraph 38 of PINS ‘Learning From Experience’ (Sept 2009) document, which states, ‘in some instances it appears that options are identified for the sake of having options rather than because they are realistic….if the options are limited there is no point in trying to artificially create them’. 2.6 The Spatial Planning Objectives therefore provide a clear vision and are specific to the challenges of the District. They are supported by the Evidence Base which has a clear audit trail, has tested all the reasonable alternatives and is therefore ‘justified’. Furthermore, the Objectives are consistent with National Policy including ‘emerging’ National Guidance contained in the Localism Bill (i.e. the level of housing has been determined by a locally derived need).

Support for the overarching objectives that contribute to the Vision. They are laudable and, we believe, achievable in broad terms across the district.

**Details of Changes to be Made:**
Hallam Land Management Limited (HLM) support the principle of SP08 but object to the scale of some of the allocations proposed. Development in rural villages should only be permitted where it is sustainable and of a scale commensurate with the size of that settlement.

Details of Changes to be Made:
Insert “smallscale” between additional and growth.
INTRODUCTION 1. The comments in this document are made on behalf of Mr Robin Nathan and focus on a number of issues raised by the 2011 Core Strategy Proposed Submission Document. Initially the representations address how the housing figures have been derived, the distribution of housing in the District and the uneven balance of strategic development, which is primarily focused in the south of the District. 2. In light of those comments we then consider amendments and additions to the document that should be made to ensure that it makes proper provision for the future planning of the District. In these representations the overall point that we wish to make on behalf of our client is that there should be amendments to the Strategy to focus more development in the north of the District. Suggestions are made as to how and where such development could be accommodated. 3. The purpose of these representations is to support the continued sustainable development of smaller settlements within the District such as Five Ash Down, which have a good range of community facilities. The proposed removal of development boundaries of a number of villages excludes them from potential housing development, which would have a detrimental impact on the vitality of these settlements and their local facilities and shops. Some settlements are located in close proximity to larger district and service centres and further small scale development in settlements such as Five Ash Down would help to achieve the council’s objectives of sustainable development and the use of local services. This approach would also accord with paragraph 3 of PPS3, which states: - “The delivery of housing in rural areas should respect the key principles underpinning the PPS, providing high quality housing that contributes to the creation and maintenance of sustainable rural communities in market towns and villages.” 4. We deal first with the context of the Core Strategy and the level of housing development it proposes, in light of a significant failure to justify or explain the levels of development proposed. REGIONAL STRATEGIES 5. PPS 12 provides the guidance for the formation of Core Strategies and the legal requirements in order for an Inspector to declare the plan ‘sound’. Paragraph 4.50 sets out the checks an Inspector must make on the plan in order to fully comply with legislation. These include having regard to national policy and generally conforming to the Regional Spatial Strategy. Paragraph 4.33 in PPS 12 further illustrates this point and seeks to ensure Core Strategies are ‘consistent with national policy and in general conformity with the regional spatial strategy’. 6. The South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum, whereas the Proposed Submission Core Strategy allocates just 9600 over the 24 year period 2006-2030, an annual rate of 400 dwellings. The differences between the annual rate of dwellings and the plan periods are important to consider here, and this can be done in two ways: - a. The South East Plan period is 2006 and 2026. The Core Strategy plan period is 2006 – 2030; four years longer. The South East Pan requires 11,000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 - 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. b. Conversely, if the South East Plan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. 7. The calculations show a clear deficit in housing provision in the Core Strategy when both annual rates and plan periods are accurately compared. 8. There has been significant debate surrounding the revocation of Regional Strategies. The latest High Court Order has confirmed that the intended abolition of the Regional Strategies by the Coalition Government can now be considered ‘material’ in future planning decisions. However, as the Cala Homes (South) Ltd v Secretary of State for Communities and Local Government and Winchester City Council [2011] EWHC 97 Judgement states, there are distinctions to be made between materiality and weight (paragraph 29). Therefore although this is a material consideration, it is the responsibility of the decision maker to defend their decision if there is any deviation from the guidance contained within the Regional Strategies. ‘Thus, in appropriate circumstances, a local planning authority in the reasonable exercise of its discretion may give no significant weight or even no weight at all to a consideration material to its decision, provided that it has had regard to it’ [our emphasis] (paragraph 30). The point here is quite clear; if the council wishes to deviate from the South East Plan it may do so, but only if there is clear and reasoned explanation given in the Core Strategy document that adequately justifies the approach taken. A failure to properly consider this issue will result in the Core Strategy being deemed unsound. 9. It is also essential in this context to have regard to paragraph 34 of PPS 3, which states ‘Regional Spatial Strategies should set out the level of overall housing provision for the region, broadly illustrated in a housing delivery trajectory, for a sufficient period to enable Local Planning Authorities to plan for housing over a period of at least 15 years.’ 10. The failure of the council to properly consider the appropriate level
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

of housing provision and in addition to fail to properly explain and justify the reasons for the overall levels of growth that are promulgated is a significant deficiency in the Strategy and there is a need to consider substantial amendment to ensure the lack of soundness in this respect is overcome. POPULATION AND HOUSEHOLD PROJECTIONS 11. We have identified above the overarching issues in respect of the Strategy, relating to inadequacy of the council’s housing figure of 9600 over the plan period of 2006-2030 and the failure to adequately justify why that figure should be accepted. In order to properly assess the soundness of the proposed Strategy it is also necessary to discuss actual housing need in relation to demographics and statistical information. 12. As we have already made plain, if the Core Strategy does not accord with figures in the South East Plan, the justification for the level of housing provision it proposes should be explained elsewhere. We have therefore examined the document to seek to establish whether such an explanation exists. 13. The only reference to statistical evidence within the Core Strategy is contained on page 13 under paragraph 3.10 which states: ‘Trend based projections(1) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households.’ 14. This is accompanied by a footnote which offers a reference to Office of National Statistics (ONS) trend based projections in addition to different figures from East Sussex County Council. These contain a reference to a population increase of around 20,000 persons equating to 13,500 households and 13,000 additional dwellings. Both this comment and the direct reference in paragraph 3.10 indicate the need for a level of future housing that is considerably in excess of the council’s figure. 15. Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) also references ONS trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 16. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 17,751 Household projections Household projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890 The above figures have been sourced from www.eastsussexfigures.org.uk 17. The important issue here is that it is unclear from the Core Strategy documents exactly which figures have been used, and it remains unclear despite our direct enquiries of the council on the matter. It seems likely, however, that trend based population and household projections have been obtained from this dataset. It may be the case that the figures above have been updated and that the council’s figures take into account previous figures available from 2006. These may then have been adjusted to fit in to the plan period of 2006-2030. 18. The trend based 2008 population projections were published by the Office for National Statistics (ONS) in May 2010 and the trend based housing projections are based on these figures but contain new household type categories recently developed by the Department of Communities and Local Government. 19. The trend based figures shown above are similar to the figures referenced in the Core Strategy, taking into account the adjustment of dates. However the footnote on page 13 refers to 13,000 additional dwellings, which is below any trend based figures previously referenced. It appears therefore that this may relate to the policy based figures, which are similar to the policy based household projection shown above (12,890), although there is some variation as the footnote references 2006-2031 and the above figures relate to 2001-2026. 20. The policy based figures shown above are described on the East Sussex in Figures website as being derived from housing provision figures provided within the South East Plan, housing trajectory work provided by the relevant council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 16 of BP1 in paragraph 5.12 where it is noted that: - ‘Due to the complexity of the model, the information used to predict future demand can not be examined in any great detail.’ 21. This is insufficient as the basis for the projections for future growth within the Core Strategy relies on these figures and it is the purpose of Background Papers to adequately explain these findings. This is especially the case as the council’s figures have been inadequately referenced and deviate considerably from all other relevant sources. 22. It is noted that although the footnote on page 13 of the Core Strategy is not properly referenced and there is no background information relating to how this information has been derived, the number of households (13,500) is more than the number of additional dwellings required (13,000). It is assumed that the extra 500 homes have been accommodated for through the council’s own information regarding long term empty dwellings in the District, short term empty dwellings due to an occupant’s death or houses currently being sold on the market. However it is considered that this slight drop in the number of households compared to the number of dwellings required is not greatly significant to argue for less housing need. Furthermore these figures have not been adequately referenced or justified and the calculations used to reach these figures are unavailable. HOUSING REQUIREMENT 23. It is predominantly trend based population and household projections which have been referenced within the Core Strategy where it is then explained on page 13, paragraph 3.10 that: ‘This shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered within Wealden.’ 24. This appears to be the basis of the council’s approach to the Core Strategy as a matter of basic principle; that the level of housing proposed for the District is less than the figure of new dwellings required by reference to regional policy and less than that indicated to be required by all other relevant sources for the reason that the District has insufficient capacity to accommodate housing at the levels required. This is the sole extent to which the council attempts to justify the 9600 housing figure. 25. However, there is no adequate explanation anywhere in the Strategy as to why the projected increase in households cannot be accommodated in the District. Of even greater importance, the Strategy, having stated that
insufficient dwellings to meet identified need will be allowed for, fails in any way to consider or try to quantify the potentially significant social, economic and housing problems that an acknowledged failure to meet projected future requirements will cause. AFFORDABLE HOUSING 26. It is notable in respect of the council’s failure to deal with these issues that in Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) the council repeatedly concludes that high levels of housing are required within the District and acknowledges that this need is identified in a variety of demographic and statistical evidence. 27. The issue of affordable housing is raised within the Core Strategy in Background Papers 1 – Development of the Proposed Submission Core Strategy and 2 – Managing the Delivery of Housing. The council’s Housing Needs Assessment (January 2010) is referenced on page 17, paragraph 5.14 of BP1 which describes how the need for affordable housing cannot be accommodated within the District despite evidence showing a great need. This is again referenced within BP2 (page 3, paragraph 2.3) where the council’s Strategic Housing Market Assessment (SHMA) has also been referred to which addresses ‘very significant affordability issues’ within the District. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the country. 28. However, there is no correlation between the extent to which the failure to produce adequate levels of affordable housing that would result from the overall approach to Core Strategy housing provision would result in social deprivation and other long term problems for the population of the District. That is in our view be a fundamental deficiency of the Strategy. DEMOGRAPHICS 29. BP2 - Managing the Delivery of Housing (page 3, paragraph 2.4) - explains the demographic structure of population and households within the District. There are a number of trends which have been referred to, including a decrease in household size, resulting in more single person households, particularly the elderly. The demand for housing from demographic evidence, coupled with the economic prosperity considerations below, mean that the overall health of the District depends on a future growth in population. It is therefore the responsibility of the council to provide enough housing both of the correct type and in the correct location, in accordance with the nature of demand outlined above. ECONOMIC PROSPERITY 30. It is a requirement of PPS 4 Planning for Sustainable Economic Growth, that local authorities should include within their plans a clear economic vision for their areas which ‘positively and proactively encourages sustainable economic growth’ (page 7, EC2.1 (a)). 31. Due to the need to maintain an economically active and consumer based population in line with PPS 4, in-migration is encouraged by the council. BP2, page 3, paragraph 2.4 states: ‘In order to maintain the viability of services and facilities and the vitality of the local economy there is therefore a requirement for significant new housing development within the District which would encourage some in-migration in order to maintain population levels’. 32. In addition, ONS figures for 2007 indicate a net inward migration from within the UK to Wealden of 800 people (arising from 7,800 leaving the District and 8,600 entering), which demonstrates in-migration is occurring and adds to the demand for housing within the District. 33. It is noted within BP2, page 3, paragraph 2.4: - ‘This natural change, leading to a declining and more elderly population, could have a potentially very damaging effect on the future customer base on existing services and facilities within the District as well as for the viability and vitality of Wealden’s town centres by reducing the economically active sector.’ 34. This effectively acknowledges that on economic grounds an increase in the population that would be the result of a higher level of housing growth is required to enable the District to maintain and improve its economic base and to facilitate protection of existing employment levels and facilitate employment growth. 35. None of these considerations relating to housing and economic need are evident within the housing figures which the Core Strategy proposes overall. The low figure of 9600 is not adequately justified within any of these documents, despite evidence to show that higher levels of housing are needed and would be beneficial to the future growth of Wealden, particularly to maintain the vitality of town centres and support economic growth. CONSTRAINTS WITHIN WEALDEN 36. The Core Strategy and BP1 identify constraints within the District which is considered to restrict housing growth in certain areas. These are outlined on page 23 of BP1, paragraph 6.2 and include the issues of waste water treatment capacity in the south of the District and the need to protect the rural nature of the District and the High Weald AONB. Also included within constraints for Uckfield, Polegate and Hailsham in the Core Strategy are traffic management and congestion problems in the town centres with significant infrastructure improvements required. 37. However this must be contrasted against the above evidence where ONS figures show a demand for housing given the projected increase in population, the overwhelming need for affordable housing and the need for in-migration to tackle population needs of the Wealden District and support economic prosperity. This goes to the heart of the need for the Core Strategy, which should seek to plan positively for appropriate growth in balance with the acknowledgement of constraints, rather than reducing growth rates arbitrarily. 38. Although these constraints and needs have been referred to within the documents relating to the Core Strategy, there is no statistical analysis to ascertain how the 9600 housing figure has been decided. There is also no explanation as to why the figures have been decreased from the South East Plan allocation, which for the Core Strategy plan period would be 13,200, or as to why the proposed allocation fails to meet household projections to an even greater extent. It is our case that the need for housing has not been appropriately analysed and a figure of 9600 does not address the evidence, which clearly shows the requirement for housing. 39. This conclusion merely concurs with that which has been reached repeatedly through BP1, and in particular on page 21, paragraph 5.37, which supports the above points in relation to a significant need for housing growth. The discussion which follows on the constraints to development does not attempt to expand on the nature of these problems and by how much they would limit new housing development. Therefore without robust statistical analysis and an unclear analysis of ONS projections it not possible to ascertain how the housing figure of 9600 has been established. As it has been used as the overall basis of the Core Strategy, this is a fundamental fault in the
research and analysis of the evidence base of the document which results in a need to overhaul housing figures basing them on real evidence of need. FORWARD PLANNING 40. Based on the discussion and evidence referenced above, it is considered that 9600 is not an appropriately justified housing figure for the District. The figure fails to take into account the need for future growth in the District and does not propose effective forward planning which is the main purpose of Core Strategies. 41. The only justification for providing this figure seems to be based on past housing figures. This is contained within the Core Strategy on page 29, paragraph 5.13 which explains how over the last 21 years an average of 400 dwellings have been built per annum in the District and that based on this, a similar rate is achievable in the future. 42. This does not provide for effective forward planning as evidence is based on past results rather than remaining focused on future growth. It is evident from the projected population figures that population is expected to increase and if Wealden are unable to accommodate this growth, it will force people to reside outside of the District. This increases pressure on neighbouring authorities who suffer their own constraints and it is the responsibility of Wealden District Council to address this growth properly.

PROPOSED REVISED HOUSING FIGURES 43. The South East Plan allocated 11,000 dwellings to the District based on national housing figures and fair distribution across the region taking into account policy considerations of each District and national housing need. The DCLG policy based population and housing projections are run under the same assumptions of the trend based projections in terms of fertility, mortality and migration level, but additionally they take into account the number of houses planned to be built during the projection period. The migration level is then adjusted according to the future housing provision. This information has been obtained in response to a specific enquiry from East Sussex County Council, correspondence of which has been attached as Appendix 1. 44. On this basis it is considered that the policy based projections fairly assess population growth and the requirements of the District. It is therefore proposed that in order to accommodate the requirement for the population increase as calculated in the evidence addressed above, it is fundamental to work towards a figure of 13,000 as proposed both by the South East Plan and justified by policy based household projections. If this position is not concurred with then the 11,000 figure allocated within the South East Plan must be taken as an absolute minimum. 45. This will then adequately accommodate for projected population growth, in-migration and economic prosperity. It will also accommodate for changing demographics of smaller households and an increase in housing will greatly help to address the apparent affordability problems in the District. It will encourage a greater choice of types and tenures of housing and subject to national requirements, affordable housing can be promoted through larger housing development schemes.

DISTRIBUTION OF HOUSING 46. This section of the representations discusses the distribution of housing, primarily between the north and south of the District but also in terms of the manner of the council’s treatment of the settlement hierarchy. The first notable point is many of the significant potential infrastructure constraints, such as waste water treatment capacity and inadequate road infrastructure, are focused on the south of the District. This is where a large majority of the housing has been allocated. The Strategy acknowledges that further development here would be limited due to these constraints, but the overall approach to dealing with levels of development in the south in the South East Plan is acknowledged. It is accepted that the council’s approach to development in these areas is acceptable in principle, although there are one or two instances where we consider that the degree of emphasis on development in the south has resulted in proposed locations for housing that are inappropriate. 47. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. Given that the general approach to housing provision and location in the south is acceptable consideration therefore needs to be given in the Strategy to additional provision in the north of the District at an appropriate scale and in locations that reflect the need to consider the appropriateness of the settlement hierarchy. For this reason it is considered that smaller sites in villages with a reasonable level of services and facilities should also be given fair consideration. It is considered that some of the villages that are proposed to have their development boundaries removed will be unnecessarily excluded from suitable future growth. 48. Some rural villages benefit from a local consumer base but are also located in close proximity to larger towns. A good example is Five Ash Down which has good local facilities and is also located in close proximity to Uckfield and benefits from the facilities available there. In order to accommodate the extra growth which is required, villages in sustainable locations should not be excluded from potential future development. An example is land available at Coopers Green, a plan of which is attached as Appendix 2.

GENERAL SUMMARY 49. It follows from the general arguments set out above that we consider that the overall position of the proposed Core Strategy is such that it has not been demonstrated to any satisfactory degree that it represents a reasonable approach to meeting acknowledged housing demand. While the strategy appears satisfactory in dealing with the generalities of the amount of growth it provides for there is a significant failure to deliver sufficient housing to meet the actual likely future requirement, particularly in the north of the District. 50. The inclusion within the Core Strategy of housing figures that are below those of the South East Plan and below those in ONS projections is not justified or, importantly, explained in any meaningful way in the document, and in the absence of such adequate explanation it can only be concluded that the Strategy is unsound and will fail to provide an adequate future policy base. 51. The housing figures allocated within the Core Strategy are not sufficient to accommodate adequate growth in the District and would result in the plan failing the tests of soundness. The 9600 housing figure has not been derived from robust statistical analysis and instead relies upon past annual housing figures. The Core Strategy overall housing figures therefore fail to accommodate for future growth and effective forward planning. 52. It is considered that there is a need to allocate 13,000 dwellings over the plan period 2006-2030 to adequately address the issues relating to policy based population growth and housing requirements. Moreover, here are a number of suitable locations within the District available for housing
development which do not compromise the constraints highlighted within the Core Strategy. 53. The failure of the
Core Strategy to make provision in this way means that additional housing allocations are necessary in order to
meet likely future requirements. The balance of the Strategy is significantly weighted towards urban growth,
particularly in the south of the District, and although the overall approach to housing and economic development,
and the balance with necessary associated infrastructure provision is justified in the Strategy the failure of the
Strategy to provide appropriately for development in the north of the District, and importantly the decision to
exclude a number of smaller settlements from the development process, is wrong. 54. In order for the council to
focus on effective forward planning, it must appropriately consider the identified housing requirement and
sustainable distribution of housing development which should be based on statistical analysis and balanced policy
considerations. This will encourage economic prosperity in identified town centres, encourage a greater choice of
housing which will help to tackle affordability issues and ensure the continued vitality of the Districts towns and
villages without compromising the rural nature of the District. 55. Because of this there is a need not only to
support rural communities but also to appreciate the contribution they can make to sustainable development
throughout the District. Excluding villages such as Five Ash Down from the possibility of future development is
wholly inappropriate in this context.

Details of Changes to be Made:
Our representations make reference to the changes we consider neccessary to the Strategy
INTRODUCTION 1. The comments in this document are made on behalf of Knight Developments and focus on a number of issues raised by the 2011 Core Strategy Proposed Submission Document. Initially the representations address how the housing figures have been derived, the distribution of housing in the District and the uneven balance of strategic development, which is primarily focused in the south of the District. 2. In light of those comments we then consider amendments and additions to the document that should be made to ensure that it makes proper provision for the future planning of the District. In these representations the overall point that we wish to make on behalf of our client is that there should be amendments to the Strategy to focus more development in the north of the District and that, as the largest town, such development should be centred on Crowborough. Suggestions are made as to how and where such development could be accommodated. 3. We deal first with the context of the Core Strategy and the level of housing development it proposes, in light of a significant failure to justify or explain the levels of development proposed. REGIONAL STRATEGIES 4. PPS 12 provides the guidance for the formation of Core Strategies and the legal requirements in order for an Inspector to declare the plan ‘sound’. Paragraph 4.50 sets out the checks an Inspector must make on the plan in order to fully comply with legislation. These include having regard to national policy and generally conforming to the Regional Spatial Strategy. Paragraph 4.33 in PPS 12 further illustrates this point and seeks to ensure Core Strategies are ‘consistent with national policy and in general conformity with the regional spatial strategy’. 5. The South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum, whereas the Proposed Submission Core Strategy allocates just 9600 over the 24 year period 2006-2030, an annual rate of 400 dwellings. The differences between the annual rate of dwellings and the plan periods are important to consider here, and this can be done in two ways: i. The South East Plan period is 2006 - 2026. The Core Strategy plan period is 2006 – 2030; four years longer. The South East Pan requires 11,000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 and 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. ii. Conversely, if the South East Plan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. 6. The calculations show a clear deficit in housing provision in the Core Strategy when both annual rates and plan periods are accurately compared. 7. There has been significant debate surrounding the revocation of Regional Strategies and the latest High Court Order has confirmed that the intended abolition of the Regional Strategies by the Coalition Government can now be considered ‘material’ in future planning decisions. However, as the Cala Homes (South) Ltd v Secretary of State for Communities and Local Government and Winchester City Council [2011] EWHC 97 Judgement states, there are distinctions to be made between materiality and weight (paragraph 29). Therefore although this is a material consideration, it is the responsibility of the decision maker to defend their decision if there is any deviation from the guidance contained within the Regional Strategies. ‘Thus, in appropriate circumstances, a local planning authority in the reasonable exercise of its discretion may give no significant weight or even no weight at all to a consideration material to its decision, provided that it has had regard to it’ [our emphasis] (paragraph 30). The point here is quite clear; if the council wishes to deviate from the South East Plan it may do so, but only if there is clear and reasoned explanation given in the Core Strategy document that adequately justifies the approach taken. A failure to properly consider this issue will result in the Core Strategy being deemed unsound. 8. It is also essential in this context to have regard to paragraph 34 of PPS 3, which states ‘Regional Spatial Strategies should set out the level of overall housing provision for the region, broadly illustrated in a housing delivery trajectory, for a sufficient period to enable Local Planning Authorities to plan for housing over a period of at least 15 years.’ 9. The failure of the council to properly consider the appropriate level of housing provision and in addition to fail to properly explain and justify the reasons for the overall levels of growth that are promulgated is a significant deficiency in the Strategy and there is a need to consider substantial amendments to ensure the lack of soundness in this respect is overcome. POPULATION AND HOUSEHOLD PROJECTIONS 10. We have identified above the overarching issues in respect of the Strategy, relating to inadequacy of the council’s housing figure of 9600 over the plan period of 2006-2030 and the failure to adequately justify why that figure should be accepted. In order to properly assess the soundness of the proposed Strategy it is also necessary to discuss actual housing need in relation to demographics and statistical information. 11. As we have already made plain, if the Core Strategy does not accord with figures in the South East Plan, the justification for the level of housing provision it proposes should
be explained elsewhere. We have therefore examined the document to seek to establish whether such an explanation exists. 12. The only reference to statistical evidence within the Core Strategy is contained on page 13 under paragraph 3.10 which states: ‘Trend based projections(1) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households.’ 13. This is accompanied by a footnote which offers a reference to Office of National Statistics (ONS) trend based projections in addition to different figures from East Sussex County Council. These contain a reference to a population increase of around 20,000 persons equating to 13,500 households and 13,000 additional dwellings. Both this comment and the direct reference in paragraph 3.10 indicate the need for a level of future housing that is considerably in excess of the council’s figure. 14. Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) also references ONS trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 15. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 17,751 Household projections Household projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890

The above figures have been sourced from www.eastsussexinfigures.org.uk 16. The important issue here is that it is unclear from the Core Strategy documents exactly which figures have been used, and it remains unclear despite our direct enquiries of the council on the matter. It seems likely, however, that trend based population and household projections have been obtained from this dataset. It may be the case that the figures above have been updated and that the council’s figures take into account previous figures available from 2006. These may then have been adjusted to fit in to the plan period of 2006-2030. 17. The trend based 2008 population projections were published by the Office for National Statistics (ONS) in May 2010 and the trend based housing projections are based on these figures but contain new household type categories recently developed by the Department of Communities and Local Government. 18. The trend based figures shown above are similar to the figures referenced in the Core Strategy, taking into account the adjustment of dates. However the footnote on page 13 refers to 13,000 additional dwellings, which is below any trend based figures previously referenced. It appears therefore that this may relate to the policy based figures, which are similar to the policy based household projection shown above (12,890), although there is some variation as the footnote references 2006-2031 and the above figures relate to 2001-2026. 19. The policy based figures shown above are described on the East Sussex in Figures website as being derived from housing provision figures provided within the South East Plan, housing trajectory work provided by the relevant council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 16 of BP1 in paragraph 5.12 where it is noted that: ‘Due to the complexity of the model, the information used to predict future demand can not be examined in any great detail.’ 20. This is insufficient as the basis for the projections for future growth within the Core Strategy relies on these figures and it is the purpose of Background Papers to adequately explain these findings. This is especially the case as the council’s figures have been inadequately referenced and deviate considerably from all other relevant sources. 21. It is noted that although the footnote on page 13 of the Core Strategy is not properly referenced and there is no background information relating to how this information has been derived, the number of households (13,500) is more than the number of additional dwellings required (13,000). It is assumed that the extra 500 homes have been accommodated for through the council’s own information regarding long term empty dwellings in the District, short term empty dwellings due to an occupant’s death or houses currently being sold on the market. However it is considered that this slight drop in the number of households compared to the number of dwellings required is not greatly significant to argue for less housing need. Furthermore these figures have not been adequately referenced or justified and the calculations used to reach these figures are unavailable. HOUSING REQUIREMENT 22. It is predominantly trend based population and household projections which have been referenced within the Core Strategy where it is then explained on page 13, paragraph 3.10 that: ‘This shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered within Wealden.’ 23. This appears to be the basis of the council’s approach to the Core Strategy as a matter of basic principle; that the level of housing proposed for the District is less than the figure of new dwellings required by reference to regional policy and less than that indicated to be required by all other relevant sources for the reason that the District has insufficient capacity to accommodate housing at the levels required. This is the sole extent to which the council attempts to justify the 9600 housing figure. 24. However, there is no adequate explanation anywhere in the Strategy as to why the projected increase in households cannot be accommodated in the District. Of even greater importance, the Strategy, having stated that insufficient dwellings to meet identified need will be allowed for, fails in any way to consider or try to quantify the potentially significant social, economic and housing problems that an acknowledged failure to meet projected future requirements will cause. AFFORDABLE HOUSING 25. It is notable in respect of the council’s failure to deal with these issues that in Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) 26. The issue of affordable housing is raised within the Core Strategy in Background Papers 1 – Development of the Proposed Submission Core Strategy and 2 – Managing the Delivery of Housing. The council’s Housing Needs Assessment (January 2010) is referenced on page 17, paragraph 5.14 of BP1 which describes.
how the need for affordable housing cannot be accommodated within the District despite evidence showing a great need. This is again referenced within BP2 (page 3, paragraph 2.3) where the council’s Strategic Housing Market Assessment (SHMA) has also been referred to which addresses ‘very significant affordability issues’ within the District. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the country. 27. However, there is no correlation between the extent to which the failure to produce adequate levels of affordable housing that would result from the overall approach to Core Strategy housing provision would result in social deprivation and other long term problems for the population of the District. That is in our view a fundamental deficiency of the Strategy. DEMOGRAPHICS 28. BP2 - Managing the Delivery of Housing (page 3, paragraph 2.4) - explains the demographic structure of population and households within the District. There are a number of trends which have been referred to, including a decrease in household size, resulting in more single person households, particularly the elderly. The demand for housing from demographic evidence, coupled with the economic prosperity considerations below, mean that the overall health of the District depends on a future growth in population. It is therefore the responsibility of the council to provide enough housing both of the correct type and in the correct location, in accordance with the nature of demand outlined above. ECONOMIC PROSPERITY 29. It is a requirement of PPS 4 (2009) Planning for Sustainable Economic Growth, that local authorities should include within their plans a clear economic vision for their areas which ‘positively and proactively encourages sustainable economic growth’ (page 7, EC2.1 (a)). 30. Due to the need to maintain an economically active and consumer based population in line with PPS 4, in-migration is encouraged by the council. BP2, page 3, paragraph 2.4 states: - ‘In order to maintain the viability of services and facilities and the vitality of the local economy there is therefore a requirement for significant new housing development within the District which would encourage some in-migration in order to maintain population levels’. 31. In addition, ONS figures for 2007 indicate a net inward migration from within the UK to Wealden of 800 people (arising from 7,800 leaving the District and 8,600 entering), which demonstrates in-migration is occurring and adds to the demand for housing within the District. 32. It is noted within BP2, page 3, paragraph 2.4: - ‘This natural change, leading to a declining and more elderly population, could have a potentially very damaging effect on the future customer base on existing services and facilities within the District as well as for the viability and vitality of Wealden’s town centres by reducing the economically active sector.’ 33. This effectively acknowledges that on economic grounds an increase in the population that would be the result of a higher level of housing growth is required to enable the District to maintain and improve its economic base and to facilitate protection of existing employment levels and facilitate employment growth. 34. None of these considerations relating to housing and economic need are evident within the housing figures which the Core Strategy proposes overall. The low figure of 9600 is not adequately justified within any of these documents, despite evidence to show that higher levels of housing are needed and would be beneficial to the future growth of Wealden, particularly to maintain the vitality of town centres and support economic growth. CONSTRAINTS WITHIN WEALDEN 35. The Core Strategy and BP1 identify constraints within the District which is considered to restrict housing growth in certain areas. These are outlined on page 23 of BP1, paragraph 6.2 and include the issues of waste water treatment capacity in the south of the District and the need to protect the rural nature of the District and the High Weald AONB. Also included within constraints for Uckfield, Polegate and Hailsham in the Core Strategy are traffic management and congestion problems in the town centres with significant infrastructure improvements required. 36. However this must be contrasted against the above evidence where ONS figures show a demand for housing given the projected increase in population, the overwhelming need for affordable housing and the need for in-migration to tackle population needs of the Wealden District and support economic prosperity. This goes to the heart of the need for the Core Strategy, which should seek to plan positively for appropriate growth in balance with the acknowledgement of constraints, rather than reducing growth rates arbitrarily. 37. Although these constraints and needs have been referred to within the documents relating to the Core Strategy, there is no statistical analysis to ascertain how the 9600 housing figure has been decided. There is also no explanation as to why the figures have been decreased from the South East Plan allocation, which for the Core Strategy plan period would be 13,200, or as to why the proposed allocation fails to meet household projections to an even greater extent. It is our case that the need for housing has not been appropriately analysed and a figure of 9600 does not address the evidence, which clearly shows the requirement for housing. 38. This conclusion merely concurs with that which has been reached repeatedly through BP1, and in particular on page 21, paragraph 5.37, which supports the above points in relation to a significant need for housing growth. The discussion which follows on the constraints to development does not attempt to expand on the nature of these problems and by how much they would limit new housing development. Therefore without robust statistical analysis and an unclear analysis of ONS projections it not possible to ascertain how the housing figure of 9600 has been established. As it has been used as the overall basis of the Core Strategy, this is a fundamental fault in the research and analysis of the evidence base of the document which results in a need to overhaul housing figures basing them on real evidence of need. FORWARD PLANNING 39. Based on the discussion and evidence referenced above, it is considered that 9600 is not an appropriately justified housing figure for the District. The figure fails to take into account the need for future growth in the District and does not propose effective forward planning which is the main purpose of Core Strategies. 40. The only justification for providing this figure seems to be based on past housing figures. This is contained within the Core Strategy on page 29, paragraph 5.13 which explains how over the last 21 years an average of 400 dwellings have been built per annum in the District and that based on this, a similar rate is achievable in the future. 41. This does not provide for effective forward planning as evidence is based on past results rather than remaining focused on future growth. It is evident from the projected
population figures that population is expected to increase and if Wealden are unable to accommodate this growth, it will force people to reside outside of the District. This increases pressure on neighbouring authorities who suffer their own constraints and it is the responsibility of Wealden District Council to address this growth properly.

**PROPOSED REVISED HOUSING FIGURES** 42. The South East Plan allocated 11,000 dwellings to the District based on national housing figures and fair distribution across the region taking into account policy considerations of each District and national housing need. The DCLG policy based population and housing projections are run under the same assumptions of the trend based projections in terms of fertility, mortality and migration level, but additionally they take into account the number of houses planned to be built during the projection period. The migration level is then adjusted according to the future housing provision. This information has been obtained in response to a specific enquiry from East Sussex County Council, correspondence of which has been attached as Appendix 1. 43. On this basis it is considered that the policy based projections fairly assess population growth and the requirements of the District. It is therefore proposed that in order to accommodate the requirement for more housing based on the evidence addressed above, it is fundamental to work towards a figure of 13,000 as proposed both by the South East Plan and justified by policy based household projections. If this position is not concurred with then the 11,000 figure allocated within the South East Plan must be taken as an absolute minimum.

44. This will then adequately accommodate for projected population growth, in-migration and economic prosperity. It will also accommodate for changing demographics of smaller households and an increase in housing will greatly help to address the apparent affordability problems in the District. It will encourage a greater choice of types and tenures of housing and subject to national requirements, affordable housing can be promoted through larger housing development schemes. DISTRIBUTION OF HOUSING 45. This section of the representations discusses the distribution of housing, primarily between the north and south of the District but also in terms of the manner of the council's treatment of the settlement hierarchy. The first notable point is many of the significant potential infrastructure constraints, such as waste water treatment capacity and inadequate road infrastructure, are focused on the south of the District. This is where a large majority of the housing has been allocated. The Strategy acknowledges that further development here would be limited due to these constraints, but the overall approach to dealing with levels of development in the south in the South East Plan is acknowledged. It is accepted that the council's approach to development in these areas is acceptable in principle, although there are one or two instances where we consider that the degree of emphasis on development in the south has resulted in proposed locations for housing that are inappropriate. 46. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. Given that the general approach to housing provision and location in the south is acceptable consideration therefore needs to be given in the Strategy to additional provision in the north of the District at an appropriate scale and in locations that reflect the need to consider the appropriateness of settlement hierarchy. 47. Crowborough is the largest town in the District and is designated as a District Centre within the Core Strategy. Given its close proximity to Tunbridge Wells it is the most appropriate location to accommodate the requirement for more housing. This will help to achieve the aims of providing more development to support growth and improving retail and employment opportunities and the provision of affordable housing in the north of the District. 48. Presently, the majority of development within the north of the District is focused in a single urban extension to the west of Uckfield (SD1). Expansion of Uckfield in this manner is considered to be inappropriate due to issues including traffic congestion, capacity, flood risk, noise from the A22 and the sites prominence in the wider landscape and the very exposed views from the Uckfield bypass. These issues have already been highlighted with the council's Strategic Housing Land Availability Assessment (SHLAA). 49. This site would represent a major incursion into unspoilt countryside that will have a very seriously damaging effect on a wide area and will completely change the setting of the town and its relationship to the surrounding countryside. That is because of the prominence of the location and its poor relationship in a landscape sense to the town, from which it is almost entirely visually detached by virtue of the topography of the area and the openness of the location to the surrounding area. CROWBOROUGH 50. The proposed submission Strategy significantly detracts from the potential of Crowborough, which is better placed in the District in terms of accessibility and has excellent education and health facilities that are at least comparable with those of Uckfield. Crowborough is in need of town centre regeneration, although it has shown that even in present recessionary times the basic strength of the centre is apparent though increases in the retail offering in terms of quality and floorspace. New social infrastructure to support its population is being provided; work having commenced on the new community building in the centre of the town. 51. There is a perceived conflict between development at Crowborough and its environmental status as a result of the relationship of the town to the AONB that surrounds it and of the proximity of Ashdown Forest as a major recreational facility that is at the same time an important environmental asset as a result of its status as a SSSI. However, given that the Forest is a major regional attraction it is not considered that growth at Crowborough will make any real difference to the health and wellbeing of the Forest per se, when regional growth figures are such that the population will generally be increasing and it is inevitable that the attractiveness of the Forest will make it an increasingly used resource by the existing and increasing population over a wide area. The Core Strategy in any case rightly seeks to draw a zone within which development that would potentially affect the Forest would be prevented. 52. On the basis of the comments we have made earlier and in view of our conclusions above we consider that there is a significant opportunity for development at Crowborough that is justified as a result of the need to ensure that overall growth for the District is at a sustainable level that will meet future requirements in an acceptable fashion. A level of development that achieves that aim is the minimum that the strategy should be proposing. There are, however,
recognised constraints to the town and therefore a need to consider the most appropriate general location for
development in terms of landscape impact and accessibility. We also consider that it would be appropriate for the
council to consider a single major location for development on the basis that the necessary infrastructure to serve
such a development can be provided more effectively and efficiently and that it will be easier to provide the funding
for regeneration and community projects with a single development rather than from a number of smaller sites. 53.
Crowborough has landscape and environmental constraints on much of its periphery and in addition the growth of
the town in the past has been such that accessibility, particularly to the south, is very constrained. Southern areas
of the town are far removed from the A26, which is required for access to the north and south, and by poor road
infrastructure in the intervening areas that is incapable of improvement to an acceptable degree to support major
development. Despite the fact that the rail station is located to the south east and there are areas to the south east
of the town that do not lie within the AONB it is not possible to identify a suitable location for development adjacent
to the town that is suitable in a landscape and environmental capacity and with appropriate accessibility
characteristics within close proximity of the station. Thus, although the Strategy seeks to accommodate a relatively
large development area to the south of the town it is not considered that that could realistically be achieved in an
acceptable way. While the fact that that area is not within the AONB might initially be seen to be a benefit there are
significant access problems that effectively mitigate against all but relatively small levels of development in this
location. 54. Land to the west and north west of the town is in close juxtaposition with Ashdown Forest and the
AONB and has a rural and semi rural character that would be significantly disrupted by new development of any
scale. Accessibility is also relatively poor and there would be some difficulty in integrating development with the
need to protect the Forest and its environs. 55. Land to the north east of the town is within the High Weald AONB
and is open in character, such that there are wide ranging long distance views of the southern slopes in this area
from the Eridge Ridge to the north. The sensitivity of these areas is high in environmental terms as a result and the
character and setting of the town in the landscape would be significantly affected by development in these areas.
56. To the east of the town are Palesgate and Crowborough Ghyll, largely wooded areas mostly owned by the
Town Council and utilised for informal public open spaces that are protected by planning policies and which form
an effective semi rural edge to the town as well as being on a high ridge that gives a significant degree of
enclosure and containment to the south eastern parts of the town. 57. North of the town the land rises gently to a
long sloping ridge that runs west-east between Steel Cross and Boars Head, with Palesgate Forest in the east and
the more open landscape north of the town to the west that contains land suitable for development. Parcels exist in
the area of Steel Cross Road that would be suitable for development but there is a more significant area of land to
the east with Green Lane as an effective western boundary that is not part of the open areas of the AONB that
slopes towards the town and is therefore seen in conjunction with the urban areas rather than the countryside
to the north, and in enclosed from the general landscape. Much of the space is former orchard land that was cleared
many years ago and is now largely vacant or used for horse grazing, and is of no special quality. Although within
the AONB the land is not part of the wider landscape and could be released for development without damage to
landscape character. 58. The land is close to Beacon Community College in Green Lane, and is accessible from
the A26 without being in a location where is has direct access, so that it will not affect the openness of the principle
northern approach to the town, and is within relatively easy reach of the town centre, the train station and facilities
such as the Goldsmiths Leisure Centre via public transport, cycling or walking, at distances of 1.75km, 1.5km and
2.3km respectively. The ease of access to the A26 will mean that there need not be any unacceptable increase in
traffic filtering through the town and disrupting residential areas. 59. There is space within the potential
development area that is allocated for recreational purposes in the council’s Non Statutory Plan that could be
established as a part of larger scale development proposals, sited closer to the top of the ridge to ensure that any
potential views of the site from the north, although already well screened by trees and subject also to the views
that will be available from the north of the rugby clubhouse currently under construction, would not be affected.
The total capacity of the site might be in the order of 600 to 650 dwellings, but there is flexibility to vary that
number in accordance with the extent of need identified through the Core Strategy. 60. Access to the site has
been investigated in principle and details were provided to the council in connection with the previous consultation
process on the “Issues and Options” document. The lan

Details of Changes to be Made:
The representations we have made include the comments on the manner in which the Strategy should be changed
to meet our objections, principally insofar as changes to the level and distribution of development are concerned.

### Details of Reasons for Soundness/ Legal Compliance:

**INTRODUCTION** 1. The comments in this document are made on behalf of our clients, Knight Developments and focus on a number of issues raised by the 2011 Core Strategy Proposed Submission Document. Initially the representations address how the housing figures have been derived, the distribution of housing in the District and the uneven balance of strategic development, which is primarily focused in the south of the District. 2. In light of those comments we then consider amendments and additions to the document that should be made to ensure that it makes proper provision for the future planning of the District. In these representations the overall point that we wish to make on behalf of our client is that whilst we support in principle the allocation of housing in the south, and Polegate in particular, it is considered the current strategy does not represent the most appropriate and sustainable approach to the growth of the town and as such the strategy should be revised taking account of natural boundaries and adjacent development whilst minimising the impact on the countryside. Suggestions are made as to how and where such development could be accommodated. 3. We deal first with the context of the Core Strategy and the level of housing development it proposes, in light of a significant failure to justify or explain the levels of development proposed. REGIONAL STRATEGIES 4. PPS 12 provides the guidance for the formation of Core Strategies and the legal requirements in order for an Inspector to declare the plan ‘sound’. Paragraph 4.50 sets out the checks an Inspector must make on the plan in order to fully comply with legislation. These include having regard to national policy and generally conforming to the Regional Spatial Strategy. Paragraph 4.33 in PPS 12 further illustrates this point and seeks to ensure Core Strategies are ‘consistent with national policy and in general conformity with the regional spatial strategy’. 5. The South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum, whereas the Proposed Submission Core Strategy allocates just 9600 over the 24 year period 2006-2030, an annual rate of 400 dwellings. The differences between the annual rate of dwellings and the plan periods are important to consider here, and this can be done in two ways: - a. The South East Plan period is 2006 - 2026. The Core Strategy plan period is 2006 – 2030; four years longer. The South East Pan requires 11,000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 and 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. b. Conversely, if the South East Plan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. 6. The calculations show a clear deficit in housing provision in the Core Strategy when both annual rates and plan periods are accurately compared. 7. There has been significant debate surrounding the revocation of Regional Strategies and the latest High Court Order has confirmed that the intended abolition of the Regional Strategies by the Coalition Government can now be considered ‘material’ in future planning decisions. However, as the Cala Homes (South) Ltd v Secretary of State for Communities and Local Government and Winchester City Council [2011] EWHC 97 Judgement states, there are distinctions to be made between materiality and weight (paragraph 29). Therefore although this is a material consideration, it is the responsibility of the decision maker to defend their decision if there is any deviation from the guidance contained within the Regional Strategies. ‘Thus, in appropriate circumstances, a local planning authority in the reasonable exercise of its discretion may give no significant weight or even no weight at all to a consideration material to its decision, provided that it has had regard to it’ [our emphasis] (paragraph 30). The point here is quite clear; if the council wishes to deviate from the South East Plan it may do so, but only if there is clear and reasoned explanation given in the Core Strategy document that adequately justifies the approach taken. A failure to properly consider this issue will result in the Core Strategy being deemed unsound. 8. It is also essential in this context to have regard to paragraph 34 of PPS 3, which states ‘Regional Spatial Strategies should set out the level of overall housing provision for the region, broadly illustrated in a housing delivery trajectory, for a sufficient period to enable Local Planning Authorities to plan for housing over a period of at least 15 years.’ 9. The failure of the council to properly consider the appropriate level of housing provision and in addition to fail to properly explain and justify the reasons for the overall levels of growth that are promulgated is a significant deficiency in the Strategy and there is a need to consider substantial amendments to ensure the lack of soundness in this respect is overcome. POPULATION AND HOUSEHOLD PROJECTIONS 10. We have identified above the overarching issues in respect of the Strategy, relating to inadequacy of the council’s housing figure of 9600 over the plan period of 2006-2030 and the failure to adequately justify why that figure should be accepted. In order to properly assess the soundness of the proposed Strategy it is also necessary to discuss actual housing need in relation to demographics and statistical...
information. 11. As we have already made plain, if the Core Strategy does not accord with figures in the South East Plan, the justification for the level of housing provision it proposes should be explained elsewhere. We have therefore examined the document to seek to establish whether such an explanation exists. 12. The only reference to statistical evidence within the Core Strategy is contained on page 13 under paragraph 3.10 which states: ‘Trend based projections(1) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households.’ 13. This is accompanied by a footnote which offers a reference to Office of National Statistics (ONS) trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 15. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 17,751 Household projections Household projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890 The above figures have been sourced from www.eastsussexinfigures.org.uk 16. The important issue here is that it is unclear from the Core Strategy documents exactly which figures have been used, and it remains unclear despite our direct enquiries of the council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 1 of Paper 1 – Development of the Proposed Submission Core Strategy (BP1) also references ONS trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 15. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 17,751 Household projections Household projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890 The above figures have been sourced from www.eastsussexinfigures.org.uk 16. The important issue here is that it is unclear from the Core Strategy documents exactly which figures have been used, and it remains unclear despite our direct enquiries of the council’s on the matter. It seems likely, however, that trend based population and household projections have been obtained from this dataset. It may be the case that the figures above have been updated and that the council’s figures take into account previous figures available from 2006. These may then have been adjusted to fit in to the plan period of 2006-2030. 17. The trend based 2008 population projections were published by the Office for National Statistics (ONS) in May 2010 and the trend based housing projections are based on these figures but contain new household type categories recently developed by the Department of Communities and Local Government. 18. The trend based figures shown above are similar to the figures referenced in the Core Strategy, taking into account the adjustment of dates. However the footnote on page 13 refers to 13,000 additional dwellings, which is below any trend based figures previously referenced. It appears therefore that this may relate to the policy based figures, which are similar to the policy based household projection shown above (12,890), although there is some variation as the footnote references 2006-2031 and the above figures relate to 2001-2026. 19. The policy based figures shown above are described on the East Sussex in Figures website as being derived from housing provision figures provided within the South East Plan, housing trajectory work provided by the relevant council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 16 of BP1 in paragraph 5.12 where it is noted that: - ‘Due to the complexity of the model, the information used to predict future demand can not be examined in any great detail.’ 20. This is insufficient as the basis for the projections for future growth within the Core Strategy relies on these figures and it is the purpose of Background Papers to adequately explain these findings. This is especially the case as the council’s figures have been inadequately referenced and deviate considerably from all other relevant sources. 21. It is noted that although the footnote on page 13 of the Core Strategy is not properly referenced and there is no background information relating to how this information has been derived, the number of households (13,500) is more than the number of additional dwellings required (13,000). It is assumed that the extra 500 homes have been accommodated for through the council’s own information regarding long term empty dwellings in the District, short term empty dwellings due to an occupant’s death or houses currently being sold on the market. However it is considered that this slight drop in the number of households compared to the number of dwellings required is not greatly significant to argue for less housing need. Furthermore these figures have not been adequately referenced or justified and the calculations used to reach these figures are unavailable. HOUSING REQUIREMENT 22. It is predominantly trend based population and household projections which have been referenced within the Core Strategy where it is then explained on page 13, paragraph 3.10 that: ‘This shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered within Wealden.’ 23. This appears to be the basis of the council’s approach to the Core Strategy as a matter of basic principle; that the level of housing proposed for the District is less than the figure of new dwellings required by reference to regional policy and less than that indicated to be required by all other relevant sources for the reason that the District has insufficient capacity to accommodate housing at the levels required. This is the sole extent to which the council attempts to justify the 9600 housing figure. 24. However, there is no adequate explanation anywhere in the Strategy as to why the projected increase in households cannot be accommodated in the District. Of even greater importance, the Strategy, having stated that insufficient dwellings to meet identified need will be allowed for, fails in any way to consider or try to quantify the potentially significant social, economic and housing problems that an acknowledged failure to meet projected future requirements will cause. AFFORDABLE HOUSING 25. It is notable in respect of the council’s failure to deal with these issues that in Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) the council repeatedly concludes that high levels of housing are required within the District and acknowledges that this need is identified in a variety of demographic and statistical evidence. 26. The issue of affordable housing is raised within the Core Strategy in Background Papers 1 – Development of the
Proposed Submission Core Strategy and 2 – Managing the Delivery of Housing. The Council’s Housing Needs Assessment (January 2010) is referenced on page 17, paragraph 5.14 of BP1 which describes how the need for affordable housing cannot be accommodated within the District despite evidence showing a great need. This is again referenced within BP2 (page 3, paragraph 2.3) where the council’s Strategic Housing Market Assessment (SHMA) has also been referred to which addresses ‘very significant affordability issues’ within the District. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the country. 27. However, there is no correlation between the extent to which the failure to produce adequate levels of affordable housing that would result from the overall approach to Core Strategy housing provision would result in social deprivation and other long term problems for the population of the District. That is in our view a fundamental deficiency of the Strategy. DEMOGRAPHICS 28. BP2 - Managing the Delivery of Housing (page 3, paragraph 2.4) - explains the demographic structure of population and households within the District. There are a number of trends which have been referred to, including a decrease in household size, resulting in more single person households, particularly the elderly. The demand for housing from demographic evidence, coupled with the economic prosperity considerations below, mean that the overall health of the District depends on a future growth in population. It is therefore the responsibility of the council to provide enough housing both of the correct type and in the correct location, in accordance with the nature of demand outlined above. ECONOMIC PROSPERITY 29. It is a requirement of PPS 4 Planning for Sustainable Economic Growth, that local authorities should include within their plans a clear economic vision for their areas which ‘positively and proactively encourages sustainable economic growth’ (page 7, EC2.1 (a)). 30. Due to the need to maintain an economically active and consumer based population in line with PPS 4, in-migration is encouraged by the council. BP2, page 3, paragraph 2.4 states:- ‘In order to maintain the viability of services and facilities and the vitality of the local economy there is therefore a requirement for significant new housing development within the District which would encourage some in-migration in order to maintain population levels’. 31. In addition, ONS figures for 2007 indicate a net inward migration from within the UK to Wealden of 800 people (arising from 7,800 leaving the District and 8,600 entering), which demonstrates in-migration is occurring and adds to the demand for housing within the District. 32. It is noted within BP2, page 3, paragraph 2.4: - ‘This natural change, leading to a declining and more elderly population, could have a potentially very damaging effect on the future customer base on existing services and facilities within the District as well as for the viability and vitality of Wealden’s town centres by reducing the economically active sector.’ 33. This effectively acknowledges that on economic grounds an increase in the population that would be the result of a higher level of housing growth is required to enable the District to maintain and improve its economic base and to facilitate protection of existing employment levels and facilitate employment growth. 34. None of these considerations relating to housing and economic need are evident within the housing figures which the Core Strategy proposes overall. The low figure of 9600 is not adequately justified within any of these documents, despite evidence to show that higher levels of housing are needed and would be beneficial to the future growth of Wealden, particularly to maintain the vitality of town centres and support economic growth. CONSTRAINTS WITHIN WEALDEN 35. The Core Strategy and BP1 identify constraints within the District which is considered to restrict housing growth in certain areas. These are outlined on page 23 of BP1, paragraph 6.2 and include the issues of waste water treatment capacity in the south of the District and the need to protect the rural nature of the District and the High Weald AONB. Also included within constraints for Uckfield, Polegate and Hailsham in the Core Strategy are traffic management and congestion problems in the town centres with significant infrastructure improvements required. 36. However this must be contrasted against the above evidence where ONS figures show a demand for housing given the projected increase in population, the overwhelming need for affordable housing and the need for in-migration to tackle population needs of the Wealden District and support economic prosperity. This goes to the heart of the need for the Core Strategy, which should seek to plan positively for appropriate growth in balance with the acknowledgement of constraints, rather than reducing growth rates arbitrarily. 37. Although these constraints and needs have been referred to within the documents relating to the Core Strategy, there is no statistical analysis to ascertain how the 9600 housing figure has been decided. There is also no explanation as to why the figures have been decreased from the South East Plan allocation, which for the Core Strategy plan period would be 13,200, or as to why the proposed allocation fails to meet household projections to an even greater extent. It is our case that the need for housing has not been appropriately analysed and a figure of 9600 does not address the evidence, which clearly shows the requirement for housing. 38. This conclusion merely concurs with that which has been reached repeatedly through BP1, and in particular on page 21, paragraph 5.37, which supports the above points in relation to a significant need for housing growth. The discussion which follows on the constraints to development does not attempt to expand on the nature of these problems and by how much they would limit new housing development. Therefore without robust statistical analysis and an unclear analysis of ONS projections it not possible to ascertain how the housing figure of 9600 has been established. As it has been used as the overall basis of the Core Strategy, this is a fundamental fault in the research and analysis of the evidence base of the document which results in a need to overhaul housing figures basing them on real evidence of need. FORWARD PLANNING 39. Based on the discussion and evidence referenced above, it is considered that 9600 is not an appropriately justified housing figure for the District. The figure fails to take into account the need for future growth in the District and does not propose effective forward planning which is the main purpose of Core Strategies. 40. The only justification for providing this figure seems to be based on past housing figures. This is contained within the Core Strategy on page 29, paragraph 5.13 which explains how over the last 21 years an average of 400 dwellings have been built per annum in the District and that
based on this, a similar rate is achievable in the future. 41. This does not provide for effective forward planning as evidence is based on past results rather than remaining focused on future growth. It is evident from the projected population figures that population is expected to increase and if Wealden are unable to accommodate this growth, it will force people to reside outside of the District. This increases pressure on neighbouring authorities who suffer their own constraints and it is the responsibility of Wealden District Council to address this growth properly.

PROPOSED REVISED HOUSING FIGURES 42. The South East Plan allocated 11,000 dwellings to the District based on national housing figures and fair distribution across the region taking into account policy considerations of each District and national housing need. The DCLG policy based population and housing projections are run under the same assumptions of the trend based projections in terms of fertility, mortality and migration level, but additionally they take into account the number of houses planned to be built during the projection period. The migration level is then adjusted according to the future housing provision. This information has been obtained in response to a specific enquiry from East Sussex County Council, correspondence of which has been attached as Appendix 1. 43. On this basis it is considered that the policy based projections fairly assess population growth and the requirements of the District. It is therefore proposed that in order to accommodate the requirement for more housing based on the evidence addressed above, it is fundamental to work towards a figure of 13,000 as proposed both by the South East Plan and justified by policy based household projections. If this position is not concurred with then the 11,000 figure allocated within the South East Plan must be taken as an absolute minimum. 44. This will then adequately accommodate for projected population growth, in-migration and economic prosperity. It will also accommodate for changing demographics of smaller households and an increase in housing will greatly help to address the apparent affordability problems in the District. It will encourage a greater choice of types and tenures of housing and subject to national requirements, affordable housing can be promoted through larger housing development schemes.

DISTRIBUTION OF HOUSING 45. This section of the representations discusses the distribution of housing, primarily between the north and south of the District but also in terms of the manner of the council’s treatment of the settlement hierarchy. The first notable point is many of the significant potential infrastructure constraints, such as waste water treatment capacity and inadequate road infrastructure, are focused on the south of the District. This is where a large majority of the housing has been allocated. The Strategy acknowledges that further development here would be limited due to these constraints, but the overall approach to dealing with levels of development in the south in the South East Plan is acknowledged. It is accepted that the council’s approach to development in these areas is acceptable in principle, although there are one or two instances where we consider that the degree of emphasis on development in the south has resulted in proposed locations for housing that are inappropriate. 46. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. Given that the general approach to housing provision and location in the south is acceptable consideration therefore needs to be given in the Strategy to additional provision in the north of the District at an appropriate scale and in locations that reflect the need to consider the appropriateness of the settlement hierarchy. 47. These representations will now focus on the Strategy’s approach to development within the southern area of the District, specifically with regard to the future growth of the Polegate area.

POLEGATE AND WILLINGDON 48. The proposed submission proposes 700 houses for the area of Polegate and Willingdon which will contribute to the Strategy’s approach to locate a higher proportion of housing in the south of the District. This is supported due to the existing built urban character of the area and the extent of strategic infrastructure, particularly the proximity to road and rail networks. 49. The location of development should reflect the need to ensure that sustainable locations are given priority and that opportunity is taken to utilise land that lies close to the urban area and where at all possible within landscape features such as major roads that will act as firm defensible boundaries. This will also benefit the protection of landscapes that adjoin the area that are of local and national importance, including the South Downs to the south west and the Pevensey Levels located to the north east. These representations address the approach of the strategy in relation to this expansion of the town and the finer principles of this approach. Development Boundaries 50. The aims of the Strategy outlined in 6.31 underlie its main approach in fostering the growth of Polegate. One of these aims refers to the approach of supporting appropriate development within the built up areas of Polegate within the development boundaries of the town. Before commenting on this overall approach of the strategy we make comment on the future development boundaries of the town, as this will have far reaching consequences on the future growth of the development of Polegate. 51. The existing policy document for the District, Wealden Local Plan 1998 through its Proposal Map defines the development boundary of Polegate to the northern boundary of the existing housing development falling short of the line of the A27 trunk road, leaving land located between the two outside of the development boundary. The positioning of this boundary preceded the construction of the A27 trunk Road, which was completed in 2002. 52. Because of the changes in circumstances we consider that the Core Strategy should be formulated on the basis that the development boundary for Polegate should be aligned with the A27. That will provide an effective and appropriate barrier to development and should represent the limit of the growth of Polegate to the north. Although such issues such as development boundaries may be considered as part of the council’s later Local Development Framework documents, the Core Strategy should be formulated with this in mind as this has the potential to influence the location of future sites that can be accommodated within the town. Location of Development 53. Realignment of the development boundary with the A27, will provide the opportunity to allow the appropriate infill of housing development between the existing urban area to the northern extremities of Polegate and the A27. It is considered logical in the circumstances to apply this approach to this part of Polegate. By focusing housing adjacent to existing built up areas and which are already bounded by existing

Page 387 of 1511
development the level of housing required can be provided in a manner that is both sensitive and sustainable in its location and can be absorbed within the fabric of the town and the existing services and infrastructure. 54. The council confirmed in the SHLAA report that this approach of infilling land between the built settlement and the A27 would have limited impact on the wider landscape. The land to the north of Polegate is separated from the Highways land bordering the A27 by bunding and heavy tree planting and thus any housing to the expansion to the north of Polegate would be well screened and mitigated from any environmental impacts that may result from the adjacent A27. An example of such of land north of Polegate is land that lies adjacent to Greenleaf Gardens which embodies the approach of extending towards the development boundary that the A27 provides whilst relating well to existing built up areas and its ancillary services and infrastructure. A plan of the land at Greenleaf Gardens that illustrates this infill approach is included as Appendix 2 of this document. 55. The approach to the location of development outlined above would be more appropriate and less harmful than that proposed in the Core Strategy, which proposes a southern extension of Polegate towards Willingdon, with the majority of the 700 houses to be located to the south and south east of Polegate to the eastern side of Eastbourne Road. This expansion would lie close to an area within Flood Zone 2 and thus would contribute to pressures on flooding and adjacent land, and in addition it is considered that the role this land plays in the overall landscape, both physically and visually, is a significant factor that should mean development in that location should be subject to particular scrutiny. The land acts as a ‘buffer’ between Polegate and Willingdon, which essentially represents the outer reaches of Eastbourne, and is important in maintaining the identity of the town and its sense of place. 56. For these reasons the scale of development south of Polegate should be limited in scale to take account of the opportunities for development that lie within defensible boundaries at the north of the town. GENERAL SUMMARY 57. It follows from the general arguments set out above that we consider that the overall position of the proposed Core Strategy is such that it has not been demonstrated to any satisfactory degree that it represents a reasonable approach to meeting acknowledged housing demand. While the strategy appears satisfactory in dealing with the generalities of the amount of growth it provides for there is a significant failure to deliver sufficient housing to meet the actual likely future requirement, particularly in the north of the District. 58. The inclusion within the Core Strategy of housing figures that are below those of the South East Plan and below those in ONS projections is not justified or, importantly, explained in any meaningful way in the document, and in the absence of such adequate explanation it can only be concluded that the Strategy is unsound and will fail to provide an adequate future policy base. 59. The housing figures allocated within the Core Strategy are not sufficient to accommodate adequate growth in the District and would result in the plan failing the tests of soundness. The 9600 housing figure has not been derived from robust statistical analysis and instead relies upon past annual housing figures. The Core Strategy overall housing figures therefore fail to accommodate for future growth and effective forward planning. 60. It is considered that there is a need to allocate 13,000 dwellings over the plan period 2006-2030 to adequately address the issues relating to policy based population growth and housing requirements. Moreover, here are a number of suitable locations within the District available for housing development which do not compromise the constraints highlighted within the Core Strategy. 61. The failure of the Core Strategy to make provision in this way means that additional housing allocations are necessary in order to meet likely future requirements. The balance of the Strategy is significantly weighted towards the south of the District and in very general terms this overall approach to housing and economic development in the south, and the balance with necessary associated infrastructure provision, is justified. 62. The approach of the strategy in respect of Polegate is incorrect and would be harmful to the future of the town by way of its impact on the landscape and on the identity of the town. The strategy should be reassessed to incorporate the use of the surrounding infrastructure as development boundaries whilst using infill development to limit the impact on the surrounding countryside. 63. In order for the council to focus on effective forward planning, it must appropriately consider the identified housing requirement and sustainable distribution of housing development which should be based on statistical analysis and balanced policy considerations. This will encourage economic prosperity in identified town centres, encourage a greater choice of housing which will help to tackle affordability issues and ensure the continued vitality of the District's towns without compromising the rural nature of the District.

Details of Changes to be Made:
The representations we have made include proposed changes to the Strategy, particularly insofar as the level and distribution of development are concerned
INTRODUCTION 1. The comments in this document are made on behalf of clients with specific interest in land north of Hailsham and focus on a number of issues raised by the 2011 Core Strategy Proposed Submission Document. Initially the representations address how the housing figures have been derived, the distribution of housing in the District and the balance of strategic development, which is primarily focused in the south of the District. 2. In light of those comments we then consider amendments and additions to the document that should be made to ensure that it makes proper provision for the future planning of the District. In these representations the overall points that we wish to make on behalf of our clients are: they support the Strategy in respect of its allocation for development in the south of the District and particularly support the expansion of North Hailsham; they consider the strategy should carefully consider the nature and location of this growth and how other uses are incorporated into the strategy for this area; and in particular they consider the scale and distribution of employment provision in view of the appropriate economic benefits to the area. 3. We deal first with the context of the Core Strategy and the level of housing development it proposes, in light of a significant failure to justify or explain the levels of development proposed. REGIONAL STRATEGIES 4. PPS 12 provides the guidance for the formation of Core Strategies and the legal requirements in order for an Inspector to declare the plan ‘sound’. Paragraph 4.50 sets out the checks an Inspector must make on the plan in order to fully comply with legislation. These include having regard to national policy and generally conforming to the Regional Spatial Strategy. Paragraph 4.33 in PPS 12 further illustrates this point and seeks to ensure Core Strategies are ‘consistent with national policy and in general conformity with the regional spatial strategy’. 5. The South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum, whereas the Proposed Submission Core Strategy allocates just 9600 over the 24 year period 2006-2030, an annual rate of 400 dwellings. The differences between the annual rate of dwellings and the plan periods are important to consider here, and this can be done in two ways: a. The South East Plan period is 2006 - 2026. The Core Strategy plan period is 2006 – 2030; four years longer. The South East Pan requires 11000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 and 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. b. Conversely, if the South East Plan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. 6. The calculations show a clear deficit in housing provision in the Core Strategy when both annual rates and plan periods are accurately compared. 7. There has been significant debate surrounding the revocation of Regional Strategies and the latest High Court Order has confirmed that the intended abolition of the Regional Strategies by the Coalition Government can now be considered ‘material’ in future planning decisions. However, as the Cala Homes (South) Ltd v Secretary of State for Communities and Local Government and Winchester City Council [2011] EWHC 97 Judgement states, there are distinctions to be made between materiality and weight (paragraph 29). Therefore although this is a material consideration, it is the responsibility of the decision maker to defend their decision if there is any deviation from the guidance contained within the Regional Strategies. ‘Thus, in appropriate circumstances, a local planning authority in the reasonable exercise of its discretion may give no significant weight or even no weight at all to a consideration material to its decision, provided that it has had regard to it’ [our emphasis] (paragraph 30). The point here is quite clear; if the council wishes to deviate from the South East Plan it may do so, but only if there is clear and reasoned explanation given in the Core Strategy document that adequately justifies the approach taken. A failure to properly consider this issue will result in the Core Strategy being deemed unsound. 8. It is also essential in this context to have regard to paragraph 34 of PPS 3, which states ‘Regional Spatial Strategies should set out the level of overall housing provision for the region, broadly illustrated in a housing delivery trajectory, for a sufficient period to enable Local Planning Authorities to plan for housing over a period of at least 15 years.’ 9. The failure of the council to properly consider the appropriate level of housing provision and in addition to fail to properly explain and justify the reasons for the overall levels of growth that are promulgated is a significant deficiency in the Strategy and there is a need to consider substantial amendments to ensure the lack of soundness in this respect is overcome. POPULATION AND HOUSEHOLD PROJECTIONS 10. We have identified above the overarching issues in respect of the Strategy, relating to inadequacy of the council’s housing figure of 9600 over the plan period of 2006-2030 and the failure to adequately justify why that figure should be accepted. In order to properly assess the soundness of the proposed Strategy it is also necessary to discuss actual housing need in relation to demographics and statistical
information. 11. As we have already made plain, if the Core Strategy does not accord with figures in the South East Plan, the justification for the level of housing provision it proposes should be explained elsewhere. We have therefore examined the document to seek to establish whether such an explanation exists. 12. The only reference to statistical evidence within the Core Strategy is contained on page 13 under paragraph 3.10 which states: ‘Trend based projections(1) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households.’ 13. This is accompanied by a footnote which offers a reference to Office of National Statistics (ONS) trend based population projections in addition to different figures from East Sussex County Council. These contain a reference to a population increase of around 20,000 persons equating to 13,500 households and 13,000 additional dwellings. Both this comment and the direct reference in paragraph 3.10 indicate the need for a level of future housing that is considerably in excess of the council’s figure. 14. Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) also references ONS trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 15. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 17,751 Household projections Household projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890 The above figures have been sourced from www.eastsussexinfigures.org.uk 16. The important issue here is that it is unclear from the Core Strategy documents exactly which figures have been used, and it remains unclear despite our direct enquiries of the council on the matter. It seems likely, however, that trend based population and household projections have been obtained from this dataset. It may be the case that the figures above have been updated and that the council’s figures take into account previous figures available from 2006. These may then have been adjusted to fit in to the plan period of 2006-2030. 17. The trend based 2008 population projections were published by the Office for National Statistics (ONS) in May 2010 and the trend based housing projections are based on these figures but contain new household type categories recently developed by the Department of Communities and Local Government. 18. The trend based figures shown above are similar to the figures referenced in the Core Strategy, taking into account the adjustment of dates. However the footnote on page 13 refers to 13,000 additional dwellings, which is below any trend based figures previously referenced. It appears therefore that this may relate to the policy based figures, which are similar to the policy based household projection shown above (12,890), although there is some variation as the footnote references 2006-2031 and the above figures relate to 2001-2026. 19. The policy based figures shown above are described on the East Sussex in Figures website as being derived from housing provision figures provided within the South East Plan, housing trajectory work provided by the relevant council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 16 of BP1 in paragraph 5.12 where it is noted that: - ‘Due to the complexity of the model, the information used to predict future demand can not be examined in any great detail.’ 20. This is insufficient as the basis for the projections for future growth within the Core Strategy relies on these figures and it is the purpose of Background Papers to adequately explain these findings. This is especially the case as the council’s figures have been inadequately referenced and deviate considerably from all other relevant sources. 21. It is noted that although the footnote on page 13 of the Core Strategy is not properly referenced and there is no background information relating to how this information has been derived, the number of households (13,500) is more than the number of additional dwellings required (13,000). It is assumed that the extra 500 homes have been accommodated for through the council’s own information regarding long term empty dwellings in the District, short term empty dwellings due to an occupant’s death or houses currently being sold on the market. However it is considered that this slight drop in the number of households compared to the number of dwellings required is not greatly significant to argue for less housing need. Furthermore these figures have not been adequately referenced or justified and the calculations used to reach these figures are unavailable. HOUSING REQUIREMENT 22. It is predominantly trend based population and household projections which have been referenced within the Core Strategy where it is then explained on page 13, paragraph 3.10 that: ‘This shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered within Wealden.’ 23. This appears to be the basis of the council’s approach to the Core Strategy as a matter of basic principle; that the level of housing proposed for the District is less than the figure of new dwellings required by reference to regional policy and less than that indicated to be required by all other relevant sources for the reason that the District has insufficient capacity to accommodate housing at the levels required. This is the sole extent to which the council attempts to justify the 9600 housing figure. 24. However, there is no adequate explanation anywhere in the Strategy as to why the projected increase in households cannot be accommodated in the District. Of even greater importance, the Strategy, having stated that insufficient dwellings to meet identified need will be allowed for, fails in any way to consider or try to quantify the potentially significant social, economic and housing problems that an acknowledged failure to meet projected future requirements will cause. AFFORDABLE HOUSING 25. It is notable in respect of the council’s failure to deal with these issues that in Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) the council repeatedly concludes that high levels of housing are required within the District and acknowledges that this need is identified in a variety of demographic and statistical evidence. 26. The issue of affordable housing is raised within the Core Strategy in Background Papers 1 – Development of the
Proposed Submission Core Strategy and 2 – Managing the Delivery of Housing. The council’s Housing Needs Assessment (January 2010) is referenced on page 17, paragraph 5.14 of BP1 which describes how the need for affordable housing cannot be accommodated within the District despite evidence showing a great need. This is again referenced within BP2 (page 3, paragraph 2.3) where the council’s Strategic Housing Market Assessment (SHMA) has also been referred to which addresses ‘very significant affordability issues’ within the District. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the country. However, there is no correlation between the extent to which the failure to produce adequate levels of affordable housing that would result from the overall approach to Core Strategy housing provision would result in social deprivation and other long term problems for the population of the District. That is in our view a fundamental deficiency of the Strategy. DEMOGRAPHICS 28. BP2 - Managing the Delivery of Housing (page 3, paragraph 2.4) - explains the demographic structure of population and households within the District. There are a number of trends which have been referred to, including a decrease in household size, resulting in more single person households, particularly the elderly. The demand for housing from demographic evidence, coupled with the economic prosperity considerations below, mean that the overall health of the District depends on a future growth in population. It is therefore the responsibility of the council to provide enough housing both of the correct type and in the correct location, in accordance with the nature of demand outlined above. ECONOMIC PROSPERITY 29. It is a requirement of PPS 4 Planning for Sustainable Economic Growth, that local authorities should include within their plans a clear economic vision for their areas which ‘positively and proactively encourages sustainable economic growth’ (page 7, EC2.1 (a)). 30. Due to the need to maintain an economically active and consumer based population in line with PPS 4, in-migration is encouraged by the Council. BP2, page 3, paragraph 2.4 states: ‘In order to maintain the viability of services and facilities and the vitality of the local economy there is therefore a requirement for significant new housing development within the District which would encourage some in-migration in order to maintain population levels’. 31. In addition, ONS figures for 2007 indicate a net inward migration from within the UK to Wealden of 800 people (arising from 7,800 leaving the District and 8,600 entering), which demonstrates in-migration is occurring and adds to the demand for housing within the District. 32. It is noted within BP2, page 3, paragraph 2.4: - ‘This natural change, leading to a declining and more elderly population, could have a potentially very damaging effect on the future customer base on existing services and facilities within the District as well as for the viability and vitality of Wealden’s town centres by reducing the economically active sector.’ 33. This effectively acknowledges that on economic grounds an increase in the population that would be the result of a higher level of housing growth is required to enable the District to maintain and improve its economic base and to facilitate protection of existing employment levels and facilitate employment growth. 34. None of these considerations relating to housing and economic need are evident within the housing figures which the Core Strategy proposes overall. The low figure of 9600 is not adequately justified within any of these documents, despite evidence to show that higher levels of housing are needed and would be beneficial to the future growth of Wealden, particularly to maintain the vitality of town centres and support economic growth. CONSTRAINTS WITHIN WEALDEN 35. The Core Strategy and BP1 identify constraints within the District which is considered to restrict housing growth in certain areas. These are outlined on page 23 of BP1, paragraph 6.2 and include the issues of waste water treatment capacity in the south of the District and the need to protect the rural nature of the District and the High Weald AONB. Also included within constraints for Uckfield, Poleygate and Hailsham in the Core Strategy are traffic management and congestion problems in the town centres with significant infrastructure improvements required. 36. However this must be contrasted against the above evidence where ONS figures show a demand for housing given the projected increase in population, the overwhelming need for affordable housing and the need for in-migration to tackle population needs of the Wealden District and support economic prosperity. This goes to the heart of the need for the Core Strategy, which should seek to plan positively for appropriate growth in balance with the acknowledgement of constraints, rather than reducing growth rates arbitrarily. 37. Although these constraints and needs have been referred to within the documents relating to the Core Strategy, there is no statistical analysis to ascertain how the 9600 housing figure has been decided. There is also no explanation as to why the figures have been decreased from the South East Plan allocation, which for the Core Strategy plan period would be 13,200, or as to why the proposed allocation fails to meet household projections to an even greater extent. It is our case that the need for housing has not been appropriately analysed and a figure of 9600 does not address the evidence, which clearly shows the requirement for housing. 38. This conclusion merely concurs with that which has been reached repeatedly through BP1, and in particular on page 21, paragraph 5.37, which supports the above points in relation to a significant need for housing growth. The discussion which follows on the constraints to development does not attempt to expand on the nature of these problems and by how much they would limit new housing development. Therefore without robust statistical analysis and an unclear analysis of ONS projections it not possible to ascertain how the housing figure of 9600 has been established. As it has been used as the overall basis of the Core Strategy, this is a fundamental fault in the research and analysis of the evidence base of the document which results in a need to overhaul housing figures basing them on real evidence of need. FORWARD PLANNING 39. Based on the discussion and evidence referenced above, it is considered that 9600 is not an appropriately justified housing figure for the District. The figure fails to take into account the need for future growth in the District and does not propose effective forward planning which is the main purpose of Core Strategies. 40. The only justification for providing this figure seems to be based on past housing figures. This is contained within the Core Strategy on page 29, paragraph 5.13 which explains how over the last 21 years an average of 400 dwellings have been built per annum in Wealden and that
based on this, a similar rate is achievable in the future. 41. This does not provide for effective forward planning as evidence is based on past results rather than remaining focused on future growth. It is evident from the projected population figures that population is expected to increase and if Wealden are unable to accommodate this growth, it will force people to reside outside of the District. This increases pressure on neighbouring authorities who suffer their own constraints and it is the responsibility of Wealden District Council to address this growth properly.

PROPOSED REVISED HOUSING FIGURES 42. The South East Plan allocated 11,000 dwellings to the District based on national housing figures and fair distribution across the region taking into account policy considerations of each District and national housing need. The DCLG policy based population and housing projections are run under the same assumptions of the trend based projections in terms of fertility, mortality and migration level, but additionally they take into account the number of houses planned to be built during the projection period. The migration level is then adjusted according to the future housing provision. This information has been obtained in response to a specific enquiry from East Sussex County Council, correspondence of which has been attached as Appendix 1. 43. On this basis it is considered that the policy based projections fairly assess population growth and the requirements of the District. It is therefore proposed that in order to accommodate the requirement for more housing based on the evidence addressed above, it is fundamental to work towards a figure of 13,000 as proposed both by the South East Plan and justified by policy based household projections. If this position is not concurred with then the 11,000 figure allocated within the South East Plan must be taken as an absolute minimum. 44. This will then adequately accommodate for projected population growth, in-migration and economic prosperity. It will also accommodate for changing demographics of smaller households and an increase in housing will greatly help to address the apparent affordability problems in the District. It will encourage a greater choice of types and tenures of housing and subject to national requirements, affordable housing can be promoted through larger housing development schemes.

DISTRIBUTION OF HOUSING 45. This section of the representations discusses the distribution of housing, primarily between the north and south of the District but also in terms of the manner of the council’s treatment of the settlement hierarchy. The first notable point is many of the significant potential infrastructure constraints, such as waste water treatment capacity and inadequate road infrastructure, are focused on the south of the District. This is where a large majority of the housing has been allocated. The Strategy acknowledges that further development here would be limited due to these constraints, but the overall approach to dealing with levels of development in the south in the South East Plan is acknowledged. It is accepted that the councils approach to development in these areas is acceptable in principle, although there are one or two instances where we consider that the degree of emphasis on development in the south has resulted in proposed locations for housing that are inappropriate. 46. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. Given that the general approach to housing provision and location in the south is acceptable consideration therefore needs to be given in the Strategy to additional provision in the north of the District at an appropriate scale and in locations that reflect the need to consider the appropriateness of the settlement hierarchy. HAILSHAM 47. These representations will now focus on the Strategy’s approach to development within the southern area of the District, specifically with regard to the future growth of the Hailsham area and the distribution and type of development that is set out by the Strategy in respect of this area. 48. The general strategy of the expansion of north Hailsham proposed within the draft Core Strategy is considered a sound and appropriate expansion of this growing market town. This expansion will provide further housing in an area suitable for housing in proximity to existing infrastructure whilst connecting the town with the existing development currently being undertaken at Hellingly Hospital located to the north of Hailsham. This northern expansion is the most appropriate location in light of the natural constraints that affect Hailsham, most notably the flood plain on its eastern boundary and the main trunk road that runs to the west and around the south of the town. 49. The Strategy proposes 700 homes and 8650 square metres of employment floorspace to the land north of Hailsham, following future infrastructure improvements to the roads that serve this area. This combination of housing, retail and employment space, proposed within paragraph 6.19 of the Strategy, should provide development that will be self supporting and provide the range of facilities that such an expansion will require. 50. The land itself appears suitable for development in terms of both its topography and location. The development proposed as part of this expansion will also serve to link the ongoing Hellingly Hospital development site within the existing settlement of Hailsham as well as providing services and employment to serve this part of Hailsham. 51. At present north Hailsham is primarily a residential area with the majority of services and employment located to the centre and south of Hailsham. For instance, the main employment sites within Hailsham are largely concentrated to the south of the town, mainly in the industrial estates at Dipllocks Way, South Road and Station Road and thus the Strategy’s approach to provide such employment provision and other uses alongside the significant housing development in the area is a sound one bringing the residential northern part of Hailsham into this expansion and vice versa. 52. As the Strategy proposes a significant amount of new employment in the northern expansion, it is appropriate to assess the extent to which provision of this proposed employment floorspace could be achieved by consolidation and expansion of existing employment sites. This approach would limit further environmental impacts of such uses and would prevent the need to develop or encroach on greenfield sites which in themselves would be subject to significant environmental and ecological constraints, particularly so with regards to the potential impact of such employment and business uses. 53. Furthermore, the existing sites are largely already served by infrastructure and services which would further contribute to the case for using and redeveloping existing employment sites to provide the necessary employment space proposed by the draft Core Strategy. There are a number of sites within the locality of the area north of

Page 392 of 1511
Hailsham that might provide further employment facilities through redevelopment. GENERAL SUMMARY 54. It follows from the general arguments set out above that we consider that the overall position of the proposed Core Strategy is such that it has not been demonstrated to any satisfactory degree that it represents a reasonable approach to meeting acknowledged housing demand. While the strategy appears satisfactory in dealing with the generalities of the amount of growth it provides for there is a significant failure to deliver sufficient housing to meet the actual likely future requirement, particularly in the north of the District. 55. The inclusion within the Core Strategy of housing figures that are below those of the South East Plan and below those in ONS projections is not justified or, importantly, explained in any meaningful way in the document, and in the absence of such adequate explanation it can only be concluded that the Strategy is unsound and will fail to provide an adequate future policy base. 56. The housing figures allocated within the Core Strategy are not sufficient to accommodate adequate growth in the District and would result in the plan failing the tests of soundness. The 9600 housing figure has not been derived from robust statistical analysis and instead relies upon past annual housing figures. The Core Strategy overall housing figures therefore fail to accommodate for future growth and effective forward planning. 57. It is considered that there is a need to allocate 13,000 dwellings over the plan period 2006-2030 to adequately address the issues relating to policy based population growth and housing requirements. Moreover, there are a number of suitable locations within the District available for housing development which do not compromise the constraints highlighted within the Core Strategy. 58. The failure of the Core Strategy to make provision in this way means that additional housing allocations are necessary in order to meet likely future requirements. The balance of the Strategy is significantly weighted towards the south of the District and although the overall approach to housing and economic development, and the balance with necessary associated infrastructure provision, in the south is justified in the Strategy the failure of the Strategy to provide appropriately for development in the north of the District is wrong. 59. The future growth to North Hailsham represents an example of appropriate growth within the south of the District and the Strategy’s approach to incorporate employment provision within this growth is a sound one. Furthermore, the shortfall in housing provision in the plan highlights the need to ensure that the areas suggested for development in the south of the District come forward and the importance of the land at North Hailsham becomes significantly greater in that event in order that the council is able to meet appropriate housing requirements. This should be done in a manner that properly integrates with existing employment sites as a focus for the further proposed future employment provision. 60. In order for the Council to focus on effective forward planning, it must appropriately consider the identified housing requirement and sustainable distribution of housing development which should be based on statistical analysis and balanced policy considerations. This will encourage economic prosperity in identified town centres, encourage a greater choice of housing and affordability issues and ensure the continued vitality of the Districts towns without compromising the rural nature of the District.

Details of Changes to be Made:
Our representations set out the changes we consider necessary to the Strategy
INTRODUCTION 1. The comments in this document are made on behalf of Mr Jerry Houlton and focus on a number of issues raised by the 2011 Core Strategy Proposed Submission Document. Initially the representations address how the housing figures have been derived, the distribution of housing in the District and the uneven balance of strategic development, which is primarily focused in the south of the District. 2. In light of those comments we then consider amendments and additions to the document that should be made to ensure that it makes proper provision for the future planning of the District. In these representations the overall point that we wish to make on behalf of our client is that there should be amendments to the Strategy to focus more development in the north of the District and that, as the largest town, such development should be centred on Crowborough. Suggestions are made as to how and where such development could be accommodated. 3. The purpose of these representations is to support the development of Uckfield, but only on a smaller scale, where development can be assimilated into the landscape setting of the town, close to the existing development boundary. The proposed urban extension to the west of Uckfield contained within the Core Strategy is in a highly unsustainable location, which would have a significant detrimental impact on the local road infrastructure, the topographical nature of the landscape and is at risk of flooding. 4. We deal first with the context of the Core Strategy and the level of housing development it proposes, in light of a significant failure to justify or explain the levels of development proposed. REGIONAL STRATEGIES 5. PPS 12 provides the guidance for the formation of Core Strategies and the legal requirements in order for an Inspector to declare the plan ‘sound’. Paragraph 4.50 sets out the checks an Inspector must make on the plan in order to fully comply with legislation. These include having regard to national policy and generally conforming to the Regional Spatial Strategy. Paragraph 4.33 in PPS 12 further illustrates this point and seeks to ensure Core Strategies are ‘consistent with national policy and in general conformity with the regional spatial strategy’. 6. The South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum, whereas the Proposed Submission Core Strategy allocates just 9600 over the 24 year period 2006-2030, an annual rate of 400 dwellings. The differences between the annual rate of dwellings and the plan periods are important to consider here, and this can be done in two ways: - a. The South East Plan period is 2006 - 2026. The Core Strategy plan period is 2006 – 2030; four years longer. The South East Pan requires 11000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 and 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. b. Conversely, if the South East Plan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. 7. The calculations show a clear deficit in housing provision in the Core Strategy when both annual rates and plan periods are accurately compared. 8. There has been significant debate surrounding the revocation of Regional Strategies and the latest High Court Order has confirmed that the intended abolition of the Regional Strategies by the Coalition Government can now be considered ‘material’ in future planning decisions. However, as the Cala Homes (South) Ltd v Secretary of State for Communities and Local Government and Winchester City Council [2011] EWHC 97 Judgement states, there are distinctions to be made between materiality and weight (paragraph 29). Therefore although this is a material consideration, it is the responsibility of the decision maker to defend their decision if there is any deviation from the guidance contained within the Regional Strategies. ‘Thus, in appropriate circumstances, a local planning authority in the reasonable exercise of its discretion may give no significant weight or even no weight at all to a consideration material to its decision, provided that it has had regard to it’ [our emphasis] (paragraph 30). The point here is quite clear; if the council wishes to deviate from the South East Plan it may do so, but only if there is clear and reasoned explanation given in the Core Strategy document that adequately justifies the approach taken. A failure to properly consider this issue will result in the Core Strategy being deemed unsound. 9. It is also essential in this context to have regard to paragraph 34 of PPS 3, which states ‘Regional Spatial Strategies should set out the level of overall housing provision for the region, broadly illustrated in a housing delivery trajectory, for a sufficient period to enable Local Planning Authorities to plan for housing over a period of at least 15 years.’ 10. The failure of the council to properly consider the appropriate level of housing provision and in addition to fail to properly explain and justify the reasons for the overall levels of growth that are promulgated is a significant deficiency in the Strategy and there is a need to consider substantial amendments to ensure the lack of soundness in this respect is overcome. POPULATION AND HOUSEHOLD PROJECTIONS 11. We have identified above the overarching issues in respect of the

Strategy, relating to inadequacy of the council’s housing figure of 9600 over the plan period of 2006-2030 and the failure to adequately justify why that figure should be accepted. In order to properly assess the soundness of the proposed Strategy it is also necessary to discuss actual housing need in relation to demographics and statistical information. 12. As we have already made plain, if the Core Strategy does not accord with figures in the South East Plan, the justification for the level of housing provision it proposes should be explained elsewhere. We have therefore examined the document to seek to establish whether such an explanation exists. 13. The only reference to statistical evidence within the Core Strategy is contained on page 13 under paragraph 3.10 which states: ‘Trend based projections(1) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households.’ 14. This is accompanied by a footnote which offers a reference to Office of National Statistics (ONS) trend based projections in addition to different figures from East Sussex County Council. These contain a reference to a population increase of around 20,000 persons equating to 13,500 households and 13,000 additional dwellings. Both this comment and the direct reference in paragraph 3.10 indicate the need for a level of future housing that is considerably in excess of the council’s figure. 15. Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) also references ONS trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 16. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 17,751 Households projections Household projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890 The above figures have been contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 18. The trend based 2008 population projections were published by the Office for National Statistics (ONS) in May 2010 and the trend based housing projections are based on these figures but contain new household type categories recently developed by the Department of Communities and Local Government. 19. The trend based figures shown above are similar to the figures referenced in the Core Strategy, taking into account the adjustment of dates. However the footnote on page 13 refers to 13,000 additional dwellings, which is below any trend based figures previously referenced. It appears therefore that this may relate to the policy based figures, which are similar to the policy based household projection shown above (12,890), although there is some variation as the footnote references 2006-2031 and the above figures relate to 2001-2026. 20. The policy based figures shown above are described on the East Sussex in Figures website as being derived from housing provision figures provided within the South East Plan, housing trajectory work provided by the relevant council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 16 of BP1 in paragraph 5.12 where it is noted that: - ‘Due to the complexity of the model, the information used to predict future demand can not be examined in any great detail.’ 21. This is insufficient as the basis for the projections for future growth within the Core Strategy relies on these figures and it is the purpose of Background Papers to adequately explain these findings. This is especially the case as the council’s figures have been inadequately referenced and deviate considerably from all other relevant sources. 22. It is noted that although the footnote on page 13 of the Core Strategy is not properly referenced and there is no background information relating to how this information has been derived, the number of households (13,500) is more than the number of additional dwellings required (13,000). It is assumed that the extra 500 homes have been accommodated for through the council’s own information regarding long term empty dwellings in the District, short term empty dwellings due to an occupant’s death or houses currently being sold on the market. However it is considered that this slight drop in the number of households compared to the number of dwellings required is not greatly significant to argue for less housing need. Furthermore these figures have not been adequately referenced or justified and the calculations used to reach these figures are unavailable. HOUSING REQUIREMENT 23. It is predominantly trend based population and household projections which have been referenced within the Core Strategy where it is then explained on page 13, paragraph 3.10 that: ‘This shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered within Wealden.’ 24. This appears to be the basis of the council’s approach to the Core Strategy as a matter of basic principle; that the level of housing proposed for the District is less than the figure of new dwellings required by reference to regional policy and less than that indicated to be required by all other relevant sources for the reason that the District has insufficient capacity to accommodate housing at the levels required. This is the sole extent to which the council attempts to justify the 9600 housing figure. 25. However, there is no adequate explanation anywhere in the Strategy as to why the projected increase in households cannot be accommodated in the District. Of even greater importance, the Strategy, having stated that insufficient dwellings to meet identified need will be allowed for, fails in any way to consider or try to quantify the potentially significant social, economic and housing problems that an acknowledged failure to meet projected future requirements will cause. AFFORDABLE HOUSING 26. It is notable in respect of the council’s failure to deal with these issues that in Background Paper 1 – Development of the Proposed
Submission Core Strategy (BP1) the council repeatedly concludes that high levels of housing are required within the District and acknowledges that this need is identified in a variety of demographic and statistical evidence. 27. The issue of affordable housing is raised within the Core Strategy in Background Papers 1 – Development of the Proposed Submission Core Strategy and 2 – Managing the Delivery of Housing. The council’s Housing Needs Assessment (January 2010) is referenced on page 17, paragraph 5.14 of BP1 which describes how the need for affordable housing cannot be accommodated within the District despite evidence showing a great need. This is again referenced within BP2 (page 3, paragraph 2.3) where the council’s Strategic Housing Market Assessment (SHMA) has also been referred to which addresses ‘very significant affordability issues’ within the District. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the country. 28. However, there is no correlation between the extent to which the failure to produce adequate levels of affordable housing that would result from the overall approach to Core Strategy housing provision would result in social deprivation and other long term problems for the population of the District. That is in our view a fundamental deficiency of the Strategy. DEMOGRAPHICS 29. BP2 - Managing the Delivery of Housing (page 3, paragraph 2.4) - explains the demographic structure of population and households within The District. There are a number of trends which have been referred to, including a decrease in household size, resulting in more single person households, particularly the elderly. The demand for housing from demographic evidence, coupled with the economic prosperity considerations below, mean that the overall health of the District depends on a future growth in population. It is therefore the responsibility of the council to provide enough housing both of the correct type and in the correct location, in accordance with the nature of demand outlined above. ECONOMIC PROSPERITY 30. It is a requirement of PPS 4 Planning for Sustainable Economic Growth, that local authorities should include within their plans a clear economic vision for their areas which ‘positively and proactively encourages sustainable economic growth’ (page 7, EC2.1 (a)). 31. Due to the need to maintain an economically active and consumer based population in line with PPS 4, in-migration is encouraged by the council. BP2, page 3, paragraph 2.4 states: ‘In order to maintain the viability of services and facilities and the vitality of the local economy there is therefore a requirement for significant new housing development within the District which would encourage some in-migration in order to maintain population levels’. 32. In addition, ONS figures for 2007 indicate a net inward migration from within the UK to Wealden of 800 people (arising from 7,800 leaving the District and 8,600 entering), which demonstrates in-migration is occurring and adds to the demand for housing within the District. 33. It is noted within BP2, page 3, paragraph 2.4: - 'This natural change, leading to a declining and more elderly population, could have a potentially very damaging effect on the future customer base on existing services and facilities within the District as well as for the viability and vitality of Wealden’s town centres by reducing the economically active sector.’ 34. This effectively acknowledges that on economic grounds an increase in the population that would be the result of a higher level of housing growth is required to enable the District to maintain and improve its economic base and to facilitate protection of existing employment levels and facilitate employment growth. 35. None of these considerations relating to housing and economic need are evident within the housing figures which the Core Strategy proposes overall. The low figure of 9600 is not adequately justified within any of these documents, despite evidence to show that higher levels of housing are needed and would be beneficial to the future growth of Wealden, particularly to maintain the vitality of town centres and support economic growth. CONSTRAINTS WITHIN WEALDEN 36. The Core Strategy and BP1 identify constraints within the District which is considered to restrict housing growth in certain areas. These are outlined on page 23 of BP1, paragraph 6.2 and include the issues of waste water treatment capacity in the south of the District and the need to protect the rural nature of the District and the High Weald AONB. Also included within constraints for Uckfield, Polegate and Hailsham in the Core Strategy are traffic congestion and congestion problems in the town centres with significant infrastructure improvements required. 37. However this must be contrasted against the above evidence where ONS figures show a demand for housing given the projected increase in population, the overwhelming need for affordable housing and the need for in-migration to tackle population needs of the Wealden District and support economic prosperity. This goes to the heart of the need for the Core Strategy, which should seek to plan positively for appropriate growth in balance with the acknowledgement of constraints, rather than reducing growth rates arbitrarily. 38. Although these constraints and needs have been referred to within the documents relating to the Core Strategy, there is no statistical analysis to ascertain how the 9600 housing figure has been decided. There is also no explanation as to why the figures have been decreased from the South East Plan allocation, which for the Core Strategy plan period would be 13,200, or as to why the proposed allocation fails to meet household projections to an even greater extent. It is our case that the need for housing has not been appropriately analysed and a figure of 9600 does not address the evidence, which clearly shows the requirement for housing. 39. This conclusion merely concurs with that which has been reached repeatedly through BP1, and in particular on page 21, paragraph 5.37, which supports the above points in relation to a significant need for housing growth. The discussion which follows on the constraints to development does not attempt to expand on the nature of these problems and by how much they would limit new housing development. Therefore without robust statistical analysis and an unclear analysis of ONS projections it not possible to ascertain how the housing figure of 9600 has been established. As it has been used as the overall basis of the Core Strategy, this is a fundamental fault in the research and analysis of the evidence base of the document which results in a need to overhaul housing figures basing them on real evidence of need. FORWARD PLANNING 40. Based on the discussion and evidence referenced above, it is considered that 9600 is not an appropriately justified housing figure for the District. The figure fails to take into account the need for future growth in the District and does not propose effective forward
planning which is the main purpose of Core Strategies. 41. The only justification for providing this figure seems to be based on past housing figures. This is contained within the Core Strategy on page 29, paragraph 5.13 which explains how over the last 21 years an average of 400 dwellings have been built per annum in the District and that based on this, a similar rate is achievable in the future. 42. This does not provide for effective forward planning as evidence is based on past results rather than remaining focused on future growth. It is evident from the projected population figures that population is expected to increase and if Wealden are unable to accommodate this growth, it will force people to reside outside of the District. This increases pressure on neighbouring authorities who suffer their own constraints and it is the responsibility of Wealden District Council to address this growth properly.

PROPOSED REVISED HOUSING FIGURES 43. The South East Plan allocated 11,000 dwellings to the District based on national housing figures and fair distribution across the region taking into account policy considerations of each District and national housing need. The DCLG policy based population and housing projections are run under the same assumptions of the trend based projections in terms of fertility, mortality and migration level, but additionally they take into account the number of houses planned to be built during the projection period. The migration level is then adjusted according to the future housing provision. This information has been obtained in response to a specific enquiry from East Sussex County Council, correspondence of which has been attached as Appendix 1. 44. On this basis it is considered that the policy based projections fairly assess population growth and the requirements of the District. It is therefore proposed that in order to accommodate the requirement for more housing based on the evidence addressed above, it is fundamental to work towards a figure of 13,000 as proposed both by the South East Plan and justified by policy based household projections. If this position is not concurred with then the 11,000 figure allocated within the South East Plan must be taken as an absolute minimum. 45. This will then adequately accommodate for projected population growth, in-migration and economic prosperity. It will also accommodate for changing demographics of smaller households and an increase in housing will greatly help to address the apparent affordability problems in the District. It will encourage a greater choice of types and tenures of housing and subject to national requirements, affordable housing can be promoted through larger housing development schemes. DISTRIBUTION OF HOUSING 46. This section of the representations discusses the distribution of housing, primarily between the north and south of the District but also in terms of the manner of the council’s treatment of the settlement hierarchy. The first notable point is many of the significant potential infrastructure constraints, such as waste water treatment capacity and inadequate road infrastructure, are focused on the south of the District. This is where a large majority of the housing has been allocated. The Strategy acknowledges that further development here would be limited due to these constraints, but the overall approach to dealing with levels of development in the south in the South East Plan is acknowledged. It is accepted that the councils approach to development in these areas is acceptable in principle, although there are one or two instances where we consider that the degree of emphasis on development in the south has resulted in proposed locations for housing that are inappropriate. 47. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. Given that the general approach to housing provision and location in the south is acceptable consideration therefore needs to be given in the Strategy to additional provision in the north of the District at an appropriate scale and in locations that reflect the need to consider the appropriateness of settlement hierarchy. 48. Crowborough is the largest town in the District and is designated as a District Centre within the Core Strategy. Given its close proximity to Tunbridge Wells it is the most appropriate location to accommodate the requirement for more housing. This will help to achieve the aims of providing more development to support growth and improving retail and employment opportunities and the provision of affordable housing in the north of the District. 49. Presently, the majority of development within the north of the District is focused in a single urban extension to the west of Uckfield (SD1). Expansion of Uckfield in this manner is considered to be inappropriate due to issues including traffic congestion, capacity, flood risk, noise from the A22 and the sites prominence in the wider landscape and the very exposed views from the Uckfield bypass. These issues have already been highlighted with the council’s Strategic Housing Land Availability Assessment (SHLAA). 50. This site would represent a major incursion into unspoilt countryside that will have a very seriously damaging effect on a wide area and will completely change the setting of the town and its relationship to the surrounding countryside. That is because of the prominence of the location and its poor relationship in a landscape sense to the town, from which it is almost entirely visually detached by virtue of the topography of the area and the openness of the location to the surrounding area. 51. While such large scale development at the town would have widely unacceptable impacts it would be appropriate to seek to focus development in Uckfield on smaller sites which are in close proximity to the existing development boundary. Such housing development would be well integrated with the settlement pattern and would not compromise the landscape quality of the area surrounding the town, the preservation of which is one of the most significant objectives of the council. There is, for instance, land on Snatts Road, immediately adjacent to the development boundary, which has been considered in the SHLAA for a total of 32 net dwellings, which could be delivered within the next six years. A plan of the land is attached as Appendix 2. It would present a minimal impact on the constraints identified at Uckfield but would help to support the small scale development which should be encouraged in Uckfield. GENERAL SUMMARY 52. It follows from the general arguments set out above that we consider that the overall position of the proposed Core Strategy is such that it has not been demonstrated to any satisfactory degree that it represents a reasonable approach to meeting acknowledged housing demand. While the strategy appears satisfactory in dealing with the generalities of the amount of growth it provides for there is a significant failure to deliver sufficient housing to meet the actual likely future requirement, particularly in the north
of the District. 53. The inclusion within the Core Strategy of housing figures that are below those of the South East Plan and below those in ONS projections is not justified or, importantly, explained in any meaningful way in the document, and in the absence of such adequate explanation it can only be concluded that the Strategy is unsound and will fail to provide an adequate future policy base. 54. The housing figures allocated within the Core Strategy are not sufficient to accommodate adequate growth in the District and would result in the plan failing the tests of soundness. The 9600 housing figure has not been derived from robust statistical analysis and instead relies upon past annual housing figures. The Core Strategy overall housing figures therefore fail to accommodate for future growth and effective forward planning. 55. It is considered that there is a need to allocate 13,000 dwellings over the plan period 2006-2030 to adequately address the issues relating to policy based population growth and housing requirements. Moreover, here are a number of suitable locations within the District available for housing development which do not compromise the constraints highlighted within the Core Strategy. 56. The failure of the Core Strategy to make provision in this way means that additional housing allocations are necessary in order to meet likely future requirements. The balance of the Strategy is significantly weighted towards the south of the District and although the overall approach to housing and economic development, and the balance with necessary associated infrastructure provision, in the south is justified in the Strategy the failure of the Strategy to provide appropriately for development in the north of the District is wrong. 57. The allocation of land for 1000 dwellings to the west of Uckfield is manifestly a potential visual and environmental disaster in terms of the relationship to the surrounding rural area and the extremely poor physical and visual links to the urban area of the town. The justification for the development, that it would enable the resolution of transport difficulty in the town centre, is somewhat bizarre given the additional activity and movement that it would generate and that the only means of preventing that would be to ensure that the development was effectively unsustainable by encouraging the population in which it would result to travel elsewhere other than Uckfield for the provision of shops and services. 58. In order for the council to focus on effective forward planning, it must appropriately consider the identified housing requirement and sustainable distribution of housing development which should be based on statistical analysis and balanced policy considerations. This will encourage economic prosperity in identified town centres, encourage a greater choice of housing which will help to tackle affordability issues and ensure the continued vitality of the District’s towns without compromising the rural nature of the District.

Details of Changes to be Made:

Our representations make reference to changes we consider necessary to the Strategy
INTRODUCTION 1. The comments in this document are made on behalf of Starglade Healthcare Ltd and focus on a number of issues raised by the 2011 Core Strategy Proposed Submission Document. Initially the representations address how the housing figures have been derived, the distribution of housing in the District and the uneven balance of strategic development, which is primarily focused in the south of the District. 2. In light of those comments we then consider amendments and additions to the document that should be made to ensure that it makes proper provision for the future planning of the District. In these representations the overall point that we wish to make on behalf of our client is that there should be amendments to the Strategy to focus more development in the north of the District. Suggestions are made as to how and where such development could be accommodated. 3. The purpose of these representations is to support the allocation of small scale development within key villages and service centres within the District as allocated by policy WCS6 – Rural Areas Strategy. There is a need for additional housing in settlements to the north of the District such as Wadhurst to be able to accommodate future housing development. The availability of suitable land on the periphery of the Key Villages should be taken fully into account in the overall strategy, particularly in view of the fact that it is considered there is a significant shortfall in housing provision. That shortfall increases the weight that should be given to the Key Villages. 4. We deal first with the context of the Core Strategy and the level of housing development it proposes, in light of a significant failure to justify or explain the levels of development proposed. REGIONAL STRATEGIES 5. PPS 12 provides the guidance for the formation of Core Strategies and the legal requirements in order for an Inspector to declare the plan ‘sound’. Paragraph 4.50 sets out the checks an Inspector must make on the plan in order to fully comply with legislation. These include having regard to national policy and generally conforming to the Regional Spatial Strategy. Paragraph 4.33 in PPS 12 further illustrates this point and seeks to ensure Core Strategies are ‘consistent with national policy and in general conformity with the regional spatial strategy’. 6. The South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum, whereas the Proposed Submission Core Strategy allocates just 9600 over the 24 year period 2006-2030, an annual rate of 400 dwellings. The differences between the annual rate of dwellings and the plan periods are important to consider here, and this can be done in two ways: a. If the South East Plan period is 2006 - 2026. The Core Strategy plan period is 2006 – 2030; four years longer. The South East Pan requires 11,000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 and 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. b. Conversely, if the South East Pan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. 7. The calculations show a clear deficit in housing provision in the Core Strategy when both annual rates and plan periods are accurately compared. 8. There has been significant debate surrounding the revocation of Regional Strategies and the latest High Court Order has confirmed that the intended abolition of the Regional Strategies by the Coalition Government can now be considered ‘material’ in future planning decisions. However, as the Cala Homes (South) Ltd v Secretary of State for Communities and Local Government and Winchester City Council [2011] EWHC 97 Judgement states, there are distinctions to be made between materiality and weight (paragraph 29). Therefore although this is a material consideration, it is the responsibility of the decision maker to defend their decision if there is any deviation from the guidance contained within the Regional Strategies. ‘Thus, in appropriate circumstances, a local planning authority in the reasonable exercise of its discretion may give no significant weight or even no weight at all to a consideration material to its decision, provided that it has had regard to it’ [our emphasis] (paragraph 30). The point here is quite clear; if the council wishes to deviate from the South East Plan it may do so, but only if there is clear and reasoned explanation given in the Core Strategy document that adequately justifies the approach taken. A failure to properly consider this issue will result in the Core Strategy being deemed unsound. 9. It is also essential in this context to have regard to paragraph 34 of PPS 3, which states ‘Regional Spatial Strategies should set out the level of overall housing provision for the region, broadly illustrated in a housing delivery trajectory, for a sufficient period to enable Local Planning Authorities to plan for housing over a period of at least 15 years.’ 10. The failure of the council to properly consider the appropriate level of housing provision and in addition to fail to properly explain and justify the reasons for the overall levels of growth that are promulgated is a significant deficiency in the Strategy and there is a need to consider substantial amendment to ensure the lack of soundness in this respect is overcome. POPULATION AND HOUSEHOLD PROJECTIONS 11. We have identified above the
overarching issues in respect of the Strategy, relating to inadequacy of the council’s housing figure of 9600 over the plan period of 2006-2030 and the failure to adequately justify why that figure should be accepted. In order to properly assess the soundness of the proposed Strategy it is also necessary to discuss actual housing need in relation to demographics and statistical information. 12. As we have already made plain, if the Core Strategy does not accord with figures in the South East Plan, the justification for the level of housing provision it proposes should be explained elsewhere. We have therefore examined the document to seek to establish whether such an explanation exists. 13. The only reference to statistical evidence within the Core Strategy is contained on page 13 under paragraph 3.10 which states: ‘Trend based projections(1) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households.’ 14. This is accompanied by a footnote which offers a reference to Office of National Statistics (ONS) trend based projections in addition to different figures from East Sussex County Council. These contain a reference to a population increase of around 20,000 persons equating to 13,500 households and 13,000 additional dwellings. Both this comment and the direct reference in paragraph 3.10 indicate the need for a level of future housing that is considerably in excess of the council’s figure. 15. Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) also references ONS trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 16. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 17,751 Household projections Household projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890 The above figures have been sourced from www.eastsussexinfigures.org.uk 17. The important issue here is that it is unclear from the Core Strategy documents exactly which figures have been used, and it remains unclear despite our direct enquiries of the council on the matter. It seems likely, however, that trend based population and household projections have been obtained from this dataset. It may be the case that the figures above have been updated and that the council’s figures take into account previous figures available from 2006. These may then have been adjusted to fit in to the plan period of 2006-2030. 18. The trend based 2008 population projections were published by the Office for National Statistics (ONS) in May 2010 and the trend based housing projections are based on these figures but contain new household type categories recently developed by the Department of Communities and Local Government. 19. The trend based figures shown above are similar to the figures referenced in the Core Strategy, taking into account the adjustment of dates. However the footnote on page 13 refers to 13,000 additional dwellings, which is below any trend based figures previously referenced. It appears therefore that this may relate to the policy based figures, which are similar to the policy based household projection shown above (12,890), although there is some variation as the footnote references 2006-2031 and the above figures relate to 2001-2026. 20. The policy based figures shown above are described on the East Sussex in Figures website as being derived from housing provision figures provided within the South East Plan, housing trajectory work provided by the relevant council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 16 of BP1 in paragraph 5.12 where it is noted that: - ‘Due to the complexity of the model, the information used to predict future demand can not be examined in any great detail.’ 21. This is insufficient as the basis for the projections for future growth within the Core Strategy relies on these figures and it is the purpose of Background Papers to adequately explain these findings. This is especially the case as the council’s figures have been inadequately referenced and deviate considerably from all other relevant sources. 22. It is noted that although the footnote on page 13 of the Core Strategy is not properly referenced and there is no background information relating to how this information has been derived, the number of households (13,500) is more than the number of additional dwellings required (13,000). It is assumed that the extra 500 homes have been accommodated for through the council’s own information regarding long term empty dwellings in the District, short term empty dwellings due to an occupant’s death or houses currently being sold on the market. However it is considered that this slight drop in the number of households compared to the number of dwellings required is not greatly significant to argue for less housing need. Furthermore these figures have not been adequately referenced or justified and the calculations used to reach these figures are unavailable. HOUSING REQUIREMENT 23. It is predominantly trend based population and household projections which have been referenced within the Core Strategy where it is then explained on page 13, paragraph 3.10 that: ‘This shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered within Wealden.’ 24. This appears to be the basis of the council’s approach to the Core Strategy as a matter of basic principle; that the level of housing proposed for the District is less than the figure of new dwellings required by reference to regional policy and less than that indicated to be required by all other relevant sources for the reason that the District has insufficient capacity to accommodate housing at the levels required. This is the sole extent to which the council attempts to justify the 9600 housing figure. 25. However, there is no adequate explanation anywhere in the Strategy as to why the projected increase in households cannot be accommodated in the District. Of even greater importance, the Strategy, having stated that insufficient dwellings to meet identified need will be allowed for, fails in any way to consider or try to quantify the potentially significant social, economic and housing problems that an acknowledged failure to meet projected future requirements will cause. AFFORDABLE HOUSING 26. It is notable in respect of the council’s failure to deal with these issues that in Background Paper 1 – Development of the
Proposed Submission Core Strategy (BP1) the council repeatedly concludes that high levels of housing are required within the District and acknowledges that this need is identified in a variety of demographic and statistical evidence. 27. The issue of affordable housing is raised within the Core Strategy in Background Papers 1 – Development of the Proposed Submission Core Strategy and 2 – Managing the Delivery of Housing. The council’s Housing Needs Assessment (January 2010) is referenced on page 17, paragraph 5.14 of BP1 which describes how the need for affordable housing cannot be accommodated within the District despite evidence showing a great need. This is again referenced within BP2 (page 3, paragraph 2.3) where the council’s Strategic Housing Market Assessment (SHMA) has also been referred to which addresses ‘very significant affordability issues’ within the District. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the country. 28. However, there is no correlation between the extent to which the failure to produce adequate levels of affordable housing that would result from the overall approach to Core Strategy housing provision would result in social deprivation and other long term problems for the population of the District. That is in our view be a fundamental deficiency of the Strategy. DEMOGRAPHICS 29. BP2 - Managing the Delivery of Housing (page 3, paragraph 2.4) - explains the demographic structure of population and households within the District. There are a number of trends which have been referred to, including a decrease in household size, resulting in more single person households, particularly the elderly. The demand for housing from demographic evidence, coupled with the economic prosperity considerations below, mean that the overall health of the District depends on a future growth in population. It is therefore the responsibility of the council to provide enough housing both of the correct type and in the correct location, in accordance with the nature of demand outlined above. ECONOMIC PROSPERITY 30. It is a requirement of PPS 4 Planning for Sustainable Economic Growth, that local authorities should include within their plans a clear economic vision for their areas which ‘positively and proactively encourages sustainable economic growth’ (page 7, EC2.1 (a)). 31. Due to the need to maintain an economically active and consumer based population in line with PPS 4, in-migration is encouraged by the council. BP2, page 3, paragraph 2.4 states: ‘In order to maintain the viability of services and facilities and the vitality of the local economy there is therefore a requirement for significant new housing development within the District which would encourage some in-migration in order to maintain population levels’. 32. In addition, ONS figures for 2007 indicate a net inward migration from within the UK to Wealden of 800 people (arising from 7,800 leaving the District and 8,600 entering), which demonstrates in-migration is occurring and adds to the demand for housing within the District. 33. It is noted within BP2, page 3, paragraph 2.4: - "This natural change, leading to a declining and more elderly population, could have a potentially very damaging effect on the future customer base on existing services and facilities within the District as well as for the viability and vitality of Wealden’s town centres by reducing the economically active sector." 34. This effectively acknowledges that on economic grounds an increase in the population that would be the result of a higher level of housing growth is required to enable the District to maintain and improve its economic base and to facilitate protection of existing employment levels and facilitate employment growth. 35. None of these considerations relating to housing and economic need are evident within the housing figures which the Core Strategy proposes overall. The low figure of 9600 is not adequately justified within any of these documents, despite evidence to show that higher levels of housing are needed and would be beneficial to the future growth of Wealden, particularly to maintain the vitality of town centres and support economic growth. CONSTRAINTS WITHIN WEALDEN 36. The Core Strategy and BP1 identify constraints within the District which is considered to restrict housing growth in certain areas. These are outlined on page 23 of BP1, paragraph 6.2 and include the issues of waste water treatment capacity in the south of the District and the need to protect the rural nature of the District and the High Weald AONB. Also included within constraints for Uckfield, Polegate and Hailsham in the Core Strategy are traffic management and congestion problems in the town centres with significant infrastructure improvements required. 37. However this must be contrasted against the above evidence where ONS figures show a demand for housing given the projected increase in population, the overwhelming need for affordable housing and the need for in-migration to tackle population needs of the Wealden District and support economic prosperity. This goes to the heart of the need for the Core Strategy, which should seek to plan positively for appropriate growth in balance with the acknowledgement of constraints, rather than reducing growth rates arbitrarily. 38. Although these constraints and needs have been referred to within the documents relating to the Core Strategy, there is no statistical analysis to ascertain how the 9600 housing figure has been decided. There is also no explanation as to why the figures have been decreased from the South East Plan allocation, which for the Core Strategy plan period would be 13,200, or as to why the proposed allocation fails to meet household projections to an even greater extent. It is our case that the need for housing has not been appropriately analysed and a figure of 9600 does not address the evidence, which clearly shows the requirement for housing. 39. This conclusion merely concurs with that which has been reached repeatedly through BP1, and in particular on page 21, paragraph 5.37, which supports the above points in relation to a significant need for housing growth. The discussion which follows on the constraints to development does not attempt to expand on the nature of these problems and by how much they would limit new housing development. Therefore without robust statistical analysis and an unclear analysis of ONS projections it not possible to ascertain how the housing figure of 9600 has been established. As it has been used as the overall basis of the Core Strategy, this is a fundamental fault in the research and analysis of the evidence base of the document which results in a need to overhaul housing figures basing them on real evidence of need. FORWARD PLANNING 40. Based on the discussion and evidence referenced above, it is considered that 9600 is not an appropriately justified housing figure for the District. The figure fails to take into account the need for future growth in the District and does not propose effective forward
planning which is the main purpose of Core Strategies. The only justification for providing this figure seems to be based on past housing figures. This is contained within the Core Strategy on page 29, paragraph 5.13 which explains how over the last 21 years an average of 400 dwellings have been built per annum in the District and that based on this, a similar rate is achievable in the future. This does not provide for effective forward planning as evidence is based on past results rather than remaining focused on future growth. It is evident from the projected population figures that population is expected to increase and if Wealden are unable to accommodate this growth, it will force people to reside outside of the District. This increases pressure on neighbouring authorities who suffer their own constraints and it is the responsibility of Wealden District Council to address this growth properly.

PROPOSED REVISED HOUSING FIGURES

The South East Plan allocated 11,000 dwellings to the District based on national housing figures and fair distribution across the region taking into account policy considerations of each District and national housing need. The DCLG policy based population and housing projections are run under the same assumptions of the trend based projections in terms of fertility, mortality and migration level, but additionally they take into account the number of houses planned to be built during the projection period. The migration level is then adjusted according to the future housing provision. This information has been obtained in response to a specific enquiry from East Sussex County Council, correspondence of which has been attached as Appendix 1. 44. On this basis it is considered that the policy based projections fairly assess population growth and the requirements of the District. It is therefore proposed that in order to accommodate the requirement for more housing based on the evidence addressed above, it is fundamental to work towards a figure of 13,000 as proposed both by the South East Plan and justified by policy based household projections. If this position is not concurred with then the 11,000 figure allocated within the South East Plan must be taken as an absolute minimum. This will then adequately accommodate for projected population growth, in-migration and economic prosperity. It will also accommodate for changing demographics of smaller households and an increase in housing will greatly help to address the apparent affordability problems in the District. It will encourage a greater choice of types and tenures of housing and subject to national requirements, affordable housing can be promoted through larger housing development schemes. DISTRIBUTION OF HOUSING 46. This section of the representations discusses the distribution of housing, primarily between the north and south of the District but also in terms of the manner of the council’s treatment of the settlement hierarchy. The first notable point is many of the significant potential infrastructure constraints, such as waste water treatment capacity and inadequate road infrastructure, are focused on the south of the District. This is where a large majority of the housing has been allocated. The Strategy acknowledges that further development here would be limited due to these constraints, but the overall approach to dealing with levels of development in the south in the South East Plan is acknowledged. It is accepted that the council’s approach to development in these areas is acceptable in principle, although there are one or two instances where we consider that the degree of emphasis on development in the south has resulted in proposed locations for housing that are inappropriate. 47. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. Given that the general approach to housing provision and location in the south is acceptable consideration therefore needs to be given in the Strategy to additional provision in the north of the District at an appropriate scale and in locations that reflect the need to consider the appropriateness of the settlement hierarchy. RURAL AREAS STRATEGY - WADHURST

We support the council’s strategy that development should be included within key villages to encourage the sustainable development and even distribution of housing within smaller settlements. This is in general accordance with the need to provide additional housing provision in the north of the District to meet housing need. Development within the villages in the District will encourage a diversity of housing mix, address affordability problems and present a good distribution of housing across the District. For example, the Core Strategy Policy WCS6 Rural Areas Strategy allocates Wadhurst 70 net additional dwellings over the plan period. A suitable site at Old Station Road has been recognised by the SHLAA as a suitable site for development for a capacity of 35 new dwellings. This site can accommodate some of the allocated dwellings to Wadhurst in a suitable, available and achievable location. A plan of the land is attached as Appendix 2. GENERAL SUMMARY 51. It follows from the general arguments set out above that we consider that the overall position of the proposed Core Strategy is such that it has not been demonstrated to any satisfactory degree that it represents a reasonable approach to meeting the district’s housing requirement, particularly in the north of the District. The inclusion within the Core Strategy of housing figures that are below those of the South East Plan and below those in ONS projections is not justified or, importantly, explained in any meaningful way in the document, and in the absence of such adequate explanation it can only be concluded that the Strategy is unsound and will fail to provide an adequate future policy base. The housing figures allocated within the Core Strategy are not sufficient to accommodate adequate growth in the District and would result in the plan failing the tests of soundness. The 9600 housing figure has not been derived from robust statistical analysis and instead relies upon past annual housing figures. The Core Strategy overall housing figures therefore fail to accommodate for future growth and effective forward planning. It is considered that there is a need to allocate 13,000 dwellings over the plan period 2006-2030 to adequately address the issues relating to policy based population growth and housing requirements. Moreover, here are a number of suitable locations within the District available for housing development which do not compromise the constraints highlighted within the Core Strategy. The failure of the Core Strategy to make provision in this way means that additional housing allocations are necessary in order to meet likely future requirements. The balance of the
Strategy is significantly weighted towards the south of the District and although the overall approach to housing and economic development, and the balance with necessary associated infrastructure provision, in the south is justified in the Strategy the failure of the Strategy to provide appropriately for development in the north of the District is wrong. 56. That development should include provision of housing in Key Settlements and greater emphasis on such development should be given in view of the shortfall of provision in the Core Strategy. 57. In order for the council to focus on effective forward planning, it must appropriately consider the identified housing requirement and sustainable distribution of housing development which should be based on statistical analysis and balanced policy considerations. This will encourage economic prosperity, encourage a greater choice of housing which will help to tackle affordability issues and ensure the continued vitality of the District without compromising the rural nature of the District.

Details of Changes to be Made:
Our representations make reference to the changes we consider necessary to the Strategy
INTRODUCTION 1. The comments in this document are made on behalf of the Clay family and focus on a number of issues raised by the 2011 Core Strategy Proposed Submission Document. Initially the representations address how the housing figures have been derived, the distribution of housing in the District and the uneven balance of strategic development, which is primarily focused in the south of the District. 2. In light of those comments we then consider amendments and additions to the document that should be made to ensure that it makes proper provision for the future planning of the District. In these representations the overall point that we wish to make on behalf of our client is that there should be amendments to the Strategy to focus more development in the north of the District and that, as the largest town, such development should be centred on Crowborough. Suggestions are made as to how and where such development could be accommodated. 3. We deal first with the context of the Core Strategy and the level of housing development it proposes, in light of a significant failure to justify or explain the levels of development proposed. REGIONAL STRATEGIES 4. PPS 12 provides the guidance for the formation of Core Strategies and the legal requirements in order for an Inspector to declare the plan ‘sound’. Paragraph 4.50 sets out the checks an Inspector must make on the plan in order to fully comply with legislation. These include having regard to national policy and generally conforming to the Regional Spatial Strategy. Paragraph 4.33 in PPS 12 further illustrates this point and seeks to ensure Core Strategies are ‘consistent with national policy and in general conformity with the regional spatial strategy’. 5. The South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum, whereas the Proposed Submission Core Strategy allocates just 9600 over the 24 year period 2006-2030, an annual rate of 400 dwellings. The differences between the annual rate of dwellings and the plan periods are important to consider here, and this can be done in two ways: - a. The South East Plan period is 2006 - 2026. The Core Strategy plan period is 2006 – 2030; four years longer. The South East Plan requires 11,000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 and 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. b. Conversely, if the South East Plan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. 6. The calculations show a clear deficit in housing provision in the Core Strategy when both annual rates and plan periods are accurately compared. 7. There has been significant debate surrounding the revocation of Regional Strategies and the latest High Court Order has confirmed that the intended abolition of the Regional Strategies by the Coalition Government can now be considered ‘material’ in future planning decisions. However, as the Cala Homes (South) Ltd v Secretary of State for Communities and Local Government and Winchester City Council [2011] EWHC 97 Judgement states, there are distinctions to be made between materiality and weight (paragraph 29). Therefore although this is a material consideration, it is the responsibility of the decision maker to defend their decision if there is any deviation from the guidance contained within the Regional Strategies. ‘Thus, in appropriate circumstances, a local planning authority in the reasonable exercise of its discretion may give no significant weight or even no weight at all to a consideration material to its decision, provided that it has had regard to it’ [our emphasis] (paragraph 30). The point here is quite clear; if the council wishes to deviate from the South East Plan it may do so, but only if there is clear and reasoned explanation given in the Core Strategy document that adequately justifies the approach taken. A failure to properly consider this issue will result in the Core Strategy being deemed unsound. 8. It is also essential in this context to have regard to paragraph 34 of PPS 3, which states ‘Regional Spatial Strategies should set out the level of overall housing provision for the region, broadly illustrated in a housing delivery trajectory, for a sufficient period to enable Local Planning Authorities to plan for housing over a period of at least 15 years.’ 9. The failure of the council to properly consider the appropriate level of housing provision and in addition to fail to properly explain and justify the reasons for the overall levels of growth that are promulgated is a significant deficiency in the Strategy and there is a need to consider substantial amendments to ensure the lack of soundness in this respect is overcome. POPULATION AND HOUSEHOLD PROJECTIONS 10. We have identified above the overarching issues in respect of the Strategy, relating to inadequacy of the Council’s’s housing figure of 9600 over the plan period of 2006-2030 and the failure to adequately justify why that figure should be accepted. In order to properly assess the soundness of the proposed Strategy it is also necessary to discuss actual housing need in relation to demographics and statistical information. 11. As we have already made plain, if the Core Strategy does not accord with figures in the South East Plan, the justification for the level of housing provision it proposes should
be explained elsewhere. We have therefore examined the document to seek to establish whether such an explanation exists. 12. The only reference to statistical evidence within the Core Strategy is contained on page 13 under paragraph 3.10 which states: ‘Trend based projections(1) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households.’ 13. This is accompanied by a footnote which offers a reference to Office of National Statistics (ONS) trend based projections in addition to different figures from East Sussex County Council. These contain a reference to a population increase of around 20,000 persons equating to 13,500 households and 13,000 additional dwellings. Both this comment and the direct reference in paragraph 3.10 indicate the need for a level of future housing that is considerably in excess of the council’s figure. 14. Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) also references ONS trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 15. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 17,751 Households Household projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890 The above figures have been sourced from www.eastsussexinfignures.org.uk 16. The important issue here is that it is unclear from the Core Strategy documents exactly which figures have been used, and it remains unclear despite our direct enquiries of the council on the matter. It seems likely, however, that trend based population and household projections have been obtained from this dataset. It may be the case that the figures above have been updated and that the council’s figures take into account previous figures available from 2006. These may then have been adjusted to fit in to the plan period of 2006-2030. 17. The trend based 2008 population projections were published by the Office for National Statistics (ONS) in May 2010 and the trend based housing projections are based on these figures but contain new household type categories recently developed by the Department of Communities and Local Government. 18. The trend based figures shown above are similar to the figures referenced in the Core Strategy, taking into account the adjustment of dates. However the footnote on page 13 refers to 13,000 additional dwellings, which is below any trend based figures previously referenced. It appears therefore that this may relate to the policy based figures, which are similar to the policy based household projection shown above (12,890), although there is some variation as the footnote references 2006-2031 and the above figures relate to 2001-2026. 19. The policy based figures shown above are described on the East Sussex in Figures website as being derived from housing provision figures provided within the South East Plan, housing trajectory work provided by the relevant council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 16 of BP1 in paragraph 5.12 where it is noted that: ‘Due to the complexity of the model, the information used to predict future demand can not be examined in any great detail.’ 20. This is insufficient as the basis for the projections for future growth within the Core Strategy relies on these figures and it is the purpose of Background Papers to adequately explain these findings. This is especially the case as the council’s figures have been inadequately referenced and deviate considerably from all other relevant sources. 21. It is noted that although the footnote on page 13 of the Core Strategy is not properly referenced and there is no background information relating to how this information has been derived, the number of households (13,500) is more than the number of additional dwellings required (13,000). It is assumed that the extra 500 homes have been accommodated for through the council’s own information regarding long term empty dwellings in the District, short term empty dwellings due to an occupant’s death or houses currently being sold on the market. However it is considered that this slight drop in the number of households compared to the number of dwellings required is not greatly significant to argue for less housing need. Furthermore these figures have not been adequately referenced or justified and the calculations used to reach these figures are unavailable. HOUSING REQUIREMENT 22. It is predominantly trend based population and household projections which have been referenced within the Core Strategy where it is then explained on page 13, paragraph 3.10 that: ‘This shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered within Wealden.’ 23. This appears to be the basis of the council’s approach to the Core Strategy as a matter of basic principle; that the level of housing proposed for the District is less than the figure of new dwellings required by reference to regional policy and less than that indicated to be required by all other relevant sources for the reason that the District has insufficient capacity to accommodate housing at the levels required. This is the sole extent to which the council attempts to rationalise the 9600 housing figure. 24. However, there is no adequate explanation anywhere in the Strategy as to why the projected increase in households cannot be accommodated in the District. Of even greater importance, the Strategy, having stated that insufficient dwellings to meet identified need will be allowed for, fails in any way to consider or try to quantify the potentially significant social, economic and housing problems that an acknowledged failure to meet projected future requirements will cause. AFFORDABLE HOUSING 25. It is notable in respect of the council’s failure to deal with these issues that in Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) the council repeatedly concludes that high levels of housing are required within the District and acknowledges that this need is identified in a variety of demographic and statistical evidence. 26. The issue of affordable housing is raised within the Core Strategy in Background Papers 1 – Development of the Proposed Submission Core Strategy and 2 – Managing the Delivery of Housing. The council’s Housing Needs Assessment (January 2010) is referenced on page 17, paragraph 5.14 of BP1 which describes
how the need for affordable housing cannot be accommodated within the District despite evidence showing a great need. This is again referenced within BP2 (page 3, paragraph 2.3) where the council’s Strategic Housing Market Assessment (SHMA) has also been referred to which addresses ‘very significant affordability issues’ within the District. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the country. 27. However, there is no correlation between the extent to which the failure to produce adequate levels of affordable housing that would result from the overall approach to Core Strategy housing provision would result in social deprivation and other long term problems for the population of the District. That is in our view a fundamental deficiency of the Strategy. DEMOGRAPHICS 28. BP2 - Managing the Delivery of Housing (page 3, paragraph 2.4) - explains the demographic structure of population and households within the District. There are a number of trends which have been referred to, including a decrease in household size, resulting in more single person households, particularly the elderly. The demand for housing from demographic evidence, coupled with the economic prosperity considerations below, mean that the overall health of the District depends on a future growth in population. It is therefore the responsibility of the council to provide enough housing both of the correct type and in the correct location, in accordance with the nature of demand outlined above. ECONOMIC PROSPERITY 29. It is a requirement of PPS 4 Planning for Sustainable Economic Growth, that local authorities should include within their plans a clear economic vision for their areas which ‘positively and proactively encourages sustainable economic growth’ (page 7, EC2.1 (a)). 30. Due to the need to maintain an economically active and consumer based population in line with PPS 4, in-migration is encouraged by the council. BP2, page 3, paragraph 2.4 states:- ‘In order to maintain the viability of services and facilities and the vitality of the local economy there is therefore a requirement for significant new housing development within the District which would encourage some in-migration in order to maintain population levels’. 31. In addition, ONS figures for 2007 indicate a net inward migration from within the UK to Wealden of 800 people (arising from 7,800 leaving the District and 8,600 entering), which demonstrates in-migration is occurring and adds to the demand for housing within the District. 32. It is noted within BP2, page 3, paragraph 2.4: - 'This natural change, leading to a declining and more elderly population, could have a potentially very damaging effect on the future customer base on existing services and facilities within the District as well as for the viability and vitality of Wealden’s town centres by reducing the economically active sector.’ 33. This effectively acknowledges that on economic grounds an increase in the population that would be the result of a higher level of housing growth is required to enable the District to maintain and improve its economic base and to facilitate protection of existing employment levels and facilitate employment growth. 34. None of these considerations relating to housing and economic need are evident within the housing figures which the Core Strategy proposes overall. The low figure of 9600 is not adequately justified within any of these documents, despite evidence to show that higher levels of housing are needed and would be beneficial to the future growth of Wealden, particularly to maintain the vitality of town centres and support economic growth. CONSTRAINTS WITHIN WEALDEN 35. The Core Strategy and BP1 identify constraints within the District which is considered to restrict housing growth in certain areas. These are outlined on page 23 of BP1, paragraph 6.2 and include the issues of waste water treatment capacity in the south of the District and the need to protect the rural nature of the District and the High Weald AONB. Also included within constraints for Uckfield, Polegate and Hailsham in the Core Strategy are traffic management and congestion problems in the town centres with significant infrastructure improvements required. 36. However this must be contrasted against the above evidence where ONS figures show a demand for housing given the projected increase in population, the overwhelming need for affordable housing and the need for in-migration to tackle population needs of the Wealden District and support economic prosperity. This goes to the heart of the need for the Core Strategy, which should seek to plan positively for appropriate growth in balance with the acknowledgement of constraints, rather than reducing growth rates arbitrarily. 37. Although these constraints and needs have been referred to within the documents relating to the Core Strategy, there is no statistical analysis to ascertain how the 9600 housing figure has been decided. There is also no explanation as to why the figures have been decreased from the South East Plan allocation, which for the Core Strategy plan period would be 13,200, or as to why the proposed allocation fails to meet household projections to an even greater extent. It is our case that the need for housing has not been appropriately analysed and a figure of 9600 does not address the evidence, which clearly shows the requirement for housing. 38. This conclusion merely concurs with that which has been reached repeatedly through BP1, and in particular on page 21, paragraph 5.37, which supports the above points in relation to a significant need for housing growth. The discussion which follows on the constraints to development does not attempt to expand on the nature of these problems and by how much they would limit new housing development. Therefore without robust statistical analysis and an unclear analysis of ONS projections it not possible to ascertain how the housing figure of 9600 has been established. As it has been used as the overall basis of the Core Strategy, this is a fundamental fault in the research and analysis of the evidence base of the document which results in a need to overhaul housing figures basing them on real evidence of need. FORWARD PLANNING 39. Based on the discussion and evidence referenced above, it is considered that 9600 is not an appropriately justified housing figure for the District. The figure fails to take into account the need for future growth in the District and does not propose effective forward planning which is the main purpose of Core Strategies. 40. The only justification for providing this figure seems to be based on past housing figures. This is contained within the Core Strategy on page 29, paragraph 5.13 which explains how over the last 21 years an average of 400 dwellings have been built per annum in Wealden and that based on this, a similar rate is achievable in the future. 41. This does not provide for effective forward planning as evidence is based on past results rather than remaining focused on future growth. It is evident from the projected
population figures that population is expected to increase and if Wealden are unable to accommodate this growth, it will force people to reside outside of the District. This increases pressure on neighbouring authorities who suffer their own constraints and it is the responsibility of Wealden District Council to address this growth properly.

**PROPOSED REVISED HOUSING FIGURES**

The South East Plan allocated 11,000 dwellings to the District based on national housing figures and fair distribution across the region taking into account policy considerations of each District and national housing need. The DCLG policy based population and housing projections are run under the same assumptions of the trend based projections in terms of fertility, mortality and migration level, but additionally they take into account the number of houses planned to be built during the projection period. The migration level is then adjusted according to the future housing provision. This information has been obtained in response to a specific enquiry from East Sussex County Council, correspondence of which has been attached as Appendix 1. 43. On this basis it is considered that the policy based projections fairly assess population growth and the requirements of the District. It is therefore proposed that in order to accommodate the requirement for more housing based on the evidence addressed above, it is fundamental to work towards a figure of 13,000 as proposed both by the South East Plan and justified by policy based household projections. If this position is not concurred with then the 11,000 figure allocated within the South East Plan must be taken as an absolute minimum. 44. This will then adequately accommodate for projected population growth, in-migration and economic prosperity. It will also accommodate for changing demographics of smaller households and an increase in housing will greatly help to address the apparent affordability problems in the District. It will encourage a greater choice of types and tenures of housing and subject to national requirements, affordable housing can be promoted through larger housing development schemes. **DISTRIBUTION OF HOUSING**

45. This section of the representations discusses the distribution of housing, primarily between the north and south of the District but also in terms of the manner of the council’s treatment of the settlement hierarchy. The first notable point is many of the significant potential infrastructure constraints, such as waste water treatment capacity and inadequate road infrastructure, are focused on the south of the District. This is where a large majority of the housing has been allocated. The Strategy acknowledges that further development here would be limited due to these constraints, but the overall approach to dealing with levels of development in the south in the South East Plan is acknowledged. It is accepted that the council’s approach to development in these areas is acceptable in principle, although there are one or two instances where we consider that the degree of emphasis on development in the south has resulted in proposed locations for housing that are inappropriate. 46. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. Given that the general approach to housing provision and location in the south is acceptable consideration therefore needs to be given in the Strategy to additional provision in the north of the District at an appropriate scale and in locations that reflect the need to consider the appropriateness of the settlement hierarchy. 47. Crowborough is the largest town in the District and is designated as a District Centre within the Core Strategy. Given its close proximity to Tunbridge Wells it is the most appropriate location to accommodate the requirement for more housing. This will help to achieve the aims of providing more development to support growth and improving retail and employment opportunities and the provision of affordable housing in the north of the District. 48. Presently, the majority of development within the north of the District is focused in a single urban extension to the west of Uckfield (SD1). Expansion of Uckfield in this manner is considered to be inappropriate due to issues including traffic congestion, capacity, flood risk, noise from the A22 and the sites prominence in the wider landscape and the very exposed views from the Uckfield bypass. These issues have already been highlighted with the council’s Strategic Housing Land Availability Assessment (SHLAA). 49. This site would represent a major incursion into unspoilt countryside that will have a very seriously damaging effect on a wide area and will completely change the setting of the town and its relationship to the surrounding countryside. That is because of the prominence of the location and its poor relationship in a landscape sense to the town, from which it is almost entirely visually detached by virtue of the topography of the area and the openness of the location to the surrounding area. CROWBOROUGH 50. The proposed submission Strategy significantly detracts from the potential of Crowborough, which is better placed in the District in terms of accessibility and has excellent education and health facilities that are at least comparable with those of Uckfield. Crowborough is in need of town centre regeneration, although it has shown that even in present recessionary times the basic strength of the centre is apparent though increases in the retail offering in terms of quality and floorspace. New social infrastructure to support its population is being provided; work having commenced on the new community building in the centre of the town. 51. There is a perceived conflict between development at Crowborough and its environmental status as a result of the relationship of the town to the AONB that surrounds it and of the proximity of Ashdown Forest as a major recreational facility that is at the same time an important environmental asset as a result of its status as a SSSI. However, given that the Forest is a major regional attraction it is not considered that growth at Crowborough will make any real difference to the health and wellbeing of the Forest per se, when regional growth figures are such that the population will generally be increasing and it is inevitable that the attractiveness of the Forest will make it an increasingly used resource by the existing and increasing population over a wide area. The Core Strategy in any case rightly seeks to draw a zone within which development that would potentially affect the Forest would be prevented. 52. On the basis of the comments we have made earlier and in view of our conclusions above we consider that there is a significant opportunity for development at Crowborough that is justified as a result of the need to ensure that overall growth for the District is at a sustainable level that will meet future requirements in an acceptable fashion. A level of development that achieves that aim is the minimum that the strategy should be proposing. There are, however,
recognised constraints to the town and therefore a need to consider the most appropriate general location for development in terms of landscape impact and accessibility. We also consider that it would be appropriate for the council to consider a single major location for development on the basis that the necessary infrastructure to serve such a development can be provided more effectively and efficiently and that it will be easier to provide the funding for regeneration and community projects with a single development rather than from a number of smaller sites. 53. Crowborough has landscape and environmental constraints on much of its periphery and in addition the growth of the town in the past has been such that accessibility, particularly to the south, is very constrained. Southern areas of the town are far removed from the A26, which is required for access to the north and south, and by poor road infrastructure in the intervening areas that is incapable of improvement to an acceptable degree to support major development. This is reinforced within paragraph 6.36 of the submission document which identifies the existing traffic and congestion problems on the local road network. Despite the fact that the rail station is located to the south east and there are areas to the south east of the town that do not lie within the AONB it is not possible to identify a suitable location for development adjacent to the town that is suitable in a landscape and environmental capacity and with appropriate accessibility characteristics within close proximity of the station. Thus, although the Strategy seeks to accommodate a relatively large development area to the south of the town it is not considered that that could realistically be achieved in an acceptable way. While the fact that that area is not within the AONB might initially be seen to be a benefit there are significant access problems that effectively militate against all but relatively small levels of development in this location. 54. Land to the west and north west of the town is in close juxtaposition with Ashdown Forest and the AONB and has a rural and semi rural character that would be significantly disrupted by new development of any scale. Accessibility is also relatively poor and there would be some difficulty in integrating development with the need to protect the Forest and its environs. 55. Land to the north east of the town is within the High Weald AONB and is open in character, such that there are wide ranging long distance views of the southern slopes in this area from the Eridge Ridge to the north. The sensitivity of these areas is high in environmental terms as a result and the character and setting of the town in the landscape would be significantly affected by development in these areas. 56. To the east of the town are Palesgate and Crowborough Ghyll, largely wooded areas mostly owned by the Town Council and utilised for informal public open spaces that are protected by planning policies and which form an effective semi rural edge to the town as well as being on a high ridge that gives a significant degree of enclosure and containment to the south eastern parts of the town. 57. North of the town the land rises gently to a long sloping ridge that runs west-east between Steel Cross and Boars Head, with Palesgate Forest in the east and the more open landscape north of the town to the west that contains land suitable for development. Parcels exist in the area of Steel Cross Road that would be suitable for development including, for example, land to the south of Steel Cross Road which is not located within the High Weald AONB. The land is located close to the junction between A26 and B2157 which provides the site with good accessibility links and access to the local and regional road network. The site is located to the within an area of existing development and is bounded to the north, east and west by residential properties. Development of this site would therefore effectively represent infilling within an already built up area that has in the past been inappropriately excluded by the development boundary to Crowborough. Inclusion of the site would provide flexibility to the development that is recommended to be located to the north of the town and is considered an appropriate location for development and growth. A plan of the site is included in Appendix 2. 58. This is considered to be in contrast to the contingency site which is located to the north of the A26 within the AONB and is unconstrained. It is therefore considered that more suitable sites to the north of the town should be included within the strategy for the development of Crowborough. GENERAL SUMMARY 59. It follows from the general arguments set out above that we consider that the overall position of the proposed Core Strategy is such that it has not been demonstrated to any satisfactory degree that it represents a reasonable approach to meeting acknowledged housing demand. While the strategy appears satisfactory in dealing with the generalities of the amount of growth it provides for there is a significant failure to deliver sufficient housing to meet the actual likely future requirement, particularly in the north of the District. 60. The inclusion within the Core Strategy of housing figures that are below those of the South East Plan and below those in ONS projections is not justified or, importantly, explained in any meaningful way in the document, and in the absence of such adequate explanation it can only...

Details of Changes to be Made:
Our representations include comments on what changes to the Strategy are required
There has been significant debate surrounding the revocation of Regional Strategies and the latest High Court housing provision in the Core Strategy when both annual rates and plan periods are accurately compared. South East Plan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. The calculations show a clear deficit in the South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 and 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. Conversely, if the Core Strategy plan period is 2006 - 2030; four years longer. The South East Plan requires 11,000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require 11,000 dwellings to be built during that period at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement.

Regional Strategies 5. PPS 12 provides the guidance for the formation of Core Strategies and the legal requirements in order for an Inspector to declare the plan ‘sound’. Paragraph 4.50 sets out the checks an Inspector must make on the plan in order to fully comply with legislation. These include having regard to national policy and generally conforming to the Regional Spatial Strategy. Paragraph 4.33 in PPS 12 further illustrates this point and seeks to ensure Core Strategies are ‘consistent with national policy and in general conformity with the regional spatial strategy’. The South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum, whereas the Proposed Submission Core Strategy allocates just 9600 over the 24 year period 2006-2030, an annual rate of 400 dwellings. The differences between the annual rate of dwellings and the plan periods are important to consider here, and this can be done in two ways: a. The South East Plan period is 2006 - 2026. The Core Strategy plan period is 2006 – 2030; four years longer. The South East Plan requires 11,000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 and 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. b. Conversely, if the South East Plan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. 7. The calculations show a clear deficit in housing provision in the Core Strategy when both annual rates and plan periods are accurately compared.

There has been significant debate surrounding the revocation of Regional Strategies and the latest High Court Order has confirmed that the intended abolition of the Regional Strategies by the Coalition Government can now be considered ‘material’ in future planning decisions. However, as the Cala Homes (South) Ltd v Secretary of State for Communities and Local Government and Winchester City Council [2011] EWHC 97 Judgement states, there are distinctions to be made between materiality and weight (paragraph 29). Therefore although this is a material consideration, it is the responsibility of the decision maker to defend their decision if there is any deviation from the guidance contained within the Regional Strategies. ‘Thus, in appropriate circumstances, a local planning authority in the reasonable exercise of its discretion may give no significant weight or even no weight at all to a consideration material to its decision, provided that it has had regard to it’ [our emphasis] (paragraph 30). The point here is quite clear; if the council wishes to deviate from the South East Plan it may do so, but only if there is clear and reasoned explanation given in the Core Strategy document that adequately justifies the approach taken. A failure to properly consider this issue will result in the Core Strategy being deemed unsound. 9. It is also essential in this context to have regard to paragraph 34 of PPS 3, which states ‘Regional Spatial Strategies should set out the level of overall housing provision for the region, broadly illustrated in a housing delivery trajectory, for a sufficient period to enable Local Planning Authorities to plan for housing over a period of at least 15 years.’ The failure of the council to properly consider the appropriate level of housing provision and in addition to fail to properly explain and justify the reasons for the overall levels of growth that are promulgated is a significant deficiency in the Strategy and there is a need to consider substantial amendments to ensure the lack of soundness in this respect is overcome.
the plan period of 2006-2030 and the failure to adequately justify why that figure should be accepted. In order to properly assess the soundness of the proposed Strategy it is also necessary to discuss actual housing need in relation to demographics and statistical information. 12. As we have already made plain, if the Core Strategy does not accord with figures in the South East Plan, the justification for the level of housing provision it proposes should be explained elsewhere. We have therefore examined the document to seek to establish whether such an explanation exists. 13. The only reference to statistical evidence within the Core Strategy is contained on page 13 under paragraph 3.10 which states: ‘Trend based projections(1) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households.’ 14. This is accompanied by a footnote which offers a reference to Office of National Statistics (ONS) trend based projections in addition to different figures from East Sussex County Council. These contain a reference to a population increase of around 20,000 persons equating to 13,500 households and 13,000 additional dwellings. Both this comment and the direct reference in paragraph 3.10 indicate the need for a level of future housing that is considerably in excess of the council’s figure. 15. Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) also references ONS trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 16. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 17,751 Household projections Household projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890 The above figures have been sourced from www.eastsussexinfimages.org.uk 17. The important issue here is that it is unclear from the Core Strategy documents exactly which figures have been used, and it remains unclear despite our direct enquiries of the council on the matter. It seems likely, however, that trend based population and household projections have been obtained from this dataset. It may be the case that the figures above have been updated and that the council’s figures take into account previous figures available from 2006. These may then have been adjusted to fit in to the plan period of 2006-2030. 18. The trend based 2008 population projections were published by the Office for National Statistics (ONS) in May 2010 and the trend based housing projections are based on these figures but contain new household type categories recently developed by the Department of Communities and Local Government. 19. The trend based figures shown above are similar to the figures referenced in the Core Strategy, taking into account the adjustment of dates. However the footnote on page 13 refers to 13,000 additional dwellings, which is below any trend based figures previously referenced. It appears therefore that this may relate to the policy based figures, which are similar to the policy based household projection shown above (12,890), although there is some variation as the footnote references 2006-2031 and the above figures relate to 2001-2026. 20. The policy based figures shown above are described on the East Sussex in Figures website as being derived from housing provision figures provided within the South East Plan, housing trajectory work provided by the relevant council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 16 of BP1 in paragraph 5.12 where it is noted that: ‘Due to the complexity of the model, the information used to predict future demand can not be examined in any great detail.’ 21. This is insufficient as the basis for the projections for future growth within the Core Strategy relies on these figures and it is the purpose of Background Papers to adequately explain these findings. This is especially the case as the council’s figures have been inadequately referenced and deviate considerably from all other relevant sources. 22. It is noted that although the footnote on page 13 of the Core Strategy is not properly referenced and there is no background information relating to how this information has been derived, the number of households (13,500) is more than the number of additional dwellings required (13,000). It is assumed that the extra 500 homes have been accommodated for through the council’s own information regarding long term empty dwellings in the District, short term empty dwellings due to an occupant’s death or houses currently being sold on the market. However it is considered that this slight drop in the number of households compared to the number of dwellings required is not greatly significant to argue for less housing need. Furthermore these figures have not been adequately referenced or justified and the calculations used to reach these figures are unavailable. HOUSING REQUIREMENT 23. It is predominantly trend based population and household projections which have been referenced within the Core Strategy where it is then explained on page 13, paragraph 3.10 that: ‘This shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered within Wealden.’ 24. This appears to be the basis of the council’s approach to the Core Strategy as a matter of basic principle; that the level of housing proposed for the District is less than the figure of new dwellings required by reference to regional policy and less than that indicated to be required by all other relevant sources for the reason that the District has insufficient capacity to accommodate housing at the levels required. This is the sole extent to which the council attempts to justify the 9600 housing figure. 25. However, there is no adequate explanation anywhere in the Strategy as to why the projected increase in households cannot be accommodated in the District. Of even greater importance, the Strategy, having stated that insufficient dwellings to meet identified need will be allowed for, fails in any way to consider or try to quantify the potentially significant social, economic and housing problems that an acknowledged failure to meet projected future requirements will cause. AFFORDABLE HOUSING 26. It is notable in respect of the council’s failure to deal with these issues that in Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) the council repeatedly concludes that high levels of housing are
required within the District and acknowledges that this need is identified in a variety of demographic and statistical evidence. 27. The issue of affordable housing is raised within the Core Strategy in Background Papers 1 – Development of the Proposed Submission Core Strategy and 2 – Managing the Delivery of Housing. The council’s Housing Needs Assessment (January 2010) is referenced on page 17, paragraph 5.14 of BP1 which describes how the need for affordable housing cannot be accommodated within the District despite evidence showing a great need. This is again referenced within BP2 (page 3, paragraph 2.3) where the council’s Strategic Housing Market Assessment (SHMA) has also been referred to which addresses ‘very significant affordability issues’ within the District. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the country. 28. However, there is no correlation between the extent to which the failure to produce adequate levels of affordable housing that would result from the overall approach to Core Strategy housing provision would result in social deprivation and other long term problems for the population of the District. That is in our view be a fundamental deficiency of the Strategy. DEMOGRAPHICS 29. BP2 - Managing the Delivery of Housing (page 3, paragraph 2.4) - explains the demographic structure of population and households within the District. There are a number of trends which have been referred to, including a decrease in household size, resulting in more single person households, particularly the elderly. The demand for housing from demographic evidence, coupled with the economic prosperity considerations below, mean that the overall health of the District depends on a future growth in population. It is therefore the responsibility of the council to provide enough housing both of the correct type and in the correct location, in accordance with the nature of demand outlined above. ECONOMIC PROSPERITY 30. It is a requirement of PPS 4 Planning for Sustainable Economic Growth, that local authorities should include within their plans a clear economic vision for their areas which ‘positively and proactively encourages sustainable economic growth’ (page 7, EC2.1 (a)). 31. Due to the need to maintain an economically active and consumer based population in line with PPS4, in-migration is encouraged by the council. BP2, page 3, paragraph 2.4 states: ‘In order to maintain the viability of services and facilities and the vitality of the local economy there is therefore a requirement for significant new housing development within the District which would encourage some in-migration in order to maintain population levels’. 32. In addition, ONS figures for 2007 indicate a net inward migration from within the UK to Wealden of 800 people (arising from 7,800 leaving the District and 8,600 entering), which demonstrates in-migration is occurring and adds to the demand for housing within the District. 33. It is noted within BP2, page 3, paragraph 2.4: - ‘This natural change, leading to a declining and more elderly population, could have a potentially very damaging effect on the future customer base on existing services and facilities within the District as well as for the viability and vitality of Wealden’s town centres by reducing the economically active sector.’ 34. This effectively acknowledges that on economic grounds an increase in the population that would be the result of a higher level of housing growth is required to enable the District to maintain and improve its economic base and to facilitate protection of existing employment levels and facilitate employment growth. 35. None of these considerations relating to housing and economic need are evident within the housing figures which the Core Strategy proposes overall. The low figure of 9600 is not adequately justified within any of these documents, despite evidence to show that higher levels of housing are needed and would be beneficial to the future growth of Wealden, particularly to maintain the vitality of town centres and support economic growth. CONSTRAINTS WITHIN WEALDEN 36. The Core Strategy and BP1 identify constraints within the District which is considered to restrict housing growth in certain areas. These are outlined on page 23 of BP1, paragraph 6.2 and include the issues of waste water treatment capacity in the south of the District and the need to protect the rural nature of the District and the High Weald AONB. Also included within constraints for Uckfield, Polegate and Hailsham in the Core Strategy are traffic management and congestion problems in the town centres with significant infrastructure improvements required. 37. However this must be contrasted against the above evidence where ONS figures show a demand for housing given the projected increase in population, the overwhelming need for affordable housing and the need for in-migration to tackle population needs of the Wealden District and support economic prosperity. This goes to the heart of the need for the Core Strategy, which should seek to plan positively for appropriate growth in balance with the acknowledgement of constraints, rather than reducing growth rates arbitrarily. 38. Although these constraints and needs have been referred to within the documents relating to the Core Strategy, there is no statistical analysis to ascertain how the 9600 housing figure has been decided. There is also no explanation as to why the figures have been decreased from the South East Plan allocation, which for the Core Strategy plan period would be 13,200, or as to why the proposed allocation fails to meet household projections to an even greater extent. It is our case that the need for housing has not been appropriately analysed and a figure of 9600 does not address the evidence, which clearly shows the requirement for housing. 39. This conclusion merely concurs with that which has been reached repeatedly through BP1, and in particular on page 21, paragraph 5.37, which supports the above points in relation to a significant need for housing growth. The discussion which follows on the constraints to development does not attempt to expand on the nature of these problems and by how much they would limit new housing development. Therefore without robust statistical analysis and an unclear analysis of ONS projections it not possible to ascertain how the housing figure of 9600 has been established. As it has been used as the overall basis of the Core Strategy, this is a fundamental fault in the research and analysis of the evidence base of the document which results in a need to overhaul housing figures basing them on real evidence of need. FORWARD PLANNING 40. Based on the discussion and evidence referenced above, it is considered that 9600 is not an appropriately justified housing figure for the District. The figure fails to take into account the need for future growth in the District and does not propose effective forward planning which is the main purpose of Core Strategies. 41. The only justification for providing this figure seems to
commenced on the new community building in the centre of the town. There is a perceived conflict between terms of quality and floorspace. New social infrastructure to support its population is being provided; work having existing and increasing population over a wide area. The Core Strategy in any case rightly seeks to draw a zone wellbeing of the Forest per se, when regional growth figures are such that the population will generally be increasing and it is inevitable that the attractiveness of the Forest will make it an increasingly used resource by the regional attraction it is not considered that growth at Crowborough will make any real difference to the health and topography of the area and the openness of the location to the surrounding area. CROWBOROUGH

The relationship in a landscape sense to the town, from which it is almost entirely visually detached by virtue of the that will have a very seriously damaging effect on a wide area and will completely change the setting of the town views from the Uckfield bypass. These issues have already been highlighted with the council's Strategic Housing capacity, flood risk, noise from the A22 and the site's prominence in the wider landscape and the very exposed Expansion of Uckfield in this manner is considered to be inappropriate due to issues including traffic congestion, with those of Uckfield. Crowborough is in need of town centre regeneration, although it has shown that even in present recessionary times the basic strength of the centre is apparent though increases in the retail offering in the opportunities and the provision of affordable housing in the north of the District. Given its close proximity to Tunbridge Wells it is the most appropriate location to accommodate the requirement for more housing. This will help to achieve the aims of providing more development to support growth and improving retail and employment

The Strategy acknowledges that further development here would be limited due to these constraints, but the overall approach to dealing with levels of development in the south in the South East Plan is acknowledged. It is accepted that the councils approach to development in these areas is acceptable in principle, although there are one or two instances where we consider that the degree of emphasis on development in the south has resulted in proposed locations for housing that are inappropriate. 47. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. Given that the general approach to housing provision and location in the south is acceptable consideration therefore needs to be given in the Strategy to additional provision in the north of the District at an appropriate scale and in locations that reflect the need to consider the appropriateness of the settlement hierarchy. 48. Crowborough is the largest town in the District and is designated as a District Centre within the Core Strategy. Given its close proximity to Tunbridge Wells it is the most appropriate location to accommodate the requirement for more housing. This will help to achieve the aims of providing more development to support growth and improving retail and employment
comments we have made earlier and in view of our conclusions above we consider that there is a significant opportunity for development at Crowborough that is justified as a result of the need to ensure that overall growth for the District is at a sustainable level that will meet future requirements in an acceptable fashion. A level of development that achieves that aim is the minimum that the strategy should be proposing. There are, however, recognised constraints to the town and therefore a need to consider the most appropriate general location for development in terms of landscape impact and accessibility. 54. Land to the west and north west of the town is in close juxtaposition with Ashdown Forest and the AONB and has a rural and semi rural character that would be significantly disrupted by new development of any scale. Accessibility is also relatively poor and there would be some difficulty in integrating development with the need to protect the Forest and its environs. 55. Land to the north east of the town is within the High Weald AONB and is open in character, such that there are wide ranging long distance views of the southern slopes in this area from the Eridge Ridge to the north. The sensitivity of these areas is high in environmental terms as a result and the character and setting of the town in the landscape would be significantly affected by development in these areas. 56. To the east of the town are Palesgate and Crowborough Ghyll, largely wooded areas mostly owned by the Town Council and utilised for informal public open spaces that are protected by planning policies and which form an effective semi rural edge to the town as well as being on a high ridge that gives a significant degree of enclosure and containment to the south eastern parts of the town. 57. North of the town the land rises gently to a long sloping ridge that runs west-east between Steel Cross and Boars Head, with Palesgate Forest in the east and the more open landscape north of the town to the west that contains land suitable for development. 58. The failure of the Strategy to make any meaningful provision of housing at Crowborough is wholly inappropriate given the status of the town and its superior sustainability and accessibility credentials, together with the need to ensure the improvement of local retail, employment and community facilities. While there are potential difficulties as a result of the relationship of the town to the AONB, the nature of the landscape in certain peripheral areas is such that development could be accommodated in a much more satisfactory landscape fashion than the proposal at Uckfield. 59. The allocations that are suggested at Crowborough are largely inappropriate, either in terms of scale (the southern extension) or location (the reserve site). As a result of the increased requirement for housing documented above it is considered that there should be a greater allocation of housing for Crowborough and that that allocation should primarily be on land to the north with smaller sites accommodated in the south, where accessibility is a serious constraint. 60. The relatively large development area to the south of Crowborough is not considered to be realistically achievable in an acceptable way and that there are problems that effectively militate against all but relatively small levels of development in this location. For instance, there is land adjacent to the Plough and Horses Pub that is considerably smaller than proposed large allocation that could accommodate around 20 dwellings. A plan of the land is attached as Appendix 2. GENERAL SUMMARY 61. It follows from the general arguments set out above that we consider that the overall position of the proposed Core Strategy is such that it has not been demonstrated to any satisfactory degree that it represents a reasonable approach to meeting acknowledged housing demand. While the strategy appears satisfactory in dealing with the generalities of the amount of growth it provides for there is a significant failure to deliver sufficient housing to meet the actual likely future requirement, particularly in the north of the District. 62. The inclusion within the Core Strategy of housing figures that are below those of the South East Plan and below those in ONS projections is not justified or, importantly, explained in any meaningful way in the document, and in the absence of such adequate explanation it can only be concluded that the Strategy is unsound and will fail to provide an adequate future policy base. 63. The housing figures allocated within the Core Strategy are not sufficient to accommodate adequate growth in the District and would result in the plan failing the tests of soundness. The 9600 housing figure has not been derived from robust statistical analysis and instead relies upon past annual housing figures. The Core Strategy overall housing figures therefore fail to accommodate for future growth and effective forward planning. 64. It is considered that there is a need to allocate 13,000 dwellings over the plan period 2006-2030 to adequately address the issues relating to policy based population growth and housing requirements. Moreover, here are a number of suitable locations within the District available for housing development which do not compromise the constraints highlighted within the Core Strategy. 65. The failure of the Core Strategy to make provision in this way means that additional housing allocations are necessary

**Details of Changes to be Made:**

Our comments include suggested changes to the Strategy
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Details of Reasons for Soundess/ Legal Complaince:

INTRODUCTION  1. The comments in this document are made on behalf of Mr and Mrs Colliver and focus on a number of issues raised by the 2011 Core Strategy Proposed Submission Document. Initially the representations address how the housing figures have been derived, the distribution of housing in the District and the uneven balance of strategic development, which is primarily focused in the south of the District. 2. In light of those comments we then consider amendments and additions to the document that should be made to ensure that it makes proper provision for the future planning of the District. In these representations the overall point that we wish to make on behalf of our client is that there should be amendments to the Strategy to focus more development in the north of the District and that, as the largest town, such development should be centred on Crowborough. Suggestions are made as to how and where such development could be accommodated. 3. We deal first with the context of the Core Strategy and the level of housing development it proposes, in light of a significant failure to justify or explain the levels of development proposed. REGIONAL STRATEGIES  4. Paragraph 4.50 sets out the checks an Inspector must make on the plan in order to fully comply with legislation. These include having regard to national policy and generally conforming to the Regional Spatial Strategy. Paragraph 4.33 in PPS 12 further illustrates this point and seeks to ensure Core Strategies are ‘consistent with national policy and in general conformity with the regional spatial strategy’. 5. The South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum, whereas the Proposed Submission Core Strategy allocates just 9600 over the 24 year period 2006-2030, an annual rate of 400 dwellings. The differences between the annual rate of dwellings and the plan periods are important to consider here, and this can be done in two ways: - a. The South East Plan period is 2006 - 2026. The Core Strategy plan period is 2006 – 2030; four years longer. The South East Pan requires 11,000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 and 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. b. Conversely, if the South East Plan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. 6. The calculations show a clear deficit in housing provision in the Core Strategy when both annual rates and plan periods are accurately compared. 7. There has been significant debate surrounding the revocation of Regional Strategies and the latest High Court Order has confirmed that the intended abolition of the Regional Strategies by the Coalition Government can now be considered ‘material’ in future planning decisions. However, as the Cala Homes (South) Ltd v Secretary of State for Communities and Local Government and Winchester City Council [2011] EWCH 97 Judgement states, there are distinctions to be made between materiality and weight (paragraph 29). Therefore although this is a material consideration, it is the responsibility of the decision maker to defend their decision if there is any deviation from the guidance contained within the Regional Strategies. ‘Thus, in appropriate circumstances, a local planning authority in the reasonable exercise of its discretion may give no significant weight or even no weight at all to a consideration material to its decision, provided that it has had regard to it’ [our emphasis] (paragraph 30). The point here is quite clear; if the council wishes to deviate from the South East Plan it may do so, but only if there is clear and reasoned explanation given in the Core Strategy document that adequately justifies the approach taken. A failure to properly consider this issue will result in the Core Strategy being deemed unsound. 8. It is also essential in this context to have regard to paragraph 34 of PPS 3, which states ‘Regional Spatial Strategies should set out the level of overall housing provision for the region, broadly illustrated in a housing delivery trajectory, for a sufficient period to enable Local Planning Authorities to plan for housing over a period of at least 15 years.’ 9. The failure of the council to properly consider the appropriate level of housing provision and in addition to fail to properly explain and justify the reasons for the overall levels of growth that are promulgated is a significant deficiency in the Strategy and there is a need to consider substantial amendments to ensure the lack of soundness in this respect is overcome. POPULATION AND HOUSEHOLD PROJECTIONS  10. We have identified above the overarching issues in respect of the Strategy, relating to inadequacy of the council’s housing figure of 9600 over the plan period of 2006-2030 and the failure to adequately justify why that figure should be accepted. In order to properly assess the soundness of the proposed Strategy it is also necessary to discuss actual housing need in relation to demographics and statistical information. 11. As we have already made plain, if the Core Strategy does not accord with figures in the South East Plan, the justification for the level of housing provision it proposes should
be explained elsewhere. We have therefore examined the document to seek to establish whether such an explanation exists. 12. The only reference to statistical evidence within the Core Strategy is contained on page 13 under paragraph 3.10 which states: ‘Trend based projections(1) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households.’ 13. This is accompanied by a footnote which offers a reference to Office of National Statistics (ONS) trend based projections in addition to different figures from East Sussex County council. These contain a reference to a population increase of around 20,000 persons equating to 13,500 households and 13,000 additional dwellings. Both this comment and the direct reference in paragraph 3.10 indicate the need for a level of future housing that is considerably in excess of the council’s figure. 14. Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) also references ONS trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 15. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 7,751 Household projections Households projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890 The above figures have been sourced from www.eastsussexinfigures.org.uk 16. The important issue here is that it is unclear from the Core Strategy documents exactly which figures have been used, and it remains unclear despite our direct enquires of the council on the matter. It seems likely, however, that trend based population and household projections have been obtained from this dataset. It may be the case that the figures above have been updated and that the council’s figures take into account previous figures available from 2006. These may then have been adjusted to fit in to the plan period of 2006-2030. 17. The trend based 2008 population projections were published by the Office for National Statistics (ONS) in May 2010 and the trend based housing projections are based on these figures but contain new household type categories recently developed by the Department of Communities and Local Government. 18. The trend based figures shown above are similar to the figures referenced in the Core Strategy, taking into account the adjustment of dates. However the footnote on page 13 refers to 13,000 additional dwellings, which is below any trend based figures previously referenced. It appears therefore that this may relate to the policy based figures, which are similar to the policy based household projection shown above (12,890), although there is some variation as the footnote references 2006-2031 and the above figures relate to 2001-2026. 19. The policy based figures shown above are described on the East Sussex in Figures website as being derived from housing provision figures provided within the South East Plan, housing trajectory work provided by the relevant council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 16 of BP1 in paragraph 5.12 where it is noted that: ‘Due to the complexity of the model, the information used to predict future demand can not be examined in any great detail.’ 20. This is insufficient as the basis for the projections for future growth within the Core Strategy relies on these figures and it is the purpose of Background Papers to adequately explain these findings. This is especially the case as the council’s figures have been inadequately referenced and deviate considerably from all other relevant sources. 21. It is noted that although the footnote on page 13 of the Core Strategy is not properly referenced and there is no background information relating to how this information has been derived, the number of households (13,500) is more than the number of additional dwellings required (13,000). It is assumed that the extra 500 homes have been accommodated for through the council’s own information regarding long term empty dwellings in the District, short term empty dwellings due to an occupant’s death or houses currently being sold on the market. However it is considered that this slight drop in the number of households compared to the number of dwellings required is not significantly great to argue for less housing need. Furthermore these figures have not been adequately referenced or justified and the calculations used to reach these figures are unavailable. HOUSING REQUIREMENT 22. It is predominantly trend based population and household projections which have been referenced within the Core Strategy where it is then explained on page 13, paragraph 3.10 that: ‘This shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered within Wealden.’ 23. This appears to be the basis of the council’s approach to the Core Strategy as a matter of basic principle; that the level of housing proposed for the District is less than the figure of new dwellings required by reference to regional policy and less than that indicated to be required by all other relevant sources for the reason that the District has insufficient capacity to accommodate housing at the levels required. This is the sole extent to which the council attempts to justify the 9600 housing figure. 24. However, there is no adequate explanation anywhere in the Strategy as to why the projected increase in households cannot be accommodated in the District. Of even greater importance, the Strategy, having stated that insufficient dwellings to meet identified need will be allowed for, fails in any way to consider or try to quantify the potentially significant social, economic and housing problems that an acknowledged failure to meet projected future requirements will cause. AFFORDABLE HOUSING 25. It is notable in respect of the council’s failure to deal with these issues that in Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) the council repeatedly concludes that high levels of housing are required within the District and acknowledges that this need is identified in a variety of demographic and statistical evidence. 26. The issue of affordable housing is raised within the Core Strategy in Background Papers 1 – Development of the Proposed Submission Core Strategy and 2 – Managing the Delivery of Housing. The council’s Housing Needs Assessment (January 2010) is referenced on page 17, paragraph 5.14 of BP1 which describes
how the need for affordable housing cannot be accommodated within the District despite evidence showing a great
need. This is again referenced within BP2 (page 3, paragraph 2.3) where the council’s Strategic Housing Market
Assessment (SHMA) has also been referred to which addresses ‘very significant affordability issues’ within the
District. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the
country. 27. However, there is no correlation between the extent to which the failure to produce adequate levels of
affordable housing that would result from the overall approach to Core Strategy housing provision would result in
social deprivation and other long term problems for the population of the District. That is in our view a fundamental
deficiency of the Strategy. DEMOGRAPHICS 28. BP2 - Managing the Delivery of Housing (page 3, paragraph 2.4) - explains the demographic structure of population and households within the District. There are a number of
trends which have been referred to, including a decrease in household size, resulting in more single person
households, particularly the elderly. The demand for housing from demographic evidence, coupled with the
economic prosperity considerations below, mean that the overall health of the District depends on a future growth in
population. It is therefore the responsibility of the Council to provide enough housing both of the correct type and
in the correct location, in accordance with the nature of demand outlined above. ECONOMIC PROSPERITY 29. It
is a requirement of PPS 4 Planning for Sustainable Economic Growth, that local authorities should include within
their plans a clear economic vision for their areas which ‘positively and proactively encourages sustainable
economic growth’ (page 7, EC2.1 (a)). 30. Due to the need to maintain an economically active and consumer
based population in line with PPS 4, in-migration is encouraged by the council. BP2, page 3, paragraph 2.4 states:-
‘In order to maintain the viability of services and facilities and the vitality of the local economy there is therefore a
requirement for significant new housing development within the District which would encourage some in-migration
in order to maintain population levels’. 31. In addition, ONS figures for 2007 indicate a net inward migration from
within the UK to Wealden of 800 people (arising from 7,800 leaving the District and 8,600 entering), which
demonstrates in-migration is occurring and adds to the demand for housing within the District. 32. It is noted within
BP2, page 3, paragraph 2.4: - ‘This natural change, leading to a declining and more elderly population, could have a
potentially very damaging effect on the future customer base on existing services and facilities within the District
as well as for the viability and vitality of Wealden’s town centres by reducing the economically active sector.’ 33.
This effectively acknowledges that on economic grounds an increase in the population that would be the result of a
higher level of housing growth is required to enable the District to maintain and improve its economic base and to
facilitate protection of existing employment levels and facilitate employment growth. 34. None of these
considerations relating to housing and economic need are evident within the housing figures which the Core
Strategy proposes overall. The low figure of 9600 is not adequately justified within any of these documents,
despite evidence to show that higher levels of housing are needed and would be beneficial to the future growth of
Wealden, particularly to maintain the vitality of town centres and support economic growth. CONSTRAINTS
WITHIN WEALDEN 35. The Core Strategy and BP1 identify constraints within the District which is considered to
restrict housing growth in certain areas. These are outlined on page 23 of BP1, paragraph 6.2 and include the
issues of waste water treatment capacity in the south of the District and the need to protect the rural nature of the
District and the High Weald AONB. Also included within constraints for Uckfield, Polegate and Hailsham in the
Core Strategy are traffic management and congestion problems in the town centres with significant infrastructure
improvements required. 36. However this must be contrasted against the above evidence where ONS figures
show a demand for housing given the projected increase in population, the overwhelming need for affordable
housing and the need for in-migration to tackle population needs of the Wealden District and support economic
prosperity. This goes to the heart of the need for the Core Strategy, which should seek to plan positively for
appropriate growth in balance with the acknowledgement of constraints, rather than reducing growth rates
arbitrarily. 37. Although these constraints and needs have been referred to within the documents relating to the
Core Strategy, there is no statistical analysis to ascertain how the 9600 housing figure has been decided. There is
also no explanation as to why the figures have been decreased from the South East Plan allocation, which for the
Core Strategy plan period would be 13,200, or as to why the proposed allocation fails to meet household
projections to an even greater extent. It is our case that the need for housing has not been appropriately analysed
and a figure of 9600 does not address the evidence, which clearly shows the requirement for housing. 38. This
conclusion merely concurs with that which has been reached repeatedly through BP1, and in particular on page
21, paragraph 5.37, which supports the above points in relation to a significant need for housing growth. The
discussion which follows on the constraints to development does not attempt to expand on the nature of these
problems and by how much they would limit new housing development. Therefore without robust statistical
analysis and an unclear analysis of ONS projections it not possible to ascertain how the housing figure of 9600 has
been established. As it has been used as the overall basis of the Core Strategy, this is a fundamental fault in the
research and analysis of the evidence base of the document which results in a need to overhaul housing figures
basing them on real evidence of need. FORWARD PLANNING 39. Based on the discussion and evidence
referenced above, it is considered that 9600 is not an appropriately justified housing figure for the District. The
figure fails to take into account the need for future growth in the District and does not propose effective forward
planning which is the main purpose of Core Strategies. 40. The only justification for providing this figure seems to
be based on past housing figures. This is contained within the Core Strategy on page 29, paragraph 5.13 which
explains how over the last 21 years an average of 400 dwellings have been built per annum in the District and that
based on this, a similar rate is achievable in the future. 41. This does not provide for effective forward planning as
evidence is based on past results rather than remaining focused on future growth. It is evident from the projected
population figures that population is expected to increase and if Wealden are unable to accommodate this growth, it will force people to reside outside of the District. This increases pressure on neighbouring authorities who suffer their own constraints and it is the responsibility of Wealden District Council to address this growth properly.

PROPOSED REVISED HOUSING FIGURES 42. The South East Plan allocated 11,000 dwellings to the District based on national housing figures and fair distribution across the region taking into account policy considerations of each District and national housing need. The DCLG policy based population and housing projections are run under the same assumptions of the trend based projections in terms of fertility, mortality and migration level, but additionally they take into account the number of houses planned to be built during the projection period. The migration level is then adjusted according to the future housing provision. This information has been obtained in response to a specific enquiry from East Sussex County Council, correspondence of which has been attached as Appendix 1. 43. On this basis it is considered that the policy based projections fairly assess population growth and the requirements of the District. It is therefore proposed that in order to accommodate the requirement for more housing based on the evidence addressed above, it is fundamental to work towards a figure of 13,000 as proposed both by the South East Plan and justified by policy based household projections. If this position is not concurred with then the 11,000 figure allocated within the South East Plan must be taken as an absolute minimum. 44. This will then adequately accommodate for projected population growth, in-migration and economic prosperity. It will also accommodate for changing demographics of smaller households and an increase in housing will greatly help to address the apparent affordability problems in Wealden. It will encourage a greater choice of types and tenures of housing and subject to national requirements, affordable housing can be promoted through larger housing development schemes.

DISTRIBUTION OF HOUSING 45. This section of the representations discusses the distribution of housing, primarily between the north and south of the District but also in terms of the manner of the council’s treatment of the settlement hierarchy. The first notable point is many of the significant potential infrastructure constraints, such as waste water treatment capacity and inadequate road infrastructure, are focused on the south of the District. This is where a large majority of the housing has been allocated. The Strategy acknowledges that further development here would be limited due to these constraints, but the overall approach to dealing with levels of development in the south in the South East Plan is acknowledged. It is accepted that the councils approach to development in these areas is acceptable in principle, although there are one or two instances where we consider that the degree of emphasis on development in the south has resulted in proposed locations for housing that are inappropriate. 46. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. Given that the general approach to housing provision and location in the south is acceptable consideration therefore needs to be given in the Strategy to additional provision in the north of the District at an appropriate scale and in locations that reflect the need to consider the appropriateness of the settlement hierarchy. 47. Crowborough is the largest town in the District and is designated as a District Centre within the Core Strategy. Given its close proximity to Tunbridge Wells it is the most appropriate location to accommodate the requirement for more housing. This will help to achieve the aims of providing more development to support growth and improving retail and employment opportunities and the provision of affordable housing in the north of the District. 48. Presently, the majority of development within the north of the District is focused in a single urban extension to the west of Uckfield (SD1). Expansion of Uckfield in this manner is considered to be inappropriate due to issues including traffic congestion, capacity, flood risk, noise from the A22 and the sites prominence in the wider landscape and the very exposed views from the Uckfield bypass. These issues have already been highlighted with the council’s Strategic Housing Land Availability Assessment (SHLLAA). 49. This site would represent a major incursion into unspoilt countryside that will have a very seriously damaging effect on a wide area and will completely change the setting of the town and its relationship to the surrounding countryside. That is because of the prominence of the location and its poor relationship in a landscape sense to the town, from which it is almost entirely visually detached by virtue of the topography of the area and the openness of the location to the surrounding area. CROWBOROUGH 50. The proposed submission strategy significantly detracts from the potential of Crowborough, which is better placed in the District in terms of accessibility and has excellent education and health facilities that are at least comparable with those of Uckfield. Crowborough is in need of town centre regeneration, although it has shown that even in present recessionary times the basic strength of the centre is apparent though increases in the retail offering in terms of quality and floorspace. New social infrastructure to support its population is being provided; work having commenced on the new community building in the centre of the town. 51. There is a perceived conflict between development at Crowborough and its environmental status as a result of the relationship of the town to the AONB that surrounds it and of the proximity of Ashdown Forest as a major recreational facility that is at the same time an important environmental asset as a result of its status as a SSSI. However, given that the Forest is a major regional attraction it is not considered that growth at Crowborough will make any real difference to the health and wellbeing of the Forest per se, when regional growth figures are such that the population will generally be increasing and it is inevitable that the attractiveness of the Forest will make it an increasingly used resource by the existing and increasing population over a wide area. The Core Strategy in any case rightly seeks to draw a zone within which development that would potentially affect the Forest would be prevented. 52. On the basis of the comments we have made earlier and in view of our conclusions above we consider that there is a significant opportunity for development at Crowborough that is justified as a result of the need to ensure that overall growth for the District is at a sustainable level that will meet future requirements in an acceptable fashion. A level of development that achieves that aim is the minimum that the strategy should be proposing. There are, however,
recognised constraints to the town and therefore a need to consider the most appropriate general location for
development in terms of landscape impact and accessibility. We also consider that it would be appropriate for the
council to consider a single major location for development on the basis that the necessary infrastructure to serve
such a development can be provided more effectively and efficiently and that it will be easier to provide the funding
for regeneration and community projects with a single development rather than from a number of smaller sites. 53.
Crowborough has landscape and environmental constraints on much of its periphery and in addition the growth of
the town in the past has been such that accessibility, particularly to the south, is very constrained. Southern areas
of the town are far removed from the A26, which is required for access to the north and south, and by poor road
infrastructure in the intervening areas that is incapable of improvement to an acceptable degree to support major
development. This is reinforced within paragraph 6.36 of the submission document which identifies the existing
traffic and congestion problems on the local road network. Despite the fact that the rail station is located to the
south east and there are areas to the south east of the town that do not lie within the AONB it is not possible to
identify a suitable location for development adjacent to the town that is suitable in a landscape and environmental
capacity and with appropriate accessibility characteristics within close proximity of the station. Thus, although the
Strategy seeks to accommodate a relatively large development area to the south of the town it is not considered
that that could realistically be achieved in an acceptable way. While the fact that that area is not within the AONB
might initially be seen to be a benefit there are significant access problems that effectively militate against all but
relatively small levels of development in this location. 54. Land to the west and north west of the town is in close
juxtaposition with Ashdown Forest and the AONB and has a rural and semi rural character that would be
significantly disrupted by new development of any scale. Accessibility is also relatively poor and there would be
some difficulty in integrating development with the need to protect the Forest and its environs. 55. Land to the
north east of the town is within the High Weald AONB and is open in character, such that there are wide ranging
long distance views of the southern slopes in this area from the Eridge Ridge to the north. The sensitivity of these
areas is high in environmental terms as a result and the character and setting of the town in the landscape would
be significantly affected by development in these areas. 56. To the east of the town are Palesgate and
Crowborough Ghyll, largely wooded areas mostly owned by the Town Council and utilised for informal public open
spaces that are protected by planning policies and which form an effective semi rural edge to the town as well as
being on a high ridge that gives a significant degree of enclosure and containment to the south eastern parts of the
town. 57. North of the town the land rises gently to a long sloping ridge that runs west-east between Steel Cross
and Boars Head, with Palesgate Forest in the east and the more open landscape north of the town to the west that
contains land suitable for development. Parcels exist in the area of Steel Cross Road that would be suitable for
development including, for example, land which is located between the A26 and B2157 and therefore has good
accessibility links and access to the local and regional road network. It is also located adjacent to existing
development and would therefore represent a clear extension to Crowborough. It would also allow for the
remainder of the land located within and bounded by the A26 and B2157 to be accessed and developed which
provides further flexibility within a clearly bounded site that would allow further development to be undertaken in
the longer term. A plan of the site is included in Appendix 2. 58. Whilst the site is located within the High Weald
AONB, the site is bounded by roads and development to the south which will minimise its impact on the wider area
by creating a clearly bounded extension to the north of the town that will not dissipate further into the AONB. This
is in contrast to the contingency site which is located to the north of the A26 within the AONB and is unconstrained
by defensible boundaries. It is therefore considered that more suitable sites to the north of Crowborough should be
included within the strategy for the development of Crowborough. GENERAL SUMMARY 59. It follows from the
general arguments set out above that we consider that the overall position of the proposed Core Strategy is such
that it has not been demonstrated to any satisfactory degree that it represents a reasonable approach to meeting
acknowledged housing demand. While the strategy appears satisfactory in dealing with the generalities of the
amount of growth it provides for there is a significant failure to deliver sufficient housing to meet the actual likely
future requirement, particularly in the north of the District. 60. The inclusion within the Core Strategy of housing
figures that are below those of the South East Plan and below those in ONS projections is not justified or,
importantly, explained in any meaningful way in the document, and in the absence of such adequate

Details of Changes to be Made:
The representation we have made include proposed changes to the Strategy
INTRODUCTION 1. The comments in this document are made on behalf of Evergreene Ltd and focus on a number of issues raised by the 2011 Core Strategy Proposed Submission Document. Initially the representations address how the housing figures have been derived, the distribution of housing in the District and the uneven balance of strategic development, which is primarily focused in the south of the District. In light of those comments we then consider amendments and additions to the document that should be made to ensure that it makes proper provision for the future planning of the District. 2. The overall point that we seek to make is that we support the emphasis on new housing in the south of the District, albeit that we question the manner in which the council has approached the issue of housing numbers and growth locations. The shortfall in the allocation of land for development is serious, and as a result it is considered that there is much greater importance in ensuring that those locations that are set out in the Strategy can be achieved. At Stone Cross, for instance, there are proposed allocations of land that would contribute in an entirely logical and appropriate way to the past development of the area and thus become a suitable extension to the settlement within defensible boundaries that did not exist when the first expansion of the settlement took place. 3. We deal first with the context of the Core Strategy and the level of housing development it proposes, in light of a significant failure to justify or explain the levels of development proposed. REGIONAL STRATEGIES 4. PPS 12 provides the guidance for the formation of Core Strategies and the legal requirements in order for an Inspector to declare the plan ‘sound’. Paragraph 4.50 sets out the checks an Inspector must make on the plan in order to fully comply with legislation. These include having regard to national policy and generally conforming to the Regional Spatial Strategy. Paragraph 4.33 in PPS 12 further illustrates this point and seeks to ensure Core Strategies are ‘consistent with national policy and in general conformity with the regional spatial strategy’. 5. The South East Plan allocated 11,000 dwellings to the Wealden District over the 20 year plan period 2006-2026, at a rate of 550 dwellings per annum, whereas the Proposed Submission Core Strategy allocates just 9600 over the 24 year period 2006-2030, an annual rate of 400 dwellings. The differences between the annual rate of dwellings and the plan periods are important to consider here, and this can be done in two ways: - a. The South East Plan period is 2006 - 2026. The Core Strategy plan period is 2006 – 2030; four years longer. The South East Pan requires 11,000 dwellings to be built during that period at a rate of 550 dwellings per annum. The Core Strategy would require just 8000 dwellings to be built between 2006 and 2026 at a rate of 400 dwellings per annum as proposed. This is a deficit of 3000 dwellings between the Core Strategy and the regional requirement. b. Conversely, if the South East Plan annual rate of 550 was applied to the Core Strategy plan period of 2006 – 2030 (24 years), this would amount to a need for 13,200 dwellings over the period 2006 - 2030. The Core Strategy requires only 9600 dwellings over this period, resulting in a deficit of 3600 dwellings. 6. The calculations show a clear deficit in housing provision in the Core Strategy when both annual rates and plan periods are accurately compared. 7. There has been significant debate surrounding the revocation of Regional Strategies and the latest High Court Order has confirmed that the intended abolition of the Regional Strategies by the Coalition Government can now be considered ‘material’ in future planning decisions. However, as the Cala Homes (South) Ltd v Secretary of State for Communities and Local Government and Winchester City Council [2011] EWHC 97 Judgement states, there are distinctions to be made between materiality and weight (paragraph 29). Therefore although this is a material consideration, it is the responsibility of the decision maker to defend their decision if there is any deviation from the guidance contained within the Regional Strategies. ‘Thus, in appropriate circumstances, a local planning authority in the reasonable exercise of its discretion may give no significant weight or even no weight at all to a consideration material to its decision, provided that it has had regard to it’ [our emphasis] (paragraph 30). The point here is quite clear; if the council wishes to deviate from the South East Plan it may do so, but only if there is clear and reasoned explanation given in the Core Strategy document that adequately justifies the approach taken. A failure to properly consider this issue will result in the Core Strategy being deemed unsound. 8. It is also essential in this context to have regard to paragraph 34 of PPS 3, which states ‘Regional Spatial Strategies should set out the level of overall housing provision for the region, broadly illustrated in a housing delivery trajectory, for a sufficient period to enable Local Planning Authorities to plan for housing over a period of at least 15 years.’ 9. The failure of the council to properly consider the appropriate level of housing provision and in addition to fail to properly explain and justify the reasons for the overall levels of growth that are promulgated is a significant deficiency in the Strategy and there is a need to consider substantial amendments to ensure the lack of soundness in this respect is overcome. POPULATION AND HOUSEHOLD PROJECTIONS 10. We have identified above the overarching issues in respect of the Strategy, relating to inadequacy of the council’s housing figure of 9600 over the plan period of 2006-2030 and the failure to adequately
justify why that figure should be accepted. In order to properly assess the soundness of the proposed Strategy it is also necessary to discuss actual housing need in relation to demographics and statistical information. 11. As we have already made plain, if the Core Strategy does not accord with figures in the South East Plan, the justification for the level of housing provision it proposes should be explained elsewhere. We have therefore examined the document to seek to establish whether such an explanation exists. 12. The only reference to statistical evidence within the Core Strategy is contained on page 13 under paragraph 3.10 which states: 'Trend based projections(1) show an increase in population in Wealden from 2006 to 2030 of around 19,000 persons, which equates to around 16,800 households.' 13. This is accompanied by a footnote which offers a reference to Office of National Statistics (ONS) trend based projections in addition to different figures from East Sussex County council. These contain a reference to a population increase of around 20,000 persons equating to 13,500 households and 13,000 additional dwellings. Both this comment and the direct reference in paragraph 3.10 indicate the need for a level of future housing that is considerably in excess of the council’s figures. 14. Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) also references ONS trend based population and housing projections on page 16, paragraph 5.11. This gives similar figures to those which are contained within the Core Strategy of a population increase of 19,200 persons equating to a need for an extra 16,800 households over the period 2006-2030. 15. We have also considered the ‘East Sussex in Figures’ website, which includes both trend based and policy based population and household projections for the different 25 year time periods. We have prepared the table below to highlight the comparison between the trend and policy based figures: - Trend Based Policy based Population projections Population projections 2008 2033 Increase 2001 2026 Increase 143,400 165,400 22,000 140,184 157,935 17,751 Household projections Household projections 2008 2033 Increase 2001 2026 Increase 61,290 77,684 16,394 58,466 71,356 12,890 The above figures have been sourced from www.eastsussexinfigures.org.uk 16. The important issue here is that it is unclear from the Core Strategy documents exactly which figures have been used, and it remains unclear despite our direct enquiries of the council on the matter. It seems likely, however, that trend based population and household projections have been obtained from this dataset. It may be the case that the figures above have been updated and that the council’s figures take into account previous figures available from 2006. These may then have been adjusted to fit in to the plan period of 2006-2030. 17. The trend based 2008 population projections were published by the Office for National Statistics (ONS) in May 2010 and the trend based housing projections are based on these figures but contain new household type categories recently developed by the Department of Communities and Local Government. 18. The trend based figures shown above are similar to the figures referenced in the Core Strategy, taking into account the adjustment of dates. However the footnote on page 13 refers to 13,000 additional dwellings, which is below any trend based figures previously referenced. It appears therefore that this may relate to the policy based figures, which are similar to the policy based household projection shown above (12,890), although there is some variation as the footnote references 2006-2031 and the above figures relate to 2001-2026. 19. The policy based figures shown above are described on the East Sussex in Figures website as being derived from housing provision figures provided within the South East Plan, housing trajectory work provided by the relevant council’s in September 2009, and they are modelled on the Chelmer Model. This is mentioned on page 16 of BP1 in paragraph 5.12 where it is noted that: 'Due to the complexity of the model, the information used to predict future demand can not be examined in any great detail.’ 20. This is insufficient as the basis for the projections for future growth within the Core Strategy relies on these figures and it is the purpose of Background Papers to adequately explain these findings. This is especially the case as the council’s figures have been inadequately referenced and deviate considerably from all other relevant sources. 21. It is noted that although the footnote on page 13 of the Core Strategy is not properly referenced and there is no background information relating to how this information has been derived, the number of households (13,500) is more than the number of additional dwellings required (13,000). It is assumed that the extra 500 homes have been accommodated for through the council’s own information regarding long term empty dwellings in the District, short term empty dwellings due to an occupant’s death or houses currently being sold on the market. However it is considered that this slight drop in the number of households compared to the number of dwellings required is not greatly significant to argue for less housing need. Furthermore these figures have not been adequately referenced or justified and the calculations used to reach these figures are unavailable. HOUSING REQUIREMENT 22. It is predominantly trend based population and household projections which have been referenced within the Core Strategy where it is then explained on page 13, paragraph 3.10 that: ‘This shows the demand for both market and affordable housing is high, and in excess of that which could be accommodated or delivered within Wealden.’ 23. This appears to be the basis of the council’s approach to the Core Strategy as a matter of basic principle; that the level of housing proposed for the District is less than the figure of new dwellings required by reference to regional policy and less than that indicated to be required by all other relevant sources for the reason that the District has insufficient capacity to accommodate housing at the levels required. This is the sole extent to which the council attempts to justify the 9600 housing figure. 24. However, there is no adequate explanation anywhere in the Strategy as to why the projected increase in households cannot be accommodated in the District. Of even greater importance, the Strategy, having stated that insufficient dwellings to meet identified need will be allowed for, fails in any way to consider or try to quantify the potentially significant social, economic and housing problems that an acknowledged failure to meet projected future requirements will cause. AFFORDABLE HOUSING 25. It is notable in respect of the council’s failure to deal with these issues that in Background Paper 1 – Development of the Proposed Submission Core Strategy (BP1) the council repeatedly concludes that high levels of housing are required within the District and acknowledges that
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

this need is identified in a variety of demographic and statistical evidence. 26. The issue of affordable housing is raised within the Core Strategy in Background Papers 1 – Development of the Proposed Submission Core Strategy and 2 – Managing the Delivery of Housing. The council’s Housing Needs Assessment (January 2010) is referenced on page 17, paragraph 5.14 of BP1 which describes how the need for affordable housing cannot be accommodated within the District despite evidence showing a great need. This is again referenced within BP2 (page 3, paragraph 2.3) where the council’s Strategic Housing Market Assessment (SHMA) has also been referred to which addresses ‘very significant affordability issues’ within the District. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the country. 27. However, there is no correlation between the extent to which the failure to produce adequate levels of affordable housing that would result from the overall approach to Core Strategy housing provision would result in social deprivation and other long term problems for the population of the District. That is in our view a fundamental deficiency of the Strategy.

DEMOPGRAPHICS 28. BP2 - Managing the Delivery of Housing (page 3, paragraph 2.4) - explains the demographic structure of population and households within the District. There are a number of trends which have been referred to, including a decrease in household size, resulting in more single person households, particularly the elderly. The demand for housing from demographic evidence, coupled with the economic prosperity considerations below, mean that the overall health of the District depends on a future growth in population. It is therefore the responsibility of the council to provide enough housing both of the correct type and in the correct location, in accordance with the nature of demand outlined above.

ECONOMIC PROSPERITY 29. It is a requirement of PPS 4 Planning for Sustainable Economic Growth, that local authorities should include within their plans a clear economic vision for their areas which ‘positively and proactively encourages sustainable economic growth’ (page 7, EC2.1 (a)). 30. Due to the need to maintain an economically active and consumer based population in line with PPS 4, in-migration is encouraged by the council. BP2, page 3, paragraph 2.4 states:- ‘In order to maintain the viability of services and facilities and the vitality of the local economy there is therefore a requirement for significant new housing development within the District which would encourage some in-migration in order to maintain population levels’. 31. In addition, ONS figures for 2007 indicate a net inward migration from within the UK to Wealden of 800 people (arising from 7,800 leaving the District and 8,600 entering), which demonstrates in-migration is occurring and adds to the demand for housing within the District. 32. It is noted within BP2, page 3, paragraph 2.4: - ‘This natural change, leading to a declining and more elderly population, could have a potentially very damaging effect on the future customer base on existing services and facilities within the District as well as for the viability and vitality of Wealden’s town centres by reducing the economically active sector.’ 33. This effectively acknowledges that on economic grounds an increase in the population that would be the result of a higher level of housing growth is required to enable the District to maintain and improve its economic base and to facilitate protection of existing employment levels and facilitate employment growth. 34. None of these considerations relating to housing and economic need are evident within the housing figures which the Core Strategy proposes overall. The low figure of 9600 is not adequately justified within any of these documents, despite evidence to show that higher levels of housing are needed and would be beneficial to the future growth of Wealden, particularly to maintain the vitality of town centres and support economic growth.

CONSTRAINTS WITHIN WEALDEN 35. The Core Strategy and BP1 identify constraints within the District which is considered to restrict housing growth in certain areas. These are outlined on page 23 of BP1, paragraph 6.2 and include the issues of waste water treatment capacity in the south of the District and the need to protect the rural nature of the District and the High Weald AONB. Also included within constraints for Uckfield, Polegate and Hailsham in the Core Strategy are traffic management and congestion problems in the town centres with significant infrastructure improvements required. 36. However this must be contrasted against the above evidence where ONS figures show a demand for housing given the projected increase in population, the overwhelming need for affordable housing and the need for in-migration to tackle population needs of the Wealden District and support economic prosperity. This goes to the heart of the need for the Core Strategy, which should seek to plan positively for appropriate growth in balance with the acknowledgement of constraints, rather than reducing growth rates arbitrarily. 37. Although these constraints and needs have been referred to within the documents relating to the Core Strategy, there is no statistical analysis to ascertain how the 9600 housing figure has been decided. There is also no explanation as to why the figures have been decreased from the South East Plan allocation, which for the Core Strategy plan period would be 13,200, or as to why the proposed allocation fails to meet household requirements. BP2 (page 3, paragraph 2.3) also identifies Wealden as one of the highest house price areas in the country. 27. However, there is no correlation between the extent to which the failure to produce adequate levels of affordable housing that would result from the overall approach to Core Strategy housing provision would result in social deprivation and other long term problems for the population of the District. That is in our view a fundamental deficiency of the Strategy.

FORWARD PLANNING 39. Based on the discussion and evidence referenced above, it is considered that 9600 is not an appropriately justified housing figure for the District. The figure fails to take into account the need for future growth in the District and does not propose effective forward planning which is the main purpose of Core Strategies. 40. The only justification for providing this figure seems to
be based on past housing figures. This is contained within the Core Strategy on page 29, paragraph 5.13 which explains how over the last 21 years an average of 400 dwellings have been built per annum in the District and that based on this, a similar rate is achievable in the future. 41. This does not provide for effective forward planning as evidence is based on past results rather than remaining focused on future growth. It is evident from the projected population figures that population is expected to increase and if Wealden are unable to accommodate this growth, it will force people to reside outside of the District. This increases pressure on neighbouring authorities who suffer their own constraints and it is the responsibility of Wealden District Council to address this growth properly.

PROPOSED REVISED HOUSING FIGURES 42. The South East Plan allocated 11,000 dwellings to the District based on national housing figures and fair distribution across the region taking into account policy considerations of each District and national housing need. The DCLG policy based population and housing projections are run under the same assumptions of the trend based projections in terms of fertility, mortality and migration level, but additionally they take into account the number of houses planned to be built during the projection period. The migration level is then adjusted according to the future housing provision. This information has been obtained in response to a specific enquiry from East Sussex County Council, correspondence of which has been attached as Appendix 1. 43. On this basis it is considered that the policy based projections fairly assess population growth and the requirements of the District. It is therefore proposed that in order to accommodate the requirement for more housing based on the evidence addressed above, it is fundamental to work towards a figure of 13,000 as proposed both by the South East Plan and justified by policy based household projections. If this position is not concurred with then the 11,000 figure allocated within the South East Plan must be taken as an absolute minimum. 44. This will then adequately accommodate for projected population growth, in-migration and economic prosperity. It will also accommodate for changing demographics of smaller households and an increase in housing will greatly help to address the apparent affordability problems in the District. It will encourage a greater choice of types and tenures of housing and subject to national requirements, affordable housing can be promoted through larger housing development schemes. DISTRIBUTION OF HOUSING 45. The overall approach to dealing with levels of development in the south of the District, reflecting the requirements of the South East Plan, is acknowledged and accepted. The council’s approach to development in these areas is acceptable in principle and in many respects the locations for proposed development are also considered to be appropriate. 46. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. The general approach to housing provision in the south is accepted and the location of development on the periphery of existing settlements such as Stone Cross is considered an appropriate means of accommodating the locations for proposed development are also considered to be appropriate. 46. The discussion earlier in this document highlights the very significant and acknowledged need for a more substantial housing figure in the District. The general approach to housing provision in the south is accepted and the location of development on the periphery of existing settlements such as Stone Cross is considered an appropriate means of accommodating development in a suitably sustainable manner. 47. In particular there is land south of Dittons Road at the western end of the settlement that has been recognised by the council to be appropriate for development in the SHLAA exercise. It is bounded by defensible boundaries (roads and a former railway line) and the need for much greater emphasis on the provision of housing dealt with earlier in these representations means that its development should be strongly supported. GENERAL SUMMARY 48. It follows from the general arguments set out above that we consider that the overall position of the proposed Core Strategy is such that it has not been demonstrated to any satisfactory degree that it represents a reasonable approach to meeting acknowledged housing demand. While the strategy appears satisfactory in dealing with the generalities of the amount of growth it provides for there is a significant failure to deliver sufficient housing to meet the actual likely future requirement, particularly in the north of the District. 49. The inclusion within the Core Strategy of housing figures that are below those of the South East Plan and below those in ONS projections is not justified or, importantly, explained in any meaningful way in the document, and in the absence of such adequate explanation it can only be concluded that the Strategy is unsound and will fail to provide an adequate future policy base. 50. The housing figures allocated within the Core Strategy are not sufficient to accommodate adequate growth in the District and would result in the plan failing the tests of soundness. The 9600 housing figure has not been derived from robust statistical analysis and instead relies upon past annual housing figures. The Core Strategy overall housing figures therefore fail to accommodate for future growth and effective forward planning. 51. It is considered that there is a need to allocate 13,000 dwellings over the plan period 2006-2030 to adequately address the issues relating to policy based population growth and housing requirements. Moreover, here are a number of suitable locations within the District available for housing development which do not compromise the constraints highlighted within the Core Strategy. 52. The failure of the Core Strategy to make provision in this way means that additional housing allocations are necessary and the allocations already set out in the Strategy should be strongly supported, in particular that relating to land at Stone Cross, in order to meet likely future requirements. The balance of the Strategy is significantly weighted towards the south of the District and in very general terms this overall approach to housing and economic development in the south, and the balance with necessary associated infrastructure provision, is justified. 53. In order for the council to focus on effective forward planning, it must appropriately consider the identified housing requirement and sustainable distribution of housing development which should be based on statistical analysis and balanced policy considerations. This will encourage economic prosperity in identified town centres, encourage a greater choice of housing which will help to tackle affordability issues and ensure the continued vitality of the District towns without compromising the rural nature of the District.

Paragraph  5.2
Sound  ☐ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complianc:

Proposed Urban Extension in North & East Hailsham Planning Policy Statement 1 (PPS1), states that; ‘In preparing development plans, planning authorities should seek to: Reduce the need to travel... and focus development in existing centres and near to major public transport interchanges.’ The urban extension to north Hailsham (SD3) identified in the Figure 7 of the Proposed Submission Core Strategy (PSCS) is 1.95 km from the centre. Although the southern sections of the east extension (SD2) would be close to the town centre the northern sections would be approximately 2.2 km from the town centre. In contrast, southern sites identified as being suitable in the SHLAA (in particular Oaklands & The Brickfield SHLAA Ref 100/1310) are located 1.2 km from the town centre. This shorter distance means that trips into the town centre are much more likely to be undertaken on foot or bicycle rather than in a car. On this basis, the proposed residential development to Hailsham as identified in Figure 7 for the PSCS is contradictory to PPS1. This point was also highlighted by the Strategic Housing Land Availability Assessment. The site at Danecroft Nursery, Station Road, Hellingly and adjacent site at 13 Station Road, Hellingly are both within the north extension (SD3), and were deemed to be unsuitable for development by the SHLAA. This was because as stated; ‘These sites are relatively isolated and are remote from local services and facilities. They are disconnected from the boundary of Hailsham which is some distance away. Housing development would be unsustainable and would have the effect of consolidating a linear form of built development in this semi-rural location.’ PPS 1 states that; ‘In some circumstances, a planning authority may decide in reaching a decision to give different weight to social, environmental, resource or economic considerations. Where this Is the case, the reasons for doing so should be explicit and the consequences considered.’ The various studies undertaken in preparation for the PSCS do not address this issue. No compensatory positive reason is given for the location of development so removed from the town centre. The evidence base study; ‘Landscape Character Assessment and Development Option Evaluation Study’ undertaken in 2009 in preparation for the PSCS states that; ‘Development of the northern fringes of Hailsham would be north of the A271 and isolated from the town..... The isolated nature of this development which is removed from the town centre of Hailsham contradicts guidance in PPS1. PPS1 states that Planning Authorities should; ‘ensure that the impact of development on the social fabric of communities is considered and taken into account’. Hailsham is more able to accommodate smaller sites to the south than larger sites to north and east. Flood Risk According to Figure 7 of the PSCS, sites identified to the north and east of Hailsham (SD2 and SD3) are positioned alongside a flood prone area. The Strategic Housing Land Availability Assessment (SHLAA) also points out that; ‘the eastern side of the north site are within Flood Zones 2 & 3’ve PPS 1 states that ‘new development should be avoided in areas at risk of flooding’. Strategic Gap Section 3.10.7 of the ‘Landscape Character Assessment and Development Option Evaluation Study’ states that; ‘The countryside to the south of Ersham Road and Ingrams Way is more enclosed and has a stronger character than areas to the east. This is the strategic gap between Polegate and Hailsham and should be protected to prevent coalescence.’ The land south and west of Ersham Road is associated with previous use as a brickfield. There are a number of existing residential developments dotted around this area with the predominant use of the land being for horses and riding. There is existing residential development adjacent to the B2104 (Ersham Road) which is further south than southern sites identified as being suitable by the SHLAA. Development at this location would provide infill between this isolated area of housing and the existing south urban fringe of Hailsham. There is also additional existing development south of this site adjacent to the A22 (Woodside Way). It is therefore not accurate to say that development south of Ersham Road and Ingrams Way would reduce the strategic gap between Hailsham and Polegate. There is currently a gap of 2.5 km between the south side of Oaklands Farm & The Brickfield and the north edge of Polegate. This is a considerable distance. The proposed development of the northern sites such as those identified in Figure 7 of the PSCS would mean that the historic village of Hellingly would effectively become engulfed by Hailsham. Referring to the Hellingly Hospital site; Section 4.9.2 of the Landscape Character Assessment and Development Option Evaluation Study’ states that; ‘The consideration of this area as a new settlement should avoid coalescence between the settlements at north Hailsham and the village of Hellingly..... A new community in this area would need to include the areas to the north of Upper Horsebridge.’ Since the north extension (SD3) identified in Figure 7 of the PSCS would be located 350m from Hellingly, it seems clear that coalescence would occur between north Hailsham and the village of Hellingly. This seems to be a blatant contradiction to the aims of the Landscape Character Assessment and Development Option Evaluation Study. BP1: ‘Development of the Proposed Submission Core Strategy’ Document BP1: ‘Development of the Proposed Submission Core Strategy’ – February 2011’ section 8.21 refers to south sites indentified in the SHLAA as; ‘area with rural character compared to other broad locations. The access to the town centre, and the proximity
of the A22 would not provide a suitable alternative to car use, and compared to other broad locations would not benefit the town centre and the wider population to such degree.’ This assessment is not accurate. Access to the town centre from the identified south sites is superior to that of the north sites identified, with an existing bus stop located on the adjacent B2104 providing regular 3 minute shuttles directly to the town centre. The south sites are significantly closer to Hailsham town centre (1.2km rather than 2.2km) than the north sites identified in the SHLAA and increase the likelihood that this journey would be taken by bicycle or foot. Section 8.24 of Document BP1 provides an assessment of the north sites identified in the SHLAA, stating: ‘In order to maximise the use of existing waste water capacity the strategy is directed to north Hailsham.’ The SHLAA contradicts the above, stating that the northern site at Upper Horsebridge, Hailsham for 520 dwellings is currently not deliverable due to the current wastewater capacity constraints at Hailsham North Wastewater Treatment Works. With reference to the north site, Section 8.24 of Document BP1 goes on to state: ‘It is less sensitive in terms of landscape impact, provides an opportunity to consolidate development at Hellingly Hospital and has the necessary road linkages and ability to create mixed housing and employment areas. Provision of services in this location will not detract from the town centre and will help provide for the wider area, and allows for the provision of additional primary school places.’ The assessment states that development at this site would be less sensitive in terms of landscape impact despite being adjacent to the historic village of Hellingly containing several listed properties. It is also contrary to the Assessment made in 2001 in the then Local Plan Review Landscape Appraisal. Conclusion The PSCS has been prepared using flawed evidence base studies such as BP1: ‘Development of the Proposed Submission Core Strategy’ and the ‘Landscape Study’. The use of such studies has meant that the PSCS has not been able to provide the most appropriate strategy for development of sites surrounding Hailsham. The PSCS is not consistent with national policy document PPS1 in that the proposed residential development at Hailsham is not positioned close to the town centre and existing facilities. The Council has not been able to provide clear and convincing reasoning to justify the approach of positioning development to the North of Hailsham which is isolated from the town centre and does not comply with PPS1. The Oaklands and Brickfield site south of Hailsham (SHLAA 100/1300: 224 dwellings) is largely on previously-developed (brownfield) land and has a highways scheme to be paid for by the developers agreed with East Sussex County Council and should be included in the SDAs to the exclusion of less suitable development. It meets the Hailsham Sustainability Objectives, being a local Urban Extension within walking distance of Hailsham town centre and offering proximity to open space, woodland and biodiversity – at a scale capable of delivering up to 224 dwellings with minimum impact on infrastructure and environmental amenity.

Details of Changes to be Made:
The main growth areas proposed are not consistent with the Council’s and Governments aim of reducing travel distances and housing development around Hailsham should be concentrated closer to the town centre.
1.1 The Amount of New Housing – Policy WCS1 and WCS2 and paragraphs 5.3 etc 1.1.1 We note that the proposed Submission Core Strategy looks to accommodate 9574 new dwellings in the district across the plan period (2006 – 2030) i.e. 399 a year. This is circa 27.5% less than the 11,000 dwellings proposed across the district in the South East Plan (SEP) (May 2009) for the period 2006 and 2026. 1.1.2 PPS12 requires Core Strategies to conform generally to the regional policy. We do not consider the amount of new housing proposed in the district to be legally compliant as it is not consistent with regional policy as set out in the SEP. 1.1.3 Whilst the LPA appear to be progressing with a lower level of growth on the assumption that the SEP will be revoked by the time the Core Strategy gets to examination, the fact is the SEP remains part of the development plan at present and the CS should have regard to the aims and objectives of the SEP/ justify why it is necessary and appropriate to depart from it. The proposed Submission Core Strategy contains no such justification. 1.1.4 A detailed understanding of the background to the amount of new housing proposed in the district in the SEP is in our opinion important in considering the soundness of the housing land supply strategy now being advocated in the proposed Submission Core Strategy document. 1.1.15 The Chief Planning Officer (CPO) in his letter of the 6th July made it clear that in the context of the revocation of the RSS LPAs would be responsible for determining the housing numbers in the absence of a regional target, and that the housing numbers promoted by LPAs would need to be justified, as LPAs would need to defend them through the LDF examination process. 1.1.19 The District Council has an obligation to assess and provide for the housing needs and demands of the District. Paragraph 33 of PPS3 makes it very clear that in determining local levels of housing provision local planning authorities should, in preparing their Core Strategies take into account evidence of current and future levels of housing need and demand, e.g. as set out in Housing Market Assessment and the Housing Needs Assessment. 1.1.22 Having regard to the above we feel the DC should give consideration to the accommodation of at least 13,200 (i.e. the 11,000 set out in the SEP plus 4 x 550) to cover the additional years to 2030). Given the 4,889 units are already committed this would leave a residual requirement of 8,311 i.e. a residual requirement equivalent to 415 dwellings pa. If, 75% of the 13,200 units were on sites that generated an affordable housing need under the new policy WCS8, this level of provision could provide for circa 3,465 affordable dwellings i.e. 18% of the affordable need identified in the HNA. Which demonstrates how sever the need is relative to the supply 1.1.23 WDC’s aversion to higher housing numbers appears to be related to the effect these could have on infrastructure and services, especially in the southern part of the district. However, it is often the case that the strategic housing allocations help to address this issue, providing new transport links/highway improvements, contributing to new sustainable drainage facilities, new schools, medical facilities etc. Higher levels of growth need not prejudice existing infrastructure and services; they could in fact help address existing problems. 1.2 Housing Distribution 1.2.1 We do not consider the housing distribution strategy to be legally compliant. It is not consistent with regional policy as set out in the SEP. PPS12 requires Core Strategies to conform generally to the regional policy. 1.2.2 Having regard to the above we feel the DC should give consideration to the accommodation of at least 13,200 (i.e. the 11,000 set out in the SEP plus 4 x 550) to cover the additional years to 2030). Given the 4,889 units are already committed this would leave a residual requirement of 8,311 i.e. a residual requirement equivalent to 415 dwellings pa. If, 75% of the 13,200 units were on sites that generated an affordable housing need under the new policy WCS8, this level of provision could provide for circa 3,465 affordable dwellings i.e. 18% of the affordable need identified in the HNA. Which demonstrates how sever the need is relative to the supply 1.2.3 WDC’s aversion to higher housing numbers appears to be related to the effect these could have on infrastructure and services, especially in the southern part of the district. However, it is often the case that the strategic housing allocations help to address this issue, providing new transport links/highway improvements, contributing to new sustainable drainage facilities, new schools, medical facilities etc. Higher levels of growth need not prejudice existing infrastructure and services; they could in fact help address existing problems. 1.2.4 Housing Distribution 1.2.1 We do not consider the housing distribution strategy to be legally compliant. It is not consistent with regional policy as set out in the SEP. PPS12 requires Core Strategies to conform generally to the regional policy. Paragraph 4.33 states that choices to be made on where growth should take place should follow national and regional policy. 1.2.2 The southern part of Wealden district is located within the Sussex Coast Sub Region, one of the nine sub regions identified in the SEP. These sub regions were to be 'the focus for growth and regeneration'. Policy SP1 of the SEP refers 1.2.3 Policy H1 of the SEP deals with regional housing provision. It stipulates that in the Sussex Coast Sub Region, 69,300 net additional dwellings should be provided between 2006 and 2026. 1.2.4 Policy SCT5 of the SEP sets out the scale and distribution of housing across the Sussex Coast sub region. It indicates that that part of Wealden District which falls within the Sussex Coast Sub Region should seek to accommodate 7000 dwellings during the plan period (2006 – 2026) i.e. 350 dwellings per annum. 1.2.5 Given the above, and having regard to the requirements of policy H1b of the SEP (wherein WDC are required to provide some 11,000 units across the district during the plan period (2006-2026)), it is clear that the SEP looks to focus growth within that part of the district that falls within the Sussex Coast Sub Region, with only a small proportion of development (4000 homes) to be accommodated within what was called the Rest of the District. 1.2.6 The SEP also makes it clear that the Sussex Coast Sub Region was identified as an area where the government was looking to proactively pursue and promote economic growth and regeneration. As a result over 60% of WDC’s housing requirement was located within the Sussex Coast Sub Region. The spatial strategy being promoted in the proposed Submission Core Strategy document is, according to paragraph 5.5 of the proposed Submission Core 493/A3/JA April 2011 Strategy document, predicated upon the strategy objectives and the settlement hierarchy. Thus only circa 51% of the proposed level of housing growth is to be located within what was referred to as the Sussex Coast Sub Region in the SEP. 1.2.7 Not only is the spatial strategy inconsistent with the SEP, but it fails to take on board the reason for
the spatial strategy proposed in the SEP i.e. the economic regeneration of the Sussex coastal area. WDC have, in their sustainability appraisal of the proposed Submission Core Strategy Document failed to assess the implications of the spatial strategy advocated in the proposed Submission Core Strategy Document on the economic regeneration of the Sussex coastal area. The council’s failure to undertake this work means that the proposed Submission Core Strategy Document is not soundly based. 1.2.9 In promoting an annual housing requirement of just 400 units WDC, in their proposed Submission Core Strategy document, are in our opinion actively stifling economic growth. Furthermore, the council’s decision to treat the whole district as a single entity, with no emphasis placed on the regeneration of the Sussex Coast Sub Region, is in our opinion, despite the aspirations of policies SP03, 04 and 06, actively prejudicing the economic regeneration of the coastal area, to the detriment of the wider area. 1.2.11 As currently drafted the housing distribution strategy advocated by WDC in their Proposed Submission Core Strategy is not in ‘general conformity’ with the RSS as required by Paragraph 4.2 and 4.33 of PPS12 and is not therefore sound.

Details of Changes to be Made:
3.1 The Amount of New Housing:- 3.1.1 We feel the housing targets set out in policy WCS1 should having regard to our position on the scale of housing growth be amended from 9600 to 13,200 dwellings. 3.1.2 Similarly we feel the housing targets set out in policy WCS2 of the CS should, having regard to our position on the scale of housing growth, the spatial strategy, and the level of housing proposed in Stone Cross specifically, be amended thus:- WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 980 New allocations; total dwellings 2006 - 2030 1,022. Total Wealden 4,889 Built or already committed; 8,311 new allocations; 13,200 Total Dwellings 2006 - 2030. 3.1.3 We would also suggest that the number of new allocations is revised to ensure that 60% of the proposed growth is located in the Sussex Coast Sub Region, as per the SEP, which should be identified on a plan. 3.1.4 Having regard to the above there would also be a need to amend policy SPO3 to address the increase in housing supply we advocate, and the reinstatement of the Sussex Coast Sub Region. Similarly paragraphs 3.11 and 3.16 would need to be revised to reflect our position, with the economic policies (SPO6 and WSC3 reviewed accordingly). 3.1.5 If the scale of housing proposed during the plan period is not revised as recommended, we would suggest that policy WCS2 is revised thus:- WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 850 New allocations; total dwellings 2006 - 2030 892. Total Wealden 4,889 Built or already committed; 4,835 new allocations; 9,724 Total Dwellings 2006 - 2030. 3.1.6 Given our recommended changes to the scale of growth proposed at Stone Cross and Westham we would also recommend that paragraph 6.31 (3) and paragraph 6.31 (3 bullet points 3, and 4 be amended thus:- ‘allocating a range of deliverable housing sites for up to 700 dwellings, and leisure, recreation and community facilities in Polegate and Willingdon, around 850 dwellings in Stone Cross, with some 16,890 sq. metres employment floorspace in the Polegate and Willingdon area. Sites for development will be identified and phased through the Site Allocation DPDs including: · provision of around 550 homes within an extension to the urban area of Stone Cross to the east and south east (SD6), with flexibility between SD6 and SD7, subject to highway improvements; · provision of around 300 homes within an extension to the urban area of Stone Cross to the north (SD7), with flexibility between SD6 and SD7, subject to highway improvements’

It is unclear within the Proposed Submission document as to what the overall housing requirement is based upon (i.e. South East Plan, Option 1. Locally Generated housing required?) For example paragraph 5.3 and Policy WCS1 gives a total number of dwellings to be built within the District for the period 2006 - 2030 but do not indicate where the total has been derived from. Although it is assumed this is the South East Plan requirement, this could do with being made clearer.

Details of Changes to be Made:
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

Details of Reasons for Soundness/ Legal Compliance:
1. We note paragraph 5.3 states that the Core Strategy and subsequent DPDs will be allocating land for at least 4,685 additional dwellings over the period April 2010 – March 2030. However, Policy WCS1 (Provision of Homes and Jobs 2006 – 2030) states that land will be identified in subsequent DPDs for the provision of some 4685 net additional dwellings in Wealden District to provide for 9,600 dwellings over the period 2006 – 2030. It is considered that Policy WCS1 should reflect the wording set out in paragraph 5.3 to accommodate the possibility of more housing development coming forward, for example on windfall sites. Therefore, the wording of Policy WCS1 should read “land will be identified in subsequent DPDs for the provision of at least 4,685 net additional dwellings in Wealden”.

Details of Changes to be Made:

Details of Reasons for Soundness/ Legal Compliance:
"Supplementary documents have been submitted but not attached, and may be viewed at the Council offices on request".

Details of Changes to be Made:
REVISION SOUGHT Increase housing requirement to 8,311

Details of Reasons for Soundness/ Legal Compliance:
Objection has already been made to policy SPO3 on the grounds that it is unsound, and that it should instead provide for 17,300 new dwellings over the plan period. That same objection is thus made in respect of policy WCS1 for the reasons previously set out.

Policy 1

Sound  [ ] Yes  [x] No  [x] Justified  [ ] Effective  [ ] Consistent with national policy
Legally Compliant  [x] Yes  [ ] No

Details of Reasons for Soundness/ Legal Complaince:
Eastbourne Borough Council notes the level of housing and employment land being proposed in the Wealden Proposed Submission Core Strategy on the basis that it is backed by a series of documents and background papers. These documents collectively, back the proposed levels of housing, employment and retail development established, and provide a justification for a reduction in the level of growth originally established in the recently revoked South East Plan. Eastbourne Borough Council shared Wealden District Council’s concerns about the ability of Wealden to deliver 11,000 net additional dwellings between 2006 and 2026. There are numerous capacities and constraints, particularly in the southern part of the District, (which had been earmarked in the South East Plan for the greatest proportion of Wealden’s housing target). The approach that seeks to limit the magnitude of housing and employment development to the capacity that the District can reasonably and sustainably accommodate is therefore supported and is considered a more appropriate level of development that will help ensure that the existing settlements retain their distinct identities. Eastbourne Borough Council considers that the level of growth established in Policy WCS1 has been set at a level that represents an effective balance between the need to provide new housing and employment land, whilst at the same time ensuring that the environment is protected and enhanced for future generations. Furthermore, the level of growth has taken account of the various existing and anticipated local infrastructure constraints and therefore represents a sound basis upon which to move forward. It is clear that the proposals established in the Wealden Proposed Submission Core Strategy will have major implications for Eastbourne but the Council considers that any potential issues can be successfully resolved by continuing constructive discussions between the two local authorities. Whilst the Council acknowledges the proposals in principle, it is considered that the wording of Policy WCS1 should be amended to clarify the time period that the “4,685 net additional dwellings” will be provided in. This issue is partially clarified in Policy WCS2 but Policy WCS1 could be enhanced by being more explicit in what has already been delivered and what is still required. This issue is partially addressed in Policy WCS2 but even there it is not immediately obvious what has actually been built between April 1st 2006 and March 31st 2010. In addition, the employment land requirement, which states that “provision will be made for some net additional 40,000 sq metres net employment space (B1/B2/B8) to provide some 128,695 sq. metres net employment space and 17,000 sq. metres net additional retail floorspace” should be broken down more clearly into the constituent parts so that it is clearer about what development has already been provided and what is still required.

Policy 1

Sound ☑ Yes ☐ No ☐ Justified ☑ Effective ☐ Consistent with national policy
Legally Compliant ☑ Yes ☐ No

Details of Reasons for Soundness/ Legal Complaince:
We recognise the Authority's approach to utilising the post-revocation flexibility in relation to the housing requirements as set down in the South East Regional Plan. In particular we note the reduction from 11,000 homes required in Wealden between 2006 - 2026 within the final South East Plan to the revised housing figure of 9,600 (as originally recommended in the Draft South East Panel Report). Overall we support the requirement for 9,600 homes within the plan period of 2006 - 2030, and the consequent 400 dwellings per annum. In terms of the components of supply we note that the Authority considers that there exists a significant contribution to the 9,600 homes, consisting of 1331 dwellings that have already been constructed within the plan timeframe (between 2006 and April 2010) as well as 3,558 dwellings committed through extant planning consents and deliverable Non Statutory Plan allocations. Overall this comprises of total of 4889 dwellings. As a result we support the residual requirement of 4,685 new allocations to be provided within the plan period. Whilst the largest proportion of the new allocations have been distributed throughout the Strategic Development Areas (Spatial Strategy Policy WCS4), we support the inclusion of at least 455 new dwellings within the Rural Villages, as per Spatial Strategy Policy WCS2: Distribution of Housing. Furthermore, we support the largest proportion (100 dwellings) of the new rural allocations within the settlement of Horam as per our representations to WCS6: Rural Area Strategy.

WCS1 Provision of Homes and Jobs 2006-2030 Policy 1

**Details of Reasons for Soundess/ Legal Complaince:**

The total amount of housing proposed by the draft Core Strategy is insufficient. DCLG household projections demonstrate that by 2030 there will be approximately 76,000 households in Wealden, an anticipated increase of around 15,500 households between 2006 and 2030. The Council states that they are unable to meet the need for housing yet do not submit any compelling evidence of this. They aim to meet approximately 57% by delivering 9600 dwellings by 2030. This equates to a shortfall in housing of approximately 5900 dwellings. In this respect the Core Strategy conflicts with its evidence base. The Strategic Housing Land Availability Assessment Report (March 2010) identifies a supply of suitable sites that are currently outside of the planning process capable of delivering a total of 18257 dwellings in the period between 2009 and 2026. The SHLAA demonstrates that the Council is capable of delivering enough housing to meet the need identified by DCLG projections therefore it is submitted that that the Core Strategy is not ‘justified’ as it fails to take account of its evidence base therefore it is ‘unsound’. The draft Core Strategy is not consistent with Planning Policy Statement 1: ‘Delivering Sustainable Development’ where it states that “In preparing development plans, planning authorities should seek to bring forward sufficient land of a suitable quality in appropriate locations to meet the expected needs for housing” (para. 27 iv). The Council will not deliver enough housing to meet anticipated need, in conflict with PPS1. Furthermore it is not consistent with Planning Policy Statement 3: ‘Housing’ when it states “The Government’s key housing policy goal is to ensure that everyone has the opportunity of living in a decent home, which they can afford, in a community where they want to live.” (para. 9). The draft Core Strategy does not propose to deliver the necessary quantity of housing to meet the need identified by DCLG forecasts regarding household projections. The proposed Core Strategy is therefore not consistent with the above national policy. The draft Core Strategy is deficient. The overall district wide housing allocation proposed in WCS1 is deficient because it does not deliver enough houses to meet an identified need. It is therefore not consistent with national policy despite evidence in the SHLAA demonstrating this to be possible. Given the absence of compelling evidence suggesting that Wealden District Council cannot meet the need for housing set out in DCLG forecasts it is considered that the presumption should be that the relevant national policy should be followed.

**Details of Changes to be Made:**

WCS1 Provision of Homes and Jobs 2006-2030 Land will be identified in subsequent Development Plan Documents for the provision of some 10585 net additional dwellings in Wealden District to provide for 15500 dwellings over the period 2006-2030.
Details of Reasons for Soundness/Legal Compliance:
The Core Strategy has emerged as the preferred strategy after substantial public consultation and after examination of a number of alternative spatial options. There remains a risk, however, that the overall housing provision figures could be successfully challenged as too low, based on evidence from Wealden District Council’s own studies of housing need and land availability. If the development provisions were to be increased there could be significant consequences for the scale and disposition of additional County Council infrastructure that would be required to deliver it. The policy’s commitment to employment land allocations which could deliver at least a moderate step change in the Wealden economy is supported. The recognition of the role that south Wealden can play in providing employment opportunities for the wider Eastbourne Hailsham ‘Triangle’ area is welcomed. Job density across East Sussex i.e. the ratio of jobs to working age population, is very low by regional and national standards, suggesting that improved job supply is required even if the working age population were to remain static. That is without compensating for the expected reduction in public sector jobs. The serious challenges facing the economy across East Sussex will require local authorities to work together to support delivery of economic regeneration.

Details of Changes to be Made:

We object to the content of the Policy as drafted on the basis that it has not been shown to be justified, effective or consistent with national policy. The target figure of 9,600 dwellings to be met within the District during the period 2006 to 2030 is significantly lower than the strategic requirement set out in the South East Plan (adopted May 2009) and fails to address identified needs.

Details of Changes to be Made:
As set out in PPS12, the CS should be prepared against the regional framework set out in the evidence base to the draft RSS. This includes having regard to, inter alia, the overall housing requirement to be met during the plan period.
Details of Reasons for Soundess/ Legal Compliance:
We wish to see the Development Boundary retained for Maresfield for the following reasons: We are not advocating major new development but wish to see further development properly controlled for the benefit of the village as a whole. The Ashdown Business Park (see para. 3.21) to the immediate west of the village has now received planning consent, and as it develops should provide considerable employment for the village. The village has relatively very good bus services in most directions (as compared with Buxted for example) which would be further enhanced. Although the village has limited facilities at present, it has all the elements of a vibrant community, primary school, church, village shop and post office. There is general support for a small number of new homes in this village (Maresfield) over and above the 80 provided for in the current non-statutory Local Plan. Almost certainly this will require some extension of a retained Development Boundary.

The recognition of SHLAA sites being an appropriate source of housing provision should be carried through all housing delivery policies.

Details of Changes to be Made:
Representations on behalf of Rich Tee Ltd. RPS has been instructed by Rich Tee Ltd. to make representations to Wealden District Council on the Draft Proposed Submission Core Strategy. Policy WCS1 - Distribution of Housing Growth Rich Tee Limited object to the proposed number of additional dwellings in the District up to 2030. The Regional Spatial Strategy for the South East was adopted in May 2009, and requires Wealden District Council to make provision for 11,000 new homes between 2006 and 2026. Following the formation of the Coalition Government in May 20101, the new Secretary of State for Communities and Local Government signalled the Government’s intention to abolish Regional Spatial Strategies (RSSs), and the Localism Bill currently making its way through Parliament will enact this policy. In July 2010 the Government’s Chief Planning Officer wrote to Chief Planning Officers in England setting out what can be described as the transitional guidelines that should be followed in the run up to RSSs being formally revoked. The guidelines made it clear that local planning authorities will be responsible for establishing the right level of housing provision in their area, and identifying a long-term supply of housing land without the burden of regional housing targets. Some authorities, the guidance continued, may decide to retain their existing housing targets that were set out in the revoked regional strategies, whereas others may wish to review their housing targets. The guidance also made clear however that it is important for the planning process to be transparent, and for people to be able to understand why decisions have been taken. Local authorities should therefore collect and use reliable information to justify their housing supply polices and defend them during the examination process. No such justification is given in the Proposed Submission Core Strategy for the figure of 9,600 dwellings up to 2030. Paragraph 3.11 notes that although significant numbers of housing need has been identified, other environmental, economic, social, infrastructure and community aspirations RPS emphasis have shaped the amount of growth that can be accommodated in Wealden. However, during the preparation of the RSS, Wealden District Council originally agreed to a proposal to find land for an additional 8,000 dwellings in the period between 2006 and 2026, but only on the provision that the infrastructure to support growth was in place before development took place. The Council’s concerns in respect of this matter were given a full airing at the Examination in Public (EiP) of the RSS which took place between 27 November 2006 and 30 May 2007. The Panel Report on the EiP stated that they were “unconvinced that the draft Plan figure for the Sussex Coast part of the District is the maximum that can be achieved”. They considered that there is “scope for private sector contributions towards new infrastructure in association with development and were encouraged by the partnership approach that had been adopted in the sub-region towards the co-ordination of future planning”. Accordingly, the Panel felt some increase in the sub-regional apportionment of this part of the District would be justified. In the rest of the District the Panel noted that a modest increase could be justified focused on Uckfield. Accordingly, Policy H1 of the final version of the Plan when it was adopted in May 2009 set a target of 11,000 new dwellings to be built in the District up to 2026. As the most recent figure which enjoyed, albeit briefly, development plan status, Rich Tee Ltd. consider that this figure should be retained, or at least form the basis of the District’s housing target for the Core Strategy. The figure has gone through the examination process which the revised figure of 9.600 will also have to do. There is no evidence that there has been a material change of circumstance since the RSS figure was examined and the RSS found to be sound; the Council appear to be presenting the same case for a lower figure in the Proposed Submission Core Strategy. The 11,000 figure therefore is founded on the more robust and credible evidence base of the two, and should be the target in the Core Strategy.

WCS1 Provision of Homes and Jobs 2006-2030  Policy 1

Details of Reasons for Soundness/ Legal Compliance:
Wealden is expected to build unrealistic number of houses with many areas unavailable e.g. Ashdown Forest. Affordable housing seems to be the first essential as many lower paid people cannot afford to buy and there seems to be little or no social housing available for families especially in the country districts.

WCS1 Provision of Homes and Jobs 2006-2030  Policy 1

Details of Reasons for Soundess/ Legal Compliance:
The developers on the Fairground Field have had to offer two years free rail travel to anyone who buys one of their rabbit hutches. This suggests that there is not the desperate need for so many dwellings. The hospitals and doctors can't cope with the requirments of today. Add the numbers that have been proposed and it will completly screw up their capabilities. There are now more people in the South paying ever increasing Council Tax and Road Tax yet the services that we are seeing are diminishing rapidly. The police are shrinking in numbers, our world leading health service is deteriorating rapidly, the local GPS's can't cope with the work load that they have today and you are treated like cattle if you need to go to London on the train. Local industry is more important than ever before and a closer control over immigration and imports has to be a priority. We need to tak a wider look at the resources that we have before we saturate them beyond function. With greater revenue collected by this increase in housing, perhaps more jobs could be offered by the 'over streched!, local councils, police and health servcie for which this over populated area pay for in taxes. The figures just don't add up. There are twice as many people paying council tax, there are three times more cars on the road paying road fund licence compared to the 60's yet everything is falling apart. We need to rethink where we have gone wrong before we continue to build on our mistakes. We still have the residue of an excellent country but we need to control what we are doing now before we destroy it for ever. The tidal wave of build, build, build has to stop while we still have some sends of sanity. We owe it to our children to try to preserve what we have before it is too late.

Details of Changes to be Made:
Therefore, in conclusion, it is our submission that in relation to the overall volume of house building proposed, the Proposed Submission Core Strategy is not founded on a robust and credible evidence base and has not considered reasonable alternatives. As a result the strategy adopted by the District council is not justified, is inflexible and ineffective at addressing the needs identified. The Proposed Submission Core Strategy, in particular Policy WSC1 is therefore unsound in terms of the tests in PPS12 : Local Spatial Planning (2008) (PPS12) (paragraph 4.36). To ensure the Core Strategy is sound, and in the absence of any clear and proper justification for the reduction in delivery identified by the Council, the level of housing provision required in the District and identified in Policy WSC1 should be raised to 13,200 dwellings for the period 2006-2030 that representing the figure identified in the South East Plan but extended at the same annual average rate of provision of 550 dwellings to cover the period to 2030.

Details of Changes to be Made:

---

Details of Reasons for Soundess/ Legal Complaince:

Trend based projections 2006 to 2030 show an increase of 19,000 persons, which equates to around 16,800 households. WDC who commissioned the survey make a deliberate decision not to follow the recommendations of the survey and ignore their responsibility to provide adequate housing and choose to under provide by planning only 9600 dwellings between 2006 and 2030 which will surely only serve to increase the housing need to very high levels over the period. Thsi should be reviewed.

Details of Changes to be Made:

---

Details of Reasons for Soundess/ Legal Complaince:

The lack of water seems to deprive many of the proposed plans for expansion of any great credibility

Details of Changes to be Made:
Employment should be addressed as a priority problem, otherwise it is likely that the whole area could become a dormitory suburb for places of work outside the area. Allowing new housing developments without possibility of employment at any of the designated sites is merely an encouragement of the ‘dormitory’ nature of the present position. The Council could stimulate and encourage starter businesses.

Details of Changes to be Made:

Details of Reasons for Soundess/ Legal Complaince:
Development would be circumscribed by the requirement of decent roads, adequate sewerage, sufficient school places and adequacy of decent social amenities (provision of playgrounds and playing fields, transport facilities and medical services.

WCS1 Provision of Homes and Jobs 2006-2030

Sound ☐ Yes ☑ No ☑ Justified ☑ Effective ☑ Consistent with national policy

Legally Compliant ☐ Yes ☐ No

Details of Reasons for Soundness/ Legal Complaince:

This policy is unsound and not justified for housing as the housing figures are far too low given the local and national needs for housing and population growth. The house projection figures at para 3.10 show a need for 16800 by 2030, and additionally WDC's own recent Housing Needs Survey supposedly showed a need for 14000 dwellings by 2026, let alone 2030. These figures appear to have been adjusted/fiddled by local councillor politicians for electoral reasons to come up with the proposed 9600 until 2030. Even these local housing needs surveys are suspect since they did not ask anyone not local if they were palling to move into the area so the council have no idea how many extra people would do this adding to the housing need. This is particularly relevant since any EU national can now come to this country without any restriction or limit. So how many Poles, Romanians, etc were asked if they were planning to come and live in Wealden District. Clearly none, yet it is well recorded that a net 3 million or more EU nationals have come to this country in the last 6 or 7 years. These will all add to the housing need and should be allowed for by every council to take a fair share of these extra people. The council also effectively state that as house building in Wealdon District over the last 21 years has been 400 a year, it will continue so for the next 20 despite the changed circumstances currently and looking ahead. Whilst only 400 houses have been built yearly over the last 21 years, this is because that is what the planning system has allowed. Whilst the first part of this period was covered by properly considered and adopted Local Plans that has not applied for the remaining half. The council, partly due to central government changes, has never since been capable of procuring a properly adopted local plan in the allotted time, and has managed to avoid an LPI since 1997 i.e. 14 years ago. Therefore to base the future on a false past in completely wrong. The fact of the matter is that in the last 10 or so years there has been a massive increase in net immigration compared to the 10 years preceding that. The levels of net immigration seen and continuing mean that every 3 to 4 years an extra million people are added to the population, and Wealden will have to accommodate its hare of these and allow for this to continue since most are EU nationals and no UK government has any way of limiting this. Should other countries join the EU, which is also planned during the period to 2030 it is certain even more immigration will occur. It is also the fact that life expectancy has increased significantly in recent times, meaning people live longer and so do not free up houses as they used to becuase they do not die so early. It is also a fact that more people are living singly and not as couples or families, thus meaning more individual house are needed. Thus all in all it is completely clear that the housing provision is far too low. It is a job to know what national policy is in the current political mess, with proposed changes to the planning system, yet to be enacted into law. However, assuming the aim is to give everyone a decent home to meet their needs this low level of housing provision will only make matters much worse, and do nothing to improve them, so much be against national policy. Employment land. All of the major current employment land allocations are unbuilt and being rolled into this plan. This is the Ashdown Business Park, Hackhurst Lane Industrial Estate and Polegate Business Park. these make up the vast majority of the supposed land allocation, yet they have been allocated for 15 to 20 years, and in contradiction to the council's claim that they are viable, have still yet to be build. Yet during this time a large amount of housing has been built, and even allowing farm building concersations this would indicate that most occupiers of the new houses are adding to the existing high level of our commuting, and not working locally. So whilst in theory extra land employemtn land is needed for the increased population, there seems little point in allocating extra land when such a high level of the existing allocations have yet to be built.

Details of Changes to be Made:

Housing provision should be increased to 16800 dwellings to match the needs identified in para 3.10. Whilst the council will say there is not the infrastructure for this, this is because they are the incompetent authority for the area not the competent one. They spend all their time fighting against housing development to the detriment of the homeless and poorly housed, never ever produce any of the plans required in the local plan process in the allotted time so delaying decisions massively,k so ending with disjointed and incoherent plans or decision when they are eventually made. Essentially acting in a negative regressive way. A properly competent authority that embraced extra housing development in a positive forward looking way should easily be able to come up with a sensible joined up plan for extra housing that incorporates the provision of the required infrastructure in a proper joined up way and timely way, and would produce a coherent plan in a short space of time, and providing for these extra houses would not be a problem. It is also noted that the council have to allocate broad locations for their chosen
house numbers, as detailed in para 5.9, that these figures and allocations do not include windfall sites, which have averaged 200 dwellings over the past 10 years. Whilst the rate at which these will continue to come forward can only be guessed at, but if it were to be 200 a year that would allow an extra 4000 dwellings without effecting the councils’ proposed sites. Where it to drop to 100 a year this would still be an extra 2000 dwellings in areas other than the allocated sites. This clearly shows there is plenty of scope to increase the housing provisions despite what the council may say. Equally as submitted in regard to policy WCS6 there is good reason and plenty of scope to allow a much larger rural allocation. Employment land. If the housing figures stay as proposed by the council, then the proposed extra provision should not be allocated until construction of 50% of the outstanding allocations has at least started. Unfortunately the planning system cannot make owners and developers build their business units if they consider it unviable to do so, so there is no planning way out of this problem. Equally whilst there is a demand from small business to buy their own freehold sites, a small business cannot fund the huge initial start up costs of roads, services and S106 requirements needed to get these estates going. Clearly should the housing provision be increased additional employment land will be required, but whether the existing or new land would be build out any quicker than it has been up to now will depend entirely on economics, not planning policy.
1.1 The Amount of New Housing – Policy WCS1 and WCS2 and paragraphs 5.3 etc 1.1.1 We note that the proposed Submission Core Strategy looks to accommodate 9574 new dwellings in the district across the plan period (2006 – 2030) i.e. 399 a year. This is circa 27.5% less than the 11,000 dwellings proposed across the district in the South East Plan (SEP) (May 2009) for the period 2006 and 2026. 1.1.2 PPS12 requires Core Strategies to conform generally to the regional policy. We do not consider the amount of new housing proposed in the district to be legally compliant as it is not consistent with regional policy as set out in the SEP. 1.1.3 Whilst the LPA appear to be progressing with a lower level of growth on the assumption that the SEP will be revoked by the time the Core Strategy gets to examination, the fact is the SEP remains part of the development plan at present and the CS should have regard to the aims and objectives of the SEP/ justify why it is necessary and appropriate to depart from it. The proposed Submission Core Strategy contains no such justification. 1.1.4 A detailed understanding of the background to the amount of new housing proposed in the district in the SEP is in our opinion important in considering the soundness of the housing land supply strategy now being advocated in the proposed Submission Core Strategy document. 1.1.15 The Chief Planning Officer (CPO) in his letter of the 6th July made it clear that in the context of the revocation of the RSS LPAs would be responsible for determining the housing numbers in the absence of a regional target, and that the housing numbers promoted by LPAs would need to be justified, as LPAs would need to defend them through the LDF examination process. 1.1.19 The District Council has an obligation to assess and provide for the housing needs and demands of the District. Paragraph 33 of PPS3 makes it very clear that in determining local levels of housing provision local planning authorities should, in preparing their Core Strategies take into account evidence of current and future levels of housing need and demand, e.g. as set out in Housing Market Assessment and the Housing Needs Assessment. 1.1.22 Having regard to the above we feel the DC should give consideration to the accommodation of at least 13,200 (i.e. the 11,000 set out in the SEP plus 4 x 550) to cover the additional years to 2030). Given the 4,889 units are already committed this would leave a residual requirement of 8,311 i.e. a residual requirement equivalent to 415 dwellings pa. If, 75% of the 13,200 units were on sites that generated an affordable housing need under the new policy WCS8, this level of provision could provide for circa 3,465 affordable dwellings i.e. 18% of the affordable need identified in the HNA. Which demonstrates how sever the need is relative to the supply 1.1.23 WDC’s aversion to higher housing numbers appears to be related to the effect these could have on infrastructure and services, especially in the southern part of the district. However, it is often the case that the strategic housing allocations help to address this issue, providing new transport links/highway improvements, contributing to new sustainable drainage facilities, new schools, medical facilities etc. Higher levels of growth need not prejudice existing infrastructure and services; they could in fact help address existing problems. 1.2 Housing Distribution 1.2.1 We do not consider the housing distribution strategy to be legally compliant. It is not consistent with regional policy as set out in the SEP. PPS12 requires Core Strategies to conform generally to the regional policy. Paragraph 4.33 states that choices to be made on where growth should take place should follow national and regional policy. 1.2.2 The southern part of Wealden district is located within the Sussex Coast Sub Region, one of the nine sub regions identified in the SEP. These sub regions were to be ‘the focus for growth and regeneration’. Policy SP1 of the SEP refers 1.2.3 Policy H1 of the SEP deals with regional housing provision. It stipulates that in the Sussex Coast Sub Region, 69,300 net additional dwellings should be provided between 2006 and 2026. 1.2.4 Policy SCT5 of the SEP sets out the scale and distribution of housing across the Sussex Coast sub region. It indicates that that part of Wealden District which falls within the Sussex Coast Sub Region should seek to accommodate 7000 dwellings during the plan period (2006 – 2026) i.e. 350 dwellings per annum. 1.2.5 Given the above, and having regard to the requirements of policy H1b of the SEP (wherein WDC are required to provide some 11,000 units across the district during the plan period (2006-2026)), it is clear that the SEP looks to focus growth within that part of the district that falls within the Sussex Coast Sub Region, with only a small proportion of development (4000 homes) to be accommodated within what was called the Rest of the District. 1.2.6 The SEP also makes it clear that the Sussex Coast Sub Region was identified as an area where the government was looking to proactively pursue and promote economic growth and regeneration. As a result over 60% of WDC’s housing requirement was located within the Sussex Coast Sub Region. The spatial strategy being promoted in the proposed Submission Core Strategy document is, according to paragraph 5.5.of the proposed Submission Core 493/A3/JA April 2011 Strategy document, predicated upon the strategy objectives and the settlement hierarchy. Thus only circa 51% of the...
proposed level of housing growth is to be located within what was referred to as the Sussex Coast Sub Region in the SEP. 1.2.7 Not only is the spatial strategy inconsistent with the SEP, but it fails to take on board the reason for the spatial strategy proposed in the SEP i.e. the economic regeneration of the Sussex coastal area. WDC have, in their sustainability appraisal of the proposed Submission Core Strategy Document failed to assess the implications of the spatial strategy advocated in the proposed Submission Core Strategy Document on the economic regeneration of the Sussex coastal area. The council’s failure to undertake this work means that the proposed Submission Core Strategy Document is not soundly-based. 1.2.9 In promoting an annual housing requirement of just 400 units WDC, in their proposed Submission Core Strategy document, are in our opinion actively stifling economic growth. Furthermore, the council’s decision to treat the whole district as a single entity, with no emphasis placed on the regeneration of the Sussex Coast Sub Region, is in our opinion, despite the aspirations of policies SP03, 04 and 06, actively prejudicing the economic regeneration of the coastal area, to the detriment of the wider area. 1.2.11 As currently drafted the housing distribution strategy advocated by WDC in their Proposed Submission Core Strategy is not in ‘general conformity’ with the RSS as required by Paragraph 4.2 and 4.33 of PPS12 and is not therefore sound.

Details of Changes to be Made:

3.1 The Amount of New Housing:- 3.1.1 We feel the housing targets set out in policy WCS1 should having regard to our position on the scale of housing growth be amended from 9600 to 13,200 dwellings. 3.1.2 Similarly we feel the housing targets set out in policy WCS2 of the CS should, having regard to our position on the scale of housing growth, the spatial strategy, and the level of housing proposed in Stone Cross specifically, be amended thus:- WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 980 New allocations; total dwellings 2006 - 2030 1,022. Total Wealden 4,889 Built or already committed; 8,311 new allocations; 13,200 Total Dwellings 2006 - 2030. 3.1.3 We would also suggest that the number of new allocations is revised to ensure that 60% of the proposed growth is located in the Sussex Coast Sub Region, as per the SEP, which should be identified on a plan. 3.1.4 Having regard to the above there would also be a need to amend policy SPO3 to address the increase in housing supply we advocate, and the reinstatement of the Sussex Coast Sub Region. Similarly paragraphs 3.11 and 3.16 would need to be revised to reflect our position, with the economic policies (SPO6 and WSC3 reviewed accordingly). 3.1.5 If the scale of housing proposed during the plan period is not revised as recommended, we would suggest that policy WCS2 is revised thus:- WCS2 Distribution of Housing Growth 2006 – 2030 Town/ settlement Stone Cross and Westham 42 Built or already committed - 850 New allocations; total dwellings 2006 - 2030 892. Total Wealden 4,889 Built or already committed; 4,835 new allocations; 9,724 Total Dwellings 2006 - 2030. 3.1.6 Given our recommended changes to the scale of growth proposed at Stone Cross and Westham we would also recommend that paragraph 6.31 (3) and paragraph 6.31 (3 bullet points 3, and 4 be amended thus:- ‘allocating a range of deliverable housing sites for up to 700 dwellings, and leisure, recreation and community facilities in Polegate and Willingdon, around 850 dwellings in Stone Cross, with some 16,890 sq. metres employment floorspace in the Polegate and Willingdon area. Sites for development will be identified and phased through the Site Allocation DPDs including: · provision of around 550 homes within an extension to the urban area of Stone Cross to the east and south east (SD6), with flexibility between SD6 and SD7, subject to highway improvements; · provision of around 300 homes within an extension to the urban area of Stone Cross to the north (SD7), with flexibility between SD6 and SD7, subject to highway improvements’

WCS1 Provision of Homes and Jobs 2006-2030

Policy 1

Sound
☑ Yes ☐ No ☑ Justified ☑ Effective ☑ Consistent with national policy

Legally Compliant
☑ Yes ☐ No

Details of Reasons for Soundess/ Legal Complaince:

We object to policy WCS1 as it is not in accordance with Regional Planning policy and is not sound because it is not sufficiently flexible. Policy H1 of the South East Plan adopted in 2009 states that Wealden District should deliver 11,000 homes between 2006 and 2026 at an average of 550 homes per annum. The intention of Wealden District to reduce their housing delivery to 400 homes per annum because of what is considered are infrastructure and capacity constrains is understood, however the Core Strategy must still be in general conformity with Regional Planning Policy which means that it must meet the aims of the Regional Policy. 1.2 The Regional Planning Policy is still part of the development plan. However at the present time following the High Court Judgement by Justice Lindblom of the 7 February 2011 weight can be given to the intention toabolosh the RSS (paragraph 53). The judgement make clear however (paragraph 69) that when preparing a development plan regard should still be had to the regional strategy and that development plans should still be in general conformity with the regional strategy. In respect of the Core Strategy weight must be given to the fact that the RSS has been subject to a considerable period of consultation, and a public examination. 1.3 The Core Strategy must deliver the aims of Regional Policy in order to be in general conformity. The Regional Spatial Strategy in paragraph 7.4 recognises that the South East is a high demand housing area where supply has not historically kept pace with demographic-based need and demand. Paragraph 7.5 states that affordability is a concern in rural areas in the South East, and that there is a "rural premium" for housing and that sustainable communities must be created and maintained in urban and rural areas. 1.4 To be in accordance with Regional Planning Policy the wording of the policy WCS1 should state that "at least" 9600 dwellings will be developed over the period 2006 - 2030. This would allow development to take place to better meet the aims of regional policy over the Core Strategy plan perio.d This would also be the most appropriate and flexible strategy. 1.5 this change is supported by the document published by the Planning Inspectorate call Examining Local Development Plan Documents: Learning from experience September 2009. Paragraph 14 states "Core Strategies are intended to guide development over the long term, "Planning Policy Statement 12: Local Development Frameworks, (PPS12) in paragraph 4.13 requires that the time horizon for Core Strategies should be for at least 15 years. Paragraph 4.14 states that "Core Strategies represent a considerable body or work and are intended to endure and give a degree of certainty to communities and investors. In particular they give a guide to where long term investment in infrastructure should be made. The need for frequent updating may be reduced by taking a long-term view and providing some flexibility". 1.6 The need for this flexibility is recognised in the Core Strategy in SP03 on page 22 which states "we iwll provide for at least 9600 homes". 1.7 flexibility in the Core Strategy is important and therefore a minimum housing figure would give the ability for changing circumstances to be taken into account during the lifetime of the Core Strategy and may prevent the need for updating the Core Strategy. This change would also bring the Core Strategy in fonformity with Regional Planning Policy as the core Strategy would meet the aims of the Regional Policy, and would align policy WCS1 with the Spatial objectives.

Details of Changes to be Made:
Policy WCS1 should state a "minimum" 9600 dwellings in the first paragraph
Although the Government has announced its intentions to revoke Regional Spatial Strategies, for the time being these remain part of the Development Plan. Accordingly, in producing the PSCS DPD the Council is required to have regard to, and be compliant with the South East Plan published in May 2009. The housing requirements set out in Policy H1 of the SEP has been the subject of detailed examination having regard to future housing demand in the south east region up to 2026. This identified the requirement for 11,000 new dwellings to be provided in Wealden District over the period 2006 - 2026, the equivalent of 550 dwellings per annum over a 20 year period. Without providing any sound justification, the Council has not only provided for an extended plan period which fails to comply with that of the SET, but also puts forward a substantially reduced housing requirement of 9,600 dwellings over the period 2006 - 2030 (the equivalent of 400 dwellings per annum during the 24 year period). If the SEP housing requirement were to be extended by 4 years based on its annual requirement of 550 dwellings, this would require 13,200 dwellings over an equivalent 24 year period. Thus, draft policies WCS1 and WCS2 of the PSCS DPD represent a shortfall of some 3,600 dwellings compared to the SEP housing requirement (as adjusted to cover the extended PSCS DPD plan period). While it is acknowledge that Wealden District is essentially rural in character and that it has a number of environmental constraints, these are not substantially greater than the majority of other Districts and Boroughs within the south east region. Very special justification would need to be provided for such a substantial departure from the SEP housing requirement figures given that there is a legal requirement for the two documents to be in general compliance with each other.

Details of Changes to be Made:
In order to be in compliance with the SEP in this respect, some 13,200 additional dwellings would need to be provided within the District between 2006 and 2030 with a remaining requirement for 8,311 dwellings between 2010 and 2030. Draft Policy WCS1 would need to be revised accordingly. This would however, have major ramifications for the PSCS Spatial Strategy in terms of the distribution of housing growth as currently set out in draft Policy WCS2. Indeed, it is difficult to see how the PSCS DPD could be reasonably altered in view of the fundamental nature of these representations and the only potential way forward in these circumstances would be for the Council to withdraw the document or provide detailed evidence and justification for such a substantial departure from current development plan policy, which might then provide an opportunity for such justification to be properly scrutinised as part of the LDF Examination in Public procedure.

WCS1 Provision of Policy 1 Homes and Jobs 2006-2030

Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy should plan for the entire housing provision over the plan period 2006 - 2030 and should not rely on outdated and non statutory allocations or planning permissions extant at the time of search but with the potention not to be implemented. Policy should formalise these sites or areas of commitment into the document as reliance is made on their delivery to achieve housing targets. The document should also address how consistent these sites are with the strategic development areas identified in Policy WCS4.

Details of Changes to be Made:
Amend policy accordingly

Sound ☐ Yes  ☑ No  ☑ Justified  ☐ Effective  ☑ Consistent with national policy
Legally Compliant ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
See attached submission relating to Policy SP03. In addition land allocated for development in the eastern sections of Policy PW3 in the Non Statutory Local Plan shows land north of Dittons Road for development which could accommodate some 60 dwellings and employment floor space in addition to existing planning permissions therefore commitments should increase from (4915) to (4975) as the bulk of PW3 is treated as commitment in Policy WCS1, but the Policy ignores the eastern area which needs to be added to the commitment total.

Details of Changes to be Made:
Change WCS1 Change the figure 4685 to 7525 Change the figure 9600 to 12500
Details of Reasons for Soundess/ Legal Complaince:
The Core Strategy has emerged as the preferred strategy after substantial public consultation and after examination of a number of alternative spatial options. There remains a risk, however, that the overall housing provision figures could be successfully challenged as too low, based on evidence from Wealden District Council's own studies of housing need and land availability. If the development provisions were to be increased there could be significant consequences for the scale and disposition of additional County Council infrastructure that would be required to deliver it. The policy's commitment to employment land allocations which could deliver at least a moderate step change in the Wealden economy is supported. The recognition of the role that south Wealden can play in providing employment opportunities for the wider Eastbourne, Hailsham 'Triangle' area is welcomed. Job density across East Sussex i.e. the ratio of jobs to working age population, is very low by regional and national standards, suggesting that improved job supply is required even if the working age population were to remain static. That is without compensating for the expected reduction in public sector jobs. The serious challenges facing the economy across East Sussex will require local authorities to work together to support delivery of economic regeneration.

Details of Changes to be Made:
Details of Reasons for Soundness/ Legal Compliance:
The justification for changing the target number of dwellings for the 2006-2030 is not robust. The dismissal of the Office of National Statistics projected population and household on the basis that the trend is attributed to inward migration and therefore not a Wealden problem is unreasonable. Wealden is not an island with border controls. The Core Strategy must take due account of the clear trend projection of 16,800 additional households between 2006 - 2030. The arbitrary reduction of this trend to a figure of 9,600 based on consultation with Parish Councils and other parties who are seeking to reduce housing provisions is not the correct methodology to prepare the Core Strategy. A reduction of 42.8% on the trend projections must be fully justified. The adopted South East Plan, May 2009 examined the constraints on Wealden and the projected housing requirements and come to the conclusion that the District should accommodate an additional 11,000 dwellings within the shorter period of 2006-2027 (14,800 - 11,000) = 3,800 households, this reflecting the constraints on the district. This being a 25.7% reduction on the trend. On this basis the figure for the district for the period 2006 - 2030 should be 16,800 - 25% (16,800 - 4,318) = 12,482 (say 12,500). Not the 9,600 proposed in the Core Strategy. A figure of 12,500 households over the 24 years of the plan represents an average annual provision of 520 dwellings per year. An additional 120 dwellings per year over the 400 proposed in the proposed submission Core Strategy is not such an unreasonable figure in view of the scale of the alterations proposed and the time scale of the plan allowance in the market to recover from its current low level. A high figure for housing provision also has the advantage of creating more revenue in the form of S106 Planning Agreement funds or by way of the Community Infrastructure Levy to fund the related infrastructure. This relates particularly to the big cost items such as bypasses and improvements to water treatment works.

Details of Changes to be Made:
In the light of this submission we would like to see SP03 re written as follows: To meet the needs of the population of Wealden and for Wealden to meet its role in providing housing in the South East of England, which protection the environment, the Core Strategy will seek to provide 2,500 between 2006 and 2030. The delivery of these homes will be dependent on the delivery of developable sites and market conditions. Over the whole of the 24 plans the average provision of 520 dwellings per year will be sort and monitored. The provision of social and physical infrastructure will be as far as possible provided in conjunction with the development proposed. Funding for such provision will be sent from all sources including the housing development itself. The of the development shall be in accord with the Spatial Strategy of the...
Details of Reasons for Soundess/ Legal Complaince:

1. We note paragraph 5.3 states that the Core Strategy and subsequent DPDs will be allocating land for at least 4,685 additional dwellings over the period April 2010 – March 2030. However, Policy WCS1 (Provision of Homes and Jobs 2006 – 2030) states that land will be identified in subsequent DPDs for the provision of some 4685 net additional dwellings in Wealden District to provide for 9,600 dwellings over the period 2006 – 2030. It is considered that Policy WCS1 should reflect the wording set out in paragraph 5.3 to accommodate the possibility of more housing development coming forward, for example on windfall sites. Therefore, the wording of Policy WCS1 should read “land will be identified in subsequent DPDs for the provision of at least 4,685 net additional dwellings in Wealden”.

#### Details of Reasons for Soundess/ Legal Complaince:

ii) Spatial Strategy Policies a) Policy WCS1: Provisions of Homes and Jobs 2006-2030 – COMMENT/OBJECT 2.7 Paragraph 3.22 of BP1: Development of the Proposed Submission Core Strategy demonstrates the quantum of development identified in the plan period has resulted from 'local needs and tested against capacities and constraints' and demonstrates that a reduction from the South East Plan figure of 11,000 dwellings to 9,600 dwellings is appropriate. Sections 5 to 8 of BP1: Development of the Proposed Submission Core Strategy detail the justification for this approach and are expressed in the CS in paragraphs 3.8 – 3.17. 2.8 However, whilst the basis for proposed Policy WCS1 has been detailed within the Evidence Base and therefore could be considered 'sound' in this regard, it has not had due regard to the South East Plan, which still forms part of the Development Plan. PPS12 identifies under Para 4.50, that as a legal requirement 'the plan conforms generally to the Regional Spatial Strategy'. 2.9 Notwithstanding the proposed intention to revoke the RSS and 'emerging' guidance contained within the 'Localism Bill', it is clear, that at this moment in time, the Core Strategy should have due regard to the requirements of the South East Plan, including the annual housing requirement from 2006 – 2010.

2.10 The overall housing requirement for Wealden as set out in the SEP (2006 – 2026) is 11,000 dwellings, which equates to 550 dwellings per annum over the 20 year plan period. Appendix 9 (p75) of BP2: Managing the Delivery of Housing, identifies that since 2006, a total of 1,332 dwellings have been completed in the District. 2.11 Table 1 below, demonstrates that against the SEP requirement since 2006, there has been ongoing failure to meet the housing requirement resulting in a current shortfall of 869 dwellings. Nevertheless, in seeking to reduce the overall housing requirement through locally derived evidence (to 9,600 dwellings), and increasing the plan period to 24 yrs (2006 to 2030) to provide an annual requirement of 400 dwellings per annum, it is evident WDC is still unable to deliver the proposed new housing requirement. Table 1 below demonstrates that even backdating the proposed Core Strategy figures to 2006, there is a current shortfall of 268 dwellings. Table 1: WDC Completions since 2006 vs SEP Requirement vs Proposed CS Requirement Year Actual Completions SEP Requirement(Surplus or Deficit) Proposed Submission Core Strategy Requirement(Surplus or Deficit) 2006/07 230 550 (- 320) 400 (-170) 2007/08 415 550 (- 135) 400 (+ 15) 2008/09 350 550 (- 200) 400 (+ 50) 2009/10 337 550 (- 213) 400 (- 63) Total 1,332 2,200 (- 868) 1,600 (- 268) 2.12 It is therefore considered, that in order to promote the delivery of housing to meet the actual local requirement as set out in the CS (9,600 dwellings), or the SEP requirement (11,000 dwellings), it is essential the CS facilitates the delivery of housing and does not seek to artificially maintain the delivery of 400 dwellings per annum or constrain the natural delivery within the District. 2.13 We have concerns with regards to WDC’s approach to windfall sites and the attempt to rely on these sites (when calculating completions) to prevent ‘over-provision’ as set out in paragraphs 10.34 – 10.36 of BP2: Managing the Delivery of Housing. 2.14 Whilst we support WDC’s approach that windfall development should not be used to project delivery (as required by PPS3), we do not consider that monitoring the delivery of high levels of windfall completions should be used as an argument to ‘slow down’ the phasing of allocated greenfield sites, as suggested in the Background Evidence and not fully explained within the Core Strategy. 2.15 This ‘preventative approach to delivery’ is at odds with the recent ‘Planning for Growth’ Ministerial Statement from Gregg Clarke MP on 23 March 2011. The statement clearly sets out the Government’s intentions for growth and reinforces the commitment to introduce ‘a strong presumption in favour of sustainable development’. The statement sets out ‘The planning system has a key role to play in this, by ensuring that the sustainable development needed to support economic growth is able to proceed as easily as possible’. The statement continues that ‘Governments clear expectation is that the answer to development and growth should, wherever possible be ‘yes’, except where this would compromise the key sustainable development principles set out in national planning policy’. 2.16 In reviewing paragraphs 10.34 – 10.36 of BP2: Managing the Delivery of Housing, we are concerned that ‘unplanned’ windfall sites could take precedence over the delivery allocated sites (and associated infrastructure), if these windfall sites are delivered in significant quantities (as historically demonstrated within Appendix 9 of BP2: Managing the Delivery of Housing). This is at odds with the Ministerial Statement which calls for ‘local planning authorities to plan positively for new development.’ 2.17 Furthermore, para 10.34 of BP2: Managing the Delivery of Housing, refers to the provisions of PPS3 and that there may be no need for ‘specific management actions’ when assessed against the delivery trajectory and an acceptable 10%–20% range. However, it is clear that the principles of the ‘Plan, Monitor, Manage’ approach as set out in paragraphs 62 – 67 of PPS3, are predicated on the basis of reacting to any ‘under-provision’ and are not intended to respond to ‘over-provision’. WDC are incorrectly applying the ‘Implementation Strategy’ Guidance
contained within PPS3 in the context of ‘over-provision’. 2.18 We therefore seek clarity over the intention of the content of paragraph 5.9 (extract below) of the CS where it identifies that ‘windfalls will be used as part of the manage and monitor system, and provide some limited contingency’. 5.9 Strategic Policy WCS2 makes no allowance for windfall sites. However over the past 10yrs around 200 dwellings per annum have been provided as windfall. Whilst the projected provision of such sites cannot be included at this stage in land supply projections, completions on these sorts of sites will count towards the overall house building totals achieved in Wealden. Windfalls will be used as part of the manage and monitor system, and provide some limited contingency. However, windfall sites can increase the demands of the District’s environmental and infrastructure constraints, and this in turn could have a determining effect on overall delivery capacity at any particular settlement. Through monitoring arrangements the Council will need to ensure that the unplanned development of windfall sites does not conflict with the strategy,’ 2.19 We seek clarity on what this ‘limited contingency’ represents, especially in the light of content of paragraphs 10.34 – 10.36 of BP2: Managing the Delivery of Housing and how the delivery of allocated sites will be reviewed in the context of windfall provision. We have noted the content of paragraph 5.17 of the CS which states: ‘5.17 The Council will, through its implementation and delivery framework and monitoring arrangements, ensure that delivery of its strategy and the overall provision of appropriate levels of growth is not prejudiced by windfalls. Further details of the management and phasing of delivery is constrained within out Background Paper 2: Managing the Delivery of Housing.’ 2.20 We therefore consider that the Background Evidence does not appear to support or relate to the content of the Core Strategy. If the approach as set out in paragraph 5.17 is the case, then why does the Background Evidence (para 10.34 – 10.36 of BP2: Managing the Delivery of Housing), or the Core Strategy (paragraphs 5.9, 5.17 and Policy WCS5 Managing the Release of Housing Land) need to have regard to the issue of ‘over-provision’ and the ‘re-phasing of sites’?

Details of Changes to be Made:

ii) Spatial Strategy Policies a) Policy WCS1: Provisions of Homes and Jobs 2006-2030 – COMMENT/OBJECT 2.7 Paragraph 3.22 of BP1: Development of the Proposed Submission Core Strategy demonstrates the quantum of development identified in the plan period has resulted from 'local needs and tested against capacities and constraints' and demonstrates that a reduction from the South East Plan figure of 11,000 dwellings to 9,600 dwellings is appropriate. Sections 5 to 8 of BP1: Development of the Proposed Submission Core Strategy detail the basis for this justification for the approach and are expressed in the CS in paragraphs 3.8 – 3.17. 2.8 However, whilst the basis for proposed Policy WCS1 has been detailed within the Evidence Base and therefore could be considered ‘sound’ in this respect, it has not had due regard to the South East Plan, which still forms part of the Development Plan.

PPS12 identifies under Para 4.50, that as a legal requirement ‘the plan conforms generally to the Regional Spatial Strategy’. 2.9 Notwithstanding the proposed intention to revoke the RSS and ‘emerging’ guidance contained within the ‘Localism Bill’, it is clear, that at this moment in time, the Core Strategy should have due regard to the requirements of the South East Plan, including the annual housing requirement from 2006 – 2010. 2.10 The overall housing requirement for Wealden as set out in the SEP (2006 – 2026) is 11,000 dwellings, which equates to 550 dwellings per annum over the 20 year plan period. Appendix 9 (p75) of BP2: Managing the Delivery of Housing, identifies that since 2006, a total of 1,332 dwellings have been completed in the District. 2.11 Table 1 below, demonstrates that against the SEP requirement since 2006, there has been ongoing failure to meet the housing requirement resulting in a current shortfall of 869 dwellings. ### Details of Changes to be Made:

- It is unclear within the Proposed Submission document as to what the overall housing requirement is based upon (i.e. South East Plan, Option 1. Locally Generated housing required?) For example paragraph 5.3 and Policy WCS1 gives a total number of dwellings to be built within the District for the period 2006 - 2030 but do not indicate where the total has been derived from. Although it is assumed this is the South East Plan requirement, this could do with being made clearer.

**Details of Reasons for Soundess/ Legal Complaince:**

It is unclear within the Proposed Submission document as to what the overall housing requirement is based upon (i.e. South East Plan, Option 1. Locally Generated housing required?) For example paragraph 5.3 and Policy WCS1 gives a total number of dwellings to be built within the District for the period 2006 - 2030 but do not indicate where the total has been derived from. Although it is assumed this is the South East Plan requirement, this could do with being made clearer.

**Details of Changes to be Made:**
We are intrigued by the Council’s intended adoption of an unsound housing position. The Council’s proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council’s Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council’s Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council’s BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,685 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WCS1 and WCS2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We
Summary of all Representations - Proposed Submission Core Strategy Regulation 27 - Report 11th July 2011

question whether the council's unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Councils emerging Core Strategy is not only deficient because it ignores the adopted RSS, but it also not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council's attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Councils Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing…” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PCSD DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

Details of Changes to be Made:

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.
Effective Justified □ Yes □ No □ Consistent with national policy
Legally Compliant □ Yes □ No

Details of Reasons for Soundess/ Legal Complaince:

3.1 The Core Strategy is unsound because, the proposed provision of 9,600 new homes from 2006-2030, in policy WCS1 – Provision of Homes and Jobs 2006-2030, is inconsistent with national policy in Planning Policy Statement (PPS) 3: Housing. 3.2 PPS3 requires the level of housing provision to be determined through, “a strategic, evidence-based approach that takes into account relevant local, sub-regional, regional and national policies and strategies achieved through widespread collaboration with stakeholders.” (paragraph 32). Despite the Government’s intention to revoke Regional Strategies they remain part of the development plan (Cala 1). The Cala 2 judgment (7 February 2011) found that the intention to revoke Regional Strategies is a material consideration but that with regard plan making, "While Regional Strategies subsist a local planning authority will have to make sure to discharge its duty to achieve general conformity with them". 3.3 The South East Plan requires the provision of 11,000 new dwellings within Wealden district over the period 2006 - 2026 (550/annum). This is split between the 'Sussex Coast' sub-region, covering the southern parishes (350/annum), and 'rest of Wealden' area covering the northern parishes (200/annum). 3.4 In paragraph 8.67 of the background paper 1 (BP1) Development of the Proposed Submission Core Strategy the council highlights that the Core Strategy was reviewed without the framework of the South East Plan. The council subsequently revised the housing targets without reference to the South East Plan or the strong and tested evidence that supported it. This approach is not sound. The role of housing in driving growth 3.5 The Government is committed to increasing the supply of housing as outlined in the white paper Local growth: realising every place’s potential (28 October 2010). This emphasises, "Housing can be an important source of economic growth” (Box 3.B) and that house building can help wider economic recovery. Indeed the government is committed to creating a framework of powerful incentives for local authorities to deliver housing including, “the New Homes Bonus scheme, starting in 2011-12, will provide a simple, powerful and transparent incentive for local authorities to support new housing development”. 3.6 The Government has identified the need, “to provide sufficient housing to meet demand” (paragraph 3.1) as one of the main functions of the planning system. The white paper outlines the role of local authorities in supporting growth and their responsibility to, “ensure a responsive supply of land that supports business growth and increases housing supply” (Box 2.A). Reducing the level of housing provision is therefore inconsistent with national policy unless there is clear new evidence, in respect of matters such as need, harm and economic implications, to justify that position. We have seen no new evidence to this effect. Need and potential to increase the level of housing provision 3.7 Policy WCS1 does not represent the most appropriate strategy when considered against the reasonable alternatives. WCS1 should provide 11,000 new homes and should be reworded: "Land will be identified in subsequent Development Plan Documents for the provision of some 4685 6,111 net additional dwellings in Wealden District to provide for 9600 11,000 dwellings over the period 2006-2030…” 3.8 Government population and household projections show a significant demand for housing within Wealden. Between 2006 and 2027 it is projected that the population in Wealden will increase by 16,200 persons and households will increase by 14,800. By 2030 the increase is projected to be 16,800 households and 19,200 persons. 3.9 This shows the demand for both market and affordable housing is high and the provision of 400dpa (9,600 new dwellings) will only meet the housing demands of 60% of households in 2030. Given that the capacity of the area to achieve higher growth has been tested and demonstrated it is clear that Policy WCS1 is not the most appropriate strategy and that a higher level of housing provision should be made. Ageing population, in-migration, maintaining viable services and a vibrant economy 3.10 There are around 62,000 households in the district. When considered against the national average, a much smaller proportion of the population falls within the 15-39 age range and a significantly high proportion of the population falls within the pensionable age group. Further, on average over the last six years, there has been a net gain of 600 persons per year from migration (paragraph 3.9, Core Strategy), including those of working age. 3.11 Without intervention, by increasing housing provision to help meet the demands for in-migration, the proportion of the population over 75 years will increase and, inevitably, in the short-medium term younger households will be forced out of the local housing market (exacerbating the situation), in the longer term the population will be in decline. As a consequence, the district’s economy and retail viability will suffer significantly as will its social health and cohesion, including investment in and support for community services and facilities. Need for affordable housing 3.12 Core Strategy paragraph 2.17 states, “the need to provide affordable housing stock remains a priority for the Council”. The Core Strategy Sustainability Appraisal Scoping Report states that the
current need for affordable housing is 16 times greater than the rate of supply. 3.13 According to BP2: Managing the Delivery of Housing there are some 2,161 households on the district's housing register requiring affordable housing. BP1 highlights that the, “Council's Housing Needs Assessment (January 2010) identified 1,215 households in current need (gross), based on survey responses. The Housing Needs Assessment estimates that the annual (net) need for affordable housing in Wealden is 812dpa over a five year period, which equates to 4,060 dwellings." (paragraph 5.14) 3.14 BP2 also highlights, “8,611 houses would be needed from the date of assessment" (paragraph 5.14). Although “This is clearly not deliverable or practicable in the light of capacity to accommodate growth, especially environmental and infrastructure constraints”. There is clearly an acute need for affordable housing in the district. Historic rates of delivery 3.15 Core Strategy paragraph 5.13 states, “Over the last 21 years on average 400 dwellings have been built per annum across the District. Based on this delivery rate, and the spatial strategy with focus of significant development in Uckfield, Hailsham and Heallingly, Polegate and Willingdon and Stone Cross, it is considered that a similar rate in the future is achievable.” The council considers that the proposed provision of 400dpa, “will help to ensure integration of development into existing communities, provides a realistic rate for the market to deliver, allows for master planning of large sites and the timely provision of infrastructure. The following trajectory sets out what has been achieved in Wealden from 2006 to date and our forecast of future housing delivery until 2030." Continuing the historic rate of housing delivery is inappropriate given the considerable need for housing. The proposed rate should be significantly increased to meet housing demands. Land available for housing 3.16 The SHLAA demonstrates that there is plenty of capacity at “suitable” sites to accommodate an increase in the level of housing provision. BP1 reveals that the, “assessment identified land considered to be suitable, available and achievable for some 22,755 homes, including current commitments.”

Details of Changes to be Made:
3.7 Policy WCS1 does not represent the most appropriate strategy when considered against the reasonable alternatives. WCS1 should provide 11,000 new homes and should be reworded: “Land will be identified in subsequent Development Plan Documents for the provision of some 4685 6,111 net additional dwellings in Wealden District to provide for 9600 11,000 dwellings over the period 2006-2030...”
We are intrigued by the Council's intended adoption of an unsound housing position. The Council's proposals for the provision of housing development during the period 2006 – 2030 demonstrate that the Council's Local Development Framework Document is not in conformity with the Regional Spatial Strategy, which forms part of the Development Plan. Paragraph 3.3 of the Council's Background Paper no. 1 (BP1) states “Current legislation requires that the Core Strategy is in general conformity with the Regional Spatial Strategy, the South East Plan” (SEP), which was adopted in May 2009. In paragraph 3.3 of BP1, the Council also acknowledge that “The South East Plan requires that at least 11,000 dwellings is provided in Wealden District between 2006 and 2026”. The SEP (Policy H1) requires 11,000 new dwellings to be provided in Wealden District between 2006 and 2026, equal to an overall annual requirement of 550 per year. Paragraph 3.3 of the Council's BP1 states “Because of existing planning permissions and houses that have already been built since 2006, overall we need to find locations for a total of approximately 7,000 new houses between now and 2026”. Assuming 550 dwellings per year based on the SEP housing requirement, extending the PSCS DPD end date to 2030 (i.e. 4 more years) would require an additional 2,200 dwellings, bringing this total to the equivalent of 9,200 dwellings between 2006 and 2030. Policy WCS2 indicates that 4,889 dwellings are already committed (through planning permissions, commencements etc.) as at 1st April 2010. Set against the SEP requirement, this would leave a residual requirement for 6,111 dwellings up to 2026 (i.e. 11,000 minus 4,889) and if the SEP requirement were to be extended by 4 years up to 2030 (at 550 dwellings per year i.e. a total of 2,200 dwellings), this would create a total residual requirement of 8,311 additional dwellings by 2030. This residual requirement is the equivalent of 415 dwellings per annum during the remaining 20 year period between April 2010 and April 2030. By contrast, draft Policy WCS1 provides for a total provision of 9,600 dwellings between 2006 and 2030. Taking account of 4,889 dwelling commitments, this leaves only 4,711 new dwellings during the remaining 20 year period. This is the equivalent of only 230 dwellings per year (i.e. just over half that implied by extending the annual housing requirement set out in Policy H1 of the SEP to 2030). In draft Policy WCS2, the 9,600 dwelling figure referred to in draft Policy WCS1 has a total of 9,574 dwellings during the same 2006 – 2030 time period. The Council has not provided any justification for failing to comply with the housing requirements set out in SEP and no justification has been provided as to how the seemingly speculative figure of 9,600 dwellings or 9,574 dwellings has been arrived at for the housing requirement during the period 2006 – 2030 in draft Policies WCS1 and WCS2. As the council are aware there have been a number of recent announcements regarding the emerging Localism Bill and the changes being sought by the Government and we have looked to deal with these within our comments. As the Council is aware, Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) deals with the Preparation of local development documents. Section 19(2) specifically states that: “In preparing a Development Plan Document or any other local development document the local planning authority must have regard to (a) national policies and advice contained in guidance issued by the Secretary of State; (b) the RSS for the region in which the area of the authority is situated, if the area is outside Greater London”; (h) any other local development document which has been adopted by the authority”. The adopted South East Plan therefore remains part of the development plan and whatever the Council believes cannot be used as a reason for not complying with 19(2)(b) as this is a statutory requirement. This is particularly true bearing in mind recent appeal decisions, which confirm the status of the RSS’s and the limited weight that can be attributed at this time to the emerging Localism Bill. Accordingly any DPD that appears prior to enactment of the Localism Bill which materially departs from the RSS must be found unsound given that it would not comply with statute, particularly given the Governments recent announcement that an Environmental Assessment will now be carried out to consider the removal of the RSS’s. By any reasonable standard, this is likely to take a long period of time and it is therefore fair to assume the RSS’s will remain as part of the development plan for a good period to come. Nonetheless, even ignoring the above the Government remains committed to the delivery of more housing and it therefore seems perverse for the council to be attempting to adopt a strategy which seeks to reduce what should be recognised at the very least, as a minimum housing requirement. It is clear from all the above therefore that the RSS remains in law as part of the development plan and cannot be ignored, as the council appears to be seeking to do. We also refer the council back to the founding principles of the emerging local development framework. For example PPS 12 confirms that the Core Strategies; “4.36 Core strategies must be justifiable: they must be: • founded on a robust and credible evidence base; and • the most appropriate strategy when considered against the reasonable alternatives”. We
question whether the council’s unjustified Housing Growth figures meet this simple test as presently emerging and we maintain therefore that the Council’s emerging Core Strategy is not only deficient because it ignores the adopted RSS, but it also is not founded on the most up to date evidence base. Perhaps, however most importantly we draw the council’s attention to the evidence base it has at its disposal and indeed comments it makes in supporting documents for this Core Strategy. Paragraph 5.3 of the “Managing the Delivery of Housing Background Paper” – Background Paper 2 notes that “the Council’s Housing Needs Assessment highlights the acute level of affordable housing need within the District and it is noted that the main means of achieving affordable housing delivery is by the means of the construction of market housing...” Paragraph 6.11 of the same document goes onto confirm that “on this basis, the assessment has identified an annual affordable housing need of 812 in Wealden”. On the basis that the delivery of affordable housing, as accepted by the Council is predicated on the delivery of market accommodation, the evidence supports a much higher level of growth than that envisaged by paragraphs 3.8 – 3.17 and more importantly policies WCS1 and WCS2 of the consultation document. Indeed, it is obvious from the above that a target of 4,685 new homes over the period 2006 – 2026 is neither robust or indeed accurate and would continue to exacerbate the ongoing chronic housing deficiencies in the district. Furthermore, paragraph 3.22 of BP1 is of course, wholly misleading as it compares housing target figures that relate to two different time periods. The 11,000 dwellings target relates to the housing requirement set out in SEP between the period 2006 and 2026 (i.e. equal to 550 dwellings per annum), whereas the Council’s reduced figure of 9,600 dwellings relates to an extended 4 year period between 2006 – 2030 which would be the equivalent of 400 dwellings per annum (i.e. a reduction of 150 dwellings per annum over the entire Plan period compared to the SEP). Thus, not only is the PSCS DPD not legally compliant in failing to be in accordance with the Development Plan (or its time period), but also it is not sound, as no satisfactory justification has been provided for the substantial reduction in the housing period and over an extended plan period. Moreover, no justification has been made as to why the council fails to take on board the evidence which clearly supports a higher housing provision than that proposed within the adopted RSS, particularly taking on board the Governments growth agenda.

**Details of Changes to be Made:**

We therefore suggest that the submitted Core strategy needs to be amended to take into the account the extant development plan, including the South East Plan’s housing target at the very least, but with a recognition for a higher level of growth should be planned for. At the very least therefore, there needs to be a larger degree of flexibility built into the document. Whilst the Council has within paragraphs 5.18 – 5.20, as well as policy WCS5 sought to provide a contingency within the document, this does not go far enough and needs to be far more robust to take account, as indentified above of the chronic affordable housing issues that exist within the District.

**Details of Reasons for Soundness/ Legal Complaince:**

1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already built (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 TOTAL 9579 2 Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the district to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need. 3 On this basis the Core Strategy is unsound because the numbers of dwellings proposed to be delivered does not properly reflect the expected housing need. A larger number of dwellings should be planned for in Policy WCS1 to redress the shortfall in District-wide housing allocations. The total should be closer to the number of new households expected to be created over the plan period.

**Details of Changes to be Made:**

The total number of dwellings to be provided should be increased, with significantly more housing development being identified in the north of the District where the market is stronger and a known need for housing exists.

Details of Reasons for Soundness/ Legal Compliance:

The Number of Dwelling Proposed to be delivered. (Paragraphs 3.8 – 3.17, Policy WCS1) 1 The Council states that the Core Strategy intends that a total of around 9,600 dwellings will be created in the period 2006 to 2030. This is made up as follows: Houses already build (to April 2010) 1331 Existing commitments 3558 Proposed Additional Housing 4685 Total 9579

Details of Changes to be Made:

2 Paragraph 3.10 of the Proposed Submission Core Strategy states that the Council expects the population of the District to increase between 2006 and 2030 by approximately 19,000, which represents 16,800 households. It is clear therefore that the number of new households likely to be created in the district over the plan period will be far in excess of the number of new dwellings planned. Even if all of the new dwellings proposed are delivered this will only meet the needs of 57% of the expected new households. Well over 7,000 households will remain in housing need.
I note that the overall figure for housing development in the District has been limited to 9,574 dwellings over the period from 2006-2030. I do not believe that this figure has been justified in relation to the available evidence. National Planning policy is set out in Planning Policy Statement 3 (Housing) dated June 2010. This document is a revision of an earlier document published in 2006. On coming to power, the coalition government altered Planning Policy Statement 3, excluding land within the curtilage of a dwellinghouse from the definition of brownfield land. The reference to 30dph as the general density target was also deleted. No other alterations were made. The Governments key housing policy goal in Planning Policy Statement 3 is to ensure that everyone has the opportunity of living in a decent home, which they can afford, in a community where they want to live. A wide choice of home, improving affordability and creating sustainable, inclusive, mixed communities in both rural and urban areas are the stated means of achieving this. Housing targets have been a way of assessing and disaggregating housing need to local level. Regional housing targets have been set via the South East Plan. This plan took many years to reach completion, and was progressed through a number of detailed processes including evidence gathering, consultation and testing within a Examination in Public. The South East Plan remains part of the development plan for South East England. The Regional Spatial Strategy, the South East Plan, sets a target for Wealden District of 11,000 new homes to 2026 (20 years), four years shorter than the Core Strategy plan period; 550 per annum. The District Council proposes 9574 to 2030 (over 24 years); 399 per annum. Although the Coalition Government has indicated its intention to abolish regional strategies, the plan remains extant until its replacement, the Localism Bill, has completed its process through parliament and is on the statute books. The courts and the Planning Inspectorate have commented on the weight that should be afforded the South East Plan, and to date, it remains part of the development plan. National planning policy continues to refer to the strategic role of regional bodies and plan-making. Appeal decisions continue to give the regional strategy considerable weight in planning decisions. It is my view that any Council must have strong evidence to deviate significantly from the housing targets set out in the Regional Spatial Strategy. I do not believe that Wealden District Council has presented sufficient evidence to justify a figure of 399 dwellings per annum (9,574 over 24 years), over the South East Plan target of 550 dwellings per annum. I believe that the South East Plan represents a robust and credible evidence base and can justify the need to deliver, in Wealden District, 550 dwellings per annum to meet local needs. Any Council wishing to deviate from this figure would require very robust evidence to do so. I do not believe that the Proposed Submission Core Strategy presents such evidence. The District Council’s own evidence for housing growth points to a need for higher levels of housebuilding. The District Council has helpfully published ONS housing projections for the period to 2030, which matches the Core Strategy plan period. It is estimated that the population will rise by 16,800 households over the same period. Although this is based largely on falling household size and in-migration (rather than natural change) it is acknowledged that maintaining population levels is necessary for the economic health of the area. The District Council housing target falls significantly short of the projected household, failing to meet demand, and need, for housing. This will have severe economic consequences. By restricting housing growth, businesses will be limited in a flexible workforce, house prices will further affect affordability and the acknowledged problems in the district will be compounded. The Council has published its Housing Needs Survey. This has identified a housing need of 812 affordable dwellings per annum. This greatly exceeds the total projected growth figure in the Proposed Submission Core Strategy of 399 dwellings per annum (9574 divided by 24 years plan period). Although it cannot be realistically expected to meet 100% affordable housing needs in a district that is constrained by other factors, by severely restricting the levels of housing growth, the District Council builds in failure to meet affordable housing needs. It is acknowledged in the Proposed Submission Core Strategy that affordable housing will largely be delivered in the main by market housing development. The District Council has a poor record of delivering affordable housing through rural exceptions policy, and despite community agreement to retain the policy, very few units have been delivered this way over the previous Local Plan period, whilst the problem remains as acute as ever. The District Council’s Strategic Housing Land Availability Assessment (SHLAA) demonstrated that suitable land was available to deliver 18,257 dwellings. Additionally, the Strategic Housing Market Assessment (SHMA) demonstrated that the market was sufficiently buoyant in many parts of the district to accommodate higher levels of housebuilding. I recognise the limitations placed on housing growth by environmental and infrastructure constraints. However these constraints affect limited parts of the district, and can be overcome by an alternative distribution strategy. I will
discuss this in more detail below, but it is my opinion that the District Council has not applied its evidence to alternative strategies that overcome the limitations placed on growth. It is my submission that in relation to the overall volume of housebuilding proposed, the Proposed Submission Core Strategy is not founded on a robust and credible evidence base and has not considered reasonable alternatives. The result of a restricted level of housebuilding the Council will fail to deliver affordable housing to meet local need. The restriction in housebuilding levels and the removal of development boundaries in many locations will result in inflexibility in delivery. The questions raised by the infrastructure constraints of waste water treatment and transport have not resulted in an alternative strategy, should this situation not be resolved. As a result the strategy adopted by the District Council is inflexible and ineffective at addressing the needs identified. Finally, as a direct result of my comments above, it is my opinion that the Proposed Submission Core Strategy is not in conformity with PPS3 or PPS1. The plans will not result in ‘sustainable, inclusive, mixed communities in all areas, both urban and rural’ (paragraph 9 PPS3). The Proposed Submission Core Strategy, in particular Policy WSC1 is there unsound in terms of the tests in Planning Policy Statement 12.

Details of Changes to be Made:
The South East Plan remains the Regional Spatial Strategy for the south east. PPS3 refers directly with the need for local planning authorities to meet the target for house building and employment provision within the region. In order to be consistent with National Policy, the Submission Core Strategy should allocate land for 550 new dwellings p.a. in Wealden District. The 24 year plan period of the Submission Core Strategy should therefore provide for 13,200 dwellings. This would provide the balance between protecting the environment and rural character of the district, providing for the social and economic infrastructure of the district and provide for the expected level of household growth in the district. WSC1 should therefore be worded Land will be identified in subsequent development plan documents for the provision of some 8311 net additional dwellings in Wealden District to provide for 13,200 dwellings over the period 2006-2030.
Details of Reasons for Soundness/ Legal Complaince:
The total amount of housing proposed by the draft Core Strategy is insufficient. DCLG household projections demonstrate that by 2030 there will be approximately 76,000 households in Wealden, an anticipated increase of around 15,500 households between 2006 and 2030. The Council states that they are unable to meet the need for housing yet do not submit any compelling evidence of this. They aim to meet approximately 57% by delivering 9600 dwellings by 2030. This equates to a shortfall in housing of approximately 5900 dwellings. In this respect the Core Strategy conflicts with its evidence base. The Strategic Housing Land Availability Assessment Report (March 2010) identifies a supply of suitable sites that are currently outside of the planning process capable of delivering a total of 18257 dwellings in the period between 2009 and 2026. The SHLAA demonstrates that the Council is capable of delivering enough housing to meet the need identified by DCLG projections therefore it is submitted that that the Core Strategy is not ‘justified’ as it fails to take account of its evidence base therefore it is ‘unsound’.

The draft Core Strategy is not consistent with Planning Policy Statement 1: ‘Delivering Sustainable Development’ where it states that “In preparing development plans, planning authorities should seek to bring forward sufficient land of a suitable quality in appropriate locations to meet the expected needs for housing” (para. 27 iv). The Council will not deliver enough housing to meet anticipated need, in conflict with PPS1. Furthermore it is not consistent with Planning Policy Statement 3: ‘Housing’ when it states “The Government’s key housing policy goal is to ensure that everyone has the opportunity of living in a decent home, which they can afford, in a community where they want to live.” (para. 9). The draft Core Strategy does not propose to deliver the necessary quantity of housing to meet the need indentified by DCLG forecasts regarding household projections. The proposed Core Strategy is therefore not consistent with the above national policy. The draft Core Strategy is deficient. The overall district wide housing allocation proposed in WCS1 is deficient because it does not deliver enough houses to meet an identified need. It is therefore not consistent with national policy despite evidence in the SHLAA demonstrating this to be possible. Given the absence of compelling evidence suggesting that Wealden District Council cannot meet the need for housing set out in DCLG forecasts it is considered that the presumption should be that the relevant national policy should be followed.

Details of Changes to be Made:
WCS1 Provision of Homes and Jobs 2006-2030 Land will be identified in subsequent Development Plan Documents for the provision of some 10585 net additional dwellings in Wealden District to provide for 15500 dwellings over the period 2006-2030.
Details of Reasons for Soundess/ Legal Complaince:
The house building total set out under the policy will not meet needs District wide. The Core Strategy will therefore not be in conformity with the South East Regional Plan, nor the evidence that supported that plan. There is also the question as to what account has been taken of the possibility that neighbouring Rother District is not able to meet its housing targets, if the Bexhill Urban Extension does not proceed with the Hastings/Bexhill link road unfunded. Change Required

Details of Changes to be Made:
Council to add explanatory text.

Details of Reasons for Soundess/ Legal Complaince:
Hallam Land Management Limited (HLM) object to the level of housing proposed, on the grounds that it falls short of what is reasonably required to meet the housing needs. A detailed explanation of the grounds on which this objection is sustained are set out in the submission made by Turley Associates on behalf of HLM.

Details of Changes to be Made:
The Proposed Submission Core Strategy should provide for at least 11,000 (and arguably up to around 16,000) dwellings over the period 2006-2030, to comply with the requirements of the SEP and the available evidence on household and dwelling formation.

WCS1 Provision of Homes and Jobs 2006-2030

Policy 1

Details of Reasons for Soundness/ Legal Compliance:
This is an expansion of my previous comment ref id 282. 1. Legality Issue The proposed Core Strategy is not legal
because it has not met the requirement for new dwellings set out in the South East Regional Plan. In the paper
'Development of the Proposed Submission Core Strategy Background' (Feb 2011) on page 7 the District Council
admits that the South East Region Plan REQUIRES that AT LEAST 11,000 dwellings is provided between 2006 and
2026. The proposed Core Strategy is for only 9,600 from 2006 to 2030. In the Cala Homes (South) legal case,
10th November 2010, the judge found that the Government did not have powers to revoke the Regional Strategies
which continue to prevail. Thus District Councils can not legally anticipate the Localism Blll which may or may not
be enacted. 2. Housing Demand Issue In the paper 'Managing the Delivery of Housing' (Feb 2011), the District
Council show that the likely demand for housing (using Office of National Statistics projections) between 2006 and
2030 is 16,900, higher than the South East Region Plan. So on the basis of local demand, the Core Strategy
should provide for 16,900 dwellings by 2030 rather than the 9,600 proposed.

Details of Changes to be Made:
By increasing the Core Strategy proposals for new dwellings from 9,600 to 16,900 by 2030, the Core Strategy will
meet the legal South East Region requirement for new dwellings and the local housing demand which it is any
Council's duty to do.
Objective SPO3 and Policy WCS1 of the PSCS seeks to provide for 9600 dwellings within Wealden from 2006 to 2030, comprising a phased delivery of an average of 400 dwellings per annum across the 24 year period. Planning Policy Statement 12 sets the Government’s policy on Local Development Frameworks. Paragraph 4.1 and 4.2 state that a Core Strategy should include an overall vision of how an area and the places in it should be developed. It should set out how much development is intended to happen, where and when. It states that the vision should be in general conformity with the Regional Spatial Strategy (RSS). Within Wealden district, the RSS comprises the South East Plan, adopted in May 2009. Policy H1 sets out the requisite housing provision for the region over the period 2006-2026. Within Wealden, Policy H1 requires the LPA to prepare plans, strategies and programmes to ensure the delivery of the annual average of 550 net additional dwellings, equivalent to 11000 over the 20 year plan period. The PSCS therefore seeks to provide a much lower housing increase than required by the RSS, by some 150 per annum, or 3000 over the 20 year plan period up to 2026. On this basis the PSCS is not in general conformity with the RSS and it is in conflict with the requirements of PPS12, and is therefore unsound. It is acknowledged that Policy SCT5 of the RSS seeks to deliver some 7100 of the total 11000 new dwellings within the south of district within the defined Sussex Coast sub-region and that this should focus on existing towns by optimising the use of previously developed land and where necessary, by making new allocations as sustainable extensions of existing towns. However, given the infrastructure capacity limitations noted in the PSCS, it is considered that some of this total would be better located in and around other towns within the District, in particular, Uckfield. It is noted that the Coalition Government attempted to revoke RSS on 06th July 2010 relying on powers under Section 79(6) of the Local Democracy, Economic Development and Construction Act 2009. However, this decision was successfully appealed on 10th November 2010. RSS’ will therefore remain part of the Development Plan until abolished by primary legislation. Subsequent challenges have taken place in the Courts. At the current time the Secretary of State for DCLG’s letter of 27th May 2010, advising LPA’s of his intention to rapidly abolish RSS’ is a material consideration. Given this current position, the PSCS should plan to deliver a housing requirement that reflects the requirements of the RSS. This will deliver a Core Strategy that is in general conformity with this higher tier planning strategy. Furthermore, the RSS housing figures are based upon the need to respond to the economic and housing circumstances of the area, and these remain equally valid despite the intention to remove the RSS in due course. The PSCS should therefore plan for housing growth across the district of 550 net additional dwellings per annum, equating to a total of 13200 over the 24 year plan period (2006- 2030).

Details of Changes to be Made:

Given this current position, the PSCS should plan to deliver a housing requirement that reflects the requirements of the RSS. This will deliver a Core Strategy that is in general conformity with this higher tier planning strategy. Furthermore, the RSS housing figures are based upon the need to respond to the economic and housing circumstances of the area, and these remain equally valid despite the intention to remove the RSS in due course. The PSCS should therefore plan for housing growth across the district of 550 net additional dwellings per annum, equating to a total of 13200 over the 24 year plan period (2006- 2030).

Policy 1
Sound  □ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  □ Yes  □ No
Details of Reasons for Soundness/ Legal Compliance:
The provision of 9,600 dwellings over the period of 2006 - 2030 is not supported by the evidence base and will not meet housing need in the District. It does not take account of housing need in the wider area outside the District. There is no evidential relationship with employment growth. The more robust assessment in the S E Plan is a more robust basis for the Plan.
Details of Changes to be Made:
Increase the housing provision figure to 11,00 over the period 2006 - 2026. Address employment land provision in the context of job numbers in the wider area, including recognition of the regional and national importance of the Gatwick area and the South East in general.

Details of Reasons for Soundness/ Legal Compliance:
If the planning appeal APP/C1435/A/10/2130580 Honey Farm is successful, the whole allocation would no longer be relevant or necessary and the policy in housing numbers terms would be unsound.
Details of Changes to be Made:
Wealden DC have opted to consider its abolition in the near future as a basis for the draft Core Strategy and have chosen to make its own assessment of requirement with no reference either to the South East Plan or the background studies which were carried out in order to underpin the substantial work which went into assessing the housing requirement for the region including Wealden District. It is useful to note that whilst the Core Strategy covers the period up to 2030 with a starting date of 2006 for assessment purposes the South East Plan covered a period just 4 years short finishing in 2026. 1.2 Table 1, Comparison of Trend, SEPPlan and Draft CS based housing requirement: Trend based requirement 2006-2026 15,000 Trend based requirement 2006 - 2030 16,800 Trend based requirement 2006 - 2030 annual rate 700 SEPPlan based requirement 2006 - 2026 11,000 SEPPlan based requirement 2006 - 2030 13,200 SEPPlan based requirement 2006 - 2030 annual rate 550 (The figure for 2006 - 2030 is a straight projection of the annualised 2006 - 2026 figure by 4 years) Core Strategy based requirement 2006 - 2026 8,000 Core Strategy based requirement 2006 - 2030 9,600 Core Strategy based requirement 2006 - 2030 Annual rate 400 (The figure for 2006 - 2026 is a reduction of the annualised 2006 - 2026 figure by 4 years) SEPPlan requirement for South Wealden 2006 - 2026 7,000 SEPPlan requirement for South Wealden 2006 - 2030 8,400 SEPPlan requirement for South Wealden 2006 - 2030 350 (The figure for 2006 - 2030 is a straight projection of the annualised 2006 - 2026 figure by 4 years). The Council's assumption that with the removal of the South East Plan localism would be best served by a reduction in the number of dwellings to be built in Wealden is wrong. The South East Plan is based on a redistribution of house building around the region to further various policy aims. Some districts are required to build fewer homes than would occur locally whilst others are required to build more. Wealden as a district under the South East Plan would be building less than the trend based forecast. 1.1.4 The trend based forecast is that which would occur in the district if regional policy adjustments were not introduced. For Wealden as a whole the trend based forecast for the period 2006 to 2030 is 16,800 households. this should be compared with the 13,200 net dwelling requirement under the South East Plan scenario and the 9,600 dwellings proposed by the Council in the Draft Core Strategy for the period 2006 - 2030. It is, therefore, the case that the South East Plan requirement for Wealden is one of significant restraint with the Council only being required to provide dwellings for 78.5% of the households predicted to arise in the district over the period 2006 to 2030. Under the South East Plan regime this is possible because other areas, such as Growth Areas of Ashford and the Thames Gateway in Kent would provide in excess of their trend based forecasts. 1.1.5 The Council's proposal to provide just 9,600 dwellings in the period 2006 - 2030 when it is expected that 16,800 households will form in the district, will see just 57% of the total number of dwellings that are required being provided. Furthermore, in the absence of the South East Plan, districts which had been required to provide over their trend based forecasts are now looking to reduce their requirement. Ashford, in Kent, for example has alreadyflagged up that in the absence of the South East Plan 6,500 less dwellings are proposed to be built over the 2006 to 2026 period. 1.1.6 The amount of affordable housing needed in the District is such that in Polegate for example, see BP2, there are people currently on the Council's housing waiting list who will wait 35 years before being housed. The only method for providing the significant levels of affordable housing which the Council can currently rely is through developers bringing forward allocated sites and providing the required affordable element. The Housing Needs Assessment which was completed for the Council in 2010 and which does not form part of the advertised Background Papers estimated that there was an annual requirement of 812 affordable homes needed in Wealden per annum. Under these circumstances it is not acceptable for the Council to adopt a level of housing provision which will provide just 1,649 affordable homes (9,600 less 4,889) commitments at January 2010) equals 4,711 / 0.35 (35% affordable element) over the remaining part of the plan period from 2010 to 2030. It is not possible to make the calculation from 2006 because the Council does not record the data but it is worthwhile noting that a significant number of sites have not delivered any or less than 35%. 1.1.7 The consequences of not building sufficient housing including affordable housing and following a distribution strategy which does not focus on areas acknowledged as needing regeneration are as follows. a. House prices in the district, which are already
some of the highest in the South East of England, will rise. b. Economic benefits associated with house building will be lost to the very area (the South of the district) most in need of them. c. Residents in need of affordable housing will have to leave the district. d. Overcrowding and the number of residents living in inadequate housing will increase. 

1.1.8 the conclusions with regard to affordability and housing need are supported by the findings of the Council's Housing Market Assessment where it was concluded that: "...it is essential that the level of housing proposed in the draft South East Plan is delivered, particularly in the context of the evidence on affordability and housing need presented in this report and all the more important under the scenario where the past rate of job growth is maintained....." 1.2.3 the Council have sought to argue that there are environmental and infrastructure restraints which prevent the delivery of any greater number of dwellings than 9,600 during the period 2006 - 2030. The principal constraints which they have identified are impact on the Ashdown Forest and Pevensey Levels, the latter principally due to waste water discharge, transport infrastructure and high education provision more particularly at Uckfield. These issues are not limiting factors in respect of the number of dwellings which can be built in Wealden.

Details of Changes to be Made:
2.1 Introduction 2.1.1 This section of our representations relates to the housing growth figures set out within the draft Submission Core Strategy. Our representation is summarised below: Section of Core Strategy: Spatial Planning Objective 3 (SPO3) and Policy WCS1 Provision of Homes and Jobs 2006-2030 Legally Compliant: - Sound: No Justified: Yes Effective: Yes Consistent with national policy: -

2.2 Reverting back to the RSS Tier 1 Figure 2.2.1 The ‘Dear Chief Planner’ letter from CLG to all authorities dated July 2010 states that ‘evidence that informed the preparation of the revoked Regional Strategies may also be a material consideration, depending on the facts of the case’, and ‘authorities may base revised housing targets on the level of provision submitted to the original Regional Spatial Strategy examination (Option 1 targets), supplemented by more recent information as appropriate’. 2.2.2 In the submission Core Strategy Wealden have reverted back to their option 1 targets of 400 units per annum. We contend that given (i) the conclusions drawn by the South East Plan panel report, (ii) policy in the adopted South East Plan, and (iii) the availability of new demographic information, that the Council should not simply roll back to the option 1 figures. Taking each in turn: (i) South East Plan panel report 2.2.3 The recommendations of the Panel were made based on the availability of technical evidence and material submitted to them. Importantly, they were not an expression of political will or influence. 2.2.4 The panel noted that draft South East Plan housing level for the Rest of East Sussex area — including the north of Wealden - was at the lower end of the 300-500 dpa range included in the consultation draft RSS, January 2005, and that the district-wide rate proposed for Wealden was significantly below provision levels in the last structure plan. 2.2.5 The panel also noted that the proposed distribution of housing for the Rest of East Sussex area, following consultation in September 2005, was termed “balanced dispersal”, and takes account of the role and accessibility of each rural settlement moderated by environmental designations. The Panel noted that this appeared to be a sound approach. 2.2.6 However, the Panel considered that a modest increase (600 dwellings equating to 30 dpa) could be justified in the rest of Wealden focused on Uckfield. Recommendation 26.6 stated that, ‘In the rest of East Sussex, add 600 dwellings (30 dpa) to the rest of Wealden based on the potential for sustainable growth at Uckfield’. 2.2.7 So, the Panel recognise the importance of Uckfield as a focus for growth and that this should be in accordance with the balanced dispersed growth strategy which they considered to be sound. 2.2.8 The Core Strategy should not ignore these recommendations. 2.2.9 The Panel report makes specific reference to the technical evidence submitted by Wolf Bond Planning LLP (respondent no. 7095) in regard to Matter 9D of the South East Plan EIP (session date 9 March 2007). Their evidence made the point that the ‘option 1’ figures: § failed to result in a step change in housing supply, rather they resulted in an overall reduction against previous Structure Plan targets; § result in the provision of even fewer affordable homes; § failed to sully explore the potential to provide additional housing growth in sustainable locations previously approved; § artificially constrained housing supply — particularly around Uckfield — and prevented otherwise suitable land coming forward for development; and § did not recognise that Uckfield is unconstrained by environmental designations — unlike most of Wealden — and thus represents the principal and most suitable location to accommodate additional housing in the rest of the East Sussex area during the plan period. 2.2.10 In our response to the Council’s Core Strategy consultation (July 2009), we noted that Maresfield has a major role to play in contributing to the future growth and development of the District, particularly in relation to the housing requirements for the Low Weald area and identification of Uckfield as a growth location. We noted: § Uckfield is an area that was identified for housing growth in both the South East Plan and the East Sussex Structure Plan, but Uckfield itself has environmental and...
physical constraints to growth. § A strategy of balanced dispersal (as advocated in the South East Plan and the Panel Report) would point to Maresfield as a sustainable location for some growth that cannot be accommodated sustainably within Uckfield town. Maresfield could make a sustainable contribution to delivering the housing needs of the Uckfield area. § The shortage of previously developed land due to the rural character of the District, necessitates greenfield release, and Maresfield represents a relatively unconstrained location for development (compared to the majority of the district). § Maresfield has a range of facilities that meet the daily needs of residents and benefits from a close proximity to Uckfield with the potential for significantly enhanced accessibility by sustainable modes. § Community representatives support a comprehensive, holistic approach to development at Maresfield rather than a piecemeal development that offers little community benefit. 2.2.11 Maresfield benefits from a sustainable location close to Uckfield; a town identified for significant housing growth within the South East Plan. We contend that Maresfield can play a positive role in delivering the aspirations for the Uckfield area, and in doing so the settlement will benefit from a clear long term framework for its long term future. Further, if the strategic role of the village is not recognised in the Core Strategy there is a real threat of small scale, piecemeal development will occur in the village which would fail to bring the benefits associated with a sustainable long term strategy. 2.2.12 In summary, we contend that, in reconsidering the growth figures for the District following the ‘Dear Chief Planner’ letter of July 2010, it is not appropriate for the council to ignore the recommendations of the South East Plan Panel, whose decisions were based on technical evidence. Their recommendations should be reflected in the Core Strategy. 2.2.14 The South East Plan still comprises part of the development plan and the policies within this need to be considered. The South East Plan sets a housing requirement of 11,000 homes to be provided in Wealden over the period 2006-2026 at an average of 550 homes per annum. However, the South East Plan states that in relation to housing requirements: ‘the level that is set here [i.e.: in the plan] is still significantly below the forecast growth of households and even more so by the more recent 2006-based population projections’ (paragraph 7.6). 2.2.15 It goes on to say that: ‘the review of this RSS will examine the current levels of housing and a rate of provision higher than 32,700 dwellings per annum is likely to be necessary to meet the strategic needs in the region’. 2.2.16 So, the RSS itself acknowledges that the housing figures for the area were being suppressed and that higher targets should in fact have been set. This point is made in Wealden’s own Housing Market Assessment. At paragraph 1.23 it states that: ‘trend based projections predict growth of 700 households per annum in Wealden district over the next 20 years. This is around 20% more than the target dwelling provision set for the district in the draft South East Plan (550 dwellings pa).’. The data therefore suggests that in an unconstrained market, demand for new housing in North Wealden would exceed current dwelling targets’. 2.2.17 The Housing Market Assessment recognises the importance of regional policy interventions rather than purely using trend forecasting, but it also acknowledges the linkages between housing growth, job creation and economic activity. The report notes (at para 1.32) that Wealden, and the north of the district in particular, is an area where ‘job and workforce growth has been buoyant in recent years’. In this context, the report notes that ‘the lower rates of housing development proposed for North Wealden are likely to mean that the area will continue to experience pressure within the housing market in the future’. SUMMARY 2.2.18 We contend that the Core Strategy is unsound, because it is not justified, as it is not consistent with the policy and evidence set out in the South East Plan and the Councils own Housing Market Assessment. (iii) Availability of new Information and Data / Household Growth 2.2.19 In November 2010 CLG published its most recent household projections, for the period 2008 – 2033. This data shows that by 2026, the number of households in Wealden is expected to grow to 73,000: a 12,000 increase from 2006. 2.2.20 The CLG Housing Statistics release states that: ‘The projections are an important part of the evidence base for assessing future housing demand and informing national and local policies on housing and planning’. 2.2.21 And: ‘Planning Policy Statement 3 requires that assessment of future housing requirements in local strategies should have regard to, amongst other factors, current and future demographic trends and profiles and take into account evidence including the Government’s latest published household projections’. 2.2.22 Although published in advance of the proposed submission Core Strategy, no reference to this information is made in the proposed submission draft. 2.2.23 The figures are lower than previous data sets – including that produced by the DCLG and used to inform the Councils Housing Market Assessment, 2007 – but are reflective of recent economic circumstances and thus take a more cautious approach to future housing growth and demand. However, the figures are substantial, and are in excess of the level of housing planned for in the Core Strategy. It is entirely unclear how these have informed the level of growth. 2.2.24 Technical Note 5 to the South East Plan explains how household projections are converted into dwelling numbers. The Chelmer Model of long-term migration projections derives a household to dwelling ratio of 1.03 . Using this ratio, the most recent CLG household projections (12,000 additional households 2006-2026) would result in a need for 12,360 new dwellings over the same period. This equates to an annual average of 618 new homes across Wealden: 218 per year more than the proposed submission Core Strategy plans for. 2.2.25 In addition to overall housing numbers is the important issue of affordable housing. The proposed submission Core Strategy acknowledges that provision of affordable housing is a priority. However, across the district, the number of affordable units required on a per annum basis far exceeds the level of growth set out in the housing trajectory. 2.2.26 The Council’s Housing Needs Assessment (January 2010) estimates that there are currently 1,215 households in need of affordable housing across the District but that there is only an estimated 325 properties available to offset this current need. In addition to current need, the Housing Needs Assessment also addresses future need. This states (at para 6.42): ‘The data suggests that on an annual basis there will be 152 newly forming households requiring affordable housing and a further 831 existing households. The total future need for affordable housing is therefore estimated...
to be 983 units per annum’. 2.2.27 So, not only is the Core Strategy planning for the provision of fewer homes than is needed, it will not deliver on its priorities for affordable housing. 2.2.29 The Core Strategy should thus be reviewed and amended to reflect the housing demand indicated by the household projections and need, and the implication for their spatial distribution considered. 2.3 Housing Trajectory – 400 units per annum 2.3.1 There are two issues to address here, (i) whether the targets are minima or maxima, and (b) justification for the 400 unit per annum target: (i) Minima or Maxima 2.3.2 We note that policy SPO3 states that ‘we will provide for at least 9,600 homes within Wealden….. on average 400 dwellings per annum’. Policies and supporting text elsewhere in the plan also make reference to the level of housing being ‘at least’ (see, for example, para 5.3). 2.3.3 Through the use of the term ‘at least’ we welcome the recognition that housing figures should be treated as floors rather than ceilings. They are in effect minima. This is in line with advice from PINS (Advice Note 1062, May 2008): that housing targets are to be regarded as floors and not ceilings and if suitable sites for housing come forward which are not allocated in plans, that is to be seen as a bonus and not detrimental. The South East Plan also recognised this. It stated, at para 7.8: ‘the fact that an annual provision or local trajectory number has been met should not in itself be a reason for rejecting a planning application. Decisions should be taken on their merit and local circumstances – including longer term housing needs and affordability in an area’. 2.3.4 We support the fact that housing targets in the Core Strategy are minima, but are concerned as to how this will be interpreted, particularly given experience elsewhere in the district where the Council are using completions and housing land supply as a means to refuse planning applications. 2.3.5 In respect of establishing minimum housing targets, we consider the Core Strategy sound, albeit that the minimum figure of 400 units per annum should be greater. However, if the housing figure established in the submission Core Strategy is truly a minima, then planning applications that provide housing over and above this level must be determined on their merits: they can not be refused simply because the annual housing target has already been met in the district. We request that this is clarified within the Core Strategy. (ii) Rationale for 400 units per annum 2.3.6 Para 5.13 of the submission Core Strategy states ‘over the last 21 years on average 400 dwellings have been built per annum across the District… It is considered that a similar rate in the future is achievable’. 2.3.7 We do not agree that this is an appropriate rationale for the housing trajectory. Over the last 21 years the rate of delivery has fluctuated dramatically. Over the last ten years there has been a history of underperformance when compared to structure plan, the South East Plan and local plan targets. Indeed, there is a ‘backlog’ of housing delivery against these plan targets. Over the period 1991 – 2009 there have been 7,320 completions across the district. This is set against a requirement for 9,240 homes based on Structure Plan (and thus Local Plan) figures for the same period, 2. 8,250 homes based on the Structure Plan targets up to 2006 and the adopted South East Plan targets for the remaining period (2006 - 2009), or 3. 7,800 if the adopted South East Plan figures are replaced with the South East Plan tier 1 figures. 2.3.8 At the recent inquiry relating to the Honey Farm site in Poleygate in the south of the district, the Council and the appellant agreed the base for completions across the district for the four and a half year period running from April 2006 – September 2010. There were 1,642 completions over the period. This is a shortfall against both the Core Strategy (of 158 units) for that period, and the South East Plan (833 units). Perhaps more significantly, it represents a significant shortfall against the projections contained within the Councils own Housing Market Assessment. As noted previously, this predicted growth of 700 households per annum in the district. Against this, the appellants demonstrated a shortfall of 1,508 units for the period April 2006 – September 2010. 2.3.9 Underperformance against targets has not been helped by the lack of an up-to-date local plan and associated identified and allocated development sites (The 1998 Local Plan and its saved policies are still being used for development control purposes) and the focus on reusing brownfield land, which restricted housing development in places characterised by their countryside setting, such as Wealden. Recent Ministerial Statements now make it clear there will be a presumption in favour of sustainable development and the intention is to increase housing delivery. There is also no brownfield target that may constrain development in places such as Wealden. 2.3.10 Interestingly, delivery rates in Wealden in the last few years have been their highest for some time , despite the economic climate. The Core Strategy now provides the opportunity not only to address previous underperformance but to proactively plan for the future. So why does the housing trajectory seek to constrain the market in Wealden at the very time when it is showing it can actually delivery increased levels of new homes? Establishing a figure of 400 units per annum, based on historic delivery, is an artificial constraint. The fact that there has been historic underperformance in housing delivery in the district should not be a determinant of what the future level of growth should be. 2.3.11 The annual housing requirement must also be assessed in light of housing need and demand, to which we have referred in section 2.2 above. This demonstrates that housing growth should be in excess of that identified in the Core Strategy. This also needs to be set in the context of historic undersupply against previous Structure Plan targets, resulting in a backlog of housing. So, the 400 per unit target is artificially low and should be increased. 2.4 No justification / rationale provided for changes to growth figures allocated to Maresfield between 2007 Issues and Options and 2011 Proposed Submission Draft 2.4.1 The 2007 Issues and Options Core Strategy identified that the potential scale of growth in Maresfield was between 350 - 500 new homes. Consultation responses to this (option 21a of the Issues and Options draft) received both support and objection. 109 responses were received. 2.4.2 The Maresfield Conservation Group agreed with the level of growth, though stating that ‘any development should be carefully planned in terms of traffic management, sensitive integration with the village and energy saving’. 2.4.3 Other respondents (for example, respondent ID: 107127) noted: ‘Agree as this site has well defined and defendable boundaries, is next to an employment site, near to 2 stations and traffic is easily dispersed by the village roundabouts, there is little landscape quality to the site’. 2.4.4 The chart copied below has been extracted
from the paper prepared for Agenda Item 8, WDC Cabinet Local Development Framework Sub Committee, 15th October 2007. As expected, both support and objection was made in regard to the quantum of growth identified for Maresfield. However, what is important is that the majority of responses - almost 60% - were in support (see column titled option 21a). What is perhaps even more significant here is that of the Villages around Uckfield where a question about growth was posed in the 2007 Issues and Options, the only one that received a majority in agreement with the specified level of growth was Maresfield. So why was this ignored? Figure 2.1: Summary of Consultation Responses: 2007 Core Strategy Issues and Options, Option 21 Source: page 82, Agenda Item 8, WDC Cabinet Local Development Framework Sub Committee, 15th October 2007 2.4.5 The 2009 Spatial Options Core Strategy presented six options for growth across the district. This dramatically reduced the potential for growth in Maresfield to between 11 and 150 new homes. None of these are for the same level of growth as in 2007. Given that the majority of responses to the 2007 consultation indicated support for the level of growth identified (between 350 – 500 homes) it is not clear why the decision was made to reduce the potential growth figure by more than half. There should have at least been some acknowledgement of the previous figures and this should have been presented as an option. 2.4.6 The only rationale we can see for reducing the potential level of growth in Maresfield is in regard to the settlement hierarchy, which, between 2007 and 2009, changed the status of Maresfield from a ‘local centre with growth potential’ to an ‘accessible settlement with limited facilities’. As we point out in section 3.1 of this response, the settlement classification significantly underplays the potential of Maresfield, ignoring, for example, the fact that a very real opportunity exists to balance homes and jobs in the area given the planning permission granted for the Ashdown Business Park, which will generate between 600 – 700 jobs in what has been termed ‘the most strategically significant employment site in North Wealden’ . 2.4.7 Based on consultation responses to the 2009 spatial options, the submission Core Strategy now sets the housing figure for Maresfield at just 50 units. This represents just 10 percent of the originally identified potential for Maresfield. It is not clear what the rationale and justification for such a significant reduction is. We note that responses made by Maresfield Parish Council to the 2009 spatial options Core Strategy note that the Parish would accept up to 50 units in Maresfield, but that greater than 50 would be considered acceptable if substantial local benefit can be demonstrated / delivered. 2.4.8 The biggest change to the level of growth was made between 2007 and 2009. Conversely, this is when housing figures in the South East Plan were in the process of being increased. There does not appear to be any evidence to suggest why the housing figure in Maresfield should be reduced so dramatically: indeed, submissions made to the 2007 consultation expressly state that a limited number of 300 units should be accommodated in Maresfield (see page 163 of Agenda Item 8, Appendix C, Technical Summary of Issues Raised through the Issues and Options Consultation Process, Cabinet Local Development Framework Sub Committee Date: 15th October 2007).

Details of Changes to be Made:
SUMMARY 2.2.13 Having ignored these recommendations, we contend that the Core Strategy is unsound, because it is not justified, as it is not founded on the evidence available and considered robust by the independent Panel conducting the examination in public of the South East Plan. (ii) Adopted South East Plan SUMMARY 2.2.28 We contend that the Core Strategy is unsound because (i) it is not justified as it is not based on the available evidence which points to a need for substantially more homes to be provided across the district and, furthermore, does not explain how this has been taken into consideration; and (ii) it is not effective, because the level of housing growth set out will mean the plan can not deliver on its priorities to deliver affordable housing. SUMMARY 2.3.12 We thus contend that the Core Strategy is unsound because (i) it is not justified as does not accord with the evidence base, which indicates higher rates of housing delivery is required and (ii) it is not effective because it is not deliverable: simply achieving 400 units per annum will not deliver the quantum of growth required to meet the requirements in the district. SUMMARY 2.4.9 In summary, we contend that the plan is unsound as the housing growth is not justified as it does not appropriately reflect the evidence base.

Policy WCS1: Provision of Homes and Jobs 2006 to 2030 Summary Response
1.1 We object to the content of the Policy as drafted on the basis that it has not been shown to be justified, effective or consistent with national policy. 1.2 The target figure of 9,600 dwellings to be met with the District during the period 2006 to 2030 is significantly lower than the strategic requirement set out in the South East Plan (adopted May 2009) and fails to address identified needs. 1.3 Our detailed representations are set out below: Representation Spatial Strategy
2.0 The SHMA identifies needs that the core strategy makes clear spatial choices about where developments should go in broad terms. 3.1 In support of the above approach, PPS12 (paragraph 4.5) states: “It is essential that the core strategy makes clear spatial choices about where developments should go in broad terms. This strong direction will mean that the work involved in the preparation of any subsequent DPDs is reduced. It also means that decisions on planning applications can be given a clear steer immediately.” (Our emphasis) 4.1 A supporting publication, issued by PINS, titled “Local Development Frameworks Examining Development Plan Documents: Learning from Experience” (Sept 2009) provides advice to LPAs in the preparation of their DPDs. 4.2 Paragraph 20 concerns housing delivery and notes that despite its critical importance, this is an area where many plans are notably weak. 5.1 Paragraph 21 relates to the approach to land identification in Core Strategy, stating: “In some instances the weakness derives from a failure to identify sufficient and/or appropriate land for development. Sometimes this appears to derive from a reluctance to accept that unpopular decisions about allocating land, possibly green field land, for development have to be made. Simply claiming that development needs will be met within the urban areas and that the position will be reviewed if necessary in the future is not likely to be acceptable unless there is a evidence that the “urban areas only” approach is likely to be realistic. Where the scale of land needed for development is such that green field allocations are likely to be required the strategy should make this clear. In this example if the DPD is a core strategy it should either make strategic allocations or give adequate guidance for a subsequent site allocations SPS to readily identify the land needed without have to re-visit strategic considerations.” (Our emphasis underlined) 6.1 Paragraph 39 states as follows: “Some authorities appear to focus their thinking about options simply on the location of development forgetting that the notion of options includes matters such as density, the rate of development, delivery mechanisms etc.” 6.1 As set out at paragraph 4.5 of PPS12, it is essential that Core Strategies make clear spatial choices about where developments should go in broad terms. As stated, this strong direction will mean that the work involved in preparing any subsequent DPDs is reduced. It also means that decisions on planning applications can be given a clear steer immediately. 7.12 The above comments cut-through the “options” set-out in the consultations paper and form the basis against which the CS should be prepared. 8.13 Set against the findings of the SHMA, Housing Needs Assessment and the requirements set out in PPS12 (and accompanying documents), the proposed spatial strategy fails to identify sufficient land for development and should be revised, including having regard to our detailed comments et out below. 9.14 As summarised above PPS12 sets out the principal components to be included in local spatial plans. Paragraph 4.42 requires that in order to be “sound” a core strategy should be justified, effective and consistent with national policy. 10.15 In order to be justified the Core Strategy (“CS”) must be founded upon a robust and credible evidence base and represent the most appropriate strategy when considered against the reasonable alternatives. 11.16 Effective means that the document must be deliverable, flexible and able to be monitored. Paragraph 4.46 clearly states that a strategy is unlikely to be effective if it cannot deal with changing circumstances adding that plans should be able to show how they will handle contingencies. 12.17 The planned approach to the amount and distribution of growth will fail to meet identified housing needs. 13.18 Paragraph 4.6 of the guidance clearly states that core strategies may allocate strategic sites for development. 14.19 Sites central to the delivery of the key spatial objectives and able to provide supporting infrastructure provision whether on-site and or through S106 contributions toward off-site provision should be identified in the Core Strategy. 15.20 The release of sites allocated for development in the Core Strategy should not be delayed due to an inflexible policy requiring the sites to be identified in subsequent DPD’s. The Strategic Housing Requirement 1.21

---

Page 473 of 1511
In preparing Local Development Documents, both PPS3 and PPS12 require LPAs to set out policies and strategies for delivering their strategic housing requirement in order to enable continuous delivery of housing for at least 15 years from the date of adoption. 1.22 The Core Strategy covers the period to 2030, in excess of 15 years from the anticipated date of adoption. 1.23 The policy basis against which the Core Strategy is to be prepared includes the Regional Spatial Strategy (RSS) for the South East (the South East Plan (SEP)). This was adopted in May 2009 and sets out the approach to meeting the strategic housing requirement within the District in the period to 2026. 1.24 SEP Policy H1 sets out a requirement for the delivery of 11,000 dwellings within the District during the period 2006 to 2026, equivalent to 550 per annum. 1.25 The requirement is “split” between the north and south of the District, with South Wealden1 (comprising that part within the Sussex Coast Sub-region) identified as providing 7,000 dwellings and North Wealden2 providing 4,000. 1.26 The requirement to be met in the component parts of the District is summarised in Table 1 below. As set out in the South East Plan, the requirement figures to be met in the component parts of the District are not to be ring-fenced. Rather, flexibility has been applied in order to vary the housing provision between the two policy areas if this is demonstrated to be more appropriate locally. Table 1: South East Plan Housing Requirement to be met in Wealden(2006 to 2020)

| Total Wealden                  | 350 7,000 200 4,000 550 11,000                                                                             | 1.27 Although the 550 dwellings per annum is evidence based, having been tested through preparation of the SEP, as I made clear at paragraph 7.6 of the SEP, the annualised requirement level is still significantly below the forecast growth of households and even more so below the more recent 2006 – based population projections. Furthermore, the independent advice from the National Housing Planning Advice Unit (NHPAU) suggests a figure which is significantly higher than the level of housing provision set out in Policy H1. 1.28 Paragraph 7.7 of the SEP notes that LPAs can test higher numbers through preparation of their development plan documents. This is particularly relevant in the case of Wealden where there is an acute affordable housing need. 1.29 The adopted SEP also states that a subsequent review of the RSS would examine the current levels of housing and a rate of provision higher than the annualised requirement set out in the RSS, which it considered was likely to be necessary to meet the strategic needs in the region. 1.30 Pursuant to recent government announcements, there has been much debate as to the weight to be applied to the policies and proposals of the RSS. 1.31 In May 2010 the SoS for Communities and Local Government wrote to all Local Authority Chief Planning Officers to highlight the Government’s intention to rapidly abolish Regional Spatial Strategies and return decision making powers on housing and planning to local councils. 1.32 The DCLG’s subsequent announcement and accompanying advice note dated 6 July 2010 stated that Regional Strategies had been revoked by the Secretary of State under s79(6) of the Local Democracy Economic Development and Construction Act 2009 and were said to no longer form part of the development plan for the purposes of s38(6) of the Planning and Compulsory Purchase Act 2004. It was advised at that time that the legal basis for Regional Strategies was a matter to be abolished through the Localism Bill. 1.33 The 6 July revocation decision was then subject to challenge in the Cala Homes (South) Ltd case (2010 EWHC 2866). This was decided on 10 November 2010 and the outcome was to quash the 6 July revocation with the court ordering the decision by the SoS to revoke the strategies with immediate effect was unlawful. The effect of the decision is to re-establish Regional Strategies as par to the development plan. 1.34 The subsequent High Court decision dated 7 Feb 2011 confirms in relation to the plan making functions of LPAs and the materiality of the decision to revoke the RSS in the future as follows: “While Regional Strategies subsist a local planning authority will have to make sure to discharge its duty to achieve general conformity with them. Failure to do this would expose the offending plan to the risk of challenge in the courts. An authority preparing a plan in no more at liberty to override its duty under section 24 (1) of the 2004 Act than it is to disregard its duty under section 38(6) when determining an application for planning permission. The statement and letter of 10 November 2010 has not warranted, let alone incited, any such breach. Neither has the SoS’s letter of 27 May 2010.” 1.35 Against the above background, LPAs must have regard to the provisions of the RSS in preparing their LDF documents. Accordingly, the SEP provides the most up to date and independent review of housing and employment need in the area and (in accordance with DCLG advice in July 2010 (Chief Planning Officer’s Letter) this should be the starting point for preparing the CS. 1.36 In addition to the above, the recent DCLG letter to Chief Planning Officers dated 31 March 2011 sets out a number of objectives from the Budget that need to inform the decisions LPAs are taking now. This includes through plan production. 1.37 The letter follows the publication of a Written Ministerial Statement on 23 March 2011 and represents a material planning consideration.
substantially in excess of what is being planned for through the CS. 1.41 The level of affordable need is summarised in “Managing the Delivery of Housing” Background Paper (BP) which states as follows: · Both the SHMA and Housing Needs Assessment identify substantial housing need within Wealden and also highlight very significant affordability issues (para 2.3) · There is a requirement for significant new housing development within the District which would encourage some in-migration in order to maintain population levels (para 2.4) · There is an acute level of affordable housing need within the District (para 5.3) · Average house price levels are extremely high in Wealden and this means that many of Wealden’s residents are unable to afford to purchase housing on the private market. A standard and widely accepted measure of affordability is the house price to median income ratio which gives an indication of whether an area’s residents are able to afford private market housing. The Wealden figure for this ration is 9.4 compared to an East Sussex average of 7.6, a South East average of 7.3 and a figure for England of 6.3. Wealden has the highest ratio of all the East Sussex authorities and is therefore one of the most difficult and expensive places in which to access the housing market. Furthermore, the Strategic Housing Assessment highlights that not only are a high proportion of Wealden’s households unable to afford to purchase market housing, but a high proportion are also unable to afford private rented accommodation. (para 6.4) 1.42 Paragraph 6.15 concludes as follows: “It is clear that there are important housing issues within Wealden which need to be addressed by the Core Strategy. There are over-riding affordability issues within the District, with high house prices and rental levels making the District on of the least affordable areas in the country. Data from the Housing Register and Housing Needs Assessment indicates a very high level of housing need which needs to be addressed through the provision of affordable housing.” 1.43 Evident from the above is that there is an acute level of housing need to be met within the District. This necessitates a need to set a more appropriate housing target and to provide for the allocation of deliverable and developable sites for housing, at suitable locations (including on previously developed and greenfield sites), particularly where they contribute to sustainable patterns of development. 1.44 The highest level of affordable housing need is in Hailsham. 1.45 As set at Appendix 2 to BP2 ("Managing the Delivery of Housing"), Hailsham has the highest estimated need for affordable housing at 266 gross dwellings per annum. 1.46 The gravity of the affordable housing position in Hailsham is summarised at para 8.3 of BP2 which states, inter alia, “assuming that the current rates of turnover are maintained, then it would take 8 years to house all of those currently on the Housing Register that require a 2 bed house, 6 years to house those that require a 3 bed house and 51 years to house those that require a 4 bed house.” 1.47 When determining the local level of housing provision LPAs are required to take into account evidence of current and future levels of need and demand for housing and affordability levels based upon, inter alia, local and sub-regional evidence of need and demand, set out in Strategic Housing Market Assessments (SHMAs) and other relevant market information such as long term house prices (PPS3). 1.48 The local need for housing justifies a higher annualised requirement over and above that set out in the SEP. 1.49 Notwithstanding the acute level of housing need identified in the evidence base to the CS, the Council’s spatial strategy suggests planning for a rate of housing growth significantly below that set out in the South East Plan and substantially below the identified affordable need 1.50 In planning for a substantially reduced rate of growth, Background Paper 14 suggests that a number of issues have a significant strategic impact of growth. Para 6.3 of the BP refers specifically to the capacity of the waste water treatment works affecting growth in Hailsham, Polegate, Stone Cross and Willingdon and the need to deliver the new road network and regeneration in Uckfield. 1.51 The stated constraints are said by the Council to support their assessment that a maximum of only 9,600 dwellings could be delivered during the plan period to 2030. 1.52 We object to the Council’s approach to the setting of a locally derived requirement. As the Council acknowledge, there is a demonstrable need for a significant level of house building, on which basis the CS should plan to meet the quantum of identified need. Planning for a level of housing growth commensurate with the requirement set out in the SEP is likely to help sustain and support economic growth. This will not be achieved with the level of growth proposed in the CS. Moreover, providing for a more appropriate level of housing growth (commensurate with the SEP requirements) is likely to provide the critical mass necessary to fund improvements to key service and infrastructure provision. After all, one of the fundamental roles of the CS is to establish an overall vision setting our how the objectives for the area will be delivered. 1.53 As set out above, the South East Plan covers the period to 2026 and requires the delivery of some 550 dwellings per annum. This implies an extra 2,200 dwellings for the additional four year period 2026 to 2030. 1.54 Against the above background, we are of the view that the CS should plan to provide a minimum of 13,200 dwellings during the period 2006 to 2030 (11,000 + 2,200). However, this level of provision will not still meet the identified local need. 1.55 The components of supply relied upon by the Council in meeting the 9,600 requirement figure are summarised below. For comparative purposes we also set out the position against the requirements of the SEP based housing requirement to 2030. Details are set out in Table 2 below: Table 2: The House Land Supply Position LPA WBP Requirement 2006 to 2030 9,600 13,200 Completions 2006 to 2010 1,331 1,331 Residual Requirement 2010 to 2030 8,269 11,869 Sources of Supply Commitments with pp 3,159 3,159 Non-Stat Local Plan Allocations 399 399 Proposed Allocations: - SD1 1,000 1,000 - SD2 600 600 - SD3 700 700 - SD4 700 700 - SD6 and SD7 650 650 - SD8 and SD9 140 140 - SD10 160 160 - SD11 160 160 - SD12 120 120 - Villages 455 455 - Total 4,685 4,685 Total Supply 8,243* 8,243* Total Supply 9,574 9,574 Shortfall/Supply -26 -3,626 *The LPA’s delivery assumptions remain to be tested in respect of all sites. 1.65 The CS makes provision for the delivery of 9,600 dwellings. This approach is based upon the Council’s assumptions about the capacity of the environment and supporting infrastructure (highways and water) to accommodate the quantum of proposed development. 1.57 In relation to Hailsham, we note reference in the SHLAA to the fact that the current waste water treatment constraints may be able to be overcome, given that...
additional treatment works capacity for a further 1,500 new dwellings may be in place post 2012 (subject to finding approval by Southern Water). This may further increase the scope for additional growth at the town. 1.58 The council’s strategy is not based upon an assessment of need and the quantum of housing proposed to be met in the period to 2030 is likely to fail to deliver stated objections SPO3, SPO4 and SPO6. 1.59 Even if one were to adopt the assumption that all of the identified components of supply will be delivered in a timely manner, the result would be a 3,626 dwelling shortfall against the requirements of the SEP in the period to 2030. 1.60 The Council’s strategy is not consistent with national policy. In addition, it fails to represent the most appropriate strategy when considered against the alternatives (a higher annualised rate of growth is required to meet identified need/demand). Finally, the strategy is not sufficiently flexible to deal with changing circumstances.

Details of Changes to be Made:
Summary of Suggested Changes 1.61 As set out in PPS12, the CS should be prepared against the regional framework set out in the evidence base to the draft RSS. This includes having regard to, inter alia, the overall housing requirement to be met during the plan period.

WCS1 Provision of Homes and Jobs 2006-2030

Sound  Yes  No  Justified  Effective  Consistent with national policy
Legally Compliant  Yes  No

Details of Reasons for Soundness/ Legal Compliance:
3.3. WCS1 Provision of Homes and Jobs 2006 - 2030. 3.3.1 Policy WCS1 proposes a provision of 8,600 dwellings in Wealden District over the period 2006 - 2030, equivalent to 400 dwellings per annum (dpa). This represents a locally-derived target which is explained in para. 3.11 of the Consultation document to be based on estimates of capacity and community aspirations. This proposed level of provision must be compared with the intention of the South East Plan whereby housing provision of 550 dpa was proposed. 3.3.2 National policy emphasises the need to increase the provision of housing overall and in particular so as to achieve a wider choice and improve affordability. Thus, whilst it is the intention of Government policy that Local Authorities should decide their own housing targets, these must continue to be justified by robust evidence. This point was emphasised in the CLG Guidance dated 6 July 2010 (pursuant to the purported abolition of RS). National policy (PPS12 para. 4.52) continues to require Core Strategies to be "justified, effective and consistent with national policy". 3.3.3 PPS3 identifies the range of considerations that need to be taken into account in determining the appropriate level of housing at Local Authority level. Para 33 states: "Regard should be had to evidence including Strategic Housing Market Assessments, the latest Household Projections, Strategic Housing Land Availability Assessments, affordability and the impact on infrastructure". 3.3.4 In light of the Council’s proposal to reduce significantly housing provision in the district, it is therefore instructive to compare the results of recent Household Projections published by the government. Sub National Household Projections 2004 Base - Wealden Household Growth 2006 - 2026 +14000 Wealden Household Growth 2006 - 2030 ** N/A 2006 Base - Wealden Household Growth 2006 - 2026 +14000 Wealden Household Growth 2006 - 2030 ** N/A 2008 Base - Wealden Household Growth 2006 - 2026 +12000 Wealden Household Growth 2006 - 2030 ** +15000 ** Interpolation of 2028 and 2033 projections 3.3.5 Thus it can be seen that whilst the latest projections imply a slightly lower level of household generation than at the time the South East Plan was issued, the projection still substantially above the housing provision included in the South East Plan, and therefore even higher than that proposed in Policy WCS1. 3.3.6 Using the 2008-based data and adding a 3% allowance for vacancies indicates a locally-generated demand within Wealden District of 15,450 over the Plan period. 3.3.7 At para. 3.10 of the Core Strategy, the Council identifies a trend-based projection of 16,800 households slightly higher than this. Based on the lower of the two figures, the Council proposes to make provision for only 62% of the requirement. 3.3.8 Furthermore, the Council has not provided any robust evidence as to why a higher figure should not be proposed. Moreover para. 3.10 of the Core Strategy confirms that suitable, available and achievable sites to meet this need have been identified in the SHLAA. 3.3.9 Accordingly we submit that Policy WCS1 is unsound and that a housing provision of at least 550 dpa (13,200 over the period 2006 - 2030) should be proposed.

Details of Changes to be Made:
Increase housing provision to at least 550 dwellings per annum
Details of Reasons for Soundness/ Legal Complaince:

Housing target is not justified by robust evidence. It fails to comply with the South East Plan. SECTION FIVE - HOUSING PROVISION 5.1 In this Section we set out our comments in response to Policy WCS1 and specifically regarding the provision of homes. 5.2 Policy WCS1 proposes a provision of 9,600 dwellings in Wealden District over the period 2006 - 2030, equivalent to 400 dwellings per annum (dpa). This represents a locally-derived target which is explained in para. 3.11 of the Consultation document to be based on estimates of capacity and community aspirations. This proposed level of provision must be compared with the intention of the South East Plan whereby housing provision of 550 dpa was proposed. 5.3 National policy emphasises the need to increase the provision of housing overall and in particular so as to achieve a wider choice and improve affordability. Thus, whilst it is the intention of Government policy that Local Authorities should decide their own housing targets, these must continue to be justified by robust evidence. This point was emphasised in the CLG Guidance dated 6th July 2010 (pursuant to the purported abolition of RS). National policy (PPS12 para. 4.52) continues to require Core Strategies to be "justified, effective and consistent with national policy". 5.4 PPS3 identifies the range of considerations that need to be taken into account in determining the appropriate level of housing at Local Authority level. Para. 33 states: "Regard should be had to evidence including Strategic Housing Market Assessments, the latest Household Projections, Strategic Housing Land Availability Assessments, affordability and the impact on infrastructure." 5.5 In light of the Council's proposal to reduce significantly housing provision in the District, it is therefore instructive to compare the results of recent Household Projections published by the Government. Sub National Household Projections Wealden Household Growth 2006 - 2026 Wealden Household Growth 2006 – 2030** 2004 Base + 14,000 N/A 2006 Base + 14,000 N/A 2008 Base + 12,000 + 15,000 ** Interpolation of 2028 and 2033 projections 5.6 Thus it can be seen that whilst the latest projections imply a slightly lower level of household generation than at the time the South East Plan was issued, the projection is still substantially above the housing provision included in the South East Plan, and therefore even higher than that proposed in Policy WCS1. Other indicators (national and local) similarly point to a need for housing provision at a higher level. 5.7 Using the 2008-based data and adding a 3% allowance for vacancies indicates a locally-generated demand within Wealden District of 15,450 over the Plan period. 5.8 At para. 3.10 of the Core Strategy, the Council identifies a trend-based projection of 16,800 households, slightly higher than this. Based on the lower of the two figures, the Council proposes to make provision for only 62% of the requirement. 5.9 Furthermore, the Council has not provided any robust evidence as to why a higher figure should not be proposed. Moreover para 3.10 of the Core Strategy confirms that suitable, available and achievable sites to meet this need have been identified in the SHLAA

Details of Changes to be Made:

5.10 Accordingly we submit that Policy WCS1 is unsound and that a housing provision of at least 550 dpa (13,200 over the period 2006 - 2030) should be proposed. Increase housing provision to at least 550 dwellings per annum
Details of Reasons for Soundness/ Legal Compliance:
The land along Benhall Mill Road is unsuitable for a number of reasons. The road is too small to accommodate any more traffic. As access to schools in southern TW is severely restricted, where would any children go? The southern route down BMR is a single track. Basic services, such as water, electricity and gas, plus waste water and rubbish collection would be difficult to handle - who would be responsible for this and do you propose to send school buses and rubbish lorries down a single track road - or inflict them on the already congested roads of TW. There are no shops, pubs or any other facilities in the area. With regard to the site at the top of BMR, 063/1610 or Frant site A, this is shown as agricultural (last time it was a brown field site - get the designation right), this is infact an old fashioned meadow and has been since the last ice age. It has also been an SNCI for a number of years. I understand that there has been a suggestion to remove the SNCI designation as the ecological value has declined. It has declined because the present long term owner has been negligent in his responsibilities in maintaining the site. Is there not some sanction that can be applied for the failure to maintain the site under the SNCI rules?

Details of Changes to be Made:
The overall housing requirement to be met at land adjacent to Tunbridge Wells boundary (within Frant Parish) should be increased in line with our separate but related objections set out in response to Policy WCS1. Accordingly Land at Little Mount Farm, Benhall Mill Road, Tunbridge Wells shown on the inset to the Key Diagram as a new housing allocation for development to the higher level of 192 dwellings (including affordable housing), given the acute housing supply shortfall in this part of the District.
Details of Reasons for Soundness/ Legal Compliance:

The planned growth and distribution in the Core Strategy requires additional education provision and a number of transport interventions identified as critical in the Infrastructure Delivery Plan (IDP). There is at this stage, a level of uncertainty about their deliverability. County Council advice on education provision needs to be updated due to variations made to the spatial distribution of growth in the agreed Wealden District Council Submission Strategy. It should however, be possible to provide this update before the IDP is submitted in support of the Core Strategy at Public Examination. There has not been enough time so far for transport interventions to have been appropriately designed and costed, so there is a risk that they could fail to be delivered, either because the cost (once assessed) exceeds the available funding identified, or because the intervention itself proves unacceptable. The County Council is willing to work closely with Wealden District Council to narrow and resolve the risks identified and deliver the Strategy. Although risks are present in the delivery of infrastructure to support the proposed distribution they are not so unreasonable to make the strategy unsound because WCS7 provides a fundamental safeguard on the effective provision of infrastructure by making the release of land for development conditional upon infrastructure capacity being assured. Also WCS5 identifies that the results of reviews of the IDP may require an adjustment in the pace of housing delivery.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

A ‘sound’ Core Strategy must contain evidence of the views of the local community and others who have a stake in the future of the area. Public comments on the Issues and Options Paper support a general approach within which 30% of new dwellings are allocated to rural areas. This would reflect the existing distribution of the population within the district as seen in the Wealden Profile 2009, a Core Strategy Spatial Development Options Background Paper, which states that of Wealden District’s total population, 19% live in town fringe settlements, and 32% live in villages, hamlets or isolated rural settlements. The draft Core Strategy currently states that an additional 4685 dwellings will be delivered in the period up to 2030. 30% of these dwellings is approximately 1405, greatly in excess of the provision made by WCS6 for at least 455 dwellings. It is submitted that a greater level of provision be made to the district as a whole, in addition to a greater level of provision made to rural areas under Policy WCS2 as the draft Core Strategy does not currently reflect the community’s views. In addition the draft Core Strategy is not consistent with national policy by neglecting to allocate a greater number of dwellings to rural areas. The Council should, as Planning Policy Statement 1: ‘Delivering Sustainable Development’ informs “Ensure that plans are drawn up over appropriate time scales, and do not focus on the short term or ignore longer term impacts and the needs of communities in the future.” (para. 26 ii). Planning Policy Statement 7 ‘Sustainable Development in Rural Areas’ informs that the Council “should make sufficient land available, either within or adjoining existing villages, to meet the needs of local people” (para.9 i) The draft Core Strategy does not reflect public opinion or the existing development pattern within the district which could lead to valuable local services in rural areas being lost in the longer term. Given the lack of environmental constraints such as article 15 land and the availability of suitable housing land identified within the SHLAA and the availability of existing local services and facilities it is considered that the Uckfield and Maresfield area could accommodate a higher proportion of growth. This has was previously recognised by the Council in the Non-Statutory Local Plan (2005) with significant allocations located in both settlements. The overall distribution of housing proposed in WCS2 is deficient as it does not take account of public consultation responses, pay regard to the current distribution of the population and the availability of existing local services and facilities and is not consistent with national policy.

Details of Changes to be Made:

WCS2 Distribution of Housing Growth 2006-2030 Land will be allocated to meet the housing provision of WCS1 in accordance with the following distribution. Town/Settlement Built or already committed (dwellings) New allocations (dwellings) Total dwellings (2006 – 2030) Rural villages 918 3732 4650 Total Wealden 4889 10611 15500 N.B the remaining 6897 new dwellings will be distributed to Uckfield, Hailsham & Hellingly, Polegate & Willingdon, Stone Cross & Westham, Crowborough, Heathfield & Waldron and adjacent to Tunbridge Wells boundary (within Frant Parish) at the Council’s discretion taking note of the environmental constraints of certain locations.
Details of Reasons for Soundness/ Legal Compliance:

WCS2 We support the principle set out here, but would hope that provision should be made for the later years targets to be reduced in future to take account of windfall sites as they develop.

Details of Changes to be Made:

The housing distribution figures should accord to the robust RSS population figures and therefore the additional 3600 dwellings should be spread 40% Hailsham/Hellingly, 40% Polegate Stone Cross and 20% to remaining settlements. Ie. 40% of 3600 equals 1440 additional dwellings required for the North Hailsham area.

Details of Changes to be Made:

To ensure a sustainable distribution of the additional housing across the District.
Details of Reasons for Soundness/ Legal Complaince:

In supporting the settlement hierarchy, including the categorisation of the village of Horam as a Local Service Centre, we further support the proposed distribution of dwellings as outlined in Spatial Strategy Policy WCS2 - Distribution of Housing Growth 2006 - 2030. In a District such as Wealden where "the rural areas outside of the main urban areas cover almost 93% of Wealden District. And contain around 50% of its population" (para 6.43 of the Core Strategy) it is important to provide sufficient housing in rural areas. Therefore we support the identification of at least 455 new dwellings within Rural Villages, of which Horam is one of thirteen. As outlined in para 8 of PPS7: Sustainable Development in Rural Areas "It is essential that local planning authorities plan to meet housing requirements in rural areas, based on an up to date assessment of local need. To promote more sustainable patterns of development and make better use of previously developed land, the focus for most additional housing in rural areas should be on existing towns and identified service centres." We consider that the village of Horam is a sustainable location which is capable of accommodating the largest percentage of the 455 new allocations within the Rural Villages (as discussed in representation made to WCS6 - Rural Area Strategy) in accordance with the principles of PPS7. The suitability and acceptability of development in Horam is discussed within the supporting Sustainability Appraisal and the accompanying Background Paper 3, in which the Authority has undertaken individual sustainability appraisals of the settlements within the settlement hierarchy in order to assist in identifying those which are capable of accommodating future growth. At Paragraph 7.3 of the Sustainability Appraisal it is noted that not only do the assessments utilise the "Information that underpins the settlement hierarchy including accessibility to services and facilities and the relative public transport accessibility links with other settlements offering a range of services, facilities and the relative public transport accessibility links with other settlements offering a range of services, facilities and employment" but also includes "environmental factors including proximity to ecological conservation areas, the potential for the use of greenfield land and potential for flood risk and water quality issues" as well as economic data based upon "the presence of significant employment opportunities, business areas and tourism opportunities as well as economic indicators at the Parish level including average household income and education attainment". Using the holistic approach and as illustrated within Table 7.2 of the Sustainability Appraisal, Horam is highly ranked in the sustainability hierarchy in terms of Social, Environmental and Economic categories. Although there are settlements which sit higher in the settlement hierarchy, the merits and constrains within the Sustainability Appraisal has rightly recognised that Horam is capable of accommodating development. This is further noted at paragraph 7.19 of the Sustainability Appraisal which states that "Rotherfield, Horam and East Hoathly perform well in sustainability terms and feature higher in the SA hierarchy, due to strong social and economic assessments". Overall, we support the distributions of dwellings as outlined in Spatial Strategy Policy WCS2 - Distribution of Housing Growth 2006 - 2030, in particular the allocation of at least 455 dwellings within the rural area. Furthermore, we support the identification of Horam as being able to accommodate the largest proportion of the 455 dwellings and in particular the opportunities available through the redevelopment of the Former Merrydown Cider site within the Local Service Centre of Horam as a mixed use scheme. This will assist the Authority in meeting both the objectives in the national planning policy and SPO14 in that it can deliver at least 70% of Horam's housing requirement (100 units), as outlined in representations to Strategic Policy WCS6 - Rural Area Strategy, on Brownfield land.

Details of Changes to be Made:
1. The Core Strategy is not legally compliant and is unsound because of its proposals for an urban extension to the north west of Heathfield (Strategic Development Area SD11). Whilst the principle of accommodating housing growth in the broad location of north west Heathfield is supported, the Core Strategy’s proposals are deficient because they: (a) fail to take a comprehensive approach to the development of this area and so are not founded on a robust and credible evidence base and are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the soundness test in paragraph 4.36 of PPS12 that they are “justifiable”. (b) constitute an unjustified encroachment into the High Weald AONB and so are not the most appropriate strategy when considered against the reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12 and also the soundness test in paragraph 4.52 of PPS12 that they are “consistent with national policy”. Paragraph 16(v) of PPS7 requires the Council in preparing the Core Strategy to “conserve sites of landscape…value, in accordance with statutory designations”. Paragraph 22(ii) of PPS7 requires that “major developments” should only take place within the AONB after “the most rigorous examination” and an assessment of “the scope for developing elsewhere outside the designated area or meeting the need for it in some other way”. The Council has failed to properly assess the scope for meeting the need for development on previously developed land at north west Heathfield that is not in the AONB. (c) utilise less accessible and less sustainable land and so are not the most appropriate strategy when considered against reasonable alternatives in this location, thus failing the same “justifiable” test in PPS12. (d) fail to provide adequate safeguarding of amenities of existing dwellings (if those dwellings are to be excluded from the urban extension as currently proposed) and fail to integrate into the existing urban form, thus failing the soundness test in paragraph 4.52 of PPS12 that the proposals are consistent with national policy. Paragraph 34 of PPS1 and paragraph 13 of PPS3 require the Council to reject design which is “inappropriate in its context” and paragraph 35 of PPS1 requires development to be designed so that it will be “integrated into the existing urban form and the natural and built environments”. THE PROPOSED SUBMISSION CORE STRATEGY 3. We object to the following parts of the Core Strategy. Because the objections are interconnected, we have set out all the relevant matters in this response, although this particular objection only relates to the specific part of the Core Strategy identified in our response to Q1 above. Our objections are as follows: (i) The omission from Spatial Planning Objective SPO1 of any reference to minimising the loss of nationally designated landscapes, including the High Weald AONB. Paragraph 16(v) of PPS7 requires the Council to conserve the AONB and since it is clear that the Council is proposing to meet part of the District’s development needs by using land within the AONB, the Council should establish a clear objective that only the minimum AONB land should be used for this purpose and wherever possible non-AONB land should be used in preference. (ii) The reference in Policy WCS2 to the broad locations for housing development being shown as insets on the Key Diagram. We object to the inset for Heathfield in relation to the way it shows the proposal SD11 and consequently object to this reference to that inset plan in Policy WCS2. (iii) The reference in Policy WCS4 to SD11: Land at North West of Heathfield. We object to the way that SD11 is described in Chapter 6 of the Core Strategy and shown on the Key Diagram and as a result object to the reference to SD11 in Policy WCS4. (iv) The omission from paragraph 5.8 of any aim to maximise the use of previously developed land in meeting existing and future housing needs. Notwithstanding the recent changes to PPS3 it remains a national objective to prioritise the use of previously developed land, in accordance with paragraph 21 of PPS1 and paragraph 40 of PPS3. (v) The reference in paragraph 6.40 to the identification of potential sites for housing “through the SHLAA”. We object to the inclusion of Site 155/1210 in its current form as shown in the SHLAA and consequently object to this reference to that site in paragraph 6.40. (vi) The reference in paragraph 6.41 to the “most suitable location” being “within the AONB” and that this land could be developed “without strategic adverse impact on the landscape”. The Council’s evidence base does not demonstrate that the land within the AONB is more suitable for development than the non-AONB previously developed land on High Street. There is no assessment by the Council of the suitability of this non-AONB land (which includes the objector’s land at Lavender Cottage, High Street, Heathfield, TN21 0UP) and yet it is more suitable than the AONB land, being (i) not subject to a national landscape designation, (ii) previously developed land, (iii) within the existing settlement boundary, and (iv) well related and integrated into the urban area and existing transport connections. In addition, the Council’s evidence base does not show that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of 2 adjacent SHLAA sites at north west Heathfield.
155/1210 with a capacity of 123 dwellings at 40 dph and Site 307/1210 with a capacity of 35 dwellings at 35 dph). The Council's Landscape Character Assessment (February 2009) shows at Figure 5 that large parts of these SHLAA sites are required to be retained as open space to provide a "landscape buffer" to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. (vii) The reference in paragraph 6.41 to the release of AONB land being justified "as no suitable alternative non-AONB location exists". The Council's evidence base does not substantiate this assertion. The Council has not assessed the suitability of the non-AONB land in this location which fronts High Street (including the objectors' land at Lavender Cottage). This non-AONB land is within the settlement limits of Heathfield as identified on the Proposals Map of the saved Local Plan and paragraph 6.48 of the Core Strategy confirms that within development boundaries "the principle of development is acceptable". The principle of redeveloping this land to provide more intensive residential development has already been accepted by the Council, with the grant of planning permissions at Brackenside (WD/08/0329) for 3 dwellings in place of 1 dwelling, and at Oaksdown/Lowlands (WD/2011/0400) for 9 apartments in the place of 2 dwellings. The more intensive development of the non-AONB land on the High Street frontage would minimise (or may even remove) the need for the use of AONB land. This option would plainly be a more suitable alternative than the use only of land "within the AONB" as proposed in the Core Strategy. (viii) The reference in paragraph 6.41 to "no suitable alternative contingency land is available". The land at Oaksdown/Lowlands is available for development (as confirmed by the recent renewal of planning permission). The objectors' land at Lavender Cottage is available for development (and this has been made known to the Council since at least August 2010). The land at Woodhatch is relied on as being available for development in order to provide the access for SHLAA site 155/1210. The objectors understand that the land at Holmhurst could be made available for development. Thus, there is a continuous frontage of 5 plots of non-AONB land available (all with generous areas of garden land, most of which is excluded from the AONB) just on this part of the High Street. Were the Council to actively promote a comprehensive redevelopment of this area it is likely that other land in the vicinity would be made available. However, the Council has simply failed in its evidence base to assess this option. If it is necessary to identify contingency land then the hinterland of AONB land should be identified as contingency land, with priority being given to the development of the non-AONB land on the High Street frontage. Prioritising that land would be consistent with the policy objectives of minimising the loss of AONB land and maximising the use of previously developed land. (ix) The reference in paragraph 6.42 item 3 to SD11 being "on land adjacent to the urban area". The proposal for SD11 should not be defined in a way which excludes the urban area and which focuses only on land within the AONB. The proposal should embrace the urban area and the development should maximise the use of previously developed land in the urban area to achieve the provision of 160 dwellings before any consideration is given to the use of land in the AONB. (x) Figure 10 Heathfield Area Strategy. This diagram shows SD11 as located within the AONB and beyond the existing settlement. The diagram should not exclude the inclusion of the existing built up area in this location within the scope of SD11. The built up area has the potential and the capacity to be redeveloped and this aim should be the first priority at north west Heathfield. (xi) Key Diagram: the inset for Heathfield. The inset shows Heathfield and Proposal SD11 in the same way that they are shown on Figure 10 and they are not acceptable for the same reason set out at (x) above. 4. We now propose to elaborate on these objections. Piecemeal not comprehensive 5. SD11 takes an opportunistic approach. It utilises substantial areas of greenfield land as the main development areas (and by implication from the SHLAA one existing property simply as a means of access). Although the SHLAA indicates that Site 155/1210 is in multiple ownerships and Site 307/1210 is owned by a company with 7 shareholders, the choice of this location seems to be influenced simply by the fact that these 2 sites were promoted in the SHLAA and so it is assumed they are available. Site 155/1210 is said to be under the control of a housing developer. We are not aware whether the Council has seen the terms of any option or other legal agreement giving such control but, given that the Proposed Submission Core Strategy is a long term strategy to 2030 and its trajectory does not anticipate the site coming forward before 2015/16, little weight can be given to the status of any current contractual arrangements. 6. Any sensible spatial planning approach to the development of this area would not look at the sites promoted in the SHLAA in isolation but would look to see how that development would relate to its local context and how it would relate to the settlement it is intended to form a part of. 7. The site of SD11 is on sloping ground set back behind existing development which separates the site from the rest of Heathfield. Development as proposed will not integrate the development with its local context as required by paragraph 35 of PPS1. Nor will it maximise the opportunities for the site to benefit from clear and easy links to the facilities in the local service centre by non-car modes. 8. A comprehensive approach would look at the whole of the area in this north western part of Heathfield and then seek to identify the land which is most suited to development. It is common sense that this would start by looking at the land with the best links by foot, cycle, and public transport to the rest of the settlement. That is of course the frontage land along Heathfield Road/High Street itself. The frontage land also contains the previously developed land comprising the existing dwellings and their various outbuildings. Whilst the recent revisions to PPS3 have removed garden land from the definition of previously developed land, the footprint of the buildings and their associated driveways and hardstandings clearly have a higher priority for development than a greenfield meadow. 9. The present objectors, as the owners of Lavender Cottage, are willing to make their land available as part of a wider development. The objectors have
made this known to the Council since at least August 2010. The principle of redeveloping for more intensive residential development has already been established on land to the wets (WD/08/0329) and on the adjoining site to the east of Lavender Cottage (WD/2011/0400). Although planning permission was granted for a block of flats (WD/2008/0276), that development has not come forward and the permission has recently had to be renewed. Clearly, the land is available for development, even if the form of development is not at present attractive to the market. We understand that the owner of the adjoining plot at Holmhurst would be prepared to make that site available. Woodhatch is relied on as available in the SHLAA (Site 155/1210 refers). Thus there is already a substantial amount of the frontage land which is available for development. A spatial approach to the planning of this area would look to utilise this developed frontage land, which plainly has development potential, before turning to the undeveloped hinterland to the rear. Unjustified Encroachment into the AONB 10. The Proposed Submission Core Strategy recognises that SD11 lies within the AONB, where there is strict control over new development. Paragraph 22 of PPS7 is clear that major development in the AONB requires “the most rigorous examination” and that such development should only be accepted after assessment of the scope for meeting the need elsewhere. Under the GDMO 2010 “major development” is a development of 10 or more dwellings. Under the Secretary of State’s arrangements for the recovery of appeals on the basis that they are large/controversial, the threshold is 150 residential units. On either basis, a development of 160 dwellings is major development. In any event, the Council has accepted in the SHLAA that “there is a requirement to demonstrate development is essential to meet local needs and that other more suitable sites do not exist elsewhere” (Site 155/1210). The claimed rationale for the use of AONB land in this case is that “no suitable alternative non-AONB location exists”. This is patently incorrect. As already noted, the frontage land is not within the AONB and if the desire is to achieve a development of some 160 dwellings there can be no justification for taking more AONB land than is absolutely necessary when there is non-AONB land in the same location which is available. 11. Whilst it may be doubtful that the frontage land which is known to be available could alone accommodate the full scale of the development sought, the need to encroach into the AONB would be very much reduced if the frontage land was used first. Such an approach would also enable the lower (and least accessible) parts of the meadow to be retained as open land, potentially providing a better buffer with the important woodland at Tilsmore Wood that makes up such a key component of the Wealden character. The need for such a buffer is recognised in the Landscape Character Assessment (Figure 5). In addition, if the Council made it clear that it was promoting the comprehensive development of the area, it is likely that other owners would also wish to make their land available, and the Council may therefore be able to avoid encroaching into the AONB to any material degree. 12. The Council’s claim that 160 dwellings can be provided in the AONB without strategic adverse impact on the landscape is not supported by the evidence base. The capacity of 160 dwellings for SD11 would appear to derive from the assumed capacity of the 2 adjacent SHLAA sites:Site 155/1210 and Site 307/1210. As already noted, the Council’s Landscape Character Assessment shows (Figure 5) that large parts of these SHLAA sites are required to be retained as open space to provide a “landscape buffer” to Tilsmore Wood. If those buffers are to be provided as recommended in the Landscape Character Assessment, the SHLAA sites will not be able to deliver the required capacity, without radical changes to the assumed density, and there has been no assessment of the impact of higher density development on the AONB and on the landscape setting and character of Tilsmore Wood. The claim therefore that SD11 can be achieved without strategic adverse impact on the AONB is not supported by the evidence base. Using Less Accessible and Less Sustainable Land 13. Similar considerations in terms of minimising the amount of AONB land apply in relation to accessibility issues. The lower parts of the sloping meadow land are not only more remote by simple distance from the footways and bus route along Heathfield Road/High Street, there is also the fact that journeys from home will inevitably be uphill for residents of that area. There will therefore be a disinclination to use non-car modes for accessing local services, even if they might appear to be within walking distance. It must also be doubted whether much of the hinterland is within the preferred 400m distance for access to a bus route. 14. In contrast, the frontage development is already connected to existing pedestrian routes by the adjacent footways and there is only a shallow fall in the land closest to the roadside. Accessibility to the bus route is also much improved. 15. Again, on any sensible measure of accessibility and sustainability, it cannot make sense to use the more remote hinterland in preference to the frontage land. PPS1 is clear at paragraph 35 that new development needs to be integrated into the urban area and address connectivity issues. The choice of a backland location for SD11 when the more accessible frontland is available is directly contrary to this guidance Inadequate safeguarding of amenities 16. We have already explained why a comprehensive approach needs to be taken to this area. However, if the Council persists in its piecemeal approach then it is apparent that inadequate consideration has been given to the relationship between the retained frontage properties and the new development to the rear. The existing development is at a very low density and has the established character of a mature residential area, with individual dwellings in spacious plots. 17. The SHLAA indicates a proposed density for the new development of some 40 dwellings per hectare for Site 155/120. This will be substantially different in character and could only be achieved by ensuring a substantial buffer between the 2 very different forms of development. However, this would push the new development further into the AONB and would further separate the new development from the settlement of which it is intended to form a part. Again, there would be a conflict with the advice in PPS1 on integrating the development with the urban area. Soundness Tests 18. It is clear from the objections set out above that the proposals for SD11 are not founded on a robust and credible evidence base, cannot be shown to be the most appropriate strategy when considered against the reasonable alternatives, and are not consistent with national policy in PPS1, PPS3, and PPS7 in several important respects. They therefore fail
2 of the key tests of soundness as set out at paragraph 4.52 of PPS12. Legal Tests 19. These objections also have the consequence that the Council’s failure to properly consider reasonable alternatives to its proposals at north west Heathfield, and in particular to consider the alternative of an area of growth in this location planned on a comprehensive basis and focused on maximising the use of previously developed land and minimising the use of land within the AONB, has the consequence that the Sustainability Appraisal/Strategic Environmental Assessment that accompanies the Core Strategy is legally deficient and the Core Strategy is consequently not legally compliant with the requirements of either Regulation 5(1) of the Environmental Assessment of Plans and Programmes Regulations 2004 or with the requirements of s.19(5) and s.20(2) Planning & Compulsory Purchase Act 2004. In addition, the same failings, together with the lack of a credible and robust evidence base to support those proposals and the conflicts with national policy mean that the Core Strategy is not “sound” as required by s.20(5)(b) PCPA 2004. 20. The SA/SEA considers, in broad terms, alternative locations for growth at Heathfield as between the north east, north west, and west of the town. However, what it fails to do is to look at reasonable alternatives within the selected north west location. It is no answer for the Council to suggest that this level of detail is a matter for a later DPD because the Core Strategy is already spatially specific that the location of north west Heathfield is an “urban extension” (i.e. an addition) and that it is “within the AONB” (i.e. outside the settlement boundary). The same spatial approach is shown on Figure 10 and on the Inset for the Key Diagram. The Council is not, therefore, able to avoid grappling with the spatial implications of this choice as part of the Core Strategy and testing it against reasonable alternatives. However, it is clear that this is not an exercise that has been attempted in the SA/SEA. 21. The Council will be well aware from the recent decision in Save Historic Newmarket Ltd v Forest Heath District Council [2011] EWHC 606 (Admin) that a failure in the SA/SEA to give proper consideration to identification and assessment of reasonable alternatives is likely to result in a quashing of the relevant parts of the Core Strategy. Conclusion 22. For all of these reasons the objectors strongly suggest that neither the Council nor the Inspector should endorse the present proposals for SD11. What is required is a fundamental rethink to achieve an integrated, sustainable and accessible development which minimises the impact on the AONB and provides a comprehensive spatial approach to the development of this area. Essentially this requires the focus to shift from the “easy target” of greenfield meadows to a more considered approach, giving priority to the previously developed frontage land, and only considering the AONB hinterland to the minimum extent necessary to achieve the required dwelling numbers.

Details of Changes to be Made:
If the Heathfield Inset to the Key Diagram is changed as per my other objections to replace the Heathfield Inset with a version of Figure 10 revised to remove the red/pink notation and replace it by a red dwelling house symbol located within the urban area to the immediate north of the A265, and replace the text annotation by the words “Comprehensive development area at north west Heathfield (SD11) (residential provision)”, no change is necessary. Otherwise, delete the sentence “Broad locations…Key Diagram”.

Details of Reasons for Soundess/ Legal Complaince:
The housing distribution figures should accord to the robust RSS population figures and therefore the additional 3600 shouls be spread 40% Hailsham/Hellingly 40% Polegate/ Stone Cross and 20% to Uckfield.

Details of Changes to be Made:
To assure sustainable distribution of additional housing across the District

WCS2 Distribution of Housing Growth 2006-2030  Policy 2

Sound  ☑ Yes  ☐ No  ☐ Justified  ☐ Effective  ☐ Consistent with national policy
Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:

As I see it the aim of the Strategy is to increase the economic, environmental and social well-being of the people in the District. This will not be achieved by the disproportionate distribution of housing proposed. It's ludicrous to continue loading the bulk of new housing into the over-crowded Low Weald Towns of Hailsham, Stone Cross, Polegate and Uckfield which already have social and economic problems created by poorly-planned over-expansion. The large increases in housing numbers in these towns are, as before, likely to be large housing estates built by national developers on greenfield sites. This will contribute to car journeys, take out valuable agricultural land and thus contribute to carbon footprint. Most of the profits from the development will go to the management and shareholders of these national companies and will be lost to the local economy. Current experience shows that local businesses do not greatly benefit from such developments as people chose to drive to out-of-town shopping centres and many commute outside the District to work. Meanwhile the town centres are full of closed-down shops which should have been used for new housing.

Details of Changes to be Made:

It is the smaller towns and settlements of our District, dying on their feet due to lack of key workers, families and young people as well as the town centres, full of empty shops, which are in most need of housing development. Housing development in such instances is likely to be small-scale and therefore local developers are likely to carry out the building which will benefit the local economy. In the larger towns it is likely to be located close to the town centre, where it could use the increasing number of disused retail sites, thus reducing car journeys and carbon footprint and contribute to the economy and social cohesion. I consider that the allocation of new housing should be spread across ALL towns and settlements in the District, in proportion to the existing numbers of houses.
Details of Reasons for Soundess/ Legal Complaince:

Eastbourne Borough Council acknowledges the level of growth being proposed in Wealden and the role that the proposed urban extensions in the south of the District will play in the future development of Eastbourne. The distribution of new residential development in the southern part of Wealden (1,300 at Hailsham/Hellingly; 650 at Stone Cross; and 700 at Polegate/Willingdon) may assist Eastbourne’s future economic growth and represents an appropriate balance across the different communities in this part of the district. It is, however essential that a green gap is provided between the proposed growth at Stone Cross and the existing edge of Eastbourne to ensure that the distinct identities between the settlements are maintained. This is particularly important in relation to the proposed South and South East extension to Stone Cross (SD6), which is very close to residential areas in Eastbourne. Eastbourne Borough Council believes it would not be appropriate for the South East extension to Stone Cross (SD6) to extend south of the railway line. In recent years, residential completions in Eastbourne have been formed by a high proportion of flats rather than houses. Many of these have involved the conversion or sub-division of existing properties and there has been an over-reliance on windfall sites to meet Eastbourne’s annual housing target established in the South East Plan. It is likely that this pattern of development will continue and it is therefore considered to be sensible that the housing provision in the southern part of Wealden and in Eastbourne are not considered in isolation from one another. Wealden is better placed to provide the majority of the larger family dwellings which will complement the higher density apartment units in Eastbourne. The proposed distribution established in Policy WCS2, which focuses development in the District’s principal towns and on the urban fringe of Eastbourne is considered to represent an appropriate balance, on the basis that it is supported by the key infrastructure requirements established in the accompanying Infrastructure Delivery Plan (IDP). The importance of the IDP and its recommendations and requirements cannot be underestimated. Failure to provide sufficient mechanisms for the delivery of essential infrastructure to support housing and employment development has the potential to cause serious problems both within Wealden and in neighbouring local authorities. This issue is likely to be particularly acute in the areas close to the District’s boundary with Eastbourne where a large proportion of the proposed new dwellings and employment areas are proposed, and where serious infrastructure deficiencies have already been identified. It is therefore imperative that the key infrastructure requirements are continually assessed and updated throughout the period up to the formal adoption of the Core Strategy. They will then subsequently need to be monitored and reviewed and it is important that Eastbourne Borough Council and Wealden District work effectively together to ensure that the growth is delivered in an effective way that does not have a detrimental impact on the existing residential community and businesses. Whilst it is acknowledged that the figures in the table depicted in Policy WCS2 will change between now and final adoption of the Core Strategy, it would be very helpful if the Policy included an additional column showing the breakdown of housing completions and commitments up to the end of the most recent monitoring period (i.e. 31st March 2010).

WCS2 Distribution of Housing Growth 2006-2030  Policy 2

Sound  ☐ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  ☐ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
In light of the objection to policies SPO3 and WCS1, the total provision of housing as set out in this policy is inadequate to meet the District's forecast requirements. This policy is thus unsound. It is not proposed to offer a specific distribution of the requisite figure of 17,300 additional dwellings, although each of the towns and other settlements could all be afforded increases in housing provision. Objection is, however, made to the inadequacy of the proposal to permit just an additional 455 dwellings to the Rural Villages. It is therefore proposed that this is substantially increased, with Mayfield being separately identified as capable of accommodating an appropriate element of this increase.

WCS2 Distribution of Housing Growth 2006-2030  Policy 2

Sound  ☐ Yes  ☑ No  ☑ Justified  ☑ Effective  ☑ Consistent with national policy
Legally Compliant  ☐ Yes  ☐ No

Details of Reasons for Soundess/ Legal Complaince:
This policy fails the SHLAA and other planning criteria as most of the proposed allocated sites have deliverability problems, being either unavailable, undeliverable through access or infrastructure problems, or are in unsustainable locations. These matters are detailed in the separate objections to specific areas, which should be read in conjunction with this objection. But briefly these are: Uckfield, the chosen site has no access, is unavailable, would cause massive town centre congestion. Hailsham and Hellingly, sites are unsustainable as there is no rail transport, undeliverable due to sewage treatment problems, insufficient local employment and car travel only option to overcome this. Polegate and Willingdon undeliverable due to sewage treatment problems. Rural Areas. Village allocations far too low leaving villages to die and just become dormitories for the rich and retired and car owners. Also in particular Maresfield due to the adjacent Ashdown business Park should have a much larger allocation to enable people to live where they work and reduce car travel. This policy also shows what a farce the council have made of the SHLAA, for which there is no challenge objection process, nor does it appear to be independently checked or inspected. The whole point of the SHLAA was to identify land that was deliverable, so allocations could be made from this land. Yet WDC seems to have the opposite and chosen land that is neither available and or deliverable. Also the SHLAA seems to have been completely inconsistently administered, so far instance many sites or villages of very similar nature have very different outcomes in the SHLAA

Details of Changes to be Made:
Remove the undeliverable sites in Uckfield, Hailsham and Polegate and Willingdon. Increase the village allocations to 2000, as detailed in objections to WCS6 Additionally, change Maresfield to a Local Service Centre and additionally allocate 300 to 400 dwellings for reasons detailed in the objections to WCS2 and WCS6

Details of Reasons for Soundess/ Legal Complaince:
The Unit recognises and supports the overall commitment to protecting the AONB from new major development and the broad distributions of growth proposed within the Strategy. In particular the restraint shown around Crowborough both in response to the AONB and the Ashdown Forest SPA/SAC is supported given the vulnerability of the boundary around the town. Similarly the area around Heathfield is also vulnerable and has in general been given an appropriate level of constraint.

WCS2 Distribution of Housing Growth 2006-2030 Policy 2

Sound  □ Yes □ No □ Justified □ Effective □ Consistent with national policy
Legally Compliant  □ Yes □ No

Details of Reasons for Soundess/ Legal Complaince:
Notwithstanding our serious concerns regarding Policy WCS1, my client is supportive of the principle of the proposed distribution of housing growth in the District identified in Policy WCS2. The approach adopted here adequately reflects the needs of the District's towns (identified in background documents such as the SHMA and BP2) whilst also taking into account the established settlement hierarchy and environmental and infrastructure constraints where appropriate. The South East Plan proposes that approximately 63% of Wealden District's new housing development be located in the defined Sussex Coast Sub-Region. The draft Core Strategy is in accordance with this as at present approximately 63% of new allocations (excluding rural areas) are within the Sussex Coast Policy Area. On this basis, we consider the general thrust of Policy WCS2 is, in accordance with paragraph 4.36 of PPS12, justifiable - it being founded on a robust and credible evidence base and the most appropriate strategy when considered against the reasonable alternatives. Nevertheless, in view of the concerns raised in respect of Policy WCS1, the level of the allocations identified for each of the settlements within the Policy should be increased to reflect the overall higher level of provision for the District.

Details of Reasons for Soundess/ Legal Complaince:
For Uckfield 3000 houses within the next 20 years seems excessive. The present lay-out of the town based on a long High Street where the standard of shops has deteriorated greatly within the past 10-15 years and shops in Framfield Road, all but disappeared, leads people to shopping elsewhere. With more houses an extension of the Sewage System will be necessary. A previous extension was in Ridgewood Farm land Ref 346/1410 an addition would mean less land there for houses. The suggested net dwelling capacity 1000 for the farm is too high (a total estimate of 1351 for the present 7 submitted sites). Increased facility for shops, public transport, doctors surgeries and schools must be carefully planned before further extensive housing is permitted. Already at times the High Street is gridlocked especially at rush hours. Many children are taken to school by car and from many estates people use their cars all the time, many commuting to work elsewhere. The use of brownfield sites and redevelopment of some existing property which is unused would reduce the endless incursion into the countryside as well as reducing the extension of estates outwoods and the need for people to drive. Water is another problem as increasing droughts and climate change, building reservoirs is not the answer if there is little rain e.g.2010. Although the Core Strategy may have considered some of these problems, the main concern seems to be increased numbers of houses which are not necessarily for local people but for incomers from elsewhere who may contribute little to the town or local community and may work elsewhere. 5 of the potentially suitable sites of the 7 submitted at present are in the Ridgewood part of Uckfield which has already had 7 estates built in the past 25 years putting great pressure on Lewes Road and the Highlands Roundabout. The proposed Thorn Crest (ref 006/1410) with exit through the presently being constructed Sandpits development, will put even more pressure onto Lewes Road, None of the estates built in recent years have made any provision for local shops (Manor Park built in the early ’60s being the exception). this means everyone has to go into Uckfield itself to shop or go outside. In Ridgewood we are fortunate to have our surviving Post Office and shop/newsagent.

Details of Reasons for Soundness/ Legal Compliance:
Object to the development at Hindslands/Morning Mill and the amount of traffic generated. Over the years, after the construction of the by-pass, the traffic has steadily risen and future development will mean this will increase. The noise pollution will increase, exacerbated by Tennis week and Airbourne. The two primary schools and secondary school in the area are over-subscribed and this will get worse. I understand that there is no provision for new schools in the development. If we allow developments on this scale there will be no open spaces.

Legally Compliant  ☑ Yes  ☐ No

Details of Reasons for Soundness/ Legal Compliance:
The recognition of SHLAA sites being an appropriate source of housing provision should be carried through all housing delivery policies.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:

We object to the content of the Policy as drafted on the basis that it has not been shown to be justified, effective or consistent with national policy. The target figure of 9,600 dwellings to be met within the District during the period 2006 to 2030 is significantly lower than the strategic requirement set out in the South East Plan (adopted May 2009) and fails to address identified needs. Separate but related objections have been submitted in response to Policy WCS1 and WCS4, the content of which is relevant to our representations submitted in response to Policy WCS2. We also object to the omission of land at Bird In Eye (North), Framfield Road/ Bird In Eye Hill, as a housing allocation in helping to meet identified housing needs. The site is edged red on the attached site location plan (no. WBP1) and extends to approximately 15ha. The site could accommodate around 300 dwellings and an illustrative masterplan is attached (no. 1583/11H). The site is controlled by Martin Grant Homes Ltd. and Taylor Wimpey UK Ltd and there are no known onsite constraints to bringing the site forward for development in the early part of the plan period. The site should be shown on the inset to the Key Diagram as a housing allocation for around 300 dwellings.

Details of Changes to be Made:

The overall housing requirement to be met in Wealden generally and at Uckfield should be increased in line with our separate but related objections set out in response to Policy WCS1. The Bird In Eye (North), Framfield Road/ Bird In Eye Hill site, should be allocated for development to provide around 300 dwellings (including affordable housing) to help meet identified housing needs in the town. This site provides a wholly deliverable opportunity over the coming five year period for housing development. The BIEN site can come forward in its own right irrespective of town centre improvement schemes.

Details of Reasons for Soundess/ Legal Complaince:

Medical Infrastructure Threatened Para 6.22 refers to the 'limited range of facilities available locally', and states 'a new GP surgery and medical centre has recently been granted planning consent in Willingdon.' This is a change from the original draft wording that the centre would be built and there is now considerable doubt whether it will ever be built at this location. Given that uncertainty the provision of medical infrastructure cannot be sound.

Drainage Issues Para 6.28 states 'development will only be allowed it it can be accomodated by the existing works, unless an alternative location for the treatment and discharge of waste water is implemented.' There appears to be undue reliance on this infrastructure being provided and if it and other infrastructure is not provided the whole allocation at SD4 fails. There appears no fall back position should this be the case and that will make the whole core strategy unsound in terms of numbers of dwellings to be built.

Details of Changes to be Made:
Details of Reasons for Soundess/ Legal Complaince:
The majority of the district is rural area. The Core Strategy recognises that it is important that villages and rural settlements remain vital and that they are sustained throughout the Plan period, so that they can meet their roles as described within the settlement hierarchy of the Plan. The removal of development boundaries from a number of settlements reduces the spread of development within the countryside. Rural Growth Areas shown under Policy WCS6 therefore assume more importance in delivering the Core Strategy. A housing figure of 100 units has been identified for Horam. A number of potentially deliverable sites have been identified in the councils 2010 dated SHLAA for the settlement. The redevelopment of my clients land at Horam to r/o the former Merrydown Cider Factory would tie in with any redevelopment of the factory site. Development here would be upon brownfield land, it could be well integrated with the village and it enjoys good access.

Details of Changes to be Made:
The Horam housing allocation be raised from 100 to 125 units under WCS6.

Details of Reasons for Soundess/ Legal Complaince:
The figure of 564 built or already committed dwellings for Polegate and Willingdon has omitted land allocated for development in the Non Statutory Wealden Local Plan policy PW3 North of Dittons Road which could accommodate some 60 dwellings. In additional all figures should be rounded up to 5 or more.

Details of Changes to be Made:
Change the figure 565 for Polegate and Willingdon built or already committed dwellings to 625 (Re WCS 2)

WCS2 Distribution of Housing Growth 2006-2030

Policy 2

Details of Reasons for Soundess/ Legal Complaince:
The allocation of 160 new dwellings at Heathfield for the period 2006 - 2030 is not justified by the evidence base and is far too low for a town of its size and importance. It will not meet housing needs and likely to lead to a decline in services and population and will lead to an increase in un-met housing need in the town. It will also lead to an increasingly ageing population as young people are forced to locate elsewhere to meet their housing need.

Details of Changes to be Made:
Increase the dwelling allocation to Heathfield having regard to its market and affordable housing need. This can be achieved by increasing the overall housing figure at Heathfield rather than taking numbers away from other locations. The main source of funding for delivery of affordable housing will be through cross-subsidy from market housing via s 106 agreements. The current need for affordable housing in Heathfield is identified as 112 households. If this housing need is to be met through the requirement for 35% of dwellings within new housing developments to be affordable then a total allocation of 330 should be required. Sufficient sites are identified to accommodate this allocation but it should be noted that this will only meet current need for affordable and should be regarded as the minimum allocation that is required. This figure could be met through the delivery of all the sites identified in the SHLAA as suitable plus an additional circa 40 dwellings of land at Tilsomore identified on the attached plan to the west of Heathfield. This site was originally considered suitable in the SHLAA for 136 dwellings but re-assessed as unsuitable due to capacity issues on the local highway network. The sustainability appraisal also concludes that this site is well located to the town centre providing good opportunities for good connectivity with relatively minimal landscape impacts. A reduced scheme at this location is therefore suitable in highway and environmental terms and should therefore be considered in order to help meet the 320 requirement.
Details of Reasons for Soundess/ Legal Complaince:
As stated previously, it is asserted that the level of growth identified for Crowborough is insufficient to meet the overarching objectives of the Core Strategy (as set out in Para 4.1) or indeed the objectives of the town council (as set out in the Top of the Weald vision document). Whilst Crowborough does exhibit constraints, it is not accepted that these are insurmountable or indeed any more significant than those which have been demonstrated to exist at other settlements. Indeed, it is suggested that the main constraint - access via Western Road - will be more successfully overcome through a larger scale of development - as the case has been made for the development of 1000 homes at Uckfield

Details of Changes to be Made:
Quantify sufficient growth for Crowborough to support Core Strategy objectives
Details of Reasons for Soundess/ Legal Compliance:

Although the Government has announced its intentions to revoke Regional Spatial Strategies, for the time being these remain part of the Development Plan. Accordingly, in producing the PSCS DPD the Council is required to have regard to, and be compliant with the South East Plan published in May 2009. The housing requirements set out in Policy H1 of the SEP has been the subject of detailed examination having regard to future housing demand in the south east region up to 2026. This identified the requirement for 11,000 new dwellings to be provided in Wealden District over the period 2006 - 2026, the equivalent of 550 dwellings per annum over a 20 year period. Without providing any sound justification, the Council has not only provided for an extended plan period which fails to comply with that of the SET, but also puts forward a substantially reduced housing requirement of 9,600 dwellings over the period 2006 - 2030 (the equivalent of 400 dwellings per annum during the 24 year period). If the SEP housing requirement were to be extended by 4 years based on its annual requirement of 550 dwellings, this would require 13,200 dwellings over an equivalent 24 year period. Thus, draft policies WCS1 and WCS2 of the PSCS DPD represent a shortfall of some 3,600 dwellings compared to the SEP housing requirement (as adjusted to cover the extended PSCS DPD plan period). While it is acknowledge that Wealden District is essentially rural in character and that it has a number of environmental constraints, these are not substantially greater than the majority of other Districts and Boroughs within the south east region. Very special justification would need to be provided for such a substantial departure from the SEP housing requirement figures given that there is a legal requirement for the two documents to be in general compliance with each other.

Details of Changes to be Made:

In order to be in compliance with the SEP in this respect, some 13,200 additional dwellings would need to be provided within the District between 2006 and 2030 with a remaining requirement for 8,311 dwellings between 2010 and 2030. Draft Policy WCS1 would need to be revised accordingly. This would however, have major ramifications for the PSCS Spatial Strategy in terms of the distribution of housing growth as currently set out in draft Policy WCS2. Indeed, it is difficult to see how the PSCS DPD could be reasonably altered in view of the fundamental nature of these representations and the only potential way forward in these circumstances would be for the Council to withdraw the document or provide detailed evidence and justification for such a substantial departure from current development plan policy, which might then provide an opportunity for such justification to be properly scrutinised as part of the LDF Examination in Public procedure.

Details of Reasons for Soundness/ Legal Complaince:

3.2 Crowborough is identified by the Council as a "top tier" District Centre within Wealden District which in strategic and locational terms is relatively close to two of the Council's three highest order "Primary Centres" at Tunbridge Wells and Tonbridge to the north of the District. The Council suggests however, that the potential for future housing land release at Crowborough is limited, due mainly to landscape constraints. 3.3 No satisfactory evidence has been produced by the Council to show that Crowborough is any more constrained than development at other locations more favoured by the Council for strategic housing development, such as at Uckfield (within its historic flood risk problems and traffic congestion in its town centre) or within the Hailsham/Polegate/Stone Cross area (where there are waste water treatment constraints that could affect the high protected Pevensey Levels area within the southern part of the district). As it stands at present and for no sound reason, new housing provision would be heavily biased towards meeting housing requirements in the central and southern parts of the District rather than in the northern part, where demand is high as reflected by local house prices. 3.4 There is no sound evidence that the Crowborough area can only accommodate up to 300 new dwellings nor is any sound reason given for delaying such housing development until the middle and end part of the PSCS DPD period. In particular, this has major implications for the delivery of affordable housing, for which there is a recognised need in Crowborough. This would be limited to just 105 additional affordable dwellings between 2015 - 2030 (assuming 35% delivery within the strategic development areas identified by the Council). 3.5 He Council has provided no satisfactory explanation as to what is meant by a "Strategic Development Area" (either in relation to the settlement hierarchy or in terms of the size of potential housing sites or the number of houses). Furthermore, not only is the purposes of identifying such areas unclear, but also there are clear inconsistencies in the Council's overall identification of potential strategic development areas compared to other areas within the District (e.g. Horam) where a significant number of dwellings might be also delivered, but without SDA status. 3.6 The identification of 12 SDAs in draft Policy WCS4 also prejudices any proper or detailed examination and assessment of other potentially suitable housing land at Crowborough (and elsewhere) at the SS and DSA DPD stage. These representations have in particular, demonstrated that any credible or sound evidence, nor do they necessarily represent the best locations or land available for future housing development (contrary to national planning policy contained in PPS12, paragraph 4.38). The Council's contingency site, which although shown in figure 9 and on the key Diagram of the PSCS DPD is not referred to in any draft Core Strategy policy. In addition it is allocated for another purpose within the Non-Statutory Local Plan and is wholly within the HWAONB. 3.7 The identification of SDAs in draft Policy WCS4 means that to be properly tested at the EIP, there would need to be a much wider consideration of all suitable candidate sites such as the land at Alderbrook, which is allocated for housing development in the Non-Statutory Local Plan (Policy CR4) and is within the Crowborough development boundary. This is immediately available to provide approximately 80 dwellings (24 affordable) and would not have to be delayed until either the middle or the end of the plan period unlike SD8, SD9 or SD10. 3.8 It must be highly questionable whether it would be appropriate to examine and compare the SDA sites with other candidate sites at the PSCS DPD EIP. It is also highly questionable as to whether the Council's proposed SS DPD would serve any purpose other than to merely identify site boundaries or provide 'development briefs' for the 12 DSA sites listed in draft Policy WSC4. If so, it is questionable as to the purpose of the Council's proposed SS DPD as the site boundaries could be identified in the Council's proposed DSA DPD and development briefs could be provided in the form of Supplementary Planning Documents. 3.9 The Council's proposed Spatial Strategy Policy is a fundamental part of the PSCS DPD and if this is found to be fundamentally flawed for the cumulative reasons put forward in these representations, then the document would be intrinsically unsound. Rather than identifying suitable settlements and broad numbers for new housing delivery in each based upon the Council's proposed settlement hierarchy, the Council has largely ignored this and has instead identified SDAs at specific locations, thereby significantly restricting the scope of the Council's proposed SS DPD, which would appear to be limited to merely defining site boundaries, rather than providing robust policy based on a full and proper assessment of all suitable and available candidate sites. Eight Appendices have been submitted, but are not attached, and these are available to view at the Council Offices by request.
Details of Changes to be Made:

3.10 Indeed, the PSCS DPD is so defective that it is difficult to see how it could be reasonably altered in view of the fundamental nature of these representations and the only potential way forward in this situation would be for the Council to withdraw the document in order to either provide a detailed evidence base for each of its proposed SDAs or alternatively and more appropriately, for this to form part of a later SS DPD (if still relevant) or a DSA DPD, once the core strategy has been adopted. This would then provide a proper opportunity to assess in detail all the housing sites proposed by the Council together with other candidate sites having regard to the overall housing requirement and the hierarchy of settlements as set out in the Core Strategy DPD.
INFRASTRUCTURE The local roads and traffic infrastructure is already running to its maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Cophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been able to confirm how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it makes it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would be able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority’s responsibility. I refer to pages 69 and 70 of the East Sussex County Council Highways’ Report dated 10 September 2010 for information of their findings, which is relevant to my submissions above. COPHall Roundabout Sensitivity Test 3.1 Using the Dittons Road trip rates, the development traffic from 520 dwellings on the PW1 site has been calculated as follows: Table 3.1: 520 Dwellings Trip Rates & Trip Generations Time Period Trip Rates Trip Generations AM Peak Arrive Depart Two way (0800 - 0900) 0.12 0.46 0.58 62 239 301 The data shows an increase of about 301 trips per hour, 5.016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain, this was not revealed until I questioned this at a cabinet meeting.

PUBLIC TRANSPORT In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. PROPOSED SUBMISSION CORE STRATEGY OPTION CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District...
Council and the majority of their views was that Hindslands should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time, Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindsland / Mornings Mill Farm. In addition, in the Wealden non-statutory local plan consultation in 2003, we presented a petition signed by 1000 Willingdon household to Wealden District Council. Hindsland / Mornings Mill Farm is not suitable to build extra 1000 new homes. I am pleased to say that the Council and Councillors had made a very sensible decision at the time, 8 years on, there are no changes or improvements within the infrastructure. We are continually facing shortage of secondary school places, primary school places, nursery places and facilities including sports and play facilities, amenity space, parking places an indoor sports hall and swimming pool and yet this Council considers that these will be provided, how? There is no mention of any sustainable or plausible proposal. GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green site between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of its full capacity. Again these essential facilities continue remain outstanding and the issues ignored

Details of Changes to be Made:
I write to register my objections to the Polegate and Willingdon and Stone Cross area strategy in the Core Strategy on the basis that it is not sound nor justified for the following reasons: INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain. This was not revealed until Cllr Stephen Shing questioned this at a cabinet meeting. PUBLIC TRANSPORT In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. The local roads and traffic infrastructure is already running to it’s maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Cophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirm how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road infrastructure can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would be able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority’s responsibility. The report does not even address how this traffic problem will be address at present or in the future. The increase of about 301 trips per hour, 5.016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads, currently at peak times, there are long queues from Cophall roundabout back to Lower Willingdon and C40 Wannock Road. Within the honey Farm appeal, this Council argues that it would be difficult for vehicle users to enter the Cophall roundabout and make their journeys to the A27 to get to Lewes or Hailsham and other areas. The Council also contends that the infrastructure would not be able to cope with the number of dwellings at the site, despite this argument raised by the Council, those same arguments also apply to the Mornings Mill Farm site, which this Council has failed to consider. PROPOSED SUBMISSION CORE STRATEGY OPTION CONSULTATION 2007 Again, in 2007, 749 Polegate and Willingdon residents submitted their consultation slips to Wealden District Council and the majority of their views was that Hindslands should not be developed and should remain as a green area and recreational ground. However, Wealden District Council and other groups within the council decided not to accept their consultation slips and their views. At the same time,
Wealden District Council received about 1,100 from the whole district. Therefore the 749 submissions from Polegate and Willingdon residents were ignored, as result this seems to have controlled the outcome. Most members of this Council opposed the Honey Farm proposal, their reasons are almost the same as the reasons we have submitted that apply to Hindslands / Mornings Mill Farm. WATER AND SEWAGE On many occasions, our group has submitted that the water supply and sewage is at their full capacity. During meetings at Wealden District Council, we have been told that the sewage has the capacity for the maximum of 1000 new houses. The proposed house numbers are well over the limit of it’s full capacity. Again these essential facilities continue remain outstanding and the issues ignored GREEN SPACE It is important that Hindsland / Mornings Mill Farm continue to remain as a green lung between Polegate and Willingdon, according to the local plan. Currently Polegate Town and Willingdon & Jevington Parish Council are short of amenity and recreation space, the shortage is between 30 - 40% below of the national average. In the Proposed Submission Core Strategy Document there is nothing to address this issue. I trust that the above representations will be placed on record accordingly.

Details of Changes to be Made:
SUSTAINABLE It is very disappointing that despite repeatedly asked questions at Wealden District Council’s full council meetings and committees regarding the proposed 1265 new houses for this area, Wealden District Council’s position is that it is waiting for the outcome of the Honey Farm Appeal where the proposal is for up to 520 houses. So far, there has never been any mention of any alternative plans should the Council lose the appeal. The Council appears to be confident in defending this appeal, despite also contradicting itself with by using the exact same reasons in the rejection of Honey Farm at Committee to justify and support those proposals within the Core Strategy for the Polegate and Willingdon area, for a site which is only down the road where the same problems would apply. Wealden District Council clearly has no plan B and if Wealden District Council cannot successfully defend this appeal, Willingdon and Polegate will automatic be lumbered with 1785 extra houses. For this reason alone, the Proposed Submission Document is irresponsible and misleading the communities. In addition reason as below; INFRASTRUCTURE- SCHOOL AND HEALTH FACILITIES As it stands, the local Schools and health facilities are only just able to cope with the high level of service users in the Eastbourne area. An estimated increase in the local population by at least 2,000 – 3,200 people will see a severe strain on the local resources available within the infrastructure. Willingdon Community School is already oversubscribed and as an example, mobile classrooms were introduced some years ago to accommodate the increase in students. To propose a further extension at Willingdon Community School to take on more students will see a further strain on the infrastructure, the impact of the surrounded roads and parking will be severely impacted. The need of a new community school and primary school has not been fully considered and no site has been identified within the plans. The proposed new medical center at the former Towermill Place remains very uncertain, this council had amended the wording at the end, it is misleading that the new medical center is part of the Infrastructure when the funding is so uncertain. This was not revealed until Councillor Stephen Shing questioned this at a cabinet meeting.

PUBLIC TRANSPORT In the Core Strategy - Proposed Submission Document and at Wealden District Council meetings, the bus corridor has been mentioned many times and our group has submitted that it would simply be unworkable. Currently there is heavy traffic congestion along the A2270 at peak times, with the extra traffic joining A2270 created from the proposed Morning Mills site, it would be impossible for the bus to move from A to B. The Council should be aware that the bus companies contend that there are not enough service users in the area which has resulted in a number of cuts in the bus services within recent years. There is no doubt the choice of public transport is very limited which makes the travel plans unfeasible, despite this, this Council is still adamant that the Morning Mills site is suitable. For example, in the Pevensey Road area, North Polegate, there are about 640 dwellings. A few months ago, Stagecoach had considered withdrawing the main bus service for this area. It is very difficult to believe that the proposal of 700 dwellings will actually sustain the service and the bus service will actually remain in place. The local roads and traffic infrastructure is already running to it's maximum capacity at present. During peak commuting hours, traffic is often congested along the A2270 Eastbourne Road, from as far as Willingdon roundabout to Cophall roundabout, Polegate High Street and C40 Wannock Road and Hailsham Road. Any increase in the number of vehicle movements from the proposed Morning Mills Farm needs to address this issue with a workable plan. As yet, Wealden District Council has not been confirm how the highways issue will be addressed and how the traffic will work to accommodate the current high volume of traffic movements and with the extra proposed 700 new allocations (dwellings) and 8600 square metres of employment floor space on land at Hindsland / Morning Mill Farm would create. The South Wealden and Eastbourne Transport Study (SWETS) report had used difference format on the same Trip Rates & Trip Generations, it make it very hard for the general public to understand exactly what the Trip Rates & Trip Generations are. However, Wealden District Council in the Honey Farm Appeal submissions, indicated that the traffic and road INFRASTRUCTURE can not accommodate the estimated traffic generated from the 520 houses, as there is only about 50 meters from Cophall roundabout. I would question how 50% more houses and 8600 square metres of employment floor space would able to cope in the same road. Using the formula, the Trip Generation would be 450 both ways, which equates to approximately 38 vehicle movements every 5 minutes. This Council has not been able to answer my question fully and has simply said that would be the Highways Authority’s responsibility. The report does not even address how this traffic problem will be address at present or in the future. The increase of about 301 trips per hour, 5,016 cars per minute, will affect other junctions seriously and create a bottleneck at A22/A27 and the Polegate cross roads,
